Interlibrary Loan Scandal: Undergraduates Not Trusted

by Greenie

What is the difference between a Caltech undergrad and a Caltech fagratd? There are too many to list, but one is in Library Science, Millikan is Library Librarian, the rules of the American Library Association, which sponsors the interlibrary network, require such a signature. Approval under which the undergrad admits is for Millikan's use only; the library borrows on its own authority in any case, and the borrower cannot refuse to supply the materials to undergraduates in any case.

Graduate students and faculty merely fill out a requisition form. For library materials undergraduates must get faculty approval. According to Jeanine Tan, Millikan's Interlibrary Loan Librarian, the rules of the American Library Association, which sponsors the interlibrary network, require such a signature. Approval under which the undergrad admits is for Millikan's use only; the library borrows on its own authority in any case, and the borrower cannot refuse to supply the materials to undergraduates in any case.

According to Ms Tatro, the rationale behind the form has several factors. One is that undergraduates may make requests which are not really necessary; presumably, the requirement of faculty approval would eliminate this possibility. Another reason is that the existing system will make the faculty more aware of the trouble entailed by interlibrary loan requests, and, presumably, tailoring the request of making such requests necessary. A third reason is that users are often unpleasantly surprised by the actual cost of the service (e.g. 25 cents per page, with a four-dollar minimum for a book from Berkeley) and the form "would help protect undergraduates from shocking bills."

These may seem acceptable reasons until one examines the animus of the form is examined. Who, for instance, signs the form? From Ms Tatro's description, it would appear almost any signature will do. The instructor of a particular course may sign it. What about a student? They may sign the library once; approval is not needed for each book, or even each assignment. Yet when the instructor signs the form, he is stating that "the publication requested is essential and justifies library handling" and that its "need has been demonstrated". One form is good for the duration of the course. In fact, Ms Tatro states that the Library does not have to handle the bookkeeping involved in obtaining forms for more than one course; the form submitted will do for all courses. The student is expected to keep the Honor System in mind when making interlibrary requests for other courses, however.

One instructor is therefore signing for all the student's courses, subject only to the judgment of the student himself. The student's advisor may also sign the form. It is highly questionable whether the advisor is abreast enough of each of his advisee's courses to make a logical decision as to how "essential" a particular request is. Not to mention the fact that the same form still serves for all other requests for the course, as well as all other courses.

Since for all interlibrary requests subsequent to the one for which the form is signed and submitted, and for all other courses, the undergrad is expected to use his own judgment (with the Honor System in mind) as to how "essential" and "justifiable" the request is, one may well wonder why he may not use his own judgment with regard to the first.

The idea of using such a form as a warning to "protect undergraduates from shocking bills" as Ms Tatro puts it, surely cannot be a real consideration for college students anywhere, much less Caltech.

Upon further examination, even more inconsistencies in the signature policy appear. Institute employees, including undergraduates, who require material for research purposes from other libraries merely request them under the names of their employees, without an approval form. This would seem to suggest that the faculty member considers it essential. Graduate students may request material for courses as well, without faculty approval. Here, a question may well be asked if there is any intrinsic difference in the judgment of a Caltech undergrad and that of a Caltech graduate student on the justifiability of a request. It is unlikely that many people would think so.

Thus, it appears that the single reason for the requiring of the form is that the American Library Association rules call for it. However, since Caltech trusts its undergraduates in most things regarding these interlibrary loan requests, and since the form is for the use of Millikan Library only, it would seem that Millikan would only save itself some of its bookkeeping work if the form were dispensed with entirely. Ms Tatro might do well to determine if the ALA rules merely require assurance of the necessity of a request of an undergraduate (which would be provided by the observance of the Honor System) or if the ALA requires an approval form in the case, it might be possible for the ALA to make an exception in the case of Caltech.

1st Term Thefts

by Carl Lydick

As first term has ended, and we are now in second term, statistics regarding thefts during the former have become available.

