ACADEMIC CALENDAR 1994-95

FIRST TERM 1994

September 20

Registration of new students: graduate students—8:30 a.m.–noon; undergraduate students—1:00–4:00 p.m.

September 21–23

New-Student Orientation for Undergraduates

September 22

New-Student Orientation for Graduates, and Graduate Information Fair

September 26

Beginning of instruction—8:00 a.m.
General Registration for undergraduates—8:30 a.m.–3:30 p.m.
Undergraduate Academic Standards and Honors Committee—9:00 a.m.

October 3

Last day for undergraduates to register for first term, 1994–95, without a \$50 late fee

October 14

Last day for adding courses and removing conditions and incompletes

October 26–November 1

Midterm examination period

November 7

Midterm deficiency notices due—9:00 a.m.
Last day for admission to candidacy for the degrees of Master of Science and Engineer

November 14–18

Preregistration for undergraduates for second term, 1994–95

November 14–25

Mail registration for graduate students, second term, 1994–95

November 16

Last day for dropping courses and changing sections

November 24–25

Thanksgiving holidays

November 24–27

Thanksgiving recess

December 2

Last day of classes
Last day for graduate students to register for second term, 1994–95, without a \$50 late fee

December 3–6

Study period

December 7–9*

Final examinations, first term, 1994–95

December 10

End of first term, 1994–95

December 11–January 3

Winter recess

December 12

Instructors' final grade reports due—9:00 a.m.

December 23–27

Christmas holidays

January 2

New Year's holiday

SECOND TERM 1995

January 4

Beginning of instruction—8:00 a.m.
General Registration for undergraduates—8:30 a.m.–3:30 p.m.
Undergraduate Academic Standards and Honors Committee—9:00 a.m.

January 11

Last day for undergraduates to register for second term, 1994–95, without a \$50 late fee

January 24

Last day for adding courses and removing conditions and incompletes

February 3–9

Midterm examination period

February 13

Midterm deficiency notices due—9:00 a.m.

February 20–24

Preregistration for undergraduates for third term, 1994–95

February 20–March 3

Mail registration for graduate students, third term, 1994–95

February 22

Last day for dropping courses and changing sections

February 27

Instructional Recess Day—classes do not meet

March 10

Last day of classes
Last day for graduate students to register for third term, 1994–95, without a \$50 late fee

*First due date for final examinations

March 11–14
Study period

March 15–17*
Final examinations, second term, 1994–95

March 17
Last day for obtaining admission to candidacy for the degree of Doctor of Philosophy

March 18
End of second term, 1994–95

March 19–April 2
Spring recess

March 20
Instructors' final grade reports due—
9:00 a.m.

THIRD TERM 1995

April 3
Beginning of instruction—8:00 a.m.
General Registration for undergraduates—
8:30 a.m.–3:30 p.m.
Undergraduate Academic Standards and
Honors Committee—9:00 a.m.

April 10
Last day for undergraduates to register for
third term, 1994–95, without a \$50 late
fee

April 21
Last day for adding courses and removing
conditions and incompletes

May 3–9
Midterm examination period

May 15
Midterm deficiency notices due—
9:00 a.m.

May 22–26
Preregistration for undergraduates for first
term, 1995–96

May 22–June 2
Mail registration for graduate students, first
term, 1995–96, and registration for
summer research

May 24
Last day for dropping courses and changing
sections

May 29
Memorial Day holiday

June 2
Last day for presenting theses for the
degrees of Doctor of Philosophy and
Engineer
Last day of classes—seniors and graduate
students

June 3–6
Study period for seniors and graduate
students

*First due date for final examinations

June 7–9*
Final examinations for seniors and graduate
students, third term, 1994–95

June 9
Last day of classes—undergraduates
Last day for graduate students to register for
first term, 1995–96, without a \$50 late
fee

June 10–13
Study period for undergraduates

June 12
Instructors' final grade reports due for
seniors and graduate students—
9:00 a.m.

June 14–16*
Final examinations for undergraduates,
third term, 1994–95

June 14
Undergraduate Academic Standards and
Honors Committee—9:00 a.m.
Curriculum Committee—10:00 a.m.
Faculty meeting—2:00 p.m.

June 16
Commencement—10:00 a.m.

June 17
End of third term, 1994–95

June 19
Instructors' final grade reports for under-
graduates due—9:00 a.m.

June 28
Undergraduate Academic Standards and
Honors Committee—9:00 a.m.

July 3–4
Independence Day holidays

September 4
Labor Day holiday

FIRST TERM 1995–1996

September 19
Registration of new students: graduate
students—8:30 a.m.–noon; undergrad-
uate students—1:00–4:00 p.m.

September 20–22
New-Student Orientation for
Undergraduates

September 21
New-Student Orientation for Graduates,
and Graduate Information Fair

September 25
Beginning of instruction—8:00 a.m.
General Registration for undergraduates—
8:30 a.m.–3:30 p.m.
Undergraduate Academic Standards and
Honors Committee—9:00 a.m.

October 2
Last day for undergraduates to register for
first term, 1995–96, without a \$50 late
fee

GENERAL INFORMATION

INTRODUCTION

The California Institute of Technology is an independent, privately supported university, whose educational mission has not changed since it was stated by the original trustees on November 29, 1921: "To train the creative type of scientist or engineer urgently needed in our educational, governmental, and industrial development."

Its mission in research was expressed by President Thomas E. Everhart in his 1988 inaugural address: "There need to be a few places that look ahead and still dare to do the most ambitious things that human beings can accomplish. Caltech still has that ambition and that daring."

Caltech conducts instruction at both the undergraduate and graduate levels and, including its off-campus facilities, is one of the world's major research institutions. Its mission to train creative scientists and engineers is achieved by conducting instruction in an atmosphere of research, accomplished by the close contacts between a relatively small group of students (approximately 900 undergraduate and 1,100 graduate students) and the members of a relatively large research staff (approximately 1,000 faculty members). "Caltech has achieved international influence far disproportionate to its size," according to *Time* magazine.

The Institute is organized into six divisions: Biology; Chemistry and Chemical Engineering; Engineering and Applied Science; Geological and Planetary Sciences; the Humanities and Social Sciences; and Physics, Mathematics and Astronomy. It is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges.

Undergraduate Program

Caltech offers a four-year undergraduate course with options available in applied mathematics; applied physics; astronomy; biology; chemical engineering; chemistry; economics; electrical engineering; engineering and applied science; geochemistry; geology; geophysics; history; independent studies; literature; mathematics; physics; planetary science; science, ethics, and society; and social science. Each leads to the degree of Bachelor of Science.

All options require students to take courses in chemistry, humanities, mathematics, physics, and the social sciences. Course work is rigorous and students are encouraged to participate in research. The undergraduate program is thus designed to provide an intensive exposure to a wide spectrum of intellectual pursuits.

Near the end of the first year, students select an option, and during the second year they begin to specialize. However, the major concentration in chosen fields and professional subjects occurs during the third and fourth years.

Caltech also encourages a reasonable participation in extracurricular activities, which are largely managed by the students themselves. Three terms of physical education are required, and intercollegiate and intramural sports are encouraged.

In short, every effort is made to provide undergraduate students with well-rounded, integrated programs that will not only give them sound training in their professional fields, but that will also develop character, intellectual breadth, and physical well-being.

Graduate Program

Graduate students constitute approximately 55 percent of the total student body at Caltech. Jointly engaged in research problems with faculty members, they contribute materially to the general atmosphere of intellectual curiosity and creative activity generated on the Institute campus.

Caltech offers courses leading to the degree of Master of Science, which normally involves one year of graduate work; the Engineer's degree in certain branches of engineering, with a minimum of two years; and the degree of Doctor of Philosophy. In all the graduate work, research is strongly emphasized, not only because of its importance in contributing to the advancement of science and thus to the intellectual and material welfare of humankind, but also because research activities add vitality to the educational work of Caltech.

The graduate options are: aeronautics, applied mathematics, applied mechanics, applied physics, astronomy, biology, chemical engineering, chemistry, civil engineering, computation and neural systems, computer science, control and dynamical systems, electrical engineering, engineering science, environmental engineering science, geological and planetary sciences, materials science, mathematics, mechanical engineering, physics, and social science.

HISTORICAL SKETCH

The California Institute of Technology developed from a local school of arts and crafts founded in Pasadena in 1891 by the Honorable Amos G. Throop. Initially named Throop University, it was later renamed Throop Polytechnic Institute. Known as the California Institute of Technology since 1920, it has enjoyed the support of the citizens of Pasadena, and as early as 1908 the Board of Trustees had as members Dr. Norman Bridge, Arthur H. Fleming, Henry M.

Robinson, J. A. Culbertson, C. W. Gates, and Dr. George Ellery Hale. The dedication by these men, of their time, their minds, and their fortunes, transformed a modest vocational school into a university capable of attracting to its faculty some of the most eminent of the world's scholars and scientists.

George Ellery Hale, astronomer and first director of the Mount Wilson Observatory, foresaw the development in Pasadena of a distinguished institution of engineering and scientific research. Hale well knew that a prime necessity was modern well-equipped laboratories, but he stressed to his fellow trustees that the aim was not machines, but men. "We must not forget," he wrote in 1907, "that the greatest engineer is not the man who is trained merely to understand machines and apply formulas, but is the man who, while knowing these things, has not failed to develop his breadth of view and the highest qualities of his imagination. No creative work, whether in engineering or in art, in literature or in science, has been the work of a man devoid of the imaginative faculty."

The realization of these aims meant specializing, so the trustees decided in 1907 to discontinue the elementary school, the business school, the teacher-training program, and the high school, leaving only a college of science and technology that conferred Bachelor of Science degrees in electrical, mechanical, and civil engineering.

In 1910 Throop Polytechnic Institute moved from its crowded quarters in the center of Pasadena to a new campus of 22 acres on the southeastern edge of town, the gift of Arthur H. Fleming and his daughter Marjorie. The president, Dr. James A. B. Scherer, and his faculty of 16 members, opened the doors to 31 students that September. When, on March 21, 1911, Theodore Roosevelt delivered an address at Throop Institute, he declared, "I want to see institutions like Throop turn out perhaps ninety-nine of every hundred students as men who are to do given pieces of industrial work better than any one else can do them; I want to see those men do the kind of work that is now being done on the Panama Canal and on the great irrigation projects in the interior of this country—and the one-hundredth man I want to see with the kind of cultural scientific training that will make him and his fellows the matrix out of which you can occasionally develop a man like your great astronomer, George Ellery Hale."

It would have surprised Roosevelt to know that within a decade the little Institute, known from 1913 as Throop College of Technology, would have again raised its sights, leaving to others the training of more efficient technicians and concentrating its own efforts on Roosevelt's "hundredth man." On November 29, 1921, the trustees declared it to be the express policy of the Institute to pursue scientific researches of the greatest importance and at the same time "to continue to conduct thorough courses in engineering and pure science, basing the work of these courses on exceptionally strong instruction in the fundamental sciences of mathematics, physics, and chemistry; broadening and enriching the curriculum by a liberal amount of instruction in such subjects as English, history, and economics; and vitalizing all the work of the Institute by the infusion in generous measure of the spirit of research."

Three men were responsible for the change in the Institute. George Ellery Hale still held to his dream. Arthur Amos Noyes, professor of physical chemistry and former acting president of the Massachusetts Institute of Technology, served part of each year from 1913 to 1919 as professor of general chemistry

and as research associate; then, in 1919, he resigned from MIT to devote full time to Throop as director of chemical research. In a similar way Robert Andrews Millikan began, in 1916–17, to spend a few months a year at Throop as director of physical research. In 1921, when Dr. Norman Bridge agreed to provide a research laboratory in physics, Dr. Millikan resigned from the University of Chicago and became administrative head of the Institute as well as director of the Norman Bridge Laboratory.

The great period of the Institute's life began, then, under the guidance of three men of vision—Hale, Noyes, and Millikan. They were distinguished research scientists who soon attracted graduate students. In 1920 the enrollment was nine graduate students and 359 undergraduates with a faculty of 60; a decade later there were 138 graduate students, 510 undergraduates, and a faculty of 180. At the present time there are about 900 undergraduates, 1,100 graduate students, and 1,000 faculty (including postdoctoral fellows).

The Institute also attracted financial support from individuals, corporations, and foundations. In January 1920 the endowment had reached half a million dollars. In February of that year it was announced that \$200,000 had been secured for research in chemistry and a like amount for research in physics. Other gifts followed from trustees and friends who could now feel pride in the Institute as well as hope for its future. The Southern California Edison Company provided a high-voltage laboratory, with the million-volt Sorensen transformer. Philanthropic foundations bearing the names of Carnegie, Rockefeller, and Guggenheim came forth with needed help when new departments or projects were organized.

In 1923 Millikan received the Nobel Prize in physics. He had attracted to the Institute such men as Charles Galton Darwin, Paul Epstein, and Richard C. Tolman. In 1924 the Ph.D. degree was awarded to nine candidates.

It was inevitable that the Institute would enlarge its fields; it could not continue to be merely a research and instructional center in physics, chemistry, and engineering. But the trustees pursued a cautious and conservative policy, not undertaking to add new departments except when the work done in them would be at the same high level as that in physics and chemistry. In 1925 a gift of \$25,000 from the Carnegie Corporation of New York made possible the opening of a department of instruction and research in geology. A seismological laboratory was constructed, and Professors John P. Buwalda and Chester Stock came from the University of California to lead the work in the new division.

That same year William Bennett Munro, chairman of the Division of History, Government, and Economics at Harvard, joined the Institute faculty. Offerings in economics, history, and literature were added to the core of undergraduate instruction.

In 1928 Caltech began its program of research and instruction in biology. Thomas Hunt Morgan became the first chairman of the new Division of Biology and a member of Caltech's Executive Council. Under Morgan's direction the work in biology developed rapidly, especially in genetics and biochemistry. Morgan received the Nobel Prize in 1933.

The Guggenheim Graduate School of Aeronautics was founded at Caltech in the summer of 1926 and a laboratory was built in 1929, but courses in theoretical aerodynamics had been given at the Institute for many years by Professors Harry Bateman and P. S. Epstein. As early as 1917 the Throop Institute had

constructed a wind tunnel in which, the catalog proudly boasted, constant velocities of 4 to 40 miles an hour could be maintained, "the controls being very sensitive." The new program, under the leadership of Theodore von Kármán, included graduate study and research at the level of the other scientific work at the Institute, and GALCIT (Graduate Aeronautical Laboratories at the California Institute of Technology) was soon a world-famous research center in aeronautics.

In 1928 George Ellery Hale and his associates at the Mount Wilson Observatory developed a proposal for a 200-inch telescope and attracted the interest of the General Education Board in providing \$6,000,000 for its construction. The Board proposed that the gift be made to the California Institute of Technology, and Caltech agreed to be responsible for the construction and operation. The huge instrument was erected on Palomar Mountain. Teaching and research in astronomy and astrophysics thus became a part of the Caltech program.

From the summer of 1940 until 1945, Caltech devoted an increasingly large part of its personnel and facilities to the furthering of the national defense and war effort. Caltech's work during this period fell mainly into two categories: special instructional programs and weapons research. The research and development work was carried on, for the most part, under nonprofit contracts with the Office of Scientific Research and Development. Rockets, jet propulsion, and antisubmarine warfare were the chief fields of endeavor. The Jet Propulsion Laboratory in the upper Arroyo Seco continues under Institute management to carry on a large-scale program of research for the National Aeronautics and Space Administration in the science and technology of unmanned space exploration. The Laboratory developed the first U.S. satellite, Explorer I, which was launched in 1958, and managed the Ranger, Surveyor, Mariner, Viking, and Voyager programs of lunar and planetary exploration for NASA, as well as Galileo, whose spacecraft is now under way to Jupiter. The Infrared Astronomical Satellite (IRAS) provided a wealth of data on the infrared sky. The Laboratory also operates NASA's worldwide deep-space tracking network and conducts a program of supporting research in space science and engineering.

In the 1950s, in response to the growing technological component of societal problems, the Institute began to expand the fields in which it had substantial expertise. In the late 1960s and early 1970s the Institute added to its faculty several economists and political scientists who initiated theoretical and applied studies of interdisciplinary issues. A graduate program in social sciences was added in 1972. Caltech students could now engage their talents in the development of the basic scientific aspects of economics and political science, and begin to use the principles from these sciences together with those from the physical sciences to formulate and address public policies.

In 1945 Robert A. Millikan retired as chairman of the Executive Council but served as vice chairman of the Board of Trustees until his death in 1953. Dr. Lee A. DuBridge became president of Caltech on September 1, 1946. Formerly chairman of the physics department and dean of the faculty at the University of Rochester, he came to the Institute after five years as wartime director of the MIT Radiation Laboratory—and remained 22 years.

DuBridge was also committed to the concept of a small, select institution offering excellence in education. Facts and figures are only part of the story,

but the statistical record of change during the DuBridge administration indicates how he held to that concept. The 30-acre campus of 1946 grew to 80 acres; the \$17 million endowment grew to more than \$100 million; the faculty of 260 became 550; the number of campus buildings increased from 20 to 64; and the budget went from something less than \$8 million to \$30 million. But enrollment remained relatively constant. In 1946 the total number of students, graduate and undergraduate, was 1,391. In 1968, the year DuBridge left, it was 1,492.

Dr. Harold Brown came to Caltech as president in 1969. A physicist who had received his Ph.D. from Columbia in 1949, he had succeeded Dr. Edward Teller as director of the University of California's Lawrence Radiation Laboratory in Livermore in 1960. President Lyndon Johnson named Brown Secretary of the Air Force in 1965, and he came to the Institute from that office. Six new campus buildings were dedicated under Brown's administration, and a major development campaign for \$130 million was under way when he resigned in 1977 to become Secretary of Defense under President Carter.

Dr. Marvin L. Goldberger was appointed president by the Board of Trustees in March 1978. He had received his B.S. at the Carnegie Institute of Technology (now Carnegie Mellon University) and his Ph.D. at the University of Chicago. He came to Caltech from Princeton University, where he was the Joseph Henry Professor of Physics. Among the major accomplishments of the Goldberger administration were the addition of three new laboratories; the acquisition of a \$70 million grant for construction of the W. M. Keck Observatory to house the world's most powerful optical telescope; and a \$50 million pledge for the establishment of the Beckman Institute. Goldberger resigned in 1987 to become director of the Institute for Advanced Study in Princeton, New Jersey.

In the fall of 1987, Dr. Thomas E. Everhart became president of Caltech, coming to the Institute from his position as chancellor at the University of Illinois at Urbana-Champaign. Prior to that he had been dean of Cornell University's College of Engineering. Dr. Everhart did his undergraduate work at Harvard, where he graduated magna cum laude with an A.B. in physics. He earned an M.Sc. in applied physics at UCLA and a Ph.D. in engineering at Cambridge University. He has gained international recognition for his work in the development of electron microscopy; he has also done research on electron beams as applied to the analysis and fabrication of semiconductors.

As Caltech has developed in effectiveness and prestige, it has attracted a steady flow of gifts for buildings, endowment, and current operations. In addition, substantial grants and contracts from the federal government and private sources support many research activities.

Today Caltech has more than 18,100 alumni scattered all over the world, many of them eminent in their fields of engineering and science.

Caltech Nobel Laureates

Robert A. Millikan	physics	1923
Thomas Hunt Morgan	physiology or medicine	1933
Carl D. Anderson, B.S. '27, Ph.D. '30	physics	1936
Edwin M. McMillan, B.S. '28, M.S. '29	chemistry	1951
Linus Pauling, Ph.D. '25	chemistry Peace Prize	1954 1962

BUILDINGS AND FACILITIES

Gates and Crellin Laboratories of Chemistry: first unit, 1917; second unit, 1927; third unit, 1937. The first two units were the gifts of Messrs. C. W. Gates and P. G. Gates of Pasadena; the third unit was the gift of Mr. and Mrs. E. W. Crellin of Pasadena. Gates (first unit), which was retired after suffering extensive

damage in the 1971 earthquake, was rebuilt in 1983 as the Parsons-Gates Hall of Administration. **The Arnold and Mabel Beckman Laboratory of Chemical Synthesis**, 1986, occupying portions of Crellin Laboratory (as well as portions of Church Laboratory for Chemical Biology), was built with funds provided by the Arnold and Mabel Beckman Foundation.

Norman Bridge Laboratory of Physics: first unit, 1922; second unit, 1924; third unit, 1925. The gift of Dr. Norman Bridge of Los Angeles, president of the Board of Trustees, 1896–1917.

High Voltage Research Laboratory, 1923. Built with funds provided by the Southern California Edison Company. Retired in 1959 with basic research completed and rebuilt in 1960 as the Alfred P. Sloan Laboratory of Mathematics and Physics.

Dabney Hall, 1928. The gift of Mr. and Mrs. Joseph B. Dabney of Los Angeles.

William G. Kerckhoff Laboratories of the Biological Sciences: first unit, 1928; second unit, 1939; annex, 1948. The gift of Mr. and Mrs. William G. Kerckhoff of Los Angeles.

Guggenheim Aeronautical Laboratory, 1929. Built with funds provided by the Daniel Guggenheim Fund for the Promotion of Aeronautics. A substantial addition was built in 1947.

Athenaeum, 1930. A clubhouse for the teaching, research, and administrative staffs of the Institute and the Huntington Library and Art Gallery, for the Associates of the California Institute of Technology, and for others who have demonstrated their interest in advancing the objectives of the Institute. The gift of Mr. and Mrs. Allan C. Balch of Los Angeles. He was president of the Board of Trustees, 1933–1943.

Undergraduate Houses, 1931:

Blacker House. The gift of Mr. and Mrs. R. R. Blacker of Pasadena.

Dabney House. The gift of Mr. and Mrs. Joseph B. Dabney of Los Angeles.

Fleming House. Built with funds provided by some 20 donors and named in honor of Mr. Arthur H. Fleming of Pasadena, president of the Board of Trustees, 1917–1933.

Ricketts House. The gift of Dr. and Mrs. Louis D. Ricketts of Pasadena.

W. K. Kellogg Radiation Laboratory, 1932. The gift of Mr. W. K. Kellogg of Battle Creek, Michigan.

Henry M. Robinson Laboratory of Astrophysics, 1932. Built with funds provided by the International Education Board and the General Education Board, and named in honor of Mr. Henry M. Robinson of Pasadena, member of the Board of Trustees, 1907–1937, and of the Executive Council of the Institute.

Charles Arms Laboratory of the Geological Sciences, 1938. The gift of Mr. and Mrs. Henry M. Robinson of Pasadena, in memory of Mrs. Robinson's father, Mr. Charles Arms.

Seeley W. Mudd Laboratory of the Geological Sciences, 1938. The gift of Mrs. Seeley W. Mudd of Los Angeles, in memory of her husband.

Franklin Thomas Laboratory of Engineering: first unit, 1945; second unit, 1950. Funds for the first unit were allocated from the Eudora Hull Spalding Trust with the approval of Mr. Keith Spalding, trustee. Named in honor of Dean Franklin Thomas, professor of civil engineering and first chairman of the Division of Engineering, 1924–1945.

Alumni Swimming Pool, 1954. Provided by the Alumni Fund through contributions of the alumni of the Institute.

Scott Brown Gymnasium, 1954. Built with funds provided by the trust established by Mr. Scott Brown of Pasadena and Chicago, who was a member and director of the Caltech Associates.

Norman W. Church Laboratory for Chemical Biology, 1955. Built with funds provided through a gift and bequest by Mr. Norman W. Church of Los Angeles, who was a member of the Caltech Associates.

Eudora Hull Spalding Laboratory of Engineering, 1957. Built with funds allocated from the Eudora Hull Spalding Trust.

Archibald Young Health Center, 1957. The gift of Mrs. Archibald Young of Pasadena, in memory of her husband, who was a member and director of the Caltech Associates.

Physical Plant Building and Shops, 1959. Built with funds provided by many donors.

Gordon A. Alles Laboratory for Molecular Biology, 1960. Erected with the gift of Dr. Gordon A. Alles of Pasadena, research associate in biology at the Institute, an alumnus, and a member of the Caltech Associates, 1947–1963; and with funds provided by the Health Research Facilities Branch of the National Institutes of Health.

Undergraduate Houses, 1960. Built with funds provided by the Lloyd Foundation and other donors.

Lloyd House. Named in memory of Mr. Ralph B. Lloyd and his wife, Mrs. Lulu Hull Lloyd, of Beverly Hills. He was a member of the Board of Trustees, 1939–1952.

Page House. Named in honor of Mr. James R. Page of Los Angeles, a member of the Board of Trustees, 1931–1962, and chairman, 1943–1954.

Ruddock House. Named in honor of Mr. Albert B. Ruddock of Santa Barbara, a member of the Board of Trustees, 1938–1971, and chairman, 1954–1961.

Harry Chandler Dining Hall, 1960. The gift of the Chandler family, the Pfaffinger Foundation, and the Times Mirror Company of Los Angeles.

W. M. Keck Engineering Laboratories, 1960. The gift of the W. M. Keck Foundation and the Superior Oil Company of Los Angeles.

Alfred P. Sloan Laboratory of Mathematics and Physics, 1960. Formerly High Voltage Research Laboratory, 1923. Rebuilt in 1960 with funds provided by the Alfred P. Sloan Foundation.

Graduate Houses, 1961:

Braun House. Built with funds provided by the trustees of the Carl F Braun Trust Estate in his memory.

Keck House. The gift of Mr. William M. Keck, Jr., of Los Angeles.

Marks House. The gift of Dr. David X. Marks of Los Angeles.

Mosher-Jorgensen House. The gift of Mr. Samuel B. Mosher of Los Angeles and Mr. Earle M. Jorgensen of Los Angeles. Mr. Jorgensen is a member of the Board of Trustees.

Karman Laboratory of Fluid Mechanics and Jet Propulsion, 1961. The gift of the Aerojet-General Corporation, named in honor of Dr. Theodore von Kármán, professor of aeronautics at the Institute, 1929–1949.

Firestone Flight Sciences Laboratory, 1962. The gift of the Firestone Tire and Rubber Company.

Winnett Student Center, 1962. The gift of Mr. P. G. Winnett of Los Angeles, a member of the Board of Trustees, 1939–1968. Winnett houses the bookstore and the Caltech Y.

Willis H. Booth Computing Center, 1963. Built with funds given by the Booth-Ferris Foundation of New York and the National Science Foundation. Named in memory of Mr. Willis H. Booth, a member of the Caltech Associates.

Beckman Auditorium, 1964. The gift of Dr. and Mrs. Arnold O. Beckman of Corona del Mar. Dr. Beckman, an alumnus, was a member of the Institute's faculty from 1928 to 1939, a member of the Board of Trustees since 1953, chairman of the Board from 1964 to 1974, and is now chairman emeritus.

Harry G. Steele Laboratory of Electrical Sciences, 1965. Built with funds provided by the Harry G. Steele Foundation and the National Science Foundation.

Central Engineering Services Building, 1966.

Robert A. Millikan Memorial Library, 1967. Built with a gift from Dr. Seeley G. Mudd and named in honor of Dr. Robert Andrews Millikan, director of the Bridge Laboratory of Physics and chairman of the Executive Council of the Institute, 1921–1945.

Arthur Amos Noyes Laboratory of Chemical Physics, 1967. Built with funds provided by the National Science Foundation and Mr. Chester F. Carlson, an alumnus, and named in honor of Arthur Amos Noyes, director of the Gates and Crellin Laboratories of Chemistry and chairman of the Division of Chemistry and Chemical Engineering, 1919–1936.

Central Plant, 1967.

George W. Downs Laboratory of Physics and Charles C. Lauritsen Laboratory of High Energy Physics, 1969. The Downs wing was built with funds provided by Mr. George W. Downs and the National Science Foundation. The Lauritsen wing was built with Atomic Energy Commission funds and named in honor of Dr. Charles C. Lauritsen, a member of the Institute faculty, 1930–1968.

Keith Spalding Building of Business Services, 1969. Named in honor of Keith Spalding, Caltech trustee, 1942–1961.

Donald E. Baxter, M.D., Hall of the Humanities and Social Sciences, 1971. Built with funds provided by Mrs. Delia B. Baxter of Atherton and named in honor of her late husband, Donald E. Baxter, M.D. Additional funds were given by the U.S. Department of Health, Education and Welfare. Dr. and Mrs. Simon Ramo provided funds for the completion of **Ramo Auditorium** within the hall. Dr. Ramo is a member of the Board of Trustees.

The Earle M. Jorgensen Laboratory of Information Science, 1971. Built with the gift of Mr. and Mrs. Earle M. Jorgensen, with additional funds provided by the Booth-Ferris Foundation and other private donors. Mr. Jorgensen is a member of the Board of Trustees.

The Mabel and Arnold Beckman Laboratories of Behavioral Biology, 1974. The gift of Dr. and Mrs. Arnold O. Beckman of Corona del Mar. Dr. Beckman is chairman emeritus of the Board of Trustees.

Seeley G. Mudd Building of Geophysics and Planetary Science, 1974. Built with funds provided by Dr. Seeley G. Mudd, Mrs. Roland Lindhurst, Mr. and Mrs. Ross McCollum, Mr. and Mrs. Henry Salvatori, and the U.S. Department of Health, Education and Welfare.

Clifford S. and Ruth A. Mead Memorial Undergraduate Chemistry Laboratory, 1981. Built with funds allocated from the Clifford S. and Ruth A. Mead Memorial Building Fund.

Thomas J. Watson, Sr., Laboratories of Applied Physics, 1982. Built with funds provided by the Watson family and other private donors. Thomas J. Watson, Jr., was a member of the Board of Trustees.

Braun Laboratories in Memory of Carl F and Winifred H Braun, 1982. Built with funds provided by the Braun family, other private donors, and the National Cancer Institute. Various members of the Braun family have served on Caltech's Board of Trustees.

Parsons-Gates Hall of Administration, 1983. Formerly Gates Laboratory of Chemistry, 1917. Rebuilt in 1983 with funds provided by the Ralph M. Parsons Foundation and the James Irvine Foundation.

Athletic Facility, 1984. Built with funds provided by the Carl F Braun Trust and the Braun Foundation.

Catalina Graduate Apartment Complex, 1984, 1986, 1988.

Infrared Processing and Analysis Center, 1986.

Beckman Institute, 1989. Built with funds provided by the Arnold and Mabel Beckman Foundation and other private donors.

Braun Athletic Center, 1992. Built with funds provided by the Braun family.

Parking Structure/Satellite Utility Plant, 1993.

The Gordon and Betty Moore Laboratory of Engineering, construction to be completed by late 1995. Built with funds provided by Dr. and Mrs. Gordon Moore. Dr. Moore is chairman of the Board of Trustees.

Off-Campus Facilities

Kresge Building, Seismological Laboratory (Division of Geological and Planetary Sciences), 1928, 220 North San Rafael Avenue, Pasadena. Named in recognition of a gift from the Kresge Foundation of Troy, Michigan.

William G. Kerckhoff Marine Biological Laboratory, 1930, Corona del Mar. Rehabilitated with funds provided by the National Science Foundation in 1966.

Jet Propulsion Laboratory, 1944, 4800 Oak Grove Drive, Pasadena. Administered by the Institute; owned and supported by the National Aeronautics and Space Administration.

Palomar Observatory, 1948, San Diego County. Site of the 200-inch Hale Telescope, built by the Institute with funds from Rockefeller sources.

Owens Valley Radio Observatory, 1958, Big Pine. Built with funds provided by the Winnett Foundation, the Office of Naval Research, the National Science Foundation, and the Oscar G. and Elsa S. Mayer Charitable Trust.

Big Bear Solar Observatory, 1969, Big Bear Lake. Built with funds provided by the National Science Foundation and the Max C. Fleischmann Foundation of Nevada.

Submillimeter Observatory, 1986, Mauna Kea, Hawaii. Built with funds provided by the National Science Foundation and the Kresge Foundation.

W. M. Keck Observatory, 1991, Mauna Kea, Hawaii. Built with funds provided by the W. M. Keck Foundation. Site of two 10-meter Keck Telescopes. Keck II is currently under construction, with completion set for 1996.

Libraries

The Caltech library system is organized into 16 departmental or subject libraries; six are in the Millikan Library and ten are distributed throughout the campus. The libraries collectively subscribe to 4,600 journals, contain 498,812 volumes, and have extensive collections of microfilm, government documents, archives, and maps.

The Robert A. Millikan Memorial Library includes the collections of biology, chemistry, mathematics, physics, engineering, and the humanities and social sciences. The circulation and reference services are on the first floor; the microfilm and government documents collections are on the fifth floor, and the photocopy service is in the basement. The Millikan Library is open weekdays during the school year from 8 a.m. to 1 a.m., and weekends from 9 a.m. until midnight.

The library collections located elsewhere on campus include aeronautics, applied physics and electrical engineering, archives and rare books, astrophysics, chemical engineering, computer science, earthquake engineering, environmental engineering, geology, management, and public affairs. The library on-line public-access catalog includes the records of books and journals held by the Caltech Libraries. Also available on-line are the recent citations to articles in approximately 2,000 science and technology journals to which the library subscribes. Special services that are available through the Caltech libraries include computerized literature searches, document delivery, and interlibrary loans.

Beckman Institute

Opening its doors in 1990, the Beckman Institute represents a major new addition to Caltech. The mission of the scientists working there is to invent new methods, new materials, and new instrumentation for fundamental research in biology and chemistry. Their results will open the way for the application of scientific discoveries to human needs.

Campus Computing Organization

The Campus Computing Organization (CCO) was created in 1986 to address the dynamic and complex computing support needs of the distributed computing environment at the Institute. The CCO provides comprehensive support for the hundreds of personal computers in use on the campus. This includes system-selection assistance, procurement, installation, maintenance, repair, consulting, and supplies.

The CCO supports educational computing. This support includes obtaining appropriate hardware and software and a large number of personal computers for student use, and assisting in the development of effective use of computers in the educational processes. Minicomputers and workstations, including a VAX/VMS cluster and a SUN/UNIX cluster, are available at no charge for student use.

The CCO manages and maintains CITnet, Caltech's campuswide local area network. This activity includes the support of connections to local, regional, national, and international networks, the development of shared network resources, and the maintenance of a campus electronic mail system.

The Computing Information Center, located in the Jorgensen building, provides a VAX software library and four general-use microcomputer labs with computers from INTEL, APPLE, SUN, and NeXT. CCO publications include the *Caltech Computing Newsletter* and the *CCO Reference Guide*; these are available free of charge by calling (818) 395-4885.

Industrial Relations Center

The Industrial Relations Center develops and offers programs on linking emerging technologies with management strategies and practices, improving the effectiveness of manufacturing operations, developing the leadership skills of technical professionals, and encouraging new business ventures. Courses and forums are presented on campus and are open to executives and managers in technology-based organizations, and Caltech students, faculty, and staff. Fees are waived for Caltech students who participate in the Center's programs.

The Center's Management Library assists corporate clients and members of the Caltech community in locating information on managing technology, starting new business ventures, and developing the managerial skills of technical professionals.

The Center is located on campus at 383 South Hill Avenue. The latest calendar of programs or more information may be obtained by calling extension 4041.

POSTDOCTORAL APPOINTMENTS

Each year Caltech appoints a number of postdoctoral research fellows for definite terms, usually one year. The postdoctoral program generally consists of fundamental research in one of the Caltech laboratories in close association with one or more regular faculty members. Caltech is an affirmative action employer. All interested persons are encouraged to apply.

SHERMAN FAIRCHILD DISTINGUISHED SCHOLARS PROGRAM

The Sherman Fairchild Distinguished Scholars Program brings renowned scientists and scholars to Caltech. Through this program, Caltech's faculty and student body have an opportunity to be influenced in both teaching and research by the wisdom and experience of eminent world leaders in various fields. The emphasis in the program is on giving faculty and students exposure to Fairchild Scholars in all academic divisions—through discussions, seminars, lectures, and research—and establishing a forum for the exchange of ideas among Fairchild Scholars, Caltech faculty and students, and industry. Appointments are usually from three to nine months during the academic year.

UNDERGRADUATE RESEARCH

The Institute provides three principal avenues for undergraduate research: the Summer Undergraduate Research Fellowships (SURF) program, research courses for academic credit and senior theses, and research for pay under a faculty member's grant or contract. Students may combine these options, but they may not receive both pay and credit at the same time for the same piece of work. Students registering for a research course during the summer do not have to pay tuition.

Each division offers the opportunity for qualified students early in their careers to engage in research under the supervision of a faculty member. Most options offer undergraduate research courses in order to encourage participation, and students should consult listings and descriptions of opportunities. Students are encouraged to undertake research of such scope and caliber as to merit the preparation of a senior thesis. The requirements for such thesis research vary from option to option; individual option representatives should be consulted.

The Summer Undergraduate Research Fellowships (SURF) program provides continuing undergraduate students the opportunity to work on an

individual research project in a tutorial relationship with a research sponsor, usually a member of the Caltech/JPL research community, but occasionally a faculty member at another college or university. Students write research proposals in collaboration with their sponsors. Proposals and recommendations are reviewed and awards granted by the members of the SURF administrative committee. The work is carried out during a ten-week period in the summer. Students may attend weekly seminars presented by members of the Caltech faculty and JPL technical staff and may participate in luncheon round-table discussions with leaders in business, government, or academia. Students may also take part in communications workshops on technical writing, presenting an oral report, and preparing visual aids. At the conclusion of the summer, SURFers submit a written report describing the project, methods, and results of their work. On the third Saturday of October, students make oral presentations of their projects at SURF Seminar Day. About 20 percent of the students publish their work in the open scientific literature. In 1994, SURF students were paid \$3,600. Applications are available in January and are due in early March. Awards are announced in early April. To be eligible, students must be continuing undergraduates and have a cumulative GPA of at least 2.0. Students must complete the third quarter at Caltech (or at another school under a program approved by a Dean). Students must be eligible for fall term registration as of the end of the June Undergraduate Academic Standards and Honors Committee (UASH) reinstatement meeting and must not be on medical leave or under disciplinary sanction. For further information regarding this program, call the SURF Office, Room 137 Beckman Institute, (818) 395-2886.

STUDENT LIFE

Undergraduate Student Houses

The seven undergraduate student houses are situated on both sides of the Olive Walk near the eastern end of the campus. The original four—Blacker, Dabney, Fleming, and Ricketts—were built in 1931 from the plans of Mr. Gordon B. Kaufmann, in the Mediterranean style to harmonize with the adjacent Athenaeum. The other three, designed by Smith, Powell and Morgridge, were completed in 1960, and are named Lloyd, Page, and Ruddock. Each of the seven is a separate unit with its own dining room and lounge, providing accommodations for about 75 students.

Each house has its own elected officers, and has wide power to arrange its own social events and preserve its own traditions. The immediate supervision of the activities of each house is the responsibility of the house Resident Associate, generally a married graduate student or younger faculty member. All houses are under the general supervision and control of the Director of Residence Life.

In addition to the student houses, the Institute maintains two apartment buildings, two dormitories, and a number of off-campus houses. Typically two or three students share an apartment. Depending upon size, the off-campus

houses have a capacity of four to ten students. These residences are all within a short walking distance of the campus and offer students greater privacy, a different life style, and the opportunity to express their culinary creativity.

Mail is delivered daily to the student mailboxes. Students should use their mailbox number, California Institute of Technology, Pasadena, CA 91126, to facilitate handling of mail at the campus post office.

The Student Activities Center

The SAC is located in the basement of the south undergraduate housing complex and is open for student use 24 hours a day. Whether you are interested in music, art, publications, student government, gaming, photography, Ping-Pong, or simply finding a room for your group to meet in, the SAC will probably have what you need. The center also houses the South House Laundry Room, and has several study halls, a small library, a bike shop, an arcade, and a TV/VCR room—most are open 24 hours. The center also includes a coffeehouse. The SAC is open to all current members of the Caltech and JPL communities, though first priority is given to undergraduate and graduate students.

The SAC provides office space for the officers of the graduate and undergraduate student governments, working space for student publications, office and rehearsal space for musical activities, and space for many more student-oriented functions. It also offers an array of services to the community, including SAC and Winnett room reservations, and club mailbox distribution. The staff is also able to assist students who need help planning a program or coordinating a new club.

Interhouse Activities

The president of each undergraduate house represents that house on the Interhouse Committee (IHC). While the seven houses are generally autonomous, the IHC exists to ensure that conflicts between houses do not develop and to deal with matters that affect the houses in general. In particular, the IHC is responsible for the freshman selection process by which the houses choose their members.

In conjunction with the athletic department, the IHC conducts two intramural sports programs: the Interhouse and Discobolus trophy competitions. (These are described below under *Athletics*.) Other interhouse activities include parties, usually involving two or three houses, which are held once or twice each term.

Faculty-Student Relations

Faculty-student coordination and cooperation with regard to campus affairs are secured through the presence of students on faculty committees, by faculty-student conferences, and by other mechanisms, such as course ombudsmen.

Freshman Advisers

Each member of the freshman class is assigned a faculty adviser. The adviser takes an interest in the freshman's progress and provides advice on any questions or problems that the freshman may have.

Option Advisers

Each member of the three undergraduate upper classes is assigned an option adviser, a faculty member in the option in which the student is enrolled. The adviser takes an interest in the student's selection of courses and progress

toward a degree, and, eventually, in assisting the student toward satisfactory placement in industry or in graduate school. Normally, the association between student and adviser is established before the beginning of the sophomore year and continues through graduation.

Athletics

Caltech supports a well-rounded program of competitive athletics. As a member of the NCAA Division III and the Southern California Intercollegiate Athletic Conference, intercollegiate competition is carried out in nine men's sports and five women's sports with teams such as Claremont-Mudd-Scripps, LaVerne, Occidental, Pomona-Pitzer, Cal Lutheran, Redlands, and Whittier. Individual athletes and teams who distinguish themselves in conference competition earn the privilege of participating in NCAA regional and national championships.

Caltech also sponsors vigorous programs of club sports and intramural competition. Club sports include football, ultimate Frisbee, ice hockey, and women's soccer. Intramural competition consists of residence house teams battling for championships (and bragging rights) in flag football, soccer, swimming, ultimate Frisbee, basketball, volleyball, tennis, track and field, and softball. A full 33 percent of Caltech undergraduates participate in intercollegiate athletics, and over 80 percent participate in some form of organized athletic competition each year.

Outdoor athletic facilities include a football field, an all-weather running track, a soccer field, baseball and softball diamonds, eight tennis courts, and two 25-meter swimming pools. Indoor facilities include two full-size gymnasiums for basketball, volleyball, badminton, and gymnastics; four racquetball courts; two squash courts; a 4,000-square-foot weight room; and a large multipurpose room for dance/aerobics, fencing, and martial arts. In addition, Caltech owns six Flying Junior sailboats that serve both instructional and competitive interests.

ASCIT

The undergraduate student body forms the membership of a corporation known as the Associated Students of the California Institute of Technology, Inc., or ASCIT. Governed by a board of directors consisting of nine elected officers, ASCIT is involved in many aspects of student life. ASCIT subsidizes the Friday-night ASCIT movies, a weekly presentation of late-vintage popular films. ASCIT also oversees publication of the student newspaper, a directory, the yearbook, a research opportunities handbook, a course review, and a literary magazine.

Besides overseeing the many student publications and coordinating activities and policies, the ASCIT Board of Directors administers the corporation's finances. ASCIT sponsors a wide variety of special-interest clubs and programs, such as the student shop and the Caltech Alpine Club.

The student government is active in campus affairs. The student members of each standing faculty committee ensure that undergraduate opinion is considered seriously. Excellent informal relations between students and faculty and between students and administration promote mutual concern and goodwill. Student-faculty conferences are held from time to time, and serve a very useful purpose in promoting cooperation and communication.

Graduate Student Council

The Graduate Student Council performs essentially the same functions for the graduate students that the Board of Directors of ASCIT does for the undergraduates.

Honor System

The Honor System, embodied in the phrase "No member shall take unfair advantage of any member of the Caltech community," is the fundamental principle of conduct for all students. More than merely a code applying to conduct in examinations, it extends to all phases of campus life. It is the code of behavior governing scholastic and extracurricular activities, relations among students, and relations between students and faculty. The Honor System is the outstanding tradition of the student body, which accepts full responsibility for its operation. The Board of Control, which is composed of elected student representatives, is charged with monitoring the Honor System for undergraduates, while the Graduate Review Board performs the same function for graduate students. Suspected violations are reported to the appropriate board, which conducts investigations and hearings with strict confidentiality. If necessary, recommendations for actions are made to the deans.

Student Body Publications

The publications of the student body include a weekly paper, *The California Tech*; a yearbook; a literary magazine; a student handbook, which gives a survey of student activities and organizations and serves as a campus directory; an annual review of the quality of teaching in the various courses; and a handbook of available research opportunities. These publications are staffed entirely by students. Through them, ample opportunity is provided for any student who is interested in obtaining valuable experience not only in creative writing, photography, art work, and in the journalistic fields of reporting and editing, but in the fields of advertising and business management as well.

Musical Activities

The Institute provides qualified directors and facilities for a wind ensemble, a jazz band, several choral music groups, a symphony orchestra (jointly with Occidental College), a number of small chamber ensembles, and a weekly interpretive music class. A series of chamber music concerts is given on Sundays in Dabney Lounge. There are other musical programs in Beckman and Ramo Auditoriums.

Student Societies and Clubs

There are at the Institute more than 70 societies and clubs covering a wide range of interests. The American Chemical Society, the American Institute of Chemical Engineers, the American Society of Mechanical Engineers, and the Society of Women Engineers all maintain active student branches.

The Institute has a chapter (California Beta) of Tau Beta Pi, the national scholarship honor society of engineering colleges. Each year the Tau Beta Pi chapter elects to membership students from the highest-ranking eighth of the junior class and the highest fifth of the senior class.

Special interests and hobbies are provided for by a broad and constantly changing spectrum of clubs, some informal but most formally recognized by either ASCIT or the Graduate Student Council.

Student Shop

The Student Shop is housed in the Physical Plant complex. It is equipped by the Institute, largely through donations, and is operated by the students. Here qualified students may work on private projects that require tools and equipment not otherwise available. All students are eligible to apply for membership in the Student Shop; applications are acted on by a governing committee of students. Members not proficient in power tools are limited to hand tools and bench work; however, instruction in power tools is given as needed. Yearly dues are collected to provide for maintenance and replacement.

The Caltech Y

The Y is located on the upper floor of the Winnett Student Center. Run by undergraduate and graduate students and supported by endowments and Caltech's friends, it builds bridges between science and just about everything else: culture, politics, social consciousness, recreation, ethics, humanism, business, and leadership activities.

Pluralistic and nonsectarian, the Caltech Y is open to everyone, and extends its hospitality to students, faculty, and staff, no strings attached. It makes interest-free loans, sets up low-cost trips and backpacking adventures, subsidizes theater and sports tickets, administers the annual \$3,000 Studenski travel award, has a copy machine and a TV/VCR, provides free outdoor campus concerts, runs a used-textbook exchange and the lost and found, provides a meeting room for campus organizations, rents camping equipment, sponsors guest speakers of national fame and local significance, plans many social and recreational activities, supports campus and community services, and coordinates the annual Leadership Institute. The Y offers a friendly atmosphere and a free cup of coffee with no membership lists, no fees, and no catches.

Ombudsperson

The Ombudsperson provides informal assistance in resolving intracampus conflicts, disputes, and grievances and promotes fair and equitable treatment within the Institute. Any member of the Caltech community (students, faculty, and staff) may receive confidential and independent assistance from the Ombuds Office.

Religious Life

In addition to several groups active on campus such as the Caltech Christian Fellowship, the Newman Club, and Hillel, houses of worship of many different denominations are within walking distance or are only a short drive from campus.

Public Events

Beckman and Ramo Auditoriums serve as the home of the professional performing arts program on the Caltech campus. Each year, more than 150 public events, ranging from the traditional Earnest C. Watson Caltech Lecture Series to dramatic, film, and concert attractions (featuring world-renowned artists), are presented at Caltech. Tickets, often with discounts available, are offered to Caltech students for all events in Beckman and Ramo Auditoriums. Under the auspices of the Office of Public Events are a ticket agency (handling tickets for Caltech events) and the campus Audio-Visual Services Unit (where projectors, tape recorders, and video equipment may be obtained).

Bookstore

The student store serves students, faculty, and staff, and is located on the ground floor of the Winnett Student Center. Owned and operated by the Institute, the store carries a complete stock of required books and supplies, reference books, greeting cards, sweatshirts, and sundries as well as an extensive collection of paperbacks and other books of general interest.

STUDENT HEALTH

Medical Examination

Before initial registration, each applicant is required to submit a Report of Medical History and Physical Examination on a form that is sent at the time of notification of admission. Students who have been absent from the Institute for two years or more may also be required to submit this report.

Student Health Services

The Archibald Young Health Center provides the following services for undergraduate and graduate students: (1) office consultation and treatment of most medical problems by physicians and nurse practitioners, physician visits by appointment only and at prescribed hours; (2) laboratory tests, X rays, and consultations as ordered by the medical staff; (3) routine medications, prescription drugs, and other supplies at cost; (4) dermatology and orthopedic clinic visits, which are available on a weekly and bimonthly basis and are by appointment only.

Staff and faculty are seen at the Health Center for on-the-job injuries only.

Student Counseling Service

A staff of mental health professionals provides individual, group, and crisis counseling to undergraduates and graduates at no cost. Students are seen at the center with various concerns, such as depression, stress, grief, relationship difficulties, and self-esteem issues, among others. The center also offers workshops and training on psychologically related topics, a substance-abuse prevention program, psychiatric consultation, and referrals to other professionals in the community. Counseling sessions are confidential.

Student Health Insurance

In addition to services available at the Health Center, coverage under a comprehensive medical insurance plan is provided to all full-time students and, during the summer, to students registered for the previous term. This plan covers (with a small deductible) hospital and surgical costs, as well as costs of outpatient treatment for injury or illness. Benefits continue for 12 months, on and off campus, provided that students remain enrolled through the school year.

Medical Coverage of Dependents

A student's spouse and all unmarried dependent children under 19 years of age are eligible to purchase coverage under the medical insurance plan. In addition, student spouses may enroll for a modest fee in a plan that makes them eligible for all services offered at the Health Center. Children are not eligible

for these services. Application for dependents' insurance should be made at the time of registration for any one school term. Rates for dependents' coverage are available at the Health Center.

Medical Responsibility of the Student

The responsibility for securing adequate medical attention in any contingency, whether emergency or not, is solely that of the student, whether the student is residing on or off campus. Apart from providing the opportunity for consultation and treatment at the Health Center as already described, the Institute bears no responsibility for providing medical attention.

Any expenses incurred in securing advice and attention in any case are entirely the responsibility of the student, except as already specified. To secure payment from the insurance plan and substantiate a claim for services rendered away from the Institute, the student is required to retain bills for such services and present them with appropriate documentation when medical claims are made. The Health Center office staff may be called upon for advice on the preparation of claim forms.

CAREER DEVELOPMENT

Career Services

The Career Development Center provides assistance to students, research fellows, and alumni in the areas of career and life planning and employment. Personal assistance is available in career choice, résumé preparation, interviewing, graduate school application, and job search strategies. Career and vocational interest tests can also be taken.

Premedical and Graduate School Advising

Students planning to apply to medical school can make use of many resources and individual counseling in the Career Center. Medical school catalogs and statistical information on successful Caltech medical school matriculants are among the materials available. Through the ASPIRE program, students can obtain relevant medical research experience, and there is a comprehensive list of available health-related volunteer opportunities. Counselors can help students throughout the process from freshman year to graduation, and will work closely with students to help ensure their success.

While students planning to apply to graduate school and other professional programs do not have to plan so far ahead, the Career Center provides many resources for these programs as well. Important to all students who will seek further education is the Letter of Recommendation service for application to graduate or professional school.

Campus Recruiting Program

Through the campus recruiting program, on-campus employment interviews are arranged with about 200 companies that seek full-time employees with B.S., M.S., Eng., or Ph.D. degrees. All graduating students, research fellows, and recent alumni are eligible to participate.

Career Day

Each February, between 35 and 40 different companies send representatives to campus for a day of informal discussion with students. Most bring informative displays and literature, and many of the representatives are Caltech alumni themselves.

Career and Employment Information Library

This resource library contains college and graduate school catalogues, scholarship and fellowship information, company literature, employer directories, career literature, audio-visual resources, and current employment opportunities.

Day on the Job

Students participating in the Day on the Job program have the opportunity to visit Caltech alumni on the job to discuss career options and to tour company facilities.

Part-Time Employment

Job listings (both on and off campus) are maintained in the Employment Information Library for students seeking part-time employment or work-study employment during the school year. Part-time employment provides students with the opportunity to help finance their education and to gain relevant work experience. (See also Self-Help: Employment and LOANS, under Financial Aid in Section 3.)

A Summer Program in Research or Engineering (ASPIRE)

The ASPIRE program provides opportunities for students at all levels to work in private industry, government laboratories, educational institutions, and other nonprofit agencies. Many of the advertised positions are with Caltech alumni. Students are encouraged to see a career counselor to receive individual help in defining their summer work interests, résumé preparation, and job search strategies. Application times for specific positions may be as early as December or as late as May. Many employers help students with transportation and summer housing. Students should come in during the fall term to get on the ASPIRE mailing list.

Annual Report

The office surveys all graduating students and compiles a detailed annual report that provides information on the plans of graduating students. Included are graduate schools attended, types of employers chosen, and salary statistics. (See Employment Experience of Recent Graduates, below.)

All students are encouraged to visit and make use of the Career Development Center early in their student careers.

INTERNATIONAL STUDENT PROGRAMS

The office of International Student Programs (ISP) assists international students and their dependents in adjusting to life at Caltech and in the United

States. The office develops programs that encourage interactions among international and domestic students.

The director serves as an informal adviser and resource for international students and visiting scholars. The office assists international students with their personal, financial, legal, career, and health-related needs, in cooperation with other Student Affairs offices. International students with a grievance or concern about the honor system or sexual harassment may also contact the director for assistance. All immigration-related matters for international students and their dependents are referred to the ISP.

The ISP plans and promotes programs and activities that foster international and cross-cultural awareness on campus. The director is a resource person for students and groups planning multicultural events. The office holds information sessions throughout the year to update international students on taxes, immigration, regulations, and other appropriate topics.

The office issues international student and teacher ID cards for those traveling abroad. The ISP also assists students who are traveling abroad with cross-cultural and adjustment information, obtaining State Department travel information sheets, and securing visas. Information on short-term study or travel opportunities abroad, as well as travel guides, are available in the office.

The ISP offers English-as-a-second-language classes for graduate students and visiting scholars throughout the year. More information on these classes is available in Section Five, the course listing of this catalog.

AUDITING COURSES

Persons not regularly enrolled in the Institute may audit courses, if they obtain the consent of the instructor in charge of the course, and the Dean of Undergraduate Students or Dean of Graduate Studies, as appropriate, and pay the required fee. Auditing fees for nonacademic staff members may be covered by the Institute Tuition Support Plan. Auditing cards may be obtained in the Registrar's Office.

Regularly enrolled students and members of the faculty are not charged for auditing. Auditing cards are not required, but the instructor's consent is necessary in all cases. No grades for auditors are reported to the Registrar's Office, and no official record is kept of the work done.

GRADES AND GRADING

All permanent grades recorded for freshmen will be either P, indicating passed, or F, indicating failed. The temporary grade of I (Incomplete) may be used as it is for other students. The temporary grade of E may be given to freshmen as described below for other students. It may also be used in a continuing course

if the performance of the freshman concerned is not significantly below the current passing level, and if the student is maintaining a steady and substantial improvement; an E given for this reason will be automatically changed to a P if the freshman earns a P for the following term, and will change to an F if the student receives an F for the following term. The grade may not be used in this way for two successive terms nor for the last term of the course.

If a freshman is enrolled in a course in which the instructor gives letter grades, the Registrar will record P for all passing grades. No grades given to a freshman will be used in computing the cumulative grade-point average.

For all students beyond the freshman year, graduate and undergraduate, letter grades will ordinarily be used to indicate the character of the student's work: A, excellent; B, good; C, satisfactory; D, poor; E, conditional; F, failed; I, incomplete. P may also be used as described below under *Pass/Fail Grading*. In addition, grades of A+ and A-, B+ and B-, C+ and C-, and D+ may be used for undergraduates only. In any situation in which no grade is reported, the grade shall be assumed to be F.

At their discretion, instructors may give students who have not completed their work for a course by the end of the term a grade of E. If the instructor does not specify a date on the grade report sheet for completion of the work, students receiving an E will have until Add Day of the following term to complete their work for that course. Instructors may, however, require the work for the course to be completed by an earlier date. If a student receives an E and does not complete the work by the date specified by the instructor or by Add Day, the grade will be changed to an F. Adequate time must be afforded to instructors to grade the work and to submit the final grade to the Registrar.

With the written permission of the instructor a student may extend the E grade past Add Day of the following term, but doing so will cause an additional E grade to be registered. Each additional extension of the E will be until the date specified by the instructor or until Add Day of the following term, but in each case will require the written permission of the instructor and the registering of an additional E grade.

After an undergraduate student has been awarded the grade of E six times, he or she is not eligible to receive E grades in any subsequent term. A petition for an E in a subsequent term may be approved by the Undergraduate Standards and Honors Committee (UASH) in an exceptional case. Such a petition requires the support of the instructor and the Dean or Associate Dean of Students.

The grade I is given only in case of sickness or other emergency that justifies noncompletion of the work at the usual time, and its use must be approved by the Dean of Students or by the Dean of Graduate Studies. The time period within which the grade of I is to be made up should be indicated on the grade sheet. As in the case of the E grade, the grade of I shall not be considered in calculating a student's grade-point average.

"Failed" means that no credit will be recorded for the course. The units, however, count in computing the student's grade-point average, unless the course was taken on a pass/fail basis. He or she may register to repeat the subject in a subsequent term and receive credit without regard to the previous grade, the new grade and units being counted as for any other course, but the

original **F** and units for the course remain on the record. An **F**, once recorded, will be changed to a passing grade only on the basis of error. Such a change may be made only with the approval of the Undergraduate Academic Standards and Honors Committee or of the Graduate Studies Committee, which ever has jurisdiction.

Each course at the Institute is assigned a number of *units* corresponding to the total number of hours per week devoted to that subject, including classwork, laboratory, and the normal outside preparation. Credits are awarded as shown in the following table.

<i>No. of Units</i>	A+	A	A-	B+	B	B-	C+	C	C-	D+	D	F
1	4	4	4	3	3	3	2	2	2	1	1	0
2	9	8	7	7	6	5	5	4	3	3	2	0
3	13	12	11	10	9	8	7	6	5	4	3	0
4	17	16	15	13	12	11	9	8	7	5	4	0
5	22	20	18	17	15	13	12	10	8	7	5	0
6	26	24	22	20	18	16	14	12	10	8	6	0
7	30	28	26	23	21	19	16	14	12	9	7	0
8	35	32	29	27	24	21	19	16	13	11	8	0
9	39	36	33	30	27	24	21	18	15	12	9	0
10	43	40	37	33	30	27	23	20	17	13	10	0
11	48	44	40	37	33	29	26	22	18	15	11	0
12	52	48	44	40	36	32	28	24	20	16	12	0
13	56	52	48	43	39	35	30	26	22	17	13	0
14	61	56	51	47	42	37	33	28	23	19	14	0
15	65	60	55	50	45	40	35	30	25	20	15	0

Grade-Point Average is computed by dividing the total number of credits earned in a term or an academic year by the total number of units taken in the corresponding period. Units for which a grade of **F** has been received are counted, even though the course may have subsequently been repeated. Grades of **P** or **F** obtained in courses graded on a pass/fail basis are not included in computing grade-point average.

Pass/Fail Grading: The following regulations apply:

- Freshmen receive pass/fail grades in all courses by virtue of their classification as freshmen by an admissions committee or, for students whose status after the first year is uncertain, by the Undergraduate Academic Standards and Honors Committee.
- All other students, undergraduate and graduate, in courses with numbers under 200 will receive letter grades unless the course is designated "graded pass/fail" or unless, when it is allowed, the student files with the Office of the Registrar a completed Pass/Fail Course Selection Card not later than the last day for dropping courses.
- In courses with numbers 200 or greater that are not designated either "graded pass/fail" or "letter grades only," the instructor may decide separately for each student what class of grades to use.

- All research courses shall be designated “graded pass/fail.” All reading courses, seminar courses, or other courses that do not have a formal class structure shall be designated “graded pass/fail” unless the option secures an exemption from the Curriculum Committee or the Graduate Studies Committee and from the Faculty Board.
- A grade on the pass/fail system should be P if it would have been a D or better on the letter grade system. (Note that there is no D- grade.) The standards of failure in courses in which only pass/fail grades are used should be the same as they would be if the course were letter graded.
- Any instructor may, at his or her discretion, specify prior to preregistration that his or her course, if not classified by the above regulations, is to be graded on a “letter grades only” basis or is to be graded pass/fail only, subject to possible review by the responsible option. The Registrar must be notified of such specification two weeks before the beginning of preregistration.
- Each term any student may select, subject to such requirements as may be imposed by the option, one elective course in which he or she is to be graded on a pass/fail basis if it is not designated as “letter grades only” and is not specifically required for the degree in his or her option. To make this election, a completed Pass/Fail Course Selection Card must be submitted to the Office of the Registrar on or before the last day for dropping courses that term. This election may be reversed or reinstated at any time before the deadline. The election must be approved and the card signed by the student’s adviser. The instructor must be notified and should sign the card to indicate that this has been done; the instructor must allow any eligible student to make this election.
- Of the units offered to satisfy the requirements for the Bachelor of Science degree, no more than 81 may be in courses graded pass/fail because of the student’s election.

NOTICES AND AGREEMENTS

Accreditations and Authorizations

The California Institute of Technology is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges. In addition, the Institute is authorized by the California State Department of Education, Office of Private Postsecondary Education, to operate as a private postsecondary educational institution and, by the same agency, to train veterans in the programs of the Veterans Administration.

In specific degree programs the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology has accredited our B.S. programs in chemical engineering and in engineering and applied science. Further, the Committee on Professional Training of the American Chemical Society has approved our B.S. program in chemistry.

The documents describing these accreditations and authorizations are on file and may be inspected in the office of the Registrar, the Undergraduate Admissions Office, or the Graduate Studies Office.

Nondiscrimination

The California Institute of Technology is committed to the concept of equal educational opportunity for all. Individuals are considered for admission to student status, and all services, facilities, programs, and activities are administered in a nondiscriminatory manner without regard to (a) race, religion, color, sex, sexual orientation, parental or family or marital status, national or ethnic origin, or nondisqualifying handicap; or (b) any other factor which is, in fact, irrelevant to student status or to the rendering of services, facilities, programs, or activities. In addition, the many Federal and State laws, and regulations issued thereunder, which bar discrimination in educational programs and related activities, are also applicable.

The grievance procedure described below is the Institute's official avenue for the redress of grievances of alleged discrimination. The Vice President for Student Affairs is the Institute's student grievance ombudsman. Informal assistance and consultation about possible discrimination or about grievance procedures may be obtained from the Assistant Vice President for Student Affairs, Dean of Students, the Associate Dean, the Dean of Graduate Studies, the Director of Residence Life, or the Ombudsperson.

Harassment

The Institute attempts to maintain a climate of mutual respect among all members of the community. Harassment of any kind is inappropriate and strongly discouraged. Any member of the Caltech community who feels that he or she has been harassed should lodge a complaint promptly. An official policy statement regarding sexual harassment and written complaint procedures are available from the Dean of Students, the Dean of Graduate Studies, or the Vice President for Student Affairs. The Assistant Vice President for Student Affairs is the campus Title IX coordinator for students. The Vice President for Student Affairs is the ombudsman for student grievances (see below). All members of the Caltech community may consult with their supervisors, the Ombudsperson, personnel in the Employee Assistance Program, or other individuals deemed appropriate, regarding harassment.

Student Grievance Procedure

Caltech provides a variety of routes, most of them informal, by which student complaints are brought to consideration and resolution. In academic matters, for example, they may begin with teacher-student conversations and may extend to the Deans, the Division Chairmen, the Registrar, or to various committees having faculty and student members. Undergraduate housing matters are dealt with by house officers, the Resident Associates, the IHC, and the Director of Residence Life. The Dean of Graduate Studies is often of assistance in resolving graduate student matters. As the Institute officer responsible for the supervision of many Student Affairs offices, the Assistant Vice President for Student Affairs may be the appropriate person to appeal to in case of unresolved complaints involving those offices. The Ombudsperson, who acts as an ombudsman for the entire Caltech community, may be consulted confidentially about any problem. The Graduate Student Council and ASCIT may become

involved in important complaints, and sometimes ad hoc groups are formed to make recommendations.

The grievance procedure is intended to deal with complaints for which reasonable efforts by the available informal routes have not led to an acceptable resolution, and which do not fall within the jurisdiction of the Honor System.

The first step in this procedure is to consult with the Vice President for Student Affairs, who, as the ombudsman for student grievances, will work with the grievant in attempting to resolve the matter. If the grievant is dissatisfied with the results, he or she may appeal the case to the Grievance Committee. This committee consists of two members of each of the categories—undergraduate students, graduate students, faculty, and administration—appointed, respectively, by the ASCIT Board of Directors, the Graduate Student Council, the Chairman of the Faculty, and the President of the Institute. The Chairman of the Committee, nonvoting except in the case of a tie, is also appointed by the President. The grievant may present the case to the Committee, present documents in support of the case, request that witnesses be called, and be assisted by another member of the Caltech community who is not an attorney. The Committee will present its conclusions and recommendations to the President of the Institute, and the President's decision will be final. A complete statement of the student grievance procedure is available from the Vice President for Student Affairs, the Dean of Students, the Dean of Graduate Studies, or the Ombudsperson.

Employment Experience of Recent Graduates

A survey was made at the end of June 1993 of the future plans of those students who had graduated at the commencement ceremony.

Of those receiving the B.S. degree about whom Caltech has definite information, 61 percent had been accepted for admission to graduate school for further education, 16 percent had accepted employment, 15 percent were uncommitted, and 5 percent had other plans. The average salary of those accepting employment was \$2,893 per month. At the M.S. level, 78 percent were continuing in graduate school, 13 percent were employed at an average salary of \$3,639 per month, 4 percent were uncommitted, and 4 percent had other plans. Of those receiving the Ph.D. degree, 39 percent were employed in industrial R&D with an average salary of \$4,988 per month, 51 percent were employed as faculty or research fellows, 4 percent were uncommitted, and 4 percent had other plans.

Student Retention and Persistence Rates

Most undergraduates enter Caltech at the freshman level. Of the 232 freshmen enrolled during the 1992/93 academic year, 219 have reenrolled in the first term of the 1993/94 academic year and are progressing, yielding a persistence rate of 94 percent. Of the 216 freshmen enrolled during the 1987/88 academic year, 165 graduated by June 1993, yielding a graduation rate for this group of 76 percent. At the graduate level, 91 percent of entering students graduate with the degree of either Master of Science or Doctor of Philosophy or, occasionally, both.

