Spot in Carter Administration Likely For Chem Head

by Bert van Steenwyk

Perhaps the most accurate thing that can be said about Dr. John Balsdenschwer's future is that he is on many people's lists. The Carter administration, with perhaps some recommendation from Harold Brown, may appoint him as the President's Science Advisor, Director of the National Science Foundation, or even Director of Defense Research and Engineering under Brown.

This won't be the first time that Balsdenschwer has been in government. He had served as a Deputy Director of the Office of Science and Technology from 1971 to 1973. He then worked in the National Career Institute for six months. Afterwards, he came to Tech to teach, to do research, and most of all, to manage science programs in the chemistry department. Dr. Balsdenschwer is primarily a man who likes to manage and direct a field of science. This is one who prefers to be the coordinator, although he does do some of his own research.

Washington, for him, was both as interesting and frustrating experience. He was in his favorite occupation, but he found the directing and coordinating of the programs of multiple scientific programs of the Executive Branch to be quite perplexing. All of the coordination of the Defense, Energy Research and Development Administration, and the Environmental Protection Agency were organized into four divisions: National Security, Natural Resources, Energy Research, and Civilian Technology. With this, there was lobbying for countless bills, and writing of programs to make sure that they were efficient and non-overlapping. Dr. Balsdenschwer believes that, if he asked to work in Washington he would not be sure if he would accept the offer. At Caltech, at least he could "see things being accomplished." Perhaps, the size of the federal government is too much for any man's sanity.

Wells, Bielecki Still In Presidential Contest

The following is an interview of the two candidates for ASCIT President, Ed Bielecki of Dohney and Bert Wells of Radulovich. The interview was conducted by Gregg Brown.

Brown: What are your goals as President?

Bielecki: There are two basic points: one is the academic and social, I mean it breaks very nicely. The same old problem that we're getting into with the size of the student body is going to be with us. Where it's interesting is in reading the report of the seven kids who went off to the other colleges many years ago, and one of the first things they said is "Gee, the faculty and such don't really know what the houses are like." And this will be true unfortunately, so that needs work on.

Scally, again, this is interesting when you look at the Y and other problems. I see the problems inherent in trying to get things or socially around this neck of the woods. So I'd definitely like to work on that, building on the base and see if we can work something out. This would probably mean using ASCIT as ASCIT, and not in addition to our regular subsidized houses, but use ASCIT as ASCIT, as the entire student body. I think that between the two you cover most everything.

Wells: I think that one of the most prominent problems that I see is lack of communication between faculty and students.

Continued on Page Four

President Jimmy Carter detailed his 31 billion dollar economic stimulus plan which included a 50 dollar rebate on last year's income taxes. The plan drew fire from many liberal Democrats and from the AFL-CIO. Left to right: Carter, Blumenshaft; Defense-Harold Brown; Interior-Cecil Andrus; Agriculture-Bob Bergland; Commerce-Juanita Kreps; H U D - P a t r i c i a H a r r i s; Transportation-Brock Adams. Still pending are the nominations of Ray Marshall for Secretary of Labor and Joseph Califano for Secretary of HEW.

President Carter proposed a halt to all nuclear testing and said that the response from the Soviet Union would be "encouraging." His statement came during his first interview since assuming the Presidency.

The following eight members of Carter's cabinet were sworn in during the State-Census: Vance; Treasury-W. Michael Blumenshaft; Defense-Harold Brown; Interior-Cecil Andrus; Agriculture-Bob Bergland; Commerce-Juanita Kreps; H U D - P a t r i c i a H a r r i s; Transportation-Brock Adams. Still pending are the nominations of Ray Marshall for Secretary of Labor and Joseph Califano for Secretary of HEW.

President Carter proposed a halt to all nuclear testing and said that the response from the Soviet Union would be "encouraging." His statement came during his first interview since assuming the Presidency.

Prime Minister Indira Gandhi of India took further measures to restore democracy in that country when she ordered the release of political prisoners, a lifting of press censorship, and the revoking of a ban on public rallies. The announcement came just a week after Mrs. Gandhi announced the resumption of parliamentary elections.

