By Joel Rubinstein

The Division of Humanities and Social Sciences will remain without a chairman for at least a few more months. Ruth Marcus, a very strong candidate, informed Caltech last Friday that although she finds Caltech very attractive, she has strong emotional ties to Yale and would like to remain there.

The chairman selection committee will meet again next week to begin the process of finding another suitable candidate. The qualifications include scholarship, administrative ability, and experience in academic institutions.

It would be a mistake to suppose that Ruth Marcus' rejection of the offer is any rejection of the Division of HSS or of Caltech itself. She said that she would be happy to work at Caltech and would have been influenced to accept the offer had it come from there. However, she earned her B.A. at Yale, and she has been on the faculty there for several years, and would like to remain there at least a few more years.

Meanwhile, back at Caltech, the slow selection process continues.

Eight Rings Found Around Uranus

Indications of three additional rings around the planet Uranus, ranging in size to those that have been discovered by Caltech and Iute Observatories astronomers. They have been found that one of the rings is relatively broad and has been found that it processes around the planet, rather than Hualo Hug. This long-term's width apparently varies, being narrowest as the planet and widest at the orbit of Uranus.

The astronomers also confirmed that the rings of Uranus were found to be that to part of material.

Disclosure of the discoveries was made last Saturday (May 19) by one of the astronomers, Peter I, Goldreich, professor of planetary science and astronomy at Caltech. Dr. Goldreich delivered a seminar on the planet and on the campus for Alumni.

The observations were made on the 10 by Eric Piscarek of H.P. Observatories using the 2.5-meter Palomar telescope of the Las Campanas Observatory in Chile. Inconsistent observations by allowing a team of astronomers to study the rings of Uranus under the leadership of Barry Neugebauer at the Haste meter telescope at Palomar and paper presented by the team indicated that the observations were reduced and interpreted by Philip Nicholas, a planetary science student at Caltech.

The rings of Uranus were originally discovered on March 10, 1977, "by two to three openers of astronomers. The most definitive results were obtained by team from Cornell University headed by James Elliot. Five main rings were found with radii ranging from 44,800 kilometers to 51,800 km, and widths from 3 to 100 km. The rings of Uranus are quite narrow compared to Saturn's rings, which measure about 50,000 km in width. All the Uranian rings lie in the plane of the planet.

The Caltech Observatories team observed the rings, which are normally too faint to be detected by telescopes, by measuring how the light from a distant star blinked on and off as it passed behind the rings, said Dr. Goldreich. Such "occultations" are very rare, and this is only the second such instance since the occultation used in the discovery of the rings last year.

The star used for the new measurement was 100 times fainter than the star used in the original discovery. The astronomers were able to perform more sensitive measurements, however, by observing the star in the infrared region of the spectrum. At these wavelengths, Uranus reflects little sunlight, and thus appears extremely dark, allowing astronomers a more sensitive look at the star passing behind the faint, narrow rings.

One especially intriguing discovery was that the rings of Uranus have extremely sharp edges.

"It may be that the rings are defined by resonances with the moons of Uranus, which channel particles into tight ring patterns," Dr. Goldreich said.

"Currently, the rings of Uranus must be clarsed only as fascinating curiosities," he said "with only a hint that they may have broader implications for theories of the formation of planets and their satellites."

Howard Jarvis, co-author of Proposition 13 spoke at Tech on Monday: After hearing his presentation, which was sponsored by the Caltech Y, the ASCIT BOD commented Jarvis, in the BOD Minutes, for "Being able to walk and breathe at the same time," while having his head in the clouds.

**NOTICE**

There will be an election held on Tuesday, May 30 to determine the fate of the current ASCIT by-laws and resolutions. The BOD and the Exco believe that the by-laws as they now stand are too restrictive and therefore do not allow for enough mobility on the part of the BOD with regards to legislative matters.

The revised by-laws will be collated at the BOD meeting on Monday, May 22 (9:30 pm in the Y Lounge). All interested persons are invited to attend this meeting and make suggestions if they wish. The final copy of the proposed by-laws will be available immediately after this meeting and will be posted to the notice board. Other members should try to read the proposed changes and to vote on May 30.