Student Patent and Computer Software Agreement

Students at Caltech have many opportunities to work in laboratories, in shops, or with computers, sometimes on individual projects and sometimes as part of a group activity. It is not unusual under these circumstances for inventions to be made, or computer software (including programs, databases, and associated documentation) to be written, and it is important that the student's rights in patents on inventions and in computer software he or she may have made or written be protected. The Institute's policy generally is to reserve to itself rights in inventions and computer software made by faculty and staff members with the use of Institute facilities or in the normal course of their Institute duties. The student's position is different, however, and students generally retain all rights except in inventions or computer software made under circumstances such that rights clearly belong to the Institute or to the sponsor of the research. In order to clarify this situation and to protect the rights both of the student and of the Institute, each entering student is asked to sign the following agreement:

1. The Institute agrees that I shall retain all rights in inventions and computer software made or written by me except when such inventions are first conceived or reduced to practice or such computer software written:
 - 1.1 in the course of the performance of work as a paid employee of the Institute;
 - 1.2 in the course of independent student research financed by or otherwise obligated to an outside grant or contract to the Institute or financed by a grant from the Institute;
 - 1.3 or when they arise out of work in the research program of an academic staff member.
2. The Institute agrees that rights of all other inventions or computer software made or written by me with the use of Institute facilities are to be retained by me, except for computer software which is written in connection with or used in the educational program of the Institute (e.g., course work, homework, theses), for which the Institute shall obtain an irrevocable royalty-free, nonexclusive license, with the right to grant sublicenses, for any purpose whatsoever.
3. I agree to notify the Institute promptly of any discovery, innovation, or invention that is first conceived or first actually reduced to practice, or computer software first written, under the conditions of paragraphs 1.1 or 1.2 or 1.3 above and computer software written in connection with or used in the educational program of the Institute under the conditions of paragraph 2 above.
4. I agree to assign to the Institute or its nominee all rights in the United States and foreign countries to inventions and computer software made or written under the conditions of paragraphs 1.1 or 1.2 or 1.3 above and to supply all information and execute all papers necessary for the purpose of prosecuting all patent applications, or registering copyrights in or otherwise protecting such computer software, and fulfilling obligations that may arise from such inventions or computer software. The Institute will bear the expenses for such patent applications or copyright registrations or for obtaining such other protection.

It is understood that the student will share in the same manner as a member of the academic staff such royalty income from patents or computer software as the Institute may receive on inventions assigned to it, or computer software assigned or licensed to it, as a result of this agreement.

It is also understood that the Institute relies on the foregoing agreement when it signs contracts with others and obligates itself with respect to discoveries, innovations, or inventions or computer software made or written in the course of research conducted at the Institute under such contracts.

Access to Student Records

The following constitutes the policy of the California Institute of Technology regarding access to student records:

1. The Institute maintains educational records for each student that include name, address, student identification number (including Social Security number), information on parents, guardian, and spouse, general information on academic status at the Institute, previous school data, results of standardized admissions examinations, courses previously taken or being taken, credits, and grades. Applicants for Financial Aid have an additional file holding those records.
2. The Registrar of the Institute is responsible for maintaining all of these educational records, except for those involving Financial Aid. They are available to the Registrar, to the Vice President for Student Affairs, to the Dean of Graduate Studies, to the Dean of Students, to the Director of Financial Aid, to the faculty of the Institute, and to their respective staffs for the normal academic and business purposes of the Institute. Records involving Financial Aid are maintained by the Director of Financial Aid, and are available to the Director and staff, to the Dean of Graduate Studies and staff, to the Faculty Committee on Scholarships and Financial Aid, and to the Faculty Committee on Graduate Study, for the purpose of granting and administering the Institute's Financial Aid program. Except as authorized by federal or state law or regulation, none of these educational records nor any personally identifiable information contained therein, other than directory information (see below), will be made available to anyone else, other than the student, without the written consent of that student. Where consent is required and given, the student, upon request, will receive a copy of the records to be released. The Institute will keep a record, available to the student and kept with his or her file, of all persons and organizations, other than those authorized within the Institute, requesting or obtaining access to the files. This record will indicate specifically the legitimate interest that each person or organization obtaining access to the records has in such records.
3. Students are allowed access to their educational records as follows: A student may inspect his or her academic transcript during normal working hours. To see other records, the student must provide a written request to the Registrar or to the Director of Financial Aid or to the Dean of Graduate Studies or to the Dean of Students, or their deputies, as appropriate.

A mutually convenient time will be arranged within 10 working days after receipt of the request for the student to examine the records in his or her file. At that time the student may examine all educational records in the file with the exception of those specifically exempted by Part 99 of Title 34 of the Code of Federal Regulations. The student may obtain copies of any of the records available to him or her; the cost will be 44 cents for the first page copied and 12 cents for each additional page. All reasonable requests for explanations or interpretations of the educational records will be honored, and if inaccurate, misleading, or otherwise inappropriate data are found in these records, they will be promptly corrected or deleted. The student also has the right to insert into the records a written explanation respecting the contents of such records. If the student and the Registrar, or the Director of Financial Aid, or the Dean of Graduate Studies, or the Dean of Students, or their deputies, do not agree on any item contained in the educational records, the student may submit a written request to the Provost for a hearing to challenge the content of the records. The Provost will schedule such a hearing within 30 days after receipt of the request and will notify the student at a time reasonably in advance of the hearing of its date, time, and place. The hearing will be before a Board composed of the Provost, the Vice President for Student Affairs, or their designated alternates, and at least one disinterested member of the faculty, who shall be appointed by the chairman of the Faculty Board. None of those hearing the challenge may have a direct interest in the outcome. The student will be afforded a full and fair opportunity to present evidence relevant to the issues raised and may be assisted or represented by individuals of his or her choice at his or her own expense, including an attorney. The decision of the board on the correctness of the educational record, as determined by majority vote, will be in writing, will be rendered within 10 days after the conclusion of the hearing, and will be final. This decision will be based solely upon the evidence presented at the hearing and will include a summary of the evidence and of the reasons for the decision. If, as a result of the hearing, the Institute decides that the information in the files is inaccurate, misleading, or otherwise in violation of the privacy or other rights of the student, the Institute shall amend the records accordingly and so inform the student in writing. However, if, as a result of the hearing, the Institute decides that the information is not inaccurate, misleading, or otherwise in violation of the privacy or other rights of a student, it shall inform the student of the right to place in the educational records a statement commenting on the information in the records and/or setting forth any reasons for disagreeing with the decision of the Institute.

4. The Institute considers the following to be directory information: a student's name, address, telephone listing, date and place of birth, major field of study, participation in officially recognized activities and sports, weight and height if a member of an athletic team, dates of attendance, degrees and awards received, thesis title, home town, and most recently attended educational agency or institution. Directory information is made generally available to requestors. Any student may, however, have part or all of this information withheld by notifying the Registrar in writing

no later than 30 days after the commencement of classes in the academic year. That information will then be withheld for the balance of that academic year. If the information is to be withheld in subsequent years, new requests must be filed.

5. A student will not be required to waive any rights regarding access to educational records. However, a student may voluntarily waive right of access to confidential statements made by third parties respecting admission to educational agencies or institutions, applications for employment, or the receipt of an honor or honorary recognition. In case of waiver, the confidential statements will be used solely for the purposes for which they were specifically intended, and the student will, upon request, be notified of the names of all persons making such confidential statements. If a student should desire to so waive right of access, so as to facilitate the obtaining of a confidential statement of this nature, he or she should contact the Registrar for the necessary form.
6. The Institute reserves the right to destroy from time to time any and all educational records that it maintains on a student, except to the extent that the law requires their maintenance for a longer period of time. However, records, access to which has been requested, are not allowed to be and will not be destroyed until such access has been granted, or a decision to deny such access has been arrived at as described in (3) of this section.

Academic Records of Veterans

The Institute maintains a written record of a student's previous education. This is part of the student's permanent record card, and included on this is a summary of any prior college-level education. A true copy of a transcript of college-level work at other institutions is maintained as part of the student's record. The amount of credit granted for prior training is indicated on the student's permanent record card and, where this results in the shortening of a required training period in the case of a veteran, the Veterans Administration is notified.

The Institute's permanent record card for each student shows the progress that student is making at the Institute. There is a record of each course enrolled in each term with a grade recorded for the course. The total number of units earned is kept so that the record will show continued progress toward the degree sought. The final grades are recorded at the end of each term of the school year, and the accumulative permanent record has on it grades for all subjects taken at the Institute. No student is allowed to enroll repeatedly in a course and withdraw without penalty. If a student enrolls in a course, he or she is expected to complete the course or receive a failing grade unless he or she withdraws from the course prior to the deadline for dropping courses. All students must maintain a minimum load equivalent to 12 quarter hours each term; no student may drop courses that would bring him or her below this level of effort. At any time when the student falls below the required number of units, fails to receive satisfactory grades, or engages in unsatisfactory conduct, the record is marked to indicate this, and the student is forbidden to continue at the Institute.

The grading system of the Institute is A (excellent) to F (failed). An A is equivalent to 4.0 and an F to 0.0. A student must maintain a grade-point average of 1.4 in any term and at least 1.9 in each full year in order to be able to enroll in a successive term at the Institute. A minimum 1.9 overall grade-point average is required for graduation. A student who drops below the required averages (1.4 for a given term or 1.9 for the year) is dismissed and must petition for reinstatement. A student may be reinstated by the Undergraduate Academic Standards and Honors Committee and, if so, is required to earn a 1.9 GPA during the immediately following term. The Veterans Administration is notified when a veteran is academically dismissed or is making unsatisfactory progress toward a degree. Since the Institute requires all students to carry a minimum full load that corresponds to 12 quarter hours each term, any student who finishes a term in good standing is considered to have made satisfactory progress. If a student withdraws from a course before the final date for withdrawal, no grade is given in that course. The time spent in school counts, however, and the student may be considered to have not made satisfactory progress in the event of such withdrawal.

In order to withdraw from any course a student must submit a withdrawal card. This shows the date on which the student was last in official attendance in that course. If a student reenrolls in that course and successfully completes it, that fact will be noted on his or her permanent record card. Since the Institute does not offer resident courses not leading to a standard college degree, no attendance records are maintained for such courses.

STUDY AND RESEARCH

AERONAUTICS

The Guggenheim Aeronautical Laboratory, the Karman Laboratory of Fluid Mechanics and Jet Propulsion, and the Firestone Flight Sciences Laboratory form the Graduate Aeronautical Laboratories, widely known as GALCIT. In this complex are housed the Applied Mathematics group, the Jet Propulsion Center, and the Hydrodynamics Laboratories, as well as the various disciplines making up the broad field known as Aeronautics.

Areas of Research

Aeronautics has evolved at Caltech from a field of basic research and engineering, primarily related to the development of the airplane, into a wide discipline encompassing a broad spectrum of basic as well as applied problems in fluid dynamics and structural mechanics. Research at GALCIT has traditionally pioneered exploration of new areas that have anticipated subsequent technological demands. Thus, for example, research in transonic, supersonic, and hypersonic fluid mechanics began before the advent of supersonic flight and the development of vehicles for re-entering the earth's atmosphere. Research in plasma dynamics began before the importance of controlled fusion was recognized; in turbulent mixing, before the appearance of the chemical laser, the need for optimizing combustion, and the drive to reduce jet noise. Similarly, research on problems of shell structures began before their widespread use in aircraft, and undoubtedly stimulated this development. Work in fracture mechanics of polymers was initiated before composite materials became an important component of aerospace structures. This tradition places a high premium on an in-depth understanding of fields both closely and remotely related to the behavior of fluids and structures, such as physics, applied mathematics, geophysics, materials science, electronics, and even astrophysics. As a consequence, GALCIT students are known and sought after for their broad yet intense education and for their ability to deal with new and challenging problems.

Major areas of study and research currently pursued by aeronautics students at Caltech are briefly described below.

Physics of Fluids. Fluid dynamics as a discipline is as much a part of physics as of engineering. Physics of fluids refers to research in areas closer to applied physics than to direct technical applications. Present active research includes studies in gasdynamics, diffraction of shock waves, shock-induced Rayleigh-Taylor instability, and transient supersonic jets; the development of laser scattering diagnostic techniques for fluid-flow measurements; and studies of two-phase flows, vapor explosions, dusty gases in transient flows, and explosive volcanoes. Students in applied physics are also able to pursue various problems in the physics of fluids under the supervision of members of the aeronautics faculty.

Computational Fluid Dynamics. Computational fluid dynamics is a relatively new discipline in which fluid flows are investigated by computer simulation. Present active research areas include the study of structures and mechanisms in transition and turbulence, the study of flows with large-scale separation and of hypervelocity flows, as well as the design of new algorithms. Computers and computing techniques have improved to the point that they are a valuable complement to laboratory investigation.

Technical Fluid Mechanics. Research at GALCIT includes a long history of work on subsonic and supersonic turbulent boundary layers, shear flows, and separated flows. These areas are related to a variety of modern technological problems and, in addition, to the traditional aeronautical problems of drag, wing stall, and jet mixing. Additional areas of activity include bluff-body aerodynamics, turbulent combustion, laminar diffusion flames and their instabilities, fires in buildings (turbulent mixing and flow fields driven by fire-produced buoyancy), hydrodynamics and two-phase flows, interaction of vorticity with free-surface, cardiac flows, and active and passive control of transition and turbulence.

Structural Mechanics. Structural mechanics research involves both the static and dynamic behavior of structures and solids. Included are buckling for both elastic and viscoelastic (composite) materials. Other subjects include the response and failure of composite materials, including high-temperature ceramics and composites that find application in future high-speed flight.

Mechanics of Fracture. An active effort is being made to understand mechanisms in a wide range of fracture problems. Aspects that are studied include quasi-static and dynamic crack growth phenomena in brittle and plastically deforming solids, polymers and advanced composites, and fatigue and failure of adhesive bonds. Research areas adjunct to fracture studies in polymers are the nonlinearly viscoelastic behavior of polymeric solids, and issues of structural durability in advanced aerospace structures.

Aeronautical Engineering and Propulsion. Research work in the field of aeronautics includes studies of airplane trailing vortices and separated flows at high angles of attack. Research work in the propulsion area has centered on the fluid dynamic problems associated with gas turbine components (principally axial flow compressors and combustion chambers), rocket engine combustion chambers, and ramjet engines.

Aero-Acoustics. A number of topics in the broad field of aero-acoustics are actively under study at GALCIT. They include jet noise, combustion noise, and nonlinear acoustics and hydro-acoustics. A particularly interesting problem is the generation of combustion-induced organ pipe oscillations in large burners of electric generating plants.

Jet Propulsion. The Daniel and Florence Guggenheim Jet Propulsion Center conducts a large portion of its instruction and research in close cooperation with the aeronautics group. Students wishing to pursue courses of study and research in jet propulsion take degrees in aeronautics or mechanical engineering. The program generally emphasizes basic subjects (such as combustion, two-phase flow, turbomachinery, fire research, acoustics) that are applicable to a wide variety of engineering problems. The experimental facilities of the Jet Propulsion Center are located in the Karman Laboratory of Fluid Mechanics and Jet Propulsion. Some of the facilities of the Jet Propulsion Laboratory have also been used under special arrangement.

Physical Facilities

The Graduate Aeronautical Laboratories contain a diversity of experimental facilities in support of the above programs. Low-speed wind tunnels include the Merrill Wind Tunnel, which can be operated by a single person, the GALCIT 10-ft. Wind Tunnel, and many special-purpose flow facilities. Both a High-Speed Water Tunnel (100 feet per second) and a Free-Surface Water Tunnel are housed in the Hydrodynamics Laboratory; they are used for studies of acoustics, laminar-turbulent flow transition, and the structure of turbulent shear flows. A smaller water channel for studies of wave motion and flow visualization is also available. For investigations of high-speed flows there is a supersonic wind tunnel with two different working sections and a new shock tunnel for studying hypervelocity gas flows up to 7 km/s is in operation. Shock tubes, plasma tunnels, and other special facilities are available for the study of extreme temperatures, shock waves, acoustics, and cryogenic flows.

The solid mechanics laboratories contain standard as well as special testing facilities for research related to aircraft, spacecraft structures, and failure/fracture behavior of materials under static and dynamic loads, including three servohydraulic facilities, two of which operate on a "tension/torsion" mode. Fatigue machines and photoelastic equipment are available, as well as special apparatus, including laser equipment and a line of high-speed cameras offering recording at rates from still to 2 million frames per second, for the study of fast phenomena, e.g., wave propagation, dynamic buckling, and the mechanics of static and dynamic fracture. Dynamic testing facilities include specialized electromagnetic loading devices (stored energy ~ 120 KJ), a drop weight tower, split Hopkinson bars (axial/torsional), and plate impact apparatus. Diagnostic devices include full field interferometric and temperature measurements, both for static and dynamic applications.

State-of-the-art electronic instrumentation is being developed and used. Computer systems for real-time control of experiments, for data acquisition, processing and storage, and for digital image processing are used extensively.

Computational facilities range from personal computers and workstations to an on-campus large-scale parallel processing machine, one of the world's fastest, and remote supercomputers such as the Cray Y-MP. Graphics workstations are available to support research in computational fluid dynamics. These workstations provide high resolution color graphics, with the capability of viewing three-dimensional information at high speed, a large storage capability, and a network interface so that programs and results can be sent to and from remote supercomputers.

APPLIED MATHEMATICS

An interdisciplinary program of study in applied mathematics that leads to the Ph.D. degree is offered by the Institute. In addition to various basic and advanced courses taught by the applied mathematics faculty, broad selections are available in mathematics, physics, engineering, and other areas. Students are expected to become proficient in some special physical or nonmathematical field. A subject minor in applied computation is offered jointly with the computer science option.

In addition to the applied mathematics faculty, professors from other disciplines such as mathematics, physics, engineering, biology, etc., supervise research and offer courses of special interest. Close contact is maintained with experimental programs in fluid and solid mechanics and with research groups developing advanced computers. The applied mathematics group has access to supercomputers and concurrent computers, and has a variety of its own computers, graphics terminals, and other equipment. Library facilities are excellent, comprising all the journals, a complete general library, and a special research library in applied mathematics.

The present graduate program is one leading mainly to the Ph.D. degree. The curriculum consists of two types of courses: those that survey the methods used in applied mathematics, and those that have a special applied mathematics flavor and represent active research interests of the members of the faculty. Among the latter have been wave motion, perturbation theory, fluid mechanics, stochastic processes, mathematical programming, numerical analysis, and computational fluid dynamics. Through study outside of applied mathematics, each student is expected to become competent in some special physical or nonmathematical field. In this way, subjects for research appear naturally, and a broad educational program is provided.

The present group primarily interested in applied mathematics consists of approximately 25 students and six professors. Also, each year many distinguished visitors either come to present lectures or remain in residence for large parts of the academic year.

Areas of Research

Research is particularly strong in theoretical and computational fluid mechanics, numerical analysis, ordinary and partial differential equations, integral equations, linear and nonlinear wave propagation, water waves, bifurcation theory, perturbation and asymptotic methods, stability theory, variational methods, mathematical programming, large-scale scientific computing, and related branches of analysis.

APPLIED MECHANICS

Areas of Research

Advanced instruction and research leading to degrees of Master of Science and Doctor of Philosophy in Applied Mechanics are offered in such fields as elasticity, plasticity, wave propagation in solid and fluid media, fluid mechanics, mechanics of quasi-static and dynamic fracture, structural mechanics and stability, dynamics and mechanical vibrations, finite element analysis, and stability and control.

Research studies in these areas that illustrate current interests include linear and nonlinear vibrations; structural dynamics and design for earthquake and wind loads; linear and nonlinear problems in static and dynamic elasticity, plasticity, and viscoelasticity; wave propagation in solids; mechanics of time-dependent fracture; chaotic behavior of dynamical systems; and material instabilities and phase transformations in solids.

Physical Facilities

In addition to the regular facilities in the Division of Engineering and Applied Science, which include extensive computing facilities, certain special facilities have developed in connection with applied mechanics activities. The vibration laboratory is equipped with a good selection of modern laboratory apparatus and instrumentation for experimental research in shock and vibration, and the earthquake engineering research laboratory contains specialized equipment for vibration tests of buildings, dams, and other structures, and for the recording and analysis of strong-motion earthquakes. The solid mechanics laboratory located in the Graduate Aeronautical Laboratories contains extensive testing equipment for the study of fracture and structural failure.

APPLIED PHYSICS

An interdivisional program in applied physics for both undergraduate and graduate study was initiated in 1970. Like applied mathematics, applied physics at Caltech is in a fortunate position: The comparatively small size of Caltech coupled with its great strength in both the pure sciences and engineering make it possible to have a faculty with a wide interest in the application of modern physics to technology, without losing close interaction with "pure subjects." At present, members of four divisions—Engineering and Applied Science; Physics, Mathematics and Astronomy; Chemistry and Chemical Engineering; and Geological and Planetary Sciences—participate in instruction and research in applied physics leading to a B.S. degree as well as to M.S. and Ph.D. degrees.

The program is designed for students who are deeply interested in physics but at the same time are fascinated by the interrelation of physical problems and technological development, i.e., students who like to work with problems in physics that originate from or result in applications. A sharp division between

“pure” and “applied” physics or between applied physics and engineering cannot be drawn, and the option of applied physics should be considered a bridge rather than a divider. A student is expected to have a thorough background in physics, as well as a broad background in related fields of technology.

Members of the faculty involved with the educational and research activities in applied physics remain members of their respective divisions. Graduate students who choose the applied physics option similarly are admitted to one of the cooperating divisions.

In setting up the undergraduate curriculum, every effort has been made to facilitate the transition into and out of the option. In general an undergraduate student in applied physics will devote somewhat more time to the study of matter in bulk than will the “pure” physicist. Since it is expected that most students will be interested in experimental research, a special effort has been made to set up challenging laboratory courses and to provide an opportunity to do a senior thesis.

For first-year graduate students and adventurous seniors, a set of basic courses covering broad areas in applied physics is available, supplemented by a set of more specialized courses often closely related to a specific research effort.

Areas of Research and Physical Facilities

Research activities cover a broad spectrum, ranging from cryogenics to plasmas, from rarefied gas flow to high pressures and shock waves in solids, from particle transport to planetary science. There is research in progress in the physics of solids, including solid-state electronics, amorphous solids, quantum electronics, and superconductivity; in the physics of fluids, including plasmas and magneto-hydrodynamics, liquids, and superfluids; and in the physics of electromagnetic radiation, including linear and nonlinear laser optics and electromagnetic theory. The research program has been enriched recently by the construction of the 40,000-square-foot Thomas J. Watson, Sr., Laboratories of Applied Physics. This attractive building contains offices around a central courtyard and laboratories on the balance of the two floors. Conference rooms and a large classroom occupy the single-story entrance wing.

ASTRONOMY

The astronomical observatories at Palomar and Big Bear, plus the Owens Valley Radio Observatory and the Caltech Submillimeter Observatory, together constitute a unique and unprecedented concentration of scientific facilities in astronomy. The Division of Physics, Mathematics and Astronomy also conducts work in theoretical astrophysics, laboratory astrophysics, gravitational-wave physics, and infrared and submillimeter astronomy.

The radio astronomy group works in close collaboration with the optical astronomers in Pasadena; the program of graduate study in the two fields is essentially the same, except for specialized advanced courses. There also is close cooperation between these groups and the students and astronomers interested in planetary physics and space science.

As a result of the cooperation possible over a broad range of astronomy and theoretical astrophysics, unsurpassed opportunities exist at Caltech for advanced study and research. Courses of study depend upon a broad and thorough preparation in physics, mathematics, and other relevant subjects; the faculty offers advanced instruction in astronomy, astrophysics, solar physics, planetary physics, and astronomical instrumentation and techniques.

Areas of Research

Both observational and theoretical astrophysics are actively pursued. Topics of current interest in optical and infrared astronomy include observational cosmology; chemical abundances in normal and peculiar stars; spectroscopic and spectrophotometric studies of quasars and galaxies; studies of white dwarfs and other stars near the end-point of evolution; studies of the dynamics and composition of galaxies and clusters, nebulae, and interstellar matter; statistical studies pertinent to the structure of the galaxy; and the physics of solar phenomena.

Research in planetary and solar system astronomy is pursued in cooperation with groups in the Division of Geological and Planetary Sciences.

The research in radio astronomy covers cosmology, via observations of the microwave background radiation, and the physical properties of galactic and extragalactic radio sources, including quasars, pulsars, radio galaxies, stellar envelopes, and the planets. The properties of the interstellar medium in our own and other nearby galaxies are investigated in spectroscopic studies of various atomic and molecular spectral lines.

Theoretical astrophysics is pursued not only in the astronomy department, but in physics and geology as well, and at Caltech includes work on supernovae, pulsars, stellar structure and evolution, stellar and planetary atmospheres, interstellar and intergalactic matter, the physics of radio sources, nucleosynthesis, relativity, and cosmology.

Physical Facilities

The Rockefeller Boards provided in 1928 for the construction by the Institute of an astronomical observatory on Palomar Mountain, equipped with a 200-inch reflecting telescope, 48-inch Oschin and 18-inch Schmidt wide-angle telescopes, and other auxiliary instruments, together with an astrophysical laboratory on the Institute campus. Graduate student thesis research may be conducted at any of these facilities. The great light-collecting power of the 200-inch Hale Telescope permits advanced studies of the size, structure, and motions of the stars of the galactic system; of the distance, motion, and nature of remote galaxies and quasi-stellar radio sources; and of many phenomena bearing directly on the constitution of matter. The 48-inch Oschin has made possible a complete survey of the northern sky, as well as an attack upon such problems as the structure of clusters of galaxies, the luminosity function of galaxies, extended gaseous nebulae, and the stellar content of the Milky Way. A second Sky Survey is now 75 percent complete. These two unique instruments on Palomar Mountain supplement each other; the 200-inch Hale Telescope reaches as far as possible into space in a given direction, while the 48-inch Oschin photographs upon a single plate an entire cluster of distant galaxies or a star cloud in our own galaxy. At Palomar a 60-inch telescope owned jointly by Caltech and the Carnegie Institution of Washington was completed in 1969. It is used for photometry, spectroscopy, and photography. The Palomar telescopes

have modern electronic detectors, some of which are constructed in Robinson Laboratory.

A multipurpose solar equatorial telescope has been installed at an observing station at Big Bear Lake. The unique atmospheric conditions in this area make possible investigations of the fine structure of the solar atmosphere. Emphasis is on high-resolution spectroscopy, magnetography, and cinematography. A major effort is the study of solar oscillations.

A special apparatus for the detection and measurement of radiation in the far infrared has been fitted to various telescopes for the study of planets, cool stars, and dust clouds, as well as quasars and the energetic nuclei of galaxies.

The Owens Valley Radio Observatory is in a radio-quiet location 400 km north of Pasadena, near Big Pine, California. Its facilities include a 40-m telescope, a six-element millimeter-wave synthesis interferometer array, a five-element interferometer for solar studies, and a 5.5-m telescope dedicated to observations of the microwave background radiation. The 40-m telescope is used in conjunction with other radio telescopes around the world for very long baseline interferometry (VLBI), a technique that permits the mapping of compact galactic and extragalactic objects with an angular resolution better than one millisecond of arc. The 40-m telescope is also used alone for continuum and spectroscopic studies of radio sources and of the microwave background radiation. The high-precision 10-m telescopes of the millimeter array are used at wavelengths of 1.3 to 4 mm to map the distribution of interstellar gas and dust in star-forming regions of our own and other galaxies. The array also enables detailed studies of the sun, planetary atmospheres, and the envelopes around evolved stars. These telescopes, which are equipped with very sensitive cryogenically cooled receivers and sophisticated signal-processing and data-recording systems, give Caltech staff and students the widest range of observing opportunities available at any university-related radio observatory in the world.

A major new facility is under construction on Mauna Kea, in Hawaii. The Caltech 10-m submillimeter telescope was completed in 1986. The Keck Foundation has funded the construction of two 10-m optical-infrared telescopes, ultimately to be operated jointly with the University of California as part of an interferometer. Keck I has four times the power of the Palomar 200-inch and is in operation. Keck II will be completed in 1996. These will be the two largest optical-infrared telescopes in the world.

Robinson Laboratory (on campus) houses the Astronomy Data Processing Facility. This contains VAX and Convex C-1 computers and special equipment for processing optical and radio images. Multi-baseline VLBI data processors are operated jointly with the Jet Propulsion Laboratory. A special laboratory for the analysis of data from the Infrared Astronomical Satellite is also on campus.

BIOLOGY

Recent dramatic progress in our understanding of the nature of life has revolutionized the science of biology. Applications of the methods, concepts, and approaches of modern mathematics, physics, chemistry, and information science are providing deep insight into basic biological problems such as the manner in which genes and viruses replicate themselves; the control of gene expression in cells; the regulation of cellular activity; the mechanisms of growth and development; and the nature and interactions of nerve activity, brain function, and behavior. Qualified experimental and computational biologists will find opportunities for challenging work in basic research as well as in medicine and in biotechnology.

Because of the eminent position of the California Institute of Technology in both the physical and biological sciences, students at the Institute have an unusual opportunity to be introduced to modern biology.

Areas of Research

Research (and graduate work leading to the Ph.D. degree) is chiefly in the following fields: biochemistry, biophysics, cell biology, developmental biology, genetics, immunology, molecular biology, structural biology, neurobiology, and virology. Biochemical methodology plays an important role in many of these fields, and there is extensive interaction with related programs in biochemistry within the Division of Chemistry and Chemical Engineering.

The programs in cellular, molecular, and developmental biology are based upon approaches derived from biochemistry, biophysics, and genetics that offer new possibilities for expanded insight into long-standing problems. Neurobiology is a major area of emphasis within the Division of Biology. A comprehensive program of research and instruction in neurobiology has been formulated to span from molecular and cellular neurobiology to the study of animal and human behavior including the computational modeling of neural processes.

Physical Facilities

The campus biological laboratories are housed in six buildings: the William G. Kerckhoff Laboratories of the Biological Sciences, the Gordon A. Alles Laboratory for Molecular Biology, the Norman W. Church Laboratory for Chemical Biology, the Mabel and Arnold Beckman Laboratories of Behavioral Biology, the Braun Laboratories in Memory of Carl F and Winifred H Braun, and the Beckman Institute. They contain classrooms and undergraduate laboratories, as well as research laboratories where both undergraduate and graduate students work in collaboration with faculty members. Special facilities include rooms for the culturing of mutant types of *Drosophila*, a monoclonal antibody production facility, a fluorescence-activated cell sorter, scanning and transmission electron microscopes, a confocal microscope facility, a magnetic resonance imaging center, a transgenic mouse facility, and a state-of-the-art microchemical facility for sequencing and synthesizing biologically important macromolecules.

About 50 miles from Pasadena, in Corona del Mar, is the William G. Kerckhoff Marine Laboratory. This laboratory provides facilities for research in cellular and molecular biology using marine animals and for collecting and maintaining these animals.

BIOTECHNOLOGY

Biotechnology is a growing area of interdisciplinary research with a long tradition at Caltech. It includes a wide range of research opportunities in the Divisions of Biology, Chemistry and Chemical Engineering, and Engineering and Applied Science. Areas of emphasis include the development and application of new methods and instruments for studying a spectrum of biological problems ranging from the structure, function, and chemistry of key macromolecules such as proteins and DNA to the imaging of cellular processes or the complex problems of neural systems. Other programs focus on the creation, study, and use of novel microorganisms and proteins, combining classical and molecular genetic approaches with modern chemistry and engineering science. New challenges in data analysis and molecular modeling bring together research in biology and chemistry with computer science and applied mathematics. Research in these areas leading to the Ph.D. may be pursued by entry into one of the relevant graduate options in the divisions listed above. The interdisciplinary nature of biotechnology often includes course work and research collaborations that embrace more than one division. Each graduate option specifies the emphasis of the educational program and its degree requirements.

Excellent facilities for biotechnology research are available in each of the participating divisions. For example, the Beckman Institute provides extraordinary resources for development and application of new instruments and methods.

CHEMICAL ENGINEERING

The chemical engineering faculty teach and conduct research about fundamental chemical and transport processes and their application in understanding, designing, and controlling a broad spectrum of complex chemical processes. The faculty and students utilize their analytical methods and resources to understand diverse processes and to synthesize new working materials and new operating strategies for improving process performance. The combination of engineering principles, chemistry, biology, and mathematics which characterizes chemical engineering at Caltech enables students and faculty to contribute to the solution of a broad spectrum of critical problems and to aid in creating emerging new high-technology industries.

Areas of Research

Many different research areas are offered to students seeking the degrees of Master of Science or Doctor of Philosophy in Chemical Engineering. Particular research fields emphasized in the department include:

- **Bioseparations:** Synthesis of new materials for recognition of biological molecules. Metal-affinity protein separations.

- Protein engineering and processing: Design of enzymes active in organic media. Nuclear magnetic resonance studies of protein structure. Protein and polymer design for highly selective protein separations.
- Process control and design: Robust control. Decentralized control. Control of nonlinear systems. Design for operability.
- Fluid mechanics and transport processes: Mechanics of polymeric liquids. Microstructured fluids. Transport in heterogeneous media.
- Polymer physics and rheology: Molecular understanding of polymer melt rheology. Optical properties of polymer blends. Dynamic modeling of polymer structure and rheology. Polymer diffusion in porous materials.
- Catalysis: Synthesis of molecular sieves and molecular sieve thin films. Development of supported aqueous phase catalysts.
- Ceramics and electronic materials: Aerosol formation of ceramic particles. Synthesis of inorganic materials in ceramics. Synthesis and characterization of quantum dots.
- Plasma processing of electronic materials: Etching and deposition. Dynamics of plasma-surface interactions. Nanofabrication on semiconductor matrices.
- Environmental chemical engineering and combustion: Physics and chemistry of atmospheric gases and aerosols.
- Aerosols and colloids: Nucleation and growth of particles. Particle formation and reactions. Structure and properties of colloidal dispersions.
- Applied mathematics and computational physics: Supercomputer applications in fluid mechanics, process control, and environmental modeling. Concurrent computing. Asymptotic analyses of transport processes.
- Physics of complex fluids: Structures, phase transitions, and dynamics of polymers, liquid crystals, and surfactant solutions.

Physical Facilities

The chemical engineering laboratories, housed in the Eudora Hull Spalding Laboratory of Engineering, are extremely well equipped. The equipment includes experimental reactors, computational facilities, and an NMR spectrometer as well as numerous special research facilities for molecular graphics, DNA synthesis, and electronic, optical, and chemical measurements.

CHEMISTRY

Caltech's chemistry program offers exciting opportunities for study and research in many areas of chemical science. Eminent faculty and strong programs are available in chemical synthesis, structural chemistry, chemical dynamics and reaction mechanisms, theoretical chemistry, biochemistry, bioinorganic, bioorganic, and biophysical chemistry, and molecular engineering. Active interaction exists between chemistry and other disciplines at Caltech, especially applied physics, biology, chemical engineering, geological and planetary sciences, and materials science. There is strong interest on the part of the faculty in both teaching and research, and the undergraduate and graduate programs are designed to encourage the greatest possible amount of freedom, creativity, and flexibility.

Areas of Research

Caltex has long had a reputation for excellence in chemistry in the areas of molecular structure and the nature of chemical bonding. This tradition is continuing. Work in structural chemistry ranges from X-ray crystallographic structural determinations of covalent compounds and transition metal complexes, to investigations of the stereochemistry of organic molecules, conformations of oligopeptides, solution structures of proteins and nucleic acids, and dynamical structures of lipid bilayers by NMR spectroscopy. Active programs in other areas of spectroscopy include laser Raman of metalloproteins and inorganic complexes; laser spectroscopy of molecular ions and ionic clusters; ion-cyclotron resonance spectroscopy of biomolecules in the gas phase; multi-dimensional and multiple-pulse NMR of solids and interfaces; and scanning tunneling microscopy of semiconductors and biological systems.

Much of the current research in chemistry is directed at finding out how chemical reactions work in both chemical and biological systems. Chemical physics programs in this area include studies of gas phase reactions and processes using ion cyclotron resonance, molecular beams, and picosecond/femtosecond laser techniques. In organic chemistry, research focuses on the molecular recognition and biomimetic catalysis in aqueous media; sequence specific recognition of DNA; and mechanistic enzymology. Catalysis by transition metals is receiving emphasis among researchers in the inorganic and organometallic areas. Research in progress includes mechanisms of electrode surface chemistry and electrocatalysis, uses of transition metal complexes as homogeneous and heterogeneous catalysts, solar energy conversion and storage, water oxidation, methane oxidation, and nitrogen fixation. Reactions of molecules on surfaces are receiving increased attention. A number of biochemical projects are aimed at obtaining detailed information about reactions catalyzed by enzymes, including electron transfer reactions promoted by metalloproteins.

A significant amount of synthetic chemistry is involved in many of the above projects. In addition, several groups have chemical synthesis as a primary goal of their research. This research includes projects aimed at the synthesis of complex organic molecules of importance in biology and human medicine; new organic molecules and materials with novel optical and magnetic properties; and of molecules required for the testing of structural theories. Efforts are also directed at the development of novel and synthetically useful chemical transformations. Recently, the division has initiated a new thrust in polymer science, with emphasis on the development of strategies and methodologies for the synthesis of designed polymers.

Research in biochemistry and molecular biology includes crystallographic studies of protein structures, studies on the folding and stability of proteins, the mechanisms of enzyme catalysis and allosteric transitions, interactions between proteins and nucleic acids, structural elucidations of nucleic acids, studies of membrane structure and function, protein-lipid interactions, and mechanisms of ion and electron transport in biological membranes. Many of these studies make use of recombinant DNA and cloning to probe fundamental biochemical processes.

Current work in energy-related research comprises studies of laser isotope separation, photochemistry, catalysis, electrochemistry, and molecular processes for energy production, storage, and transmission.

Our theoretical chemistry program encompasses work on the applications of quantum mechanics to the study of electronic states of molecules and solids. The emphasis of the work here is on excited states and reactions of molecules, including studies of resonance-enhanced multiphoton ionization processes in molecules. Theoretical techniques are also being developed to facilitate detailed understanding of electron transfer processes, proton transfer reactions, energy randomization processes within molecules, and the dynamics of reacting systems.

Physical Facilities

The laboratories of chemistry consist of five units providing space for about 300 graduate students and postdoctoral research fellows. Crellin and Gates laboratories house several research groups, the divisional computing facility, the divisional High Field NMR facility, and the divisional administrative offices. Several synthetic research groups occupy the Arnold and Mabel Beckman Laboratory of Chemical Synthesis. The Braun Laboratories in Memory of Carl F and Winifred H Braun are shared with the Division of Biology. The Arthur Amos Noyes Laboratory of Chemical Physics, one of the major research facilities, is adjoined by the Clifford S. and Ruth A. Mead Memorial Undergraduate Chemistry Laboratory. A number of resource centers serving researchers of the division are located in the newly created Beckman Institute.

CIVIL ENGINEERING

Civil engineering includes the research, development, planning, design, and construction associated with urban development, water supply, energy generation and transmission, water treatment and disposal, transportation, and space development. Dealing with the function and safety of such facilities as buildings, bridges, pipelines, dams, rivers, power plants, and harbors, it is concerned with the protection of the public against natural hazards such as earthquakes, winds, floods, landslides, water waves, and fires.

Recent advances in technology, the escalation of urban problems, and the exploration of space have broadened the applications of civil engineering, increasing the scope of research. New problems have presented special challenges to the civil engineer well-trained in the fundamentals of his or her profession. For this reason, in the advanced study of civil engineering at the Institute, the application of basic scientific principles and mathematics is emphasized for the solution of engineering problems.

Areas of Research

Graduate work leading to advanced degrees lies chiefly in the following fields: structural engineering and structural dynamics; applied mechanics; earthquake engineering; soil mechanics and foundation engineering; finite element analysis; hydraulics, which includes hydrodynamics, hydraulic engineering, hydrology, and coastal engineering; and environmental engineering (see also environmental engineering science). In the past few years, graduate students and members of the faculty have pursued a variety of research programs,

including the analysis of structures subjected to earthquakes and other dynamic loadings; system identification and control of structures; structural health monitoring; the use of finite element methods for structural analysis; soil deformation under stress; behavior of soil models in a centrifuge; investigation of laws of sediment transportation and dispersion in bodies of water; turbulent mixing in density-stratified flows; wave-induced harbor oscillations; tsunamis; design criteria for various hydraulic structures; aerosol filtration; radioactive waste disposal; water reclamation; and ocean outfalls for thermal discharges or sewage effluents.

Students whose interests are in environmental problems may enroll for graduate degrees in either civil engineering or environmental engineering science.

Physical Facilities

Civil engineering activities are housed in two buildings: the Franklin Thomas Laboratory, which contains the soil mechanics laboratory and centrifuge, the earthquake engineering laboratory and library, and the vibration laboratory; and the W. M. Keck Engineering Laboratories, which contain the laboratory of hydraulics and water resources and the environmental engineering science laboratories.

Excellent computing facilities are available through the campus computing network and in the specialized computing centers of various research groups.

COMPUTATION AND NEURAL SYSTEMS

An interdisciplinary option has been established to study problems arising at the interface between neurobiology, electrical engineering, computer science, and physics. The unifying theme of this program is the relationship between the physical structure of a computational system (physical or biological hardware), the dynamics of its operation, and the computational problems that it can efficiently solve. The creation of this multidisciplinary program stems largely from recent progress on several previously unrelated fronts: the analysis of complex neural systems, the modeling of artificial neural networks, the development of massively parallel computer hardware, and recent advances in analog VLSI capabilities. Faculty in the program belong to the Divisions of Biology; Engineering and Applied Science; Physics, Mathematics and Astronomy; and Chemistry and Chemical Engineering. They have an interest in developing conceptual frameworks and analytical approaches for tackling seemingly disparate problems that share a common deep structure at the computational level. Students in the program will partake of a wide-ranging curriculum that will promote a broad understanding of neurobiology, computational hardware and software, and information theory.

Areas of Research

Areas of research include experimental and modeling studies of the visual system; the circuitry, computational function, and modeling of the olfactory cortex; the analysis of circuitry used in insect locomotion; the design and fabrication of analog VLSI for early stages in machine visual and auditory

processing; the theory of collective neural and silicon circuits for biological and machine computations; modeling and representation of physical objects for the general analysis of images; the use of optical devices in parallel computational hardware; and the neuron as a computational device.

COMPUTER SCIENCE

Although computing is a ubiquitous tool in all areas of study and research at Caltech, computer science is directed at the theory and technology of computation itself. It is the science of information, and of the structures that communicate, store, and process information. Whether these structures are expressed in hardware and called machines, in software and called programs, or in nature or society, the fundamental concepts are similar. The student of computer science at Caltech does not specialize along traditional lines that divide hardware and software, systems and applications, or theory and experiment. Rather, a unified approach to the design and analysis of computing structures is taken both in courses and in research.

Unlike in the physical and natural sciences, the objects of study by computer scientists are artificial systems, that is, structures that are purposefully designed. Thus, design assumes a role equal in importance to analysis, and is a term found frequently in the curriculum and research. Design is not only a creative activity, but also a formal or, at least, systematic one. Managing the great complexity of useful systems requires that one represent computations in a way that is amenable to mathematical treatment, as well as to implementation.

Areas of Research

Research and advanced courses leading to M.S. and Ph.D. degrees in computer science are concentrated in the following areas: VLSI systems; concurrent computation; theory of computation; programming languages; semantics; programming methods and correctness; the human-machine interface, including natural language; information theory; computer vision; computer graphics; and computer-aided design. Research projects frequently involve work in several of these areas, with both the theoretical and experimental aspects, as well as connections with such fields as mathematics, physics, biology, linguistics, and electrical engineering.

Students have unusual opportunities at Caltech for research in very large scale integrated (VLSI) systems. VLSI is not only a powerful technology for implementing computing systems, but also an elegant medium for studying computing structures and for understanding their connection to the physical world. VLSI research at Caltech has many components, including formal design methods and theory, computer-aided design and analysis tools, and experiments with high-performance VLSI architectures.

Caltech's computer science department is unique in that it has been realized from the department's recent beginnings that programming and VLSI design should be treated as one science: the science of designing concurrent computing structures. Because of their great complexity, one cannot hope to

construct reliable concurrent systems without rigorous design methods for deriving their implementation and proving their correctness. In our research in algorithms, programming notations, and semantics for concurrent computations, we are considering essentially two types of implementations: concurrent programs that run on large ensembles of communicating general-purpose automata, and direct implementation in the VLSI medium. The scale and physical characteristics of either of these media pose many interesting problems of sequencing and synchronization; these may be addressed by design disciplines such as "self-timed" systems, in which sequencing does not depend on global timing assumptions.

Caltech students also have unusual opportunities for research in computer graphics through the recently established NSF Science and Technology Center for Computer Graphics and Scientific Visualization. Through this five-university collaboration, a new intellectual foundation is being developed for the field. In addition, the graphics group collaborates closely with Caltech's new Biological Imaging Center, for gathering and visualizing high-resolution three-dimensional data of (as yet unseen) biological structures.

Research in computer graphics and computer vision emphasizes the creation of realistic images and models. Physics is used to create realistic shapes and motions of computer models. Constraints on the physics allow controlled animation of the models. Rendering techniques that accurately simulate optics generate pictures with almost photographic realism. Computer vision is the inverse problem to computer graphics. Shape representations and constraints are equally applicable to computer graphics and computer vision problems.

Research in the methods for designing computational structures addresses the complexity of computational structures by using composition to design them. In this view, a system is an elementary system or a composed system, and a composed system is a list of systems put together using a compositional operator. The study of design methods is the study of elementary systems and compositional operators. Research is conducted on the theory and application of compositional systems ranging from circuits to geographically distributed systems. Of particular interest is the use of compositional methods to develop programs that will execute efficiently on a variety of concurrent computers. Specific projects deal with notations for specification, compiler technology, methods of reasoning about correctness and efficiency, and human interfaces that aid systematic design. Caltech students have excellent opportunities for research and collaboration in concurrent computing through the NSF Science and Technology Center for Research on Parallel Computation.

Research in software system architectures for the support of the non-computer professional is a continuing part of computer science at Caltech. The primary language of these systems is natural English, with emphasis on the users' abilities to tailor their systems to their own interests. This research includes strong experimental components, using real-life task environments.

Computational complexity and information theory are two basic fields of research that are growing closer. The relation between different measures of complexity, the universal bounds on the measures, and the characterization of sequential and concurrent computing in terms of the combinatorial structure of data are active fields of research.

Physical Facilities

The computer science department's computing facilities are interconnected by department networks that are part of the Internet. All department faculty, graduate students, research staff, secretaries, and librarians have terminals, personal computers, or workstations for access to these computing facilities.

Many of the department computers, including 75 Sun workstations and 30 Hewlett-Packard workstations, run UNIX. Students also have access to other powerful workstations, such as IBM RS 6000s, and to a multimedia laboratory for developing electronic textbooks. Our graphics laboratory includes ten Hewlett-Packard RISC-based graphics workstations; an AT&T Pixel Machine ray-tracing engine; and a complete system for generating computer animation, using a VPR-3 one-inch videotape recorder or a digital magnetic video disk recorder. The Cosmic Cube multicomputers, two Symult Series 2010s, and various experimental Mosaic multicomputers are on the department network for system and application experiments. One of the most powerful computers in existence, the Intel Touchstone DELTA System, is available for research. In addition, through the Center for Research on Parallel Computing, students have access to a wide variety of parallel supercomputers. Laser printers and color plotting devices are distributed through the offices and laboratories.

These computing facilities support a diverse collection of software used both in courses and research activities. This software includes compilers and/or interpreters for more than 20 programming languages, extensive VLSI computer-aided design and analysis tools, TeX typesetting software, and libraries of advanced computer graphics routines.

Our digital systems and VLSI laboratories are equipped with complete facilities for the construction and testing of experimental systems, including probing, testing, and packaging integrated circuits.

The computer science library subscribes to and maintains a collection of 80 journals in the computer science field. The library also includes collections of technical reports from our department and from the computer science departments of other universities, and text and reference books.

ELECTRICAL ENGINEERING

Electrical engineering at Caltech emphasizes both electronics and systems. Closely allied with both computer science and applied physics, it offers students the opportunity for study and research, both theoretical and experimental, in a wide variety of subjects, including microwave systems, quantum electronics, modern optics, solid-state materials and devices, power electronics, control theory, signal processing, and communications.

Areas of Research and Physical Facilities

Substantial experimental laboratory facilities, housed mainly in the Harry G. Steele Laboratory of Electrical Sciences Building, are associated with each of the research fields described below.

1. Solid-State Electronics (Nicolet)—Projects emphasize experimental research in semiconductor device technology and currently include thin-film reactions, amorphous metallic alloys for thin-film diffusion barriers, characterization of epitaxial structures and their stability under ion irradiation and thermal processing.
2. Quantum Electronics (Yariv)—Research projects in progress include the generation and control of ultrashort pulses, integrated optoelectric semiconductor circuits, semiconductor injection lasers, molecular beam epitaxy growth of sub-micron GaAs/GaAlAs structures for optoelectronics and electronics, phase conjugate optics, applications of nonlinear optics, ultra fast ($<10^{-12}$ s) semiconductor lasers, crystal growth for image storage and processing, and optoelectronic neural networks.
3. Lasers and Guided Waves (Bridges)—Experimental and theoretical studies in optical-, submillimeter-, and millimeter-wave technology and applications: EHF electro-optic modulation, dielectric waveguides and fiber optics, gas lasers; optical communication and measurement systems.
4. Power Electronics (Cuk, Middlebrook)—Modern problems in analysis, design, and synthesis of electronic circuits as applied to efficient conversion, control, and regulation of electrical energy. Fundamental research in synthesis of new, more efficient, switched-mode power processing circuits, novel, more compact, integrated magnetics circuits and advanced control techniques to improve the transient performance of regulated power supplies. Development of soft switching methods to reduce or eliminate switching losses in switching converters and produce high efficiency, high power density converters operating at moderate switching frequencies ranging from 100kHz to 1MHz. Development of switched-mode converters with unity power factor input performance for off-line applications and fast load regulation. Synthesis of switching converters suitable for light ballast applications. Synthesis of dc-to-ac inverters for variable speed motor drives, such as electric vehicles and switching amplifiers for servo applications. Ultra low (3V) and high voltage applications, such as TWT power supplies. Theoretical research is backed by experiments in well equipped Power Electronics laboratory.
5. Communications (Goodman, McEliece, Vaidyanathan)—Theoretical and computer experimental work in a wide range of information, communication, and signaling problems, including coding and modulation for channels and memories, communications switching and traffic, channel and memory capacity, digital filtering, and signal processing for speech, music, images, and radar. Current research emphases are in error control coding and modulation for channels that occur in multi-user mobile and cellular radio, deep-space communication, jamming, and magnetic recording; fundamental limits of information storage; information content and compression; traffic and switching theory; enhancement of graphics, video, and radar; algorithms for neural networks as communications and signal processors; traffic modeling for mobile services, enhanced switches, and integrated services digital networks; design of reliable communication networks; and design and simulation of single-rate and multi-rate digital filters and filter banks to minimize the number of computational operations for a given accuracy.

Digital filter banks, subband coding, wavelet transforms, multidimensional multirate signal processing. Possibilities of joint work in Microsystems exist.

6. **Microsystems (Goodman)**—Theoretical and experimental research in advanced information processing systems. The group collaborates with communications, control, signal processing, and vision groups. The laboratory supports its theoretical work with hardware and VLSI design facilities on SUN workstations, and chip fabrication via MOSIS. Current research includes neural networks for associative memory, computer vision, handwriting recognition and autonomous vehicle control; digital signal processing (particularly compression) for music and video; expert systems for resource allocation and telecommunications management.
7. **Control (Doyle)**—Theoretical research is conducted in all aspects of control, with emphasis on robustness, multivariable and nonlinear systems, and optimal control. Theoretical developments are tested using the latest in computer and experimental facilities in a wide variety of application areas. Opportunities on campus, at Caltech's Jet Propulsion Laboratory, with industrial sponsors, and at NASA Laboratories include control problems associated with: large flexible space structures, refinery systems, flight control, robotics, control of unsteady flows, and various other aerospace and process control applications.
8. **Millimeter-Wave Integrated Circuits (Rutledge)**—Integrated circuits and antennas for frequencies from 1 GHz to 1 THz. Current projects include imaging antenna arrays for radio astronomy and space science, oscillator and amplifier grids for high-power solid-state microwave sources, and submillimeter sideband generators.
9. **Learning Theory and Pattern Recognition (Abu-Mostafa)**—Systems and algorithms for machine learning and adaptive pattern recognition, and the underlying mathematical theory. Special emphasis on learning from hints. Practical implementations using neural networks and other models. Analysis tools from information theory and computational complexity.
10. **Optical Information Processing (Psaltis)**—Research to develop optical techniques and devices for information processing. Current areas of interest include optical memories, optical neural computers, neural network models of computation, pattern recognition and image processing, photorefractive crystals, and Si and GaAs optoelectronic devices.
11. **Microsensors and Microactuators (Tai)**—Silicon micromachining technology is used to fabricate miniature solid-state microelectromechanical devices. Current research includes pressure sensors, flow sensors, IR sensors, accelerometers, microphones, micromotors, microvalves and micropumps, neuro-probes, and microsurgical tools. Device research requires broad exercise covering physics, design, fabrication, and testing. Hands-on training is especially emphasized in our Micromachining Laboratory.
12. **Digital Signal Processing (Vaidyanathan)**—Theoretical and computer oriented work on a wide variety of problems in digital signal processing. Multirate systems and filter banks, filter design, quantization in signal processors, efficient signal coding, adaptive signal processing, multidi-

- mensional multirate systems, and wavelet transforms. Digital filter banks, subband coding, multidimensional multirate signal processing.
13. Computational Vision (Perona)—Theoretical and experimental research on the computational principles underlying vision processes. Psychophysics and modelling of the human visual system. Emphasis on multiresolution multiorientation image analysis, image segmentation, and visually guided navigation and recognition.
 14. Advanced Microfabrication (Scherer)—High resolution lithography and etching allow the miniaturization of structures to below 10 nm. These advanced fabrication tools are applied toward the development of microlasers, optoelectronic circuits, and detectors. Current research includes the application of these tools toward fabricating new metal and semiconductor devices.
 15. 1. Parallel and Distributed Computing (Bruck)—Theoretical and experimental research on a number of fundamental issues related to the design of novel algorithms, protocols, and architectures that enable efficient parallel and distributed computing for scientific and commercial applications. Special emphasis on creating and experimenting with novel communication algorithms and protocols for reliable and efficient inter-processor communication over a variety of communication media, including communication subsystems of parallel machines and local area networks. Also includes research on new models for computing inspired by neural networks with emphasis on the questions: What are the essential ingredients that make real neural networks computationally powerful? Can we improve computing systems based on these insights?
 2. Fault-Tolerant Computing—Research on fault tolerance aspects of high-performance computing systems. The focus is on the underlining theory as well as the practical challenges, including the creation of checkpointing schemes for scientific and commercial applications, the design of reliable communication algorithms and interconnection architectures, and the development of schemes based on error-correcting codes to enable reliable storage and high bandwidth communication.

ENGINEERING SCIENCE

Advanced programs of study leading to the degrees of Master of Science and Doctor of Philosophy in Engineering Science are offered by the Division of Engineering and Applied Science. The need for these programs has developed as new frontiers of engineering have advanced to coalesce with major disciplines of science.

Areas of Research

The study program of the engineering science student at Caltech emphasizes physics, applied mathematics, biology, and those scientific disciplines that underlie the current development of technology. Its scope contains a broad range of subjects and continues to evolve and develop. Fields of study may

include such topics as fluid mechanics with applications to geophysical and biomechanical problems; forced nonlinear wave phenomena; dynamics of vortical flows and structural excitation; physics of fluids; aerosol physics; rheology of biological fluids; transport in biological systems; mechanophysiology of swimming, flying, and animal locomotion; free-surface flows; naval hydrodynamics; jets, cavities, and wakes; stratified and rotating flows; tsunamis and long waves in the ocean; and physical oceanography.

Physical Facilities

Laboratories are equipped with several microscope systems, laser illuminator and fluorescent imaging facilities, and high-speed cinephotomicrographic sets for biophysical and mechanophysiological studies. They are also equipped with a versatile towing tank and flow measuring devices for investigating free surface flows, propulsive devices, and fluid energy engineering.

ENVIRONMENTAL ENGINEERING SCIENCE

This interdisciplinary graduate program is concerned with the science and engineering of environmental systems. Research and instruction emphasize basic studies which underlie new solutions to challenging environmental problems such as: urban, regional, and global air quality; water supply and water quality control; hazardous waste treatment; maintenance of stable ecosystems; and global environmental change.

Among the academic disciplines central to the program are: atmospheric and aquatic chemistry; environmental fluid mechanics; applied microbiology; hydraulics; hydrology; and aerosol physics and chemistry. Courses are offered in the Environmental Engineering Science program and in other related programs of the Institute. Faculty members participating in this interdisciplinary program are from the Divisions of Engineering and Applied Science, Chemistry and Chemical Engineering, and Geological and Planetary Sciences.

Areas of Research

Examples of recent and current research are theoretical and experimental studies on fates of trace elements in the environment; coagulation and settling of particles; aerosol chemistry and physics; cloud chemistry and global climate change; new hazardous waste treatments (e.g., novel oxidants, ultrasound, pulsed-power plasmas, semiconductor photochemistry); environmental photochemistry; kinetics of oxidation processes in aqueous systems; genetics and physiology of microbial transformations; in situ bioremediation processes; pollutant and particle transport in alluvial streams and groundwaters; dilution in turbulent shear flows; role of buoyancy forces in turbulent mixing; buoyant discharges in coastal waters; pollutant formation and control in combustion; regional air pollution modeling and control; and effects of air pollutants on works of art.

Physical Facilities

The laboratory experimental work in environmental engineering science is primarily carried out in the W. M. Keck Laboratories with a wide variety of modern instrumentation in the various laboratories described below.

The Air Quality Laboratory includes a facility located on the roof of Keck that has been specially designed for smog chamber studies of gaseous and particulate pollutants. A large (60 m^3) outdoor chamber is used for direct simulations of atmospheric conditions using carefully prepared mixtures of hydrocarbons, nitrogen oxides, and other pollutants. Both gas phase chemistry and the formation of aerosol particles are probed with this system. A smaller (1 m^3) artificially illuminated chamber is used primarily for studies of chemical mechanisms and product identification. Analytical instrumentation includes monitors for major pollutants (SO_2 , NO_x , O_3 , etc.), gas chromatography, plus the resources of the Environmental Analysis Center for detailed chemical analysis of gas and aerosol samples. Measurements of aerosol particle formation and growth in the smog chamber experiments and in field studies are performed using the Scanning Electrical Mobility Spectrometer, a fast-response, high-resolution particle sizing instrument developed at Caltech, along with more conventional particle measurement techniques (optical particle counters, cascade impactors, condensation nuclei counters, and filter samplers).

Flow reactors are used for controlled studies of nucleation processes, and to probe the dynamics of agglomerate aerosols. Equipment is available sufficient to conduct field experiments involving measurement of atmospheric particulate matter concentration, chemical composition and size distribution, and gaseous pollutant concentration simultaneously at up to ten monitoring sites.

The environmental chemistry and aquatic chemistry laboratories and the Environmental Analysis Center are equipped for chemical analysis by atomic absorption, polarography, electrometry, plasma emission mass spectrophotometry, gas chromatography, high performance liquid chromatography, HPLC, fluorescence spectroscopy, FTIR, GC/MS, LC/MS, multi-component UV-VIS spectrophotometry, electrophoresis chromatography, gradient-elution ion chromatography, gel permeation chromatography, total organic carbon analysis, and for physical characterization of aqueous particles by light scattering, electrophoresis and electrical particle size analysis.

The hydraulics laboratory has a variety of water channels and basins appropriate for studies of waves, sediment transport, turbulent diffusion, and density-stratified flows. A 40-meter-long glass-walled flume is equipped with dual circulating water systems for density-stratified shear flow studies. This tilting flume can also be used as a wave tank to generate breaking waves using a computer-operated hydraulic wave generator. Two smaller wave flumes also have computer-controlled wave generators that can produce waves of specified profiles. Four multi-beam laser-Doppler velocimetry systems are available for velocity measurements in turbulent flow studies or for wave-induced fluid velocity measurements. High-resolution laser-induced fluorescence is used for simultaneous concentration measurement, and mass flux and dispersion studies. The laser systems can be directly coupled to a laboratory computer system that can accomplish real-time multi-user processing and experiment control with data presentation by video graphics or hard-copy plotter. Additional computers are available for data analysis.

The applied microbiology laboratory includes a facility for preparation of bacterial media, as well as equipment for large- and small-scale culture, continuous culture, DNA isolation and manipulation, DNA sequencing and sequence data manipulation, protein purification and enzyme assays, and field sampling and analyses. In addition, access is available to the electron microscope facility on campus, as well as the oligonucleotide probe synthesizer and the microprotein sequenator.

An excellent library with a wide variety of current materials in environmental engineering and science, and hydraulics, is centrally located in the Keck Laboratories building.

The department provides students with access to scientific computing and word processing through various departmental and personal computers, the CADRE network operated by the Division of Engineering and Applied Science, and also advanced supercomputers operated by the Institute.

ENVIRONMENTAL QUALITY LABORATORY

The Environmental Quality Laboratory is a research center for multidisciplinary, policy-oriented studies of problems related to natural resources and environmental quality. Administered within the Division of Engineering and Applied Science, the organization consists of faculty, students, and staff from various disciplines in engineering, and natural and social sciences. Since EQL is an independent research unit, faculty and students who participate in EQL activities are also associated with the appropriate degree programs. EQL research projects provide the framework for a comprehensive view of alternative solutions to natural resources and environmental control problems.

EQL research includes technical assessments, computer modeling, studies of environmental control options, policy analyses, and laboratory and field studies of important components of large-scale systems. Areas of current or recent work include:

- *Air quality, especially in the South Coast Air Basin of California* (control of sulfate and nitrate air pollutants; sources and distribution of carbon particles; visibility; development of advanced photochemical oxidant air quality models; reactive plume models; indoor air quality; effects of ozone on works of art).
- *Water resources and water quality* (pollution control for coastal waters; sewage sludge disposal; acid deposition; ground-water contamination and control).
- *Control of hazardous substances and residuals management* (toxic substances in air and water; economics and regulation).
- *Energy policy* (energy markets and pricing; energy demand and conservation; regulation).

EQL contributes to the education and training for multidisciplinary environmental and natural resources research by involving predoctoral students, postdoctoral fellows, and visiting faculty members in EQL research projects. Students who desire to work in EQL apply through an appropriate degree program, such as environmental engineering science, chemical engineering, civil engineering, mechanical engineering, geological sciences, or social science.

GEOLOGICAL AND PLANETARY SCIENCES

In the Division of Geological and Planetary Sciences, faculty members study the earth and planets in order to understand their origin, constitution, and development, and the effect of the resulting physical and chemical environments on the history of life, and on man. The approach to these problems is made with strong reliance on the basic sciences. Programs of study and research are pursued in geology, geobiology, geochemistry, geophysics, and planetary science. The curriculum is flexible so that students with degrees in biology, chemistry, engineering, or physics may carry out graduate work within the division. Interdisciplinary studies are encouraged and students may carry out academic and research programs within and between different divisions.

The geographical position and geologic setting of the Institute are favorable for year-round field access to a wide variety of earth problems and materials. Current advances in understanding the dynamic motions of the earth's crust and the structure of the interior have opened up new opportunities for research into the processes responsible for the earth's development and activity. Seismic activity in the southern California area presents stimulus and research material for the study of earthquakes, which are of great practical concern and are intimately related to the earth's development on a global scale. Human records of seismic activity are put into long-term perspective by studies of surface and bedrock geology, which reveal the history of motion on fault systems. The dynamics and geometry of crustal movements are studied by geological and geophysical methods on both planetary and local scales in order to understand the evolution of continents. Major processes and events in the chemical and physical evolution of the earth can be identified by studying the structure, chemistry, and isotopic composition of rocks formed or modified in these events. The absolute chronology can be established by measurements of radioactive isotopes. A wide variety of studies focus on the origins of igneous and metamorphic rocks in planetary interiors. These include radiogenic and stable isotopes and experimental petrology, in addition to field and petrographic studies. The broadscale structure of the earth is inferred from isotopic-geochemical studies and is interrelated with geophysical studies. Further breadth in our understanding of the earth and its place in the cosmos is being gained by comparative study of the other planets—their atmospheres, surfaces, and internal structures. The early history of the solar system can be approached by studies of lunar samples and meteorites. The earliest solar and presolar history is being studied by seeking the connection between the residual planetary materials and the physical-chemical processes within the solar nebula and the precursor interstellar medium.

Physical Facilities

The division is housed in three adjacent buildings, which are modern and well equipped for instruction and laboratory work. They contain several comfortable seminar rooms and the library as well as student and faculty offices. Various computer capabilities are also distributed throughout the division. There is an analytical facility (which includes an electron microprobe, a scanning electron microscope, and X-ray diffraction equipment). There is a machine shop for the

design and fabrication of experimental equipment. Specimen collection and sample preparation areas are available. There are modern laboratories for chemistry (at the trace and ultra low levels), mass spectrometry (electron impact, thermal ionization, and ion microprobe), experimental petrology, infrared spectroscopy, and laser spectroscopy. In addition, there is a laboratory for the study of the behavior of rocks and minerals and their elastic constants in the pressure and temperature environments of planetary interiors. This includes a shock-wave laboratory for studying ultra high pressure equations of state and shock effects. A field laboratory for measuring in situ stress is under development.

Conditions for field study and research in the earth sciences in southern California are excellent. A great variety of rock types, geologic structures, active geologic processes, physiographic forms, and geologic environments exist within convenient reach of the Institute. The relatively mild climate permits field studies throughout the entire year; consequently, year-round field work is an important part of both the educational and research programs. There are active field programs in diverse areas in North America.

The Seismological Laboratory of the Institute is housed in the Seeley G. Mudd Building. This has excellent computer facilities and maintains a seismological observatory which includes the Kresge Laboratory, located about three miles west of the campus on crystalline bedrock affording a firm foundation for the instrument piers and tunnels. The Seismological Laboratory carries on a vigorous program of geophysical research and education and is headquarters for a 250-station seismological network and telemetered seismic array across southern California. A smaller but state-of-the-art broadband and high dynamic range array called TERRAscope is also used for research.

State-of-the-art tunable far-infrared and infrared laser spectrometers in a newly created laser facility are available for the study of gas phase and surface processes of importance in cosmochemical and geochemical environments. This facility is used to study the mechanisms of chemical reactions that govern the formation of the protosolar nebula and the earth's upper atmosphere.

The Jet Propulsion Laboratory, NASA's lead center for planetary exploration, is located seven miles from campus and is administered by the Institute. Students and faculty have the opportunity to participate in JPL activities through joint research, instrument development, mission operations, and data analysis. Planetary science minicomputers and image processing systems are linked, through the campus network, to the Image Processing Laboratory at JPL and to supercomputers across the country. In addition, Caltech owns and operates several optical and radio observatories that are used partly for planetary research. A particularly active program of planetary studies is pursued at the Owens Valley Radio Observatory.

HUMANITIES

Literature at Caltech spans the major periods of American, British, and European writing. Students can pursue interests ranging from Greek and Latin literature to a survey of drama; from Shakespeare to romantic and modern poetry; from early fiction to the postmodern novel.

History at Caltech examines the Western and non-Western past to understand the evolution of culture, science, institutions, and behavior. Courses span the medieval, Renaissance, and modern periods; the United States, Europe, and Asia; and special topics such as radicalism and demography. In certain courses, quantitative methods drawn from the social sciences are applied to historical studies.