Overall thefts on campus totalled $13,150, $8,373 from lab equipment and supplies. Individual losses in-...
by Nick Smith

The SCOWE II conference recently produced one of the most explosive outbreaks of barbaric outpouring anywhere. It seems that Dr. Ralph Winter wrote the paper that Christianity has introduced to the world, whereby the hatred between men, which caused barbaric treatment of Indians, began to die. He used as one of his examples the eradication of skull collecting in Europe, which died out as late as 1300. Somehow I seem to recall just a few days ago, a massacre in Ireland over a minor difference in what kind of Christianity to believe in.

No, Dr. Winter, Christianity never managed to tone down the violence and hatred in Ireland. The custom in question probably died out more as a result of the loss of Irish freedom (also somewhere around 1600) and its partitioning into 'plantations' ruled by English overlords, than out of any desire to tone down ascetic practices. After all, the Irish couldn't go around using each other's heads for drinking cups, nor could they, not with the terrible English overlords already makin' sure that there were few enough Englishmen around to use their heads as a souvenir.

And they couldn't be usin' English skulls, not to live to tell of, or not to laugh or cry over the horrible things done in their name.

I really don't know whether to laugh or cry over the horrible smugly naive attitude expressed to the statement that Christianity was a negative factor in the eradication of skull collecting in Ireland, just like the rest of Europe, which died out as late as 1300.

Christianity has been a flexible thing throughout the years. When whatever church there is supports the status quo, it tells the masses that what is happenin' to them on earth, no matter how terrible, is of no importance. Popes and Patriarchs are only live in luxury because that is how the status quo are, and the poor and downtrodden will get along just fine until they get their revenge (death, put that one on the head). If the church is on the outs with the powers that be, suddenly it becomes a revolutionary property in the eyes of the beholder. Archbishops and Cardinals will find their position against the tyrants. All in the name of Christ.

Ireland, just like the rest of the world, had a history of violence long before St. Patrick drove out the snakes. It was part of the way of life in those days. But at least then the violence was a personal thing. If you took a stick to the skull of a man and made it into a drinking cup, it was probably a man armed as well as you, a man who had the same authority to defend his own skill and strength. But, nothing you pulled off a box and shot at was your equal. The man who pronounced you had a dispute with, over riches or land, or even over something personal, not over whether you stood for God, as the church residing in Rome or Canterbury.

Yes, they were 'barbaric' enough to take out the heads of their peers, but at least but they had the guts to admit that they enjoyed it. They didn't need promises of a life to come and make their lives worth ever being worth anything. They were cheap and insignificant.

Tell me, you362:5 missionar362:5, just what facets of Christianity might have been barbaric? Whose BRAND of Christ are you going to offer up? The ones that deny the pleasures of earthly life? The ones that offer Heaven to the faithful? The ones that promise the end of the world when the last one of us is dead? The ones that include ritual cannibalism (wine and wafers if you prefer) or snake dances? Just which one of the above are you going to present the Irish to the point that they only murder each other a few at a time over technical differences?

Dr. Winter, and all others of the same type, deal a bit more honestly with young potential Christian converts. They do not tell the masses that what is happenin' to them on earth is a fine date by which to pacify Ireland at all.

Who asked them to fight the tyrants? All in the name of Christianity. Who asked them to work for the liberation of the masses that what is happening on earth is a fine date by which to pacify Ireland? All in the name of what? Whose BRAND of Christianity do you enjoy? The ones that tell Heaven to the faithful? The ones that promise the end of the world when the last one of us is dead? The ones that include ritual cannibalism (wine and wafers if you prefer) or snake dances? Just which one of the above are you going to present the Irish to the point that they only murder each other a few at a time over technical differences?

Student Conference on World Evangelism

by Koleen Matsuda

Last weekend, from Friday night to Saturday morning, college students from as far as Mexico came to Caltech for the Winter Student Conference on World Evangelization (SCOWE II), sponsored, partially, by the Dutch Christian Fellowship. 560 students came to the conference to gain a better understanding of missions and to develop concern for various aspects of missions work.