President Carter fulfilled one of his campaign promises when he granted a pardon to Viet nam War-era draft evaders and Ray Beausoleil and Dan Kerns for Director-at-Large. Winners will be chosen by a plurality of the entire student body. I think that between the two you cover most everything.

The Texas Honor Code: Does It Work?

by Gregg Brown and Henry Fuhrmann

No member of the Caltech community shall take unfair advantage of another member of the Caltech community.

The Honor Code

Perhaps one of the most sacred beliefs on campus is the Honor Code. In many respects it makes life more pleasant than would be the case in any other college. However, it also means added work in some cases and a heavier burden of responsibility in all cases. The Honor Code is not something to be taken for granted. It is something that should be examined and discussed periodically. Some people (especially freshmen) wonders if it really works. Others wonder about its effect on off-campus people. Do they feel less bound by it than others? How does it apply to grad students and professors? How widespread are nonacademic violations of the Honor Code? Does the library

President Carter warned of misuse of power by scientists.

by Gregg Brown

Dr. Edward Teller, one of the founders of the Lawrence Livermore Laboratory and sometimes referred to as the father of the H-Bomb, was on campus yesterday to talk to students about his involvement in nuclear warfare and the science that he is involved in now.

Teller, 76, spoke during a lunchtime reception at the Cafeteria Y who brought Teller to campus, Oppenheimer's influence around Teller's opinions about the responsibility of the individual scientist to control his own creations.

According to the opinions he expressed during the short time he got together, Teller believes that the scientist's only responsibility is to generate science and to provide some information about the science that he has generated. He feels that the scientist should, under no circumstances, try to use his position as a scientist to influence public policy.

As an example of the misuse of such influence, Teller described a conversation between himself and Robert Oppenheimer just after the demonstration of the H-Bomb at which time Oppenheimer said he thought that the bomb should be used to end the Korean War. Teller's response was use any of his influence in the matter, but was later informed by Oppenheimer that he had placed the proposal in the hands of then President Eisenhower. Of course, continued Brown.

The following is an interview of the two candidates for ASCIT President, Ed Bielecki of Dohney and Bert Wells of Radulovich. The interview was conducted by Gregg Brown.

Brown: What are your goals as President?

Bielecki: There are two basic points: one is the academic and social, I mean it breaks very nicely. The same old problem that we're getting into with the size of the student body is going to be with us. Where it's interesting is in reading the report of the seven kids who went off to the other colleges many years ago, and one of the first things they said is "Gee, the faculty and such don't really know what the houses are like." And this will be true unfortunately, so that needs work on.

Scally, again, this is interesting when you look at the Y and other problems. I see the problems inherent in trying to get things or socially around this neck of the woods. So I'd definitely like to work on that, building on the base and see if we can work something out. This would probably mean using ASCIT as ASCIT, and not in addition to our regular subsidized houses, but use ASCIT as ASCIT, as the entire student body. I think that between the two you cover most everything.

Wells: I think that one of the most prominent problems that I see is lack of communication between faculty and students.

Continued on Page Four
The meeting was called to order by Bielecki at 10:10 p.m. Present were the Big-B editors, Chuck Kahn, Ed Bielecki, Chuck Gromley, McDonnell, Chas, Rea, Wells, Rousseau, Fisher, and Yoshida. Speaking of officers, Bielecki delivered a fan-tastic one-sized from Pettrillo’s and Winchell’s, a fair indication in accounting for the complete lack of absenteeism this week.

A number of statements have been withheld from the published minutes at the request of the speakers where the content of such statements was sufficiently confidential, insulting, or embarrassing. Many of these are simply not included or marked in the minutes; others, for the sake of maintaining continuity of sorts in the dialogue (and at the risk of having a text that reads like a transcript of Victor Marchetti’s), have been substituted with the word “DELETED.”

1) Wells moves to commend Ed Bielecki for obtaining the night’s refreshments. Having put away the Big-B for this hour and a half, the BOD paves the resolution (Wells/Rousseau: 5-1). New business.