Philosophy is concerned with the most fundamental issues involving the nature of human knowledge and judgment. At Caltech particular emphasis is placed on philosophy of the natural and social sciences, moral and political philosophy, and philosophy of psychology. Members of the faculty have a variety of other interests, including philosophical problems of policy analysis and the history of philosophy. Courses are given at both introductory and advanced levels.

A variety of courses in classical and modern European languages and in music and art history are available. Art history classes make use of the resources of the Huntington Library and Art Gallery, the Los Angeles County Museum of Art, and other museums in the area.

Areas of Research

The literature faculty, interested in new approaches to studying their subject, engage in research into the relationships between literature and psychology, literature and the pictorial arts, literature and history, and the material production of literature.

Research in history covers a wide range of historical fields and methodologies. Topics include an examination of the development of racial attitudes and behavior in the 19th-century U.S.; the history of the physical and biological sciences and of science in relationship to society; history and film; late British India; taxation and economic development in France; Chinese history and demography; and American working-class culture and labor relations. A cluster of faculty carry out research and teaching in the interrelated subjects of science, ethics, and public policy.

Research in philosophy includes work in philosophy of science, philosophy of mind and psychology, history of philosophy, ethics, and political philosophy.

INDEPENDENT STUDIES PROGRAM

Independent Studies is an educational alternative for undergraduates whose goals cannot be satisfied with a normal undergraduate option. The student gathers a three-person faculty committee, representing at least two divisions of the Institute, and chooses his or her own scholastic requirements under this committee's supervision. Approval must also be obtained from the Curriculum Committee, a standing committee of the faculty. The independent studies program has no facilities of its own. Areas of study and research may be selected from any part of the Institute. (For a complete description see page 143.)

MATERIALS SCIENCE

Materials scientists study relationships between the properties of materials and their internal structure, and how this structure can be controlled. The field of materials science at the California Institute of Technology is oriented toward fundamental issues in metals, semiconductors, ceramics, and composites. Additional faculty in electrical engineering, applied physics, and chemistry are also concerned with semiconductors and superconductors. Work in polymers is carried out in aeronautics, chemistry, and chemical engineering.

Areas of Research

The current areas of research by the materials science faculty are oriented toward a wide variety of nontraditional materials, many far removed from their equilibrium thermodynamic states. Examples of such materials include metallic glasses, metal-matrix composites, crystalline alloys containing chemical disorder, ball-milled powders, nanocrystalline materials, and shock-wave consolidated powders. The physical characteristics of interest span a wide range of mechanical, thermodynamic, and electrical properties. The internal structures of all these materials are being characterized and their origins explored. The studies often monitor how these structures relax toward equilibrium. In addition, there is significant interaction with the faculty in applied physics concerning ion-beam processing and epitaxial growth of semiconductor thin films. Materials science is a cross-disciplinary field, and materials research is performed by groups in many different options at Caltech. Graduate students in the materials science option can perform their thesis research with a supervisor or co-supervisor in a different option.

Physical Facilities

Research by the faculty, graduate students, and a few advanced undergraduates is conducted in the W. M. Keck Laboratory of Engineering Materials. Material-preparation facilities include equipment for physical vapor deposition under ultra-high vacuum conditions, shock-wave consolidation of powders, rapid solidification, high-energy ball milling, and ion-beam modifications of materials. Facilities for the characterization of materials include an extensive array

of x-ray diffraction equipment including a double crystal diffractometer, two x-ray facilities with high-performance, position-sensitive detectors, a small-angle x-ray scattering system, a Rutherford backscattering spectrometer, Mössbauer spectrometers, a differential scanning calorimeter and two differential thermal analyzers, cryogenic facilities for the characterization of superconductors, and several test systems for the measurement of mechanical properties. A modern microscopy facility has been built around a Philips EM 430 300-keV transmission electron microscope with high resolution and analytical capabilities. Two other 100-keV transmission electron microscopes and an analytical scanning electron microscope are also dedicated to materials research. In addition to the equipment within materials science, a wide range of mechanical and microstructural characterization facilities are available elsewhere at Caltech. Networked computing facilities are available.

MATHEMATICS

Areas of Research

Graduate students in mathematics may find opportunities to select areas of research from the following list of fields and subfields of mathematics that are areas of current research interest of the mathematics faculty. *Algebra*: finite group theory, algebraic K-theory; *Algebraic geometry*: Hodge theory, arithmetical geometry; *Analysis*: classical real and complex analysis, harmonic analysis, integration theory, and functional analysis; *Combinatorics*: block designs, coding theory, and combinatorial matrix theory; *Mathematical Logic*: recursion theory, set theory, and nonstandard analysis; *Mathematical Physics*: Schrödinger operators; *Mathematical Statistics*: sequential analysis; *Number Theory*: analytic and algebraic number theory, automorphic forms, and Galois representations; *Geometry and Topology*: low-dimensional and algebraic topology, Riemannian manifolds, and analysis on manifolds.

Physical Facilities

The mathematics department occupies three floors of the Sloan Laboratory of Mathematics and Physics. In addition to offices for the faculty and graduate students, there are classrooms, seminar rooms, a lecture hall, and a lounge for informal gatherings of the students and staff. Sloan Laboratory also houses a reference library in mathematics. The main mathematics library with its outstanding collection of journals is housed nearby in the Robert A. Millikan Memorial Library.

The Willis H. Booth Computing Center central computing facility serves the entire campus. Computing equipment is also available in the mathematics computer laboratory on the third floor of Sloan Laboratory.

MECHANICAL ENGINEERING

Mechanical engineering embraces essentially all of those engineering aspects that have to do with fluid flow, heat and mass transport, combustion, power, propulsion, structural integrity, mechanical design, robotics, optimization, and systems analysis. Mechanical engineers are involved in the design and analysis of nuclear and fossil-fuel power plants, as well as all types of energy production and conversion installations, transportation systems, propulsion devices, and pollution control. At the Institute, many of the basic disciplines are offered that are required for such applications. They are described in the following paragraphs.

Mechanical Systems and Engineering Design. Activities in mechanical systems and engineering design encompass a broad range of traditional mechanical engineering fields, such as control systems, dynamics, kinematics, and mechanical design, as well as cross-disciplinary areas such as signal processing, computer control, engineering computation, electro-mechanical design, and micro-mechanical systems (MEMS) design. In the abstract, engineering design is the rigorous application of theory and analysis from traditional engineering disciplines to the synthesis of novel solutions to new problems. Analytical techniques from many fields must be used to analyze the performance, stability, and robustness of complicated systems. An imaginative, practical approach is emphasized for the solution of real problems involving many areas of technology. General areas of interest include design theory and methodology, imprecision in engineering design, engineering system design, MEMS design, kinematics, robotics, autonomous systems, and control of mechanical systems; computer-aided design and simulation.

Mechanics. Studies in the broad field of mechanics may be undertaken in either the applied mechanics, mechanical engineering, or civil engineering options. In general, work pursued within the mechanical engineering option will have a more physical orientation.

Thermal Systems and Applied Fluid Mechanics. This area encompasses a broad spectrum of research activities, including convective heat transfer (packed beds, moving granular media, film cooling), fire research, chemical vapor deposition, materials processing and thin film growth, two-phase flow, cavitation, turbomachines for flow of liquids and rocket propellants, and air pollution.

Laboratory facilities are available in a large number of areas, especially computer-aided design, robotics, heat transfer, materials processing, pump dynamics, liquid phase turbomachines, hydrodynamic water tunnels for the study of cavitation, hydrofoils, and flow visualization. These facilities are shared with other groups in applied mechanics and civil engineering.

Jet Propulsion. The Daniel and Florence Guggenheim Jet Propulsion Center provides facilities for postgraduate education and research in jet propulsion and advanced spacecraft propulsion. Students wishing to pursue courses of study and research in jet propulsion take degrees in aeronautics or mechanical engineering. The program generally emphasizes basic subjects (such as combustion, two-phase flow, turbomachinery, fire research, and acoustics) that

are applicable to a wide variety of engineering problems. The experimental facilities of the Jet Propulsion Center are located in the Kármán Laboratory of Fluid Mechanics and Jet Propulsion. A collaborative program exists with the Jet Propulsion Laboratory in advanced propulsion.

PHYSICS

Areas of Research

Graduate students in physics will find opportunities for research in the following areas where members of the staff are currently active.

Particle Physics. Experiments in elementary particle physics are carried out with accelerators at the European Center for Nuclear Research (CERN), Cornell, and Beijing. Activities include studies of Z^0 decay at the LEP storage ring at CERN, studies of charmed quarks and τ leptons at IHEP, and studies of τ leptons at Cornell. In addition, a large project to search for magnetic monopoles and other phenomena in particle astrophysics is under way at the Gran Sasso underground laboratory in Italy. An active detector development program is aimed at a future experiment to study CP-violation and rare B decays at a new accelerator at SLAC. Finally, work toward SSC detectors is an active component of the program.

A phenomenology group is concentrating on heavy flavor phenomenology and on design and planning for the superconducting supercollider (SSC).

Kellogg Radiation Laboratory. Studies of the structure and interactions of nuclei currently include experiments in the few-MeV energy range, carried out with Caltech's in-house tandem electrostatic accelerators, and experiments in the GeV range, carried out at SLAC and the Bates Linear Accelerator Center (MIT). The lower-energy experiments are designed to address important problems in nuclear astrophysics, while the high-energy studies emphasize the effects of the quark structure of nucleons on the structure and properties of nuclei.

Nuclear and Neutrino Physics. This group focuses on fundamental properties of nuclei and elementary particles, particularly neutrinos. Experiments on neutrino oscillations being carried out at the San Onofre nuclear reactor and on double beta decay in an underground laboratory in the Gotthard tunnel in Switzerland help understand neutrino mixing and neutrino mass. The experimental program, which also includes symmetry tests with polarized nuclei using a dilution refrigerator, is complemented by theoretical studies of nuclear structure and particle properties.

Experimental High-Energy Astrophysics. The isotopic composition of samples of solar, local interstellar, and galactic matter is measured with energetic particle mass spectrometers launched on spacecraft and high-altitude balloons. Similar instruments on the Voyager spacecraft are searching for the boundary of the heliosphere. The X-ray and gamma-ray astronomy program carries out astrophysical observations of solar, galactic, and extragalactic phenomena in the energy range 1 keV to 10 MeV. Studies have been undertaken with the HEAO and SMM spacecraft and with newly developed imaging gamma-ray telescopes.

Future observations will use the ROSAT X-ray telescope and the Gamma-Ray Observatory.

Infrared Astronomy. Astrophysical observations from 1- μm to 1-mm wavelengths are carried out with ground-based telescopes at the Palomar and Keck observatories. The infrared group constructs instruments for use on the 5-m Hale and 10-m Keck telescopes. Caltech has been a major participant in a recent survey of the infrared sky conducted by the IRAS satellite, from which data are being analyzed.

Submillimeter Astronomy. Star formation, interstellar gas, galaxies, and quasars are studied using the 10-meter telescope at the Caltech Submillimeter Observatory on 14,000-foot Mauna Kea in Hawaii. Far-infrared observations are made from NASA's Kuiper Airborne Observatory. Research is conducted on superconducting tunnel junction and bolometer detectors for use in future telescopes, both on the ground and in space.

Computational Astronomy. High-performance parallel computers are applied to computation-intensive problems in astronomy. Topics include radio pulsar searches, diffraction limited imaging with ground-based optical/IR telescopes, and large N-body simulations.

Condensed Matter Physics. Two-dimensional matter, phase transitions in two and three dimensions, phonon physics, and high-temperature superconductivity are areas of interest. Extensive new facilities for nanostructure fabrication and ultra-low-temperature physics have been established in Sloan Laboratory for exploration of mesoscopic systems. These facilities are complemented by the Microdevices Laboratory of the Jet Propulsion Laboratory (JPL), which plays a central role in a number of collaborative research efforts.

Applied Physics. Techniques of theoretical and experimental physics are applied to problems in surfaces, materials, and planets. Work is done with on-campus facilities, including ion accelerators and UHV thin-film preparation equipment, as well as off campus, at both industrial and other academic laboratories. Recent studies include sputtering, damage by high-energy ions, modification of semiconductors by ion implantation, the behavior of granular materials, and light-emission mechanisms in phosphors and scintillators.

Quantum Optics. Investigations of quantum dynamical processes in nonlinear dissipative systems are carried out in a number of fundamental optical experiments. Specific areas of research include the generation and application of squeezed and antibunched states of light, the realization of ideal quantum measurement and amplification schemes, and the investigation of nonperturbative radiative processes in cavity quantum electrodynamics. Facilities in support of this work are located in the East Bridge Laboratory.

Experimental Gravitational Physics. Efforts are focused upon establishing a Laser Interferometer Gravitational-Wave Observatory (LIGO). The LIGO Project conducts research and development in precision measurement techniques and their application to gravitational-wave astronomy. On-campus research facilities include the 40-meter interferometer (currently the world's largest gravitational-wave detector prototype), special laboratory facilities for optics, vacuum studies, and electronics development, and an extensive network of computer workstations. The experimental program is complemented by work in the theoretical astrophysics group.

Neuroscience. Some properties of neural networks which underlie brain function are being investigated. The emphasis is on studies of neuronal networks

grown in tissue culture, whose activity and response to stimuli are recorded as they change in response to imposed patterns of activity. Advanced biophysical and bioengineering technologies are used to obtain long-term electrical and optical records of neural signals.

Theoretical Physics. The particle theory group studies the unification of interactions based on superstring theory, the properties of hadrons described by QCD with an emphasis on heavy quarks, the quantum properties of black holes, and quantum cosmology.

Theoretical studies also include nuclear structure and reactions, condensed matter physics, including the quantum theory of solids and turbulent fluids, and various aspects of mathematical physics.

Theoretical Astrophysics. Many astrophysical interests are pursued in collaboration with the astronomy faculty, including problems in general relativity and cosmology, in relativistic astrophysics and accretion theory, in the interstellar medium, in the dynamics of stellar and planetary systems, in helioseismology, and in quasars, pulsars, and neutron stars.

Physical Facilities

The physics department is housed in six buildings grouped together on the south side of the campus: the Norman Bridge Laboratory, the Alfred P. Sloan Laboratory of Mathematics and Physics, the W. K. Kellogg Radiation Laboratory, the George W. Downs Laboratory of Physics, the C. C. Lauritsen Laboratory of High Energy Physics, and the Synchrotron Laboratory. Members of the staff also carry out research at the Palomar Observatory and at the Owens Valley Radio Observatory. Several computers are available for use in research, including the Intel Touchstone DELTA System, a high-performance supercomputer with a peak speed of 30 Gflop.

SCIENCE, ETHICS, AND SOCIETY

The program in Science, Ethics, and Society is devoted to understanding the evolution of science and technology and their interactions, past and present, with the larger society. The program integrates historical, philosophical, and technical studies to explore the development and practice of the physical and biological sciences since the seventeenth century. Considerable attention is paid to the social, economic, political, and institutional context of technical development, particularly how the demands and organizations of industry, government, and philanthropy have shaped the scientific and technological enterprise. The program also examines the related moral and ethical issues—religious, social, and otherwise—that have pervaded disputes in areas such as weapons research and arms control, biotechnology and biomedicine, the environment, and scientific misconduct.

Areas of Research

Historical research in the program covers a broad range of subjects, including central developments in the fields of modern physics and physical chemistry, genetics and molecular biology, the sciences of mind, and special subjects such

as the history of Big Science, federal policy for research and development, the political economy of patents, scientific instruments, biotechnology, and the environment. Philosophical research in the program deals with issues in causality and scientific inference, mind and the development of language, philosophy of psychology, foundations of probability and risk assessment, bioethics, and scientific fraud and misconduct. All research in the program is conducted in a multidisciplinary environment that ties together past and present as well as history, philosophy, politics, and economics. Work in Science, Ethics, and Society may be pursued as an undergraduate option, a graduate minor, or on a course-by-course basis.

SOCIAL SCIENCE

Social science at Caltech offers a unique program closely integrating the fields of economics, law, political science, quantitative history, and anthropology. The program takes a practical but rigorous approach to social science—designing institutions to solve problems—and involves extensive use of empirical techniques and mathematical modeling. Particular emphasis is placed on studying the relationships among economics, politics, and public policy in a rigorous scientific manner. Students can use their considerable quantitative talents to great advantage in these areas.

Areas of Research

The social science program is characterized by collaborative, multidisciplinary research, exploring such areas as group decision making, voting procedures, and market behavior.

Among the areas of basic and applied research in political science are (1) formal models of interdependent decision making, especially in the context of elections, congressional behavior, international political processes, and cooperative committee processes, and (2) statistical analyses of the impact of economic conditions on voting, the creation and functioning of regulatory bureaucracies, redistricting, and the appropriations process in Congress.

Research in quantitative history incorporates economic and political models and statistical methods into historiography, yielding new insights into the effects of tax policy on productivity and wealth distribution, the extent of racial discrimination in the U.S., the relationship between evolution of foreign and domestic capital markets and economic growth, and the process that leads to the adoption of new technologies.

Current research in economics includes analysis of energy policy, tax compliance, and the effects of consumer information on the price and quality of goods and services. Faculty members are also in the forefront of the design and analysis of incentive schemes, research that promises exciting possibilities for the systematic improvement and design of institutions.

Finally, Caltech is a major center for the experimental investigation of economic and political decision making, for the development of experimental methods of analysis, and for the application of these methods to public policy.

INFORMATION FOR UNDERGRADUATE STUDENTS

REQUIREMENTS FOR ADMISSION TO UNDERGRADUATE STANDING

The undergraduate program leads to a four-year Bachelor of Science degree. Admissions decisions are made once a year in the winter, and admitted students matriculate in the fall term only. Caltech does not have a summer session or part-time program, and cannot consider you if you already have a bachelor's degree from another college, university, or the equivalent. If you have matriculated at any college, university, or the equivalent in a program leading to any degree, you will probably be required to apply as a transfer student, and should read the requirements in the section titled "Transfer Admissions."

ADMISSION TO THE FRESHMAN CLASS

The freshman class consists of approximately 215 students. Students are selected on the basis of strong academic performance, especially in the areas of math and science; the results of the SAT-I and three SAT-II Tests; teacher and counselor evaluations; personal characteristics; a demonstrated interest in math, science, or engineering; and the information provided on the application. There is no set minimum grade-point average or standardized test score that will disqualify your application, though most of our students come from the top of their high school class and average 1410 on the SAT (combined math and verbal).

Applying

An application for admission may be obtained by writing or calling the Office of Undergraduate Admissions, California Institute of Technology, Mail Code 55-63, Pasadena, California, 91125, (818) 395-6341. An application fee of \$40 should be returned with the application, which must be postmarked by October

15, 1994, for Early Action, or January 1, 1995, for Regular Decision, to be considered for admission in the fall of 1995. Please read carefully the instructions that accompany the application. They are more specific than those stated in this catalog, and noncompliance will delay the processing of your application. Each year we receive about 2,000 applications and admit about 450 students. Many individuals who are academically qualified are not admitted each year because of our desire to maintain a small undergraduate population, which limits the amount of spaces available. You are advised to protect yourself by submitting applications to several schools.

Early Action

Students who have a strong preference for Caltech may want to consider Early Action. The Early Action application process requires you to return the completed application by October 15, 1994. This includes all evaluation forms and essays, though you may take College Board tests as late as the November test series. Be advised, however, that Early Action decisions are made in early to mid December. If your test scores do not reach us by the time we begin the Early Action decision-making process, you will be evaluated without them, and that will weaken your application. Students will be notified in late December whether they have been admitted, denied, or held for Regular Decision. Students admitted will not be required to make a commitment to Caltech prior to May 1, 1995.

High School Requirements

Applicants are expected to have completed the following curriculum prior to admission. Students whose preparation does not meet these requirements should contact the Office of Undergraduate Admissions about eligibility.

- Four years of mathematics (calculus or higher is strongly recommended)
- One year of physics (calculus-based physics is recommended)
- One year of chemistry
- Three years of English (four years are recommended)
- One year of U.S. history/government

College Board Tests

Applicants are required to take the following standardized tests by the November test series for Early Action consideration, and by the December test series for Regular Decision consideration. Early Action applicants should read the note under "Early Action" above. Regular Decision applicants should note that admissions decisions for Regular Decision are made in early March. You must elect score-reporting options which will insure your scores arrive at Caltech prior to March 1, 1995.

- SAT-I: Reasoning (V&M)
- SAT-II: Writing
- SAT-II: Math II C

One of the following SAT-II Tests: Biology, Chemistry, or Physics.

Information regarding the College Board examinations can be found in the Bulletin of Information, which may be obtained without charge at most high schools, or by writing to the appropriate address. Applicants who wish to take the examinations in the western United States or Canada, or in Mexico, Australia, or the Pacific Islands should write the College Board, P.O. Box 23060, Oakland, CA 94623-2306. For all other inquiries, write the College Board, P.O. Box 592, Princeton, NJ 08540.

Essays

Caltech does not require or offer admissions interviews; therefore, the required application essays are intended to provide an opportunity for the applicant to demonstrate those qualities that set her or him apart from other applicants with identical profiles.

Evaluations

Three evaluations and a Secondary School Report are required. One must be from a math or science teacher, one from a humanities or social science teacher, one additional evaluation (see the instructions in the application), and a Secondary School Report to be filled out by your high-school counselor or other school official. You are free to submit more than one in any category, but at least one must be submitted in each category.

Additional Information

Any additional information you want to send with your application is welcome. Descriptions of research projects and hands-on science and engineering experience are helpful, as is material that demonstrates experiences outside of math and science. Additional material should be identified with a name and social security number. Please do not send diskettes.

Acceptance

Caltech is a College Board member and therefore has agreed not to require any candidate to give final notice of acceptance of admission or of financial aid before May 1. When accepting an offer of admission to Caltech, an admitted student is required to send in a matriculation form and registration deposit of \$100, which will be applied to the first term's bill. Places in the entering class will not be held after May 1. Early Action applicants will be informed of their status in late December, and Regular Decision applicants will be contacted in mid-March.

Deferral of Entrance

Caltech will consider requests from admitted students for a year's deferral of entrance. It is not possible, however, to guarantee that all requests will be granted. Students who want to defer must still pay the registration deposit by May 1 and also submit a written request stating the purpose of postponement.

Advanced Placement, International Baccalaureate, and College Credit

Caltech encourages all prospective undergraduate applicants to participate in the Advanced Placement (AP) and International Baccalaureate programs. Automatic or standardized credit for these classes, however, is not available at Caltech. (Please read the section on page 113 under "Humanities and Social Science Requirements" for a possible exception.) Course credit and/or placement in an accelerated program is *sometimes* granted as deemed appropriate by the department faculty. The awarding of Caltech course credit takes place at the time of registration each fall. It is not possible for students to know prior to fall registration how AP and college-level coursework will be evaluated.

Chemistry

In exceptional cases, students with a particularly strong background in chemistry may elect to take Chemistry 21, the Physical Description of Chemical Systems, or Chemistry 41, Chemistry of Covalent Compounds, rather than Chemistry 1, General and Quantitative Chemistry. It is assumed that such students have reasonable competence in the following areas: 1) elementary theories of atomic structure and electronic theories of valence, 2) chemical stoichiometry, 3) computations based upon equilibrium relationships, and 4) elementary chemical thermodynamics. For those students who qualify for Advanced Placement in Chemistry, the Institute requirement of 18 units of Ch 1 abc can be satisfied by completing with passing grades two terms of (i) Ch 21 abc (9 units each term), or (ii) Ch 41 abc (9 units each term). The student's qualification for Advanced Placement in Chemistry will be determined in personal interviews with the chairman of the Undergraduate Studies Committee in chemistry, and the course instructor. Similarly, qualified students, with the instructor's consent, are allowed to substitute either Ch 3 b or Ch 4 a for the "core" chemistry laboratory requirement (Ch 3 a).

Mathematics

Normally, an entering freshman will take Ma 1 abc, Freshman Mathematics. This course will cover the calculus of functions of one variable; an introduction to differential equations; vector algebra; analytic geometry in two and three dimensions; infinite series. The course will be divided into a lecture part, discussing primarily the mathematical notions of the calculus and the other topics listed above, and a recitation part, providing active practice in the application of mathematical techniques.

During the summer, entering freshmen will be invited to outline their advanced training in mathematics and take a placement examination. The appropriate course and section for each student will be determined on the basis of this information. Those students whose preparation permits them to begin with Ma 2 a will receive credit for Ma 1 abc. Exceptionally well-prepared students may receive additional credit for Ma 2 abc.

Physics

The required freshman physics course, Ph 1 abc, is considerably more rigorous than most advanced placement work, and entering freshmen are encouraged to take Ph 1. A test is administered during the summer to aid in the organization of Ph 1; students who have performed particularly well can discuss the possibilities for advanced placement with the physics representative during orientation. A second test may then be required.

New Student Orientation

All freshmen are expected to attend the New Student Orientation as a part of the regular registration procedure.

The orientation, usually off campus, takes place during the three days immediately following new student registration for the fall term. A large number of faculty members and upperclass student leaders participate to help introduce the new student to the Caltech community. The orientation period provides an opportunity for the new student to become acquainted with the campus, the Honor System governing personal conduct, and other aspects of life at Caltech. In addition, he or she can meet classmates and a number of the upperclass students and faculty. Thus the new student can begin to feel at home at Caltech and share in the common agreement on intellectual and moral standards before the pressure of academic work begins.

ADMISSION TO UPPER CLASSES BY TRANSFER

Transfer Admissions

Caltech admits transfer students for the fall term only. We require a completed application, letters of recommendation, SAT scores, an official transcript from all colleges or universities you have attended, and the completion of the Caltech Transfer Admissions Entrance Examinations. Please review carefully the section titled "Eligibility Criteria for Admission" to determine whether you meet the eligibility requirements for transfer admissions consideration. Competition is keen, and there can be no guarantee of admission. We suggest you protect yourself with applications to other institutions.

Areas of Study

All Caltech students take a common core science curriculum that includes two years of math, two years of physics, and one year of chemistry, regardless of their choice of a major (called an option at Caltech). Transfer students are expected to follow the Caltech core curriculum as closely as possible.

Academic Prerequisites

Students will be eligible to apply for transfer admission only if they have completed elsewhere the equivalent of the appropriate Caltech courses for their class standing. The following is a description of the Caltech core curriculum, taken by all Caltech students during their first two years. Topics listed in the following course descriptions for physics, math, and chemistry must be covered in equivalent courses. There are no specific requirements for topics to be covered in humanities and social science classes.

Freshman courses:

Math 1 abc

Physics 1 abc

Chemistry 1 abc

Chemistry 3 a

Humanities and Social Science electives

Sophomore courses:

Math 2 abc

Physics 2 abc

or

Physics 12 abc

Additional laboratory science

Humanities and Social Science electives

Eligibility Criteria for Admission

The Institute admits to its sophomore or junior class a small number of students who have excellent records at other institutions of collegiate rank and who perform satisfactorily on the Caltech Freshman or Transfer Admissions Entrance Examinations.

- Transfer students are not admitted to the senior year at Caltech.
- Students who have already completed a bachelor's degree in any subject are not eligible for transfer.
- Students who have completed more than 60 semester units or 90 quarter units of university-level coursework (or the equivalent) at the time of transfer are not eligible for transfer. All university-level coursework taken or in progress at the time of application is considered in determining transfer eligibility. We do not include AP credit given at another institution in this unit count.

Standardized Test Requirements

All transfer applicants must submit SAT-I: Reasoning (V&M) scores. If the SAT-I has not been taken previously, it must be taken no later than the March sitting. International students are also expected to take the SAT-I administered by the College Board. Transfer applicants living in countries in which the SAT-I is not offered may be considered for admission, but should be aware that the lack of SAT-I scores will weaken their application.

The TOEFL (Test of English as a Foreign Language) is required of transfer applicants who are not citizens or permanent residents of the United States, and whose native language is not English. The TOEFL should be taken by the February sitting. International students who have studied in the United States for more than two years are exempt from taking the TOEFL.

Transfer Admissions Entrance Examinations

All applicants are required to take Caltech Transfer Admissions Entrance Examinations in math and physics. An additional exam in chemistry is required of those students planning to study chemistry or chemical engineering. Further instructions are included with the Caltech Transfer Application.

Transfer of Credit

The courses for which transfer applicants will receive credit, and the corresponding class standing, will be determined at the time of enrollment. It is not possible to answer general questions regarding the acceptability of coursework taken elsewhere. Faculty members review each course submitted for credit on an individual basis. If the standard of work taken elsewhere is uncertain, additional examinations may be required before the question of credit is finally determined.

Admissions Application

Transfer applications are available between September 1 and February 1. Completed applications should be received by the Caltech Office of Undergraduate Admissions by March 1. Applicants will be notified of the decisions of the Admissions Committee in mid-June. Questions about transfer admission and application requests should be directed to: Transfer Information, Office of Undergraduate Admissions, Caltech Mail Code 55-63, Pasadena, CA 91125, U.S.A., (818)395-6341.

The 3/2 Dual Degree Plan

Caltech invites students from a select group of liberal arts colleges to transfer to Caltech upon completion of their junior year. After two years in residence at Caltech, and the successful completion of our requirements, 3/2 students will be granted a Bachelor of Science degree from Caltech and a second bachelor's degree from their liberal arts college. Students may transfer into any of the Caltech options, with the current exception of electrical engineering.

Students from the following institutions are eligible to apply to the 3/2 program:

- Bowdoin College (ME)
- Grinnell College (IA)
- Occidental College (CA)
- Ohio Wesleyan University (OH)
- Pomona College (CA)
- Reed College (OR)
- Wesleyan University (CT)
- Whitman College (WA)

Applications and a program description are available from the 3/2 liaison at each of the liberal arts college partners and from the Caltech Office of Undergraduate Admissions. Deadline for submission of 3/2 applications and support materials is April 1.

Admission to the 3/2 program is not guaranteed and will be determined by the Caltech Faculty Upperclass Admissions Committee. Students applying should have a record of superior academic achievement at their home institutions, and strong letters of recommendation from their 3/2 liaison and an additional faculty member. They must have completed a minimum of one year of calculus-based physics and mathematics (two years are recommended) including multivariable calculus and differential equations, and one year of chemistry.

Exchange Programs

Exchange programs exist with Occidental College, Scripps College, and Art Center College of Design, permitting Caltech students to receive credit for courses taken at these colleges. Students from these colleges also may receive credit for courses taken at the Institute. Tuition payments are not required, but the student may have to pay any special fees. The student must obtain approval from the instructor of the exchange course. Exchange courses taken by Caltech

students must have prior approval by the student's option, by the division providing courses most similar to the proposed course, and by the Registrar. Students wishing to take such courses should obtain the appropriate form at the Registrar's Office, get the required signatures as above, and return it to the Registrar. Freshmen at Caltech ordinarily cannot participate in this exchange.

In addition, through the office of the Dean of Students, informal exchange programs are conducted with several colleges and universities throughout the country. Under these programs, a student can visit another campus for a period ranging from one term to a full academic year, without the formalities of transfer proceedings or written applications. Any student interested in the informal program should check with the Dean of Students for details.

ROTC

Through arrangements with the University of Southern California (USC), an Air Force Reserve Officers' Training Corps program is available to qualified full-time Caltech students on a competitive basis, and an Army Reserve Officers' Training Corps program is available through the extension program of the University of California at Los Angeles (UCLA). The Air Force (AFROTC) program is a two- or four-year program available to juniors or freshmen. Successful completion of this program leads to a commission as a Second Lieutenant in the Air Force. The four-year program for freshmen must be applied for by December 1 of the year prior to entering college. The deadline for the other program is in the year prior to entering the program. Air Force ROTC offers two types of scholarships, Type I and Type II. The application process is the same for each scholarship type. Type I scholarship provides full tuition, required fees and books, uniforms, and \$100 a month. The entitlement for a Type II scholarship is the same except the tuition is capped by Air Force ROTC. Academic units earned in this program count toward fulfillment of graduation requirements. Students desiring this credit should request that an official transcript be forwarded to Caltech. For additional information on this program, contact the Department of Aerospace Studies (AFROTC) at the University of Southern California, Los Angeles, CA 90089, (213) 740-2670. The Army ROTC offers four-, three-, and two-year scholarships that range from \$200 to \$5,000 a year, depending on type of award and tuition costs. High school seniors must complete applications for national competition before December 1 prior to the year they plan to attend. Completion of the program leads to a commission as a Second Lieutenant in one of seventeen specialties in the Army Reserve, National Guard, or Regular Army. For additional information, contact the Department of Military Science, UCLA, Men's Gym, #142, Los Angeles, CA 90024, (310) 825-7381.

REGISTRATION REGULATIONS

Procedures

Students must register in person on the dates specified in the academic calendar. Registration material is to be picked up at a location designated by the Registrar, and returned to the registration area when completed. Students are not registered until they have both

- turned in a signed registration card with their approved study list, and
- made satisfactory arrangements with the Office of Student Accounts for the payment of all fees due the Institute.

Any student who has not completed both phases of registration within one week after registration day will be removed from the Institute rolls.

Students are required to maintain continuity of registration until the requirements for the Bachelor of Science degree are fulfilled, except in the case of an approved leave of absence. If continuity is broken by withdrawal without leave, reinstatement is required before academic work may be resumed.

Changes in Registration

All changes in registration must be reported to the Registrar's Office by the student prior to the published deadlines. A grade of F will be given in any course for which a student registers and which he or she does not either complete satisfactorily or drop. A course is considered dropped when a drop card is completed and returned to the Registrar's Office. A student may not at any time withdraw from a course that is required for graduation in his or her option, without permission of the Registrar.

A student may not add a course after the last day for adding courses, or withdraw from a course after the last date for dropping courses, without the approval of the Undergraduate Academic Standards and Honors Committee. Registration for added courses is complete when an add card, signed by the instructor and the student's adviser, has been filed in the Registrar's Office. No credit will be given for a course for which a student has not properly registered. The responsibility for submitting drop cards and add cards to the Registrar's Office before the deadlines for dropping or adding courses each term rests entirely with the student. Failure to fulfill the responsibility because of oversight or ignorance is not sufficient grounds to petition for permission to drop or add courses after the deadline. It is the policy of the Undergraduate Academic Standards and Honors Committee that no petitions for the retroactive dropping or adding of courses will be considered except under very extenuating circumstances.

Leave of Absence

Leave of Absence

A leave of absence must be sought by written petition, which must be accompanied by a completed withdrawal card. The Dean or Associate Dean of

Students may grant a leave of absence provided: (a) the student is in good standing, in other words does not have to meet special academic requirements as a result of reinstatement, (b) the leave is for one year or less, and (c) the leave extends over a period that includes at least one full term.

The Dean or Associate Dean may also grant a leave of absence for medical reasons provided the petition is approved by the Director of Health Services or the Director of Counseling Services. Return from a medical leave also requires the recommendation of the Director of Health Services or the Director of Counseling Services, and the final approval of the Dean or the Associate Dean. A student returning from a leave of absence for medical reasons will maintain the same academic standing that he or she had at the beginning of the leave.

Involuntary Leave of Absence

The Dean of Students may place a student on an involuntary leave of absence if persuaded by the evidence that such action is necessary for the protection of the Institute community or for the personal safety or welfare of the student involved. An involuntary leave may include a specific date after which the student may return or it may be indefinite as to term. In the latter case the Dean of Students may stipulate conditions that must be met before the student may return. These conditions might include a letter of approval from the Director of Health Services or the Director of Counseling Services. A decision by the Dean to place a student on involuntary leave is subject to automatic review within seven days by the Vice President for Student Affairs (or his designee). Nothing in this statement precludes access to the normal student grievance procedure.

All other petitions pertaining to leaves should be addressed to the Undergraduate Academic Standards and Honors Committee, which may review all leaves of absence.

Withdrawal from the Institute

Formal separation from the Institute is effected by filing a completed withdrawal card with the Registrar. The effective date of an immediate withdrawal is the date of the signature of the Dean or Associate Dean of Students. A student who withdraws, or is absent for a term (or longer), without an approved leave of absence, must petition for reinstatement to return to the Institute. Reinstatement rules are the same as those listed under scholastic requirements. A student must withdraw by the last day of classes in any term. No courses or grades for that term will appear on the permanent record of the student. However, the date of withdrawal and the number of units will be noted on the record. The record will also indicate whether a leave of absence was granted.

A student leaving the Institute at any time during the term without filing a formal withdrawal card will not be considered withdrawn. In such a case, any grades reported by the instructors will be recorded on the permanent record card; the grade of F will be recorded for all other courses.

Summer Research or Summer Reading

Qualified undergraduate students who are regular students at the Institute are permitted to engage in research or reading during the summer, but in order to receive academic credit the student must have the approval of his or her division and must file a registration card for such summer work in the Registrar's Office before June 1. An undergraduate may not receive payment for research carried out for academic credit. Students who are registered for summer research or reading will not be required to pay tuition for the units. *Units in accordance with work accomplished.*

SCHOLASTIC REQUIREMENTS

All undergraduates are required to meet certain scholastic standards as outlined below.

Ineligibility for Registration

Eligibility to register is determined by the student's record as of Registration Day of the term in which registration is sought. Undergraduates who register for programs that make it appear they are no longer candidates for a B.S. degree or who are not making satisfactory academic progress may be refused further registration by the Undergraduate Academic Standards and Honors Committee. Freshmen who have accumulated 27 or more units of E or F, exclusive of PE, are ineligible to register for subsequent terms and must petition the Committee for reinstatement if they wish to continue as students. The Dean of Students or the Associate Dean may act on the petition if the student has received fewer than 42 units of E or F, exclusive of PE. For other petitions, action can be taken only by the Committee. Freshmen who have been reinstated will be ineligible to register if in any subsequent term of their freshman year they obtain 6 or more units of E or F, exclusive of PE. In this situation, action can be taken only by the Committee.

Undergraduate students, except freshmen, are ineligible to register for another term:

- If they fail during any one term to obtain a grade-point average of at least 1.4, or if they receive 27 or more units of E or F, exclusive of PE, during any one term.
- If they fail to obtain a grade-point average of at least 1.9 for the academic year, or if they accumulate 45 or more units of E or F, exclusive of PE, over the academic year. (Students who have completed at least three full terms of residence at the Institute and have been registered for their senior year shall no longer be subject to the requirement that they make a grade-point average of at least 1.9 for the academic year. Seniors must, however, receive a grade-point average of at least 1.4 or receive fewer than 27 units of E or F each term.)
- If, once reinstated, they fail to complete a full load of at least 36 units in the following term with a grade-point average of at least 1.9.

If a late grade makes a student ineligible after the start of the next term, the permanent record card shall show the ineligibility and a reinstatement. If the late grade is reported to the Registrar before midterm deficiency notices are due for the subsequent term, the student shall be held to the requirement as above to complete a full load of at least 36 units with a grade-point average of at least 1.9.

If a late grade received on or before the last day for adding classes makes a reinstated student eligible, the ineligibility and the reinstatement will be removed from the student's record.

No student ineligible to register on Registration Day will be permitted to register unless a petition for reinstatement has been submitted and acted upon.

Students ineligible for registration because of failure to meet the requirements stated in the preceding paragraphs may submit a petition to the Undergraduate Academic Standards and Honors Committee for reinstatement, giving any reasons that may exist for their previous unsatisfactory work and stating any new conditions that may lead to better results. Each such petition will be considered on its merits. *For the first such ineligibility*, the petition will be acted upon by the Dean of Undergraduate Students, after consultation with the student and examination of the record. At the dean's discretion, such cases may be referred to the Undergraduate Academic Standards and Honors Committee for action. *All subsequent reinstatements must be acted upon by the Committee.* In any case being considered by the Committee, students may, if they wish, appear before the Committee or, on request by the Committee, they may be required to appear. A second reinstatement will be granted only under exceptional conditions.

Departmental and Option Regulations

Continuing in an Option

Students whose grade-point averages are less than 1.9 at the end of an academic year in a specific group of subjects designated by their department or option may, at the discretion of their department, be refused permission to continue the work of that option. Such disbarment does not prevent the students from continuing in some other option or from taking additional courses to raise their average in their original option. Students without an option will fall under the direct jurisdiction of the Dean of Students. Students may remain without an option for no more than one year.

Change of Option

An undergraduate in good standing at the Institute shall be permitted to transfer into any option of his or her choice provided he or she has (a) a 1.9 GPA in subjects required for graduation in that option or in a specific group of subjects designated by that option or (b) permission of the option representative or committee. A change of option is effected by obtaining a Change of Option petition from the Registrar's Office. The completed petition must then be signed by the option representative for the new option (who will assign a new adviser), and filed with the Registrar's Office. Institute regulations require that a student who has made normal progress at the Institute be able to change options at any time up to the end of the sophomore year without penalty either as to time until graduation or as to excessive unit requirements in any term.

Term Examinations

will be held in all subjects unless the instructor in charge of any subject shall arrange otherwise. No student will be exempt from these examinations. When conflicts exist in a student's schedule, it is the student's responsibility to report the conflict to the instructor in charge of one of the conflicting examinations and make arrangements for another time.

Satisfactory Academic Progress

At the end of the spring term a student will be declared ineligible to register if he or she has not completed an average of 33 units per completed term (excluding summers) in residence or has not completed an average of 30 units in the three most recent terms in residence.

Graduation Requirement

To qualify for graduation a student must complete the prescribed work in one of the options with a passing grade in each required subject and with a grade-point average of 1.9. A grade of F in an elective course need not be made up, provided the student has received passing grades in enough other accepted units to satisfy the minimum total requirements of the option.

Graduation in the Normally Prescribed Time

Any undergraduate student who fails to complete the requirements for graduation at the end of the normally prescribed time must petition the Undergraduate Academic Standards and Honors Committee for approval to register for further work.

Requirement for a Second Bachelor of Science Degree

Under exceptional circumstances a student may be permitted to return to study for a second Bachelor of Science degree. As a general rule this second degree must be in an option which is not in the same division as that of the original degree. To receive this permission the student must petition the Curriculum Committee. If the petition is approved the student must then register for three consecutive terms of additional study, completing in each term at least 36 units, and must meet all the requirements for graduation in the second option. If additional time is needed to complete the degree, the student must also petition the Undergraduate Academic Standards and Honors Committee for an extension. A student admitted for a second Bachelor of Science degree in a particular option may not change to another option without first submitting a new petition to the Curriculum Committee and receiving the explicit approval of that committee.

Graduation with Honor

Students who have achieved a high scholastic standing or who have carried out creative research of high quality may be recommended to the faculty for graduation with honor by the Committee on Undergraduate Academic Standards and Honors. The Committee shall consider for graduation with honor those students who have achieved an overall grade-point average of 3.5 and others who, on the basis of exceptional creativity, have been recommended to the Committee by a faculty member or by a division of the Institute.

Excess of or Fewer than Normal Units (Overloads and Underloads)

An overload is defined as registration for more than 54 units by an upper-classman or more than 51 units by a freshman. An underload is registration for

fewer than 36 units. A student who wishes to carry an overload in any term must obtain the approval of his or her adviser and of the Dean or Associate Dean of Students. Petitions for overloads will not be accepted later than the last day for adding classes in any term.

Underloads with 27 or more units may be approved by the Dean or Associate Dean if the student has not previously had an underload. Seniors may take an underload by presenting for the Registrar's approval a course plan for graduation the following June, provided that the plan does not require an overload in any term. In all other cases the student must petition the Undergraduate Academic Standards and Honors Committee for approval. The committee has the latitude to grant part-time status to a small number of exceptional, highly motivated students with at least junior standing, for reasons deemed valid by the committee.

Miscellany

Transfer of Credit from Other Institutions

Regularly enrolled students who want to obtain credit for college courses taken elsewhere should have a copy of the transcript of their work sent to the Registrar's Office. The student should then obtain an "Allowance of Credit" form from the Registrar's Office and take this, with the transcript, to the representative of the option in which credit is desired. Credit will be granted when this form, with the appropriate signatures, is returned to the office.

Allowance of Credit in the Humanities and Social Sciences

In general, Caltech students should fulfill Caltech course requirements by taking courses at Caltech. Students are expected to have a well-reasoned educational goal for taking classes elsewhere. The only exceptions are transfer students admitted to advanced standing. Credit for comparable work done at other institutions with similar academic standards is not granted automatically.

Students who wish to take courses elsewhere (whether on leave, in the summer, or during the academic year) should consult, *in advance*, with the Executive Officer for the Humanities or the Executive Officer for the Social Sciences, or their designees, to minimize any misunderstanding regarding the nature of credit they may receive. Upon completion of the course, the student must obtain an Allowance of Credit Form from the Registrar, obtain the signed approval of the Executive Officer, or his or her designee, for transfer credit, and return the completed form to the Registrar's Office. The Executive Officers are the final authority in the allowance of credit.

Guidelines and specific information about allowance of credit are available from the Division of the Humanities and Social Sciences.

Other Allowances of Credit

Except for transfer credit and advanced placement credit upon admission, credit will not be granted for Caltech courses not registered for, except in special circumstances by arrangement with the instructor. Such arrangements must be approved by the Curriculum Committee, and the student must petition the Committee before the work is undertaken.

Selection of Option

At the beginning of the third term, freshmen must notify the Registrar's Office of their selection of an option in engineering, humanities, social sciences, or science to be pursued in subsequent years. Upon the selection of an option, a freshman will be assigned an adviser in that option, whose approval must then be obtained for preregistration for the following year.

An undergraduate may be allowed to major in two options for the Bachelor of Science degree. As a general rule, the two options should not be in the same division. The student must obtain the approval of the Curriculum Committee prior to the beginning of the senior year. He or she will then be assigned an adviser in each option.

Candidacy for the Bachelor's Degree

A student must file with the Registrar a declaration of candidacy for the degree of Bachelor of Science on or before the first Monday of November preceding the date on which he or she expects to receive the degree. All subjects required for graduation, with the exception of those for which the candidate is registered during the last term of his or her study, must be completed and the grade recorded, by the second Monday of May preceding commencement.

Transcripts of Records

A student, or former student, may request that official transcripts of his or her records be forwarded to designated institutions or individuals. Requests should be filed at the Registrar's Office at least five days before the date on which the transcripts are to be mailed. (See "Unpaid Bills" for complete details.)

ATHLETICS AND PHYSICAL EDUCATION

Before graduation each undergraduate is required to successfully complete 9 units of physical education. This requirement may be satisfied entirely or in part by participation in intercollegiate athletics, or successful completion of physical-education class coursework. All grades are issued pass/fail. A maximum of 6 units per term may be applied toward graduation requirements with the total not to exceed 36 units. Participation as a bona fide member of an intercollegiate team for the period covered by the sport in a given term satisfies the requirement for that term.

A broad program of instruction is provided each term. Enrollment in classes is conducted during preregistration. Late registration is permitted during the first week of each term, provided there is space available and with permission of the instructor. Standards for evaluation of student performance will be clearly defined at the beginning of each class. Participation in intramural sports will count toward the successful completion of an instructional class of the same activity.

UNDERGRADUATE EXPENSES

For freshmen and transfer students applying for admission, there is a \$40 application fee. This fee is not refundable, but it will be applied to tuition fees upon registration.

A registration fee, \$100 for freshmen and transfer students, is payable upon notification of admission. This fee is not refundable, but it will be applied to tuition fees upon registration. Housing contracts must be submitted to the Director of Residence Life by the date specified in the instructions accompanying the contract.

Expense Summary 1994-95

General:

General Deposit	\$ 25.00 ¹
Tuition	16,695.00
Student Body Dues, including <i>The California Tech</i>	60.00 ²
Assessment for <i>Big T</i>	36.00 ²
Assessment for Caltech Y	15.00
	<u>\$16,831.00</u>

Other:

Student Housing: (Rates are subject to change)	
Room (on campus; other rates vary)	2,840.80
Board (provides 10 meals per week while Institute is in session)	2,209.68
Dues	105.00
Books and Supplies (approx.)	735.00
Personal Expenses (approx.)	1,395.00
Meals not on Board contract (approx.)	1,371.00
	<u>\$8,656.48</u>

The following is a list of undergraduate student fees at the California Institute of Technology for the academic year 1994-95 together with the dates on which these charges are due. Fees are subject to change at the discretion of the Institute.

	<i>First Term</i>	<i>Fee</i>
September 20, 1994	General Deposit	\$ 25.00
(<i>Freshmen</i>)	Tuition	5,565.00
September 26, 1994	Associated Student Body Dues	20.00
(<i>All Others</i>)	Assessment for <i>Big T</i>	12.00
	Assessment for Caltech Y	5.00
	Room and Board	
	(for on-campus residence)	1,828.36
	Student House Dues and Assessment	35.00

¹ This charge is made only once during residence at the Institute.

² Fees subject to change by action of the Board of Directors of the Associated Students of the California Institute of Technology.

	<i>Second Term</i>		
January 4, 1995	Tuition	\$5,565.00	
	Associated Student Body Dues	20.00	
	Assessment for <i>Big T</i>	12.00	
	Assessment for Caltech Y	5.00	
	Room and Board (for on-campus residence)	1,666.32	
	Student House Dues and Assessment	35.00	
	<i>Third Term</i>		
April 3, 1995	Tuition	\$5,565.00	
	Associated Student Body Dues	20.00	
	Assessment for <i>Big T</i>	12.00	
	Assessment for Caltech Y	5.00	
	Room and Board (for on-campus residence)	1,555.80	
	Student House Dues and Assessment	35.00	
Tuition Fees for fewer than normal number of units:			
	36 units or more		<i>Full Tuition</i>
	Per unit per term	\$ 155.00	
	Minimum tuition per term	1,550.00	
	Audit Fee \$155.00 per lecture hour, per term.		

Other Items of Interest

Refunds

Students withdrawing from the Institute during the first three weeks of a term are entitled to a partial refund of tuition based on the period of attendance. The schedule for the specific percentage of tuition to be refunded for specific days of attendance is shown below. The days in attendance are the number of days counted from the first day of the term to:

- date of approval of the request by the Dean of Students for *withdrawals*.

Withdrawal Tuition Refund Schedule

Tuition is refunded according to the following schedule:

<i>Days</i>	<i>Percent of tuition due the Institute</i>	<i>Days</i>	<i>Percent of tuition due the Institute</i>
1-7	20.00	15	40.00
8	30.67	16	41.33
9	32.00	17	42.67
10	33.33	18	44.00
11	34.67	19	45.33
12	36.00	20	46.67
13	37.33	21	48.00
14	38.67	22	100.00

- registration for reduced units is approved by the Undergraduate Academic Standards and Honors Committee or the Registrar. For students enrolled in less than 36 units for the term, a tuition credit for the difference between the charge for 36 units and the appropriate charge for the reduced units will be applied to the student's account. This tuition credit will only be made for reduced units as of the published Add Day of each term. However, if tuition credit has been applied to students' accounts for reduced units, any subsequent increase in tuition units will result in the appropriate tuition charge for the increased number of units retroactive to the beginning of the academic term.

The Financial Aid Office is notified of refunds for aid recipients. The amount of refund is determined by the refund schedule stated above.

In the case of a withdrawal, the portion of refund to be returned to Title IV funds is as follows:

$$\frac{\text{Total Title IV aid (excluding FWS) for payment period}}{\text{Total aid awarded (excluding FWS) for payment period}}$$

The distribution order of the Title IV portion of the refund is as follows:

1. Federal Direct Unsubsidized Stafford Loan
2. Federal Direct Subsidized Stafford Loan
3. Federal PLUS Loan
4. Federal Perkins Loan
5. Federal Pell Grant
6. Federal SEOG
7. Other Title IV Aid
8. Non-Title IV Aid

The non-Title IV portion will be distributed as appropriate, first to outside donors, as required, then to Caltech grant, scholarship, or loan, depending on the composition of the aid package. These distributions will occur as credits to the appropriate aid funds and charge(s) to the student's Caltech account.

If a Federal Direct Stafford or PLUS disbursement was credited to the student's account during the academic year, some of the loan proceeds may be attributed to a payment period subsequent to the one in which the student withdrew, and require a return disbursement to the lender. This determination will be made prior to the above refund calculation.

Tuition Refund for Call to Active Military Service

Students serving in reserve units of the U.S. Armed Services will receive a full refund of tuition charges for any term which they are unable to complete because they are called to active duty.

Repayment

Upon withdrawal, overpayment of aid in excess of direct charges and allowable indirect charges is calculated as follows:

Direct Charges

<i>Tuition and fees</i>	actual charges
<i>Room and board</i>	are prorated by number of weeks attended times actual weekly cost (daily room rate times 7, plus daily board rate times 5)

Board contracts are prorated according to the number of days a student has been on campus. Room contracts are charged on a term basis for all students. Early termination of a room contract will be granted only with the approval of the Director of Residence Life.

ASCIT Dues

As a service to the Associated Students of the California Institute of Technology, Inc., or ASCIT, dues of \$60 per year and an assessment of \$30 for the college annual, the *Big T*, are collected by the Institute and turned over to ASCIT. A subscription to the student newspaper, *The California Tech*, is included in these dues, and the balance is used in the support of student activities as deemed appropriate by the ASCIT Board of Directors. Students not wishing to join ASCIT or to purchase the *Big T* should so indicate at the time of registration.

General Deposit

Each new student is required at his or her first registration to make a general deposit of \$25, to cover possible loss and/or damage of Institute property. Upon graduation or withdrawal from the Institute, any remaining balance of the deposit will be refunded.

Fees for Late Registration

Registration is not complete until the student has personally turned in the necessary forms for a program approved by his or her adviser and has paid tuition and other fees. A penalty fee of \$50 is assessed for failure to register within five days of the scheduled dates.

Honor System Matters

Monies owed to the Institute resulting from a Board of Control decision may be collected through Student Accounts, at the request of the Dean of Students.

Student Houses

Students in the houses must supply their own blankets. Bed linens and towels are furnished and laundered by the Institute.

Application for rooms in the student houses may be made by addressing the Director of Residence Life, 115-51, California Institute of Technology, Pasadena, CA 91125.

Special Fees

Students taking the Summer Field Geology course (Ge 123) should consult with the division about travel and subsistence arrangements and costs.

Unpaid Bills

All bills owed the Institute must be paid when due. Any student whose bills are past due may be refused registration for the term following that in which the past due charges were incurred. Transcripts will not be released until all bills have been paid or satisfactory arrangements for payment have been made with the Office of Student Accounts.

FINANCIAL AID

Caltech believes that qualified students who wish to attend the Institute should not be prevented from doing so for financial reasons. Although the Institute expects students and families to finance the cost of education to the fullest extent possible, the Institute will make every effort to assist those who need help, including those whose financial circumstances change during the year.

Demonstrated financial need is the difference between the annual cost of attending Caltech and the amount the student and parents can reasonably be expected to contribute toward those costs. Costs include actual tuition and fees, room and board, an allowance for meals not covered in the board contract, books and supplies, personal expenses, and a travel allowance based on airfare for two round trips. (Caltech is unable to include a travel allowance for students whose residence is outside the United States, Mexico, or Canada.) Caltech's estimate of a family's ability to contribute is determined annually in accordance with guidelines established nationally by the U.S. Department of Education and the College Scholarship Service.

Eligibility for each type of assistance varies, depending upon the source of funds. Most students who attend Caltech qualify for some kind of financial aid from the Institute, federal and state agencies, outside organizations such as foundations and businesses, and/or lending institutions. Assistance offered by Caltech includes federal, state, and institutional grants, low-interest loans, and subsidized jobs. U.S. citizens or eligible noncitizens (as defined in the application) may apply for state and federally funded programs. International students may apply for institutionally funded programs.

Students do not have to be accepted for admission to Caltech before applying for financial aid. Applications for admission are evaluated separately from requests for financial aid. Students with complete financial aid applications on file will be considered for all applicable types of need-based assistance. A renewal application must be submitted each year. In addition to direct financial assistance, information is available, upon request, about education payment plans and financial-planning resources. (For information on non-need-based scholarships and prizes, see pages 105 and 107–112.)

All students who believe they will need assistance to attend Caltech are encouraged to submit financial aid applications to the Financial Aid Office. Application procedures are outlined below.

The financial aid staff is happy to talk with students and their families at any time to explain the application process and Caltech's computations. For further information on the determination of financial need, application procedures, as well as financial aid awards and programs, contact the Financial Aid Office, California Institute of Technology, 12-63, Pasadena, CA 91125, or call (818) 395-6280.

HOW TO APPLY FOR FINANCIAL AID

Slightly different procedures and deadlines exist for each category of student applying for financial aid. Descriptions of these procedures and deadline dates are listed below.

Freshman Admission Candidates Who Are United States Citizens or Permanent Residents: By completing the Financial Aid Information Card included with the Caltech Freshman Admissions Application, freshman admission candidates will automatically be sent a *Free Application for Federal Student Aid (FAFSA)* and a College Scholarship Service (CSS) *Financial Aid Form (FAF)* from Caltech after December 1, 1994. Students applying for financial aid must complete and submit both of these forms to CSS **between January 1 and February 1, 1995**, for priority consideration. Applicants should list the California Institute of Technology as a recipient of both forms. California residents must also complete the Cal Grant GPA Verification form in order to apply for a Cal Grant (*see "Types of Aid Available"*). After receipt of the processed *FAFSA* and *FAF*, the Financial Aid Office will determine a student's eligibility for financial aid. Conditional awards will be issued with offers of admission. Awards then will become official after student and parent tax returns and all other requested documents are received by the Financial Aid Office, and any necessary award adjustments are made.

International Freshman Admission Candidates: By completing the Financial Aid Information Card included with the Caltech Freshman Admissions Application, International Freshman Admission Candidates will automatically be sent a *Foreign Student Financial Aid Application and Certification of Finances* no later than February 1, 1995. International freshman students must return this financial aid application by **March 2, 1995**, to the Caltech Financial Aid Office. **International freshman students who do not apply for aid by March 2, 1995, or who are denied aid, will be ineligible for aid for any other academic period while they are undergraduates at Caltech.** (Canadian and Mexican citizens are exempt from this rule.) After receipt of the *Foreign Student Financial Aid Application*, the Financial Aid Office will determine a student's eligibility for financial aid. Conditional awards will be issued with offers of admission. Awards will then become official after translated tax returns for students and parents, and all other requested documents, are received by the Financial Aid Office, and any necessary award adjustments are made. Those offered assistance will be eligible to apply for aid in subsequent years.

Transfer Admission Candidates Who Are United States Citizens or Permanent Residents: By completing the Financial Aid Information Card included with the Transfer Application, transfer admission candidates will automatically be sent a *Free Application for Federal Student Aid (FAFSA)* and a College Scholarship Service (CSS) *Financial Aid Form (FAF)* from Caltech after January 1, 1995. Students applying for financial aid must complete and submit both of these forms to CSS **between January 1 and April 15, 1995**. Applicants should list the California Institute of Technology as a recipient of both forms. After receipt of the processed *FAFSA* and *FAF*, the Financial Aid Office will determine a student's eligibility for financial aid. Conditional awards will be issued with offers of admission. Awards then will become official after student and parent tax returns and all other

requested documents are received by the Financial Aid Office, and any necessary award adjustments are made. Applicants must submit a Financial Aid Transcript from each college previously attended, whether or not financial aid was received. Financial Aid Transcript forms are available from any college or university financial aid office.

International Transfer Admission Candidates: By completing the Financial Aid Information Card included with Transfer Applications, International Transfer Admission Candidates will automatically be sent a *Foreign Student Financial Aid Application and Certification of Finances*, no later than March 1, 1995. International transfer applicants must submit this financial aid application by **April 15, 1995**, to the Caltech Financial Aid Office. **International transfer applicants who do not apply for aid, or who are denied aid, will be ineligible for aid for any other academic period while they are undergraduates at Caltech.** (Canadian and Mexican citizens are exempt from this rule.) After receipt of the *Foreign Student Financial Aid Application and Certification of Finances*, the Financial Aid Office will determine a student's eligibility for financial aid. Conditional awards will be issued with offers of admission. Awards will then become official after translated tax returns for students and parents, and all other requested documents, are received by the Financial Aid Office, and any necessary award adjustments are made. Those offered assistance will be eligible to apply for aid in subsequent years.

Returning Students will be sent a federal *Renewal Application* from the U.S. Department of Education and a College Scholarship Service (CSS) *Financial Aid Form (FAF)* by the Caltech Financial Aid Office in December 1994. The *FAFSA* and *FAF* should be submitted to the College Scholarship Service (CSS) by **March 2, 1995**. Supporting documents, including student and parent tax returns, should be submitted directly to the Financial Aid Office by May 1, 1995. Award letters will be issued during the summer.

Returning International Students should file the *Foreign Student Financial Aid Application and Certification of Finances* by **March 2, 1995**, with the Caltech Financial Aid Office.

All students must reapply for aid each year. (See "Returning Students.")

TYPES OF AID AVAILABLE

Once financial need has been determined, that need will be met either by a single type of aid or by a combination of grants or scholarships, student employment, and low-interest loans. Such a combination makes up a financial aid "package."

Grants and scholarships, which include those provided both through Caltech and by the federal and state governments, do not have to be repaid. Loans are a sound means of meeting a portion of current educational expenses by borrowing against future earnings. Loans, of course, must be repaid. Employment wages comprise money earned during the academic year either on or off campus. Employment opportunities exist for students who must work to help meet their educational costs.

Grants and scholarships are typically disbursed to the student's account, one-third at the beginning of each term. Federal Perkins Loans and Caltech Loans are also disbursed to the account in thirds, after a promissory note is signed (usually at registration). Wages for on-campus employment are paid as earned, by check, through the biweekly Caltech payroll system.

Grants and Scholarships

Caltech Grants and "Name" scholarships are awarded from an institutional fund or endowment specifically established for the purpose of helping undergraduates meet their demonstrated financial need. The amount of the award depends entirely on demonstrated financial need.

"Name" scholarships are awarded in place of Caltech grants to undergraduates from gifts to the Institute given for scholarship purposes, and are named by or for the donor. All aid applicants who meet the specifications of the donor are considered for a "Name" scholarship. No special application need be filed. Recipients may be asked to write a thank-you letter to one or more donors. Many donors are lifelong friends of the Institute, and they appreciate hearing directly from students about life at Caltech today.

Federal and State Grants

The Federal Pell Grant Program is for undergraduate students who have not yet completed a baccalaureate degree. Eligible students may receive Federal Pell Grants for the period of time necessary to complete a first undergraduate baccalaureate degree.

The Federal Pell Grant program is intended to be the "floor" of the student's financial aid package. This is usually the first program for which a student's eligibility is determined because many other federal aid programs require that a student's Federal Pell Grant eligibility be taken into consideration prior to determining eligibility for other aid. Application for a Federal Pell Grant is made by using the *Free Application for Federal Student Aid (FAFSA)*. Applicants will receive a Student Aid Report (SAR) directly from the FAFSA processor. Upon receipt of the SAR, students should review the SAR for errors. If corrections need to be made, students can submit the SAR to the Financial Aid Office for corrections. If eligible, the Financial Aid Office will determine the amount of the award, based upon the cost of attendance, the Expected Family Contribution, and the student's enrollment status.

In 1994–95, Pell Grant awards ranged up to \$2,300.

The Federal Supplemental Educational Opportunity Grants (FSEOG) Program provides grant funds for undergraduate students who have not completed their first baccalaureate degree and who are financially in need of this grant to enable them to pursue their education. Awards of FSEOG funds must be made first to students who show exceptional financial need (defined as those students with the lowest federal expected family contribution at the Institute). Priority for FSEOG funds must be given to Pell Grant recipients. No additional application is required. These grants are contingent upon federal appropriations. The minimum annual FSEOG award is \$100, and the maximum annual award is \$4,000.

Cal Grants are awarded to California residents by the California Student Aid Commission (CSAC). All students who are eligible to apply are required to do so each year at the time they apply for Caltech assistance. Students should complete a FAFSA and GPA verification form. Results from the FAFSA are sent by the processor to the CSAC, where eligibility is determined. Renewal materials are mailed to current recipients at their permanent addresses each year in December. Students must renew their Cal Grant eligibility on an annual basis by completing the FAFSA. The FAFSA deadline for new applicants is currently March 2.

Cal Grant A, which is awarded on the basis of financial need and academic achievement, is designed to assist with the cost of tuition and fees. In 1993–94, the maximum Cal Grant A awards were valued at \$5,250.

Cal Grant B is awarded to students from disadvantaged/low-income families. During the first year, Cal Grant B recipients are awarded a monthly stipend for living costs. Renewal Cal Grant B recipients are awarded the monthly stipend and, in addition, assistance with tuition and fees. In 1993–94, Cal Grant B recipients received a maximum of \$1,410 total in quarterly stipends and \$5,250 in tuition and fee assistance.

Many other states provide scholarships and grants. A complete list of state scholarship agencies and their addresses is available from the Financial Aid Office. Students should contact the agency in their state of residence regarding programs available and application procedures.

Self-Help: Employment and Loans

A self-help award is a combination of loans and employment opportunities students may take advantage of during the year to help meet school expenses. Students often can choose how much of their self-help they wish to earn and how much they wish to borrow.

The amount of self-help expected of a student is established yearly by the Institute. For the 1994–95 academic year, students will typically receive \$5,600 in a combination of work and/or loan, with any remaining need being met with grant assistance.

At Caltech, students are offered a suggested combination of loan and employment opportunities that they may take advantage of during the year to meet their self-help expectation. Freshman students often can choose how much they wish to earn and how much they wish to borrow, or they may decide to work or borrow less than the standard self-help amount. These choices will not affect the amount of their grant.

Student employment is generally available to all students regardless of whether they apply for financial aid. Interested students should contact the Caltech Career Development Center. Because all income earned during the academic year may be considered as a resource for those receiving financial aid, students should notify the Financial Aid Office when they begin employment during the academic year. Undergraduate students must receive approval from the Dean of Students to work more than 16 hours per week. Students typically work an average of 10 hours per week. Freshman students may not commence employment until the second term and must receive permission from the Dean of Students prior to commencing employment.

The Federal Work-Study (previously known as College Work-Study, or CWS) Program provides jobs for undergraduates as well as graduates and professional students who are in need of such earnings to meet a portion of their educational expenses. Jobs may be located on campus or off campus. The employer may be Caltech; a federal, state, or local public agency (such as Caltech's Jet Propulsion Laboratory); a private nonprofit organization; or a private for-profit organization if the job is academically relevant. Beginning with the 1994-95 school year, Caltech will place an increased emphasis on placing Federal Work-Study students in community service jobs. Federal Work-Study employees are paid at least the federal minimum wage rate.

The maximum amount of Federal Work-Study wages that students may earn is determined by financial need. To locate a job, the student may contact the campus Career Development Center and may check the student newspaper. *Summer Federal Work-Study* may also be available.

The Caltech Work-Study Program is funded by the Institute to provide part-time employment for international students who have demonstrated financial need. This program is limited to the campus or to JPL. The program is designed to parallel the Federal Work-Study Program, and the same guidelines apply to its administration. Summer Caltech Work-Study Program funding may also be available.

Federal Perkins Loans are awarded by the Institute to students with demonstrated financial need. Funds are obtained from the federal government and from former Caltech students who are in the process of repaying their loans. No interest is charged on the loan while a student maintains at least a half-time academic load. Repayment begins nine months after leaving school or dropping below half-time status. Interest is then charged at a rate of 5 percent on the unpaid balance. Federal Perkins Loans are limited to a total of \$3,000 annually during undergraduate study, a total of \$15,000 for all years of undergraduate study, and a maximum of \$30,000 for the entire undergraduate and graduate career. Students may be allowed up to ten years to repay, based upon the amount they have borrowed. Information concerning deferment, repayment, postponement, and cancellation will be provided on each borrower's loan promissory note and in a disclosure statement given to students prior to disbursements of the loan.