By Rob Bourret

Tom and Jerry may attract five people to tense behind a white chalk line on the Caltech track, perhaps for the first time perhaps unprecedented in their lives. A voice will utter two 10-mile legs before it will stop, and precisely at 9am a gunshot will shatter the stillness of the cool morning. Fifty members of the Caltech community, including undergrads, grads, JPL relatives, & friends, backed by a legion of over ten timers and support staff, will begin the 2nd Annual RELP 24 Hour Relay.

Divided into five ten-man teams of varying ability, with each person running a 1-mile leg while all other members on the baton on, they will attempt to cover as many miles as possible before 9am on Sunday morning. The overall goal: a combined 5 team total of 1,000 miles, and all 50 runners totaling a 100 miles respectively.

Anyone interested in improving or otherwise benefiting need only need a good excuse to avoid tending, or something to do after the ASCIT beach (bikini) welcome to help out, or at least stop by for a while. Questions or concerns about this year's progress should be mailed to a meeting at 5 pm today in the 100, or by 175. This way, we have now (5 pm) have goals of 225 and 150 miles respectively.

Remember, if you have the urge for something different anytime at all, come see us. We'll be there until Sunday morning.
Uranus
Continued from Page One

In the Caltech seminar, Dr. Goldreich also described what is currently known about the rings of Saturn. Studies of radar waves bounced off the rings, of reflected sunlight, and of infrared and radio emissions, have given rise to two competing theories of the composition of the famous rings. One theory holds that the rings consist of centimeter-to-meter-sized chunks of ice. The other theory is that the rings are composed of meter- to kilometer-sized chunks of rock.

Theories of the Saturnian rings' thickness produce estimates ranging from 10 meters to one or two kilometers, said Dr. Goldreich, Dr. Goldreich also described studies being conducted by himself and colleagues at other institutions to the distribution of material around the rings, their formation, and the origin of the gaps in the rings.

Golf Takes Fourth
By M. Eric Kiddie

The fast-finishing Caltech golf team claimed two more victories in last week's conference play, clinching fourth place with a 6-0 record.

Highly-touted Claremont proved to be little match for the storming Techies. Invading the opponent's home links, Caltech overlooked the Stags 99-95. Leading the way was the twosome of Charles Curatalo and Terry Thomason, shutting out their adversaries 18-0. Bob Chess and Andy Falls added icing to the cake with a commendable 12 point performance.

The Conference Championship at the toruous Jarupa Hills Country Club was a memorable display of Caltech teamwork and savvy. For its fourth solid place finish the squad advanced a notch in conference standings. Sophomore Nelson Goldkenemer, well unprepared at the turn, sized up the state of affairs: "The course is playing long today and the traps are the toughest we've faced Being conditioned to this at Annadale we're in good shape, though. I'm playing well because this track is similar to my home course."

Dorado Beach, Puerto Rico.

Backed by the momentum of their previous matches, Caltech finished in a blaze of glory, utterly besmearing Whitter in Arros, a considerable distance away from the courthouse where most of the new concerts are held. At just past noon both my boss and I found ourselves blasted from our chairs by the "opening chords" of Betjeman's first number. The blast continued for the duration of the noon hour, I personally object to being subjected to such a "concert" when I am located half the campus away. Normally, music from noon concerts provides a reasonably faint, even pleasant, background when one is obliged to work inside during the noon hour. But I think it is highly inappropriate--I would go so far as to say un-American--to endure a performance which sounds as if it is under my window when it is in fact in the center of the campus, particularly when the style of music is less than universally appreciated. It is not the freedom to choose whatever kind of rubbish (or faculty or staff) prefer to which I address the complaint. It is to the circumstances under which that freedom is exercised. Those who do not wish to hear it should not have it thrust upon them at high volume in their places of work.

This particular concert was highly offensive to me and to a good many other people in the far west end of the campus who were obliged to remain in their offices that day. I am sure I speak for more than myself when I register the complaint, along with the hope that this kind of situation will not be repeated in the future. Sincerely,

Elizabeth Ball

Cinematch
Ashes, Diamonds, & Cul-de-Sacs

This week Cinematch goes to Poland for perhaps two of the finest directors to come from that country--Andrzej Wajda and Roman Polanski. Representing Wajda will be his award-winning film Ashes and Diamonds, and for Polanski, Cul-de-Sac.