One of the cogent points Dr. Winter made about the prevalent misconception that the natives of a more primitive culture might be happier if left alone is that the spreading of Christianity has introduced a system to such cultures whereby the hatred between men which caused barbaric treatment of fellow men disappeared. An example of this was the eradication of headhunters from Europe where skulls were used as goblets as late as 1600 in Ireland.

In some instances in history, however, Christian missionaries did not assimilate into the culture they entered. They were ignorant of cultural barriers, and did not understand the need to adapt to avoid transplantsion of their culture instead of communicating their message. This is why it is so important for Christians to be aware of the challenge of taking the initiative to bridge a cultural gap. Being aware of this helps us to develop a world perspective.

In the Saturday morning session, David Howard, head of the missions branch of Inter-Varsity Christian Fellowship, gave an example of this. Larry Poland, head of the Campus Crusade for Christ AGAPA Movement were guest speakers. In the afternoon, students attended seminars designed to develop awareness of various kinds of opportunities in missions work for people both during and after college. Because most of the seminars were small, students could ask questions they had about particular aspects of missions work.

After the seminars, students met in their respective college groups to plan for various activities which they, at their own campuses, could do to translate concern for people, based on the overwhelming love of God, into action. The conference ended around 9:30 p.m. with a general session in Beckman.

SCOWE II was completely planned and organized by students. Many Christian CC's were involved, helping out at registration tables, serving meals, ushering in Beckman, and a few were involved in pre-conference work, scheduling speakers and making housing arrangements for visiting students. Quite a few students stayed with Techers who offered their rooms overnight for guests.

If any student is interested in having more detailed information about the conference, or if you have any questions or objections concerning missions work, contact Becky Winter in 125 Rudderock.

Modern Folk Quartet Returns

Pecos and Larry Beezer are a folk group, a very different four piece group. Pecos is a polished lead voice and guitar player. Some of his vocals are nasal, cut the basic is lush; they are not really different in sound from "America". Larry Beezer is great at what he does, but this is the third time I have seen that particular act. He is known as the "Electric Mouth" for his amazing impersonations of marching bands, subway trains, and motorcycles. But it would be fine if he could learn other impersonations, also.

"Does he play the usual not-too-loud folk-rock sound of the Ice House, the Modern Folk Quartet adheres to straight folk, ranging from baroque to mountain story, to Simon and Garfunkel style. As belting folk groups, they play various guitars, recorder, banjo, clarinet, and harmonica. They performed the "Shittin' Molasses" with graceful, lilting harmony. Don Ho would be envious of their romantic tribute to the Royal Hawaiian Hotel (with ukulele, of course). This triple threat appears through January 18.***

Friday, Jan. 16: Fredd Wayne as Benjamin Franklin, Citizen, at 7 p.m., in Beckman. Contact Caltech Ticket Office, x1652.

TRY THE NEW FAIRWAY HOUSE FAMILY RESTAURANT
Best Food In Town Daily Specials

OPEN 7 DAYS A WEEK 7 AM TO 9 PM (SUNDAY TO 6 PM )
905 SAN PASQUAL CORNER OF LAKE

Tripping the Kibbutz Fantastic

by Al Drehman

How many Sunday evenings have you wasted without someplace close and inexpensive to go to? Unless you have a date and a car you probably end up doing nothing. Let me suggest Israeli folk dancing. It is held every Sunday evening from 7:30 to 10:30 on the third floor of the Keith Spalding building. Admission is only 25 cents and includes one hour of lessons and two hours of dancing.

"It might be reasonable, but if I am not Jewish I might as well give it a try-you will see."

There are more women than men and most of the women are not from Tech. In the words of the propagator, Rick Coffield, "It is a good way to get away from the student house life and meet people from other places." Rick (a recent Caltech gradu­ate) and his wife Luicie have been running the dancing and lessons since 1973. They took it over after the originator of the program went to Israel.

Although some religious dances are done, most are fast happy dances. Many of the dances have a strong Eastern European or Arabic flavor due to their various origins.