Caltech Loans are made from funds provided by many sources, and are used to supplement the Institute's Federal Perkins Loan funds. Generally, no interest is charged and no repayment of principal is required while a student maintains a continuous course of study as an undergraduate at Caltech. Repayment begins nine months after leaving school or dropping below half-time status. Interest is then charged at a rate of 5 percent on the unpaid balance until the loan has been repaid in full. As with Federal Perkins Loans, if the student transfers to another institution or attends graduate school, here or at another institution, no payments need be made on the principal or interest as long as half-time attendance is maintained at the other institution. More specific information is provided to each borrower on the promissory note and in a disclosure statement given to students prior to disbursements of the loan. For example, *Cecil L. Killgore Student Loans* are available to members of all undergraduate and graduate classes, including freshmen, under the same general guidelines established for Caltech Loans as described above. It is the fund's policy to make loans available at the lowest possible cost to the student, with priority given to students in the field of power engineering.

Federal Direct Student Loans

The *Federal Direct Student Loan Program* is a new opportunity for students to borrow money from the federal government to pay for a Caltech education. Under this program, the U.S. Department of Education makes loans, through Caltech, directly to students. Caltech will use your Federal Direct Loan to pay your tuition and fees, as well as room and board charges, and will give you any remaining money for living expenses. Federal Direct Loans make loan repayment simpler—your payments go directly to the federal government.

Direct Loans include:

1. The Federal Direct Stafford Loan Program
2. The Federal Direct Unsubsidized Stafford Loan Program
3. The Federal Direct PLUS Loan Program; and
4. The Federal Direct Consolidation Loan Program

Federal Direct Stafford Loan

The Federal Direct Stafford Loans (subsidized and unsubsidized) are available to both graduate and undergraduate students. The federal government “subsidizes” a loan by paying the interest while the student is in school, during the grace period, and during periods of deferment. For an unsubsidized loan, the government does not provide the subsidy; therefore, interest on the loan accrues during those periods. Another difference between these two loans is that the calculated family contribution is taken into consideration when determining a student’s need for a subsidized loan. To determine eligibility for an unsubsidized loan, the family contribution is not considered. Other than these two differences, the provisions of the Federal Direct Stafford Loan Program apply to both subsidized and unsubsidized loans (i.e., loan limits, deferment provisions, etc.).

Before Caltech can determine loan eligibility, a determination of the student’s eligibility for a Pell Grant must be made. In order to make this determination, the applicant must complete a Free Application for Federal Student Aid (FAFSA). Federal Direct Subsidized Stafford Loans may not be used to substitute for the federally calculated expected family contribution; however, Federal Direct Unsubsidized Stafford Loans may be used in this capacity. Before a student can apply for a Federal Direct Unsubsidized Stafford Loan, eligibility for a subsidized loan will be determined. Federal Direct Unsubsidized Stafford Loan borrowers are not required to demonstrate need in order to be eligible. However, if the student is eligible for a Federal Direct Stafford Loan, he or she will be awarded that loan first, and this award will be taken into consideration when determining eligibility for the Federal Direct Unsubsidized Stafford Loan. The amount borrowed under the subsidized and unsubsidized loans combined may not exceed the annual/aggregate loan limits, or the total cost of education.

The following chart summarizes loan limits for Federal Direct Stafford Loans and Federal Direct Unsubsidized Stafford Loans.

MAXIMUM LOAN AMOUNT for a Full ACADEMIC YEAR

	DEPENDENT STUDENT	INDEPENDENT STUDENT
	Maximum combined subsidized & unsubsidized Federal Direct Stafford Loan	Maximum combined subsidized & unsubsidized Federal Direct Stafford Loan
1st year undergraduate	\$2,625	\$6,625
2nd year undergraduate	\$3,500	\$7,500
3rd & 4th year undergraduate	\$5,500	\$10,500
Graduate/Professional	N/A	\$18,500

NOTE: The loan amounts listed above cannot exceed the cost of your education minus other financial aid you receive.

Aggregate loan amounts are \$23,000 for dependent undergraduates, \$46,000 for independent undergraduates, and \$138,500 for graduate and professional students (including Stafford amounts borrowed as an undergraduate).

All loans must be disbursed in at least two installments. Further, loan checks for first-time, first-year undergraduate borrowers may not be released to the student until he/she has been enrolled in his/her program of study for at least 30 days.

Effective for new loans made after July 1, 1994, the maximum interest rate is 8.25 percent. The actual rate is variable, and is determined according to a formula linked to the 91-day Treasury-bill rate. For the period July 1, 1994, through June 30, 1995, the rate will be set in early summer. To offset the federal government's cost of the program, the borrower must pay an up-front origination fee of 4 percent of the principal amount of the loan. This origination fee is used to offset some of the federal costs of the program.

Under the Direct Loan program, student borrowers have four types of repayment plans available:

1. The standard repayment plan;
2. The extended repayment plan;
3. The graduated repayment plan;
4. The income contingent repayment plan.

The *standard repayment plan* requires a fixed annual repayment amount paid over a fixed period of time. The minimum annual repayment is \$600 and the maximum repayment period is 10 years.

The *extended repayment plan* assumes a fixed annual repayment amount paid over an extended period of time. The minimum annual repayment amount is \$600 or the amount of interest due and payable each year, whichever is greater.

The *graduated repayment plan* establishes annual repayment amounts at two or more levels. Repayments are paid over a fixed or extended period of time. Minimum scheduled repayments may not be less than 50 percent nor more

than 150 percent of the amortized payment if the loan was repaid under the standard repayment plan.

The *income contingent repayment plan* calls for varying annual repayment amounts based on the Adjusted Gross Income (AGI) of the borrower over an extended period of time, as determined by the Department. The maximum repayment period may not exceed 25 years. This repayment option is *not* available to Federal Direct PLUS borrowers.

If the borrower does not indicate his or her choice of repayment plans, the U.S. Department of Education will schedule the borrower's repayments according to the standard, extended, or graduated repayment plans described above. The borrower may change the choice of repayment plans under conditions established by the U.S. Department of Education and may accelerate his or her repayments without penalty. In addition, the U.S. Department of Education may establish on a case-by-case basis, an alternative repayment plan for a borrower who demonstrates that the terms and conditions of the available repayment plans are inadequate to accommodate the borrower's exceptional circumstances.

Once the student is no longer enrolled at least half-time and a six month grace period has ended, loan repayment for Federal Direct Stafford Loans may be deferred.

- During any period in which the borrower is pursuing at least a half-time course of study as determined by the institution;
- During any period in which the borrower is pursuing a course of study under an approved graduate fellowship program or rehabilitation program training program for disabled individuals;
- For up to 3 years during periods in which the borrower is actively seeking but unable to find full-time employment;
- For up to 3 years for any reason, which Caltech determines, has caused or will cause the borrower to have an economic hardship.

These deferment provisions were applicable to new borrowers whose first disbursement is made on or after July 1, 1993.

Unlike the Federal Perkins Loan program, there are no postdeferment grace periods for Federal Direct Stafford Loans.

More specific information of repayment and deferments are included in the loan promissory note and the loan disclosure statement provided to student borrowers.

Federal Direct PLUS (Parent) Loan Program

Under the Federal Direct PLUS Program, parents of dependent undergraduate students may borrow up to the difference between the cost of attendance and all other financial aid, per dependent student. Federal Direct PLUS loans are also limited to parent borrowers who have "no adverse credit history," as determined by the Secretary of Education. Federal Direct PLUS loans may be used to replace the expected family contribution. There is no cumulative maximum limit that can be borrowed under the Federal Direct PLUS program. Federal Direct PLUS loan checks are credited to the student's account and must be disbursed in at least two installments.

Interest rates on Federal Direct PLUS loans are variable, linked to the 52-week Treasury-bill rate, but may not exceed 9 percent. For the period beginning July 1, 1994, through June 30, 1995, the interest rate will be set in the

summer of 1994. There is no federal interest subsidy on Federal Direct PLUS Loans. However, the government is authorized to charge the borrower an up-front origination fee of up to 4 percent to offset the federal government's cost of the program.

Unless the *parent* borrower qualifies for one of the deferments under the Federal Direct Stafford Loan Program, repayment of principal and interest must begin 60 days after disbursement. Parent borrowers who qualify for deferment may pay interest only, beginning 60 days after disbursement, unless interest is capitalized (i.e., deferred and added to the loan principal).

Applications for Federal Direct PLUS loans are available from the Caltech Financial Aid Office. Applications must be returned to the Financial Aid Office for eligibility certification.

Federal Direct Consolidation Loan Program

Borrowers with an outstanding indebtedness from the Federal Direct Stafford and Perkins Loan programs may be eligible to consolidate those loans. The interest rate is determined by the weighted average interest rate of the loans being consolidated, rounded to the nearest whole percent. The current maximum interest rate is 9 percent. The maximum repayment period depends on the total outstanding student loan amount. If the amount of the Federal Direct Consolidation Loan is less than \$7,500, the borrower's repayment period schedule may not exceed 30 years. Additional information is available from the Financial Aid Office.

Other Loans: Emergency Loans may be available to students regardless of their eligibility for financial aid. The Hoover Loan Fund enables students to borrow small sums of money to cover unforeseen emergencies. These loans are administered by the Dean of Students on a case-by-case basis. Additional information and applications may be obtained from the Dean of Students' Office.

The Caltech Y also has a no-interest, 30-day, emergency-loan program. Maximum loans are \$25.

Financial Payment Plans

Several private organizations offer a variety of financing options (such as monthly payment plans and long-term loans) to assist students and families in meeting college expenses. A publication describing these programs is available upon request from the Caltech Financial Aid Office.

No-Need Scholarships

A number of scholarships are available to *returning* students regardless of financial need. Each year the Committee on Scholarships and Financial Aid recommends a number of the Institute's most academically talented freshmen, sophomores, and juniors for Merit Awards for the following year. Recommendation for these awards is made solely on the basis of academic merit. These awards are made from the Caltech Prize, Carnation Scholarship, and Rosalind W. Alcott endowments. The John Stauffer Scholarship is also awarded to a student with a chemistry-related major. In 1993-94, 73 students received Merit Awards in the amount of \$5,000 to \$15,900. The honor is recorded on transcripts and listed in the commencement bulletin when these scholars graduate.

Several corporations, including Northrop and Green Hills Computer Software, offer partial- or full-tuition scholarships to students demonstrating particular facility in the options that represent the types of expertise the corporations need in their research and development groups. As these and other organizations announce competitions throughout the year, eligibility criteria and deadlines are advertised by the Financial Aid Office in the student newspaper, *The California Tech*.

Satisfactory Academic Progress

In order to continue to receive financial aid at Caltech, students must maintain satisfactory academic progress toward completion of the baccalaureate degree as defined on page 112. Whenever this is not maintained, approval for reinstatement by the Undergraduate Academic Standards and Honors Committee, the Registrar, or the Dean of Undergraduate Students (as described on page 86) shall reestablish satisfactory progress for purposes of financial aid eligibility.

In general, assistance is available to eligible students for the first 12 terms of enrollment (or the equivalent for transfer or less-than-full-time students). Exceptions may be approved after submission of a petition to the Financial Aid Office. Petition forms are available in the Financial Aid Office.

For financial-aid purposes, undergraduate students are classified according to the number of units earned and the number of terms of residence at Caltech. Both these criteria must be satisfied for eligibility. Students are regarded as freshman, until eligible for sophomore status, and as sophomore, junior, or senior, if they meet the corresponding criteria set below. Units earned are defined as units completed with a passing grade.

Classification	Minimum Units Earned	Minimum Terms in Residence
Sophomore	108	3
Junior	216	6
Senior	324	9

Refund and Replacement Policy

Caltech has established an equitable refund policy for students who find it necessary to withdraw from the Institute.

Withdrawal from the Institute:

Students who officially withdraw from the Institute during an academic term will receive a tuition refund based on the schedule published on page 93. Students living in Caltech housing may also be eligible for a partial refund from the Housing Office.

When granting refunds to financial aid recipients, it is Caltech's policy generally to reduce the aid award by the amount of the refund. Therefore, an aid recipient's refund is, in most cases, returned to the original aid account.

An overpayment or overaward occurs when a student receives more aid than he or she is eligible to receive. Therefore, the Financial Aid Office will compare prorated costs to aid disbursed in accordance with federal guidelines. If aid disbursed exceeds costs, the student may be responsible for the overpayment. Overpayments may be charged to the student on his or her student account. Additional information is available in the Financial Aid Office.

Dropping a Course:

A student's financial aid package will be adjusted to reflect any tuition adjustment made by the Student Accounts Office as well as any other adjustments required by law or by applicable fund donors. In addition, students who are not enrolled full time as of the last day to add courses may have their aid revised. Generally, students enrolling less than three-fourths time will have an increased work expectation. Additional information is available in the Financial Aid Office.

PRIZES

Mabel Beckman Prize

The Mabel Beckman Prize is given in memory of Mrs. Beckman's many years of commitment to Caltech's educational and research programs. The \$3,000 prize is awarded to an undergraduate woman who, upon completion of her junior or senior year at Caltech, has achieved academic excellence and demonstrated outstanding leadership skills, a commitment to personal excellence, good character, and a strong interest in the Caltech community.

Eric Temple Bell Undergraduate Mathematics Research Prize

In 1963 the department of mathematics established an Undergraduate Mathematics Research Prize honoring the memory of Professor Eric Temple Bell, and his long and illustrious career as a research mathematician, teacher, author, and scholar. His writings on the lives and achievements of the great mathematicians continue to inspire many hundreds of students at Caltech and elsewhere. A

prize of \$500 is awarded annually to one or more juniors or seniors for outstanding original research in mathematics, the winners being selected by members of the mathematics faculty. The funds for this prize come from winnings accumulated over the years by Caltech undergraduate teams competing in the William Lowell Putnam Mathematics Contest, an annual nationwide competition.

Fritz B. Burns Prize in Geology

This prize is awarded to a junior or senior who has demonstrated both academic excellence and great promise of future contributions in the fields represented by the Division of Geological and Planetary Sciences.

Caltech Prize Scholarships and Carnation Scholarships

Each year Caltech awards these prizes for academic excellence to continuing students. They are based solely on merit (selection is made on the basis of grades, faculty recommendations, and demonstrated research productivity) with no consideration given to need or any other nonacademic criterion.

Donald S. Clark Memorial Awards

From a fund contributed by the Caltech Alumni Association, annual awards of \$1,000 are made to two juniors in engineering options in recognition of service to the campus community and grade point averages equal to or greater than those required for graduation with honor. The awards honor the work of Professor Clark, class of 1929, both in the field of engineering and in his service to the Alumni Association.

Deans' Cup and Residence Life and Master's Award

Two awards, selected by the Deans, the Director of Residence Life, and the Master, respectively, are presented to undergraduates whose concern for their fellow students has been demonstrated by persistent efforts to improve the quality of undergraduate life and by effective communication with members of the faculty and administration.

Haren Lee Fisher Memorial Award in Junior Physics

Mr. and Mrs. Colman Fisher established the Haren Lee Fisher Memorial Award in Junior Physics in memory of their son. The General Electric Foundation also contributed to the fund under the matching plan of their Corporate Alumnus Program. A prize of \$350 will be awarded annually to a junior physics major, who is selected by a physics faculty committee as demonstrating the greatest promise of future contributions to physics.

Henry Ford II Scholar Awards

Henry Ford II Scholar Awards are funded under an endowment provided by the Ford Motor Company Fund, a nonprofit organization supported primarily by contributions from the Ford Motor Company. Each award, up to \$5,000, will be made annually either to the engineering student with the best academic record at the end of the third year of undergraduate study, or to the engineering student with the best first-year record in the graduate program. The chairman of the Division of Engineering and Applied Science names the recipient.

Jack E. Froehlich Memorial Award

The family and friends of the late Jack E. Froehlich, who did his undergraduate and graduate work at Caltech and was later the project manager for Explorer I for the Jet Propulsion Laboratory, established a prize fund that provides an award of \$1,000 to a junior in the upper 5 percent of his or her class who shows outstanding promise for a creative professional career. The student is selected by the division chairmen and the Deans, together with the Undergraduate Academic Standards and Honors Committee.

George W. Green Memorial Prize

The George W. Green Memorial Prize was established in 1963 with contributions given in memory of George W. Green, who for 15 years served on the staff of the Caltech business office and was Vice President for Business Affairs from 1956 to 1962. The prize of \$1,200 is awarded annually to an undergraduate student in any class for original research, an original paper or essay, or other evidence of creative scholarship beyond the normal requirements of specific courses. The student is selected by the division chairmen and the Deans, together with the Undergraduate Academic Standards and Honors Committee.

Arie J. Haagen-Smit Memorial Fund

The Arie J. Haagen-Smit Memorial Award was established in 1977 to honor the memory of the pioneering bio-organic chemist who discovered the chemical constituents of smog. Dr. Haagen-Smit was a member of the Caltech faculty for 40 years, and his family and friends have arranged for a prize of \$750 to be given at the end of the sophomore or junior year to a student in biology or chemistry who has shown academic promise and who has made recognized contributions to Caltech. The selection is made by a committee of representatives from the biology and chemistry divisions, and the Deans.

Frederic W. Hinrichs, Jr., Memorial Award

The Board of Trustees of the California Institute of Technology established the Frederic W. Hinrichs, Jr., Memorial Award in memory of the man who served for more than 20 years as Dean and professor at the Institute. In remembrance of his honor, courage, and kindness, the award bearing his name is made annually to the senior who throughout his or her undergraduate years at the

Institute has made the greatest contribution to the student body and whose qualities of character, leadership, and responsibility have been outstanding. At the discretion of the Deans, more than one award, or none, may be made in any year. The award, presented at commencement, consists of a cash award and a certificate.

Bibi Jentoft-Nilsen Memorial Award

Family and friends of Bibi Jentoft-Nilsen, class of 1989, have provided this award in her memory. The cash award of \$500 is for an upperclass student who exhibits outstanding qualities of leadership and who actively contributes to the quality of student life at Caltech.

Lingle Scholarship

Each year the Freshman Admissions Committee selects one incoming freshman for a \$5,000 merit award. The Lingle Scholarship is awarded in recognition of interest in a career in science or engineering, outstanding academic record, demonstrated fair-mindedness, and unquestioned integrity. The scholarship is renewable for three years, given satisfactory academic standing. All admitted applicants will be considered and no special application is required.

Artur Mager Prize in Engineering

The Aerospace Corporation established the Artur Mager prize to honor Dr. Artur Mager, an alumnus of the California Institute of Technology and formerly group vice president, engineering, of the Aerospace Corporation. Dr. Mager demonstrated outstanding qualities of technical creativity, leadership, and character throughout his career. The prize is awarded to a senior student in engineering selected by the chairman of the Division of Engineering and Applied Science based on excellence in scholarship and the promise of an outstanding professional career. The prize consists of a cash award of \$2,000 and a certificate.

Mary A. Earl McKinney Prize in Literature

The Mary A. Earl McKinney Prize in Literature was established in 1946 by Samuel P. McKinney, M.D., of Los Angeles. Its purpose is to promote proficiency in writing. The terms under which it is given are decided each year by the literature faculty. It may be awarded for essays submitted in connection with regular literature classes, or awarded on the basis of a special essay contest. The prize consists of cash awards amounting to \$750.

Millikan Scholarships

Millikan Scholarships are awarded to selected freshmen whose record of personal and academic accomplishment is judged outstanding among the remarkable group of incoming freshmen.

Robert L. Noland Leadership Award

The Robert L. Noland Leadership Award is a cash award of \$2,000 for upper-class students who exhibit qualities of outstanding leadership. The kind of leadership to be recognized is most often expressed in personal actions that have helped other people and that have inspired others to fulfill their leadership capabilities. The scholarship was set up by Ametek in 1978 in honor of its president, Robert L. Noland, a Caltech alumnus. Two or more awards are generally made each year.

Rodman W. Paul History Prize

The Rodman W. Paul History Prize was established in 1986 by some of his many colleagues and friends to honor Professor Paul's 35 years of teaching and research at the Institute. The prize is awarded annually to a graduating senior who has shown unusual interest in and talent for history.

Howard Reynolds Memorial Prize in Geology

The Howard Reynolds Memorial Prize in Geology is awarded to a sophomore or junior with financial need who demonstrates the potential to excel in the field of geology, and who actively contributes to the quality of student life at Caltech.

H. J. Ryser Scholarships

The H. J. Ryser Scholarships were established in 1986 in memory of H. J. Ryser, who was professor of mathematics at Caltech from 1967 to 1985. Professor Ryser contributed greatly to combinatorial mathematics and inspired many students with his carefully planned courses. The scholarships are given on the basis of merit, preferably in pure mathematics. Recipients are selected by the executive officer for mathematics after consulting the faculty.

Richard P. Schuster Memorial Prize

This award is made from a fund established by family, friends, and colleagues of Richard P. Schuster, Jr., a graduate of Caltech and the Institute's Director of Development at the time of his death. The recipient is a junior or senior in chemistry or chemical engineering; selection is based on financial need and a demonstration of academic promise.

Don Shepard Award

Relatives and friends of Don Shepard, class of 1950, have provided this award in his memory. The award is presented to a student, the basic costs of whose education have already been met but who would find it difficult, without additional help, to engage in extracurricular activities and in the cultural opportunities afforded by the community. The recipients—freshman, sophomore, and junior students—are selected on the basis of their capacity to take advantage of and to profit from these opportunities, rather than on the basis of their scholastic standing.

SIF Award

The Student Investment Fund Award was established to promote outstanding research in finance. The award, \$500, is funded by the Student Investment Fund. Competition is open to all students, but priority is given to undergraduates. Selection takes place on the basis of a research report, to be submitted to a committee appointed annually by the Humanities and Social Sciences faculty.

Sigma Xi Award

In accordance with the aim of Sigma Xi, The Scientific Research Society, to encourage original investigation in pure and applied science, the Institute chapter of the society annually awards a prize of \$1,200, funded from membership dues, to a senior selected for an outstanding piece of original scientific research. The student is selected by the division chairmen and the Deans, together with the Undergraduate Academic Standards and Honors Committee.

Morgan Ward Prize

The Morgan Ward Prize was established by the department of mathematics in 1963 to honor the memory of Professor Morgan Ward in recognition of his long service to mathematics and to the Institute. The competition is open only to freshmen and sophomores. An entry consists of a mathematical problem together with a solution or a significant contribution toward a solution. One or more winners are selected by a faculty committee acting on the advice of student judges. Each prize of \$75 is funded by the same source used to sponsor the Eric Temple Bell Prize.

Fredrick J. Zeigler Memorial Award

The Fredrick J. Zeigler Memorial Award was established in 1989 to honor Fredrick J. Zeigler, a member of the class of 1976 and an applied mathematics major. The award, which carries a cash prize of \$2,500, is given to a pure or applied mathematics student in his or her sophomore or junior year. Selected by the faculty in pure and applied mathematics, the award recognizes excellence in scholarship as demonstrated in class activities or in the preparation of an original paper or essay in any subject area.

GRADUATION REQUIREMENTS, ALL OPTIONS

To qualify for a Bachelor of Science degree at the Institute, a student must obtain passing grades in each of the required courses listed below; must satisfy the additional requirements listed under the undergraduate options; and must achieve a grade-point average of not less than 1.9. The student must also register for programs that make normal progress toward a B.S. degree.

It is the general policy of the Institute that to graduate, a student must meet

the requirements of any one catalog that the student has registered under. In exceptional circumstances, the Curriculum Committee can recommend to the faculty exceptions to this policy. A list of any changes and exceptions to individual catalogs will be available from the Registrar.

Students must register for the Institute requirements in the year specified, unless they have previous credit. If for some reason they are not able to complete the requirements at the proper time, they must register at the earliest possible opportunity. (The Curriculum Committee may in unusual cases excuse undergraduate students from any of the following Institute or option requirements upon presentation of petitions.)

The Institute unit system is described in the opening paragraphs of Section 5.

Institute Requirements, All Options

<i>Course</i>	<i>Units</i>
1. Freshman Mathematics (Ma 1 abc)	27
2. Sophomore Mathematics (Ma 2 abc ¹)	27
3. Freshman Physics (Ph 1 abc)	27
4. Sophomore Physics (Ph 2 abc ² or Ph 12 abc)	27
5. Freshman Chemistry (Ch 1 abc) ³	18
6. Freshman Chemistry Laboratory (Ch 3 a) ⁴	6
7. Additional Introductory Laboratory	6
8. Humanities Courses (as defined below)	36
9. Social Sciences Courses (as defined below)	36
10. Additional Humanities and Social Sciences Courses	36
11. Physical Education	9

Introductory Laboratory Requirement

All students are required to take at least 12 units of laboratory work in experimental science during their freshman and sophomore years. Ch 3 a (6 units) shall be taken during the freshman year. The additional 6 units must be chosen from one of the following: APh 9 (6 units), Bi 10 (6 units), Ch 3 b (6 units), Ch 4 ab (6 units per term), ChE 10 (6 units), CS/EE 11 (6 units), E 5 (6 units), Ge 1 (3 units), Ge 5 (3 units), Ph 3 (6 units), Ph 4 (6 units), or a more advanced laboratory course.

Humanities and Social Sciences Requirements

All students must complete satisfactorily 108 units in the Division of the Humanities and Social Sciences. Of these, 36 must be in the humanities (art; history; humanities; literature; music; philosophy; science, ethics, and society; and, with certain restrictions, languages and linguistics) and 36 in the social sciences (anthropology, economics, law, political science, psychology, social science), in

¹ One term from the following courses may be substituted for Ma 2 c: Ma 112 abc, Ma 144 ab, AMa 153 abc.

² One term from the following courses may be substituted for Ph 2 c: Ph 12 c, APh 17 c, Ch 21 c, Ch 24 a.

³ This requirement can also be met by completing two terms of Ch 41 abc or Ch 21 abc. Ch 10 c can be taken in place of Ch 1 c.

⁴ This requirement can also be met by completing Ch 3 b or Ch 4 a.

each case divided equally between introductory and advanced courses. The remaining 36 may be drawn from humanities and social sciences, including HSS Tutorial courses and (to the limit of 27 units) courses in business economics and management. They may *not* include reading courses unless granted credit by petition to the Humanities or Social Science faculty. No more than 18 units of Freshman Humanities may be counted toward the 108-unit requirement.

Entering freshmen are required to take two terms of "Freshman Humanities," humanities courses numbered 20 or below in the catalog, that require from 4,000 to 6,000 words of essay writing a term. Successful completion of two terms is a prerequisite for advanced humanities (numbered above 20), but *not* for introductory social sciences. These courses may be taken in any two terms of the freshman year.

Entering freshmen who have an Advanced Placement score in English of 3 or higher or who score 600 or above on the English Composition Achievement Test *with essay* will be excused from taking the diagnostic English examination administered before the beginning of first term. Freshmen required to take the diagnostic test whose skills are judged inadequate in this examination may *not* enter Freshman Humanities courses until they complete successfully En 1 ab, English as a Second Language, or En 2, Basic English Composition, to be offered during the first term. These courses count as general Institute credit. They do not count toward the 108-unit requirement or toward the requirements for Freshman Humanities.

A student must take 18 units of advanced humanities courses. Courses that count toward the advanced humanities requirement are marked in the catalog by an asterisk. Courses numbered from 21 through 199 without the asterisk can be taken to fulfill the final 36 units of the 108-unit HSS requirement unless otherwise noted. The first four terms of a foreign language do not count toward the 36-unit humanities requirement; however, every term receives credit toward the final 36 units of the 108-unit requirement in HSS. In addition, the fifth and sixth terms of a language count toward the 18-unit advanced humanities requirement.

Students are required to take 18 units of introductory social science courses, consisting of two courses of 9 units each, chosen from Anthropology: An 22; Economics: Ec 11; Law: Law 33; Political Science: PS 12; Psychology: Psy 12; Social Science: SS 13.

Students must also take 18 units of courses numbered 100 or above, selected from the following categories: anthropology, economics, law, political science, psychology, and social science, but only from a field in which they have completed an introductory course. All 18 units of advanced social science credit can be taken from the same area as long as the appropriate introductory course has been taken.

Courses that are cross-listed between Humanities and Social Science disciplines (e.g., psychology and literature, or history and economics) will not count toward either upper-division requirement unless so defined in the catalog.

First-Year Course Schedule, All Options

Differentiation into the various options begins in the second year.

		Units per term		
		1st	2nd	3rd
Ma 1 abc	Freshman Mathematics (4-0-5)	9	9	9
Ph 1 abc	Classical Mechanics and Electromagnetism (4-0-5)	9	9	9
Ch 1 abc	General and Quantitative Chemistry (3-0-3)	6	6	6
Ch 3 a	Experimental Chemical Science (0-6-0) ¹	6 or 6	6 or 6	6 or 6
	Introductory courses in the humanities and social sciences. A wide choice of alternatives will be available to students; the Registrar will announce the offerings for each term	9	9	9
	Introductory Laboratory Courses ²	x	x	x
	Additional Electives ³	x	x	x
PE	Physical Education ⁴	3	3	3

x—Except for the minimum laboratory unit requirement, the number of units chosen here is optional. If the student chooses no electives except physical education and takes the minimum permissible laboratory courses, the total unit load will be 42 for two terms and 39 for one term. A total load—including electives—of more than 48 units per term is considered a heavy load. Loads of more than 51 units for freshmen or 54 units for upperclass students require approval by the Dean of Students.

Applied Mathematics Option

The undergraduate option in applied mathematics is for those students who want to combine their basic studies in mathematics with considerable involvement in applications. The program is similar in general outline to the mathematics option, with additional requirements to ensure a balance between courses that develop mathematical concepts and courses that show the interplay of these concepts with a variety of applications. Complete programs will be worked out with faculty advisers.

Option Requirements

1. Ma 5 abc, AMa 95 abc, and AMa 101 abc.
2. One of the following (or an approved combination): AMa 98 abc, AMa 151 abc, AMa 152 abc, AMa 153 abc, AMa 181 abc, or AMa 104 and AMa 105 ab.
3. One of the following (or an approved combination): Ma 107 and Ma 109 ab, Ma 110 abc, Ma 120 abc, Ma 121 abc, Ma 122 abc, EE/Ma 126, Ma 127 ab, CS/EE/Ma 129, Ma 151 abc.

¹ This course is offered in each of the three terms.

² The additional 6 units must be chosen from one of the following: APH 9 (6 units), Bi 10 (6 units), Ch 3 b (6 units), Ch 4 ab (6 units per term), CS/EE 11 (6 units), E 5 (6 units), Ph 3 (6 units), Ph 4 (6 units), or a more advanced laboratory course.

³ A partial list of electives particularly recommended for freshmen includes the following: Ay 1, Bi 8, ChE 10, CS/EE 4, CS 10, Env 1, Ge 1, Ph 10, Ph 20, Ph 21, Ph 22.

⁴ Three terms (9 units) of PE are required for the B.S. degree. Students need not elect to take the required PE in the freshman year. It may be taken in any three terms before graduation.

4. One 27-unit 100 or higher level course in science or engineering not in AMA or Ma and approved by the student's adviser.
5. Passing grades must be obtained in a total of 483 units, including the courses listed above.

Applied Physics Option

The applied physics option is designed to connect what are conventionally considered "engineering" and "pure physics." Research in applied physics is an effort to answer questions related to problems of technological concern. Since the interests of both engineering and pure physics cover fields that overlap, a definite dividing line cannot be drawn between them. Realizing this, the applied physics option draws its faculty from the Divisions of Physics, Mathematics and Astronomy; Engineering and Applied Science; Chemistry and Chemical Engineering; and Geological and Planetary Sciences. This interdivisional aspect of the option allows a flexibility and range in curriculum, appropriate to the student's particular research interests, that may result in a mixture of courses and research in different divisions.

Specific subject areas of interest in the program cover a broad spectrum of physics related to different fields of technology. Solid-state physics includes work in superconductivity, amorphous solids, and semiconducting solid states. Work on electromagnetic waves extends from antenna problems into lasers and nonlinear optics. Fluid physics includes magnetohydrodynamics, high-temperature plasmas, and superfluids. Transport phenomena in gases, liquids, and

¹ See items 2 and 3 under option requirements.

solids form another active area related to nuclear and chemical engineering.

The undergraduate curriculum attempts to reflect and maintain a close relationship with the various disciplines. This facilitates a transition to or from any of these, if at any time in the student's course of study and research this would be considered beneficial.

Attention is called to the fact that any student who has a grade-point average less than 1.9 at the end of the academic year in the subjects listed below under option requirements may be refused permission to continue work in this option.

Option Requirements

1. Any three of the following: APh 24, Ph 3, Ph 5, Ph 6, Ph 7.
2. APh 17 abc, APh 25, APh 125 ab, and Ph 106 abc.
3. AMa 95 abc.
4. Either APh 78 abc or one term of APh 77 and one chosen from the following: APh 77, Ph 77, EE 91, Ch 6, Ae/APh 104 bc, MS 123.
5. 27 additional units of APh courses numbered over 100, which must include one of the following sequences: APh 101 abc, APh 105 abc, APh 114 abc, APh 156 abc, APh 181 ab, APh 190 abc, or the sequence APh/EE 130, 131, 132. Note that APh 100 and APh 200 do not satisfy this requirement.
6. Passing grades must be earned in a total of 486 units, including the courses listed above. None of the courses taken to satisfy option requirements may be taken on a pass/fail basis.

APh 101 abc, APh 105
abc, APh 114 abc, AMa
101 abc, AMa 104,
AMa 105 ab, Ch 125
abc, Ph 125 abc, Ph
129 abc, Ph 77 ab

More Specialized Courses

APh 156 abc, APh 181 ab, APh 190 abc, APh/EE 130, AM 135 abc, ChE 103 abc, EE 91 abc, Ge 102, Ge 103

Astronomy Option

The astronomy option is designed to give the student an understanding of the basic facts and concepts of astronomy, to stimulate his or her interest in research, and to provide a basis for graduate work in astronomy. The sophomore-junior sequence (Ay 20, 21, 22, 101, 102) constitutes a solid introduction to modern astronomy. More advanced courses may be taken in the junior and senior years.

Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed in the Division of Physics, Mathematics and Astronomy may, at the discretion of his or her department, be refused permission to continue the work in this option.

Option Requirements

1. Ay 20, Ay 21 or 102, Ay 101, 14 units of Ay electives (excluding Ay 1), Ph 3, Ph 5 or 6, Ph 7, Ph 98 abc or Ph 125 abc, and Ph 106 abc.
2. 54 additional units of Ay or Ph courses.
3. 27 additional units of science or engineering electives, of which 18 must be outside the Division of Physics, Mathematics and Astronomy.
4. Passing grades must be earned in a total of 486 units, including the courses listed above.

Typical Course Schedule

	Suggested total number of units	<u>45-51</u>	<u>45-51</u>	<u>45-51</u>

Students are encouraged (but not required) to undertake research leading to a senior thesis; credit for this work is provided through Ay 42.

Suggested Electives

The student may elect any course offered in any division in a given term, provided that he or she has the necessary prerequisites for that course. The following courses are useful to work in various fields of astronomy and astrophysics: AMa 95⁴, Ay 22, Ay 110, Ay 121, Ay 122, Ay 123, Ay 124, Ay 125, Ay 126, Ay 127, Ay 128, Bi 1, EE 5, EE 14, EE 90, EE 157, Ge 1, Ge 4, Ge 101 a, Ge 131, Ge 153, Ge 154, Ge 167, Ma 5, Ma 112, Ph 77, Ph 125⁴, Ph 129, Ph 136⁴.

¹ Prerequisite for Ph 98.

² Students are required to take (a) Ph 3 if not already taken, (b) Ph 5 or Ph 6, and (c) Ph 7.

³ Sophomore electives include at least 27 units of science and engineering courses, of which at least 18 units must be in subjects other than mathematics, physics, and astronomy. It is desirable for a student to acquire as broad a background as possible in other related fields of science and engineering.

⁴ Students who plan to do graduate work in astronomy should elect some of these courses during their third and fourth years, in consultation with their advisers.

Biology Option

The undergraduate option in biology is designed to build on a solid foundation in mathematics and physical science by providing an introduction to the basic facts, concepts, problems, and methodologies of biological science. The option serves as a basis for graduate study in any field of biology or for admission to the study of medicine. Instruction is offered in the form of participation in the ongoing research programs of the division, as well as in formal course work. Course work emphasizes the more general and fundamental properties of living organisms, and areas of current research interest, rather than the traditional distinct fields within the life sciences.

The division encourages undergraduate participation in its research program and believes that research participation should be a part of each student's program of study. Students may elect to prepare an undergraduate thesis (Bi 90). Research opportunities may be arranged with individual faculty members, or guidance may be obtained from a student's individual faculty adviser in the division or from the biology undergraduate student adviser.

The requirements listed below for the biology option are minimal requirements. An adequate preparation for graduate work in biology will normally include additional elective research or course work in biology and/or advanced course work in other sciences or in mathematics. Flexibility to accommodate varied individual scientific interests, within the broad scope of biology, is achieved through the provision of elective courses, arrangements for individual research (Bi 22), and tutorial instruction (Bi 23). In addition, arrangements may be made to take courses at neighboring institutions in fields of biology that are not represented in our curriculum.

Premedical Program

The undergraduate course for premedical students is essentially the same as that for biology students and is intended as a basis for later careers in research as well as in the practice of medicine. It differs in some respects from premedical curricula of other schools; however, it has been quite generally accepted as satisfying admission requirements of medical schools.

It is recommended that all students contemplating application to medical school consult with the undergraduate adviser, Dr. Jean-Paul Revel, and discuss their plans at the Career Development Center.

Option Requirements

1. Specific courses: Bi 8, Bi 9, Bi 11, Bi/Ch 110 abc, Bi 122, Bi 123, Bi 150, and Ch 41 abc.
2. An additional 52 units of Bi courses. At least 10 of these units must be in Bi 22 or laboratory courses (Bi 10, Bi 161, Bi 162, Bi 180).
3. Passing grades must be earned in a total of 486 units, including the courses listed above.

Recommended Course Schedule

¹ Electives must include sufficient units of work in biology to complete the graduation requirement for 143 units of work in biology.

² Ch 21 or the combination of Ch 21 a, Ch 24 ab is strongly recommended for students interested in postgraduate work in biology, as most graduate programs expect entering students to have taken a course in physical chemistry.

³ The sequence of courses Bi 150, Bi 152, Bi 156, and Bi 157 is designed to provide a comprehensive introduction to the field of neurobiology.

Suggested Electives*Second Year*

Second Term: Ch 4 a

Third Term: Bi 10, Ch 4 b

Third Year

First Term: Bi 22, Bi 23, Ch 21 a

Second Term: Bi 22, Bi 23, Bi 114, Bi 189, Ch 21 b, Ch 24 a, Ch 90

Third Term: Bi 22, Bi 23, Bi 115, Bi 137, Bi 156, Bi 157, Bi 158, Ch 21 c,
Ch 24 b, Env 144*Fourth Year*

In addition to those listed for the third year:

First Term: Bi 90 a, Bi 217, Ch 144 a, Ch 244 a

Second Term: Bi 90 b, Bi 125, Bi 127, Bi/Ch 132 a, Bi 152, Bi 154, Bi 161,
Bi 162, Bi 220, Bi 225, Ch 144 b, Ch 244 b, CNS/Bi 186,
Env 145 a, Env/Bi 166Third Term: Bi 90 c, Bi/Ch 132 b, Bi 190, Bi 218, Bi 219, Bi 241, Env 145 b,
Env/Bi 168, Ge 5**Chemical Engineering Option**

Chemical engineering is based upon applications of chemistry, physics, mathematics, and, increasingly, biology and biochemistry. In addition to basic physics, chemistry, and mathematics, the chemical engineering curriculum includes the study of applied mathematics, material and energy balances, properties and physics of gases, liquids and solids, fluid mechanics, heat and mass transfer, thermodynamics, chemical kinetics and chemical reactor design, and the integrating subjects of process design, process control, and optimization. Because of this broad-based foundation that emphasizes basic and engineering sciences, chemical engineering is perhaps the broadest of the engineering disciplines.

Because many industries utilize some chemical or physical transformation of matter, the chemical engineer is much in demand. He or she may work in the manufacture of inorganic products (ceramics, semiconductors, and other electronic materials); in the manufacture of organic products (polymer fibers, films, coatings, pharmaceuticals, hydrocarbon fuels, and petrochemicals); in the manufacture of graphite, abrasives, and fuel cells; in the metallurgical industries; or in the biotechnology industry. Chemical engineering underlies most of the energy field, including the efficient production and utilization of coal, petroleum, natural gas, oil shale, and geothermal deposits. The chemical engineer may also enter the field of biochemical engineering, where applications range from the utilization of microorganisms and cultured cells, to enzyme engineering and other areas of emerging biotechnology, to the manufacture of foods, to the design of artificial human organs.

Freshman and sophomore students normally take the fundamental courses in mathematics, physics, and chemistry (Ma 1 abc, Ma 2 abc, Ph 1 abc, Ph 2 abc, Ch 1 abc, Ch 41 a). It is strongly recommended that they also take a course in computer programming (e.g., CS 1 or CS 2). Students interested in an introduction to the breadth of chemical engineering are encouraged to take ChE 10. The open-ended projects in ChE 10 also offer an opportunity to become acquainted with some of the faculty in chemical engineering.

Undergraduate research is emphasized, and students are encouraged, even in the freshman year, to participate in research with the faculty. An optional senior thesis is a unique aspect of the chemical engineering program.

Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed under the Division of Chemistry and Chemical Engineering may, at the discretion of the faculty in this division, be refused permission to continue the work of this option.

Option Requirements

1. Ch 41 abc, ChE 63 ab, AMa 95 abc, Ch 21 a and either Ph 2 c or Ch 21 c, ChE 101, ChE 103 abc, ChE 104, ChE 105, ChE 110 ab, ChE 126 a, ChE 126 b or ChE 90 ab, and either Ec 11, BEM 101, or BEM 103¹.
2. 18 units of chemistry electives².
3. 36 units of science and engineering electives³.
4. Passing grades must be earned in a total of 486 units.

¹ These 9 units partially satisfy the Institute requirements in humanities and social sciences.

² In addition to chemistry courses taught within the Division of Chemistry and Chemical Engineering, other courses such as Bi/Ch 110 and Env 142 may be used to satisfy this requirement.

³ These electives may include courses in chemistry and chemical engineering; up to 18 units may be satisfied by ChE 80.

⁴ Ch 21 c can be used to replace the Ph 2 c requirement.

Chemistry Option

Study in the chemistry option leads, especially when followed by graduate work, to careers in teaching and research at colleges and universities, in research for government and industry, in the operation and control of manufacturing processes, and in management and development positions in the chemical industry.

A first-year general chemistry course is taken by all freshman students. The emphasis is on fundamental principles and their use to systematize descriptive chemistry. Students who show themselves to be qualified and receive the instructor's consent may elect to take an Advanced Placement chemistry course (at least two terms from Ch 21 abc or Ch 41 abc). The one-term required laboratory course (Ch 3 a) presents basic principles and techniques of synthesis and analysis and develops the laboratory skills and precision that are fundamental to experimental chemistry. The laboratory in the following two terms (Ch 4 ab), normally taken concurrently with Ch 41, introduces the student to methods of synthesis, separation, and instrumental analysis used routinely in research. Qualified students, with the instructor's consent, are allowed to substitute either Ch 3 b or Ch 4 a for the core requirement of Ch 3 a.

Beyond the freshman year, each student in the chemistry option, in consultation with his or her adviser, selects a suitable course of study under the supervision of the division. The requirements of the option are listed below. A student wishing to deviate from these requirements should submit with justification an alternate curriculum for consideration by his or her adviser and the Undergraduate Study Committee.

Undergraduates in the option must also take chemistry courses below the 100 level for a letter grade with the exception of the following courses, which are only offered on a pass/fail basis: Ch 1, Ch 3 a, Ch 90, and, if taken during the freshman year, Ch 4 ab, Ch 21 abc, and Ch 41 abc. Within the total period of undergraduate study there are additional Institute requirements for Ma 1 abc, Ph 1 abc, Ma 2 abc, Ph 2 abc, and 108 units of humanities and/or social science as well as 9 units of PE.

The courses listed below would constitute a common core for many students in the option.

Any student of the chemistry option whose grade-point average is less than 1.9 will be admitted to the option for the following year only with the special permission of the Division of Chemistry and Chemical Engineering.

Option Requirements

1. Ch 14, Ch 21 abc (or Ch 21 a, Ch 24 ab), Ch 41 abc, Ch 90.
2. A minimum of five terms of laboratory work chosen from Ch 4 ab, Ch 5 ab, Ch 6 ab, Ch 7, Ch 15, and Bi 10.
3. A minimum of five terms of advanced chemistry electives taken for a letter grade from chemistry course offerings at the 100 and 200 level, including cross-listed offerings such as Bi/Ch 110 abc, Bi/Ch 132 ab, and ChE/Ch 164, but excluding Ch 180, Ch 280, and Bi/Ch 202.
4. Passing grades must be earned in the courses that constitute the approved program of study, including those listed above.
5. Passing grades must be earned in a total of 486 units, including courses listed above.

Typical Course Schedule

		<i>Units per term</i>		
		<i>1st</i>	<i>2nd</i>	<i>3rd</i>
<i>Second Year</i>				
Ch 41 abc	Chemistry of Covalent Compounds (3-0-6)	9	9	9

	Electives	47-51	37-41	47-51
		<hr/>	<hr/>	<hr/>
		47-51	47-51	47-51

This core program is not specifically required for graduation in the option, nor is it in any sense a complete program. Students are expected to work out individual programs suitable for their interests and professional goals in consultation with their advisers. Several representative programs, including sets of possible electives, are shown below. These may well approximate choices by students who intend to do graduate work in conventional areas of chemistry.

Suggested Representative Courses of Study for Those Intending Graduate Work in Particular Areas of Chemistry^{1,2}

	<i>Second Year</i>	<i>Third Year</i>	<i>Fourth Year</i>
<i>Inorganic Chemistry</i>	Ch 5 ab ³ , Ch 41 abc, Ma 2 abc, Ph 2 abc, HSS elective, other elective	Ch 14, Ch 21 abc, Ch elective(s) ⁴ , Ch laboratory ⁵ , Ch 80 ⁶ , Ch 90, HSS elective	Ch electives ^{4,5} , Ch 80 ⁶ , HSS elective
<i>Chemical Physics</i>	Ch 21 abc ⁷ , Ch 6 ab ⁷ , Ch 14, Ma 2 abc, Ph 2 abc, HSS elective	Ch laboratory ⁸ , Ch 41 abc ⁷ , Ch elective(s) ⁹ , Ch 80 ⁶ , Ch 90, HSS elective, AMa 95 abc	Ch 125 abc, Ch electives ^{8,9} , Ch 80 ⁶ , HSS elective
<i>Organic Chemistry</i>	Ch 5 ab ³ , Ch 41 abc, Ma 2 abc, Ph 2 abc, HSS elective, other elective	Ch 14, Ch 21 abc, Ch elective(s) ¹⁰ , Ch laboratory ⁵ , Ch 80 ⁶ , Ch 90, HSS elective	Ch electives ^{5,10} , Ch 80 ⁶ , HSS elective
<i>Biochemistry</i>	Ch 5 a ³ , Ch 41 abc, Bi 1, Bi 9, Ma 2 abc, Ph 2 abc, HSS elective	Ch laboratory ¹¹ , Ch 14, Ch 21 a, Ch 24 ab (or Ch 21 bc), Ch 80 ⁶ (or Bi 22), Ch 90, Bi/Ch 110 abc, Bi 10, HSS elective	Ch (Bi) electives ^{11,12} , Ch 80 ⁶ (or Bi 22), HSS elective

¹ A significant fraction of the chemical literature, especially in organic chemistry, is in German. A reading knowledge of German is therefore useful in research at the doctoral level. Russian is another important language for chemistry; however, the leading Russian periodicals are translated and published in English.

² Experience in computer programming and use is now important to all areas of chemistry.

³ Requires Ch 4 ab; if Ch 4 ab was not taken in the freshman year, it can be taken in the sophomore year, and Ch 5 ab deferred to the junior year.

⁴ Ch 112, Ch 117, Ch 120 ab, Ch 121 ab, Ch 122 abc, Ch 135 ab, Ch/ChE 140, Ch 143, Ch 144 ab, Ch/ChE 147, Ch 154, ChE/Ch 155, Env/Ch/Ge 175 abc, Ch 212 ab, Ch 213 abc, Ch 221.

⁵ Ch 6 ab, Ch 7, Ch 15, Ch 118 ab, Bi 10.

⁶ See "Research Opportunities for Undergraduates in Chemistry," which may be obtained from the Chairman of the Undergraduate Studies Committee. No more than 27 units of Ch 80 will count toward the 486 units graduation requirement without a senior thesis.

⁷ Students without sufficient math preparation may delay Ch 21 abc and Ch 6 ab until their junior year and take Ch 5 ab and Ch 41 abc during their sophomore year.

⁸ Ch 5 ab, Ch 15, Ch 118 ab, Bi 10.

⁹ Ch 120 ab, Ch 121 ab, Ch 126, Ge/Ch 128, Ch 130, Ch 135 ab, Ch/ChE 140, Ch 144 ab, Ch/ChE 147, ChE/Ch 148, ChE/Ch 164, ChE/Ch 165, Ch 221, Ch 224, Ch 227 ab, Ph 106 abc, AMa 105 ab.

¹⁰ Ch 112, Ch 120 ab, Ch 121 ab, Ch 122 abc, Ch 135 ab, Ch 143, Ch 144 ab, Ch 145, Ch 146, Ch/ChE 147, Ch 154, ChE/Ch 155, Env/Ch/Ge 175 abc, Ch 242 ab, Ch 247.

¹¹ Ch 5 b, Ch 15, Ch 6 ab, Ch 7, Ch 118 ab.

¹² Ch 122 ab, Bi/Ch 132 ab, Ch 143, Ch 144 ab, Ch 145, Ch 146, Ch 154, Bi/Ch 170, Ch/Bi 231, Ch 242 ab, Ch 244, Ch 247.

Suggested Elective Courses for the Chemistry Option

1. *Chemical Engineering*: Introduction to Chemical Engineering Systems (ChE 10), Chemical Engineering Thermodynamics (ChE 63), Undergraduate Research (ChE 80), Chemical Reaction Engineering (ChE 101), Transport Phenomena (ChE 103), Separation Processes (ChE 104), Physical and Chemical Rate Processes (ChE 151), Special Topics in Transport Phenomena (ChE 174), Protein Technology (ChE 177).
2. *Biology*: Introduction to Molecular Biology (Bi 7), Cell Biology (Bi 9), Genetics (Bi 122), Immunology: Signaling, Gene Regulation, and Development (Bi 114), Multicellular Assemblies (Bi 137), Molecular Neurobiology (Bi 156), Methods in Molecular Genetics (Bi 180).
3. *Engineering*: Introductory Methods of Applied Mathematics (AMa 95), Laboratory Research Methods in Engineering and Applied Science (E 5), Solid-State Electronics for Integrated Circuits (APh 9), Introduction to Digital Electronics (CS/EE 4), Digital Electronics Laboratory (CS/EE 11), Introduction to Sequential Programming (CS 1), Problem Solving and Computing Lab (CS 2).
4. *Physics*: Physics Laboratory (Ph 3, Ph 4, Ph 5, Ph 6, Ph 7), Topics in Classical Physics (Ph 106), Quantum Mechanics (Ph 125), Mathematical Models of Physics (Ph 129), Statistical Physics (Ph 127).
5. *Humanities*: Introduction to Economics (Ec 11), Elementary French (L 102) or Elementary German (L 130) or Elementary Russian (L 141).
6. *Miscellaneous*: Introduction to Astronomy (Ay 1), Engineering Problems of the Environment (Env 1), Principles of Materials (MS 15), Introduction to Earth and Planetary Sciences (Ge 1), Introduction to Isotope Geochemistry (Ge 140), Classical Analysis (Ma 108).

Economics Option

The economics option provides students with an understanding of the basic principles underlying the functioning of economic institutions. It offers a modern and quantitative approach to economics seldom available to undergraduates. The emphasis on economic principles and modern methodology provides students with an excellent preparation for graduate study in economics or for professional study in the fields of business or law and economics.

The option is sufficiently flexible that students can combine their pursuit of economics with studies in other areas, such as engineering, physics, or mathematics. The core of the option consists of Introduction to Economics, Ec 11; Theory of Value, Ec 121; Econometrics, Ec 122; Business Cycles, Ec 161; and Monetary Theory, Ec 162. Students are strongly encouraged to supplement this core with additional electives in economics, political science, and mathematics.

Option Requirements

1. Ec 11, Ec 121 ab, Ec 122, Ec 161, and Ec 162.
2. Ma 112 a.
3. 54 additional units of advanced economics and social science courses. Students may take AMa 181 ab, BEM 103, BEM 104, or BEM 109 in partial fulfillment of this requirement.
4. 45 additional units of science, mathematics, and engineering courses. The requirement cannot be satisfied by courses listed as satisfying the introductory laboratory requirement or by any course with a number less than 10.
5. Passing grades must be earned in a total of 486 units, including all courses used to satisfy the above requirements.

Typical Course Schedule

		<i>Units per term</i>		
		<i>1st</i>	<i>2nd</i>	<i>3rd</i>
<i>Second Year</i>				
Ma 2 abc	Sophomore Mathematics (4-0-5)	9	9	9
Ph 2 abc	Waves, Quantum Mechanics, and Statistical Physics (4-0-5)	9	9	9

¹ See requirements 4 and 5 above.

Electrical Engineering Option

The electrical engineering option is designed to provide a broad exposure to the fundamentals of the electrical sciences while allowing some degree of specialization in a particular aspect of modern electrical engineering. Study in this option leads, especially when followed by graduate work, to research and development work in industry and government laboratories or to research and teaching in universities.

Students electing this option normally begin their work in their sophomore year with the theory and laboratory practice of analog and digital electronics in EE 14 abc, although many may have already been introduced to the field through the freshman electives CS/EE 4, CS/EE 11, and APh 9. The junior-year program features basic courses in linear systems, EE 32 ab; communications, EE 160, or control, CDS 111; energy processing, EE 40; electromagnetics, EE 151; and solid-state devices, EE/APh 180. In the senior year, the student will ordinarily demonstrate his or her ability to formulate and carry out a research or development project, through either the senior thesis, EE 78 abc, or the senior project laboratory, EE 91 abc. The senior student may elect advanced courses to continue special interests begun in the required courses or in the electives taken in the sophomore and junior years; alternatively, a senior may select a broader range of topics from EE or other engineering or science courses.

A student whose interests lie in the electrical sciences but who wishes to pursue a broader course of studies than that allowed by the requirements of the electrical engineering option may elect the engineering and applied science option.

Attention is called to the fact that any student who has a grade-point average less than 1.9 at the end of the academic year in the subjects listed under electrical engineering may be refused permission to continue work in this option.

Option Requirements

1. E 10.
2. AMa 95 abc.
3. EE 14 abc, EE 32 ab, EE 40, EE 151, EE 160 or CDS 111, EE/APh 180.
4. EE/CS 51 and EE/CS 52.
5. EE 78 abc or two terms of EE 91 abc.
6. In addition to the above courses, 27 units selected from any EE course numbered over 100, or any multilisted courses numbered over 100 that include EE in the listing. Also, CDS 111, CDS 112, and CDS 113 ab are acceptable.
7. Passing grades must be earned in a total of 486 units, including courses listed above.

Typical Course Schedule

		<i>Units per term</i>		
		<i>1st</i>	<i>2nd</i>	<i>3rd</i>

³ See option requirement 5.

Suggested Electives

First-year students interested in electrical engineering should consider selecting one or two courses per term from APh 9, CS/EE 4, CS 10, CS/EE 11, E 5, Ph 3.

Suggested elective courses for the second, third, and fourth year for various specializations within electrical engineering are given below. Students interested in other areas of specialization or interdisciplinary areas are encouraged to develop their own elective program in consultation with their faculty adviser.

	<i>Second Year</i>	<i>Third and Fourth Year</i>
<i>Communications</i>	Selected from APh 17 abc, APh 23, APh 24, CS/EE 51, CS/EE 52, CS/EE 53, CS/EE 54	EE 112 ab, EE/Ma 126, EE/Ma 127 ab, EE 128, EE 162, EE 163 ab, EE 164, EE 165, APh/EE 130, CNS/EE 124, APh/EE 131, APh/EE 132, Ma 112 a
<i>Computer Engineering</i>	CS/EE 51, CS/EE 52, CS/EE 53, CS/EE 54	CS 137, CS 139 ab, CS/EE 181 abc, and selections from EE 50, EE/CS 183 abc, CNS/EE 124, CS 171 ab, CS/EE/Ma 129 abc
<i>Control</i>	APh 17 abc	CDS 110 ab, CDS 111, and selections from CDS 113 ab, CDS 112, EE 112 ab, EE 128, EE 162, EE 164
<i>Electronic Circuits</i>	APh 17 abc	CDS 111, EE 112 ab, and selections from EE 50, CDS 113 ab, EE/Mu 107 abc, EE 117 ab, EE 152, EE 153, CS/EE 181 abc, CNS/CS/EE 182 abc, APh 181 ab
<i>Microwave Engineering</i>	APh 23, APh 24, APh 17 abc	EE 152, EE 153, EE 157 abc, EE 158, APh 50 abc, APh/EE 130, APh/EE 131, APh 132, APh 181 ab
<i>Optoelectronics</i>	APh 23, APh 24, APh 17 abc	APh/EE 130, APh/EE 131, APh/EE 132, APh 105 abc, APh 114 abc, APh/CNS/EE 133, APh 190 abc, EE 152
<i>Solid-State Electronics</i>	APh 17 abc	APh 50 abc, APh 181 ab, and selections from APh 105 abc, APh 114 abc, EE 153

Engineering and Applied Science Option

The engineering and applied science option offers the opportunity for study in challenging areas of science and technology. In addition to such engineering disciplines as mechanical or civil engineering, computer science, etc., the student may undertake work in such diverse fields as environmental engineering science, energy engineering and thermal science, the physics of fluids, earthquake engineering, aerodynamics, solid mechanics, materials science, soil mechanics, engineering science, elasticity and plasticity, the theory of waves and vibrations, mechanical systems, and engineering design. The option in engineering and applied science offers an unusually broad curriculum that permits students to tailor a course of study to their individual needs as well as pursue one of the more traditional engineering curricula.

The first year of the four-year course of study leading to a Bachelor of Science degree is common for all students of the Institute, although freshman elective subjects are available as an introduction to various aspects of engineering and applied science. At the end of the first year, students who elect the engineering and applied science option are assigned advisers as close to their expressed field of interest as possible, and, together, they develop programs of study for the next three years. Beyond the Institute-wide requirements of physics, mathematics, and humanities, these programs require one year of applied mathematics and a certain number of units selected from a wide variety of engineering and applied science courses. Engineering design (synthesis), as distinct from analysis, is considered an essential part of every engineer's capability. Advisers will expect students to select a sufficient number of courses that place emphasis on design.

Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in subjects with the prefix Ae, AM, APH, CDS, CE, ChE, CNS, CS, E, EE, ES, Env, JP, MS, or ME may, at the discretion of the division faculty, be refused permission to continue the work of that option.

Option Requirements

1. E 10.
2. AMa 95 abc; or Ma 107 and either Ma 108 ab or Ma 109 ab. Neither sequence of courses may be taken pass/fail.
3. 126 additional units in courses in the following: Ae, AM, APH, CDS, CE, ChE, CNS, CS, E, EE, ES, Env, JP, MS, or ME. Note that the student cannot exercise the pass/fail option on any courses offered to meet this requirement.
4. 9 units¹ of courses taken from the following list: APH 24, APH 77, APH 124, APH/MS 141, Ae/APH 104 bc, CE 95, CE 97, CE 180, CS/EE 53 and 54, CS 174 abc, CS/EE 181 abc, EE 91 abc, Env 116, Env 143, MS 90, MS 123, ME 72, ME 90 bc, ME 96.
5. 9 units¹ of additional laboratory², excluding those for which freshman laboratory credit is allowed.
6. Passing grades must be earned in a total of 486 units, including courses listed above.

¹ These units will partially satisfy requirement 3 when in appropriate subjects.

² These electives must either be from the list in item 4 or they must be from courses with the word "laboratory" in the title.

Other options within the Engineering and Applied Science Division are applied mathematics, applied physics, and electrical engineering. Some students may have a field of interest that partially overlaps these options but requires sufficient course work outside the option so that it would be difficult or impossible to meet that option's requirements. The E&AS option offers the flexibility to combine these diverse interests.

All students selecting the E&AS option should have a minimum competency in computer science by the end of the first year. This competency may be established in one of two ways. Students with little or no programming skills should take CS 1, 2 in their freshman year. Students possessing basic programming skills may omit CS 1. Students especially interested in computer science should take the full sequence of CS 1, 2, 3 in consecutive terms of their freshman year.

A typical course schedule and typical course sequences are given in the following pages for several engineering disciplines. These should be considered not as requirements but as guides, with the details to be worked out by the student and his or her adviser.

Typical Course Schedule

	<i>Units per term</i>		
	<i>1st</i>	<i>2nd</i>	<i>3rd</i>
<i>Second Year</i>

Aeronautics

	<i>First Term</i>	<i>Second Term</i>	<i>Third Term</i>
First Year ¹	Elective	E 5	Elective
Second Year ²	AM 35 a ME 18 a ³	AM 35 b ME 18 b ³	AM 35 c ME 71
Third Year ⁴	ME 19 a MS 15 a	ME 19 b MS 15 b	ME 19 c MS 90
Fourth Year ⁵	Ae/ME 130 ME 72	Ae 103 a Electives	Ae 103 b ME 96

¹ Recommend one course per term selected from CS 1, CS 2, CS/EE 4, CS/EE 11, E 5.

² Suggested electives include APh 23, APh 24.

³ APh 17 abc is a suggested alternative for ME 18 ab and Ph 2 c.

⁴ Suggested electives include APh 50 abc, CE 97, CS 3, EE 14 abc.

⁵ Suggested electives include Ae/APh 101 abc, Ae/AM 102 abc, Ae/APh 104 abc, Ae 107, AMa 101 abc, CE/ME 101 abc, CS 20 abc, EE 32 ab, JP 121 abc, ME 20 ab, ME 115, ME 171 ab.

Applied Mechanics

	<i>First Term</i>	<i>Second Term</i>	<i>Third Term</i>
First Year ¹	Elective	E 5	Elective
Second Year ²	AM 35 a ME 18 a	AM 35 b ME 18 b	AM 35 c Electives
Third Year ³	Ae/AM 102 a ⁴ ME 19 a	Ae/AM 102 b ⁴ ME 19 b	Ae/AM 102 c ⁴ ME 19 c
Fourth Year ⁵	AM 151 a ⁴ AM 125 a ⁶ AMa 104	AM 151 b ⁴ AM 125 b ⁶ AMa 105 a	AM 151 c ⁴ AM 125 c ⁶ AMa 105 b

¹ Recommend one course per term selected from CS 1, CS 2, E 5, Env 1, Ge 1.

² Recommended electives include Bi 1, ME 71, MS 15 abc.

³ Recommended electives include APh 25, APh 125 abc, MS 15 abc, Ph 106 abc.

⁴ Both Ae/AM 102 abc and AM 151 abc are strongly recommended, with one taken in the third year and one taken in the fourth year.

⁵ Recommended electives include AM 135 abc, APh 50 abc, CE/ME 101 abc, and Ph 106 abc.

⁶ Or AMa 101 abc.

Civil Engineering (a) Structural and Soil Mechanics

	<i>First Term</i>	<i>Second Term</i>	<i>Third Term</i>
First Year ¹	Elective	E 5	Elective
Second Year ²	AM 35 a ME 18 a	AM 35 b ME 18 b	AM 35 c Electives
Third Year ³	CE 90 a ME 19 a	CE 90 b ME 19 b	CE 90 c ME 19 c
Fourth Year ⁴	AM 151 a Ae/AM 102 a CE 115 a	AM 151 b Ae/AM 102 b CE 115 b	AM 151 c Ae/AM 102 c CE 150

¹ Recommend one course per term selected from CS 1, CS 2, E 5, Env 1, Ge 1.

² Recommended electives include ME 71, MS 15 abc.

³ Recommended electives include CE 97, ME 96, MS 15 abc.

⁴ Recommended electives include CE/ME 101 abc, CE 97, CE 113 ab, CE 160 abc, CE 180, CE 181, Env 112 abc, ME 96.

Civil Engineering (b) Hydraulics and Water Resources

	<i>First Term</i>	<i>Second Term</i>	<i>Third Term</i>
First Year ¹	Elective	E 5	Elective
Second Year ²	AM 35 a ME 18 a	AM 35 b ME 18 b	AM 35 c Electives

² *Recommended additional electives to be agreed upon by student and adviser. Electives of general interest may be chosen from the Institute catalog.*

³ *Or CE 97.*

Geology, Geochemistry, Geophysics, and Planetary Science Options

The aim of this undergraduate program is to provide thorough training in the geological and planetary sciences and, wherever possible, to integrate these studies with, and build upon, the courses in mathematics, physics, chemistry, and biology taken during the student's earlier years at the Institute. Active involvement in research, particularly during the summer, is encouraged. For geologists, field work is emphasized because it provides firsthand experience with geological phenomena that can never be satisfactorily grasped or understood solely from classroom or laboratory treatment. Options are offered in geology (including geobiology), geophysics, planetary science, and geochemistry. Electives permit students to follow lines of special interest in related scientific and engineering fields. Those who do well in the basic sciences and at the same time have a compelling curiosity about the earth and the other planets are likely to find their niche in these options, especially if they enjoy grappling with complex problems involving many variables. Most students majoring in the earth and planetary sciences now pursue further training at the graduate level. For students beginning their junior year, it is possible to complete the requirements for each of the options within two years.

Any student whose grade-point average in science and mathematics courses is less than 1.9 at the end of an academic year may be refused permission to register in the geological and planetary science options.

* Ge 1 or 5, and Ge 10 recommended.

** This course should represent 18 of the 27 units of sophomore science electives.

*** The student must select two of the three Ge 121 course offerings.

**** At least 18 of these units must be from courses outside the division.

Ch 41 abc or other chemistry courses may be substituted with prior consent of adviser and option representative.

History Option

History majors must take not less than 99 units of history courses (including Freshman Humanities) during their four years as undergraduates. Of these, not less than 45 *must* be in junior and senior tutorial (H 97 ab and H 99 abc), and another 18 *may* be in H 98 ab if students wish and their instructors agree.

The courses and tutorials in the history option concentrate on three areas: Europe, the United States, and Asia. Each history major will concentrate in one of these areas and write a research paper in it; each student must also take at least 36 units of history in other areas as approved by the adviser or as required by the history option.

A student considering the history option when he or she comes to Caltech will be well advised to take one sequence of Hum 2, 6, 7, 8, or 9. In the sophomore year the student should take upper-level history courses, but this is also a good time to pursue the study of literature or philosophy, to begin or continue a foreign language (particularly desirable if the area of concentration is to be Europe or Asia), and to do introductory work in the social sciences. A student will normally make a commitment to an area of concentration early in the junior year, exploring this area through regular course work supplemented during the second and third terms by tutorial study in H 97 ab. At the beginning of the senior year, a history major will enroll in H 99 abc and be assigned to a faculty member in the student's chosen area. The first term will be devoted to preparation, the second to research, and the third to the writing of a substantial research paper.