2) Rea moves to appoint the following people to the remaining positions of the student committees: Underclass Admissions—Chris Jensen, Bert Wells; Interstudent Council—Dennis Lewis; Grievance—Pam Crane.

3) Rea asks if the BOD should approve the results of the day’s elections for ASCIT office. McDonnell replies that in view of the large number of undecided contests that approval would better be withheld until after the runoffs have been decided.

4) Bielecki says that it is time to appoint a new Big-T editor. This has totally destroyed, dismantled, and humiliated every high school team it has encountered; doubting, yes, even tripping the score of the hapless opposition. We can beat any high school team if we try and we feel that it is time for a challenge, albeit a small one.

We operate like a machine: answering the first several questions and building up a substantial lead. We then attempt to make the match more interesting by putting in our substitutes. The substitutes, however, almost always open our lead still further. (We are not, I repeat, not perfect, although we come as close as humanly possible.) This massacre continues for the entire game, reducing the opponent to a sobbing, pathetic shell of what they once were.

This team is the 1972 Yankee of knowledge. We never should have cut our mouths as a buzz-saw. We are the Lew Alcindor-led UCLA basketball team of trivia; beat our opponents by as much as possible and then beat them some more. The day we lose is the day that Russia holds a free election; the day that Gus Hall becomes President; the day that Caltech wins a football game.

One final warning: If you do not accept this challenge, we will run a notice in the Los Angeles Times and the California Institute of Technology tucked their tails between their legs and ran from Ulysses S. Grant High School.

Awaiting your immediate reply,

—Robert Chess
Stan Bower
Ruch Howard

Bielecki: “Is he signed up all the way?”
Fisher: “How about it?”
Rea: “Approve the results of the day’s elections for ASCIT office. McDonnell replies that in view of the large number of undecided contests that approval would better be withheld until after the runoffs have been decided.”

Sirs:

The presidential race has entered its third go-around. So far, no clear-cut choice has emerged. Most candidates have their phuses, we feel that the best man is not on the ballot. Those circumstances originally prevented him from running, he is now ready to enter the race. It’s time to elect Tom McDonnell ASCIT president.

We feel, however, that the best way to accomplish this is by waiting to vote NO to take a plurality, nominations would be actively for a “No” vote. We believe the results of the election, he would run for a second term.

For personal reasons, I thought it would be best to withhold my candidacy until either Ed decided to withdraw his nomination, or the “No” option was won in the general election.

Since nominations closed last Thursday, I hope that we have a great deal of support for me by campaigning in advance. I had originally intended to run for the office until this year’s president told me that he would run for a second term. For personal reasons, I thought it would be best to withhold my candidacy until Ed decided to withdraw his nomination, or the “No” option was won in the general election.

Sincerely,
—Tom McDonnell

Dear Fellow Caltech Eggheads:

We, the members of the Ulysses S. Grant High School Quiz Team (possibly known to you as the Knowledge Bowl) formally challenge a team of your most knowledgeable individuals to a match at any day, time, or location of your choosing.

This team is so powerful that it has totally destroyed, dismantled, and humiliated every high school team it has encountered; doubting, yes, even tripping the score of the hapless opposition. We can beat any high school team if we try and we feel that it is time for a challenge, albeit a small one.

We operate like a machine: answering the first several questions and building up a substantial lead. We then attempt to make the match more interesting by putting in our substitutes. The substitutes, however, almost always open our lead still further. (We are not, I repeat, not perfect, although we come as close as humanly possible.) This massacre continues for the entire game, reducing the opponent to a sobbing, pathetic shell of what they once were.

This team is the 1972 Yankee of knowledge. We never should have cut our mouths as a buzz-saw. We are the Lew Alcindor-led UCLA basketball team of trivia; beat our opponents by as much as possible and then beat them some more. The day we lose is the day that Russia holds a free election; the day that Gus Hall becomes President; the day that Caltech wins a football game.

One final warning: If you do not accept this challenge, we will run a notice in the Los Angeles Times and the California Institute of Technology tucked their tails between their legs and ran from Ulysses S. Grant High School.