The first feature of the evening will be Ashes and Diamonds. His style is rather similar to the early Soviet films of Pudovik and Eisenstein--facial expression and body movements are intensified. Cast in the nubile of the recently ended WWII, a member of the Polish resistance movement is given the assignment of killing the new Communist district secretary. Also, he mistakenly kills two innocent men. Tired of fighting, he falls in love with a barmaid. His fate is sealed and he is sent back to battle with his duty and his abhorrence of war and destruction.

Wajda's picture is even more impressive considering that it was made in a Soviet satellite country.

The second feature of the evening is Roman Polanski's Cul-de-Sac. Made in Great Britain following his earlier two films: The Knife in the Water and Repulsion, Polanski continues creating his own universe. In this film, Polanski represents man by three representatives from society: an industrialist, his wife and a small-time gangster. The mood of the film has been described as 'razor-edge slapstick'. Tension is set up throughout the film. Polanski crashes all sorts of items to catch the viewer of grand-Romanesque style to soothe the eyes and electronic jazz to grate the ears. In the end the industrialist is left folken by a rock, Polanski's view of the world.

Dialogue II

Who do you say I am?

Jesus asked his followers nearly two thousand years ago. Their response has significantly affected the lives of men and women ever since. If you have ever wondered about the same question or have had other questions regarding the life and teachings of Jesus of Nazareth, you are cordially invited to an afternoon with Armand Gueslin, piano; Kathleen Lenski, violin; Kenneth Mundy, bassoon; Victor Vener, horn. Tickets can get rush tickets for $1.00.

Cheap Seats!

Rush tickets at $1 each are now available to Techers (bring ID) at the Caltech ticket office, 332 S. Michigan Ave., 10 am-6 pm Monday through Friday and Saturday 10 am-1 pm (May 29) for the following two events you have been waiting for all season... both in Ramo at 8 pm:

Saturday, May 20: Richard Grayson, brilliant keyboard artist playing improvisations, and his own compositions, some electronically;

Tuesday, May 23: Bear Republic Theater's "Signalls" - comedy, pathos, satire, drunks about growing up male in America's ERA world; a very funny sort of day.

Tuesday Rush tickets at $1...

Enjoying the short wave is a great way to a man's heart. So why not do the same for the one you love? Imagine the look on her face when you present her with a beautiful piece of jewelry or a thoughtful gift that shows her just how much you care. You can find a wide selection of engagement rings, wedding bands, and other fine jewelry at your local Caltech presents.

Rush Tickets May Also Be Obtained On Night Of Event At Auditorium Box Office.

Dialogue III

"Mother, remember what you told me about the shortest way to a man's heart?"

"Yes, dear."

"Well, last night I found a new route.

Egad!

Picnic Party?

The Deans (Ray Owen and David Wales) are hosting a pizza party on Saturday, May 21st at 3 pm in Tournament Park.

Power To The Satellites!

On Thursday, May 25 the Caltech Y will present Dr. Richard Dickinson to speak on the topic Satellite Power Systems. This presentation will be about microwave transmissions between solar satellites and earthbound systems. The program will start at 8:00 pm in Winnett Lounge.

GRAD JOB PART TIME

Group Theory
Made Easy

The Math Club will be meeting at 7:30 pm in Tuesday, May 23 in 153 Sloan. There will be a talk by Dr. Daniel Gorenstein, entitled "A Strange Simple Group with 175,560 Elements," followed by election for a new president. All interested persons are encouraged to attend.

Field Theory

The ASCIT Beach Flick will be "Who do you say I am?" at 7:30 pm in Winnett Lounge. For further information call Young-II Choo at 796-6881.

Dinner Party

The Third Annual Millikan Board Room Barbecue will be held Friday, May 26 in Millikan Board Room from 8:30 to 3:30.

Square Dance

The CCF is sponsoring a free square dance on Saturday, May 27, from 7:30 to 10:30 pm. There will be a caller and some munchies. Everyone is invited, especially seniors.