Since statistics can be a useful tool in historical analysis, the option recommends that some of the science and math courses that a history major takes beyond the sophomore year (to satisfy the 54-unit Institute requirement) be in that area. Students who wish to write their senior research papers in the history of science are encouraged to use the rest of the 54 units to advance their understanding of one or two particular scientific disciplines.

Option Requirements

1. H 97 ab, H 99 abc.
2. 54 additional units of history courses (including, if appropriate, H 98 ab), of which 36 must be in an area or areas other than the area of concentration.
3. 54 additional units of science, mathematics, and engineering courses. This requirement cannot be satisfied by courses listed as satisfying the introductory laboratory requirement or by Ay 1, Bi 7, CS/EE 4, EE 14, Env 1.
4. Passing grades must be earned in a total of 486 units, including the courses listed above.

Independent Studies Program

The Independent Studies Program (ISP) is an undergraduate option that allows the student to create his or her own scholastic requirements, under faculty supervision, and to pursue positive educational goals that cannot be achieved in any of the other available options. A student's program may include regular Caltech courses, research courses, courses at other schools, and independent study courses (item 5 below). In scope and depth, the program must be comparable to a normal undergraduate program, but it need not include all of the specific courses or groups of courses listed in the formulated Institute requirements for undergraduates.

The Curriculum Committee, a standing committee of the faculty, has overall responsibility for the program. In addition, each student has his or her own committee of three advisers, two of whom must be professorial faculty. Application material may be obtained at the Registrar's office or from the Dean of Students.

Administrative Procedures and Guidelines

1. An interested student must recruit three individuals, representing at least two divisions of the Institute, who approve of his or her plans and agree to act as an advisory "committee of three." The committee of three forms the heart of the program and bears the chief responsibility for overseeing the student's progress. The chairman and one other member must be on the professorial staff. The third member may be any qualified individual, such as a postdoctoral fellow, graduate student, or faculty member of another institution.

2. The student must submit a written proposal to the Dean of Students, endorsed by the committee of three, describing his or her goals, reasons for applying, and plan of study for at least the next year. If persuaded that the proposal is sound and workable, the Dean endorses it and passes it on to the Curriculum Committee. This committee, in turn, reviews the proposal and, if it is acceptable, assumes responsibility for oversight of the program.

3. To implement the program, a written contract is now drawn up between the student, the committee of three, and the Curriculum Committee. This contract includes the agreed-upon content of the student's program and the methods for ascertaining satisfactory progress for those parts of the student's program that are not standard Institute courses. This contract may of course be amended, but any amendments must be approved by the committee of three and the Curriculum Committee. Copies of each student's contract and of all amendments thereto, along with all ISP records for each student and his or her transcript, are kept in the permanent files of the Registrar's Office.

4. The progress of each student in the ISP is monitored each quarter by the Registrar, and any deviations from the terms of the contract are reported to the Chairman of the Curriculum Committee. Standards for acceptable progress and for satisfactory completion of the terms of the contract are the responsibility of the Curriculum Committee. When the Committee is satisfied that the terms of the contract have been fulfilled by the student, it recommends the student to the faculty for graduation.

5. A plan of study may include special ISP courses to accommodate individual programs of study or special research that falls outside ordinary course offerings. In order that credit be received for an ISP course, a written course contract specifying the work to be accomplished, time schedule for progress reports and completed work, units of credit, and form of grading must be agreed upon by the instructor, the student, and the committee of three, and submitted to the Registrar *prior* to initiating the work in the course. ISP courses are recorded on the student's transcript in the same manner as are other Caltech courses.

Literature Option

Students majoring in literature can take a broad range of literature courses or, if they wish, concentrate on American, English, or comparative (cross-national) literature. All majors are assigned an adviser who will help them select the courses best suited to their needs, including courses in fields closely related to literature. Majors will be expected to consult their adviser before registering for each quarter's work. Those who are preparing for graduate work should take more than the minimum requirements listed below, and should be prepared to take courses in several periods of English literature and in the literature of one or more foreign languages. All literature courses must be taken for grades.

Option Requirements

1. 108 units in the Lit 98-180 group of courses (or, with authorization, certain Hum courses), to be taken under the guidance of the major adviser, and including at least one quarter of Lit 114 (Shakespeare). An additional quarter concentrating on a second major author (e.g., Chaucer, Milton, Wordsworth, Melville, Joyce) is also recommended.
2. In addition, one year of French, German, Russian, Latin (or any language approved by the option adviser) at an appropriate level (to be determined by consultation with the option adviser).
3. 54 additional units of science, mathematics, and engineering courses. This requirement cannot be satisfied by courses listed as satisfying the introductory laboratory requirement or by Ay 1, Bi 7, CS/EE 4, EE 14, Env 1.
4. Passing grades must be earned in a total of 486 units, including the courses listed above.

Mathematics Option

The four-year undergraduate program in mathematics leads to the degree of Bachelor of Science. The purpose of the undergraduate option is to give students an understanding of the broad outlines of modern mathematics, to stimulate their interest in research, and to prepare them for later work, either in pure mathematics or allied sciences. Unless students have done exceptionally well in their freshman and sophomore years, they should not contemplate specializing in mathematics. An average of at least "B" in mathematics courses is expected of students in order to major in mathematics.

Since the more interesting academic and industrial positions open to mathematicians require training beyond a bachelor's degree, students who intend to make mathematics their profession must normally plan to continue with graduate study. Some students use their background in mathematics as an entry to other fields such as physics, economics, computer science, business, or law. Students expecting to pursue a Ph.D. degree in mathematics should realize that many mathematics departments require a reading knowledge of one or two foreign languages.

The schedule of courses in the undergraduate mathematics option is flexible. It enables students to adapt their programs to their needs and mathematical interests and gives them the opportunity of becoming familiar with creative mathematics early in their careers. Each term during their junior and senior years, students normally take 18 units of courses in mathematics or applied mathematics, including the required courses Ma 108 abc and 109 abc. Any course listed under applied mathematics is regarded as an elective in mathematics and not as an elective in science, engineering, or humanities. Sophomores who have not taken Ma 5 must take this course as juniors. Overloads in course work are strongly discouraged; students are advised instead to deepen and supplement their course work by independent reading.

Attention is called to the fact that students whose grade-point averages are less than 1.9 at the end of the academic year in the subjects under mathematics and applied mathematics may, at the discretion of the department, be refused permission to continue the work of the mathematics option.

Option Requirements

1. Ma 5 abc, Ma 108 abc, Ma 109 abc.
2. Two quarters (18 units) of a single course, chosen from the following: Ma 110, Ma 116, Ma/CS 117, Ma 120, Ma 121, Ma 122, Ma/EE 126-127, Ma/CS/EE 129, Ma 142, Ma 144, Ma 147, Ma 151, Ma 160.
3. 27 additional units in Ma or AMa.
4. Passing grades must be earned in a total of 483 units, including the courses listed above.

Typical Course Schedule

		<i>Units per term</i>		
		<i>1st</i>	<i>2nd</i>	<i>3rd</i>
<i>Second Year</i>

		<hr/> 54	<hr/> 54	<hr/> 54

Physics Option

The physics option offers instruction in the fundamentals of modern physics and provides a foundation for graduate study, which is generally necessary for a career in basic research. Many individuals have also found that the physics program forms an excellent basis for future work in a wide variety of allied fields.

While all Caltech students must take the two years of introductory courses, an intensive version of the sophomore course (waves, quantum mechanics, and statistical mechanics) is offered for those planning further study in physics. The required junior-level courses give a thorough treatment of fundamental principles. Elective courses taken during the junior and senior years allow students to explore their particular interests. Some electives offer broad surveys, while others concentrate on particular fields of current research. A choice of laboratory courses is offered at several levels. Students are encouraged to become active participants in research on campus. Academic credit for physics work done outside of the classroom can be awarded in a variety of ways.

Students must maintain a grade-point average of 1.9 or better each year in the subjects listed under this division to remain in the physics option.

Option Requirements

Laboratory Courses:

1. Ph 3.
2. One of the following: Ph 5¹, Ph 6, or APh 24.
3. Ph 7.

The above three requirements must be completed by the end of the second year. In planning a program, note that Ph 5, 6, and 7 are each offered only once per year, in the first, second, and third terms, respectively.

4. 18 units of Ph 77 or Ph 78. 9 units of APh 77 or Ay 105 may be substituted for Ph 77 b. 9 units of Ph 76 may be substituted for Ph 77 a or b.

Fundamental Physics:

5. Ph 106.
6. Ph 98 or Ph 125.

Electives:

7. 54 units, in addition to the above, of any of the following: Ph 78, Ph 79, any Ph or APh course numbered 100 or above, or AMa 101. Students wishing to apply more than 9 units of Ph 171, Ph 172, or Ph 173 toward this 54-unit requirement must petition the Physics Undergraduate Committee for approval. Other courses in other departments with substantial physics content may be approved by the Physics Undergraduate Committee in individual cases; seniors must submit their petition for this purpose before the first day of the third term. The student cannot exercise a pass/fail option for any courses offered to meet this requirement.
8. 27 units of science or engineering electives outside of Ph, APh, Ma, and AMa.
9. Passing grades must be earned in a total of 486 units, including the courses listed above.

Typical Course Schedule

	<i>Units per term</i>		
	<i>1st</i>	<i>2nd</i>	<i>3rd</i>
<i>Second Year</i>			
Ph 2 or Ph 12	9	9	9
Ma 2	9	9	9
Humanities	9	9	9
Physics Laboratory	0	9	9
Electives	12	9	9
<hr/>			
<i>Third Year</i>			
Ph 106	9	9	9
Ph 98 ²	9	9	9
AMa 95 or Ma 107 and either Ma 108 or Ma 109	12	12	12
Humanities	9	9	9
Electives	9	9	9
<hr/>			
<i>Fourth Year</i>			
Ph 77	9	9	0
Advanced Physics Electives	18	18	18
Electives	9	9	18
Humanities	9	9	9
<hr/>			
	45	45	45

¹ Some laboratory courses from other options have considerable physics content, and students wishing to satisfy this requirement with such a course may petition the Physics Undergraduate Committee for approval.

² Students who took Ph 2 should consult their adviser as to whether Ph 125 in their senior year might be more appropriate.

Science, Ethics, and Society Option

The option in science, ethics, and society (SES) provides students with a broad historical and philosophical education in the social, economic, ethical, and political issues that have arisen in the modern world in connection with the advance of science and technology. The program is concerned with study of the long-term development of science and technology and with the evolution of disputes over ethics and policy in areas such as research and development, technological innovation, energy supply and conservation, the environment, and biomedicine. The curricular core of the program resides in historical and/or philosophical study of subjects such as the Scientific Revolution, the politics of research and development, the social uses of biological knowledge, the nature of scientific explanation, and the evolution of theories of cognition; but the program also takes up contemporary issues concerning science and technology, treating them in philosophical, ethical, and historical perspective. The option thus focuses on the acquisition of broad basic knowledge about persistent issues in the affairs of science, technology, and society so as to enable students to deal with such issues in the future, whatever particular form they may take. The option offers students the advantage of developing special literacy in and understanding of issues of science and society, because the program combines courses that directly address such issues with the strong technical background gained at Caltech. It provides excellent preparation for students going into law, business, medicine, and public affairs, as well as solid preparation for graduate work in history and/or philosophy of science.

Option Requirements

1. SES 101 ab, SES 102 abc, and SES 103. SES 101 ab is a two-quarter introductory course normally to be taken in the sophomore year, one quarter of which emphasizes historical issues, the other quarter of which focuses on philosophical ones. SES 103 is a lecture series featuring outside speakers roughly four times per quarter that introduces students to a broad variety of SES-related topics past and present. Students are expected to participate in the lecture series through their sophomore, junior, and senior years. SES 102 abc is a three-quarter course devoted to the writing of a senior research paper. The first two quarters will be taught primarily as directed tutorial under the guidance of a faculty supervisor; students will pursue intensive reading to develop deep knowledge in a field of concentration and begin work on a senior research project. The third quarter will be taught as a seminar in which the students discuss and criticize each other's developing research papers. The senior research paper stresses independent work and can cover any one of a number of topics from a historical and/or philosophical/ethical perspective, including biotechnology, biomedicine, the environment, science and national defense, the historical politics of research and development, Big Science, the nature and growth of scientific knowledge, cosmology, or science and theories of cognition, language, and perception. Among the resources available for writing the senior paper is the Caltech Archives, which contains a substantial collection of rare books in the history of science going back to the 16th century and houses the correspondence and other papers of a number of distinguished scientists, including George Ellery Hale, Robert Millikan, Richard P. Feynman, Lee A. DuBridge, and

Max Delbrück. The materials in the Caltech Archives throw considerable light on the development of key fields in modern science—for example, astrophysics, quantum mechanics and relativity, molecular biology, geology and planetary science—and are rich in information on topics such as the relationship of science to government and industry.

2. Four advanced history courses, two of which must be in the history of science (SES/H 156, SES/H 157, SES/H 158, SES/H 159, SES/H 160 ab, SES/H 162, SES/H 163, SES/H 164, SES/H 165, SES 169). Four advanced philosophy courses, two of which must be in philosophy of science or ethics (SES/PI 122, SES/PI 125, SES/PI 127, SES/PI 131, SES 169). Students are expected to choose their mix of required courses and electives with an eye to developing an area of concentration—such as the history and politics of science and technology, or science, ethics, and philosophy, or science and culture—in which they will choose the topic for the senior research paper. Students are also encouraged to take course work in literature (for example, Lit 127 and/or Lit 138).
3. 45 units of science, mathematics, and engineering courses. This requirement cannot be satisfied by courses listed as satisfying the introductory laboratory requirement or by any course with a number less than 10.
4. Passing grades must be earned in a total of 486 units, including all courses used to satisfy the above requirements.
5. It is desirable that students enter the option in the sophomore year. However, students may also enter the option in the junior year if they can complete its requirements in time for graduation.

Typical Course Schedule

First Year

It is recommended that students take the following courses: history of early modern Europe or the American revolution; introduction to or history of philosophy; and Ec 11 or PS 12.

		Units per term		
		1st	2nd	3rd
<i>Second Year</i>				
SES 101 ab	Introduction to Science, Ethics, and Society	9	9	-
	Advanced Philosophy or History	-	-	9
SES 103	Lecture Series (1-0-0)	1	1	1
Ma 2 abc	Sophomore Mathematics (4-0-5)	9	9	9
Ph 2 abc	Waves, Quantum Mechanics, and Statistical Physics (4-0-5)	9	9	9
	Electives	18	18	18
		<hr/>	<hr/>	<hr/>
		46	46	46

It is recommended that one of the electives be either Ec 11 or PS 12, whichever one has not been taken in the freshman year.

Third Year

SES 103	Lecture Series (1-0-0)	1	1	1
	Advanced SES/History	9	9	9
	Advanced SES/Philosophy	9	9	9
	Science, Math, Engineering	9	9	9
	Electives	18	18	18
		<hr/>	<hr/>	<hr/>
		46	46	46

Fourth Year

SES 103	Lecture Series (1-0-0)	1	1	1
SES 102 ab	Senior Research Tutorial (1-0-8)	9	9	-
SES 102 c	Senior Research Seminar (2-0-7)	-	-	9
	Advanced SES/History or Philosophy	9	-	-
	Science, Math, Engineering	9	9	-
	Electives	18	27	36
		<hr/>	<hr/>	<hr/>
		46	46	46

It is recommended that students choose their advanced social science electives from among courses that will enlarge their perspective on topics related to SES (for example, Ec 118, Ec/SS 128, Ec/SS 129, Ec/SS 130, Ec 140, PS/SS 119, PS 120, PS 121, PS 122, An 22, An 123).

Social Science Option

The social science program is designed to provide undergraduates with multi-disciplinary training in social science. The program focuses on the processes of social, political, and economic change and the analytical methods used by social scientists to describe and predict them. The program is designed to be sufficiently flexible to provide an excellent preparation for students intending to attend graduate school in any social science discipline, or in law or business.

Option Requirements

1. Ec 11, PS 12, Ec 121 a, Ma 112 a, Ec 122, PS/Ec 172.
2. One of the following: An 22, An 101, or Psy 12.
3. 45 additional units of science, mathematics, and engineering courses. The requirement cannot be satisfied by courses listed as satisfying the introductory laboratory requirement or by any course with a number less than 10.
4. 54 additional units of social science courses, which include any course listed under the following headings: anthropology, economics, law, political science, psychology, and social science.
5. Passing grades must be earned in a total of 486 units, including all courses used to satisfy the above requirements.

Typical Course Schedule

		<i>Units per term</i>		
		<i>1st</i>	<i>2nd</i>	<i>3rd</i>

¹ Students may concentrate on research by taking 54 units of supervised research in their senior year.

INFORMATION FOR GRADUATE STUDENTS

The Institute offers graduate work leading to the degrees of Master of Science and Doctor of Philosophy. In addition, it offers the following intermediate degrees: Aeronautical Engineer, Civil Engineer, Electrical Engineer, and Mechanical Engineer.

The academic work of the Institute is organized into six divisions: Biology; Chemistry and Chemical Engineering; Engineering and Applied Science; Geological and Planetary Sciences; the Humanities and Social Sciences; and Physics, Mathematics and Astronomy.

Graduate work at the Institute is further organized into graduate options, which are supervised by those professors whose interests and research are closely related to the area of the option, within the administrative jurisdiction of one or more of the divisions. The graduate student working for an advanced degree in one of the graduate options is associated with an informal group of those professors who govern the option, other faculty including research associates and fellows, and other graduate students working for similar degrees.

A faculty member serves as the representative for an option. The option representative provides consultation on academic programs, degree requirements, financial aid, etc., and provides general supervision to graduate students in the option. The Committee on Graduate Studies, which includes the option representatives, elected members of the faculty at large, and graduate students appointed by the Graduate Student Council, exercises supervision over the scholastic requirements established by the faculty for all advanced degrees, provides policy guidance to the Dean of Graduate Studies, and certifies all candidates for graduate degrees to the faculty for their approval. The option representatives for 1994-95 are as follows:

Aeronautics	Prof. W. G. Knauss
Applied Mathematics	Prof. D. S. Cohen
Applied Mechanics	Profs. E. K. Antonsson and J. F. Hall
Applied Physics	Prof. K. Vahala
Astronomy	Prof. S. G. Djorgovski
Biology	Prof. E. Meyerowitz
Chemical Engineering	Prof. G. Gavalas
Chemistry	Prof. J. E. Bercaw
Civil Engineering	Profs. E. K. Antonsson and J. F. Hall

Computation and Neural Systems	Prof. C. Koch
Computer Science	Prof. A. J. Martin
Control and Dynamical Systems	Prof. M. Morari
Electrical Engineering	Prof. R. D. Middlebrook
Engineering Science	Prof. T. Y. Wu
Environmental Engineering Science	Prof. G. Cass
Geological and Planetary Sciences	Prof. K. E. Sieh
Materials Science	Prof. B. Fultz
Mathematics	Prof. W. Luxemburg
Mechanical Engineering	Prof. E. K. Antonsson and J. F. Hall
Physics	Prof. F. Porter
Social Science	Prof. L. E. Davis

GENERAL REGULATIONS

Admission to Graduate Standing

Application

Apply to the Dean of Graduate Studies, California Institute of Technology, 02-31, Pasadena, CA 91125, for an application form for admission to graduate studies. Admission will be granted *only to a limited number of students of superior ability*, and application should be made as early as possible. No application fee is required. In general, admission to graduate standing is effective for enrollment only at the beginning of the next academic year. The California Institute of Technology encourages applications from both men and women, including members of minority groups. Students wishing to apply for assistantships or fellowships may do so in the appropriate section of the application for admission. Completed applications are due in the Graduate Office no later than January 15. Some options will review an application received after the deadline, but that applicant may be at a disadvantage in the allocation of financial assistance or in the priority for admission. Although the application form asks the applicant to state his or her intended major field of study and special interests, the application may actually be considered by two or more divisions or interdisciplinary programs.

To be admitted to graduate standing an applicant must in general have received a bachelor's degree representing the completion of an undergraduate course in science or engineering equivalent to one of the options offered by the Institute. He or she must, moreover, have attained such a scholastic record and present such recommendations as to indicate fitness to pursue, with distinction, advanced study and research. Admission sometimes may have to be refused solely on the basis of limited facilities in the option concerned.

Required Tests

The Graduate Record Examination is strongly recommended by all options and required by some for all applicants.

Students from non-English-speaking countries are expected to read, write, and speak English and comprehend the spoken language. Applicants whose

first or native language is not English are required to take the Test of English as a Foreign Language (TOEFL) as part of their application procedure. This test is given at centers throughout the world on several dates each year. The testing schedule and registration information may be obtained by writing to TOEFL, Educational Testing Service, Princeton, NJ 08540. Results of the test should be sent to the Graduate Office. It is strongly recommended that students who achieve a low TOEFL score or who have little opportunity to communicate in English make arrangements for intensive work during the summer preceding their registration. The Graduate Office can provide information on schools that provide such intensive study.

Students who, upon their arrival at Caltech, are found to be seriously deficient in their ability to communicate in English must take a special course in English during their first quarter and must demonstrate satisfactory progress. This special course is a non-credit course offered by the Graduate Office in the late afternoon. No student may be a full graduate teaching assistant until this requirement has been satisfied.

Special Students

Students may be admitted in exceptional cases as special graduate students to carry out full-time studies at the Institute without being candidates for a degree from Caltech. This status is ordinarily restricted to students who are registered in, or are on leave of absence from, an advanced degree program at another institution and who need to make use of resources available at Caltech. Admission to such status requires application directly to the Dean of Graduate Studies, following the same procedures as for regular graduate students.

Graduate Residence

One term of residence shall consist of one term's work of not fewer than 36 units of advanced work in which a passing grade is recorded. Advanced work is defined as study or research in courses whose designated course number is 100 or above. If fewer than 36 units are successfully carried, the residence will be regarded as shortened in the same ratio; but the completion of a greater number of units in any one term will not be regarded as increasing the residence. In general, the residency requirements are as follows: for Master of Science, a minimum of three terms (one academic year) of graduate work; for Aeronautical Engineer, Civil Engineer, Electrical Engineer, and Mechanical Engineer, a minimum of six terms (two academic years) of graduate work; and for Doctor of Philosophy, a minimum of nine terms (three academic years) of graduate work.

Registration

Graduate students are required to register and file a program card in the Registrar's Office for each term of residence, whether they are attending a regular course of study, carrying on research, doing independent reading, writing a thesis, or utilizing any other academic service or campus facility. Mail registration is provided for graduate students during a two-week period near the end of the previous quarter. A late registration fee of \$50.00 is assessed for failure to register on time.

Before registering, students should consult with members of the option in which they are taking their major work to determine the studies that they can pursue to the best advantage. This registration program card must be signed by the student's adviser. An adviser is assigned to each entering graduate student by the option representative. In most options a new adviser is assigned when the student begins research. Only members of the professorial faculty may serve as advisers. With the approval of the Dean of Graduate Studies, any graduate student whose work is not satisfactory may be refused registration at the beginning of any term by the division in which the student is doing his or her major work.

In registering for research, students should indicate on their program card the name of the instructor in charge, and should consult with him or her to determine the number of units to which the proposed work corresponds. At the end of the term, the instructor in charge may decrease the number of units for which credit is given if he or she feels that the progress of the research does not justify the full number originally registered for.

Students will not receive credit for courses unless they are properly registered. The students themselves are charged with the responsibility of making certain that all grades to which they are entitled have been recorded.

All changes in registration must be reported, on drop or add cards, to the Registrar's Office by the student. Such changes are governed by the last dates for adding or dropping courses as shown on the academic calendar on pages 4 and 5. A student may not withdraw from or add a course after the last date for dropping or adding courses without his or her option's consent and the approval of the Dean of Graduate Studies.

A graduate student who is registered for 36 or more units is classified as a full-time student. A graduate student who registers for less than 36 units, or who undertakes activities related to the Institute aggregating more than 62 hours per week (in class, research, and teaching assistantship units) must receive approval from the Dean of Graduate Studies. Petition forms for this purpose may be obtained from the Graduate Office and must carry the recommendation of the option representative of the student's major option before submission to the Dean of Graduate Studies.

Academic Year and Summer Registration

Most courses are taught during the three 12-week quarters that make up the academic year. However, predoctoral students are strongly encouraged to continue their research throughout the summer quarter. They are entitled to at least two weeks' annual vacation (in addition to Institute holidays), but they should arrange their vacation schedules with their research advisers early in each academic year.

All students in residence must be registered. A registration card for summer research must be filed with the Registrar's Office in May. There is no tuition charge for summer research units. To maintain full-time student status, 36 units must be taken in the summer quarter.

Leave of Absence

Graduate students are required to maintain their admission status until all requirements for a degree are fulfilled, whether by continuity of registration or on the basis of approved leave. A leave of absence for medical or other reasons may be approved for up to one year at a time. Leave will be approved to meet

military obligations, and tuition adjustments will be made if the leave must be initiated within a term. (See page 94.) An approved leave of absence indicates that the student can return to the option at the end of the leave. Financial aid awarded by the Institute will not be deferred from the term for which it was originally offered and must be requested again for the term of reenrollment.

Detached duty status continues registration for a student doing research at another location, such as a national facility, for an extended period. Reduced duty status continues registration for a student who cannot carry a full load due to medical disability, including pregnancy.

Petition forms for an approved leave of absence, or detached or reduced duty status, may be obtained from the Graduate Office and must, before submission to the Dean of Graduate Studies, carry the recommendations of the student's option representative and, where appropriate, the thesis adviser. In case of a lapse in admission status, readmission must be sought before academic work may be resumed or requirements for the degree completed. Registration is required for the quarter in which the thesis defense is undertaken, with the exception of the first week of each quarter.

The Dean of Graduate Studies may place a graduate student on involuntary leave of absence if persuaded by the evidence that such an action is necessary for the protection of the Institute community or for the personal safety or welfare of the student involved. Such a decision by the Dean is subject to automatic review within seven days by the Vice President for Student Affairs.

Part-Time Programs

Part-time graduate study programs at the Institute are for graduate students who cannot devote full time to their studies and are allowed to register only under special arrangements with a sponsoring organization, and are subject to the following rules:

Degree Programs

- Applicants for the part-time program must submit a regular application form.
- Any research work done for academic credit shall be supervised by a Caltech faculty member.
- Students admitted to the part-time program are required to take at least 27 units of graduate course work or research work each term during the first academic year. They may not commit themselves to work for more than 20 hours per week for the sponsoring organization.
- During the second year, students may register for less than 27 units each term. All degree requirements must be met by the end of the second academic year.
- Part-time studies in the program will be limited to the first two years of academic residence for each student. Beyond the initial period, students continuing their graduate work must do so on a full-time basis.
- Any option at the Institute retains the right to not participate in the program or to accept it under more stringent conditions.

Nondegree Programs

Caltech employees, both campus and JPL, are eligible to apply to take one or more graduate courses for credit. Participants in this program will not be considered to be working toward a Caltech degree, in contrast to the part-time

program for graduate degrees described above, and courses taken under this program cannot be used to fulfill the requirements for a Caltech degree.

At least one month prior to the start of the term, the employee should have an initial discussion with the option representative of the option in which the course is to be taken. Application should be made to the Graduate Office by completing the special form provided for this purpose, and providing a transcript of academic work and one letter of recommendation. The employee must meet the prerequisites for the course, and must obtain the written permission of the instructor. Individual options may require further information such as GRE scores. The decision on admission to take each course will be made by the course instructor and the option representative, with final approval by the Dean of Graduate Studies. Taking an additional course at a later time will require full reapplication. It is the employee's responsibility to arrange a revised work schedule with the appropriate supervisor. Approval of the employee's division is required.

Part-time nondegree students are subject to the Honor System (see page 26) and are under the purview of the Dean of Graduate Studies. They may take only courses numbered 100 or higher. Research courses are excluded from the program. For courses in which a letter grade is offered, these students may not register to receive a pass/fail grade in the course, nor can credit for the course be obtained by examination. The option may limit the number of nondegree students admitted to any one course.

Working at Special Laboratories

- Any student who desires to take advantage of the unique opportunities available at one of the special laboratories, e.g., JPL or EQL, for Ph.D. thesis work, may be allowed to do so, provided that he or she maintains good contact with academic life on campus, and the laboratory involved commits support for the duration of the thesis research, and provided that all Caltech graduate thesis research carried out at a special laboratory is under the supervision of Caltech faculty members.
- A student's request to carry out thesis work at a special laboratory should be formally endorsed by the appropriate committee of his or her option and by the special laboratory, on a petition submitted through the option representative to the Dean of Graduate Studies. The special laboratory should recognize its commitment of special equipment or any other resources required for the thesis work. Approval by the special laboratory should also indicate that the thesis topic is a sensible one, and that it is not likely to be preempted by the laboratory.
- A special laboratory's support of a Caltech student doing thesis research at the laboratory should be provided, if possible, through a campus graduate research assistantship (GRA) under a suitable work order. In this way, the student would be eligible for a tuition award on the same basis as a campus thesis student.
- Employment by a special laboratory of a graduate student for work not connected with his or her thesis should be regarded as equivalent to other outside employment.

Exchange Program with Scripps Institution of Oceanography

An exchange program has been established with the Scripps Institution of Oceanography (SIO), University of California, San Diego, permitting Caltech graduate students to enroll in and receive credit for graduate courses offered by SIO. Arrangements should be made through the student's major option and the Office of the Dean of Graduate Studies. The student must obtain the advance approval of the instructors of courses to be taken at SIO. In some cases, when it is in the best interests of the student, arrangements may be made for the student to be temporarily in full-time residence at SIO.

Thesis research done partly at SIO may be arranged directly by the student's option and the staff of appropriate research laboratories at SIO, without the necessity of enrolling for SIO courses designated for research; in this case the student will continue to be under the supervision of his or her Caltech thesis adviser and will enroll for Caltech research units.

DEGREE REGULATIONS

Degree of Master of Science

The Master of Science degree is a professional degree designed to prepare a student for teaching, for further graduate studies, or for more advanced work in industry. Detailed requirements are based primarily on professional studies, and the program should be planned in consultation with the faculty in the appropriate discipline. Under normal circumstances, the requirements for the M.S. degree can be completed in one academic year.

A student who enters the Institute holding a master's degree from another institution will not normally be awarded a master's degree in the same field from the Institute unless the initial admission to Caltech graduate standing indicated that the student was to be a master's candidate. A student may not normally be awarded two master's degrees from the Institute.

Special regulations for the master's degree are listed under each graduate option.

Residence and Units of Graduate Work Required. At least one academic year of residence at the Institute and 135 units of graduate work at the Institute subsequent to the baccalaureate degree are required for the master's degree. Included in these units are at least 27 units of free electives or of required studies in the humanities. Courses used to fulfill requirements for the bachelor's degree may not be counted as graduate residence.

To qualify for a master's degree, a student must complete the work indicated in the section on special regulations for his or her option with a grade-point average for the approved M.S. candidacy courses of at least 1.9.

In special cases, with the approval of the instructor and the Dean of Graduate Studies, courses taken elsewhere before enrollment at the Institute may be offered in place of specifically required courses. An examination may be required to determine the acceptability of such courses. Course credit, if granted, shall not count toward the 135-unit and residency requirements.

Joint B.S./M.S. Degree. In exceptional cases, undergraduate students may pursue a joint B.S./M.S. program of study in some options. Students should contact the graduate option representative to find out if the joint B.S./M.S. degree is possible in a particular option. Such students must follow the normal procedures for admission to the M.S. program in the option of their choice. Students attending courses or carrying out research toward an M.S. degree before completion of their B.S. degree requirements will be considered as undergraduate students and will not be eligible for graduate financial aid, graduate housing, or other graduate student privileges.

Admission to Candidacy. Before the midpoint of the first term of the academic year in which the student expects to receive the degree, he or she should file in the Office of the Dean of Graduate Studies an application for admission to candidacy for the degree desired. On the candidacy form, the student must submit a proposed plan of study, which must have the approval of his or her option. This approved plan of study will constitute the requirements for the degree. Any modifications must be approved by the option representative, and the initialed plan of study resubmitted to the Graduate Office at least two weeks before Commencement.

Engineer's Degree

Engineer's degrees are awarded in aeronautical engineering, civil engineering, electrical engineering, and mechanical engineering. The work for an engineer's degree must consist of advanced studies and research in the field appropriate to the degree desired. It must conform to the special requirements established for that degree and should be planned in consultation with the members of the faculty concerned. Students who have received the master's degree and wish to pursue further studies leading toward either the engineer's or the doctor's degree must file a new petition to continue graduate work toward the desired degree. Students who have received an engineer's degree will not in general be admitted for the doctor's degree.

Residence. At least six terms of graduate residence subsequent to a baccalaureate degree equivalent to that given by the Institute are required for an engineer's degree. Of these, at least the last three terms must be at Caltech. It must be understood that these are minimum requirements, and students must often count on spending a somewhat longer time on graduate work.

To qualify for an engineer's degree, a student must complete the work prescribed by his or her supervising committee with a grade-point average of at least 1.9. Research work and the preparation of a thesis must constitute no fewer than 55 units. More than 55 units may be required by certain options, and the student should determine the particular requirements of his or her option when establishing a program.

Admission to Candidacy. Before the midpoint of the first term of the academic year in which the student expects to receive the degree, he or she must file in the Office of the Dean of Graduate Studies an application for admission to candidacy for the degree desired. Upon receipt of this application, the Dean of Graduate Studies, in consultation with the chairman of the appropriate division, will appoint a committee of three members of the faculty to supervise the student's work and to certify its satisfactory completion. One of the members of the committee must be in a field outside the student's major field of study. The

student should then consult with this committee in planning the details of his or her work. The schedule of work as approved by the committee shall be entered on the application form and shall then constitute a requirement for the degree. Changes in the schedule will not be recognized unless initialed by the proper authority. No course that appears on the approved schedule and for which the applicant is registered may be removed after the last date for dropping courses, as listed in the catalog.

The student will be admitted to candidacy for the degree when the supervising committee certifies: (a) that all the special requirements for the desired degree have been met, with the exception that certain courses of not more than two terms in length may be taken after admission to candidacy; (b) that the thesis research has been satisfactorily started and probably can be finished at the expected time.

Such admission to candidacy must be obtained by the midpoint of the term in which the degree is to be granted.

Thesis. At least two weeks before the degree is to be conferred, each student is required to submit to the Dean of Graduate Studies two copies of his or her thesis in accordance with the regulations that govern the preparation of doctoral dissertations. These regulations may be obtained from the Graduate Office. The candidate must obtain written approval of the thesis by the chairman of the division and the members of the supervising committee, on a form obtained from the Office of the Dean of Graduate Studies.

The use of "classified" research as thesis material for any degree will not be permitted. Exceptions to this rule can be made only under special circumstances, and then only when approval is given by the Dean of Graduate Studies before the research is undertaken.

Examination. At the discretion of the option in which the degree is desired, a final examination may be required. This examination would be conducted by a committee appointed by the candidate's supervising committee.

Degree of Doctor of Philosophy

The degree of Doctor of Philosophy is conferred by the Institute primarily in recognition of breadth of scholarship, depth of research, and the power to investigate problems independently and efficiently, rather than for the completion of definite courses of study through a stated period of residence. The work for the degree must consist of research and the preparation of a thesis describing it, and of systematic studies of an advanced character, primarily in science or engineering. In addition, the candidate must have acquired the power of clear and forceful self-expression in both oral and written language.

Subject to the general supervision of the Committee on Graduate Study, the student's work for the degree of Doctor of Philosophy is specifically directed by the division in which he or she has chosen the major subject. Each student should consult his or her division concerning special divisional and option requirements.

Admission. With the approval of the Dean of Graduate Studies, students are admitted to graduate standing by the option in which they choose their major work toward the doctor's degree. In some cases, applicants for the doctor's degree may be required to register for the master's or engineer's degree first; however, these degrees are not general prerequisites for the doctor's degree.

Students who have received the master's degree and wish to pursue further studies leading toward either the engineer's or the doctor's degree must file a request to continue graduate work toward the desired degree. Students who have received an engineer's degree will not, in general, be admitted for the doctor's degree.

A student who holds a Ph.D. degree from another institution will not normally be admitted to graduate standing at Caltech to pursue a second Ph.D. degree. A student will not normally be awarded two Ph.D. degrees from the Institute.

Minor Programs of Study. The Institute does not require a minor for the Ph.D. degree, but the individual options may have minor requirements as part of their requirements for the major.

A student may undertake a minor program of study in any option. Completion of a minor program of study is recognized on the Ph.D. diploma by the statement, "... and by additional studies in (minor option)."

A minor program of study should be at a level of study in the minor substantially beyond that typically acquired by students as part of their major requirements. Most options require 45 units or more, including at least one 200-level course and a coherent program of the supporting 100-level courses. The faculty of the minor option may approve a proposed minor program on the basis of overall class performance and/or by an oral examination. Detailed requirements for minor options are listed under the individual options.

Residence. At least nine terms (three academic years) of residence subsequent to a baccalaureate degree equivalent to that given by the Institute are required for the doctor's degree. Of this at least one year must be in residence at the Institute. It should be understood that these are minimum requirements, and students must usually count on spending a somewhat longer time in residence. A student whose undergraduate work has been insufficient in amount or too narrowly specialized, or whose preparation in his or her special field is inadequate, must count upon spending increased time in work for the degree.

However, no student will be allowed to continue work toward the doctor's degree for more than five academic years (15 terms) of graduate residence, nor more than 18 terms for full- or part-time academic work, without approval of a petition by the Dean of Graduate Studies. This petition must include a plan and schedule for completion, agreed upon and signed by the student, the research adviser, and the option representative.

Registration. Continuity of registration must be maintained until all requirements for the doctor's degree have been completed, with the exception of summer terms and authorized leaves of absence. Registration is required for the quarter in which the thesis defense is undertaken, with the exception of the first week of the quarter.

Admission to Candidacy. On the recommendation of the chairman of the division concerned, the Dean of Graduate Studies will admit a student to candidacy for the degree of Doctor of Philosophy after the student has been admitted to work toward the doctor's degree and has been in residence at least one term thereafter; has initiated a program of study approved by the major option and, if needed, by the minor option; has satisfied the several options concerned by written or oral examination or otherwise shown that he or she has a comprehensive grasp of the major and minor subjects and of subjects fundamental to them; has fulfilled any necessary language requirements; and has shown ability

in carrying on research in a subject approved by the chairman of the division concerned. Option regulations concerning admission to candidacy are given in a later section. Members of the Institute staff of rank higher than that of assistant professor are not admitted to candidacy for a higher degree.

A standard form, obtained from the Dean of Graduate Studies, is provided for making application for admission to candidacy. Such admission to candidacy must be obtained before the close of the second term of the year in which the degree is to be conferred. *The student is responsible for seeing that admission is secured at the proper time.* A student not admitted to candidacy before the beginning of the fourth academic year of graduate work at the Institute must petition through his or her division to the Dean of Graduate Studies for permission to register for further work.

Candidacy (and permission to register) may be withdrawn by formal action of the option from a student whose research is not satisfactory, or for other compelling reasons. However, the option must petition through its Division Chairman to the Dean of Graduate Studies before taking such action.

Foreign Languages. The Institute believes in the importance of the knowledge of foreign languages and encourages their study as early as possible, preferably before admission to graduate standing. Although there is no Institute-wide foreign-language requirement for the degree of Doctor of Philosophy, graduate students should check for possible specific requirements set by their division or option.

Final Examination. Each doctoral candidate shall undergo broad oral examination on the major subject, the scope of the thesis, and its significance in relation to the major subject. The examination, subject to the approval of the Dean of Graduate Studies, may be taken after admission to candidacy whenever the candidate is prepared; however, it must take place at least three weeks before the degree is to be conferred.

The examination may be written in part, and may be subdivided into parts or given all at one time at the discretion of the options concerned. The student must petition for this examination, on a form obtained from the Graduate Office, not less than two weeks before the date of the examination. Ordinarily, more than two weeks are needed for the necessary arrangements. The date of the examination and the composition of the examining committee will not be approved by the Dean of Graduate Studies until the thesis is submitted in final form—i.e., ready for review by the Dean, the members of the examining committee, and the Graduate Office proofreader. (See *Thesis*, below.)

Thesis. The candidate is to provide a copy of his or her completed thesis to the members of the examining committee at least two weeks before the final oral examination. The date of the examination and the composition of the examining committee will not be approved by the Dean of Graduate Studies until the thesis is submitted in completed form, i.e., ready for review by the Dean, the members of the examining committee, and the Graduate Office proofreader. A student may petition the Dean of Graduate Studies for registration for 10 units and for minimum tuition charges if the student supplies a copy of the thesis, schedules the examination, and submits the necessary petitions for the Ph.D. examination and for the 10 units registration prior to 5:00 p.m. on the third Friday of the term in which the examination will be taken. A student need not register and will not be charged tuition for the term in which the thesis examination is taken, provided the examination is taken and passed

before 5:00 p.m. on the first Friday of that term. In addition, all necessary procedures must be followed, including adhering to the deadline dates mentioned above and maintaining continuity of registration.

The last date for submission of the final, corrected thesis to the Dean of Graduate Studies is May 1 if the candidate defended his or her thesis during the previous summer or the first or second terms; or two weeks before the degree is to be conferred if the candidate defended his or her thesis during the month of May. Two copies of the thesis are to be submitted in accordance with the regulations governing the preparation of doctoral dissertations, obtainable from the Graduate Office. For special option regulations concerning theses, see specific graduate options.

Before submitting the final, corrected thesis to the Dean of Graduate Studies, the candidate must obtain approval of the thesis by the chairman of his or her division and the members of the examining committee, on a form that can be obtained at the Graduate Office.

With the approval of the option concerned, a portion of the thesis may consist of one or more articles published jointly by the candidate and members of the Institute staff or other coauthors. In any case, however, a substantial portion of the thesis must be the candidate's own exposition of his or her own work.

The use of "classified" research as thesis material for any degree is not permitted. Exceptions to this rule can be made only under special circumstances, and then only when approval is given by the Dean of Graduate Studies before the research is undertaken.

Regulations and directions for the preparation of theses may be obtained from the Office of the Dean of Graduate Studies, and should be followed carefully by the candidate.

GRADUATE EXPENSES

The tuition charge for all students registering for graduate work is currently \$16,695 per academic year, payable in three installments at the beginning of each term. Graduate students who cannot devote full time to their studies are allowed to register only under special circumstances. Students desiring permission to register for fewer than 36 units should therefore petition on the form available from the Graduate Office. If reduced registration is permitted, the tuition for each term is at the rate of \$155 a unit for fewer than 36 units, with a minimum of \$1,550 a term. This tuition credit will only be made for reduced units as of the published Add Day of each term. However, if tuition credit has been applied to students' accounts for reduced units, any subsequent increase in tuition units will result in the appropriate tuition charge for the increased number of units retroactive to the beginning of the academic term. Additional tuition will be charged to students registering for special courses that are not part of the normal educational facilities of the Institute.

The payment of tuition by graduate students is required (a) without reference to the character of the work by the student, which may consist of research,

independent reading, or writing a thesis or other dissertation, as well as attendance at regular classes; (b) without reference to the number of terms in which the student has already been in residence; and (c) without reference to the status of the student as an appointee of the Institute, except that members of the academic staff of rank of instructor or higher are not required to pay tuition.

Each graduate student is required to make a general deposit of \$25 to cover loss of, or damage to, Institute property used in connection with work in regular courses of study. Upon completion of graduate work, or upon withdrawal from the Institute, any remaining balance of the deposit will be refunded.

Unpaid Bills. All bills owed the Institute must be paid when due. Any student whose bills are past due may be refused registration for the term following that in which the past due charges were incurred. Transcripts are not released until all bills due have been paid or satisfactory arrangements for payment have been made with the Office of Student Accounts.

Information regarding fellowships, scholarships, and assistantships is discussed in the following pages. Students of high scholastic attainment may be offered special tuition awards covering all or part of the tuition fee. Loans also may be arranged by applying at the Graduate Office.

Expense Summary 1994-95

General:

General Deposit	\$ 25.00 ¹
Tuition	16,695.00
Graduate Student Council Dues	24.00 ²
	<hr/>
	<u>\$16,744.00</u>

Other:

Books and Supplies (approx.)	\$892.00
Room ³ :	
On-campus graduate houses	
For single students	\$323.00 per 30-day month
For single students (suite)	\$339.00 per 30-day month
Catalina apartments	
For single or married students	
4 bedroom apartment	\$377.00 per person per 30-day month
2 bedroom apartment	\$425.00 per person per 30-day month
1 bedroom apartment	\$713.00 per apt. per 30-day month
Meals: Available at Chandler Dining Hall or the Athenaeum (members only)	

¹ This charge is made only once during residence at the Institute.

² Graduate students registered during the summer term are required to pay an additional \$8.00 in Graduate Student Council dues.

³ Room rent is billed at the end of each month and is payable upon receipt of the monthly statement.

The following is a list of graduate fees at the California Institute of Technology for the Academic Year 1994-95, together with the dates on which these charges are due. Fees are subject to change at the discretion of the Institute.

	<i>First Term</i>	<i>Fee</i>
September 26, 1994	General Deposit	\$ 25.00
	Tuition	5,565.00
	Graduate Student Council Dues	8.00
 <i>Second Term</i>		
January 4, 1995	Tuition	\$5,565.00
	Graduate Student Council Dues	8.00
 <i>Third Term</i>		
April 3, 1995	Tuition	\$5,565.00
	Graduate Student Council Dues	8.00

Tuition fees for fewer than the normal number of units:

36 units	Full Tuition
Per unit per term	\$ 155.00
Minimum per term	1,550.00
Audit Fee, \$155.00 per lecture hour, per term	

Fees for Late Registration. Registration is not complete until the student has personally turned in the necessary registration forms for a program approved by his or her adviser and has paid tuition and other fees. A penalty fee of \$50 is assessed for failure to register within five days of the scheduled dates.

Graduate Student Council Dues. Dues of \$24 are currently charged to each graduate student for the academic year. In addition, \$8 is charged to each graduate student registered during the summer. The council uses the dues to support a program of social and athletic activities and other activities of benefit to graduate student life.

Honor System Matters. Monies owed to the Institute resulting from a Graduate Review Board decision may be collected through Student Accounts, at the request of the Dean of Graduate Studies.

Housing Facilities. The Institute has three dormitories on campus providing single rooms for 119 graduate students. In September 1984, the Institute completed construction of an apartment complex, Catalina I, that provides an additional 148 single rooms in four-bedroom furnished units. Catalina II, completed in September 1986, has 156 single rooms in two-bedroom furnished units. Catalina III, completed in September 1988, has 54 single rooms in two-bedroom furnished units, and 30 one-bedroom furnished units. These apartments are also available to married students with families.

Rates for housing vary, depending upon the accommodations and services provided. A contract is required to live in these houses for the academic year. A \$100 deposit must accompany each housing application. The deposit will be refunded if there is no delinquent rent or damages. Complete information and

reservations can be obtained by writing to the Housing Office, Mail Code 1-56, California Institute of Technology, Pasadena, CA 91125.

The Institute also owns a limited number of apartments and single-family houses that are available for rental, on a lease basis, to married graduate students. Because of limited availability, there is a waiting list for these properties; priorities are assigned to various categories of students and dependents. For additional information and sign-up forms, contact the Housing Office, Mail Code 1-56, California Institute of Technology, Pasadena, CA 91125.

The Housing Office maintains a current file of available rooms, apartments, and houses in the Pasadena area. The listings are available for use upon arrival at Caltech. Students preferring to live in non-Institute housing typically pay approximately \$410–\$445 per month in rent for a shared apartment, and somewhat more for a private apartment. Please note that the Institute cannot make negotiations for individual housing off campus.

Dining Facilities. Graduate students are granted the privilege of joining the Athenaeum (faculty club), which affords the possibility of contact with fellow graduate students and with others using the Athenaeum, including the Associates of Caltech, distinguished visitors, and members of the professional staffs of the Huntington Library and the California Institute of Technology.

The Chandler Dining Hall, located on the campus, is open Monday through Friday. Breakfast, lunch, and snacks are served cafeteria style.

Health Services. Health services available to graduate students are explained in Section One.

FINANCIAL ASSISTANCE

Caltech offers in each of its divisions a number of fellowships, tuition scholarships, and graduate assistantships. In general, tuition scholarships may be for full or partial tuition charges; assistantships provide stipends; and fellowships often provide both tuition scholarship awards and stipends. Graduate assistants are eligible to be considered for special tuition awards.

A request for financial assistance is included on the application for admission to graduate standing. These applications should reach the Graduate Office by January 15. Some options will review applications received after the deadline date, but such applicants may be at a disadvantage in the allocation of financial assistance. Appointments to fellowships, scholarships, and assistantships are for one year only; and a new application must be filed with option representatives each year by all who desire appointments for the following year, whether or not they already hold such appointments.

Graduate students receiving any form of financial aid from the Institute are required to report to the Dean of Graduate Studies any financial aid from other sources. Students may accept outside employment if the time commitment does not interfere with their graduate studies. However, the number of hours per week spent on outside employment must be reported to the Dean of Graduate Studies.

Loans are available to graduate students who need such aid to continue their education. Application should be made to the Graduate Office.

Graduate Assistantships

Graduate assistants help with teaching, laboratory work, or research that affords them useful experience. Teaching assistantships are for up to 15 hours per week during the academic year and are devoted to preparation, grading, or consulting with students. Research assistantships are up to 20 hours per week during the academic year and may be greater during the summer. Combined teaching and research assistantships are common. **Stipends are based on four 12-week quarters and are normally paid monthly.** Assistantships normally permit carrying a full graduate residence schedule also. Only teaching assistants with good oral English are allowed to teach sections.

Teaching assistants must familiarize themselves with Caltech's policy on harassment (see page 35). Classes should foster academic achievement in a "hassle-free" environment. Teaching assistants should not attempt to date a student in their class, and should disqualify themselves from teaching a section in which a spouse or current partner is enrolled. Any questions should be referred to the Dean of Graduate Studies.

Teaching and research obligations of graduate assistants shall not exceed 50 weeks per year, but may be less depending on departmental policy and the arrangements made by the adviser and the student. Graduate assistantship appointments include regular Institute holidays occurring during specified appointment periods. In addition, when necessary, graduate assistants may arrange for short-term medical disability leave (including maternity leave). Assistants should schedule their vacation and planned disability leaves with their adviser or option representative. Any questions should be referred to the Dean of Graduate Studies.

Graduate Scholarships, Fellowships, and Research Funds

The Institute offers a number of endowed fellowships and scholarships for tuition and/or stipends to graduate students of exceptional ability who wish to pursue advanced study and research.

In addition to the National Science Foundation, the Department of Health and Human Services, the Department of Energy, and the California State Graduate Fellowship program, gifts are received from other donors to support graduate study. A number of governmental units, industrial organizations, educational foundations, and private individuals have contributed funds for the support of fundamental research related to their interests and activities. These funds offer financial assistance to selected graduate students in the form of graduate research assistantships.

Work-Study Programs

Limited opportunities are available for work-study programs in certain areas of interest. At the present time the sponsors of such programs are the Hughes Aircraft Company (Scientific Education Office, World Way, P.O. Box 90515, Los Angeles, CA 90009), the Northrop Corporation Fellowship Program (P.O. Box 1138, Pico Rivera, CA 90660-9977), and the Jet Propulsion Laboratory of the California Institute of Technology. Potential students considering participation in the Hughes or Northrop programs may make inquiry to the addresses above

when applying for graduate study. Those wishing to be considered for the JPL program should consult JPL and their option representative after their admission. In general, such programs require some part-time employment during the academic year, as well as full-time work during the summer.

Loans

Several types of loans are available to graduate students. To qualify for any of these loans, a student must demonstrate financial need and must maintain satisfactory academic progress in the course of study for which he or she is enrolled. Application forms and further information are available in the Graduate Office.

Loan applicants will be asked to submit signed copies of their federal income tax returns (form 1040, 1040A, or 1040EZ), complete with all supporting schedules and attachments.

Satisfactory Academic Progress

In order to continue receiving financial aid at Caltech, graduate students must maintain satisfactory academic progress toward completion of their degree. Continuity of registration must be maintained until all requirements for the degree being sought have been completed, with the exception of summer terms and authorized leaves of absence.

The Master of Science degree requires at least one academic year of residence at the Institute and 135 units of graduate work with a grade-point average of at least 1.9. Under normal circumstances a master's degree requires a minimum of three academic terms (one year) and cannot take more than two years, without a petition approved by the Dean of Graduate Studies.

The engineer's degree must consist of advanced studies and research in the field appropriate to the degree desired. At least six terms (two years) of graduate residence are required with a minimum 1.9 overall grade-point average. The engineer's degree cannot take more than three years to complete, without a petition approved by the Dean of Graduate Studies.

For the doctor's degree at least nine terms (three years) of residence are required, but the necessary study and research typically requires more than five years. The work for the degree consists of research and the preparation of a thesis describing it, and of systematic studies of an advanced character, primarily in science or engineering. In addition, the candidate must have acquired the power of clear and forceful self-expression in both oral and written language.

The requirements for each degree include special regulations established by each option and detailed in the Institute catalog for the year of initial registration. Many options require a C grade or better in particular courses or groups of courses. Hence, a limited number of courses may be repeated while still maintaining a status of satisfactory academic progress and would count toward the 36-unit-per-term requirement. A full-time graduate student must register for (and complete) 36 units per term. Approval of the Dean of Graduate Studies is required before dropping any course that brings a student below 36 units. All graduate students are expected to complete 108 units each academic year. The treatment of incomplete grades and withdrawals is specified on page

31. Satisfactory academic progress is checked each academic year by the Graduate Office.

The special regulations for the options typically include the completion of specific courses, oral and/or written examinations, petitions, research requirements, etc., by specific times. Satisfactory academic progress is judged by the options against these regulations, and revocation of permission to register may be recommended by the option to the Dean of Graduate Studies prior to or in response to the student's petition for admission to candidacy. Further, even after admission to candidacy, the candidacy (and permission to register) may be withdrawn by formal action of an option for a student whose research is not satisfactory, or for other compelling reasons. However, the option must petition through its Division Chairman to the Dean of Graduate Studies before taking such action.

A doctoral student who has not been admitted to candidacy by the beginning of the fourth year must petition to the Dean of Graduate Studies for permission to register for further work. In addition, no doctoral student will be allowed to register for a sixth year without approval of a petition by the Dean of Graduate Studies. This petition must include a plan and schedule for completion, agreed upon and signed by the student, the research adviser, and the option representative.

Petitions approved by the option and the Dean of Graduate Studies reinstate student eligibility for all financial aid.

Refund and Repayment Policy

Caltech has established an equitable refund policy for students who find it necessary to withdraw or take a leave of absence from the Institute.

Students who officially withdraw or take a leave of absence from the Institute during an academic term will receive a tuition refund based on the schedule published on page 93. Students living in Caltech housing may also be eligible for a partial refund from the Housing Office.

When granting refunds to financial aid recipients, it is Caltech's policy to reduce the aid award by the amount of the refund and any adjustments in the actual living costs. Therefore, an aid recipient's refund is, in most cases, returned to the original account.

An overpayment or overaward occurs when a student receives more aid than he or she is eligible to receive. Therefore, the Graduate Office will compare actual costs to aid disbursed in accordance with federal guidelines. If aid disbursed exceeds costs, the student may be responsible for the overpayment. Any overpayment will be charged to the student on his or her student account. Additional information is available in the Graduate Office.

Students receiving financial aid from any source are expected to register for 36 units each term unless special arrangements have been made with the Dean of Graduate Studies.

PRIZES

Charles D. Babcock Award

The Charles D. Babcock Award recognizes a student whose achievements in teaching (or other ways of assisting students) have made a significant contribution to the aeronautics department. The criteria for the award selection are as follows: The award can be made as unscheduled support for a graduate student associated with aeronautics, e.g., for travel to a technical meeting for professional advancement. All aeronautics-associated students are eligible, with preference given to those in the structures and solid mechanics group. The award may be made yearly, as merited. The timing of the award will be as special recognition warrants.

The Charles D. Babcock Award was established in 1992 in memory of Charles D. Babcock, who was Professor of Aeronautics and Applied Mechanics until 1987; he served aeronautics as Option Representative and the Institute as Vice Provost.

William F. Ballhaus Prize

A prize of \$750 will be awarded for an outstanding doctoral dissertation in aeronautics, to be selected by the aeronautics faculty. This award is made possible by a gift from Dr. William F. Ballhaus, a California Institute of Technology alumnus, who received his Ph.D. degree in aeronautics in 1947.

Bohnenblust Travel Grants in Mathematics

Special grants may be awarded to outstanding graduate students in mathematics to enable them to travel in the U.S. or abroad to further their mathematical education. The mathematics faculty established these awards in 1978 to honor H. F. Bohnenblust, who served Caltech as Professor of Mathematics, Executive Officer for Mathematics, and Dean of Graduate Studies.

Rolf D. Buhler Memorial Award in Aeronautics

An award of \$500 is made annually to a student in the Aeronautics Master's Program whose academic performance was exemplary and who shows high potential for future achievements at Caltech.

The Rolf D. Buhler Memorial Award in Aeronautics was established in 1990 in memory of Rolf Buhler, a 1952 graduate of GALCIT and Professor of Space Flight at the Technical University of Stuttgart in Germany.

W. P. Carey & Co., Inc., Prizes in Mathematics

Prizes of up to \$500 will be awarded by a faculty committee in applied mathematics for outstanding doctoral dissertations. If there is no appropriate candidate, then the awardee can be chosen from pure math. These awards have been made possible by gifts from William Polk Carey and from W. P. Carey & Co., Inc.

Richard Bruce Chapman Memorial Award

A prize of \$500 will be awarded annually to a graduate student who has distinguished himself or herself in research in the field of hydrodynamics.

Bruce Chapman was awarded an M.S. from Caltech in 1966 and a Ph.D. in 1970, both in engineering science. This award has been established in his memory by his family and friends.

Milton and Francis Clauser Doctoral Prize

An annual prize is awarded to the Ph.D. candidate whose research is judged to exhibit the greatest degree of originality as evidenced by its potential for opening up new avenues of human thought and endeavor as well as by the ingenuity with which it has been carried out.

The Milton and Francis Clauser Doctoral Prize is made possible by gifts from the family and friends of these twin alumni, who received bachelor's degrees in physics in 1934, master's degrees in 1935, and doctor's degrees in aeronautics in 1937.

Lawrence L. and Audrey W. Ferguson Prize

Awarded to the graduating Ph.D. candidate in biology who has produced the outstanding Ph.D. thesis for the past year.

Henry Ford II Scholar Awards

The Henry Ford II Scholar Awards are funded under an endowment provided by the Ford Motor Company Fund. Each award, up to \$5,000, will be made annually either to the engineering student with the best academic record at the end of the third year of undergraduate study, or to the engineering student with the best first-year record in the graduate program. The chairman of the Division of Engineering and Applied Science names the student to receive the award.

Graduate Dean's Award for Outstanding Community Service

This award is made annually to a Ph.D. candidate who, throughout his or her graduate years at the Institute, has made great contributions to graduate life and whose qualities of leadership and responsibility have been outstanding. The award consists of a cash award and a certificate.

The Herbert Newby McCoy Award

A cash award is made annually to a graduate student in chemistry to acknowledge an "outstanding contribution to the science of chemistry." The awardee is chosen by a faculty committee, based on solicited nominating packages, and the award-winning research is presented in a formal divisional seminar given by the awardee.

The McCoy award was established in 1965 as a result of a bequest of Mrs. Ethel Terry McCoy to honor her husband, who did pioneering work in the chemistry of rare earths and was associated with Caltech through collaboration with chemists Linus Pauling and Howard Lucas.

Ernest E. Sechler Memorial Award in Aeronautics

An award of \$750 is made annually to an aeronautics student who has made the most significant contribution to the teaching and research efforts of the Graduate Aeronautical Laboratories of the California Institute of Technology (GALCIT), with preference given to students working in structural mechanics.

The Ernest E. Sechler Memorial Award in Aeronautics was established in 1980 in memory of Ernest E. Sechler, who was one of the first graduates of GALCIT and who then served as a GALCIT faculty member for 46 years. Throughout his career Sechler was the faculty adviser for aeronautics students. In addition, he made many contributions to structural mechanics in areas ranging from aeronautics to the utilization of energy resources.

John Stager Stemple Memorial Prize in Physics

A prize of \$500 is awarded annually to a graduate student in physics for outstanding progress in research as demonstrated by an excellent performance on the oral Ph.D. candidacy exam. John S. Stemple was a Caltech physics graduate student when he died; a memorial fund was established from contributions made by the community of Falls Church, Virginia, John's hometown.

Charles Wilts Prize

Awarded for outstanding independent research in electrical engineering leading to a Ph.D.

SPECIAL REGULATIONS OF GRADUATE OPTIONS

Aeronautics

Aims and Scope of Graduate Study in Aeronautics

The Institute offers graduate programs in aeronautics leading to the degrees of Master of Science, Aeronautical Engineer, and Doctor of Philosophy. The programs are designed to provide intense education in the foundations of the aeronautical sciences, with emphasis on research and the experimental method. Entering graduate students should have a thorough background in undergraduate mathematics, physics, and engineering science. Applicants for graduate study are asked to submit Graduate Record Examination scores with their applications.

In working for a degree in aeronautics, a student may pursue major study in, for example, one of the following areas: physics of fluids, technical fluid mechanics, structural mechanics, mechanics of fracture, aeronautical engineering and propulsion, and aero-acoustics.

While research and course work in aeronautics at the Institute cover a very broad range of subjects, a choice of one of the above fields allows students to focus their activities while taking advantage of the flexibility offered by the breadth of interests of the aeronautics group. A student with an interest in energy-related subjects will find many suitable courses and research projects of particular use. Subjects of major importance in the efficient use of energy, such as turbulent mixing, drag reduction, and lightweight structures, have historically been the focus of research activity in the aeronautics option.

In consultation with his or her adviser, a student may design a program of study in one of the above fields, consisting of the fundamental courses prescribed in the regulations for the separate degrees listed below, and of electives selected from the list of aeronautics courses. Special attention is called to the list of courses numbered Ae 210 or higher.

Degree of Master of Science in Aeronautics

Admission. Students with a baccalaureate degree equivalent to that given by the Institute are eligible to seek admission to work toward the master's degree in aeronautics. Applicants are encouraged to indicate their desire to continue studies past the master's degree.

Course Requirements. Of the 135 units of graduate work required by Institute regulations, at least 108 units must be in the following subject areas:

Fluid mechanics	27 units
Solid mechanics	27 units
Experimental technique and laboratory work . . .	27 units
Mathematics or applied mathematics	27 units

In addition, three units of Ae 150 are required. Each student must have a proposed program approved by his or her adviser prior to registration for the first term of work toward the degree.

Admission to More Advanced Degrees

Students wishing to pursue the more advanced degrees of Aeronautical Engineer or Ph.D. must file a petition to continue work toward the desired degree.

Students registering for the engineer's degree may transfer to study for the Ph.D. upon satisfactory completion of the same qualifying examination required of those working for the Ph.D. However, once admitted to work for the Ph.D. degree, students are not normally permitted to register for work leading to the engineer's degree. All students working for the engineer's degree or the Ph.D. degree are expected to register for and attend one of the advanced seminars (Ae 208 abc or Ae 209 abc).

Degree of Aeronautical Engineer

The degree of Aeronautical Engineer is considered to be a terminal degree for the student who desires advanced training more highly specialized than the master's degree permits, and with less emphasis on research than is appropriate for the Ph.D. degree.

Admission. Students with a Master of Science degree equivalent to that given by the Institute may seek admission to work for the engineer's degree.

Program Requirements. The degree of Aeronautical Engineer is awarded after satisfactory completion of at least 135 units of graduate work equivalent to the Master of Science program described above, plus at least 135 additional units of advanced graduate work. This latter program of study and research must consist of:

- not less than 60 units of research in aeronautics or jet propulsion (Ae 200 or JP 280);
- three units of an advanced seminar such as Ae 208, Ae/AM 209, or JP 290; and
- satisfactory completion (with a grade of C or better, or Pass) of at least 27 units of aeronautics courses numbered Ae 200 or higher, excluding research and seminars.

A proposed program conforming to the above regulations must be approved by the student's adviser prior to registration for the first term of work toward the degree.

A thesis is required based on the research program and may consist of the results of a theoretical and/or experimental investigation or may be a comprehensive literature survey combined with a critical analysis of the state of the art in a particular field.

No student will be allowed to continue to work toward the degree of Aeronautical Engineer for more than six terms of graduate residence beyond the baccalaureate degree (not counting summer registrations) except by permission after petition to the aeronautics faculty.

Degree of Doctor of Philosophy in Aeronautics

Admission. Students with a Master of Science degree equivalent to that given by the Institute may seek admission to work for the Ph.D. degree. In special cases students may be admitted to Ph.D. work without first obtaining the master's degree.

Qualifying Examination. Because of the broad spectrum in the backgrounds of graduate students entering the Ph.D. program in aeronautics, the student must first pass a qualifying examination to determine whether he or she is qualified to pursue problems typical of Ph.D. work. Emphasis in the qualifying examination is directed at any or all of the following: a) establishing the student's ability

to formulate research plans, b) determining the extent of the student's knowledge in his or her field of interest, and c) determining the student's ability to use mathematical and physical principles for original work. The qualifying examination generally covers the following broad subjects:

- a. Mathematics/Applied Mathematics
- b. Fluid Mechanics/Propulsion/Thermodynamics
- c. Solid Mechanics/Structures/Materials
- d. Applied Aeronautics/Mechanics/Controls
- e. Physics/Applied Physics

The examinations are offered all on one or two days, during the first half of the winter term, in the second year of graduate residence at the Institute.

A student is examined on three of these topics, selected with the approval of the adviser, with the following restrictions:

1. The mathematics/applied mathematics topic is required.
2. A student must choose fluids or solids as the second topic, or both as the second and third topics. Alternate topics must be discussed with the option representative and adviser.
3. The fluids or solids topic, whichever was not covered in the qualifying examination, will then be covered in the candidacy examination (through a corresponding faculty representative on the candidacy committee).

In the event of an unsatisfactory performance, the examining faculty members may permit a repeat examination in the appropriate topic(s). This reexamination must be completed before the end of June of the same year.

Candidacy. To be recommended for candidacy for the Ph.D. in aeronautics, the applicant must have satisfactorily completed at least 135 units of graduate work equivalent to the above Master of Science program and must pass one of the following, or its equivalent, with a grade of C or better:

AMa 101 abc Methods of Applied Mathematics

AM 125 abc Engineering Mathematical Principles

Ph 129 abc Mathematical Methods of Physics

and complete (with a grade of C or better, or Pass):

- at least 45 units of aeronautics courses numbered Ae 200 or higher, excluding research and seminars
- a subject minor offered outside of aeronautics, or at least 54 units of courses outside of the applicant's chosen discipline and approved by the aeronautics faculty. If, in the latter context a language is chosen, letter grades are required.

If any of the above subjects were taken elsewhere than at the Institute, the student may be required to pass special examinations indicating an equivalent knowledge of the subject.

In addition to fulfilling these course requirements, the applicant must pass a candidacy examination at least one year before the degree is expected to be conferred. This examination, which includes the topic of mathematics or applied mathematics, aims at determining whether the student is successful in integrating formal course work into a mature understanding of fundamental engineering concepts, and at demonstrating his or her professional competence in applying these concepts to problems in advanced research.