As I said before, the lessons and dancing are open to everyone, and Techers (especially men) are wanted. It is non­secu­lar and people with all ranges of dancing experience participate. So give it a try—you will probably like it.
**Carnival of Crazies, Prurient Lust**

Films to be projected this weekend in Buxton Lecture Hall include a variety of ASCIT flick tonight at 7:30 and 9:30, and King of Hearts and Murnau's The Last Command on Saturday night by Dr. Marlene de Rios, an associate professor of anthropology, a drug was the subject of her talk. The drug is used by the natives of the region as part of their folk medicine. This drug was the subject of her talk. The drug is used by the natives of the region as part of their folk medicine.

**Ground Cattle Sandwiches and “falaowful” Minestrone**

Tono’s, 395 N. Rosemead, Pasadena (near the Hastings Thoroughfare)

Tono’s advertizes itself for its spaghetti and hamburgers; it’s really your average Italian restaurant with the ever-present ground-cattle sandwich thrown in along with the traditional fare.

The minestrone soup is extremely expensive, and can be ordered from the menu. The characters are a pair of rowdy, horny J.D.’s. But the protagonist is a little bit of a weakling - a precocious, arrogant little twig of fourteen years or so, he spends his free time reading comics about. Private Alan Bates of a Scottish Highlander village, left by retreating troops the night by Dr. Marlene de Rios, an associate professor of anthropology, a drug was the subject of her talk. The drug is used by the natives of the region as part of their folk medicine.

**De Rico Lectures on Ayahuasca and Rum and Mothballs**

by Carol Freinkel

Ayahuasca is a hallucinogenic native to the Peruvian Amazon area. It is a preparation (four to one hour) visionary experiences and is used by the natives of the region as part of their folk medicine. This drug was the subject of a lecture Tuesday night by Dr. Marlene de Rios, an associate professor of anthropology, a drug was the subject of her talk. The drug is used by the natives of the region as part of their folk medicine.

**Secrets Of the Orient**

The Caltech Y is partially financing a Tai-chi Chuan class taught by JPL associate Dr. Dan Lee. It will be held in Dabney Lounge on Tuesday and Wednesday mornings from 6:15 to 7:45. A sign-up sheet will be in the Cafe.

Space: 1999

Through this freak of nature and our physics, Luna is hurled out of Terra's grasp and into the limitless void, leaving Earth with embarrassing tidal waves and dubious fate at best.

Every week the Alphans encounter another nemesis, whether it be hostile alien, friendly alien, the elements, or themselves, all the while hoping for a time to settle with a nice place to call home which to love, not knowing if they are the last surviving component of Earth. After all, they are likely to bump into something sometime.

Martin Landau is believable as the tight-lipped authoritative Commander of Alpha, John Koenig. "We're just trying to survive."

Barbara Bain, Landau's real-life wife, is the stolid, unemotional physician, Helena Russell, whose long-lost space man husband was supposedly killed by the artifant planet Terra Nova. "I'm afraid we can never be together again." It looks like the champagne and Cinnamon Carter are gone forever.

Barry Morse is Dr. Bergman, the resident scientist. He is my favorite character on the show, and probably best known as the detective who for seven years collaborated with Janet Leigh around in The Fugitive.

There is a nucleus of regulars on the show, all very polished in their roles. These include the fiery Allan Carter, a shoot now, ask later pilot; Kano, the computer expert who has participated in experiments to connect the Human Brain to a computer; Paul, the cool, calm, and collected Main Mission controller, and Sandra, the petite European Main Missioner. The characters do their utmost to overcome their pasts, presents, and futures are bare to the public. I cannot help but think of the similar way we ride down the bus to the crew of the Enterprise so well.

Space: 1999, while at times suffering from aberrations of our current scientific world (what do we know, anyway?), more than atones for this with its superior plots and fine acting.

One of the best so far was the episode where the Moon encountered a new object (complete with accretion disk, relativity trol!?) which proceeds to destroy one of the small Eagle spacecraft on a reconnaissance mission with the tremendous tidal forces, disrupting the very fabric of Alphan society. The object, named the "normal asteroid belt between Mars and Jupiter, but the new object never got near the asteroid belt. Kowal suspects there are more of the new objects, but they haven't been observed because of their small size."