Supper And Solicitations

The Caltech Hillel invites you to attend a UJWF fund-raising supper at 5 pm in Winnett Lounge on May 21. No charge for supper. Donations will be solicited. For information call Dorene at 799-4450.

Well Done!

The next event in the Musica Rara series is set for Friday, May 26 at 8 pm in Dabney Hall Lounge (student $2.50). Music by Saint-Saens, Schubert, Brahms, Dukas, all performed by Armand Gueslin, piano; Kathleen Lenski, violin; Kenneth Mundy, bassoon; Victor Vener, horn. Tickets can get rush tickets for $1.00.

Extraordinary Restraint

Liew C. Chiu has been selected as this year's winner of the Haren Lee Fisher Memorial Award in Junior Physics. And you don't know how hard it was to say just that.

You've Got Sand WHERE?

The ASCIT Beach Flick will be from 4 pm to midnight, this Saturday (the 20th). It will be at Huntington Beach Pier 3. There will be raves, water, free food and who knows what else. Y'all come.

The Caltech Hillel invites you to try"..."and who knows what else. Y'all come.

The Beckman Internship was established by friends of Dr. Arnold O. Beckman, Chairman Emeritus of the Board of Trustees, to give students opportunities to "experience the process of government from the inside." The internship will support Porter's 12-week assignment in Tucker's office in Little Rock. He will be involved with casework related to Tucker's 500,000 constituents. Porter is a resident of Little Rock, Arkansas.

Porter will submit a report on his internship activities when he returns in the fall.

THE CALIFORNIA TECH

Page Three
Early Sawdust, Cafeteria Style

By The Gallivanting Gourmand

Once upon a time there was a campground where we could eat salads, yogurt and plant shop called The Hanging Gardens. This is not what is now the Hanging Gardens, but another place entirely, although in the same location, which is another matter.

Anyway, along came someone with lots of money, who then decided to build a little place here. How would you like to move it down the street and into downtown Pasadena? (Pure Food and Drink Act.)

PFDA has a lot of nice things going on there, but it was a small place here. How would you and a New York yogurt and plant shop called The Bacon and Sour Cream? They have a large one. The soups don't have a lot of variety on any given day, but looked acceptable. For $1.05 you can get the large, all-you-can-eat combination of soup with bread and butter. A small soup is 95 cents, and the same price for a sandwich.

I didn't try the chill, and didn't see anyone else buying it while I was there.

The sandwich bar is overpriced $2.25 for a basic sandwich made with ham and cheese. That's not bad but think ingredients I saw didn't really look that good for stuffing. $3.45 for the larger sandwich that way. However, I recommended other ways. The sandwich bar looked like a very basic set of submarine sandwich making with a few exotica thrown in. I can't see going anywhere else for sandwiches.

Now come to the dinner salads. They are very interesting, ranging from $3.25 to $3.95, with prime rib, leg of lamb baked chicken, pasta, vegetarian special, and a daily special (real on the day I was there). The presentation being, it is a decent size for sampling. Be warned: frozen yogurt is more expensive than ice cream, and unless you like the stuff, it is overpriced. Figure on spending about 50 cents more than you would on an equivalent Baskin Robbins.

The only really disgusting thing about PFDA was the decor. Early Sawdust. While this is considered cute and trendy, it is a dismal mistake. If you have hay fever, be careful; there is a dislike for the taste of wood in your food scratch PFDA off your list.

Overall, Don's Pure Food and Drink Act, at 246 S. Lake, is an option to PFDA if you wish to spend from $2 to $5 for a weekend meal, or if you like Frogurt. They get three forks for food quality, four hop toads for service, and one long, bony (it moos at each quarter hour) for the decor. Definitely not for me.

So my advice is that you get a chance, but don't do it if you are in a waiter-stomping mood.

Pasadena's World of Books

By Martin Goldberg

In the past, The Tech has carried many restaurant reviews, and they are always welcome. Personally, I prefer to eat at home, and spend my money on books instead of food.

In this review. Since I don't own a car, the review is limited to those stores that were in walking distance of the Caltech campus. Also, I will not review in this article special interest stores, such as Christian Supply Center, Pasedena, Christian Corner, and Little Bit of Heaven.