Foreign Languages. The student is encouraged to discuss with his or her adviser the desirability of studying foreign languages.

Thesis and Final Examination. Each candidate is required before graduation to give a public seminar presenting the results of his or her thesis research. For final examination and thesis completion, see general degree requirements.

Subject Minor in Aeronautics

A student majoring in a field other than aeronautics may, with the approval of the aeronautics faculty, elect aeronautics as a subject minor. A minimum of 54 units in subjects acceptable to the aeronautics faculty is required.

Applied Mathematics

Aims and Scope of Graduate Study in Applied Mathematics

A program for graduate study in applied mathematics leads to the Ph.D. degree and requires four or five years. This program is aimed at those students with a background in mathematics, physics, or engineering who wish to obtain a thorough training and to develop their research ability in applied mathematics.

Reflecting the interdisciplinary nature of the program, several different groups in addition to the applied mathematics faculty contribute to the teaching and supervision of research. Students in applied mathematics are expected to combine their basic mathematical studies with deep involvement in some field of application. In accordance with this, basic general courses are listed specifically under applied mathematics; these are to be supplemented, according to the student's interest, from the whole range of Institute courses in specific areas of physics, engineering, etc.

There is an applied mathematics colloquium in which visitors, faculty, and students discuss current research.

Admission

Each new graduate student admitted to work for the Ph.D. in applied mathematics is given an informal interview on Thursday or Friday of the week preceding the beginning of instruction for the fall term. The purpose of this interview is to ascertain the preparation of the student and assist him or her in mapping out a course of study. The work of the student during the first year will usually include some independent reading and/or research.

Categories of Courses

Courses that are expected to form a large part of the student's program are divided by the applied mathematics faculty into three categories as follows:

Group A. Courses in mathematics and mathematical methods. Examples of these include AMa 101, AMa 104, AMa 105, AMa 156, AMa 204, Ma 107, Ma 109 ab, Ma 121, Ma 142, Ma 144, Ma 147, Ma 151.

Group B. Courses of a general nature in which common mathematical concepts and techniques are applied to problems occurring in various scientific disciplines. Examples of these include: AMa 151, AMa 152, AMa 153, AMa 181, AMa 220, AMa 251, AMa 261.

Group C. Courses dealing with special topics in the sciences. A complete list cannot be given here, but examples are courses in elasticity, fluid mechanics, dynamics, quantum mechanics, electromagnetism, communication theory, and computer science.

Master's Degree in Applied Mathematics

Entering graduate students are normally admitted for the Ph.D. program. The master's degree may be awarded in exceptional cases. Of the 135 units of graduate work required by Institute regulations, at least 81 units of advanced graduate work should be in applied mathematics.

Degree of Doctor of Philosophy in Applied Mathematics

The Oral Candidacy Examination. In order to be recommended for candidacy the student must, in addition to satisfying the general Institute requirements, pass an oral candidacy examination administered by a faculty committee. This examination is normally given during the first or second quarter of the second graduate year. It is based upon one year's work in courses of the type described in group A above, and upon one year's work in courses of the type described in groups B and C. The examination will also cover any independent study carried out by the student during his or her first graduate year.

Further Requirements. In order to be recommended for the Ph.D. in applied mathematics, the student must do satisfactory work in a program containing at least 45 units of work in courses of the type indicated in group A, and at least 45 units of courses chosen from groups B and C. This is intended to prevent undue specialization in either the more mathematical or the more engineering types of courses.

Submission of Thesis. On or before the first Monday in April of the year in which the degree is to be conferred, a candidate for the degree of Ph.D. in applied mathematics must deliver a typewritten or printed copy of the completed thesis to his or her research supervisor.

Final Examination. The final oral examination is held within four weeks after the submission of the thesis. The examination covers the thesis and related areas.

Subject Minor in Applied Mathematics

A subject minor is not required for the Ph.D. degree in applied mathematics. However, graduate students in other options may pursue a subject minor in applied mathematics. The group of courses must differ markedly from the major subject of study and include 54 units of advanced courses in applied mathematics, excluding AMa 101, 104, 105. The student must pass an oral examination that is separate from the examination in the student's major.

Subject Minor in Applied Computation

The subject minor in applied computation is administered jointly by the applied mathematics and computer science options, and is open to graduate students in all options. This minor emphasizes the mathematical, numerical, algorithmic, and programming methods underlying the application of computation—particularly parallel and concurrent computation—to research in science and engineering.

To pursue the applied computation minor, applied mathematics students should seek a minor adviser in computer science; computer science students should seek a minor adviser in applied mathematics; and students in other options should seek a minor adviser in either applied mathematics or computer science. The minor adviser and the student formulate a program of courses individually tailored to the student's background and needs, with the objective that the student achieve a level of competence in specific subjects relevant to applied computation that is comparable to that of candidacy-level graduate

students in applied mathematics and computer science in these same subjects. These subjects include *at minimum* mathematical and numerical methods, algorithms, and advanced programming, and may also include other areas of particular relevance to a student's research area, such as specialized mathematical methods, computer graphics, simulation, or computer-aided design.

Each proposed program must be approved by a faculty committee composed of the option representatives of applied mathematics and computer science, and one faculty member appointed by the chairman of each division from which students are enrolled in the program. The number of course units is variable, with a minimum of 45 units of graduate-level courses. The satisfaction of the intended level of competence is assured by the student's passing an oral examination.

Applied Mechanics

Master's Degree in Applied Mechanics

Study for the degree of Master of Science in applied mechanics ordinarily will consist of three terms of courses numbered 100 or above totaling at least 138 units. The program must include E 150 abc and one course from among the following: AM 114 abc, AM 125 abc, AMa 101 abc, or either of the combinations Ma 107, Ma 108 ab, or Ma 107, Ma 109 ab. Note that neither AM 114 nor either of the combinations involving Ma 107 may be used to fulfill the advanced mathematics requirement for the Ph.D. in applied mechanics. A minimum of 54 units of graduate-level courses must be selected from courses in AM, AMa, Ae, JP, CE, and ME with the approval of the student's adviser and the faculty in applied mechanics.

Students admitted for study toward a master's degree but interested in pursuing subsequent study toward a Ph.D. degree should also read the section below concerning this degree.

Degree of Doctor of Philosophy in Applied Mechanics

The degree of Doctor of Philosophy in applied mechanics ordinarily involves a second year of graduate work in advanced courses and research, plus at least one additional year on a comprehensive thesis research project. Such study and research programs are individually planned to fit the interests and background of the student.

Counseling. A counseling committee of three faculty members is appointed for each student upon his or her admission to work toward a Ph.D. degree in applied mechanics, in order to advise the student on a suitable course program. The committee member closest to the student's current interests acts as committee chairman and interim adviser until this responsibility is assumed by the dissertation supervisor. This committee must meet during the first term of each year of Ph.D. study.

Admission to or Continuation in Ph.D. Status. All new students admitted for study toward the Ph.D. degree in applied mechanics, and all other graduate students wishing to become eligible for study toward this degree, are required to take a short oral examination early in the third term of their first year of graduate study at the Institute. This examination, which is conducted by the special joint faculty committee, is confined to elementary but basic topics.

Admission to Candidacy. To be recommended for candidacy for the Ph.D.

degree in applied mechanics, the student must, in addition to meeting the general Institute requirements:

- complete 27 units of research;
- complete at least 108 units of advanced courses arranged by the student in conference with his or her adviser and approved by the faculty in applied mechanics. If the student chooses to take a subject minor, the units so taken may be included in the total of 108, subject to the approval of the faculty in applied mechanics;
- pass with a grade of at least C an advanced course in mathematics or applied mathematics, such as AM 125 abc, Ph 129 abc, or AMa 101 abc, acceptable to the faculty in applied mechanics. The requirement in mathematics shall be in addition to the second requirement above and shall not be counted toward a minor;
- pass an oral examination on the major subject; if the student has a minor, an examination on the subject of that program may be included at the request of the discipline offering the minor. The student must take the oral examination before the end of the second year of graduate residence at the Institute.

Language Requirements. The student is encouraged to discuss with his or her adviser the desirability of taking foreign languages, which may be included in a minor with proper approvals. Foreign languages are not required.

Thesis and Final Examination. A final oral examination will be given after the thesis has been formally completed. This thesis examination will be a defense of the doctoral thesis and a test of the candidate's knowledge in his or her specialized field of research.

Subject Minor in Applied Mechanics

A student majoring in another branch of engineering, or another division of the Institute, may elect applied mechanics as a subject minor, with the approval of the faculty in applied mechanics and the faculty in his or her major field. The group of courses shall differ markedly from the major subject of study or research, and shall consist of at least 54 units of advanced work. The student must pass an oral examination that is separate from the examination in the student's major.

Applied Physics

Aims and Scope of the Graduate Program in Applied Physics

The graduate program in applied physics is regarded by its faculty to be a doctoral program. Students whose goal is the master's degree are admitted rarely, and only in special situations.

A professional in the field should be able to cope with any physics problem that confronts him or her in a technological context. Graduate study in applied physics should therefore cover considerable ground with the least possible loss of depth. Independent and original research is essential, but not for the purpose of acquiring advanced knowledge in a narrow specialty. In today's rapidly changing technology, an applied physicist should not expect to remain precisely within the field of thesis research; the training received should enable him or her to contribute easily to related fields of physics.

Master's Degree in Applied Physics

Of the 135 units required for this degree, at least 54 units must be selected from APH 114, APH 125, APH 105, Ae/APH 101, and APH 156. Topics in Applied Physics, APH 110 ab, is required. The remaining portion of the 135 units is to be made up from electives approved by the option representative. No more than 27 units may be earned in APH 200.

Suggested electives include APH 105, APH 114, Ae/APH 101, APH/EE 130, APH/EE 131, APH/EE 132, APH 156, APH 181, APH 190, APH 200, APH 125, Ph 129, AMa 101, AMa 104, AMa 105, AM 135, AM 176, ChE 103, ChE 165, Ch 120, Ch 125, Ge 101, Ge 102, Ge 103, Ge 104, and Ge 260. As a result of consultation with his or her adviser, a student may be required to take AM 113 abc, depending on his or her previous experience.

Degree of Doctor of Philosophy in Applied Physics

Candidacy. To be recommended for candidacy for the doctor's degree the applicant must satisfy the requirements listed below:

- Competence must be demonstrated in the following subjects, at the levels indicated.
 1. Classical Physics: Mechanics and Electromagnetism
course level: Ph 106 or APH 106
 2. Quantum Mechanics
course level: APH 125
 3. Mathematical Methods
course level: AMa 101, AM 125, or Ph 129
 4. Statistical Physics and Thermodynamics
course level: APH 105
 5. Solid-State Physics or Fluid Dynamics or Plasma Physics
course level: APH 114, Ae/APH 101, or APH 156

Competence will be demonstrated in either of two ways. The applicant may complete an appropriate Caltech course with a grade no lower than C. Alternatively, a student supplying evidence of having done equivalent work elsewhere may demonstrate competence through an oral examination. Separate examinations will be required for each area.

- Oral candidacy examination. The student will prepare a brief presentation on a topic agreed upon by the student and the research adviser for the student's proposed thesis; normally the topic will be the projected research. The candidacy examination will be based upon the student's background in applied physics and its relation to this presentation. The oral examination will be given only after the student has demonstrated competence in the five areas, and must be completed before the close of the student's second year of residence.
- Competence in research must be demonstrated as follows: The student must have a doctoral thesis adviser and must have completed 18 units of research with this adviser no later than the beginning of the student's third year of residence.

The Minor. By its nature, applied physics spans a variety of disciplines, and the major requirements reflect this. A minor is *not* required of students majoring in applied physics. Students are, however, encouraged to take advanced courses appropriate to their particular interests.

Thesis and Final Examination. The candidate is required to take a final oral examination covering his or her doctoral thesis and its significance and relation to his or her major field. This final examination will be given not less than two weeks after the doctoral thesis has been presented in final form, and prior to its approval. This examination must be taken at least four weeks before the commencement at which the degree is to be granted.

Subject Minor in Applied Physics

Graduate students electing a subject minor in applied physics must complete 54 units of graduate courses in applied physics. The courses may be selected from any of the applied physics courses with numbers *greater than* 100, excluding APh 110 and APh 200.

The student's proposed program must be approved by the Applied Physics Graduate Studies Committee. The committee will examine the course program to determine which of the following areas of interest in applied physics it includes:

Group A: Ae/APh 101, APh 156

Group B: APh 105, APh 114, APh 181, APh 214

Group C: APh/EE 130, APh/EE 131, APh/EE 132, APh 190

It is recommended that the program include courses from more than one of the above areas.

The Applied Physics Graduate Studies Committee may recommend an oral examination based upon its evaluation of the course program. When the program includes more than one of the above areas of interest, then an oral examination may not be required.

Astronomy

Aims and Scope of the Graduate Program in Astronomy

The primary aim of the graduate astronomy program at Caltech is to prepare students for creative and productive careers in astrophysical research. The astronomy program emphasizes independent research by graduate students, who are free to pursue study in virtually any area of astrophysics. The opportunity exists to take advantage of the many observational facilities owned and operated by Caltech.

Admission

Incoming students should have a strong background in physics, and although a good preparation in astronomy is helpful, this is not required for admission to the graduate program. All applicants, including those from foreign countries, are requested to submit Graduate Record Examination scores for verbal and quantitative aptitude tests and the advanced test in physics.

Placement Examination

Each student admitted to work for an advanced degree in astronomy is required to take the Placement Examination in physics (see Placement Examinations, page 216) covering material equivalent to Ph 106, Ph 125, and Ph 129. This examination will test whether the student's background is sufficiently strong to permit advanced study in astronomy. If it is not, students will be required to pass the appropriate courses.

Master's Degree in Astronomy

The choice of astronomy and other science elective courses must be approved by the department. At least 36 units of the 135 units must be selected from Ay 121, Ay 122, Ay 123, Ay 124, Ay 125, Ay 126, Ay 127, and Ay 128. The courses Ph 106, Ph 125, and Ph 129 may be required of those students whose previous training in some of these subjects proves to be insufficient. At least 27 units of advanced courses in fields other than astronomy are required.

Degree of Doctor of Philosophy in Astronomy

Astronomy Program. The student's proposed overall program of study must be approved by the department during the first year. The two first-term courses are required of all students: Ay 121 and Ay 122; in addition, 36 units chosen from Ay 123, Ay 124, Ay 125, Ay 126, Ay 127, and Ay 128 are required for candidacy. The student should take the 6 courses necessary for this in the first year. Also required are research and reading projects, starting in the second term of the first academic year. Credit for this work will be given under courses Ay 142 and Ay 143.

Physics Program. The student's program during the first two years of graduate study should include at least 36 units of physics courses, exclusive of Ph 106, Ph 125, and Ph 129. This requirement may be reduced on written approval of the department for students who take substantial numbers of units in Ph 106, Ph 125, and Ph 129. Students in radio astronomy may substitute an advanced course in electrical engineering or applied mechanics for up to 9 units of the required 36 units of physics. Theoretical astrophysics students should include at least 54 units of physics courses in their programs. Students in planetary physics may substitute appropriate advanced courses in geophysics and geochemistry. All the above courses must be passed with a grade of C or better.

The Minor. It is recommended that students take a subject minor in physics. Other fields in which subject minors are taken include geology or engineering, depending on the student's field of specialization.

Language Requirement. Although the department believes strongly that knowledge of foreign languages is useful in astronomy, there is no formal foreign-language requirement. However, graduate students for whom English is a second language will be required to demonstrate fluency in oral and written English at the time of their candidacy exam. The examining committee will administer a test when this is deemed necessary.

Admission to Candidacy. To be recommended for candidacy for the Ph.D. degree in astronomy, a student must, in addition to meeting the general Institute requirements:

- complete satisfactorily 36 units of research, Ay 142, or reading, Ay 143;
- pass with a grade of C or better, or by special examination, Ay 121 and Ay 122, plus four of the following: Ay 123, Ay 124, Ay 125, Ay 126, Ay 127, and Ay 128;
- pass a written examination (see below);
- pass an oral examination (see below);
- fulfill the language requirement (see above); and
- be accepted for thesis research by a member of the faculty, or, by special arrangement, a staff member of the Observatories of the Carnegie Institution of Washington.

The written examination will be given in October of the second year. It will cover the material from the required astronomy courses and will consist of two

three-hour papers. An oral exam dealing with the student's proposed thesis research should be taken before the end of the first term of the third year. The date and time of the exam are the responsibility of the student to arrange. The examining committee is chosen in consultation with the student's adviser and approved by the option representative. Special permission will be required for further registration if the candidacy course requirements and the written and the oral examinations are not satisfactorily completed by the end of the third year of graduate work.

Final Examination. A final draft of the thesis must be submitted at least six weeks before the commencement at which the degree is to be conferred. At least two weeks after submission of the thesis, the student will be examined orally on the scope of his or her thesis and its relation to current research in astronomy.

Subject Minor in Astronomy

The program for a subject minor in astronomy must be approved by the department before admission to candidacy. In addition to general Institute requirements, the student must complete satisfactorily, with a grade of C or better, 45 units in advanced courses in astronomy.

Biology

Aims and Scope of Graduate Study in Biology

Graduate students in biology come with very diverse undergraduate preparation—majors in physics, chemistry, mathematics, or psychology, as well as in biology and its various branches. The aims of the graduate program are to provide, for each student, individual depth of experience and competence in a particular chosen major specialty; perception of the nature and logic of biology as a whole; sufficient strength in basic science to allow continued self-education after formal training has been completed and thus to keep in the forefront of changing fields; and the motivation to serve his or her field productively through a long career. In accordance with these aims, the graduate study program in biology includes the following parts: (a) the major program, which is to provide the student with early and intense original research experience in a self-selected subject of biology, supplemented with advanced course work and independent study in this subject; and (b) a program of course work designed to provide well-rounded and integrated training in biology and the appropriate basic sciences, which is adjusted to special interests and needs. An individual program will be recommended to each student in a meeting with the student's advisory committee (see below). The Division of Biology does not encourage applications from students who have pursued undergraduate study in biology at the Institute, because the broader perspective to be gained from graduate study in a different setting is considered to be essential for the full development of each student's potential. Exceptions to this policy may be considered by the faculty of the division if there are circumstances, such as completion of an advanced degree at another institution, which indicate that it would be in the best interests of a student to pursue graduate study at the Institute.

Admission

Applicants are expected to meet the following minimal requirements: mathematics through calculus, general physics, organic chemistry, physical chemistry (or the equivalent), and elementary biology. Students with deficient preparation in one or more of these categories may be admitted but required to remedy their deficiencies in the first years of graduate training, with no graduate credit being granted for such remedial study. This will usually involve taking courses in the categories in which the student has deficiencies. In certain instances, however, deficiencies may be corrected by examinations following independent or supervised study apart from formal courses. Furthermore, the program in biology is diverse, and in particular fields such as psychobiology and experimental psychology, or in interdisciplinary programs, other kinds of undergraduate preparation may be substituted for the general requirements listed above.

When feasible, visits to the campus for personal interviews will be arranged before a final decision for admission is made. Graduate Record Examinations (verbal, quantitative, and an advanced test in *any* science) are required of applicants for graduate admission intending to major in biology. Applicants are encouraged to take these examinations and request that the scores be transmitted to Caltech, in November or earlier, to ensure unhurried consideration of their applications.

Advisory Committees

An advisory committee will be constituted for each student, to provide consultation and advice throughout the period of study until admission to candidacy. Each advisory committee will consist of three or four faculty members, including a student's current research supervisor and at least one member of the Graduate Admissions Committee, who will serve as chairman of the advisory committee. The composition of the committee will be adjusted as necessary if the student changes research supervisors or areas of interest. Each student meets with his or her advisory committee at the time of beginning work in the division, to formulate a plan of study; again in the third term of the first year of study to discuss progress and subsequent plans; and at other times when problems arise or advice is needed.

Teaching Requirements for Graduate Students

All students must acquire teaching experience.

Master's Degree in Biology

The biology division does not admit students for work toward the M.S. degree. In special circumstances the M.S. degree may be awarded, provided Institute requirements are met. In general the degree is not conferred until the end of the second year of residence. The degree does not designate any of the disciplines of the division, but is an M.S. in biology.

Degree of Doctor of Philosophy in Biology

Major Subjects of Specialization. A student may pursue major work leading to the doctoral degree in any of the following subjects:

Biotechnology	Genetics
Cellular Biology and Biophysics	Immunology
Cellular and Molecular Neurobiology	Integrative Neurobiology
Developmental Biology	Molecular Biology and Biochemistry

At graduation, a student may choose whether the degree is to be awarded in biology or in the selected major subject. As part of their Ph.D. program, students may complete a minor in another graduate option, in accordance with the regulations of that option. Students should consult with their advisory committee in planning such a program.

Dual Major in Biotechnology. Students who wish their Ph.D. education to emphasize the development of new techniques and instruments for studying fundamental problems of biology may elect a dual major, combining biotechnology with one of the major subjects of specialization listed in the preceding paragraph. A significant component of the thesis research will be the development of an innovative technique, method of analysis, or instrument. It will also include application of the new technology to a significant biological problem. In preparation for this research, studies in biotechnology may involve significant work outside of biology, in fields such as computer science, chemistry, engineering, and applied mathematics.

Additional Opportunities in Biotechnology. Biotechnology is a highly interdisciplinary area of research, and students interested in this area will find additional graduate opportunities within graduate options including chemistry and chemical engineering, environmental engineering, computer science, and computation and neural systems.

Admission to Candidacy. To be recommended by the Division of Biology for admission to candidacy for the doctor's degree, the student must have demonstrated the ability to carry out original research and have passed, with a grade of B or better, the candidacy examination in the major subject and one or two minor subjects from the list of major subjects of specialization. Students with a dual major in biotechnology must pass the candidacy examination in the major subject (omitting the normal minor subject or subjects), and a second examination covering knowledge fundamental to the particular work in biotechnology that is proposed by the student. In addition, all students will be expected to make an oral defense to their thesis advisory committee of a written research proposal, on the topic of their anticipated thesis project. This defense will occur 6–9 months following passage of the candidacy examination.

Thesis Committee. Before admission to candidacy, a thesis advisory committee is appointed for each student by the chairman of the division upon consultation with the student and the major professor. This committee will consist of the student's major professor as chairman and four other appropriate members of the faculty. The thesis committee will meet with the student before admission to candidacy to certify that the student has demonstrated the ability to carry out independent research, and at regular intervals thereafter to review the progress of the thesis program. This committee will, with the approval of the Dean of Graduate Studies, also serve as the thesis examination committee (see below).

Thesis and Final Examination. Two weeks after copies of the thesis are provided to the examination committee, the candidate collects the copies and comments for correction. At this time, the date for the final examination is set at the discretion of the major professor and the division chairman, to allow as much time as necessary for such matters as publication of the examination in the Institute calendar, thesis correction, preparation of publications, and checking out and ordering of the student's laboratory space. The final oral examination covers principally the work of the thesis, and according to Institute regulations must be held at least two weeks before the degree is conferred. Two copies of

the thesis are required of the graduate for the Institute library. A third copy is required for the division library.

Minor in Biology

A student majoring in another division of the Institute may, with the approval of the biology division, elect a subject minor in any of the subjects listed above under major subjects of specialization. Requirements for such a minor are determined by the faculty committee designated for each subject. A minor program in biology is also available to students of other divisions. Such a program shall consist of 45 units of upper division course work in the biology division, with each course passed with a grade of C or better. Approval of each program must be obtained from the biology graduate option representative. A student majoring in another division who elects a subject minor in biology may, if desired, arrange to have the minor designated as biology, rather than with the name of the specific minor subject.

Chemical Engineering

Aims and Scope of Graduate Study in Chemical Engineering

The general objective of the graduate work in chemical engineering is to produce individuals who are exceptionally well trained to apply mathematics; the physical, chemical, and biological sciences; and engineering to the understanding of systems involving chemical reactions and transport phenomena and to the development of new processes and materials.

Admission

It is expected that each applicant for graduate study in the Division of Chemistry and Chemical Engineering will have studied mathematics, physics, and chemistry to the extent that these subjects are covered in the required undergraduate courses at Caltech. In case the applicant's training is not equivalent, the option may prescribe additional work in these subjects before recommending him or her as a candidate.

Master's Degree in Chemical Engineering

Course Requirements. At least 135 units of course work must be completed in order to satisfy the Institute requirements. These units must include ChE 151 abc, ChE 165, 18 additional units of advanced courses in chemical engineering, 27 units of science or engineering electives, and 18 units of general electives. Finally, the M.S. requirements include at least 27 units of research, ChE 280, which represent two terms of research under the supervision of a chemical engineering faculty member or a two-term industrial research or development project performed with a member of the faculty in cooperation with professional staff at a local industrial laboratory. At least three weeks before the end of the final term of residence, a research report on the work performed under ChE 280 must be submitted to a designated member of the faculty, who will ask that it be read and approved by two members of the faculty. A copy of each approved M.S. report will be kept in the chemical engineering library. Doctoral students who have been admitted to candidacy can use their approved candidacy report to satisfy the research report requirement of the M.S. degree.

Degree of Doctor of Philosophy in Chemical Engineering

The work leading to the Ph.D. degree prepares students for careers in universities and in the research laboratories of industry and government, although Ph.D. graduates are also well qualified for the areas listed for the master's degree. Usually the first year of graduate work is principally devoted to course work in chemical engineering and related subjects. Time is also devoted during this period to the choice of a research project and to its initiation. During the second year the student is expected to spend at least half time on research, and to complete the course work and candidacy requirements.

Admission. Upon arrival at Caltech, each prospective Ph.D. student will meet in consultation with members of the faculty so that they may evaluate the level of the student's preparation with respect to that expected at the Ph.D. level in the areas of kinetics, thermodynamics, and transport phenomena. These consultations are made to help the student set up a course program for the first year of study. A written copy of the recommendations will be entered into each student's permanent file.

Oral Qualifying Exam. Each student is required to take a subject oral qualifying examination at the beginning of the second quarter in residence, the purpose of which is to examine expertise in kinetics, thermodynamics, and transport phenomena. The intended level of the exam is approximately that of the corresponding undergraduate courses at Caltech. Students who fail one or more of the three subjects will be permitted to repeat the examination on the failed subject immediately after the spring term. The format and topics of the examination are distributed to the first-year students at the beginning of the fall quarter.

Course Requirements. Students are required to take ChE 151 abc, ChE 164, ChE 165, and an additional ChE course from a designated list. Each student is required to complete either a subject minor, or a general program of courses outside chemical engineering consisting of at least 54 units. The general program of courses must be approved *in advance* by the option representative. It is intended that the courses chosen should constitute some integrated program of study rather than a randomly chosen collection of courses outside chemical engineering. Within these guidelines, the only courses specifically excluded are AM 113, AM 114, and research in another option. A grade of C or better is required in any course. The requirements for a subject minor in any option are listed in this catalog.

Candidacy Report/Examination. Before the end of the fall quarter of the second year of residence, each student must submit a written progress report on his or her research for approval to a specially constituted candidacy committee consisting of faculty members familiar with his or her general area of research. An oral examination is subsequently held by this committee to evaluate the student's ability to carry out research at the Ph.D. level. A student who fails to satisfy the candidacy requirements by the end of the second year in graduate residence will not be allowed to register in a subsequent term except by special permission of the option and the Dean of Graduate Studies.

Admission to Candidacy. To be admitted to candidacy, the student must have passed the qualifying and candidacy examinations, must have had the candidacy report approved, and must have submitted an approved list of courses already taken or to be taken.

Thesis and Final Examination. See page 163 for regulations concerning theses

and final examinations. A copy of the corrected thesis is to be submitted to the chemical engineering graduate secretary for the chemical engineering library.

The final examination will be concerned with the candidate's oral presentation and defense of his or her Ph.D. thesis.

Subject Minor in Chemical Engineering

Graduate students electing a subject minor in chemical engineering must complete 54 units of graduate courses in chemical engineering that are approved by the chemical engineering faculty. The 54 units will consist of no more than 18 units from ChE 101, 103 abc, 105, and 110 ab, and at least 36 units from ChE 151 abc, ChE 164, ChE 165, and a list of chemical engineering courses provided by the option representative. A 3.0 GPA is required for the courses taken.

Chemistry

Aims and Scope of Graduate Study in Chemistry

The graduate program in chemistry emphasizes research. This emphasis reflects the Institute's traditional leadership in chemical research and the conviction that has permeated the Division of Chemistry and Chemical Engineering from its founding, that participation in original research is the best way to awaken, develop, and give direction to creativity.

Soon after a new graduate student arrives in the laboratories, he or she attends a series of orientation seminars that introduce students to the active research interests of the staff. Students then talk in detail with each of several staff members whose fields attract them, eventually settle upon the outlines of a research problem that interests them, and begin research upon it early in the first year. Students can elect to do research that crosses the boundaries of traditionally separate areas of chemistry, for in this relatively compact division, they are encouraged to go where their scientific curiosity drives them; they are not confined to a biochemical or physical or organic laboratory. A thesis that involves more than one adviser is not uncommon, and interdisciplinary programs with biology, physics, geology, chemical engineering, and environmental engineering science are open and encouraged.

An extensive program of seminars will enable students to hear of and discuss notable work in chemical physics, organic chemistry, inorganic chemistry and electrochemistry, organometallic chemistry, and biochemistry and biophysics. Graduate students are also encouraged to attend seminars in other divisions.

Placement Examination

During the week preceding registration for the first term of graduate study, students admitted to work for advanced degrees will be required to take written placement examinations in the fields of inorganic, organic, and physical chemistry and chemical equilibrium. In general, the examinations are designed to test whether students possess an understanding of general principles and a power to apply these to specific problems. Students are expected to demonstrate a proficiency in the above subjects not less than that acquired by advanced undergraduates.

If a student fails to show satisfactory performance in any area of the placement examination, he or she will be required to complete satisfactorily a prescribed course, or courses, in order to correct the deficiency. All placement

examination requirements must be satisfied before a student can be admitted to candidacy.

Course Program

For an advanced degree, no graduate courses in the principal area of research are required. Course work is involved in satisfying the minor requirement, as described below. Students should plan a program of advanced courses in consultation, at first with a representative of the Chemistry Graduate Study Committee, and later with their research adviser.

Master's Degree in Chemistry

Students are not ordinarily admitted to graduate work leading to an M.S. degree. Under special circumstances, and with prior approval of the Graduate Study Committee, a master's degree can be obtained. All master's programs for the degree in chemistry must include at least 40 units of chemical research and at least 30 units of advanced courses in science. The remaining electives may be satisfied by advanced work in any area of mathematics, science, engineering, or the humanities, or by chemical research. Two copies of a satisfactory thesis describing this research, including a one-page digest or summary of the main results obtained, must be submitted to the divisional graduate secretary at least ten days before the degree is to be conferred. The copies of the thesis should be prepared according to the directions formulated by the Dean of Graduate Studies and should be accompanied by a statement approving the thesis, signed by the staff member directing the research and by the chairman of the Chemistry Graduate Study Committee.

Degree of Doctor of Philosophy in Chemistry

Candidacy. There is no formal course work required in the *major* field of interest (for minor requirements, see below). However, to be recommended for candidacy for the doctor's degree in chemistry, in addition to demonstrating an understanding and knowledge of the fundamentals of chemistry, a student must give satisfactory evidence of proficiency at a high level in the primary field of interest, as approved by the division. This is accomplished by an oral candidacy examination, which must be held during or before the fifth term of graduate residence (excluding summer terms). At this examination a student is asked to demonstrate scientific and professional competence and promise by discussing a research report and propositions as described below.

The research report should describe progress and accomplishments to date and plans for future research. Two original research propositions, or brief scientific theses, must accompany the report, and at least one must be well removed from the student's field of research. These propositions should reflect his or her breadth of familiarity with the literature, originality, and ability to pose and analyze suitable scientific research problems. The research report and propositions must be in the hands of the examining committee one week before the examination.

The result of the candidacy examination may be either (a) pass, (b) fail, or (c) conditional. Conditional status is granted when the committee decides that deficiencies in a student's research report, propositions, or overall progress can be remedied in a specific and relatively brief period of time. In order to change conditional to pass status, the student must correct the indicated deficiencies or in some cases schedule a new examination the following term. He or she must be admitted to candidacy at least three terms before the final oral exami-

nation. A student cannot continue in graduate work in chemistry (nor can financial assistance be continued) past the end of the sixth term of residence without being admitted to candidacy, except by petitioning the division for special permission. This permission, to be requested by a petition submitted to the Graduate Study Committee stating a proposed timetable for correction of deficiencies, must be submitted before registration for each subsequent term (including the summer following the sixth term of residence) until admission to candidacy is achieved.

Language Requirement. There is no formal foreign language requirement for the Ph.D. in chemistry. However, the division believes strongly in the professional importance to chemists of a knowledge of foreign languages and encourages their study prior to graduate work or while in graduate school.

The Minor. In order to provide breadth in a student's graduate experience, he or she is required either to (a) complete a subject minor in another option (the requirements being set by that option) or (b) complete an approved program of course work outside the principal area of research. This program consists of at least 36 units of course work (the equivalent of approximately four standard one-term courses) outside the scientific area in which the dissertation research is performed. These courses may be either inside or outside the chemistry option. Courses for the minor shall be taken on a letter-grade basis unless the course is offered with only a pass/fail option. A grade of C or better is required for credit toward the minor. The adviser has the responsibility of determining which courses fulfill the requirement in each particular case, subject to final approval by the Chemistry Graduate Study Committee.

Thesis Research Progress. Before the thirteenth term of graduate residence (excluding summer terms), the student will be expected to demonstrate satisfactory progress in the course of thesis research. To this end an informal meeting with the Ph.D. Thesis Committee will be held, at which time the student will present an oral summary of research completed to date as well as an outline of future research plans. Following the presentation, an appropriate timetable for completion of the degree requirements will be discussed and agreed upon. If the student has not progressed sufficiently, completion of the Ph.D. may be considered inappropriate.

Length of Graduate Residence. Any graduate student who anticipates a need to register for a sixteenth academic term must request a meeting of his or her candidacy committee and present a petition for permission to register that includes a plan of action for the period of the requested registration and a specific date for the completion of the degree requirements. This petition must be approved by the chairman of the Chemistry Graduate Study Committee, and, in cases where financial support is an issue, also by the Executive Officer or Division Chairman, before it is forwarded to the Dean of Graduate Studies. Financial support of graduate students who are required to petition to register will not normally be provided through teaching assistantships. Failure to complete the degree requirements by the date specified in the petition would require the entire approval process to be repeated.

Thesis and Final Examination. The final examination will consist in part of the oral presentation and defense of a brief résumé of the student's research and in part of the defense of a set of propositions he or she prepares. Three original research propositions are required. No more than *one* of these may be a carry-over from the candidacy examination, and *at least one* must be *well removed* from

the field of research. Each proposition shall be stated explicitly and the argument presented in writing with adequate documentation. The propositions should display originality, breadth of interest, and soundness of training; a student will be judged on the selection and formulation of the propositions as well as on the defense of them. Formulating a set of propositions should begin early in the course of graduate study.

To emphasize the importance of these propositions, there will be a separate examination on the three propositions by the Ph.D. examining committee. This examination on the propositions is normally taken after the Thesis Research Progress meeting, but must be held before the end of the fifth year of residence, and not less than ten weeks in advance of the final doctoral examination. A copy of the propositions, along with suitable abstracts, must be submitted to the examining committee and to the division graduate secretary not less than two weeks before the propositions examination. These propositions must be acceptable to the committee before the final doctoral examination can be scheduled.

A copy of the thesis must be submitted to each member of the examining committee not less than two weeks before the final doctoral examination. A copy of the thesis should also be submitted to the Institute Graduate Office for proofreading three weeks prior to the final doctoral examination. One reproduced copy of the thesis, corrected after proofreading, is to be submitted to the division graduate secretary for the divisional library. Two final copies (one on [®]Permalife paper) are to be submitted to the Institute Graduate Office.

Subject Minor in Chemistry

Graduate students in other options taking chemistry as a subject minor will be assigned a faculty adviser in chemistry by the Chemistry Graduate Study Committee. In consultation with this adviser, the student will work out an integrated program of courses, including at least 45 units of formal course work at the 100 level or above. This program must be approved by the Chemistry Graduate Study Committee, and a grade of C or better in each course in the approved program will be required.

Civil Engineering

Aims and Scope of Graduate Study in Civil Engineering

Students who have not specialized in civil engineering as undergraduates, as well as those who have, may be admitted for graduate study. As preparation for advanced study and research, a good four-year undergraduate program in mathematics and the sciences may be substituted for a four-year undergraduate engineering course, with the approval of the faculty. The qualifications of each applicant will be considered individually, and, after being enrolled, the student will arrange his or her program in consultation with a member of the faculty. In some cases the student may be required to make up undergraduate deficiencies in engineering science courses. However, in every case the student will be urged to take some courses that will broaden his or her understanding of the overall field of civil engineering, as well as courses in his or her specialty. Most graduate students are also required to take further work in applied mathematics.

Master's Degree in Civil Engineering

Although the first year of graduate study involves specialized engineering

subjects, the student working for the Master of Science degree is encouraged not to overspecialize in one particular field of civil engineering. For the M.S. degree a minimum of 138 units of academic credit for courses numbered 100 or above is required. The program must include three units of CE 130 abc and 108 units (minimum) of graduate-level courses from at least three of the five general subject areas of structures and solid mechanics, soil mechanics, hydraulics and water resources, environmental engineering science, and mathematics. Students who have not had AMa 95 abc or its equivalent will be required to include AM 114 abc in their program.

Students admitted for study toward a master's degree but interested in pursuing subsequent study toward a Ph.D. degree should also read the section below concerning this degree.

Degree of Civil Engineer

Greater specialization is provided by work for the engineer's degree than for the master's. The candidate for this degree is allowed wide latitude in selecting his or her program of study, and is encouraged to elect related course work of advanced nature in the basic sciences. The degree of Civil Engineer is considered to be a terminal degree for the student who desires advanced training more highly specialized and with less emphasis on research than is appropriate to the degree of Doctor of Philosophy. However, research leading to a thesis is required for both degrees. The student should refer to Institute requirements for the engineer's degree.

Degree of Doctor of Philosophy in Civil Engineering

The student should refer to the Institute requirements for the doctoral degree.

Counseling. A counseling committee of three faculty members is appointed for each student upon his or her admission to work toward a Ph.D. degree in civil engineering, in order to advise the student on a suitable course program. The committee member closest to the student's current interests acts as committee chairman and interim adviser until this responsibility is assumed by the dissertation supervisor. This committee must meet during the first term of each year of Ph.D. study.

Admission to or Continuation in Ph.D. Status. All new students admitted for study toward the Ph.D. degree in civil engineering, and other graduate students wishing to become eligible for study toward this degree, are required to take a short oral examination early in the third term of their first year of graduate study at the Institute. This examination, which is conducted by the special joint faculty committee, is confined to elementary but basic topics.

Major Subjects of Specialization. A student may pursue major work leading to the doctor's degree in civil engineering in any of the following disciplines: structural engineering and applied mechanics, earthquake engineering, soil mechanics, hydraulics, coastal engineering, and environmental engineering. Other disciplines may be selected with approval of the civil engineering faculty.

Admission to Candidacy. To be recommended for candidacy for the Ph.D. degree in civil engineering, the student must, in addition to meeting the general Institute requirements:

- complete 27 units of research;
- complete at least 108 units of advanced courses, arranged in conference with his or her adviser and approved by the faculty in civil engineering. Students are expected to take not less than 45 units of work in technical subjects, other

than the required mathematics, not closely related to their thesis research. If a student chooses to take a subject minor, the units so taken may be included in the total of 108, subject to the approval of the faculty in civil engineering;

- pass at least 27 additional units of course work in advanced mathematics, such as AM 125, AMa 101, Ph 129, or a substitute acceptable to the faculty in civil engineering. For a student whose program is more closely related to the sciences of biology or chemistry than physics, AMa 104 and AMa 105 (or AMa 104 and AMa 181 ab) will be an acceptable substitute for the mathematics requirement;
- pass an oral examination on the major subject; if the student has a subject minor, examination on the minor subject may be included at the request of the discipline offering the minor. The student must take the candidacy examination before the end of the second academic year of graduate residence at the Institute; the examination will comprise:
 - a section where the student will be questioned on the content of courses taken during graduate residence in which he or she will be expected to demonstrate an understanding of the major field of interest;
 - a discussion of a brief research report describing accomplishments to date, including reading, study, and plans for future research. The student must present the report to the examining committee at least ten days before the examination.

Thesis and Final Examination. A final oral examination will be given after the thesis has been formally completed. Copies of the completed thesis must be provided to the examining committee two weeks prior to the examination. This thesis examination will be a defense of the doctoral thesis and a test of the candidate's knowledge in his or her specialized field of research.

Subject Minor in Civil Engineering

A student majoring in another branch of engineering, or in another division, may, with the approval of the civil engineering faculty, elect civil engineering as a subject minor. At least 54 units of approved courses must be taken, and an oral examination must be passed.

Computation and Neural Systems

Aims and Scope of Graduate Study in Computation and Neural Systems

An integrated approach to graduate study combining computation and neural systems is organized jointly by the Division of Biology, the Division of Engineering and Applied Science, and the Division of Physics, Mathematics and Astronomy. This curriculum is designed to promote a broad knowledge of relevant and related aspects of neurobiology, computational devices, information theory, emergent or collective systems, parallel computation, modeling, and complex systems, in conjunction with an appropriate depth of knowledge in the particular field of the thesis research.

Admission

Applicants for admission to the option should have an undergraduate major in electrical engineering, biology, physics, mathematics, or computer science and a strong interest that will permit enrolling in courses in all the relevant disciplines. All applicants for admission, including those from foreign countries, are

strongly urged to submit Graduate Record Examination test scores for verbal and quantitative aptitude tests and for an advanced test in physics, biology, engineering, or mathematics.

Advisory Committees

An advisory committee of three CNS faculty members is constituted for each student by the CNS admissions committee upon admission to the program. The faculty in whose lab the student is staying first chairs this committee. The advisory committee meets with the student when he/she arrives, guides and approves first-year course choices, and answers questions and offers advice about the program and the way of life in CNS. Further, meetings with this committee should be arranged as needed by the student or by an advisor. The CNS faculty are available to students during the year for formal and/or informal discussions.

Laboratory Rotations

Mandatory rotations through research groups (labs) provide a unique opportunity for the student to experience the CNS culture. To broaden the student's knowledge and to provide familiarity with different techniques and ways of thinking or doing research, each student spends three 12-week laboratory rotations (one per term) during the first year, and is encouraged to engage in research. During each rotation, the student is expected to take part in the life and routine of the lab by attending lab meetings; participating in research projects and discussions with members of the lab; and meeting monthly with the faculty of that lab to discuss science.

First-Year Course Requirements

Six nine-unit courses are required during the first year: CNS 185, Bi 150, a neurobiology or modelling course, a math course, and two other CNS, Bi, EE, AMa, or Ph courses (for example, a schedule of CNS 185, CNS 221, CNS 182, Bi 150, Bi 161, and CNS 124 satisfies this requirement). Students are free to take additional classes, and a research advisor may require that a student take a specific, complementary course as a requirement for joining his or her lab.

Candidacy

The three faculty in whose labs rotations have been done are on the student's candidacy exam committee. At the end of the first year, the student is expected to decide on a research group and begin work there. The first summer is thus expected to be spent entirely on research in that lab. Advancing to candidacy requires passing two tests: the general knowledge exam, and the research and candidacy exam. These exams are supervised by the CNS option representative.

The general knowledge exam satisfies the breadth requirement. A list of about 100 questions, grouped by category, and a list of classical research papers are provided to the students at the beginning of the year, thus providing a clear idea of the scope of knowledge that each student is expected to know well. Students are encouraged to organize working and discussion groups to prepare for this exam; the format and implementation of such a system, however, is left to the students.

This is an oral exam, with five faculty (including the heads of the student's three rotation labs and two others chosen for "breadth," of whom one can be

from outside CIT). It should be scheduled by the student (who contacts the committee members) to take place during the last six weeks of the third term of year 1. For the exam, the student must answer questions (from more than one category) taken from the list, which is modified each year. (The exam can be retaken after six months.)

The research and candidacy exam satisfies the depth requirement. During year 2, the student is expected to produce a piece of work of a quality sufficient to be presented at a professional meeting during the first term of year 3. (The objective of this description is to offer a way to calibrate the level of expected research achievement and involvement. Acceptance of the abstract or paper is not a requirement for passing candidacy.) This work is presented in an oral exam that takes place in spring term of year 2 to the same exam committee (if possible) that conducted part 1 of the exam. The exam focuses exclusively on research (accomplished and/or planned). During year 2, the student may take other courses, as needed, but is expected to present a high standard (quality, originality) of research at the time of this second part of the candidacy exam.

Computer Science

Graduate study in computer science is oriented principally toward Ph.D. research. The course work and thesis requirements for the M.S. degree are a required part of the Ph.D. program. Students entering the graduate program with an M.S. degree from another school may transfer credit for course work as appropriate, but must complete the Caltech M.S. requirements, including the M.S. thesis.

The Ph.D. program requires a minimum of three academic years of residence. The first two years are typically devoted to course work and M.S. thesis research as preliminaries to the candidacy examination and Ph.D. thesis research.

Students must maintain high academic standards during their graduate residence. A student's Ph.D. research must exhibit originality in the formulation, analysis, and solution of a problem that is significant to the field of study.

Master's Degree in Computer Science

There are five requirements to fulfill for the M.S. in computer science:

- *Total units.* Completion of a minimum of 135 units of courses numbered 100 or greater, including M.S. thesis research (CS 180).
- *Advanced courses in computer science.* Completion of a minimum of 54 units of advanced CS courses in addition to units earned for reading, research, projects, and the M.S. thesis. The student's adviser will assure that this course work represents a balance between theoretical/experimental and hardware/software courses.
- *Units outside computer science.* Completion of a minimum of 27 units outside computer science. Courses jointly listed with computer science cannot be used to fulfill this requirement.
- *B.S. equivalent preparation.* As an assurance of reasonable breadth in a student's preparation, M.S. students must demonstrate competence in at least four of the five following areas: (a) theory, (b) hardware, (c) systems,

(d) software, or (e) applications. Competence can be demonstrated by completion of a corresponding course at Caltech or by undergraduate preparation.

- *M.S. thesis.* Completion of a minimum of 45 units of CS 180 and of an M.S. thesis approved by a computer science faculty member.

Although it is possible for a well-prepared student to complete the M.S. requirements in one academic year, a period of four to five quarters provides an opportunity for a greater variety of courses than the minimum required, and for a deeper involvement in the M.S. research.

Degree of Doctor of Philosophy in Computer Science

The M.S. requirements are part of the Ph.D. requirements.

Candidacy. To be admitted to candidacy, a student must have completed the M.S. program, have entered upon a course of research approved by his or her thesis adviser, and have passed a candidacy oral examination on general knowledge of computer science.

Thesis and Final Examination. A final oral examination will be scheduled and given after the Ph.D. thesis has been submitted for review to the student's adviser and thesis committee. This thesis examination is a defense of the thesis research and a test of the candidate's knowledge in his or her specialized fields of research.

Subject Minor in Computer Science

A subject minor is not required for the Ph.D. degree in computer science. However, students majoring in other fields may take a subject minor in computer science, provided the program is supervised by a computer science faculty adviser, is approved by the computer science option representative, and consists of 45 units sufficiently removed from the student's major program of study.

Subject Minor in Applied Computation

The subject minor in applied computation is administered jointly by the applied mathematics and computer science options, and is open to graduate students in all options. This minor emphasizes the mathematical, numerical, algorithmic, and programming methods underlying the application of computation—particularly parallel and concurrent computation—to research in science and engineering.

The requirements are listed under applied mathematics.

Control and Dynamical Systems

Aims and Scope of Graduate Study in Control and Dynamical Systems

The option in control and dynamical systems (CDS) is open to students with an undergraduate degree in engineering, mathematics, or science. The qualifications of each applicant will be considered individually, and, after being enrolled, the student will arrange his or her program in consultation with a member of the faculty. In some cases the student may be required to make up undergraduate deficiencies in engineering science courses.

The CDS option emphasizes the interdisciplinary nature of modern theory of dynamical systems and control. The curriculum is designed to promote a broad knowledge of mathematical and experimental techniques in dynamical systems theory and control. In addition to taking courses in the CDS option,

students must select a focus area (see below).

Master's Degree in Control and Dynamical Systems

Students will be admitted to the option who expect to pursue the Ph.D. degree. The master's degree may be awarded in exceptional cases. The awarding of this degree requires fulfilling the Institute requirements for a master's degree, satisfying the focus requirements, and receiving a recommendation for awarding of the degree from the candidacy oral examination committee.

Degree of Doctor of Philosophy in Control and Dynamical Systems

Institute requirements for the Ph.D. degree are described in the section on degree requirements. Approximately two years of course work are required and two or more years are usually needed for preparation of the dissertation.

Counseling. Upon admission each student will be assigned an adviser in the option and a committee of three members, chaired by the adviser, which will approve the initial course of study by the student. The committee will be the judge of the completion of the focus requirement, necessary before the candidacy examination. The adviser will be replaced by a research adviser when the direction of specialization is determined, not later than the beginning of the second year. An exam given during the first year of study will be used to evaluate the student's preparation for continued study.

Admission to Candidacy. To be recommended for candidacy for the Ph.D. degree in control and dynamical systems, the student must, in addition to meeting the general Institute requirements:

- Complete the following required courses: CDS 101, CDS 102, CDS 112;
- Complete the focus requirement, consisting of at least 27 units in a particular area outside of CDS. Courses taken to satisfy the focus must represent a coherent program of advanced study in the chosen area. Possible areas include fluids, vehicles, vibrations, transport phenomena, process design, analog VLSI, propulsion, robotics, turbomachines, power electronics, micro-machines, economics, and neurobiology. The program of study must be approved by the student's counseling committee and the option representative.
- Additional 45 units in CDS or other advanced courses in dynamical systems and/or mathematics;
- Prepare a Research Progress Report;
- Pass an oral examination on the major subject. The oral examination must be taken before the end of the second year of graduate academic residence at the Institute.

Thesis and Final Examination. A final oral examination will be given after the thesis has been formally completed. This thesis examination will be a defense of the doctoral thesis and a test of the candidate's knowledge in the specialized field of research.

Subject Minor in Control and Dynamical Systems

A student majoring in another option at the Institute may elect a subject minor in control and dynamical systems. He or she must obtain approval from the CDS faculty of a course of study containing at least 54 units of advanced courses with a CDS listing.

Electrical Engineering

Aims and Scope of Graduate Study in Electrical Engineering

Award of the Bachelor of Science degree may be followed by graduate study leading to the Master of Science degree in electrical engineering, and the more advanced degrees of Electrical Engineer or Doctor of Philosophy. Because admission to graduate studies in electrical engineering at Caltech is extremely competitive, the Admissions Committee attempts to select those applicants it judges both best qualified and best suited for the graduate program. Applicants should submit Graduate Record Examination scores.

Master's Degree in Electrical Engineering

Normally, the master's degree in electrical engineering is completed in one academic year. The principal criteria for evaluating applicants for the MSEE are the excellence of their preparation for the math- and physics-oriented nature of Caltech's graduate courses, and the judgment of the Admissions Committee on their ability to successfully pursue and benefit from the course program. The Institute does not normally admit an applicant to the master's degree in a field in which the applicant already has a master's degree from another U.S. institution. Financial aid is seldom offered to those who intend to complete their graduate work with a master's degree. A joint B.S./M.S. degree is not available in electrical engineering.

135 units are required as approved by the electrical engineering graduate student adviser. Engineering Seminar, E 150 abc, is required. Students are urged to consider including a humanities course in the remaining free electives.

Degree of Electrical Engineer

To be recommended for the degree of Electrical Engineer the applicant must pass the same subject requirements as listed for the doctor's degree.

Degree of Doctor of Philosophy in Electrical Engineering

As a rule, applicants who wish to undertake research work leading to a degree of Doctor of Philosophy in electrical engineering are admitted initially only for the MSEE. They are, however, evaluated according to additional criteria, the most important of which is the applicant's interest in and potential for research in one of the areas described below. The statement of purpose required as part of the application should clearly address this match. Considerable weight is also given to the opinions expressed in the applicant's letters of recommendation.

During the Ph.D. applicant's master's degree year, evaluation continues. It is based in part on performance in courses and in part on a one-hour oral presentation scheduled early in the second quarter. As the year progresses, the electrical engineering faculty get to know the student, and the student makes contact with the professor in his or her area of research interest. Upon acceptance into a research group, the student begins research work and defers receiving the master's degree until formal admission into the Ph.D. program. Before the end of his or her second academic year of graduate study, the student is expected to take the Ph.D. qualifying oral examination.

Ph.D. applicants who already hold a master's degree in electrical engineering from another U.S. institution may be admitted directly to the Ph.D. program, but must provide sufficient information to obtain advance acceptance into a research group.

Financial aid available to a Ph.D. applicant includes teaching assistantships and fellowships. TA duties consist of grading papers or lab instruction but not classroom lecturing. A fellowship may be supplemented by a teaching assistantship, and either or both include a full tuition scholarship. Tuition scholarships alone are not available. If financial aid is not requested, or if the box on the application form labeled "willing to come without aid" is checked, information on the source of funds for each year of intended graduate study must be included.

Candidacy. To be recommended for candidacy for the doctor's degree, the applicant must satisfy the following requirements:

- complete 18 units of research in his or her field of interest.
- obtain approval of a course of study consisting of at least 189 units of advanced courses in electrical engineering or the related subjects listed under the master's degree, except that units in research (e.g., EE 191 and 291) may not be counted in this total. The course taken to satisfy the next requirement may be included in this total. Courses taken to fulfill the requirements for the Master of Science degree may be included also.
- pass 27 units of mathematics courses, as approved by the student's faculty adviser, with no grade lower than C.
- pass a qualifying oral examination covering broadly the major field.

Thesis and Final Examination. The candidate is required to take a final oral examination covering the doctoral thesis and its significance in and its relation to his or her major field. This final examination will be given not less than two weeks after the doctoral thesis has been presented in final form, and before its approval. This examination must be taken at least four weeks before the commencement at which the degree is to be granted.

Subject Minor in Electrical Engineering

A student majoring in another option at the Institute may elect a subject minor in electrical engineering. He or she must obtain approval from the electrical engineering faculty of a course of study containing at least 45 units of advanced courses with an EE listing (excluding EE 191 and 291).

Engineering Science

Aims and Scope of Graduate Study in Engineering Science

The engineering science option at Caltech is designed for students interested in subjects that form the core of new "interdisciplinary" sciences. These branches of science provide the basis for the growth of modern technology. Students may choose physics and applied mathematics as their minor subjects and choose a thesis adviser within the Division of Engineering and Applied Science.

Master's Degree in Engineering Science

One of the following courses in mathematics is required: AMa 101 abc, Methods of Applied Mathematics I; AM 125 abc, Engineering Mathematical Principles; or Ph 129 abc, Mathematical Methods of Physics.

A minimum of 54 units of courses must have the approval of the student's adviser and the faculty in engineering science.

Degree of Doctor of Philosophy in Engineering Science

Admission to Candidacy. To be recommended for candidacy for the Ph.D. degree in engineering science, the student must, in addition to meeting the general Institute requirements:

- complete 12 units of research;
- complete at least 50 units of advanced courses arranged by the student in conference with his or her adviser and approved by the faculty in engineering science;
- pass with a grade of at least C an advanced course in mathematics or applied mathematics such as AM 125 abc, Ph 129 abc, or AMa 101 abc, acceptable to the faculty in engineering science. This requirement shall be in addition to the previous requirement, and shall not be counted toward any minor requirements.
- pass an oral candidacy examination on the major subject; if the student has a subject minor, examination on the minor subject may be included at the request of the discipline offering the minor.

Language Requirements. Students are encouraged to discuss with their advisers the desirability of taking foreign languages. Foreign languages are not required.

Thesis and Final Examination. A final oral examination will be given after the thesis has been formally completed. This thesis examination will be a defense of the doctoral thesis and a test of the candidate's knowledge in his or her specialized field of research.

Subject Minor in Engineering Science

A subject minor is not required for the Ph.D. degree in engineering science; however, students majoring in other fields may take a subject minor in engineering science, provided the program consists of 45 units sufficiently far removed from their major program of study and is approved by the appropriate faculty group and by the option representative.

Environmental Engineering Science

Aims and Scope of Graduate Study in Environmental Engineering Science

Environmental problems cut across many disciplines. Graduate study in environmental engineering science emphasizes environmental problem areas and the application of information from several fields in achieving solutions. Opportunities for interactions among several branches of engineering, science, and social science are numerous.

In selecting courses and research topics, each student is advised to plan for both breadth of study of the environment and depth of understanding in a particular subject area. The curriculum has been developed primarily for students pursuing the Ph.D. degree. The purpose of the Ph.D. program is to prepare students for careers in specialized research, advanced engineering, and management in various aspects of the environment. The M.S. degree is also offered for students who plan careers in engineering or in management in some aspect of environmental engineering. Although all graduate students are encouraged to develop an awareness of the wide range of environmental problems, the environmental engineering science program is not designed to train environmental generalists.

Admission

Students with a bachelor's degree in engineering, science, or mathematics may apply for admission to work for either the M.S. or Ph.D. degree. Programs of study are arranged individually by each student in consultation with a faculty adviser. In some instances a student may need to take additional undergraduate courses in preparation for graduate work in this field.

Master's Degree in Environmental Engineering Science

For the M.S. degree a minimum of 135 units of work in advanced courses is required. Each student selects a program with the approval of a faculty adviser and the option representative. The program should be well-balanced, with courses in several areas of concentration to avoid narrow specialization.

The M.S. program must include 3 units of Env 150 abc (seminar) and at least 105 units of graduate-level courses from at least three of the following five subject areas (with a minimum of 18 units in each selected area):

- air quality
- water quality
- applied and environmental biology
- fluid mechanics and transport
- applied mathematics

At least 63 units must be in Env courses (including joint-listed courses but excluding reading and research units under Env 100 and 300). Students who have not had AMa 95 abc or its equivalent are required to include AM 114 abc as part of the applied mathematics group. Students are encouraged to take social science and humanities courses as all or part of the 27 elective units included in the total of 135 units.

Suggested courses in the various areas are:

Air quality: Env 116, ChE/Env 157, ChE/Env 158, ChE/Env 159, Env/Ch/Ge 175 a, Ge 152 b.

Water quality: Env 142 ab, Env 143, Env 146, Env/Ch/Ge 175 bc, Env 216, Bi/Ch 110 abc, Bi/Ch 132 ab, ChE 101, ChE 151 c, ChE/Ch 164, ChE 165, Ch 117, Ch 118 ab, Ge 104, Ge 140 a, Ge 152 c.

Applied and environmental biology: Env 144, Env/Bi 166, Env/Bi 168, Env 208, Env 210, Bi/Ch 110 abc, Bi 122, Bi 180, ChE 163.

Fluid mechanics and transport: Env 112 abc, Env 214 abc, Env 216, CE/ME 101 abc, CE 111, CE 113 ab, CE 210 ab, CE 212, CE 213, ChE 103 abc, ChE 151 ab, Ge 152 ac.

Applied mathematics: AMa 101 abc, AMa 104, AMa 105 ab, AMa 181 abc, AM 114 abc, AM 125 abc, Ma 112 a.

Social science: Ec 118, Ec 122, SS 222 abc.

If a student has already earned a master's degree at another university, he or she may not enroll for a master's degree in environmental engineering science unless the previous field of study was significantly different.

If a Ph.D. student completes all the requirements for the M.S. degree as part of the Ph.D. program and does not already have an M.S. degree in this field (or a closely related field), he or she will be awarded the M.S. degree if an M.S. candidacy form is submitted to the option representative.

Degree of Doctor of Philosophy in Environmental Engineering Science

Upon a student's admission to work toward the Ph.D. degree in environmental engineering science, a faculty adviser is appointed to assist in the design of an academic program. The student chooses a thesis adviser at a time when his or her major research interest has become clearly defined, usually before the end of the first year at Caltech. The thesis adviser will act as chair of the three-member counseling committee appointed for each student.

The program of courses for the Ph.D. should be designed to meet the student's need in preparation for research, to provide depth in the major area, and to give breadth of outlook. Each Ph.D. program must receive the approval of the environmental engineering science faculty, upon the recommendation of the faculty adviser and the counseling committee. Students should submit their proposed schedules of courses for the Ph.D. to the faculty for approval as soon as a research area has been chosen.

Areas of Specialization. Students may undertake thesis research in the following areas: air pollution, aerosol physics and chemistry, atmospheric chemistry, aquatic chemistry, applied microbiology, marine ecology, environmental fluid mechanics, water resources, environmental health engineering, hydraulic engineering, and coastal engineering.

Admission to Candidacy. To be recommended for admission to candidacy for the Ph.D. degree in environmental engineering science, the student must, in addition to meeting the general Institute requirements:

- complete most of the program of courses as arranged in consultation with the advisory committee, to satisfy the guidelines described below, and as approved by the faculty of environmental engineering science.
- pass the oral candidacy examinations.

Major Course Requirements. The major program should be tailored to meet the student's needs in preparation for research and yet provide some breadth as well as depth. For breadth the student must take course work in at least two of the following four areas: air quality; water quality; applied and environmental biology; and fluid mechanics and transport. Major courses will normally be selected from the lists given above for the M.S. degree, although other suitable courses may be proposed.

Mathematics Requirement. Each student must pass at least 27 units of graduate courses in mathematics selected from: AM 114 abc, AMa 101 abc, AMa 104, AMa 105 ab, AMa 181 abc, AM 125 abc, Ph 129 abc, Ma 112 a, or a satisfactory substitute.

Additional advanced mathematics courses will be required as appropriate for each student's area of research on a case-by-case basis as approved by the EES faculty.

Minor Course Requirement. Each student is expected to take a subject minor of 45 or more units, for which the requirements in each subject area are delineated in the catalog. Normally, the subject minor will be administered by a division other than Engineering and Applied Science, but it can be taken in another program within this division if that program is sufficiently different from EES.

Oceanography may be chosen as a subject minor when the required number of course units is taken in approved courses at the Scripps Institution of Oceanography under the exchange arrangement described on page 159. In this case,

a professor from SIO will be invited to be a member of the committee for the final examination.

Under exceptional circumstances, in lieu of a subject minor, the EES faculty may approve an alternative program of 45 or more units comprising two or three closely related courses given by two divisions or options, provided that the program has rationale and coherence. If a full-year course is dropped after the first term, that term's work may not be used as credit toward the alternative requirement. A three-term course may be dropped after two terms, and credit received in special circumstances. If humanities or social science courses are elected as part of an alternative program, at least 18 units must be taken in a specific subject. Reading courses or seminars may not be counted as part of this 45-unit requirement.

Minimum Number of Units. The minimum number of units of graduate work is 162, including the major, minor, and required advanced math courses, but excluding research units. Students must pass a minimum of 27 units of advanced mathematics in addition to 135 units of graduate course work in EES and related disciplines. The decision as to the actual total number of math courses needed beyond the minimum requirement for a particular student rests with the student's adviser, advisory committee, and the EES faculty. If students have taken substantial graduate course work at other institutions, the EES faculty may allow a reduced unit total of Caltech courses.

Candidacy Examinations. The candidacy examinations consist of two parts. Part A must be passed *before* registration day of the *spring* quarter of the *second* year of graduate study; however, for students entering with an M.S. (or equivalent), the time limit is June 30 following the *first* year of their graduate study at Caltech. Part A of the examination will test the student on course work and general knowledge of the field.

Part B of the examination must be passed *before* registration day of the *winter* quarter of the *third* year of graduate study; however, for students entering with an M.S. (or equivalent), the time limit is registration day of the *spring* quarter of the *second* year of their graduate study at Caltech. The examination will comprise a critical discussion of a brief written research report provided by the student to the examining committee at least ten days before the examination. The report will describe accomplishments to date and plans for future research.

Thesis and Final Examination. Copies of the completed thesis must be provided to the examining committee two weeks before the examination. The final oral examination covers principally the work of the thesis and, according to Institute regulations, must be held at least two weeks before the degree is conferred. Three copies of the thesis are required of the graduate, one of which is deposited in the Institute library, one in the departmental library, and one with University Microfilms.

Subject Minor in Environmental Engineering Science

A doctoral student in another major field who wishes to take a subject minor in environmental engineering science should submit a proposed minor program to the option representative for approval. The proposed program must consist of 45 or more units in Env courses or in closely related courses of other options. Upon completion of these courses the student must pass an oral examination.

Geological and Planetary Sciences

Aims and Scope of Graduate Study

Graduate students in the Division of Geological and Planetary Sciences enter with very diverse undergraduate preparation—majors in astronomy, biology, chemistry, mathematics, and physics, as well as in geochemistry, geology, and geophysics. Graduate study and research within the division are equally diverse, and the graduate program aims to provide for students a depth of competence and experience in their major field, sufficient strength in the basic sciences to allow them to continue self-education after their formal training has been completed, and the motivation and training to keep them in the forefront of their field through a long and productive career. Students are encouraged to explore work in interdisciplinary areas both within and outside the division. Although financial support is not guaranteed, all students making normal progress have in the past been supported by a combination of fellowships, research assistantships, and teaching assistantships.

Admissions and Entrance Procedures

Only students who intend to work full time toward the doctor of philosophy (Ph.D.) degree are admitted. The admission process follows Institute regulations. Applicants are strongly urged to submit Graduate Record Examination (GRE) scores for the aptitude tests and the advanced test in their field of undergraduate specialty. Applicants from non-English-speaking nations are required to submit Test of English as a Foreign Language (TOEFL) scores.

Based on their applications and interests, students enter one of the major subject options of the division and are given an academic adviser who is a professorial faculty member associated with the option. The four options are geology, geochemistry, geophysics, and planetary science. Students may later change options, but must first obtain approval by the new option. Each student must plan to satisfy the requirements for the Ph.D. degree in one option.

Entering students take a placement exam in the week preceding the beginning of instruction for the first term. The exam covers basic mathematics, physics, and chemistry. Afterward, the student meets with his or her adviser prior to registration and selects courses based in part on the results of the placement exam.

Students are encouraged to register for at least 9 units of research (Ge 297) in each of two out of the first three terms of residence. Each of these terms of research should be under the direction of different faculty members. The primary objective is to communicate to the students the excitement of discovery based on original investigations and to provide a broad scope of research aims. An important by-product can be formulation of propositions for the Ph.D. oral examination or orientation toward Ph.D. research.

Master's Degree

Students enrolled in the Ph.D. program may be awarded a master's degree when they have satisfied the basic Institute requirement of 135 units. These courses must be numbered 100 or higher, and must be part of those used to satisfy the Ph.D. requirement in one of the options of the division. Specifically required are Ge 101, 102, 103, and 109. More advanced courses may be substituted for Ge 101, 102, or 103, subject to approval by the instructor and the division faculty.

Doctoral Degree: Division Requirements

For a Ph.D. degree the student must 1) pass the qualifying oral examination, 2) satisfy course requirements of the division and of an option, and 3) complete a thesis and successfully defend it in a final oral examination. Admission to candidacy occurs after the student has satisfied the first two requirements and has been accepted for thesis research by a division faculty member, who then becomes the student's thesis adviser. The student will continue to have a separate academic adviser.