From Kowal's observations, the rock completes one orbit every nine months, its travels extending a little outside the earth's orbit at one extremity and a little inside that of Venus at the other. The orbit is inclined 32 degrees from the ecliptic plane.

"If we were not so highly inclined," Kowal observed, "the object could collide with the earth or Venus."

As it is, its orbit must be shifted slightly in time so that the rock approaches the earth or Venus. It comes close to the earth once every three years.

A new type of asteroid, one that continually wanders between the earth and Venus, has been discovered by the young astronomers recently fled by 13th and 14th moons of the planet Jupiter.

The object is a rock, a half mile in diameter, that approaches within two million miles of the earth, and was moving past the earth at some 35,000,000 miles an hour when discovered by Charles Kowal the night before Christmas.

Kowal, an associate scientist at Caltech and Astronomer at the Hale observatories, describes the object as a new type of asteroid. It is within the size range of "normal asteroids, which spend at least part of their time in the asteroid belt between Mars and Jupiter, but the new object never got near the asteroid belt. Kowal suspects there are more of the new objects, but they haven't been observed because of their small size."

"From Kowal's observations, the rock completes one orbit every nine months, its travels extending a little outside the earth's orbit at one extremity and a little inside that of Venus at the other. The orbit is inclined 32 degrees from the ecliptic plane.

Statement of Dope Law

[The following information was provided by the California State Department of Justice as of January 1, 1976.]

1. Possession of one ounce or less of marijuana is a misdemeanor. This is a program that was designed to help a sequel to a sequel for an alleged offender to appear in court. If the individual signs the promise to appear, and properly identifies himself, he will not be fingerprinted or photographed and will not be taken into custody.

2. Procedurally there are options left to the local magistrate, and hence, to the alleged offender.

(i) If the magistrate sets bail for alleged offenders, those who have signed the promise to appear may be released on a recognizance bond.

(ii) That the magistrates set bail are to set bail and authorize the above procedures, an alleged offender will appear in court and he is denied a bond and an attorney is appointed to test the evidence against him and his right to a speedy trial. He may also be eligible to participate in the Drug Offender Diversion Program (PC1000).

(iii) The maximum fine for conviction is $100.00.

(iv) That the alleged offender is sentenced to a term in some county facility, but that the court may recommend that the offender serve within a two year period, the fourth conviction requires the offender to enter the Drug Offender Diversion Program, if a program will accept him.

(v) That all records of the conviction are destroyed.

7. Any person who was arrested and/or convicted of a marijuana violation under the influence of marijuana is being used.

8. Public agencies are prohibited from attaching any disability or hardships to an arrest or conviction or to a person's possession of marijuana for sale).

A. Police have an option to arrest or to cite an alleged offender.

B. In current procedures, an alleged offender is arraigned on the complaint with the court's consent to a magistrate, his right to test the evidence against him and his right to a speedy trial. He may also be eligible to participate in the Drug Offender Diversion Program.

C. The maximum penalty is $500.00 fine.

D. The maximum penalty is six months in county jail and/or $500.00 fine.

E. The records destruction procedures apply as above, including the destruction or permanent obliteration of state "RAP" sheets in the Department of Justice.

3. Simple possession of any amount of "concentrated cannabis" may be prosecuted as either a felony or a misdemeanor. Concentrated cannabis is defined as "the aggregate result whether crude or purified, obtained from marijuana." (Includes hashish and hash oil)

A. Police will arrest an alleged offender and take him into custody as a felon.

B. The district attorney or the court will determine whether the case will be handled as a misdemeanor or a felony.

C. A person arrested and charged with possession of more than one ounce of marijuana is a misdemeanor. Possession of marijuana for sale is a felony.

D. The maximum penalty is one year in county jail and/or $500.00 fine (misdemeanor), or state prison for one to five years (felony).