Don's sells new paperbacks and magazines at cover price. The stock of used books is not celophane.

Book Village has a stamped store sign on the sidewalk, with note: [note: reviewer went in during lunch and remodeling, and as this crowd is not entirely typical, mostly old hardbacks. The store contains 120,000 books, 200,000 used paperbacks, 105, used pamphlets, and 900 used magazines. Some of these are probably good bet if you want a specific old SF paperback. Also, they give discounts (up to 20%) on special-ordered hardbacks.

Hunter Books sells supplies and PCC textbooks. Also, they have some used paperback books, although you will not want used PCC textbooks, don't waste your time going here.

E. E. Cummings sells supplies and PCC textbooks. Also, they have some used paperback books, although you will not want used PCC textbooks, don't waste your time going here.

Possptive Prospective E.E. Graduates

Measurex Corporation, a leading supplier of computer-based process control systems located in the San Francisco Bay Area, is interested in recruiting recent engineers in Manufacturing Engineering division.

If you will be receiving a BSEE and have good paper work, this position is a kick of getting along well with people, and excellent communications skills, and if you're interested in learning, then we are interested in talking to you. We have more experienced manufacturing engineers to solve manufacturing and design problems with electrical, mechanical, and software engineers.

Please contact us by sending your resume to Dr. V.M. Golub, Measurex Corporation, One Results Road, Dublin P.O. Box 1654, McCabe Building, Suite 300, San Jose, CA 95104, or by calling collect (408) 255-1600 ext. 480. Our salaries are very competitive.

Historical Perspectives

ancient Papers Unearthed

Shavois, France

Remarkable researches by certain "associate members" of the Tech staff unearthed a series of ancient scrolls containing the text of speeches given at the first recorded awards banquet. This report is of interest to historians and etymologists alike, due to the fact that it explains the origins of two of the more confusing titles of nobility. The report began:

'According to what had been Roman Gaul and would soon be France, lived two groups of people who shared a common strategic, valley. One group was led by a brave man named Lautrec, and the other was led by a man named Rouge; he and his people lived in the Holy Wood, the forest of the last barbarian clan, which attacked the valley before the Mongol invasion. Lautrec was a brave man, but the others were not. When the Mongol horde had taken the valley, the last barbarian clan, all that remained between the Khan and the Mongol hordes, a small group of people could not stand long against the Mongol forces.

Vichyssoise and La Rouge, however, had a plan to outflank the Khan. The problem was-

women polled did not experience orgasm during sexual intercourse over the average more often than they masturbated. This is in contrast to the six other male subpopulations which show a greater frequency of masturbation than sexual intercourse within the last year. However, in all likelihood the sexual response is rather similar to the number of Playboians women responding the same. Moreover, about 45% of the Caltech women responding said they achieved orgasm during sexual intercourse never or almost never. This is in contrast to 20% found for Playboy. If the dichotomy between male and female responses is large based on this difference, then there is a disparity between Caltech female and Playboy female responses. Clearly some other factors are involved here. The reasons are not clear and the extent to biological differences of the populations. But this is not at all due to the bias of the question, which I mentioned above. To all likelihood the extreme dichotomy of the male ad female responses is due in part to biological differences (along with the biased wording of the question), and also in part to the cultural/behavioral attitude among some males.

As in the last graph, the most striking feature of this graph is the overwhelming support for non-therapeutic abortions. PCC females showed the lowest degree of support, but still 72.6% of the PCC females polled felt that non-therapeutic abortions should be allowed. Even in my next article I will be featuring such items as direct sexual moralities, and the importance of this to our understanding of the factors and benefits for sexual satisfaction.

Larry J. Morris

The female data is shown in the graph. The general idea of the graph is that, while at least one-third of the male population may achieve orgasm by their partners, this behavior is not proper for sexual satisfaction. Cinematech

Continued from Page Two

Cinematech is shown on Saturday nights in Baxter Lecture Hall at 7:00 PM. The festival is entirely underwritten with ASCIT funds, and donations are $1.50 for the general public, $1.00 for ASCIT and GSC members, and 50 cents for children under 14. Please take note that films are not always suitable for children.