The qualifying examination consists of oral and written defense of two research propositions, supplemented by a written description of one of them. Students are encouraged to consult with various staff members concerning their ideas on propositions, but the material submitted must represent the work of the student. There must be a different faculty member associated with each of the two propositions. The exam is administered by the qualifying examination committee, which has members from the four options of the division, and is normally taken early in the first term of the second year of residence. A more detailed outline of the qualifying examination is available in the chairman's office.

The basic divisional course requirement includes 47 units within the division but outside the area of the student's option. The required 47 units of courses outside the major field may be used to satisfy a subject minor in another option of the division. Every graduate student in the division should be responsible for the basic general information covered in the four courses, Ge 101, 102, 103, and 104. Students are required to take the three courses in the Ge 101, 102, 103, and 104 series that are outside of their option. Students may petition to drop one or more of these three courses, with approval of the appropriate option faculty, if they already have substantial academic training in that field. Oral presentation, Ge 109, is required of all degree candidates and counts for two of the units listed above. Throughout their graduate careers, students are expected to attend departmental seminars and seminar courses led by visiting scientists. Students may submit a petition to their option to substitute appropriate graduate courses taken at other institutions, corresponding to no more than 27 units.

The division encourages students to engage in research early in their graduate careers. A student making normal progress will have submitted a paper, in which the student is senior author, by the end of the third academic year. The paper will be submitted to a refereed scientific journal and will have the approval of a faculty member of the division. Doctoral candidates must complete a thesis and submit it in final form by May 10 of the year in which the degree is to be conferred. A first draft of the thesis must be submitted to the division chairman by April 1. The final oral examination for the doctorate will be scheduled following submission of the thesis and, in conformity with Institute regulations, it must be scheduled at least two weeks before the degree is to be conferred.

Candidates are expected to publish the major results of their thesis work. A manuscript should be reviewed by the member of the staff supervising the major research and should be ready for submission to a refereed scientific journal at the time of the final exam. The student should be principal author. The published paper should have a California Institute of Technology address and a Division of Geological and Planetary Sciences contribution number, and

at least five reprints should be sent to the division. Published papers may be included in the thesis.

The student's progress toward meeting these requirements will be monitored annually by the faculty. Satisfactory progress includes meeting the following schedule:

By the end of first academic year (third term): submission by the student 1) of tentative titles of propositions for review by the qualifying examination committee and 2) a list of courses planned to satisfy the Ph.D. requirement for review by the option.

By the end of second academic year: 1) passing oral exam; 2) approval by the option of courses planned to satisfy candidacy requirements; 3) submission of a tentative thesis topic and adviser.

By the end of third academic year: 1) satisfactory completion of course requirements; 2) satisfactory completion of other requirements including selection of thesis topic and adviser; 3) admission to candidacy.

End of fourth academic year: satisfactory progress toward completion of thesis.

After completing the fifth academic year, the student must formally petition to register for each subsequent year. Financial aid will normally not be extended beyond the sixth year.

The student's program and progress will be reviewed annually by his or her option. In cases where in the opinion of the faculty in the option the student is clearly not showing adequate progress, they may recommend an evaluation by the full faculty. The faculty may deny permission to continue in the Ph.D. program based upon their overall assessment of the student's performance.

Requirements of the Major Subject Options

Geology and Geobiology. In addition to the general Institute and basic division requirements, which include taking at least 47 units within the division in subjects other than their own major subject, candidates for the Ph.D. in geology or geobiology must successfully complete a minimum of 90 units of 100- to 200-level courses, including the advanced courses most pertinent to their major field. Courses that cannot be used to satisfy these requirements include languages, research and reading courses, and certain courses constituting basic preparation in their field, as follows: Ge 101, Ge 106, Ge 107, Ge 114, and Ge 115. At least 36 of the 90 units must be taken outside the Division of Geological and Planetary Sciences (with a grade of C or better). It is possible for these to be used to satisfy part of the requirements of a minor. Also, Ch 21 abc may be included as part of these units. Knowledge of field geology equivalent to Ge 121 abc is required of all majors. For good work in most modern earth science fields, a proficiency in mathematics equivalent to that represented by AM 113 abc (Engineering Mathematics) is essential.

Geochemistry. In addition to general Institute and basic division requirements, the candidate for a Ph.D. degree in geochemistry is required to complete 90 additional units of course work at the 100 level or greater. These courses must include 45 units outside the division and include the advanced courses most relevant to the student's thesis research. This option requires all students to have a basic knowledge of chemistry at the level of Ch 21. The 45 units of courses submitted for fulfillment of the basic division requirement must include one quarter of field geology. Reading and research courses may not be used, although students are expected to take such courses and to devote each

summer to research.

Students completing the geochemistry academic program are required to submit a tentative proposal for their research no later than May 1 of the third year in residence. This proposal should document the scientific importance of the project relative to previous work, feasibility of completion within an allowable graduate-student tenure, and, if any, preliminary results. The proposals will be reviewed by the geochemistry faculty.

Geophysics. In addition to general Institute and basic division requirements, the Ph.D. candidate in geophysics must successfully complete a minimum of 90 units of 100- to 200-level courses chosen from the two categories below. At least 36 units must be completed from each group. Courses with less than five units per term in these groups will not be accepted.

Group A. Courses in mathematics, applied mathematics, physics, applied physics, and chemical physics. A minimum proficiency in basic mathematical methods at the level of AMa 101 and in basic physics at the level of Physics 106 is required.

Group B. Courses in geophysics.

Students with an exceptionally strong background in one or more of the areas represented by these groups may, upon petition to the option representative, be excused from up to 18 units of the overall 90-unit requirement. Research and reading courses cannot be used to satisfy these requirements but are highly recommended as preparation for the oral qualifying examination.

Planetary Science. In addition to general Institute and basic division requirements, the candidate for a Ph.D. degree in planetary science shall acquire at least a minimum graduate background in each of three categories of course work: 1) the earth sciences, 2) physics, mathematics, chemistry, and astronomy, and 3) planetary science, which shall include at least one quarter in Planetary Atmospheres (Ge 152 a, or b, or c) and one quarter in Planetary Surfaces (Ge 151). These requirements may be met by successful completion (normally B average or higher) of at least 45 units of suitable course work at the 100 level or higher in each category. The requirements in the first category coincide with the basic division requirement, except that Ge 103 is considered a planetary science course. Reading and research courses may not be used, although students are expected to take such courses and to devote each summer to research in planetary science. Planetary Science Seminar (Ge 225 abc) is required each year for all planetary science students.

Students shall demonstrate professional competence in a second scientific field distinct from their specialization within planetary science. This may be accomplished by satisfactory completion of a subject minor. Courses used to satisfy this secondary requirement may also be used to satisfy the requirements in one of the 45-unit categories.

Minor in Geological and Planetary Sciences

A student from another division of the Institute may, with the approval of the Division of Geological and Planetary Sciences, elect a minor in any one of the major subjects listed above. Such a subject minor will include at least 45 units in courses at the 100 level or higher. Normally, a member of the division faculty will participate in the oral thesis defense.

History

The program for a subject minor in history must be approved by the Executive Officer for the Humanities before the admission to candidacy. In addition to meeting general Institute requirements, the student must complete satisfactorily, with a grade of C or better, 45 units in advanced courses in history.

Materials Science

Aims and Scope of Graduate Study in Materials Science

Students may enter the graduate program in materials science with undergraduate preparation in physics, chemistry, engineering, or materials science. Students interested in terminating their graduate study at the master's level are not normally admitted. The graduate program is designed to give students a deep understanding of issues fundamental to synthesis-structure-property relationships in materials. The program for all graduate students begins with a set of core courses. After meeting the requirements for the M.S. degree, students continuing for the Ph.D. degree are required to pass an oral candidacy examination, complete a thesis describing original research in materials science or a related field, and publicly defend their thesis work.

Master's Degree in Materials Science

Each student is assigned to a member of the faculty, who will serve as the student's adviser. The adviser and the option representative for materials science will approve his or her course of study. Study for the degree of Master of Science in Materials Science ordinarily will consist of three terms of courses chosen from the following list, and up to 27 units of MS 200, totaling at least 135 units. Completion of these courses within two years with no grade less than a C constitutes the academic requirements for the M.S. degree.

Core Courses

- a. APh 110 abc (6 units) or E 150 abc (3 units), seminar
- b. 1. MS 120, MS 121, APh/MS 122, Kinetics of Crystal Imperfections, Phase Transformations in Solids, Diffraction Theory and Applications, 27 units
2. APh 105 abc, States of Matter, 27 units
3. APh 114 ab, Solid-State Physics, 18 units
4. Either AM 114 abc, or AM 125 abc, or AMa 101 abc, or Ph 129 abc, Mathematical Methods, 27 units
5. MS 123, Transmission Electron Microscopy Laboratory
6. At least 27 units chosen from:
 - AM 135 abc, Mathematical Elasticity Theory
 - APh 114 c, Solid-State Physics
 - APh 125 abc, Ph 125 abc, or Ch 125 abc, Quantum Mechanics

Degree of Doctor of Philosophy in Materials Science

Work toward the degree of Doctor of Philosophy in materials science requires a minimum of three years following the completion of the bachelor's degree or equivalent. Approximately two years of this time are devoted to research work leading to the doctoral thesis.

Language Requirement. There is no language requirement for the Ph.D. degree.

Minor. No minor is required for the Ph.D. degree. Students are, however, encouraged to take advanced courses appropriate to their particular interests.

Counseling. A faculty member, normally the student's research adviser, is assigned to advise the student on a suitable course program.

Admission to or Continuation in Ph.D. Status. To be advanced to candidacy for the doctor's degree the student must satisfy three requirements:

a. Courses. Successful completion of the core courses listed above. Alternatively, if the student has taken equivalent courses elsewhere, he or she must prove competence in these areas through an oral examination in each subject.

b. Oral Candidacy Examination. The student will prepare a brief presentation on a topic in his or her proposed area of research. The examination will be based on the student's course work and how it is related to the subject of the presentation.

This examination should be taken no later than the end of the student's second year of residence.

c. Research Competence. The student must have a doctoral research adviser, and must have completed at least 18 units of MS 300.

Thesis and Final Examination. The candidate is required to take a final oral examination covering the doctoral thesis and its significance in and relation to his or her major field. The examination will consist of a public thesis seminar and an associated oral examination on the thesis and related fields. This examination will be held at least two weeks after the doctoral thesis has been presented in its final form, and prior to its approval. This examination must be taken at least four weeks before the commencement at which the degree is to be granted.

Subject Minor in Materials Science

A student majoring in another option at the Institute may elect a subject minor in materials science. He or she must obtain approval from the materials science faculty of a course of study containing at least 45 units of advanced courses. Normally a member of the materials science faculty will participate in the candidacy examination in the student's major department.

Mathematics

Aims and Scope of Graduate Study in Mathematics

The principal aim of the graduate program is to equip the student to do original research in mathematics. Independent and critical thinking is encouraged by participation in seminars and by direct contact with faculty members; an indication of the current research interests of the faculty is found on page 70. In order to enable each student to acquire a broad background in mathematics, individual programs of study and courses are mapped out in consultation with faculty advisers. The normal course of study leads to the Ph.D. degree.

Admission

Each new graduate student admitted to work for an advanced degree in mathematics will be given an interview on Thursday or Friday of the week preceding the beginning of instruction in the fall term. The purpose of this interview is to ascertain the preparation of the student and assist him or her in mapping out a

course of study. The work of the student during the first year will include independent reading and/or research.

Course Program

The graduate courses offered, listed in Section 5, are divided into three categories. The courses numbered between 100 and 199 are basic graduate courses open to all graduate students. The three core courses at the graduate level—Ma 110 in Analysis, Ma 120 in Algebra, and Ma 151 in Geometry and Topology—are required of all graduate students unless waived by the Graduate Committee. Students are expected to complete these basic core courses during the first two years, and are encouraged to take additional advanced courses while doing their thesis research.

The courses in the second category are numbered between 200 and 290. They are taken normally by second-year and more advanced graduate students. They are usually given in alternate years. The 300 series includes the more specialized courses, the research courses, and the seminars. They are given on an irregular basis depending on demand and interest.

Each student must participate actively in seminars for a total of at least three terms. Students are strongly encouraged to do this within the first two years of graduate studies, but must complete this before advancement to candidacy. The department will help to make seminars accessible to students. Guidelines will be distributed to the students at the beginning of each academic year.

Beginning with the second year at the latest, the student will be expected to begin independent research work and will be strongly encouraged to participate in seminars.

Bohnenblust Travel Grants in Mathematics

Special grants may be awarded to outstanding graduate students in mathematics to enable them to travel in the U.S. or abroad to further their mathematical education. The mathematics faculty established these awards in 1978 to honor H. F. Bohnenblust, who served Caltech as Professor of Mathematics, Executive Officer for Mathematics, and Dean of Graduate Studies. Application forms and further details are available in the Mathematics Office, 253 Sloan.

Master's Degree in Mathematics

Entering graduate students are normally admitted directly to the Ph.D. program, since the Institute does not offer a regular program in mathematics leading to the master's degree. This degree may be awarded in exceptional circumstances either as a terminal degree or as a degree preliminary to the Ph.D. degree. Sufficiently advanced undergraduates may be admitted to graduate standing to pursue a master's degree simultaneously with the bachelor's program.

The recipient of a master's degree will be expected to have acquired, in the course of studies as an undergraduate or graduate student, a comprehensive knowledge of the main fields of mathematics comparable to 180 units of work in mathematics at the Institute with course numbers greater than 90.

The general Institute requirements specify that the recipient of a master's degree must have taken at least 135 units of graduate work as a graduate student at the Institute, including at least 81 units of advanced graduate work in mathematics. This advanced work is interpreted as work with a course number greater than 109 and may include a master's thesis.

Degree of Doctor of Philosophy in Mathematics

Candidacy Examination. Before being admitted to candidacy for the Ph.D. in mathematics, the student is expected to have acquired an understanding of the main fields of modern mathematics and to have demonstrated an ability to do competent research in a particular field.

The first graduate year is usually spent in acquiring basic background knowledge. In order to determine as early as possible the candidate's progress toward this objective, candidacy examinations will be given toward the end of the first year of graduate study. Students must take two of three examinations: one covering the field of algebra, one covering real and complex analysis, and one covering geometry and topology. These emphasize the ability to apply basic mathematical ideas and theorems to specific cases. The three core courses should be adequate preparation for these examinations. Before being admitted to candidacy, students must pass two of these three examinations and, in the one not taken, must take and pass the corresponding core course with a grade of B or better.

Sometime during the second or third year the student is expected to give an oral presentation, to a committee of faculty members, which will describe the general subject matter of the proposed area of thesis research and describe the tentative thesis problem. The committee will consist of three members, including the student's adviser. It is the student's responsibility to arrange the formation of this committee in consultation with the adviser. A satisfactory performance on this oral presentation is required for admission to candidacy.

During the summer following the first year of graduate work, each graduate student in mathematics is expected to plan a program of independent study and research work under the guidance of some member of the mathematics staff. This summer program should provide the student with an opportunity to acquire new mathematical knowledge and to generate new mathematical ideas. Shortly after the beginning of the fall term, the faculty will make an overall evaluation of the progress and research potential of these graduate students. The results of this evaluation will be reported to the student and will be used in consultation with the student to plan a subsequent academic program. At this time each student is expected to arrange for a member of the faculty to act as a research adviser.

Language Requirement. The student must demonstrate a good knowledge of one of three foreign languages—French, German, or Russian. This requirement is satisfied by passing a written test consisting of translating a passage of a mathematical work chosen by an examiner who is a member of the mathematics faculty. A list of the examiners in each language will be distributed to the students at the beginning of each academic year.

Thesis and Final Examination. On or before the first Monday in May of the year in which the degree is to be conferred, candidates for the degree of Doctor of Philosophy must deliver typewritten or reproduced copies of their thesis to their supervisors. These copies must be complete and in the exact form in which they will be presented to the members of the examining committee. Candidates are also responsible for supplying the members of their examining committee, at the same time or shortly thereafter, with reproduced copies of their thesis. The final oral examination on the thesis will be held within three weeks from the date the thesis is handed in.

Subject Minor in Mathematics

Students majoring in other fields may take a subject minor in mathematics. Minor programs must include 54 units of advanced work approved by a representative of the mathematics department, who will insure that the work represents a concentrated study in one or more of the main fields of mathematics. A special oral examination in the subject minor will be given soon after completion of the minor program.

Mechanical Engineering*Aims and Scope of Graduate Study in Mechanical Engineering*

Students who have not specialized in mechanical engineering as undergraduates, as well as those who have, may be admitted for graduate study. As preparation for advanced study and research, a good four-year undergraduate program in mathematics and the sciences may be substituted for a four-year undergraduate engineering course, with the approval of the faculty. The qualifications of each applicant will be considered individually, and, after being enrolled, the student will arrange his or her program in consultation with a member of the faculty. In some cases the student may be required to make up undergraduate deficiencies in engineering science courses. However, in every case the student will be urged to take some courses that will broaden an understanding of the overall field, as well as courses in the specialty. Most graduate students are also required to take further work in applied mathematics.

Master's Degree in Mechanical Engineering

The program must be approved by the option representative in mechanical engineering. A total of 138 units of courses numbered 100 or above is the minimum number required for completion of the master's degree in mechanical engineering. The master's degree is based upon course work drawn from the following distribution of courses:

Program Required for Mechanical Engineering

- Graduate Mechanical Engineering courses—54 units
These units should provide a solid base for the student's engineering interest. The courses may be selected from the following list: CE/ME 101 abc, ME 119 abc, AM 102 abc, AM 135 abc, AM 151 abc, CDS 110 ab or CDS 112, 113 a, and JP 121 abc.
- Mathematics, Engineering, and Research electives—54 units
Students who have not taken the equivalent of AMa 95 abc are required to take AM 114 abc for 36 units. Mechanical engineering students are urged to consider taking 27 units of courses in: aerosols and air pollution Env 116, ChE/Env 158, ChE/Env 159; automation and robotics ME 115 ab, ME 131, ME 132; combustion ChE 157, JP 213 abc; engineering design ME 171 ab; multiphase flows ME 202 abc; propulsion JP 121 abc; experimental methods Ae 104 abc. Other courses may also be taken in Ae, AM, AMa, ME, JP, MS, EE, Env, APH, CS, ChE, CNS. Students who are considering study beyond the master's degree are encouraged to take research units, ME 300, up to a maximum of 27.
- Free Electives—27 units
These units may be selected from any course with a number of 100 or greater, except that research units may not be included.
- Engineering Seminar, E 150—3 units

Students admitted for study toward a master's degree but interested in pursuing subsequent study toward a Ph.D. degree should also read the section below relating to this degree.

Degree of Mechanical Engineer

Greater specialization is provided by work for the engineer's degree than for the master's. The degree of Mechanical Engineer is considered to be a terminal degree for the student who desires more highly specialized advanced training with less emphasis on research than is appropriate to the degree of Doctor of Philosophy. However, research leading to a thesis is required for both degrees. The student should refer to Institute requirements for the engineer's degree.

Not less than 55 units of work shall be for research and thesis; the exact number shall be determined by a supervising committee, appointed by the Dean of Graduate Studies. Courses should be closely related to mechanical engineering. The specific courses (to be taken and passed with a grade of C or better by the candidate) will be finally determined by the supervising committee. The courses must include an advanced course in mathematics or applied mathematics, such as AM 125 abc or AMa 101 abc, that is acceptable to the faculty in mechanical engineering. A suitable course program may usually be organized from the more advanced courses listed under AM, AMa, JP, ME, MS, and Ae.

Degree of Doctor of Philosophy in Mechanical Engineering

Institute requirements for the Ph.D. degree are described in the section on degree requirements. Approximately two years of course work are required, and two or more years are usually needed for preparation of the dissertation.

Counseling. A counseling committee of three faculty members is appointed for each student upon admission to work toward a Ph.D. degree in mechanical engineering, to provide advice on a suitable course program. The committee member closest to the student's current interests acts as committee chairman and interim adviser until this responsibility is assumed by the dissertation supervisor. This committee must meet during the first term of each year of Ph.D. study.

Admission to or Continuation in Ph.D. Status. All new students admitted for study toward the Ph.D. degree in mechanical engineering, and all other graduate students wishing to become eligible for study toward this degree, are required to take a short oral examination early in the third term of their first year of graduate study at the Institute. This examination, which is conducted by a special joint faculty committee, is confined to elementary but basic topics.

Admission to Candidacy for the Ph.D. in Mechanical Engineering. To be recommended for candidacy for the Ph.D. degree in mechanical engineering, the student must, in addition to meeting the general Institute requirements:

- complete 27 units of research;
- complete at least 108 units of advanced courses arranged by the student in conference with his or her adviser and approved by the counseling committee and the faculty in mechanical engineering. If the student chooses to take a subject minor, the units thereof may be included in the total of 108, subject to the approval of the faculty in mechanical engineering;
- pass with a grade of at least C an advanced course in mathematics or applied mathematics, such as AM 125 abc, or AMa 101 abc, acceptable to the student's committee and the faculty in mechanical engineering. The require-

ment in mathematics shall be in addition to the second requirement above, and shall not be counted toward a minor;

- pass an oral examination on the major subject, and, if the student has chosen a subject minor, an examination on the subject of that program may be included at the request of the discipline offering the subject minor. The oral examination must be taken before the end of the second year of graduate academic residence at the Institute.

Thesis and Final Examination. A final oral examination will be given after the thesis has been formally completed. This thesis examination will be a defense of the doctoral thesis and a test of the candidate's knowledge in the specialized field of research.

Subject Minor in Mechanical Engineering

A student majoring in another branch of engineering or another division of the Institute may, with the approval of the faculty in mechanical engineering and the faculty in his or her major field, elect mechanical engineering as a subject minor. The group of courses shall differ markedly from the major subject of study or research, and shall consist of at least 54 units of advanced work. The student shall pass an oral examination that is separate from the examination in the student's major.

Physics

Aims and Scope of Graduate Study in Physics

The physics option offers a program leading to the degree of Doctor of Philosophy. This program prepares students for careers in scientific research or research combined with teaching, and so its most important part is independent research. Courses are offered that give a broad and sound treatment of both fundamental physics and specialized physics research topics. These are intended both to help a beginning graduate student prepare for research and to broaden an advanced student's knowledge of physics.

Students may choose between two major areas of specialization. One, the physics major, encompasses the traditional choices of experimental and theoretical physics. Caltech research opportunities for this major include high-energy physics, nuclear and particle physics, cosmic-ray and gamma-ray astronomy, infrared astronomy, submillimeter astronomy, condensed-matter physics, quantum optics, applied physics, gravitational physics, astrophysics, mathematical physics, and theoretical physics.

Students may alternatively elect a major in Physical Computation and Complex Systems (PCCS). The objective of this major is a unified approach to abstraction, modeling, and computation applied to the natural world. This approach is based on a systematic use of physical analogies and methods. The program involves fundamental education in mathematical physics, simple classical and quantum physical systems, fundamental properties of complex systems, physical optimization methods, and the appropriate computational techniques needed for large-scale problem solving on advanced-architecture computers.

A Master of Science degree may be awarded upon completion of what is typically a four-term program of courses. Students are not normally admitted to work toward the M.S. degree in physics unless they are also working for a Ph.D.

Admission

Application blanks for admission to graduate standing and for financial assistance should be obtained from the Dean of Graduate Studies, California Institute of Technology, Pasadena, CA 91125, and submitted as early as is convenient. While late applications will be considered, applications should whenever possible reach the Graduate Office by January 15. Special inquiries will be welcomed by the chairperson of the Physics Graduate Admissions Committee. Applicants are strongly advised to take the Graduate Record Aptitude Test and Advanced Physics Test. Information may be obtained from the Educational Testing Service, 20 Nassau Street, Princeton, NJ 08540.

Placement Examinations

On the Thursday preceding the beginning of instruction for the student's first term of graduate study, a student admitted to work for an advanced degree in physics is required to take placement examinations to be used as a guide in selecting the proper course of study. These examinations will cover material in mechanics and electromagnetism, quantum mechanics, and mathematical physics, approximately as covered in Ph 106, Ph 125, and Ph 129. In general, they will be designed to test whether the student possesses an understanding of general principles and the ability to apply these to concrete problems, rather than detailed informational knowledge. The results of the placement exam are not formally recorded as a part of the student's record. In cases in which there is a clear basis for ascertaining the status of the entering graduate student, the placement examinations may be waived.

Master's Degree in Physics

A Master of Science degree in physics will be awarded upon satisfactory completion of a program approved by the departmental representative that fulfills the following requirements:

Ph 125 abc 27 units
 (If this course was taken as part of an undergraduate program or an equivalent course was taken elsewhere, it may be replaced by 27 units of any quantum-mechanics-based course.)

Physics electives 81 units
 These must be selected from Ph 103, Ph 118, Ph 127, Ph 129, Ph 135, Ph 136, Ph 151, Ph 161, Ph 176, Ph 203, Ph 205, Ph 209, Ph 220, Ph 222, Ph/APh 223, Ph 224, Ph 225, Ph 228, Ph 229, Ph 230, Ph 231, Ph 234, Ph 235, Ph 236, Ph 237, Ph 242.

Other electives 27 units
 These must be graduate courses from physics or any other option, including the humanities.

With the approval of the option representative, a student who has the proper preparation may substitute other graduate courses in science or engineering for some of the physics electives listed above. A master's is not offered in the PCCS major.

Doctor of Philosophy Degree in Physics or PCCS

In addition to the general Institute requirements for a Ph.D., the particular requirements for a doctorate in physics or PCCS include admission to candidacy as described below, passing 27 units of advanced courses in physics outside the student's research specialty, writing a thesis that describes the results of independent research, and passing a final oral examination based on this thesis and research. Students working toward the Ph.D. degree should complete the requirements for admission to candidacy and the course work as soon as possible.

Admission to Candidacy. Two requirements for admission to candidacy are the passing of an oral candidacy examination (described below) and the passing of two terms of Physics Seminar, Ph 242. In addition, a student must pass two written examinations covering fundamental classical and quantum physics.

The other particular requirements for admission to candidacy differ for the two majors, physics and PCCS. A physics student must demonstrate proficiency in any three of the following four areas: the mathematical methods of physics at the level of Ph 129, the applications of quantum physics at the level of Ph 135, the applications of classical physics at the level of Ph 136, and astrophysics. For each of the first three areas, the student may either pass a written candidacy examination similar to the two required exams or pass (with a grade of C or better) all three terms of the corresponding course. Those students choosing astrophysics may substitute for one area, after consultation with the theoretical astrophysics faculty, part of the written astrophysics examination that is given yearly by the astronomy department. No course work other than Physics Seminar is specifically required for the written candidacy exams, but the typical student will profit from taking several of the basic graduate courses, such as Ph 106, Ph 125, Ph 129, Ph 135, Ph 136, and Ph 209.

A PCCS student must demonstrate proficiency as described above in two of the four areas: mathematical methods of physics at the level of Ph 129, and applications of classical physics at the level of Ph 136. In addition, the PCCS student must pass Ph 151 and Ph 161 with a grade of C or better.

A graduate student who has not been admitted to candidacy by the end of the third year of graduate study at the Institute will not be permitted to register for a subsequent academic year. In addition, it is required that the two mandatory written exams be attempted in a student's first year of graduate study and be passed by the end of the second year. Furthermore, the requirement of demonstrating proficiency in the other subjects must be attempted by the end of the second year and satisfied by the end of the third year. If these deadlines are not met, a student must petition the Physics Graduate Committee before registration for subsequent terms will be allowed. Further guidelines concerning the expected rate of progress in satisfying these requirements are available in the Physics Graduate Office.

The vast majority of students admitted for graduate study in the physics option pass the candidacy requirements. Their purpose is not to "weed out" students, but rather to ensure that, before beginning research, they have both adequate preparation in their research specialty and a broad general knowledge of physics.

Written Candidacy Examinations. Each written candidacy exam is three hours long and covers a particular part of physics that is considered essential, no matter what the candidate's ultimate field of specialization may be. The exami-

nations are offered at frequent intervals, typically once per term, and the separate sections may be taken at different times. This flexible scheduling of the written exams allows students to prepare for the separate sections while simultaneously learning about research areas through either advanced courses or reading and research courses.

Oral Candidacy Examination. This exam is primarily a test of the candidate's suitability for research in his or her chosen field. The chairman of the examination committee will be the professor the student plans to do research with, and normally a student will have already begun research (Ph 172 or Ph 173) on a definite topic with that professor. The examination will cover the student's research work and its relation to the general field of specialization. Before being allowed to take this exam, a student must have satisfied all of the other requirements for admission to candidacy.

Course Requirements. The requirement that students pass two terms of Physics Seminar, Ph 242, before being admitted to candidacy is intended to provide them with a general overview of modern physics research. This course is usually offered in the first two terms of the academic year, and consists of weekly seminars on physics research at Caltech. There is an oral exam based on this material at the end of the term. It is strongly recommended that students take this course in their first year of graduate study at the Institute.

The requirement of 27 units (3 terms of the usual 9-unit course) of advanced physics courses outside a student's specialty may be satisfied by courses drawn from the following list: Ph 118, Ph 127, Ph 151, Ph 161, Ph 176, Ph 203, Ph 205, Ph 220, Ph 222, Ph/APh 223, Ph 224, Ph 225, Ph 228, Ph 229, Ph 230, Ph 231, Ph 234, Ph 235, Ph 236, Ph 237, APh 114, APh 156, APh 190, APh 214, Ay 121–128, Ay 218. The appropriate course or courses for this requirement will normally be clear, but the chairperson of the Physics Graduate Committee will advise students in cases of doubt. The required 27 units may be satisfied with three terms of one course or spread over several courses. Normally, students take many more than the required 27 units of advanced courses, especially courses in their own specialty. The 27-unit requirement for students in the PCCS major is an application specialization, which must be satisfied by courses covering an area of physics that is a focus of their PCCS research. In cases of doubt, students in the PCCS major must consult with the chairperson as to the appropriate courses to satisfy their application specialization. PCCS students should be aware that many courses in applied mathematics and in computer science, although not required, are highly relevant to their studies.

A student is expected to obtain a grade of C or better in each course. If the student obtains grades below C, the Physics Graduate Committee may review the student's entire record, and if it is unsatisfactory will refuse permission to continue work toward a Ph.D.

Research Requirements. There are no specific research requirements, but in general a substantial effort is required to master the techniques in a given field and carry out a significant piece of original research. Students are strongly advised to start research as soon as possible and to carry it on in parallel with formal course work; they are advised to take reading and research units (Ph 171–173) prior to being admitted to candidacy. Typically, students will find it desirable to continue graduate study and research for two years after admission to candidacy.

The Minor. A minor is not required, but a student may elect to pursue a minor in another option.

Language Requirements. There are no language requirements for a Ph.D. in physics or PCCS.

Thesis and Final Examination. A final oral examination will be given not less than two weeks after the thesis has been presented in final form. This examination will cover the thesis topic and its relation to the general body of knowledge of physics. The candidate is responsible for completing the thesis early enough to allow the fulfillment of all division and Institute requirements, with due regard for possible conflicts in the scheduling of more than one final oral examination per day.

Subject Minor in Physics or PCCS

Students desiring a subject minor in physics or PCCS should discuss their proposed program with the chairperson of the Physics Graduate Committee. Forty-five units are required for approval of a subject minor in physics or PCCS. A student may only obtain a minor in either physics or PCCS, not in both major areas of specialization. Physics courses with numbers over 100 will be allowed for the subject minor. At least 18 of the 45 units must be chosen from the physics electives list (see list under *Master's Degree in Physics*), excluding Ph 129 and any specific courses in physics required for the student's major program. A minor in PCCS requires that the student pass all terms of Ph 151 and Ph 161, which can also form part of the total 45-unit requirement. An oral exam may be required, and this should be arranged with the chairperson of the Physics Graduate Committee. This exam will include both academic topics and topics on current physics research areas. The oral exam may be waived if at least one term of Ph 242 has been taken successfully, or if all 45 units are in letter-graded (*not* pass-fail) courses.

Science, Ethics, and Society

Graduate students in science, mathematics, or engineering may take a minor in science, ethics, and society (SES). The minor provides students with a historical and philosophical education in the social, economic, ethical, and political problems that have arisen in the modern world in connection with the advance of science and technology. It provides opportunities for study of the development of science and technology since the Scientific Revolution, and for inquiry into the evolution of ethical and policy issues in areas such as research and development, technological innovation, energy supply and conservation, the environment, and biomedicine. Work in the minor concerns historical and/or philosophical examinations of subjects such as genetics and molecular biology, the birth of modern physics, the politics of research and development, the social uses of biological knowledge, the nature of scientific explanation, and the evolution of theories of cognition; but it may also include consideration of contemporary issues concerning science and technology treated in philosophical, ethical, and historical perspective. The minor thus focuses on the acquisition of broad basic knowledge about persistent issues in the affairs of science, technology, and society so as to enable students to deal with such issues in the future, whatever particular form they may take. It is thus a valuable supplement to a technical degree, since it helps equip students to meet the nontechnical social, economic, and political challenges that people in technical careers increasingly encounter. Students who successfully complete the SES minor will be recognized with official credit for the achievement on their transcripts.

SES Graduate Minor Requirements

Graduate students who take an SES minor are expected to complete SES 101 ab, SES 102 bc, at least 3 units of SES 103, and 18 units of additional work in SES. Students need not complete the requirements for the minor within the first two years of graduate study. Students who have completed work in SES subjects equivalent to SES 101 a or SES 101 b before coming to Caltech may be given credit toward the completion of the minor requirements.

Social Science

Aims and Scope of Graduate Study in Social Science

Over the past two decades, it has become ever more apparent that many of the most serious problems faced by the nation have both an economic *and* a political component. Graduate education, however, has remained largely compartmentalized, with most programs producing students who, while well trained in economics or in political science, are not trained in both. The Caltech Ph.D. program in social science is designed to graduate scholars who are well grounded in the theoretical perspectives, the quantitative techniques, and the experimental methods of economics *and* of political science and who also have been introduced to quantitative history and to law as well. In addition to providing students with a solid foundation in the underlying disciplines, the program has a substantial policy component that brings institutional design—an analysis that merges work in theory, experimentation, and history—to policy studies in a way that is done at no other institution.

Recent graduates of the program have taken positions in departments of economics, political science, and public policy, and in schools of business at major universities. A smaller number have taken positions as economic analysts, program evaluators, and planners for government or private business. In addition, a special program enables students to obtain joint degrees in social science from Caltech and in law from cooperating professional schools. Graduates of this latter program are qualified for teaching positions in schools of law, for legal practice, and for other positions in academia and government.

Admission

The requirements for admission to the graduate program in social science are in the field of mathematics. Entering students are expected to have completed 1) courses in calculus at the levels of Ma 2 abc; 2) a course in linear algebra and/or matrix algebra; and 3) a course in elementary mathematical statistics. Students who have not completed some of these courses may be admitted with the understanding that they will complete these mathematical requirements after entering the program. Entering students must provide Graduate Record Examination scores and may be asked to take placement examinations in mathematics to determine their level of achievement. The extent of remedial work, if any, will be determined by the option's director of graduate studies in consultation with the student.

Students are also expected to take any additional mathematics courses relevant to their research. For example, research in many areas of social science requires mathematical competence at the level of Ma 107.

Course Program

Within the first two years of residence, every student is expected to a) demonstrate adequate competence in the core academic areas of microeconomics, analytical politics, and econometrics; b) satisfactorily pass the preliminary examinations; c) complete six research workshops with a minimum grade of B; and d) present the results of at least one research project to an optionwide colloquium.

- The core curriculum consists of the following twelve one-quarter courses: SS 201 abc (analytical foundations of social science); SS 202 abc (political theory); SS 205 abc (microeconomics); and SS 222 abc (econometrics).

Students are expected to complete these courses by the end of the first year of study. While these courses are not specifically required for a degree, the student must demonstrate competence in each area and must show that omission of one or more of these courses will not impede normal progress toward the degree. A decision to omit a course requires written approval by the option's director of graduate studies and should be made in consultation with the director and the appropriate faculty. Successful progress during the first three quarters of residency requires that the student complete a minimum of 36 units of work in each quarter, with an average grade of B or better, and with no grade less than C.

- At the end of the spring term of the first year, all students must take the preliminary examination. This written exam is given in three parts and covers the areas of analytical politics, microeconomics, and econometrics. To pass the examination, the student must pass all three parts. Students who fail the examination in their first attempt may take it a second time, but that attempt must be made before the beginning of the second year.

■ During the second year, each student must complete a minimum of 36 units of work each quarter (with an average grade of B or better), and in that total of 108, a student must successfully complete at least six one-quarter workshops (54 units) and earn at least a B in each. These research-oriented courses are designed to introduce students to independent research, and all require research papers, although the student, with the consent of the relevant instructors, may link two or three workshops and produce a single major paper. Under any conditions, a minimum of two papers must be completed during the second year. The six workshops should be chosen in consultation with the option's director of graduate studies and with faculty members in the area in which the student wishes to do his or her thesis research and should be chosen with the student's long-term research goals in mind. Students should take at least three workshops in the discipline that they expect to pursue, with a focus on the specific fields in which they will specialize, e.g., applied or theoretical microeconomics or politics, or social scientific history. Students should also bear in mind that a major strength of the program is its multidisciplinary nature, and they are encouraged to sample a variety of fields. In each year there will be workshops in economic theory, applied economics, formal political theory, and some substantive area of political science. In addition, although all may not be offered each year, there will be workshops in law, quantitative history, and public policy.

All research papers from the six workshops must be finished and submitted to the social science faculty no later than the end of the spring term of the second year. In addition, the student must present the results on one research project in an optionwide colloquium.

After the completion of the second year, the student's overall performance and research potential will be evaluated by the social science faculty. The student will be admitted to candidacy for the Ph.D. if this evaluation is favorable and if he or she has been accepted for thesis research by an option faculty member.

Degree of Doctor of Philosophy in Social Science

Requirements for the Ph.D. include: 1) passing, by the beginning of the second year, a written examination covering the core material in social science; 2) satisfactorily completing six research workshops; 3) completing a minimum of two research papers; 4) presenting a research seminar to the faculty by the end of that year; 5) gaining admission to candidacy; 6) writing a dissertation that reports the findings of independent research; and 7) passing a final oral examination based on the thesis and research. The dissertation is expected to represent publishable, original research with a coherent theme. At the end of each quarter during the third and fourth years, the thesis committee and the option's director of graduate studies will meet to determine whether the student is making sufficient progress in *research* to provide a reasonable expectation of completion within four years. It is expected that students will have completed all requirements for the Ph.D. degree by the end of their fourth year of residency.¹

¹A comprehensive description of the option's academic policies can be found in "Information for Students and Advisors in the Social Science Ph.D. Program," available upon request from the Division of the Humanities and Social Sciences.

Master's Degree in Social Science

Entering graduate students are admitted to the Ph.D. program. The M.S. degree is awarded in exceptional cases. Of the 135 units of graduate work required by Institute regulations, at least 81 units should be advanced work in social science. Students petitioning for an M.S. are required to take an examination.

Subject Minor in Social Science

Graduate students taking social science as a subject minor shall complete a program of not less than 45 units in advanced courses in a coherent program of study that has been approved by the director of graduate studies.

COURSES

Courses numbered below 100 are taken primarily by undergraduate students. Those numbered from 100 to 199 are taken by both undergraduates and graduates, and those numbered 200 and above are taken primarily by graduate students.

The school year is divided into three terms. The number of units assigned in any term to any subject represents the number of hours spent in class, in laboratory, and estimated to be spent in preparation per week. In the following schedules, figures in parentheses denote hours in class (first figure), hours in laboratory (second figure), and hours of outside preparation (third figure).

At the end of the seventh week of each term, a list of courses to be offered the following term is published by the Registrar's Office. On the day of registration (see Academic Calendar), an updated and revised course schedule is published announcing the courses, class hours, and room assignments for the term.

AERONAUTICS

Ae 100. Research in Aeronautics. *Units to be arranged in accordance with work accomplished.* Open to suitably qualified undergraduates and first-year graduate students under the direction of the staff. Credit is based on the satisfactory completion of a substantive research report, which must be approved by the Ae 100 adviser and by the option representative.

Ae/Aph 101 abc. Fluid Mechanics. *9 units (3-0-6); first, second, third terms.* Begins with study of one-dimensional flows, then moves to consideration of flows of higher dimension. Third term: viscous flows. Topics include thermodynamics of fluid flow, equations of motion; one-dimensional compressible flow, shock waves, nonsteady flow; acoustics, thin-airfoil theory; potential flow; kinematics of fluid flow, stress, vorticity; vortex flows; dynamics of real fluids, viscous flow, boundary layer theory. Instructor: Shepherd.

Ae/AM/CE 102 abc. Mechanics of Structures and Solids. *9 units (3-0-6); first, second, third terms. Prerequisite: AM 35 abc or equivalent.* Static and dynamic stress analysis. Two- and three-dimensional theory of stressed elastic solids. Analysis of structural elements with applications in a variety of fields. Variational theorems and approximate solutions, finite elements. A variety of special topics will be discussed in the third term such as, but not limited to, elastic stability, wave propagation, and introductory fracture mechanics. Instructor: Knauss.

Ae 103 abc. Vehicle Aerodynamics and Dynamics. *9 units (3-0-6); first, second, third terms. Prerequisites: AMa 95 abc.* The first term of this course is CDS 110 a. (For course description see Control and Dynamical Systems.) The second and third terms cover performance and dynamic behavior of aircraft. Topics include elementary airfoil and wing theory, speed performance, climb and descent, range, takeoff and landing distances, static longitudinal and lateral stability, small amplitude unsteady motions, dynamic stability, and responses to controls and disturbances. Instructors: Culick, Sturtevant.

Ae/Aph 104 abc. Experimental Methods. *9 units (3-0-6 first term; 1-3-5 second and third terms). Prerequisites: AMa 95 abc or equivalent (may be taken concurrently), Ae/Aph 101 abc (may be taken concurrently).* Lectures on experiment design and implementation. Measurement methods, transducer fundamentals, instrumentation, optical systems, signal processing, noise theory, analog and digital electronic fundamentals, with data acquisition and processing systems. Experiments (second and third terms) in solid and fluid mechanics with emphasis on current research methods. Instructor: Gharib.

CE/Ae/AM 108 abc. Computational Mechanics. 9 units (3-0-6). For course description, see Civil Engineering.

Ae 150 abc. Aeronautical Seminar. 1 unit (1-0-0); first, second, third terms. Speakers from campus and outside research and manufacturing organizations discuss current problems and advances in aeronautics. Graded pass/fail only. Instructor: Knauss.

Ae/AM 160 abc. Continuum Mechanics of Fluids and Solids. 9 units (3-0-6); first, second, third terms. Elements of Cartesian Tensors. Configurations and motions of a body. Kinematics—study of deformations, rotations and stretches, polar decomposition. Lagrangian and Eulerian strain velocity and spin tensor fields. Irrotational motions, rigid motions. Kinetics—balance laws. Linear and angular momentum, force, traction stress. Cauchy's theorem, properties of Cauchy's stress. Equations of motion, equilibrium equations. Power theorem, nominal (Piola-Kirchhoff) stress. Thermodynamics of bodies. Internal energy, heat flux, heat supply. Laws of thermodynamics, notions of entropy, absolute temperature. Entropy inequality (Clausius-Duhem). Examples of special classes of constitutive laws for materials without memory. Objective rates, co-rotational, convected rates. Principles of materials frame indifference. Examples: the isotropic Navier-Stokes fluid, the isotropic thermoelastic solid. Basics of finite differences, finite elements, and boundary integral methods, and their applications to continuum mechanics problems illustrating a variety of classes of constitutive laws. Instructors: Rosakis, Leonard.

EE/Ae 179 abc. Projects in Flight Control. Units to be arranged in accordance with work accomplished. For course description, see Electrical Engineering.

Ae 200. Advanced Research in Aeronautics. Units to be arranged. Ae.E. or Ph.D. thesis level research under the direction of the staff. A written research report must be submitted during finals week each term.

Ae 201 abc. Advanced Fluid Mechanics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ae/APh 101 abc or CE/ME 101 abc; AM 125 abc or AMa 101 abc (may be taken concurrently). Foundations of the mechanics of real fluids. Basic concepts will be emphasized. Subjects covered will include a selection from: physical properties of real gases; the equations of motion of viscous and inviscid fluids; the dynamical significance of vorticity; vortex dynamics; exact solutions; motion at high Reynolds numbers; hydro-dynamic stability; boundary layers; flow past bodies; compressible flow; subsonic, transonic, and supersonic flow; shock waves. Third term: hypersonic aerodynamics (see Ae 234). Instructor: Pullin.

Ae 204 abc. Technical Fluid Mechanics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ae/APh 101 abc, CE/ME 101 abc or equivalents. External and internal flow problems, encountered in engineering, for which only empirical methods exist. Turbulent shear flow, separation, transition, three-dimensional and nonsteady effects. Basis of engineering practice in the design of devices such as mixers, ejectors, diffusers, and control valves. Studies of flow-induced oscillations, wind effects on structures, vehicle aerodynamics. Not offered 1994–95.

Ae 208 abc. Fluid Mechanics Seminar. 1 unit (1-0-0); first, second, third terms. A seminar course in fluid mechanics. Weekly lectures on current developments are presented by staff members, graduate students, and visiting scientists and engineers. Graded pass/fail only. Instructor: Gharib.

Ae/AM 209 abc. Seminar in Solid Mechanics. 1 unit (1-0-0); first, second, third terms. A seminar for staff and students of all divisions whose interests lie in the general field of solid mechanics. Reports on current research by staff and students on campus are intermixed with seminars given by invited lecturers from companies and other research institutions. Graded pass/fail only. Instructor: Staff.

Note: The following courses, with numbers greater than 210, are one-, two-, or three-term courses offered to interested students. Depending on conditions, some of the courses may be taught as tutorials or reading courses, while others may be conducted more formally.

Ae/AM/MS 213 ab. Mechanics and Materials Aspects of Fracture. 9 units (3-0-6); first and second terms. Prerequisites: Ae/AM 102 ab (concurrently) or equivalent and instructor's permission. Analytical and experimental techniques in the study of fracture in metallic and nonmetallic solids. Mechanics of brittle and ductile fracture; connections between the continuum descriptions of fracture and micromechanisms. Discussion of elastic-plastic fracture analysis and fracture criteria. Special topics include fracture by cleavage, void growth, rate sensitivity, crack deflection and toughening mechanisms, as well as fracture of nontraditional materials. Instructor: Ravichandran.

Ae/AM 215. Dynamic Behavior of Materials. 9 units (3-0-6); third term. Prerequisites: AM 114 abc or AM 125 abc; Ae/AM 102 abc or AM 135 abc. Fundamentals of theory of wave propagation; plane waves, wave guides, dispersion relations; dynamic plasticity, adiabatic shear banding; dynamic fracture; shock waves, equation of state. Instructor: Rosakis.

AM/Ae 220 ab. Elastic Stability of Structures and Solids. 9 units (3-0-6). For course description, see Applied Mechanics.

Ae 221. Theory of Viscoelasticity. 9 units (3-0-6); second term. Prerequisites: Ae 102 abc or equivalent and instructor's permission. Material characterization and thermodynamic foundation of the stress-strain laws. Correspondence rule for viscoelastic and associated elastic solutions and integral formulation for quasi-static boundary value problems. Treatment of time-varying boundary conditions such as moving boundaries and moving loads. Stress waves. Approximate methods of viscoelastic stress analysis. Not offered 1994–95.

Ae/AM 223 ab. Plasticity. 9 units (3-0-6); second, third terms. Prerequisite: Ae/AM 102 abc or instructor's permission. Theory of dislocations in crystalline media. Characteristics of dislocations and their influence on the mechanical behavior in various crystal structures. Application of dislocation theory to single and polycrystal plasticity. Theory of the inelastic behavior of materials with negligible time effects. Experimental background for metals and fundamental postulates for plastic stress-strain relations. Variational principles for incremental elastic-plastic problems, uniqueness. Upper and lower bound theorems of limit analysis and shakedown. Slip line theory and applications. Additional topics may include soils, creep and rate-sensitive effects in metals, the thermodynamics of plastic deformation, and experimental methods in plasticity. Not offered 1994–95.

Ae/AM 225. Special Topics in Solid Mechanics. *Units to be arranged.* Subject matter will change from term to term depending upon staff and student interest but may include such topics as structural dynamics; aeroelasticity; thermal stress; mechanics of inelastic and composite materials; and nonlinear problems. Not offered 1994–95.

Ae/AMa 232 abc. Computational Fluid Dynamics. *9 units (3-0-6); first, second, third terms. Prerequisites: Ae/APh 101 abc; AM 125 abc or equivalent; CE/ME 101 abc or equivalent; AM 113 abc or equivalent; AMa 104, AMa 105 ab or equivalent.* Introduction to the use of numerical methods in the solution of fluid mechanics problems. First term: Problem-oriented review of numerical methods for inviscid and viscous incompressible flows. Vortex methods in two and three dimensions. Vortex merging and roll-up. Free shear layers. Viscous effects. Aircraft wake vortices. Ring vortices. Separated flows. Second term: Survey of finite difference, finite element, and spectral approximations for solution of the Navier-Stokes equations in two and three dimensions. Numerical study of problems of hydrodynamic stability, transition, and turbulence. Third term: Methods for the numerical solution of the compressible Euler and Navier-Stokes equations in one, two, and three dimensions. Finite-difference and finite-volume methods. Methods based on solution of the Riemann problem. Flux-splitting. Shock-capturing methods and related stability problems. Kinetic-theory-based methods. Explicit and implicit artificial viscosity for the Euler equations. Total variation diminishing approximations. Implementation of algorithms on parallel architectures. Instructors: Leonard, Meiron.

Ae 234. Hypersonic Aerodynamics. *9 units (3-0-6); second term. Prerequisites: Ae/APh 101 abc, AM 125 abc, or instructor's permission.* An advanced course dealing with aerodynamic problems of flight at hypersonic speeds. Topics are selected from: hypersonic small-disturbance theory, blunt-body theory, boundary layers and shock waves in real gases, heat and mass transfer, testing facilities and experiment. Not offered 1994–95.

Ae 235. Rarefied Gasdynamics. *9 units; first term.* Molecular description of matter; distribution functions; discrete-velocity gases. Kinetic theory: free-path theory, internal degrees of freedom. Boltzman equation: BBGKY hierarchy and closure, H Theorem, Euler equations, transport equations, Chapman-Enskog procedure. Collisionless and transitional flows. Applications. Not offered 1994–95.

Ae 236. Separated Flows. *9 units (3-0-6); third term.* Topics include a review of boundary layer theory, Kirchhoff model of separation, triple-deck theory, Sychev model, effect of turbulence on separation, location of separation points in various practical applications, classes of three-dimensionality, separation in three-dimensional steady flow, topological structure of steady three-dimensional separation, open separation, local solutions, and shock-wave boundary-layer interaction. Instructor: Hornung.

Ae 237 ab. Nonsteady Gasdynamics. *9 units (3-0-6); first and second terms.* Gasdynamic discontinuities in liquids, solids, and gases. Waves with phase change and nonadiabatic flows. Shock and detonation wave stability. Continuous nonsteady waves. Wave interactions in one- and two-dimensional flow. Boundary layers in nonsteady flow. Applications and shock tube techniques. Instructor: Sturtevant.

Ae 238. Sources of Vorticity. 9 units (3-0-6); second term. Torque exerted on element of fluid by stress distribution. Conditions at a solid boundary. The baroclinic torque, compressibility, stratification. Effects of viscoelasticity and turbulence. Accelerated reference frames, and body forces. Unorthodox boundary conditions. Vorticity production due to discretization errors in numerical computations. Instructor: Hornung.

Ae 239 ab. Fluid Dynamic Stability and Turbulence. 9 units (3-0-6); first, second terms. Prerequisites: Ae/APh 101 abc; AM 125 abc or AMa 101 abc (AM 125 or AMa 101 may be taken concurrently). Convective and absolute instability. Local and global instability. Examples include Kelvin-Helmholtz, Rayleigh-Taylor instability. Rayleigh and Orr-Sommerfeld equations. Laminar stability of parallel shear flows as a guide to transition to turbulence. Stability of subsonic and supersonic shear flows. Acoustic modes for compressible shear flows. Scaling arguments for turbulent shear flows. Jets, mixing layers, and boundary layers. Homogeneous isotropic turbulence and structure of the fine scales. The problem of closure. Physical and spectral models. Vortex dynamics. Large-scale computation. Not offered 1994-95.

Ae 240. Special Topics in Fluid Mechanics. Units to be arranged; third term. Subject matter changes depending upon staff and student interest. Not offered 1994-95.

Ae 241. Special Topics in Experimental Fluid and Solid Mechanics. 9 units (3-0-6). Prerequisites: Ae/APh 104 or equivalent or instructor's permission. Selected topics, to be announced, subject matter depending on current interests. Not offered 1994-95.

ANTHROPOLOGY

An 22. Introduction to the Anthropology of Development. 9 units (3-0-6); first term. Introduction to the study of social change in contemporary tribal and peasant societies. Emphasis on the impact of modernization, especially through urbanization, industrialization, and the intensification of agriculture. Instructor: Scudder.

An 101. Selected Topics in Anthropology. 9 units (3-0-6). Instructors: Staff and visiting lecturers.

An 123. The Anthropology of Rapid Social Change. 9 units (3-0-6); second term. Prerequisite: An 22. Detailed studies of selected peasant and tribal societies in developing areas, focusing on two types of rapid social change: that which is induced from outside through the efforts of government and other planning organizations, and that which is induced from within through local experimentation, innovation, revitalization, and migration. Instructor: Scudder.

An 124. The Evolution and Current Status of Small-Scale Human Societies. 9 units (3-0-6); third term. Prerequisite: An 22, or consent of instructor. Lectures, reading, and student projects deal with current efforts of indigenous people to raise living standards while maintaining cultural integrity. To illustrate the issues involved, the principal requirement of the course is for students working in two groups to design a ten-year development program for the Navajo Nation within the United States. Instructor: Scudder.

APPLIED MATHEMATICS

AMa 95 abc. Introductory Methods of Applied Mathematics. 12 units (4-0-8); first, second, third terms. Prerequisites: Ma 1 abc, Ma 2 abc, or equivalents. Introduction to: functions of complex variables; linear ordinary differential equations; special functions; eigenfunction expansions; integral transforms; linear partial differential equations and boundary-value problems. Instructors: Saffman, Meiron.

AMa 98 abc. Selected Topics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 2.

a,b Introduction to nonlinear problems. Special methods for solving ordinary and partial differential equations. Applications to nonlinear oscillations, shock waves, solitons.

c Difference-differential equations. Applications to traffic flow, random walks, branching processes, birth and death processes. Not offered 1994–95.

AMa 101 abc. Methods of Applied Mathematics I. 9 units (3-0-6); first, second, third terms. Prerequisite: AMa 95 or Ma 109. Review of basic complex variable analysis; asymptotic expansions; ordinary linear differential equations; Sturm-Liouville theory; eigenfunction expansions; integral transforms; special functions; integral equations; introduction to partial differential equations; elementary theory of nonlinear differential equations. Instructor: Whitham.

AMa 104. Matrix Theory. 9 units (3-0-6); first term. Prerequisite: AMa 95 or equivalent. Linear transforms, theory of linear vector spaces, Hilbert spaces. Matrix calculus, vector and matrix norms. Eigenvalue and eigenvector theory, canonical forms, singular value decompositions, inverses and pseudo-inverses, computational linear algebra. Instructor: Fey.

AMa 105 ab. Introduction to Scientific Computing. 11 units (3-2-6); second, third terms. Prerequisites: AMa 95 and 104 or equivalent. Numerical linear algebra. Approximation theory. Numerical integration. Numerical solution of ordinary differential equations. Introduction to numerical solution of partial differential equations. Linear programming. Computer assignments will be given. Instructor: Fey.

AMa / CS 132 abc. Concurrent Scientific Computing. 9 units (3-3-3); first, second, third terms. *Prerequisites:* basic knowledge of numerical methods and some programming experience. A course on the application of computers to scientific computing problems. A variety of numerical methods and their implementation on several architectures will be discussed. Homework assignments will include a project on a concurrent computer. Topics: linear algebra computations, fast Fourier transform, multigrid, conjugate gradient, vortex and Monte Carlo methods; vector processors, parallel machines with local and shared memory. Not offered 1994–95.

AMa 151 abc. Perturbation Methods. 9 units (3-0-6); first, second, third terms. *Prerequisite:* AMa 101 or equivalent; may be taken concurrently with instructor's permission. Uniformly valid approximations in various physical problems. Generalized boundary-layer technique. Coordinate straining techniques; Poincaré's method. Problems with several time scales; averaging techniques; method of Krylov Bogoliubov. Eigenvalue problems. Examples taken from various fields of science. Instructor: Balk.

AMa 152 abc. Linear and Nonlinear Wave Propagation. 9 units (3-0-6). *Prerequisite:* AMa 101 or equivalent; may be taken concurrently with instructor's permission. Mathematical formulation, hyperbolic equations, characteristics, shocks. Combined effect of nonlinearity and diffusion. Wave propagation with relaxation effects. Dispersive waves, group velocity, geometry of waves, nonlinear dispersive waves. Inverse scattering and the theory of solitons. Not offered 1994–95.

AMa 153 abc. Stochastic Processes. 9 units (3-0-6); first, second, third terms. *Prerequisite:* AMa 95 or Ma 108. Basic probability and probabilistic approximations; applications to stochastic population theories and stochastic epidemics. Markov chains, random walks and discrete potentials, Brownian motion. Correlations, power spectra, and application to filtering and prediction of stationary processes. Stochastic differential equations, use of Fokker-Planck and Kolmogorov equations. Markov-process methods. Instructor: Franklin.

AMa 156. Numerical Analysis of Ordinary Differential Equations. 11 units (3-2-6); second term. *Prerequisites:* AMa 95, AMa 104, and AMa 105 or equivalent. Theory of numerical techniques for linear and nonlinear initial and boundary-value and eigenvalue problems. The discussion of the numerical techniques will focus on consistency, accuracy, stability, stiffness, numerical efficiency, etc. Stiff equations and multiple time scales. Computer assignments will be given. Not offered 1994–95.

AMa 161 abc. Applied Functional Analysis. 9 units (3-0-6). *Prerequisites:* AMa 101 or equivalent. Introduction to Hilbert and Banach spaces; Sobolev spaces. Distribution theory, spectral theory for self-adjoint operators, degree theory, bifurcation. Linear and nonlinear partial differential equations with applications in fluid dynamics and materials science. Reaction-diffusion equations, theory of shock waves, Navier-Stokes equations, homogenization theory, phase transitions, and numerical analysis. Instructor: Hou.

AMa 181 ab. Mathematical Programming and Game Theory. 9 units (3-0-6); second, third terms. *Prerequisite:* AMa 104 or equivalent. Computer algorithms for linear programming: simplex, Khachian, Karmarkar. Duality; perturbation theory; combinatoric optimization by integer programming; Gomory's

method; multi-objective programming; two-person games. Fixed-point theorems of Brouwer, Kakutani, and Schauder. Nash's theorem for n -person games. Kuhn-Tucker theory; quadratic and geometric programming; computer algorithms for nonlinear programming. Not offered 1994–95.

AMa 190. Reading and Independent Study. *Units by arrangement.* Graded pass/fail only.

AMa 201 ab. Methods of Applied Mathematics II. *9 units (3-0-6); second, third terms. Prerequisite: AMa 101 or equivalent; may be taken concurrently with instructor's permission.* Integral equations. Volterra and Fredholm theory; Hilbert-Schmidt theory; variational characterization. Singular integral equations. Cauchy kernels; Hilbert transforms; Hilbert and Riemann problems. Special techniques. Applications to problems in physics. Not offered 1994–95.

AMa 204 abc. Numerical Methods for Differential and Integral Equations. *9 units (3-0-6); first, second, third terms. Prerequisites: AMa 95, AMa 104, and AMa 105, or equivalent.* Theoretical and practical study of methods for approximate solution of various linear and nonlinear ordinary and partial differential and integral equations with the use of digital computers. Not offered 1994–95.

AMa 220 abc. Bifurcation Theory and Nonlinear Boundary-Value Problems. *9 units (3-0-6). Prerequisite: Some knowledge of differential equations.* Theory and applications of bifurcation and nonlinear boundary-value problems in mechanics, fluid dynamics, and nonlinear diffusion processes. Lyapounov-Schmidt theory; multiple bifurcations and Newton's polygons; extension of bifurcated branches, secondary bifurcation, perturbed bifurcation, and imperfection sensitivity; Hopf bifurcation of periodic solutions; chaos; nonlinear boundary-value and eigenvalue problems; monotonicity methods; stability theory; degree theory; numerical applications and path following. Instructor: Keller.

Ae/AMa 232 abc. Computational Fluid Dynamics. *9 units (3-0-6).* For course description, see Aeronautics.

AMa 251 abc. Advanced Fluid Mechanics. *9 units (3-0-6); first, second, third terms. Prerequisites: Ae/APh 101 abc or CE/ME 101 abc; AM 125 abc or AMa 101 abc (may be taken concurrently).* For course description, see Aeronautics, Ae 201.

AMa 260 abc. Special Topics in Continuum Mechanics. *9 units (3-0-6); first, second, third terms. Prerequisites: Ae/APh 101 or CE/ME 101, AMa 101, or equivalent, and instructor's permission.* An introduction to the basic concepts of the theories of flows of current interest. Rotating and stratified flow and applications to geophysical fluid dynamics. Further topics depending upon class interest. Not offered 1994–95.

AMa 261 a. Special Topics in Nonlinear Wave Propagation. *9 units (3-0-6); first term. Prerequisites: AMa 101 and instructor's permission.* Inverse scattering and related techniques for the study of nonlinear waves. Solitons and their interactions. Multiphase nonlinear waves. Recent developments in these areas. Not offered 1994–95.

AMa 290. Applied Mathematics Colloquium. *Units by arrangement.*

AMa 300. Research in Applied Mathematics. *Units by arrangement.*

APPLIED MECHANICS

AM 35 abc. Statics and Dynamics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ma 1 abc, Ph 1 abc. Introduction to statics and dynamics of rigid and deformable bodies. Equilibrium of force systems, principle of virtual work, distributed force systems, friction, static analysis of rigid and deformable structures, kinematics, particle dynamics, rigid-body dynamics, dynamics of deformable systems, vibrating systems, Lagrange's equations, and Hamilton's principle. Instructor: Beck.

AM 96 abc. Applied Dynamics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ph 1 abc, Ma 1 abc. Basic principles and applications of classical mechanics. Analytical description of motion, including relative motion. Particle mechanics, including energy and momentum principles. Generalized coordinates, principle of virtual work, stability, Lagrange's equations, and Hamilton's principle. Rigid-body dynamics. Response of mechanical systems to periodic and transient excitations. Applications to such problems as planetary motion, effects of the earth's rotation, rocket motion, impact, gyroscopic motions, vibration isolation, vibration instrumentation, etc. Not offered 1994-95.

AM 97 abc. Analytical Mechanics of Deformable Bodies. 9 units (3-0-6); first, second, third terms. Prerequisites: Ph 1 abc and Ma 2 abc. Introduction to the theory of stress and strain in solid bodies. Applications to beams, columns, plates and shells, torsion, inelastic behavior, numerical and experimental stress analysis, wave propagation, energy methods of analysis. Not offered 1994-95.

Ae/AM/CE 102 abc. Mechanics of Structures and Solids. 9 units (3-0-6). For course description, see Aeronautics.

CE/Ae/AM 108 abc. Computational Mechanics. 9 units (3-0-6). For course description, see Civil Engineering.

AM 113 abc. Introductory Engineering Mathematics. 12 units (4-0-8); first, second, third terms. Prerequisite: elementary calculus. Alternative to AM 114 abc, including review of concepts and techniques from calculus and ordinary differential equations. Introduction to complex variables and applications. Illustrative examples of boundary-value problems for the Laplace equation, the heat equation, and the wave equation. Not offered 1994-95.

AM 114 abc. Engineering Mathematics. 12 units (4-0-8); first, second, third terms. For graduate students who have not had the equivalent of AMa 95 abc. Prerequisite: Ma 1 abc, Ma 2 abc, or equivalent. Includes: basic theory of complex variables and applications, such as conformal mapping, linear differential equations, and special functions; Fourier series and Fourier integrals; solution of boundary-value problems for partial differential equations by separation of variables and by integral transforms. Instructor: Duan.

AM 125 abc. Engineering Mathematical Principles. 9 units (3-0-6); first, second, third terms. Prerequisite: AMa 95 abc, AM 113 abc, or AM 114 abc. Topics include linear spaces, operators and matrices, integral equations, variational principles, differential equations, stability, perturbation theory. Applications to problems in engineering and science are stressed. Instructor: Caughey.

AM 135 abc. Mathematical Elasticity Theory. 9 units (3-0-6); first, second, third terms. *Prerequisite:* instructor's permission. Cartesian tensors. Kinematics and kinetics of continuous media, constitutive relations for elastic solids. Fundamental problems and related theorems of linearized elastostatics and elastodynamics. Integration theory and applications to specific problems of engineering interest. Instructor: Bhattacharya.

AM 136 abc. Advanced Mathematical Elasticity Theory. 9 units (3-0-6); first, second, third terms. *Prerequisite:* AM 135 abc or equivalent. Topics drawn from the more advanced linear theory and nonlinear theory. Specific content varies according to interests of students and instructor. Not offered 1994–95.

AM 151 abc. Dynamics and Vibrations. 9 units (3-0-6); first, second, third terms. *Prerequisite:* AMa 95 abc, AM 113 abc, or AM 114 abc, or instructor's permission. Variational principles and Lagrange's equations. Response of mechanical systems to periodic, transient, and random excitation. Free and forced response of discrete and continuous systems. Approximate analysis methods. Introduction to nonlinear oscillation theory and stability. Instructor: Iwan.

Ae/AM 160 abc. Continuum Mechanics of Fluids and Solids. 9 units (3-0-6). For course description, see Aeronautics.

AM 175 abc. Advanced Dynamics. 9 units (3-0-6); first, second, third terms. *Prerequisites:* AM 125 abc and AM 151 abc or equivalents. Topics include linear and nonlinear vibrations of discrete and continuous systems, stability and control of dynamical systems, and stochastic processes with applications to random vibrations. Not offered 1994–95.

AM 176 abc. Nonlinear Dynamical Systems and Chaos. 9 units (3-0-6); first, second, third terms. *Prerequisites:* AM 125 abc, or instructor's permission. Basic ideas from dynamical systems theory. One-dimensional maps, circle maps, rotation numbers, kneading theory, strange attractors, structural stability, hyperbolicity, symbolic dynamics, invariant manifolds, Poincaré maps, the Smale horseshoe. Techniques of local bifurcation theory are developed with emphasis on center manifolds and normal forms, global bifurcations, chaos, homoclinic and heteroclinic motions. Applications will be taken from a variety of areas, including fluid mechanics, structural mechanics, control theory, circuit theory, orbital mechanics, condensed-matter physics, and classical field theory. Not offered 1994–95.

AM 200. Special Problems in Advanced Mechanics. *Hours and units by arrangement.* By arrangement with members of the staff, properly qualified graduate students are directed in independent studies in mechanics.

Ae/AM 209 abc. Seminar in Solid Mechanics. 1 unit (1-0-0). For course description, see Aeronautics.

Ae/AM/MS 213 ab. Mechanics and Materials Aspects of Fracture. 9 units (3-0-6). For course description, see Aeronautics.