E. The records destruction procedures do not apply.

4. Transporting or giving away one ounce or less of marijuana is treated the same as possessing one ounce or less, except that the diversion provision (1D above) is not mentioned.

5. It will no longer be unlawful to possess marijuana smoking paraphernalia, nor will it be a violation to visit a place where marijuana is being used.

6. While marijuana intoxication will still remain a violation, being the influence of marijuana will no longer be a Health and Safety Code violation.

7. Any person who was arrested and/or convicted of a marijuana violation under the influence of marijuana for sale is a murderer.

8. Police agencies are prohibited from attaching any disability or prejudice to any person because of an arrest or conviction for possession of marijuana once the person's records pertaining to such an incident are destroyed or obliterated either automatically or by request of the person.

9. A person convicted of an offense described in 1, 2 and above, and 3 above if it was a misdemeanor, will no longer be required to register with the police or sheriff where they reside.

10. Diversion under Penal Code Section 1000 et. seq, remains an option for qualified offenders charged with any of the three marijuana sections (1, 2 or 3 above).

Astronomer Finds Rock

A new type of asteroid, one that continually wanders between the earth and Venus, has been discovered by the young astronomers recently fled by 13th and 14th moons of the planet Jupiter.

The object is a rock, a half mile in diameter, that approaches within two million miles of the earth, and was moving past the earth at some 35,000,000 miles an hour when discovered by Charles Kowal the night before Christmas.

Kowal, an associate scientist at Caltech and Astronomer at the Hale observatories, describes the object as a new type of asteroid. Kowal suspects there are more of the new objects, but they haven't been observed because of their small size."

"From Kowal's observations, the rock completes one orbit every nine months, its travels extending a little outside the earth's orbit at one extremity and a little inside that of Venus at the other. The orbit is inclined 32 degrees from the ecliptic plane.

"If we were not so highly inclined," Kowal observed, "the object could collide with the earth or Venus."

As it is, its orbit must be shifted slightly in time so that the rock approaches the earth or Venus. It comes close to the earth once every three years.
rom Fluorocarbon Effects to Xerox Repair: Techer on the Hill

by Madeline Shen

that your political awareness has been raised by a pre press conference trans and your summer jobs have been broadened in possibility of doing in a Sweatshop, may I suggest you investigate working in the comfort of your own home. I knew that he was a member of some committees I was interested in and had been in both the Senate and the House, each for quite a stay (he was one of the early supporters of the New Deal). He was a unique politician in other ways, too: he was honest, very concerned for the individuals in his constituency and had an interesting record. He also welcomed interns. Capitol Hill is cluttered with summer interns, though not necessarily of Techer quality or bent. Some 2500 depend on less than 500 offices. So, many offices set strict limits on the number of interns they will take on or require that they be constituents. However, if you wish to be involved with Congress, I would strongly recommend the Hill over most district offices. And if the cost of transporting yourself to Washington, D.C. is not an issue, Caltech will cover the expense without dipping into the grant figure.

What you spend your time and energy on varies drastically from office to office and depends on your interests and capabilities. I worked in a fairly enlightened office, where I was spared a dolge of typical "office work" such as typing or filing. Everyone does some, of course, and usually types his own work, but I was immediately given some projects of my own and assigned to assist various permanent staff members with some of their responsibilities. I did everything from researching the available studies on the stratospheric effects of fluorocarbons to fixing the Xerox machine, from writing speech drafts and committee hearing summaries to working on cases. Most of us became quite knowledgeable on at least a few bills so that we could report their status to interested constituents, and be aware of any developments. I had access to many of the resources which are available to Congressional office staffs, such as the Library of Congress, and learned to utilize them efficiently and effectively. I also learned the office style and handling its responsibilities and through encounters with other interns discovered the interesting interoffice differences; our office was one of the few which made an outgoing mail was read and signed by the Representative, for example.

I generally worked from 8:30 to 5:00, but sometimes was always going on, either in the office on the Hill, even during breaks. There were many opportunities for after-hours activities such as receptions (I attended one for Arthur Ashe, for instance), campaign dinners, rallies and so on. Besides it being the election year, the bicentennial fever will probably add to the number of interesting events available.