How Long Will You Be Here?
Dr. James Bonner and Dr. Clinton Brown will sponsor a conference on The Next Eighty-Fours. This conference is the third in a series of seminars which is presented at ten-year intervals. As before, the conference participants will speculate about the future and examine predictions of the past. The conference will take place April 5th and 6th.

In One... Out the Other
The Arts Peppers Foundation of Pandemon has approved a grant of $10,000 to Caltech to support basic research aimed at elucidating the physiology of the ear via hair cells. This research will be led by A. J. Hudspeth. Detailed knowledge of the function of these hair cells is necessary to understand the hearing mechanism and to successfully attack the problem of neural regeneration.

Go for the Gusto
Wanted — Persons with gusto to help create a streamlined bicycle to represent Caltech at the International Human-Powered Speed Championships, April 30, at Ontario Motor Speedway. Research credit is a possibility. Call Alec, 212-C Thomas, x1648 or 793-9246.

No We, No See No Jackets
Lettermen: letters are in! Jackets are not. See Roy Oldiner to pick up yours.

For Madmen Only
The Caltech Y, renowned as the entertainment capital of the campus, will present on Thursday, February 3, the incomparable illusionist extraordinairre Harry Anderson. He comes to us from the streets and gutters of San Francisco, where we found him handling men, women, and children.

Anderson will spend the entire day on campus, beginning with a noon-time show of prestidigitation in the quad. The afternoon will be devoted to testing your wits (do bring them with you) with legendarium. And the evening will culminate with a demonstration of mentalism and telepathy in Winnett Lounge and 8 p.m.

Anderson has already begun his work. He has delivered to the Y a sealed chest which contains a prediction of the headline of the L.A. Times on February 3. The chest may be viewed at the Y during office hours. It will be opened at the evening performance.

So let some magic into your life! Come see Harry Anderson next Thursday. You have nothing to lose but your senses!

You Sink My Battlehip
On Wednesday, January 29, the Caltech Gamers will relight the battle of Emperess Augusta Bay. The game will start at 7:45 p.m. in Dabney Hall Lounge. All are welcome.

Bring Your Own Country
There will be a meeting of the Student Shop on Saturday, January 29, for members who missed the first meeting this term. Refreshments will be served.

Terror and Suspense
Cinematch presents two tales of terror and suspense this week—Gaslight, starring Ingrid Bergman and Charles Boyer; and Wait Until Dark, starting Audrey Hepburn, Alan Arkin, and Richard Crenna (Hepburn got an Academy Award nomination for this one). Showtime is 7:30 p.m. Saturday in Baxter Lecture Hall; admission is $1 for ASCIT/GSC, $1.50 for everyone else.

Student Shop
There will be a meeting of the Student Shop on Saturday, January 29, for members who missed the first meeting this term. Refreshments will be served.

More BOD
Continued from Page Two
Fisher replies that he is only signed up between 3 and 5 P.M. and that if we rule on special cases “it gets sticky”. Rea suggests to Fisher that if he doesn’t want to set a hard, fast limit to simply ask Helu not to sign up over three weeks in advance. Bielecki interjects that Helu had also asked him to request that the “Deep Space Team”, the model rocket club, become an official ASCIT-recognized club.

On the subject of finances, Fisher acknowledges that the price hike to $0.15 was the result of pressure by a number of groups, including the BOD. Chase explains how the increase was calculated “scientifically” to cover the cost of depreciation. Fisher states that the bus is 2½ years old. Bielecki recommends that when the increase is announced, to drive home the point that if there is no increase, sooner or later there will be no more bus, even though the bus was originally given to us. Fisher adds that we might eventually want or need two buses, and that the number of drivers is increasing to make use of the bus. Finally, Bielecki inks whether the BOD will approve the increase, or offer some alternative. Rousseau suggests amending the By-Laws to leave it to the discretion of the BOD. This receives general agreement. Fisher suggests that the Director-at-Large consider instituting bus schedules for small groups of students.