This week ASCIT brings you another film festival winner with The Last Detail, a film that won best actor at the Cannes Film Festival. The Last Detail is an excellent character study. The no-holds barred approach of Nicholson (who won best actor) is simply a pleasure to watch.

You shouldn’t have to change banks every time you change lifestyles.

Graduation is one time you change lifestyles. But it’s certainly not the only time.

It happens when you move. It happens when you get married. It happens when you have children, take a new job, and so on.

The point is, you shouldn’t have to worry about changing banks every time it happens.

And if your bank is Bank of America, you might not have to worry at all.

For starters, with nearly twice as many locations as any other California bank, we’re usually close by. If you’re moving within California, it’s easy to transfer your account to wherever branch is most convenient for you.

Next, we offer a wide range of checking plans to fit your changing needs. Like our All-In-One® Checking Plan, with several services in one simple package, including BankAmerica Travelers Cheques, commission-free when purchased at any of our California branches. We also offer loans for important needs that may crop up along the roads ahead. And BankAmericard® Visa® and Master Charge®, if you qualify, to give you ready credit when you need it.

We even have available for you a continuing series of free Consumer Information Reports, helpful guides on such financial matters as “How To Establish Credit,” “Personal Money Planner,” and “Ways To Save Your Money.” They’re available at all our branches, to help you through some of the changes. So why not stop by and talk things over.

We serve more Californians than any other bank. And we’d like to serve you.

BANK OF AMERICA

THE SKY’S THE LIMIT IN NAVAL AVIATION.

If you want to get to the top in aviation, the Navy is the way to go. We offer unlimited opportunities as pilots and Naval Flight Officers.

As a pilot, you’ll be trained to fly the most advanced jets ever developed. As a Naval Flight Officer, you’ll operate the sophisticated weapon systems, computers and advanced electronics. As either, you’ll wear the wings of Naval Aviation.

If you’re a college man in good physical condition, Naval Aviation could be your route to the top. Find out about it from your local recruiter. Contact: Lt. Tim Norbom, 4727 Wilshire Blvd, LA, CA 90010

Brandel, Berkeley and other universities in the area. Mr. Grayson is a member of the Oriental College music faculty. Tickets for the May 20th concert at Caltech may be obtained from the Caltech Ticket Office. For more information, call 793-7043.

Full Equal!
A drunk walked up to the bar and asked for two beers. The bartender watched him closely as he walked into the men’s washroom and ordered two more beers. Again the bartender watched as the drunk went into the washroom. After this occurred three times, the bartender could no longer control his curiosity, and so he asked the drunk why he was taking his beer into the washroom. The drunk said that he was pouring it down the toilet. This puzzled the bartender, and so he asked why on earth was he doing this? The drunk replied firmly, “I’m just damned tired of being a middle man.”

ATTENTION JUNIORS

Earn over $650 a month right through your senior year

If you’re a junior or senior majoring in math, physics, or engineering, the Navy has a program you should know about.

It’s called the Nuclear Propulsion Officer Candidate—College Program (NUPOC—C for short) and if you qualify, you can earn as much as $650 a month right through your senior year. Then after 16 weeks of Officer Candidate School, you’ll receive an additional year of advanced technical education. This would cost you thousands in a civilian school, but in the Navy, we pay you. And at the end of the year of training, you’ll receive a $3000 cash bonus.

It isn’t easy. There are fewer than 400 opening and only one of every six applicants is accepted. But if you make it, you’ll have qualified for an elite engineering training program. With unequaled hands-on responsibility, a $24,000 salary in four years, and gilt-edged qualifications for jobs in private industry should you decide to leave the Navy later. (But we don’t think you’ll want to.)

Ask your placement officer to set up an interview with a Navy representative when he visits the campus or contact your Navy representative at (213) 468-3321 (collect). If you prefer, send your resume to the Navy Recruiting District, 4727 Wilshire Blvd., Officer Programs Office, Los Angeles, CA 90010, and a Navy representative will contact you directly. The NUPOC—Candidate Program. It can do more than help you finish college; it can lead to an exciting career opportunity.

Navy Officer
It’s not just a job, it’s an adventure.