Last summer, the Bipartisan Intern Committee did a good job of providing speakers, assemblies, and trips for the interns as well as insights into the people and offices set strict limits on the number of interns they will take on or require that they be constituents. However, if you wish to be involved with Congress, I would strongly recommend the Hill over most district offices. And if the cost of transporting yourself to Washington, D.C. is not an issue, Caltech will cover the expense without dipping into the grant figure.

What you spend your time and energy on varies drastically from office to office and depends on your interests and capabilities. I worked in a fairly enlightened office, where I was spared a dolge of typical "office work" such as typing or filing. Everyone does some, of course, and usually types his own work, but I was immediately given some projects of my own and assigned to assist various permanent staff members with some of their responsibilities. I did everything from researching the available studies on the stratospheric effects of fluorocarbons to fixing the Xerox machine, from writing speech drafts and committee hearing summaries to working on cases. Most of us became quite knowledgeable on at least a few bills so that we could report their status to interested constituents, and be aware of any developments. I had access to many of the resources which are available to Congressional office staffs, such as the Library of Congress, and learned to utilize them efficiently and effectively. I also learned the office style and handling its responsibilities and through encounters with other interns discovered the interesting interoffice differences; our office was one of the few which made an outgoing mail was read and signed by the Representative, for example.

I generally worked from 8:30 to 5:00, but sometimes was always going on, either in the office on the Hill, even during breaks. There were many opportunities for after-hours activities such as receptions (I attended one for Arthur Ashe, for instance), campaign dinners, rallies and so on. Besides it being the election year, the bicentennial fever will probably add to the number of interesting events available.

Last summer, the Bipartisan Intern Committee did a good job of providing speakers, assemblies, and trips for the interns as well as insights into the people and offices set strict limits on the number of interns they will take on or require that they be constituents. However, if you wish to be involved with Congress, I would strongly recommend the Hill over most district offices. And if the cost of transporting yourself to Washington, D.C. is not an issue, Caltech will cover the expense without dipping into the grant figure.

Equal Rights Amendment", Rep. Bell said during speaking. Thursday — Opening the Town Hall Baker speaking; Friday — Running a Political Campaign", Director of Political Research, Democratic National Committee speaking, and a reminder that Rogers Morris will be speaking August. 7. There were receptions arranged for the events at the White House and Chinese Embassy, and a visit to the Pentagon.

Besides events such as these, I was able to take advantage of some of the committee hearings occurring every day. Many of these featured notable speakers. I listened to George Meany discuss our role on the U.N. Labor Board and heard Captain Miller of the Marine Corp. recount his Cambodian capture. The Science and Technology committee often received testimony from familiar figures. The Senate was in session most days so when interesting legislation was up for vote, my staff card allowed me to glide past the tourists and into the gallery with no trouble. Through these experiences I gained an insider's appreciation for the state of the art of governing a country. It was intriguing and, admittedly, sometimes exhausting and frustrating. However, if you are at all interested in this sort of experience, it will be little trouble for you to apply for the Blackburn Internship. Simply describe your goals and qualifications in an application submitted before Feb. 7. There are no questions about the internship itself or the application procedure, you're welcome to contact Dr. Bonner or me. Good Luck!

There’ll also be another installment of our series on classical music by one of the world’s best orchestras. Interested? Read on.

Dr. Ted Taylor, ’45, did nuclear experimentation at Los Alamos in 1942. He designed the world's largest and smallest fission bombs, and is vitally concerned about radioactive materials being ripped off or lost. On Tuesday, Jan. 20, he will be available to talk to anyone interested, at noon in the Y lounge and at 4 p.m. in Winnett Lounge. Both discussions will be open and unstructured but the lecture topics will probably be nuclear terrorism and blackmail, and lack of safeguards in the industry.