1) A brief return to the coffeehouse... Bielecki: “There was something else...”
Rea: “Coffeehouse?”
Chen: “They’ve got comic books!”

ASCIT is to make the student’s stay here the best it can. This includes the academics, it includes the whole realm of experience of the student living, having fun, learning, everything. It should be an all-around experience to improve the life of the student.

Brown: What do you think went your two greatest accomplishments over your past term?

Bielecki: I worked with the Y in an attempt to restart the Scipps-Caltech exchange with other schools. That fell through, but it’s a hoot. And just in general keeping communications open which is a large part of the job.

Wells: I’d find of all like to state my views on what is the purpose of ASCIT. I think there are several areas of work in which ASCIT is involved. One is overt and more apparent to the student than any other thing ASCIT does. This includes all of these matters that flow into a great deal, publications, and also the activities the chairmanship is involved in. There are certain athletic events which ASCIT is involved with, such as them being less than 24 hours. Now of course the TQFR is one aspect of this work. In regard to ASCIT does, and I tend to play down this overt activity I don’t discuss it much. It’s because I accept it as being part of life. In other words I think there’s a greater potential for ASCIT to get student input on the selection of a new president.

Brown: Do you have anything to say?

Wells: Well, getting back to the beginning, I think of more than just safeguarding and maintaining the overt—behaves that was the word; I use it to refer back only—activities. I think that they should be expanded. Yes, I agree that you’re here to get an education. That is one of the basic activities, and these dealing with the faculty and administration are important. But you’re also here to get an experience in dealing with people and the world that you will need. You cannot be successful, know all the science in the world, but if you can’t get along with people then you’re stuck. And these activities where ASCIT can get you out and with people interacting; that is a very important part that needs to expanded, and not just maintained

Brown: You mentioned the Scipps exchange. Why did that fall through?

Bielecki: It was actually nothing official on their end, it was basically working through the administration, but it was just a matter of time, we got along with people with the students and they just sort of flicked it in, partially because it was just one of those things that just fall through. I think of the start of our year and they ran into problems with their end. The whole thing is, if we can start working on it again...

Brown: Have you started working on it again?

Bielecki: No, I have not gotten out to Pomona where they are.

"I think the faculty should be encouraged to flex their muscles as much as possible"

-Bert Wells

Great American Food Co.
The Great American Food and Beverage Company, 826 Wilshire, Santa Monica. Today, every restaurant seems to need some general motif to justify its existence. Most of the more creative and original tactical gimmicks fail miserably, but the Company is happily an exception. It is probably the only place around that could be described as "Contemporary Folk American," and that's the reason for its great success.

The comfortable decor might be called Late Turn-of-the-Century, but the license plates on the walls from across the country wouldn't quite fit in. The appointments certainly hint a perfect balance between being too austere and boring or too overpowering and detracting. The waiting staff also provides prompt music by strolling from table to table; all have some proficiency at playing the guitar or singing, and provide quality diversion.

The menu provides an interesting variety of hamburger plates, omelettes, rib and chicken specialties, vegetarian dishes, ice cream creations, and the like. All of the dinner items are served in great quantity and with fresh fruit. Of special note is the Will Rogers Special: one pound (1) of ground beef stuffed with mushrooms and onions is covered with creamed spinach and jack cheese and broiled to perfection. It's served on a bed of rice with corn on the cob and reeth fruit. This comes along with a dinner salad. For $6.85. It's not cheap, but reasonable considering the quality and the atmosphere.

The Company features numerous ice cream specialties. The double sundaes for about $2.50 are enormous, and can just barely be finished after a "Will Rogers" (if you're six-foot-three and have been fasting all weekend).

Heinlein is kept on draft--a rare treat in this part of the world. The reasonably diverse wine list also features the better imported bottle beers for $1.25.

L.A. Cabaret Highlighted at Icehouse

by Judy Greenard

Tents are rough in these days of recession. The wallet gets embarrassingly thin, that automotive dream tails out of reach, and you still need somewhere to go for an evening out.

Well, all is not lost. One of the best deals in entertainment is a waddle down the street. Located on Montana, just north of Colorado, the Ice House offers pleasingly sophisticated live entertainment for $1.50 on weekdays and $2.50 on weekends.

The shows are in a small theater with a pleasantly informal atmosphere. Between shows, the patrons can relax at the bar or have dinner in intimate booths. Drinks and food are also served during the shows. While various types of liquid refreshment are available, the varieties of cider are truly excellent and are highly recommended.

Many brilliant careers were launched at the Ice House, whose roll of honor includes George Carlin, Bob Newhart, Lily Tomlin, Gabe Kaplan and the late Richard Pryor. "Wild, Wild Woman!," "WiId, WiId Women!," "WiId, WiId, WiId Women!."

The audience was asked to participate, and the first lines of the Tribune's "WiId, WiId Women!" was incorporated into the scene. The scene was acted out by two members of the audience called out a first line: "Hey, don't roll me over!"

Another type of improvisation was expansion. A member of the audience called out a first line: "It's a matter of everyday life," and each member of the group expanded it in the style of a famous person. improvisation

I can't remember the exact scene.

Leaky Lecture, Concert Scheduled for Next Week

Dr. Rene Dubos, Professor Emeritus of the Rockefeller Institute for Medical Research in New York City, is a microbiologist and experimental pathologist. He will discuss the dangers of some environmental hazards and social innovations for the future of the planet and human life in a Leakey Foundation Lecture next Tuesday evening, February 11, at 8:30 p.m. In Beckman Auditorium. Tickets are available at the Caltech Ticket Office.

Lotte Goslar's Pantomime Circus which is scheduled into Caltech's Beckman Auditorium on February 12, is not a circus in the usual sense, but a unique dance and mime theater with techniques from classical and modern dance forms as well as from pantomime and allied theater arts. There will be a special program for young people on Saturday, February 12, at 11 a.m., and there will be a full length evening performance the same day at 8 p.m. The evening show is free.

Interspersed with some serious work and pure dance numbers, the shows are largely humorous, and spoof and satire abound. The laughing star and guiding force of the Pantomime Circus is its founder, choreographer and director, Lotte Goslar, with her troupe of dancers, actors and clowns siding in. In addition to Dr. Dubos, members of the audience called out a first line: "Hey, don't roll me over!"

The laughing star and guiding force of the Pantomime Circus is its founder, choreographer and director, Lotte Goslar, with her troupe of dancers, actors and clowns siding in. In addition to Dr. Dubos, members of the audience called out a first line: "Hey, don't roll me over!"

Another type of improvisation was expansion. A member of the audience called out a first line: "It's a matter of everyday life," and each member of the group expanded it in the style of a famous person.

Another type of improvisation was expansion. A member of the audience called out a first line: "It's a matter of everyday life," and each member of the group expanded it in the style of a famous person.

I can't remember the exact scene.

Leaky Lecture, Concert Scheduled for Next Week

Dr. Rene Dubos, Professor Emeritus of the Rockefeller Institute for Medical Research in New York City, is a microbiologist and experimental pathologist. He will discuss the dangers of some environmental hazards and social innovations for the future of the planet and human life in a Leakey Foundation Lecture next Tuesday evening, February 11, at 8:30 p.m. In Beckman Auditorium. Tickets are available at the Caltech Ticket Office.

Lotte Goslar's Pantomime Circus which is scheduled into Caltech's Beckman Auditorium on February 12, is not a circus in the usual sense, but a unique dance and mime theater with techniques from classical and modern dance forms as well as from pantomime and allied theater arts. There will be a special program for young people on Saturday, February 12, at 11 a.m., and there will be a full length evening performance the same day at 8 p.m. The evening show is free.

Interspersed with some serious work and pure dance numbers, the shows are largely humorous, and spoof and satire abound. The laughing star and guiding force of the Pantomime Circus is its founder, choreographer and director, Lotte Goslar, with her troupe of dancers, actors and clowns siding in. In addition to Dr. Dubos, members of the audience called out a first line: "Hey, don't roll me over!"
The Honor Code

Mike is walking back to his house late at night when a friend makes up and tells him that his father just called and wanted him to call back as soon as possible. Mike knows that his mother has a heart condition so he wants to get to a phone immediately. Consider each of the six alternative decisions and decide which one constitutes honor code violations.