Dr. John Lilly, ’38, author of Mind of the Dolphin; Center of the Cyclone; and Programming and Metaprograms in the Human Biocomputer, spoke to a full house about sensory deprivation last time he was here. On Wednesday evening he’ll be returning to campus to talk about “The Feasibility of Communicating with Dolphins”. In Ramo Auditorium at 7:30 p.m. You’re invited, and there’s no charge for admission.

Mr. Natoma Oshiba is well known to many Techers as an expert in the practice and instruction of Karate. In addition to teaching the art here he is the head of Shokotan Karate of America and two other organizations. Thursday night at 7:30 p.m. in Baxter Lecture Hall he will present a lecture-demonstration on how Karate can be an experimental focus for daily life. As always, everyone is welcome, and there’s no admission fee.

Alternatively, at the same time that evening you could go to the L.A. Philharmonic to hear Guest Conductor William Steinberg with Meoheh Ditich on piano, performing Mozart Piano Concerto in G, K 453 and Bruckner: Symphony No. 7. For only $150 we’ll drive you there and back and provide reserved seats. The sign-up sheet was posted this morning in the Y office, so don’t drop by to put your name on it.

Are you interested in learning the basics of Tai Chi? Mr. Paul Lee will be teaching a ten-week introductory course on the subject, with weekly sessions of one and one-half hours each, beginning in the near future. The cost will be $10 for undergrads, $15 for grad, and $20 for all others, and enrollment will be limited. Contact the Y office for more information, or to sign up. Once again I would like to remind you that we have a lot of student money waiting to be claimed. I am referring to books that have been sold off our used-book shelves. If you have left anything with us, check to see if you’ve struck it rich.

Well, that wraps us up for the week. Be aware of what’s going on around you, and take advantage!

Alan Silverstein

PPD Free to Come on Campus

Continued from Page Four

Students were at exactly what it policy is. The PPD does have and h had their hands on campus at their own discretion, regardless of whether an official representative of the Institute called as the opposed to the belief held by many students that they could only come at the request of a representative or while in active pursuit of a suspect. Their point is, in general to notify Camp Security of their intentions over to let the Institute has the situation itself. There it law compelling them to do however, and given sufficient motivation they could quite possibly come on campus with us warning, unlikely as that may be.

THE CALIFORNIA TECH

CALTECH Programs

This week’s triple feature starts with Tech drama. This is one CIT instructor. You’ll have opportunities to learn about nuclear bombard, communicating with dolphins, and finding peace of mind through the practice of Karate.
Wayne as Franklin
A Ten Year Success

by Mojo

Fred Wayne returns to Beckman auditorium tonight to become Benjamin Franklin, Citizen of Los Angeles. In 1770's and baroque music, he will give the result of two years' research in characterizing Benjamin Franklin, Citizen of Los Angeles in 1776. Since 1974, and since then on all of his adventures, he has made a television special in 1972. If you get to see the publicity photographs you will see the big difference between Mr. Wayne on and off stage. He spends two hours before each performance in makeup.

"I'm not trying anything new for this performance. Benckman is an important opening with lots of press, and I don't want to do anything untold.

"I'm especially fond of proposals which first performance here eight years ago was such a success. The house was a sellout, and the reception was fantastic. Every actor sometimes has trouble getting up for the performance. I come in a day or so before to get my voice and vocal cords out of the way so I can have enough energy for a really good performance. I sometimes have trouble with overconfidence that won't be a problem here.

The Tech Knows, Now So Can You

By Jo Gondo

This Monday, a California Tech of the highest order was mounted. An expensive-looking car cluttered around Millikan Library. Concluding that there was a Board of Trustees meeting in progress, he asked Mr. Wayne about the man. "Well, does Wayne return to Beckman auditorium nightly?"

"The California Tech," he exclaimed, "will give the result of two years' research in characterizing Benjamin Franklin, Citizen of Los Angeles in 1776. Since 1974, and since then on all of his adventures, he has made a television special in 1972. If you get to see the publicity photographs you will see the big difference between Mr. Wayne on and off stage. He spends two hours before each performance in makeup.