Using his master key, he enters the nearest building. Is just being in the building a violation?

There is an office that is always open at night because it has a Xerox machine that students use frequently. He goes in and uses a telephone that is on a secretary's desk in the back of the room to make the call.

He enters the locked office of a professor he knows well and uses his telephone.

There is an open office nearby with its lights on. He walks in and makes the call.

He finds a random locked office and walks in and uses the phone.

He enters the nearest door without knowing what is behind it in hopes of finding a phone.

The following situations are distinct from the six above. Check each one that you think constitutes an honor code violation.

You go into a friend's locked room to use his calculator.

You are through one hour of a 1 hour test. The next question looks easy so you decide to get up and go to the restroom. When you get back, the problem turns out to be harder than you thought, and when your time is up you take the extra five minutes that you spent in the restroom.

You add a few extra graphs to a graph in your lab notebook to make it fit your curve better.

You make your error bars larger than they should be to accommodate the data you have.

You didn't finish your circuit in time in your physics lab. You borrow a friend's finished circuit and use it to take the data. You could have finished yours, however, if you had had the time.

You need some wood for Interhouse, so you go to a construction site on campus and take some stuff that looks like scrap. The company is not affiliated with Caltech.

You take some extra food from dinner for a midnight snack or for breakfast the next day. The food service policy is unlimited seconds.

Can you suggest some quantitative way to find out if the honor system really works in academic cases?

Yes No

Galloping Gourmand

Continued from Page Six

Full bar service is also available but they check I.D.'s closely for those of you who are old enough to vote and join the Army, but are too young to drink.

A complete evening with drinks, dinner, dessert, and the tip will come to just under fifteen dollars (cheaper if you like in and coffee). Although the price is a bit out of the average Techie's budget, it's worth it as a break from routine. Try it.

-Dick Reavy

Honor System

Continued from Page One

Have you ever used your master key to break into a building that was not yours? Have you ever used your master key to break into a building that was not yours? Have you ever used your master key to break into a building that was not yours?

Icehouse Review

Continued from Page Six

The sketch finished up with a song about a fictitious movie (chosen by the audience) and was called "Foreign Movie." The show ran on for two weeks, the last week introducing unannounced performers between the intermission and in some of their own acts. Last week, they introduced Artie Leichter, a very competent rock band highlighting a somewhat surly singer who nonetheless gave quite a satisfactory performance, although he underrated his own songwriting talents. The other members of the band were never outstanding, which was unfortunate since they gave excellent account of themselves and deserved credit for it.

-PDP-8 PLAYS BACH

The PDP-8 computer plays works by Bach, Mozart and others on the 96 rank Schnicker pipe organ at All Saints Church, Pasadena, California.

Send $6.98 (plus 6% sales tax for California residents) to: Computer Humorists, 2310 El Moreno Street, La Crescenta, California 91214
In a double-dual meet against U.C. San Diego and U.C. Riverside, Caltech's men's swim team advanced their record to 2-1, beating UCSD 58-36 but losing to UCR 61-47. The women's swim team, hardly defeated UCR's women's swim team 57-48 and picked up a forfeit against UCSD.

The victorious women were Stani Roiden in the 200-yard freestyle, Pam Crane in the 50-yard freestyle, Becky Hartsfield in the 100-yard individual medley, Lynn Hildemann in 1-meter springboard diving, Roiden again in the 100-yard butterfly, Crane again in the 100-free, and the team of Angela McGaggett, Hartsfield, Roiden and Crane in both the 200-yard medley relay and the 400-yard free relay.

Due to the nature of the double-dual meet, the accomplishments of the men are too numerous to list.

All in all it was a good day for swimming, with both the women's and men's team showing great promise for the season ahead.

---

Tech swimmers Becky Hartsfield takes the plunge.