Ae/AM 215. Dynamic Behavior of Materials. 9 units (3-0-6). For course description, see Aeronautics.

AM/Ae 220 ab. Elastic Stability of Structures and Solids. 9 units (3-0-6); second, third terms. *Prerequisite:* Instructor's permission. Introduction to the notions of

stability and bifurcation of elastic systems using simple examples. Koiter's general asymptotic theory for the buckling, post-buckling, mode interaction, and imperfection sensitivity in elastic systems. One-dimensional problems include the elastica, thin-walled beams, circular arches, trusses, and frames. Two-dimensional examples include flat plates with simple or multiple buckling loads and circular cylinders under lateral pressure or axial compression. Extension to continuum solid mechanics includes plane strain and simple three-dimensional problems. Instructor: Triantafyllidis.

Ae/AM 223 ab. Plasticity. 9 units (3-0-6). For course description, see Aeronautics.

Ae/AM 225. Special Topics in Solid Mechanics. Units to be arranged. For course description, see Aeronautics.

AM 250 abc. Research in Applied Mechanics. Hours and units by arrangement. Research in the field of applied mechanics. By arrangement with members of the staff, properly qualified graduate students are directed in research.

APPLIED PHYSICS

Aph 9 ab. Solid-State Electronics for Integrated Circuits. 6 units (2-2-2); first, second terms; six units credit for the freshman laboratory requirement. Introduction to solid-state electronics, including physical modeling and device fabrication. Topics: semiconductor crystal growth and device fabrication technology, carrier modeling, doping, generation and recombination, pn junction diodes, MOS capacitor and MOS transistor operation, and deviations from ideal behavior. Laboratory includes computer-aided layout, and fabrication and testing of light-emitting diodes, transistors, and inverters. Students learn photolithography, and use of vacuum systems, furnaces, and device-testing equipment. Instructor: Scherer.

Aph 17 abc. Thermodynamics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ma 1 abc, Ph 1 abc. Introduction to the use of thermodynamics and statistical mechanics in physics and engineering. Entropy, temperature, and the principal laws of thermodynamics. Canonical equations of state. Applications to cycles, engines, phase and chemical equilibria. Probability and stochastic processes. Kinetic theory of perfect gases. Statistical mechanics. Applications to gases, gas degeneration, equilibrium radiation, and simple solids. Instructor: Dimotakis.

Aph 23. Demonstration Lectures in Optics. 6 units (2-0-4); first term. Prerequisite: Ph 1 abc. Nine lectures cover fundamentals of optics with emphasis on modern optical applications, intended to exhibit basic optical phenomena including interference, dispersion, birefringence, diffraction, and laser oscillation, and the applications of these phenomena in optical systems employing two-beam and multiple-beam interferometry, Fourier-transform image processing, holography, electro-optic modulation, and optical detection and heterodyning. System examples to be selected from optical communications, radar, and adaptive optical systems. Instructor: Vahala.

Aph 24. Introductory Modern Optics Laboratory. 6 units; second term. *Prerequisite:* Aph 23. Laboratory experiments to acquaint students with the contemporary aspects of modern optical research and technology. Experiments encompass many of the topics and concepts covered in Aph 23. Instructor: Vahala.

Aph 25. Introductory Quantum Mechanics. 9 units (3-0-6); third term. *Prerequisites:* Ph 2 ab, Ma 2 ab, or equivalents. Introduction to quantum mechanics: Schrödinger equation, uncertainty principle, postulates of quantum mechanics, wave packets, dispersion, abrupt potentials, harmonic oscillator, angular momentum. Instructor: Vahala.

Aph 77 bc. Laboratory in Applied Physics. 9 units; second, third terms. Selected experiments chosen to familiarize students with laboratory equipment, procedures, and characteristic phenomena in plasmas, fluid turbulence, fiber optics, X-ray diffraction, microwaves, high-temperature superconductivity, black-body radiation, holography, and computer interfacing of experiments. Instructor: Gould.

Aph 78 abc. Senior Thesis, Experimental. 9 units; first, second, third terms. *Prerequisite:* instructor's permission. Supervised experimental research experience, open only to senior applied physics majors. Requirements will be set by individual faculty members, but will include a written report based upon actual laboratory experience. The selection of topic and the final report must be approved by the Applied Physics Undergraduate Committee. Students desiring additional units should register in Aph 100. Not offered on a pass/fail basis. Instructors: Gould and the applied physics faculty.

Aph 79 abc. Senior Thesis, Theoretical. 9 units; first, second, third terms. *Prerequisite:* instructor's permission. Supervised theoretical research experience, open only to senior applied physics majors. Requirements will be set by individual faculty members, but will include a written report based upon actual laboratory experience. The selection of topic and the final report must be approved by the Applied Physics Undergraduate Committee. Not offered on pass/fail basis. This course cannot be used to satisfy the laboratory requirement in Aph. Instructors: Gould and the applied physics faculty.

Aph 100. Advanced Work in Applied Physics. Special problems relating to applied physics, arranged to meet the needs of students wishing to do advanced work. Primarily for undergraduates. Students should consult with their advisers before registering. Graded pass/fail.

Ae/Aph 101 abc. Fluid Mechanics. 9 units (3-0-6). For course description, see Aeronautics.

Ae/Aph 104 abc. Experimental Methods. 9 units (3-0-6 first term; 1-3-5 second and third terms). For course description, see Aeronautics.

Aph 105 abc. States of Matter. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Aph/ME 17 abc or equivalent. A survey emphasizing unifying concepts, such as order parameters, scaling laws, quasi-particle excitations, and correlation functions. Topics: long-range ordered states such as crystals, superfluids, and ferromagnets; phase transitions; critical phenomena; ideal classical and degenerate gases; theory of liquids; band theory of solids; fluctuations; noise. Instructor: Johnson.

APh 107. Advanced Dynamics. 9 units (3-0-6); third term. *Prerequisite:* dynamics at level of Ph 106 ab. Review of Hamilton and Hamilton-Jacobi formalisms; integrable systems; continuous and discrete dynamics (maps); the KAM analysis; solitons; dissipative systems and fractal sets; a variety of examples. Instructor: Corngold.

APh 110. Topics in Applied Physics. 2 units (2-0-0); first, second terms. A seminar course designed to acquaint juniors and first-year graduate students with the various research areas represented in the option. Lecture each week given by a different faculty member of the option, reviewing, in general terms, his or her field of research. Graded pass/fail. Instructors: Bellan and applied physics faculty.

APh 114 abc. Solid-State Physics. 9 units (3-0-6); first, second, third terms. *Prerequisite:* APh 50 or Ph 98 abc or equivalent. Introductory lecture and problem course dealing with experimental and theoretical problems in solid-state physics. Topics include crystal structure, symmetries in solids, lattice vibrations, electronic states in solids, transport phenomena, semiconductors, superconductivity, magnetism, ferroelectricity, defects, and optical phenomena in solids. Instructor: McGill.

APh/MS 122. Diffraction Theory and Applications. 9 units (3-0-6); second term. *Prerequisite:* instructor's permission. Principles of electron and X-ray diffraction, and applications in characterizing materials. Topics include: Scattering and absorption of electrons and X-rays by atoms, anomalous scattering. The transmission electron microscope (TEM) and the X-ray diffractometer. Kinematical theory of diffraction: mathematical and graphical treatments; effects of strain, size, disorder, and temperature; bright field and dark field TEM imaging of crystal defects. Dynamical theory of diffraction: Darwin's theory; Bethe's theory; defect contrast in TEM. Special topics in TEM. Instructor: Fultz.

APh 124. Advanced Modern Optics Laboratory. 9 units; third term. *Prerequisites:* APh 24, APh 130, APh 131 (or APh 190 ab). Laboratory experiments covering both active and passive optical devices and topics relevant to their use in modern optical systems. Topics covered include propagation effects in optical fibers; fiber-optic traveling-wave amplifiers; gain saturation and saturation dynamics in optical amplifiers; sources for fiber-optic systems including semiconductor lasers and fiber lasers; direct modulation, external modulation of laser sources; noise in laser sources. Not offered 1994–95.

APh 125 abc. Quantum Mechanics of Matter. 9 units (3-0-6); first, second, third terms. *Prerequisite:* APh 25. Quantum mechanics and applications to problems in solids, liquids, and gases. Topics: central force problems; hydrogen atom; multielectron atoms; approximation methods: time-independent and time-dependent perturbation theory, variational method, WKB approximation; eigenstates of molecules; theories for chemical bonding; optical transitions in matter; scattering: Born approximation, partial wave expansions, electron and photon scattering in matter; the electromagnetic field; quantum theory of crystalline solids. Instructors: Atwater, Vahala.

APh/EE 130. Introduction to Optoelectronics. 9 units (3-0-6); first term. *Prerequisites:* APh 23, 24 or instructor's permission. Introduction to phenomena, devices, and applications of optoelectronics. Gaussian beam propagation, optical reso-

nators. Interaction of light and matter, laser rate equations, mode-locking, Q-switching; selected specific lasers. Instructor: Bridges.

APh/EE 131. Optoelectronic Devices. 9 units (3-0-6); second term. Prerequisite: APh/EE 130 or instructor's permission. Semiconductor lasers; propagation of light in crystals; electro-optic effects and their use in the modulation of light; optical detectors and amplifiers; noise characterization of optoelectronic devices; introduction to nonlinear optics. System design considerations, with examples selected from optical communications, radar, and other applications. Instructor: Bridges.

APh/EE 132. Fourier Optics. 9 units (3-0-6); third term. Prerequisite: APh 95 abc. Fourier transform techniques are used to describe light propagation through homogeneous media and thin optical elements (lenses, gratings, holograms); applications to modern optical systems are discussed. Topics: scalar diffraction theory; the lens as a Fourier transforming element; coherent and incoherent imaging; optical information processing systems; holography. Instructor: Psaltis.

APh/CNS/EE 133. Optical Computing. 9 units (3-0-6); second term. Prerequisite: APh/EE 132 or equivalent exposure to optics. An introductory course in devices and techniques used for the optical implementation of information processing systems. Subjects to be covered include optical linear transformations, nonlinear optical switching devices, holographic interconnections, optical memories, photorefractive crystals, and optical realizations of neural computers. Offered in alternate years; not offered 1994-95.

APh/MS 140. Ion Beam Modification and Analysis of Materials. 6 units (2-0-4); first term. Introduction to ion-solid interactions as applied to the modification of thin films and to the structural and compositional analysis of materials. Topics: collision kinematics, interatomic potentials, scattering cross sections, stopping cross sections, energy straggling, transport theory, ion ranges. Applications to backscattering spectrometry: energy and mass resolution, scattering geometry, evaluation of spectra, channeling. Applications to materials modification: ion implantation, mixing, sputtering, amorphization. Not offered 1994-95.

APh/MS 141 abc. Ion Beam Analysis Laboratory. 5 units (0-4-1); first, second, third terms; no more than two terms for credit. Prerequisite or concurrently: APh 140. Laboratory instruction in the use of backscattering spectrometry for the characterization of materials. Operation of solid-state detector and electronics chains. System calibration. Recording of spectra. Quantitative evaluation of spectra. Channeling in single crystalline films and bulk crystals. Instructors: Atwater, Nicolet.

APh 150. Topics in Applied Physics. Units and term to be arranged. Content will vary from year to year, but at a level suitable for advanced undergraduate or beginning graduate students. Topics are chosen according to the interests of students and staff. Visiting faculty may present portions of this course. Instructors: Staff.

APh 156 abc. Plasma Physics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 106 abc or equivalent. An introduction to the principles of plasma physics, including orbits of charged particles in electric, magnetic, and gravitational

fields; continuum magnetohydrodynamics and elementary stability theory; transport processes such as conductivity and diffusion, Vlasov equation, waves, and oscillations in plasmas. Examples from plasmas used in controlled thermonuclear fusion research (e.g., tokamaks, mirrors, pinches). Instructor: Bellan.

EE/Aph 180. Solid-State Devices. 9 units (3-0-6). For course description, see Electrical Engineering.

Aph 181 ab. Physics of Semiconductors and Semiconductor Devices. 9 units (3-0-6); *first, second terms*. Introduction to the concepts of semiconductor devices, based on underlying physical properties of semiconductors. Electronic and chemical equilibrium in the bulk semiconductor and near interfaces, e.g., pn junctions, surfaces. Kinetics of carrier generation-recombination and transport to first order. Traditional and novel methods of device fabrication. Applications will be made to a wide variety of devices, and attention given to feasible schemes for device construction. Not offered 1994-95.

Aph 190 abc. Quantum Electronics. 9 units (3-0-6); *first, second, third terms*. *Prerequisite: Ph 125, or equivalent*. Generation, manipulations, propagation, and applications of coherent radiation. The basic theory of the interaction of electromagnetic radiation with resonant atomic transitions. Laser oscillation, important laser media, Gaussian beam modes, the electro-optic effect, nonlinear-optics theory, second harmonic generation, parametric oscillation, stimulated Brillouin and Raman scattering. Other topics include: light modulation, diffraction of light by sound, integrated optics, phase conjugate optics, and quantum noise theory. Instructor: Yariv.

Aph 200. Applied Physics Research. *Units in accordance with work accomplished*. Offered to graduate students in applied physics for research or reading. Students should consult their advisers before registering. Graded pass/fail.

Aph 214 abc. Advanced Solid-State Physics. 9 units (3-0-6); *first, second, third terms*. *Prerequisites: Aph 114 abc and Ch 125 abc or Ph 125 abc*. Course in experimental and theoretical solid-state physics. Topics: phonons; electronic excitation in solids; electron-phonon interactions; optical transport and magnetic properties; superconductivity; ferroelectricity. Emphasis will be mainly theoretical, with frequent comparison between theoretical predictions and experimental results. Not offered 1994-95.

Ph/Aph 223 abc. Topics in Condensed Matter Physics. 9 units (3-0-6). For course description, see Physics.

Aph 250. Advanced Topics in Applied Physics. *Units and term to be arranged*. Content will vary from year to year; topics are chosen according to interests of students and staff. Visiting faculty may present portions of this course. Instructors: Staff.

Aph 300. Thesis Research in Applied Physics. *Units in accordance with work accomplished*. Aph 300 is elected in place of Aph 200 when the student has progressed to the point where his or her research leads directly toward a thesis for the degree of Doctor of Philosophy. Approval of the student's research supervisor and department adviser or registration representative must be obtained before registering. Graded pass/fail.

ART HISTORY

These courses are open only to students who have fulfilled the freshman humanities requirement.

Art 101. Selected Topics in Art History. *9 units (3-0-6).* *Advanced credit to be determined on a course-by-course basis by the instructor.* Instructors: Staff.

Art 103. Ancient Art: From the Pyramids to the Colosseum. *9 units (3-0-6).* A survey of the art of the earliest civilizations of the Ancient Near East and Mediterranean from the Bronze Age to approximately A.D. 300. The major monuments—architectural, sculptural, and pictorial—of Mesopotamia, Egypt, the Aegean, Greece, and Rome will be examined as solutions to problems of form and function presented by communal political, economic, and religious life. Emphasis will be placed on the creation of Graeco-Roman art, the foundation of the Western artistic tradition. The course will include one or more study trips to the Getty Museum. Instructors: Staff.

Art 106. The Age of the Great Cathedrals. *9 units (3-0-6).* A study of Western European artistic developments from the disintegration of the Roman world, circa A.D. 476, to the age of the great cathedrals through the 14th century. The period is art-historically divided into four general categories: early Christian, Carolingian, Romanesque, and Gothic. The diverse historical forces at work during this long period produced a correspondingly varied art. Major monuments of architecture, such as the cathedrals of Notre Dame, Chartres, Reims, Cologne, Strasbourg, and Westminster, as well as sculpture, illuminated manuscripts, mosaics, panel painting, and stained glass will be examined within the aesthetic and social framework of countries as culturally diverse as France, Italy, Germany, Spain, and Britain. Instructor: Howard.

Art 108. Italian Renaissance Art. *9 units (3-0-6).* A basic study of the greatest achievements of Italian painting, sculpture, and architecture in the 15th and 16th centuries. Masterpieces by a succession of artists such as Giotto, Masaccio, Brunelleschi, Donatello, Alberti, the Bellini, Leonardo da Vinci, Michelangelo, Raphael, Titian, Veronese, and others will be examined for their formal beauty and power, and studied as manifestations of individual genius in the context of their time and place: Italy, fragmented politically, yet at the peak of its cultural dominance. Instructor: Howard.

Art 109. Northern European Art: 1400–1650. *9 units (3-0-6).* A comprehensive survey of artistic developments in Northern Europe from the late middle ages through the Renaissance and baroque periods. The course will focus upon the complexity of northern art, from its origins in the still forceful medieval culture of 15th-century Flanders, to its confrontation with Italian Renaissance humanism in the 16th century. The effects of this cultural synthesis and the eventual development of distinct national schools of painting in the 17th century are examined through the works of the period's dominant artists, including Van Eyck, Dürer, Brueghel, Holbein, Rubens, Van Dyck, Hals, and Rembrandt. Instructor: Howard.

Art 110. Baroque Art. *9 units (3-0-6).* A survey of the arts of painting, sculpture, and architecture from the late 16th century to the late 18th century. A confident and optimistic age, the baroque fostered the rise of national schools that produced artistic giants like Bernini, Caravaggio, Rubens, Rembrandt, Velasquez, Claude, Poussin, Tiepolo, and Guardi. The masterpieces of these and other artists reflect the wide variety of baroque art and will be studied within the context of certain commonly held ideals and of the differing economic, political, and religious systems that characterized the period. Instructor: Howard.

Art 111. European Art of the 18th Century: From the Rococo to the Rise of Romanticism. *9 units (3-0-6).* Course will encompass 18th-century European painting, sculpture, architecture, and the decorative arts. During this period a variety of styles and subjects proliferated in the arts, as seen in the richly diverse works of artists such as Watteau, Boucher, Chardin, Fragonard, Tiepolo, Canaletto, Hogarth, Gainsborough, Blake, David, Piranesi, and Goya, which reflect a new multiplicity in ways of apprehending the world. Instructor: Bennett.

Art 112. British Art of the Georgian Period. *9 units (3-0-6).* Introduction to the visual arts and to vocabularies of analysis for the study of painting, through an in-depth study of British art of the Georgian period, in the Huntington Art Gallery collection. Instructor: Bennett.

Art 115. Art of the 19th Century. *9 units (3-0-6).* A survey of 19th-century art with an emphasis on French painting created between 1780 and 1880. The lectures will focus on issues such as the new image of the artist, the tension between public and private statements in the arts, the rise of landscape painting, the development of the avant-garde, and paintings of modern life during this period. Instructor: Bennett.

Art 118. Art of the 20th Century. *9 units (3-0-6).* A survey of European and American painting, sculpture, and architecture of the 20th century. The lectures will focus on issues such as the ways in which artists tried, succeeded, or failed to fit together personal and public meaning in their art, the problems facing architects in an industrial society, the claims and strategies of the avant-garde, why art became abstract, and what is meant by the claim during this period that "art is dead." Discussion will center on the relationship between art and politics, technology, and individual artistic expression. Instructors: Staff.

Art 125. History of Western Architecture. *9 units (3-0-6).* A survey of major developments in Western architecture and urbanism from the classical civilizations of Greece and Rome to the 20th century. The course focuses upon the visual, spatial, and functional properties and the cultural significance of key building types ranging from Greek temples, Roman civil and administrative structures, Gothic cathedrals, Renaissance and baroque churches and city palaces, to the technology-based skyscrapers and other forms of 20th-century modernism. Instructor: Howard.

Art 150. The Arts of Dynastic China. *9 units (3-0-6).* A survey of the development of Chinese art in which the major achievements in architecture, sculpture, painting, calligraphy, and ceramics will be studied in their cultural contexts from prehistory through the Manchu domination of the Qing Dynasty (1644-1911). Emphasis will be placed on the aesthetic appreciation of Chinese art as molded by the philosophies, religions, and history of China. Instructors: Staff.

Art 151. Traditions of Japanese Art. 9 units (3-0-6). An introduction to the great traditions of Japanese art from prehistory through the Meiji Restoration (1868-1912). Students will examine major achievements of sculpture, painting, temple architecture, and ceramics as representations of each artistic tradition, whether native or adapted from foreign sources. Fundamental problems of style and form will be discussed, but aesthetic analysis will always take place within the conditions created by the culture. Instructors: Staff.

ASTRONOMY

Ay 1. Introduction to Astronomy. 9 units (3-1-5); second term. Primarily for freshmen; a survey of astronomy and astrophysics, with emphasis on the application of physics in astronomy. Laboratory includes familiarization with the 14-inch Celestron telescope, and the use of a CCD camera to measure the relative intensities of stars. Instructor: Schmidt.

Ay 20. Basic Astronomy and the Galaxy. 11 units (3-2-6); first term. Prerequisites: *Ma 1 abc, Ph 1 abc.* Astronomical terminology. Stellar masses, distances, and motions. Star clusters and their galactic distributions. Stellar spectra, magnitudes, and colors. Structure and dynamics of the galaxy. Laboratory exercises, including double-star orbits and the use of an astrograph. Instructor: Scoville.

Ay 21. Galaxies and Cosmology. 9 units (3-0-6); second term. Prerequisite: *Ay 20.* The extragalactic distance scale. Clusters of galaxies. Introduction to cosmology. Balance of matter and radiation in the universe. Instructor: Readhead.

Ay 22. Solar System. 9 units (3-0-6); third term. Physics of the sun. Surface phenomena of the sun, formation of spectral lines. Solar activity, sunspots, and flares. The solar corona and solar wind. Physics of the planetary system. Planetary magnetospheres and atmospheres, surface phenomena. Comets. Instructor: Zirin.

Ay 30. Current Trends in Astronomy. 3 units (2-0-1); second term. Weekly seminar designed for sophomore astronomy majors only, held in faculty homes in the evening, to introduce students to the faculty and their research. Graded pass/fail. Instructors: Staff.

Ay 43. Reading in Astronomy and Astrophysics. *Units in accordance with work accomplished.* Student must have a definite reading plan and obtain permission of instructor before registering. Graded pass/fail.

Ay 78 abc. Senior Thesis. 9 units; first, second, third terms. Prerequisite: *to register for this course, the student must obtain approval of the Astronomy Option Representative and the prospective thesis adviser.* Open only to senior astronomy majors. This research must be supervised by a faculty member, your thesis adviser. The written thesis must be completed and approved by the adviser before the end of the third term. Students wishing assistance in finding an adviser and/or a topic for a senior thesis are invited to consult with the Astronomy Option Representative.

A grade will not be assigned in Ay 78 until the end of the third term. P grades will be given the first two terms, and then changed at the end of the course to the appropriate letter grade.

Ay 101. Physics of Stars. 11 units (3-2-6); first term. Prerequisite: Ay 20. Physics of stellar atmospheres. Properties of stars, stellar spectra, radiative transfer, line formation. Stellar structure, stellar evolution, evolution of binaries. Nucleosynthesis in stars. Stellar oscillations. Instructor: Djorgovski.

Ay 102. Physics of the Interstellar Medium. 9 units (3-0-6); second term. Prerequisite: Ay 20. An introduction to fluid mechanics, sound waves, and shock waves. Introduction to magnetohydrodynamics, Alfvén waves, and plasma waves, with applications to the interstellar medium. Supernova remnants. The interstellar magnetic field. The physics of H I and H II regions. Instructors: Sargent, Scoville.

Ay 105. Optical Astronomy Instrumentation Lab. 9 units (1-6-2); third term. Prerequisite: Ay 20. An opportunity for astronomy and physics undergraduates (juniors and seniors) to gain firsthand experience with the basic instrumentation tools of modern optical and infrared astronomy. The ten weekly lab experiments are expected to include: radiometry measurements, geometrical optics, optical aberrations and ray tracing, spectroscopy, fiber optics, CCD electronics, CCD characterization, photon counting detectors, vacuum and cryogenic technology, and stepper motors and encoders. Instructor: McCarthy.

Ay 121. Radiative Processes. 9 units (3-0-6); first term. Prerequisites: Ay 101 (undergraduates); Ph 98 or equivalent. The interaction of radiation with matter: radiative transfer, emission, and absorption. Compton processes, synchrotron radiation, collisional excitation, spectroscopy of atoms and molecules. Instructors: J. Cohen, M. Cohen.

Ay 122. Astronomical Measurements and Instrumentation. 9 units (3-0-6); second term. Prerequisite: Ph 106 or equivalent. Measurement and signal analysis techniques throughout the electromagnetic spectrum. Telescopes and interferometers; detectors and receivers; photometry and radiometry; imaging devices and image processing; spectrometers; space telescopes. Instructors: Carlstrom, Martin.

Ay 123. Stellar Structure and Early Evolution. 9 units (3-0-6); first term. Prerequisites: Ay 101 (undergraduates); Ph 98 or equivalent. Stellar structure and evolution. Polytropes, radiative transport, convection, nuclear energy generation, main sequence. Hayashi track, advanced stages of evolution, pulsations, rotation. Stellar atmospheres. Instructor: McCarthy.

Ay 124. Structure and Dynamics of Galaxies. 9 units (3-0-6); second term. Prerequisites: Ay 21 (undergraduates); Ph 106 or equivalent. Stellar dynamics and properties of galaxies; kinematics and dynamics of our galaxy; spiral structure; stellar composition, masses, and rotation of external galaxies; star clusters; galactic evolution; binaries, groups, and clusters of galaxies. Instructor: Phinney.

Ay 125. High-Energy Astrophysics. 9 units (3-0-6); third term. Prerequisites: Ay 21 (undergraduates); Ph 106 or equivalent. High-energy astrophysics and the final stages of stellar evolution; supernovae, binary stars, accretion disks, pulsars; extragalactic radio sources; active galactic nuclei; black holes. Instructors: J. Cohen, Martin.

Ay 126. Interstellar Medium. 9 units (3-0-6); third term. Prerequisite: Ay 102 (undergraduates). Physical processes in the interstellar medium. Ionization, thermal, and dynamic balance of interstellar medium, molecular clouds, hydrodynamics, magnetic fields, H II regions, supernova remnants, star formation, global structure of interstellar medium. Instructors: Carlstrom, Scoville.

Ay 127. Cosmology and Galaxy Formation. 9 units (3-0-6); third term. Prerequisites: Ay 21 (undergraduates) and Ph 106 or equivalent. Cosmology; extragalactic distance determinations; relativistic cosmological models; galaxy formation and clustering; thermal history of the universe, microwave background; nucleosynthesis; cosmological tests. Instructors: Goldreich, Sargent.

Ay 128. Solar Physics. 9 units (3-0-6); second term. Prerequisites: Ay 22 (undergraduates); Ph 106 or equivalent. The detailed structure and dynamics of the sun, including the solar interior, the neutrino problem, the photosphere, chromosphere, corona and solar wind, convection and the solar dynamo, sunspots and faculae, helioseismology, solar flares, and solar-terrestrial relations. Instructor: Zirin.

Ge/Ay 132. Atomic and Molecular Processes in Astronomy and Planetary Sciences. 9 units (3-0-6). For course description, see Geology.

Ay 141 abc. Research Conference in Astronomy. 2 units (1-0-1); first, second, third terms. These conferences consist of reports on investigations in progress at the Caltech Submillimeter, Las Campanas, Palomar, and Big Bear observatories and the Owens Valley Radio Observatory, and on other research that is of current interest. Graded pass/fail.

Ay 142. Research in Astronomy and Astrophysics. Units in accordance with work accomplished. The student should consult a member of the department and have a definite program of research outlined. Approval by the student's adviser must be obtained before registering. 36 units of Ay 142 or Ay 143 required for candidacy. Graded pass/fail.

Ay 143. Reading and Independent Study. Units in accordance with work accomplished. The student should consult a member of the department and have a definite program of reading and independent study outlined. Approval by the student's adviser must be obtained before registering. 36 units of Ay 142 or Ay 143 required for candidacy. Graded pass/fail.

Ay/EE 144. Imaging at Radio, Infrared, and Optical Wavelengths by Interferometric and Adaptive Techniques. 9 units (3-0-6); second term. The theory of coherence, interferometry, and aperture synthesis observations at radio and visible wavelengths. The technique of adaptive optics to overcome atmosphere blurring at visible wavelengths. Emphasis is given to the formation of images with limited spatial frequency coverage, to applications in astronomy, geodesy, and high-resolution imaging with large optical telescopes. Relative emphasis on interferometric imaging versus adaptive optics will vary from year to year. Instructors: Kulkarni, Shao.

Ay/Ph 145. Signal Processing and Data Analysis. 9 units (3-0-6); second term. Statistical analysis and signal processing essential to observational and to experimental science. Topics: calculus of probability, Bayes Theorem, distributions of single and multiple random variables, normal samples, parameter estimation, time series analysis of signals, Fourier transforms, convolution and correlation,

sampling and digitizing, power spectrum measurement, digital filters. Examples from astronomy and physics. Instructor: Kulkarni.

Ay 211. Extragalactic Astronomy. 9 units (3-0-6); *first term*. Course for graduate students in astronomy and physics, including discussion of recent research in extragalactic astronomy and cosmology. Given in alternate years. Not offered 1994-95.

Ay 212. Topics in Astronomy. 9 units (3-0-6); *second term*. A course for graduate students in astronomy. Topic for 1994-95 will be "Globular Clusters." Instructors: J. Cohen, Djorgovski.

Ay 215. Seminar in Theoretical Astrophysics. 9 units (3-0-6); *second term*. *Prerequisite: instructor's permission*. Seminar for advanced students on recent developments in astrophysics. Given in alternate years. Not offered 1994-95.

Ay 218. High-Energy Astrophysics. 9 units (3-0-6); *first term*. *Prerequisites: Ay 125, Ph 106, and Ph 125 or equivalent*. Topics covered vary from year to year. Topic for 1994-95 will be "Clusters and Superclusters of Galaxies." Instructors: Readhead, Sargent.

Ay 234. Seminar in Radio Astronomy. 6 units (2-0-4); *third term*. *Prerequisite: Ay 125*. Recent developments in radio, infrared, optical, X-ray, and gamma-ray studies of active galactic nuclei and quasars. Discussion will include physical models, morphological and geometric characteristics, and unification. Given in alternate years. Not offered 1994-95.

Ay 235. Research Seminar. 1 unit (1-0-0); *first term*. Will present seminars on current research interests of the astronomy faculty to graduate students during the fall term. Instructors: Staff.

BIOLOGY

Bi 7. Introduction to Modern Biology. 9 units (3-0-6); *first term*. A course designed as a survey of modern biology, including such areas as developmental biology and cell physiology. The course will serve as an introduction to more advanced offerings (Bi 8, Bi 9, etc.). It is intended both for nonmajors who want a survey of modern biology and for freshmen who intend to major in biology but need more background. Instructors: Anderson and Revel.

Bi 8. Introduction to Molecular Biology; Organization and Expression of Genetic Information. 12 units (3-3-6); *second term*. This course and its sequel, Bi 9, cover biology at the cellular level. After introducing basic concepts necessary for understanding biological systems at the molecular level, Bi 8 emphasizes cellular processes involved in the organization and expression of genetic information, including what is commonly called molecular biology, and introduces topics in developmental biology and immunology. Graded pass/fail. Instructors: Simon, Wold.

Bi 9. Cell Biology. 9 units (3-0-6); third term. Continues coverage of biology at the cellular level, begun in Bi 8. Topics: cytoplasmic structure, membrane structure and function, cell motility, and cell-cell recognition. Emphasis on both the ultrastructural and biochemical approaches to these topics. Instructors: Dunphy and staff.

Bi 10. Cell Biology Laboratory. 6 units (0-4-2); third term. Prerequisite: Bi 8; designed to be taken concurrently with Bi 9. Introduction to basic methods in cell biological research, including subcellular fractionation, practical enzymology and immunochemistry, use of radioisotopes, gel electrophoresis of proteins and nucleic acids, and light and electron microscopy. Instructor: Deshaies.

Bi 11. Organismic Biology. 9 units (3-3-3); first term. Prerequisite: Bi 9. Survey of the principal kinds of organisms and the problems they solved in adapting to various environments. Instructor: Brokaw.

Bi 22. Undergraduate Research. Units to be arranged; first, second, third terms. Special problems involving laboratory research in biology; to be arranged with instructors before registration. Graded pass/fail. Instructors: Staff.

Bi 23. Biology Tutorial. Units to be arranged; second, third terms. Study and discussion of special problems in biology, usually involving regular tutorial sessions with instructors. To be arranged through the undergraduate adviser before registration. Graded pass/fail. Instructors: Strauss and staff.

Bi 90 abc. Undergraduate Thesis. 12 or more units per term; first, second, third terms. Prerequisites: 18 units of Bi 22 or equivalent research experience in the research area proposed for the thesis, and instructor's permission. Intended to extend opportunities for research provided by Bi 22 into a coherent individual research project, carried out under the supervision of a member of the biology faculty. Normally involves three or more consecutive terms of work in the junior and senior years. The student will formulate a research problem based in part on work already carried out, evaluate previously published work in the field, and present new results, in a thesis format. First two terms graded pass/fail; final term graded by letter on the basis of the completed thesis. Instructors: Revel and staff.

Bi / Ch 110 abc. Biochemistry. 12 units (4-0-8); first, second, third terms. Prerequisite: Ch 41 or instructor's permission. Instructors recommend Bi 8 and Bi 9 as background for Bi / Ch 110 b and c. Lectures and discussions on the molecular basis of biological structure and function. Emphasizes macromolecular structure and the metabolic processes involved in energy storage and utilization; storage, transmission, and expression of genetic information in prokaryotes and eukaryotes. Molecular regulatory mechanisms and the biochemistry of cell membranes. Instructors: Richards, Campbell, Kennedy, Parker.

Bi 114. Immunology. 12 units (4-0-8); second term. Prerequisites: Bi 8, Bi 9, Bi 122 or equivalent, and Bi / Ch 110 a recommended. The course will cover the molecular and cellular mechanisms that mediate recognition and response in the mammalian immune system. Topics include cellular and humoral immunity, the structural basis of immune recognition, antigen presentation and processing, developmental regulation of gene rearrangement, biochemistry of lymphocyte activation, lymphokines and the regulation of cellular responses, T and B cell development, and mechanisms of tolerance. Instructors: Bjorkman and Rothenberg.

Bi 115. Virology. 6 units (2-0-4); third term. Prerequisites: Bi 8, Bi 9. Introduction to the chemistry and biology of viruses. Emphasis on replication strategies of animal viruses, with consideration also given to epidemiology of viruses, nature and control of virus diseases, evolution of viruses, and some aspects of bacterial and plant virus replication. Given in alternate years; not offered 1994–95. Instructor: Strauss.

Bi 122. Genetics. 9 units (3-0-6); second term. Prerequisite: Bi 8 or Bi 9, or instructor's permission. Lecture and discussion course covering basic principles of genetics. Instructor: Meyerowitz, Lipshitz, Sternberg.

Bi 123. Genetics Laboratory. 6 units (0-4-2); third term. Prerequisite: Bi 122. Laboratory exercises illustrating genetic principles and techniques, designed to accompany Bi 122. Instructor: Lipshitz.

Bi 125. Principles and Methods of Gene Transfer and Gene Manipulation in Eukaryotic Cells. 6 units (2-0-4); second term. Prerequisite: Bi/Ch 110. Lecture and discussion course dealing with modern approaches to "genetic intervention" in eukaryotic cells. Topics: mutagenesis of cultured animal cells and selection schemes; gene transfer into cultured cells mediated by naked DNA, chromosomes and viruses; transformation of yeast by chromosomal DNA and plasmids; neoplastic transformation of plant cells by *Agrobacteria* plasmids; nuclear transplantation and gene injection into amphibian eggs and oocytes; selective drug-induced gene amplification in cultured animal cells; somatic cell hybridization. Given in alternate years; not offered 1994–95. Instructor: Attardi.

Bi 127. Regulation of the Cell Cycle. 6 units (2-0-4); third term. Prerequisites: Bi 8, Bi 9, Bi/Ch 110, or graduate standing. Enrollment by permission of instructor. An advanced seminar focusing on regulation of the cell cycle in eukaryotes. Genetic, biochemical, and molecular studies of cell cycle control in different biological systems including yeast, vertebrate and invertebrate embryos, and vertebrate cells in culture will be featured. The relationship of cell proliferation, and the signals that control it, to cellular differentiation will be a theme. Critical review of current literature will be central. Given in alternate years; not offered 1994–95. Instructor: Wold.

Bi/Ch 132. Biophysics of Macromolecules. 9 units (3-0-6); second term. Recommended: Bi/Ch 110 (or taken concurrently). Structural and functional aspects of nucleic acids and proteins, including hybridization; electrophoretic behavior of nucleic acids; principles and energetics of folding of polypeptide chains in proteins; allostery and cooperativity in protein action; enzyme kinetics and mechanisms; and methods of structure determination, such as X-ray diffraction and magnetic resonance. Structure and function of metalloenzymes. Given in alternate years; not offered 1994–95. Instructors: Chan, Rees.

Bi 137. Multicellular Assemblies. 9 units (3-0-6); third term. Prerequisite: Bi 9 or consent of instructor. Aspects of the cellular interactions involved in formation and maintenance of the hierarchy of tissues and organs in multicellular organisms. Topics include cell membranes, cell movements and aggregation, cellular adhesion, intercellular communication, the organization of epithelial and connective tissues, and the histophysiology of a few typical organs. Given in alternate years; offered 1994–95. Instructor: Revel.

Bi 145. Animal Physiology. 9 units (3-0-6); third term. Recommended prerequisites: Bi 9, Bi 11, Ch 24. Selected topics in animal physiology. Mammalian systems will be emphasized, but information from other groups will be drawn upon where relevant. Particular focus on biophysical analysis and understanding of muscle contraction and its regulation; the supply of oxygen to muscle and other tissues; and the regulation of water and solute contents of cells and organisms. Given in alternate years; not offered 1994-95. Instructor: Brokaw.

Bi/CNS 150. Neurobiology. 10 units (4-0-6); first term. Lectures and discussions on general principles of the organization and function of nervous systems, providing both an overview of the subject and a foundation for advanced courses. Topics include neurocytology and gross neuroanatomy; developmental neurobiology; the biophysical basis for action potentials, synaptic transmission, and sensory transduction; and the integration of these processes in sensory and motor pathways of the central nervous system. Laboratory demonstrations offer experience with the experimental preparations discussed in the course. Instructors: Laurent, Zinn, Schuman.

Bi 152. Introduction to Neuroethology. 6 units (2-0-4); second term. Introduction to the neurobiological study of natural behavior of animals. Topics include such questions as how animals recognize and localize signals in their natural environments, how animals move, how behavior develops, what and how animals learn, and how natural selection shapes the evolution of brain and behavior. Instructor: Konishi.

Bi 156. Molecular Neurobiology. 9 units (3-0-6); second term. Prerequisite: Bi 150 or instructor's permission. A lecture and discussion course covering the biochemistry and molecular biology of processes fundamental to nervous system function. These include neurotransmitter/neuropeptide synthesis and release, neurite outgrowth, receptor and ion channel function, and myelination. Other topics include neurotrophic factors and putative cell surface recognition molecules. The relationship of these subjects to mental illness and learning will be considered. Given in alternate years; not offered 1994-95. Instructors: Patterson, Zinn.

Bi 157. Comparative Nervous Systems. 9 units (2-3-4); third term. An introduction to the comparative study of the gross and microscopic structure of nervous systems. Emphasis on the vertebrate nervous system; also, the highly developed central nervous systems found in arthropods and cephalopods. Variation in nervous system structure with function and with behavioral and ecological specializations and the evolution of the vertebrate brain. Given in alternate years; offered 1994-95. Instructor: Allman.

Bi 158. Vertebrate Evolution. 9 units (3-0-6); third term. An integrative approach to the study of vertebrate evolution combining comparative anatomical, behavioral, embryological, genetic, paleontological, and physiological findings. Special emphasis will be given to: (1) the modification of developmental programs in evolution; (2) homeostatic systems for temperature regulation; (3) changes in the life cycle governing longevity and death; (4) the evolution of brain and behavior. Given in alternate years; not offered 1994-95. Instructor: Allman.

Bi/CNS 161. Cellular Neurobiology Laboratory. 9 units (0-6-3); second term.

Prerequisite: Bi 150 or instructor's permission. Principles of cellular neurobiology and membrane biophysics illustrated using favorable preparations, such as frog nerve-muscle synapse and cultured nerve and muscle tissue. Students conduct all aspects of experiments, including dissection, fabrication of microelectrodes, intracellular stimulation and recording, and patch recording of single membrane channels. Graded pass/fail. Given in alternate years; offered 1994–95. Instructor: Lester.

Bi/CNS 162. Central Nervous System Laboratory. 10 units (0-8-2); second term.

Prerequisite: Bi 150 or instructor's permission. A laboratory-based introduction to experimental methods used to study the central nervous system electrophysiologically. Through the term, students investigate the physiological response properties of the mammalian cerebellum using various extracellular recording techniques. Students are instructed in all aspects of experimental procedures, including proper surgical techniques, microelectrode fabrication, stimulus presentation, and computer-based data analysis. Graded pass/fail. Given in alternate years; not offered 1994–95. Instructor: Bower.

Env/Bi 166. Microbial Physiology. 9 units (3-0-6). For course description, see Environmental Engineering Science.

Env/Bi 168. Microbial Diversity. 9 units (3-0-6). For course description, see Environmental Engineering Science.

Bi/Ch 170. Principles of Three-Dimensional Protein Structure. 9 units (3-3-3);

first term. Prerequisites: Bi/Ch 110. The forces determining the folding of proteins into their unique tertiary structures. Protein structures will be classified by organization of the structural elements and structural motifs, and their influence on function will be explored. Topics will include enzyme and antibody structure and function, virus structures, and protein–nucleic acid interactions. A computer graphics system will be used for the display and analysis of macromolecular structure. Instructors: Bjorkman, Rees.

Bi 180. Methods in Molecular Genetics. 12 units (2-8-2); first term. *Prerequisites:* Bi

122 and instructor's permission. An introduction to current research tools of molecular genetics. Students perform a series of structured experiments to familiarize themselves with basic genetic approaches, including mutant selection, genetic mapping, gene cloning, and gene product analysis. Students then confront an unresolved research problem in biology to be addressed by both designing and executing their own experiments. Graded pass/fail. Not offered 1994–95. Instructors: Bertani and staff.

CNS/Bi/Ph 185. Collective Computation. 9 units (3-1-5). For course description, see Computation and Neural Systems.

CNS/Bi/EE 186. Vision: From Computational Theory to Neuronal Mechanisms. 12 units (4-4-4). For course description, see Computation and Neural Systems.

Bi 189. Developmental Biology of Animals. 6 units (2-0-4); second term. *Recom-*

ended prerequisite: Bi/Ch 110. Lectures and discussions on various aspects of embryological development; cytoplasmic localization and cell interaction in early development, gene function and oogenesis, the role of accessory cells,

gene regulation; the evolution of developmental processes, and patterns of macromolecular syntheses in early embryological life. Given in alternate years; not offered 1994–95. Instructors: E. Davidson, Sternberg.

Bi 190. Advanced Genetics. 6 units (2-0-4); third term. Prerequisite: Bi 122. Lectures and discussions covering advanced principles of genetic analysis. Emphasis on genetic approaches to the study of development in *Saccharomyces*, *Caenorhabditis*, *Drosophila*, and *Arabidopsis*. Given in alternate years; offered 1994–95. Instructors: Sternberg, Lipshitz, Meyerowitz.

Bi / Ch 202 abc. Biochemistry Seminar. 1 unit; first, second, third terms. A seminar on selected topics and on recent advances in the field. Instructors: Chan, Rees.

Bi 204. Genetics Seminar. 2 units; first term. Reports and discussion on special topics. Instructor: Meyerowitz.

Bi 211. Topics in Membrane and Synaptic Physiology. 6 units (3-0-3); first term. Graduate seminar discussing the original literature on the biophysics and molecular biology of ion channels, neurotransmitter receptors, transporters, and other molecules underlying the excitability of cell membranes. Given in alternate years; not offered 1994–95. Instructor: Lester.

Bi 212. Topics in Neuroethology. 6 units (2-0-4); second term. Reading and discussions of original papers related to animal behavior and its analysis by neuroethological methods. Knowledge of neurophysiology is required. Given in alternate years; not offered 1994–95. Instructor: Konishi.

Bi 214. Control of Development and Function in Hematopoietic Cells. 6 units (2-0-4); first term. Prerequisites: Bi 114 or graduate standing. An advanced seminar based on reading from the current literature. Mechanisms of cell fate determination and lineage commitment, cell activation, and physiological function will be discussed, with an emphasis on lymphocytes. Given in alternate years; offered 1994–95. Instructor: Rothenberg.

Bi 217. Central Mechanisms in Perception. 6 units (2-0-4); first term. Reading and discussions of behavioral and electrophysiological studies of the systems for the processing of sensory information in the brain. Given in alternate years; offered 1994–95. Instructor: Allman.

Bi 218. Molecular Biology of Neural Development. 6 units (2-0-4); second term. A graduate seminar course designed to cover selected topics in the development of the nervous system, studied at the molecular level. The material should complement that in Bi 219, which is offered in alternating years. Emphasis will be placed on the genetic analysis of invertebrate systems and on selected model systems in vertebrate neural development. Given in alternate years; not offered 1994–95. Instructor: Anderson.

Bi 219. Developmental Neurobiology. 12 units (3-0-9); second term. Advanced discussion course involving extensive reading of current papers and student presentations. Topics: proliferation, migration, differentiation, and death of neurons; role of trophic factors, cell surface molecules, and hormones. Emphasis on the generation of specific synaptic connections and the molecular basis underlying it. Given in alternate years; offered 1994–95. Instructors: Patterson, Fraser.

Bi 220. Advanced Seminar in the Molecular Biology of Development. 6 units (2-0-4); second, third terms. Discussion of current papers on various pertinent topics including nucleic acid renaturation, hybridization, and complexity studies; synthesis and turnover of transcripts, transcript prevalence, and the dynamics of gene expression; transcription-level regulation of gene function; molecular aspects of differentiation in certain more intensely studied systems, etc. Quantitative aspects and biophysical background of relevant measurement methods are emphasized. Given in alternate years; offered 1994–95. Instructor: E. Davidson.

CNS/Bi 221. Computational Neuroscience. 9 units (4-0-5). For course description, see Computation and Neural Systems.

Bi 222. Structure and Function of the Synapse. 6 units (2-0-4); third term. Prerequisites: Bi 110 abc, Bi 150, graduate standing, or instructor's permission. Lectures, reading, and discussion covering recent research on synaptic structure and function. Topics will include structure and function of synaptic proteins, emphasizing mechanisms of neurotransmitter release and regulation of post-synaptic receptors; the extracellular matrix and synaptic structure; protein kinase signalling cascades; and developmental and adult synaptic plasticity, emphasizing long-term potentiation and long-term depression. Reading and discussion will focus on evaluation of the primary research literature. Given in alternate years; offered 1994–95. Instructors: Kennedy and Schuman.

Bi 225. Topics in Cellular and Molecular Genetics. 6 units (2-0-4); second term. Reading and discussion of current papers on the theory and practice of "genetic intervention" in higher eukaryotic cells. Approaches will include DNA and chromosome-mediated transformation of cells in culture, gene amplification, cell fusion, gene injection into eggs, and use of somatic cell genetics techniques for gene cloning. Emphasis on the use of these approaches to study problems in areas such as cell differentiation, cell cycle control, cell compartmentation, and membrane physiology and assembly. Given in alternate years; offered 1994–95. Instructor: Attardi.

Ch/Bi 231. Advanced Topics in Biochemistry. 6 units (2-0-4). For course description, see Chemistry.

Bi 241. Advanced Topics in Molecular Biology. 6 units (2-0-4); third term. Prerequisite: instructor's permission. Reading and discussion of new areas in molecular biology. Instructor: Dreyer.

Bi 250 ab. Issues and Principles in Modern Biology. 4 units (2-0-2); first, second terms. The course presents an overview of current research in the biology division with an emphasis on the work going on in the laboratories of individual faculty members. Weekly meetings include specific reading and involve direct give-and-take between the instructors and the class. Instructors: Simon and staff.

Bi 270. Special Topics in Biology. Units to be arranged; first, second, third terms. Students may register with permission of the responsible faculty member.

Bi 299. Graduate Research. Units to be arranged; first, second, third terms. Students may register for research units after consultation with their adviser.

BUSINESS ECONOMICS AND MANAGEMENT

BEM 101. Introduction to Accounting. 9 units (3-0-6); first term. An introduction to accounting in business. Topics include: financial accounting, cost accounting. Instructors: Staff.

BEM 102. Topics in Management Science. 9 units (3-0-6). *Prerequisite: Ec 11.* Various management and industrial organization topics, including queuing, inventory and reliability theory, optimal stopping with applications to job search, and R&D. Underlying theory of simple stochastic processes will be developed as needed. Instructor: Camerer.

BEM 103. Introduction to Finance. 9 units (3-0-6); second term. *Ec 11 recommended.* An introduction to corporate finance. Economic theory is used to study asset valuation and financial decision making in business. Topics include: financial decision making under certainty, introduction to valuation of risky assets (stocks and bonds), the corporate investment decision, dividend policy, and the corporate financing decision. Instructor: Bossaerts.

BEM 104. Investment Analysis. 9 units (3-0-6); third term. *Prerequisites: BEM 103, some familiarity with statistics. Ec 11 recommended.* An introduction to investment analysis, portfolio management, and capital markets. Its focus is the application of modern financial theory to portfolio selection and asset pricing. Topics include asset pricing models, the term structure of interest rates, contingent claim valuation. Instructor: Bossaerts.

BEM 105. Options. 9 units (3-0-6). *Prerequisites: BEM 103, some familiarity with statistics. Ec 11 recommended.* An introduction to modern option pricing theory. The focus is the valuation of contingent claims. Both American and European options are considered. The Binomial and Black-Scholes option pricing models are derived. The theory is also applied to risky debt and portfolio choice. Not offered 1994–95. Instructors: Staff.

BEM 109. Venture Capital. 9 units (3-0-6). *Prerequisites: BEM 103 and BEM 104.* Application of financial theory to the evaluation and financing of venture capital projects. The focus is on capital budgeting and financial structure. The central question will be: In what respect is venture capital different from traditional forms of capital? Venture capitalists will be invited to explain projects in which they have been involved. Not offered 1994–95. Instructor: Bossaerts.

BEM 110. Topics in Business Economics. 9 units (3-0-6). *Prerequisite: consent of instructor.* Selected topics in business economics. Instructors: Staff.

BEM/Ec 146. Organization Design. 9 units (3-0-6); first term. *Prerequisite: Ec 11.* An introduction to the analysis, design, and management of organizations with an emphasis on incentives and information. Principles from economics, political science, and game theory will be applied to problems in project and team management, in organizational computing, and in allocating and pricing shared facilities. Instructor: Camerer.

CHEMICAL ENGINEERING

ChE 10. Introduction to Chemical Engineering Systems. 9 units (3-3-3); third term; open to freshmen only. An introduction to the breadth of chemical engineering through several short-term projects supervised by individual chemical engineering faculty. Areas covered include fluid mechanics, separations, catalysis, and materials properties. Instructors: Arnold, Flagan, Shair.

ChE 63 ab. Chemical Engineering Thermodynamics. 9 units (3-0-6); first, second terms. A comprehensive course in classical thermodynamics with engineering and chemical applications. First and second laws; closed and open systems. Equations of state. Thermochemical calculations. Properties of real fluids. Power generation and refrigeration cycles. Multicomponent systems, excess properties, fugacities, activity coefficients, and models of nonideal solutions. Chemical reaction equilibria. Phase equilibria. Instructor: Giapis.

ChE 80. Undergraduate Research. Units by arrangement. Research in chemical engineering offered as an elective in any term other than in the senior year. Graded pass/fail.

ChE 90 ab. Senior Thesis. 9 units (0-4-5); second, third terms. Prerequisite: ChE 126 a. A research project carried out under the direction of a chemical engineering faculty member. A grade will not be assigned to ChE 90 prior to completion of the thesis, which normally takes two terms. A P grade will be given for the first term and then changed to the appropriate letter grade at the end of the course. Instructor: Gavalas.

ChE 101. Chemical Reaction Engineering. 9 units (3-0-6); second term. Prerequisites: Ch 21 a, ChE 103 a. Chemical kinetics. Ideal chemical reactors. Energy balances in chemical reactors. Residence time distributions. Catalytic materials. Fluid-fluid heterogeneous catalytic reactions. Heterogeneous reactors. Instructor: Flagan.

ChE 103 abc. Transport Phenomena. 9 units (3-0-6); first, second, third terms. Prerequisites: AMa 95 or AM 113 ab, or concurrent registration in either. A rigorous development of the basic differential equations of conservation of momentum, energy, and mass in fluid systems. Solution of problems involving fluid flow, heat transfer, and mass transfer. Instructors: Kornfield, Wang.

ChE 104. Separation Processes. 9 units (3-0-6); third term. Prerequisite: ChE 63 ab. An introduction to separation principles and processes. Physicochemical basis of separations. Precipitation, crystallization, filtration, extraction, distillation, fixed-bed adsorption, protein separations. Instructor: Arnold.

ChE 105. Process Control. 9 units (3-0-6); first term. Prerequisite: AMa 95 abc or AM 113 abc, or concurrent registration in either. Review of Laplace transforms and linear algebra. Feedback control of linear systems. Frequency response. Sampled-data systems. Introduction to multivariable control. Instructors: Staff.

ChE 110 ab. Optimal Design of Chemical Systems. 12 units (3-0-9); second, third terms. Prerequisites: ChE 63, ChE 101, ChE 103, or equivalents. Introduction to process design; flowsheets for chemical processes; synthesis of multicomponent

separation sequences and reaction paths; synthesis of heat exchange networks; optimization; process economics; simulation of chemical processes; design of a major process. Instructor: Wagner.

ChE 126 ab. Chemical Engineering Laboratory. 9 units (1-6-2); first, second terms. *Prerequisites:* ChE 101, ChE 103 abc, and ChE 105, or concurrent registration. Projects illustrative of problems in transport phenomena, unit operations, chemical kinetics, process control, and reactor design are performed. Instructors: Arnold, Davis.

Ch/ChE 140 ab. Principles and Applications of Semiconductor Photoelectrochemistry. 6 units (4-0-2). For course description, see Chemistry.

Ch/ChE 147. Polymer Chemistry. 9 units (3-0-6). For course description, see Chemistry.

ChE/Ch 148. Polymer Physics. 9 units (3-0-6); third term. *Prerequisites:* Ch/ChE 147 or with instructor's permission. An introduction to the physics that govern polymer structure and dynamics in liquid and solid states, and to the physical basis of characterization methods used in polymer science. Topics include characterization, scaling, and dynamics of polymers in solutions and melts; polymer-polymer thermodynamics in blends and block-copolymers; rubber elasticity; the rubber-glass transition; crystallization and morphology of semi-crystalline polymers. Not offered 1994-95.

ChE 151 ab. Physical and Chemical Rate Processes. 12 units (3-0-9); first, second terms. The foundations of heat, mass, and momentum transfer for single and multiphase fluids will be developed. Governing differential equations; laminar flow of incompressible fluids at low and high Reynolds numbers; forced and free convective heat and mass transfer, diffusion, and dispersion. Emphasis will be placed on physical understanding, scaling, and formulation and solution of boundary-value problems. Applied mathematical techniques will be developed and used throughout the course. Instructor: Brady.

ChE 151 c. Physical and Chemical Rate Processes. 12 units (3-0-9); third term. Basic concepts in chemical kinetics and in the analysis of homogeneous and heterogeneous reaction systems. Diffusion in porous solids and the effect of diffusion on heterogeneous catalytic reactions. Gas-solid and solid-state reactions. Estimation of rate parameters by transition state theory and group contribution methods. Kinetic description of multicomponent mixtures. Nonlinear phenomena in chemical reactors. Instructor: Gavalas.

ChE/Ch 155. Chemistry of Catalysis. 9 units (3-0-6); third term. Discussion of homogeneous and heterogeneous catalytic reactions, with emphasis on mechanistic principles and on the relationships between the two areas. Topics include: homogeneous hydrogenation; catalysis by metals; homogeneous oxidation; catalysis by metal oxides; catalytic polymerization; acid-base catalysis. Offered 1994-95. Instructors: Davis, Labinger.

ChE/Env 157. Sources and Control of Air Pollution. 9 units (3-0-6); third term. *Open to graduate students and seniors with instructor's permission.* Principles necessary to understanding the sources and control of air pollutants; generation of pollutants in combustion systems; control techniques for particulate and gaseous pollutants; solution of large-scale regional air pollution control problems. Given in alternate years; not offered 1994-95. Instructor: Cass.

ChE/Env 158. Air Pollution Aerosols. 9 units (3-0-6); first term. Open to graduate students and seniors with instructor's permission. Fundamentals of particulate air pollutants; aerosol physics and chemistry; gas-to-particle conversion processes; pollutant effects on visibility. Instructor: Flagan.

ChE/Env 159. Atmospheric Chemistry and Physics of Air Pollution. 9 units (3-0-6); second term. Open to graduate students and seniors with instructor's permission. Principles necessary to understanding the atmospheric behavior of air pollutants; atmospheric gas- and aqueous-phase chemistry; atmospheric diffusion; removal processes and residence times; statistical distributions of pollutant concentrations. Instructor: Cass.

ChE 163. Fundamentals of Biochemical Engineering. 9 units (3-0-6); third term. Prerequisite: ChE 101 or instructor's permission. A first course in microbial and enzyme processes, with applications to industrial fermentations, biocatalysis, and production of proteins using recombinant organisms. Topics: rudiments of microbiology and genetic engineering; isolation and utilization of enzymes; kinetics of enzyme catalyzed reactions; substrate utilization and kinetics of microbial growth; design and analysis of biological reactors. Instructor: Arnold.

ChE/Ch 164. Introduction to Statistical Thermodynamics. 9 units (3-0-6); second term. Prerequisite: Ch 21 abc or equivalent. Ensembles and statistical mechanical formulation of the laws of thermodynamics. Classical statistical mechanics; quantum statistics; translational, rotational, vibrational, and electronic partition functions. Chemical equilibria. Real gases and distribution functions; other interacting systems; liquids and solids. Instructors: Gavalas, Wang.

ChE 165. Chemical Thermodynamics. 9 units (3-0-6); first term. Prerequisite: ChE 63 abc or equivalent. Review of first and second laws and engineering applications. Intermolecular forces and virial coefficients. Equations of state and thermodynamic properties of pure substances. Thermodynamics of gaseous and liquid mixtures. Theories of solutions. Phase and chemical equilibria. Instructors: Gavalas, Wang.

ChE 174. Special Topics in Transport Phenomena. 9 units (3-0-6); third term. Prerequisite: AM 113 or AMa 95, ChE 151 ab. May be repeated for credit. Advanced problems in heat, mass, and momentum transfer. Introduction to mechanics of complex fluids; physicochemical hydrodynamics; microstructured fluids; selected topics in hydrodynamic stability theory; transport phenomena in materials processing; turbulence. Other topics may be discussed depending on class needs and interests. Instructor: Brady.

ChE 177. Protein Technology. 9 units (3-0-6); second term. Prerequisites: ChE 163, Ch/Bi 110 a, or instructor's permission. A lecture and discussion course on selected topics in protein technology: protein engineering; enzyme kinetics; biocatalysis in unnatural environments; modern advances in protein separations: chromatography, extraction, genetic approaches to separations. Not offered 1994-95.

ChE 280. Chemical Engineering Research. Offered to Ph.D. candidates in Chemical Engineering. Main lines of research now in progress are covered in detail in Section Two.

CHEMISTRY

Ch 1 abc. General Chemistry. 6 units (3-0-3); *first, second, third terms.* Lectures and recitations dealing with the principles of chemistry. First term: electronic structure of atoms, periodic properties, ionic substances, covalent bonding, Lewis representations of molecules and ions, shapes of molecules, Lewis acids and bases, Bronsted acids and bases, chemical equilibria. Second term: oxidation and reduction, thermodynamics, and kinetics. Third term: special topics selected from contemporary chemical research emphasizing chemical reactivity, stereochemistry, and the characterization and properties of organic compounds and biomacromolecules. Graded pass/fail. Instructors: Lewis, Barton, Rees.

Ch 3 a. Fundamental Techniques of Experimental Chemistry. 6 units; *first, second, third terms.* Introduces the basic principles and techniques of synthesis and analysis and develops the laboratory skills and precision that are fundamental to experimental chemistry. Enrollment first term will be limited to students who have gained advanced placement into Ch 41 or Ch 21, or by permission of the instructor. Graded pass/fail. Instructors: Staff.

Ch 3 b. Experimental Procedures of Synthetic Chemistry. 8 units (1-6-1); *third term.* *Prerequisites:* Ch 1 a, Ch 1 b, and Ch 3 a. Instruction in fundamental synthesis, separation, and characterization procedures used in chemical research. Graded pass/fail. Instructors: Staff.

Ch 4 ab. Synthesis and Analysis of Organic and Inorganic Compounds. 9 units (1-6-2). *Prerequisite:* Ch 1 abc (or the equivalent) and Ch 3 a. Previous or concurrent enrollment in Ch 41 is strongly recommended. Introduction to methods of synthesis, separation, purification, and characterization used routinely in chemical research laboratories. Ch 4 a emphasizes spectroscopic methods of analysis; Ch 4 b stresses applications of chromatography in addition to more classical separation techniques. Ch 4 a, first and second terms; Ch 4 b, third term only. Instructors: Staff.

Ch 5 ab. Advanced Techniques of Synthesis and Analysis. 9 units (1-6-2); *first, second terms.* *Prerequisite:* Ch 4 ab. Modern synthetic chemistry. Specific experiments may change from year to year. Multistep syntheses of natural products, coordination complexes, and organometallic complexes will be included. Experiments to illustrate the fundamental principles of inorganic and organometallic chemistry. Methodology will include advanced techniques of synthesis and instrumental characterization. Instructors: Bercau, Myers.

Ch 6 ab. Application of Physical Methods to Chemical Problems. 10 units (0-6-4); *second, third terms.* *Prerequisites:* Ch 1 abc, Ch 4 ab, and Ch 21 or equivalents (may be taken concurrently). Introduction to the application of modern physical methods to chemical problems, with emphasis in the area of molecular spectroscopy. Techniques including X-ray crystallography, laser Raman spectroscopy, microwave spectroscopy, electron spin resonance, ultraviolet photoelectron spectroscopy, and Fourier transform ion cyclotron resonance spectroscopy are used to examine the structure, properties, and reaction dynamics of molecules in the gas phase, in solution, and at surfaces. Instructors: Beauchamp, Okumura.

Ch 7. Experimental Methods in Bioorganic Chemistry. 9 units (1-6-2); second term. Prerequisites: Ch 41 abc and Bi/Ch 110 a. Enrollment by permission of instructors only. Preference will be given to seniors and students who have taken Ch 5 a or Bi 10. This advanced laboratory course will provide experience in contemporary methods for polypeptide and oligonucleotide synthesis. Experiments are designed to introduce the student to strategies and methods that have been developed for the design and assembly of biopolymers of tailored sequences, including the deployment of solid-phase condensation methods, nucleic acid and amino acid protection schemes, and methods for product isolation, purification, and characterization. A strong emphasis will be placed on understanding the chemistry underlying the successful utilization of these methods. The application of commercially available enzymes for useful synthetic organic transformations will also be explored. Offered 1995-96. Instructors: Dervan, Imperiali.

Ch 10 abc. Frontiers in Chemistry. 3 units (2-0-1); first, second terms. 6 units (1-4-1); third term. Open for credit to freshmen and sophomores. Prerequisites: Ch 10 c prerequisites are Ch 10 ab, Ch 3 a, and either Ch 1 ab, Ch 41 ab, or Ch 21 ab, and permission of instructor. Ch 10 ab is a weekly seminar by a member of the chemistry department on a topic of current research; the topic will be presented at an informal, introductory level. The other weekly session will acquaint students with the laboratory techniques and instrumentation used on the research topics. Ch 10 c is a research-oriented laboratory course, which will be supervised by a chemistry faculty member. Weekly class meetings will provide a forum for participants to discuss their research projects. Ch 10 c can be used as a substitute for Ch 1 c. Graded pass/fail. Instructors: Barton, Lewis.

Ch 14. Chemical Equilibrium and Analysis. 6 units (2-0-4); first term. A systematic treatment of ionic equilibria in solution. Topics covered include acid-base equilibria in aqueous and nonaqueous solutions, complex ion formation, chelation, oxidation-reduction reactions, and some aspects of reaction mechanisms. Instructor: Richards.

Ch 15. Chemical Equilibrium and Analysis Laboratory. 10 units (0-6-4); first term. Prerequisites: Ch 1 abc, Ch 3 a, Ch 14 (may be taken concurrently). Laboratory experiments are used to illustrate modern instrumental techniques that are currently employed in industrial and academic research. Emphasis is on determinations of chemical composition, measurement of equilibrium constants, evaluation of rates of chemical reactions, and trace-metal analysis. Instructors: Rees, Schultz.

Ch 21 abc. The Physical Description of Chemical Systems. 9 units (3-0-6); first, second, third terms. Prerequisites: Ch 1 abc, Ph 2 abc, Ma 2 abc. Atomic and molecular quantum mechanics, spectroscopy, thermodynamics, statistical mechanics, and chemical kinetics. Instructors: McKoy, Baldeschwieler, Beauchamp.

Ch 24 ab. Introduction to Biophysical Chemistry. 9 units (3-0-6); second, third terms. Prerequisites: Ma 1 abc, Ph 1 abc, Ch 21 a or Ph 2 abc. Fundamental physical chemistry, with emphasis on those topics most important in biology. Thermodynamics and its applications to aqueous solutions and living systems, membrane potentials and the thermodynamics of transport, reaction kinetics and mechanisms, transport properties, applications of molecular spectroscopy in biology, and statistical mechanics with applications to biological polymers. Instructor: Chan.

Ch 41 abc. Chemistry of Covalent Compounds. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ch 1 abc or instructor's permission. The synthesis, structure, and mechanisms of reactions of covalent compounds. Emphasis will be on the study of molecules formed from carbon and other first- and second-row elements. Instructors: Dougherty, Carreira, Imperiali.

Ch 80. Chemical Research. Offered to B.S. candidates in chemistry. *Prerequisite:* consent of research supervisor. Experimental and theoretical research requiring a report containing an appropriate description of the research work.

Ch 81. Independent Reading in Chemistry. Units by arrangement. *Prerequisite:* instructor's permission. Occasional advanced work involving reading assignments and a report on special topics. No more than 12 units in Ch 81 may be used as electives in the chemistry option.

Ch 90. Oral Presentation. 2 units (1-0-1); second term. Training in the techniques of oral presentation of chemical and biochemical topics. Practice in the effective organization and delivery of technical reports before groups. Graded pass/fail. Instructor: Parker.

Ch 91. Scientific Writing. 3 units (1-0-2); third term. Practical training in the writing of technical reports, reviews, and research papers on chemical topics. Open to undergraduates only. Graded pass/fail. Not offered 1994-95.

Bi/Ch 110 abc. Biochemistry. 12 units (4-0-8). For course description, see Biology.

Ch 112. Inorganic Chemistry. 9 units (3-0-6); first term. *Prerequisite:* Ch 41 abc or equivalent. Introduction to group theory, ligand field theory, and bonding in coordination complexes and organotransition metal compounds. Systematics of synthesis, bonding, and reactivities of commonly encountered classes of transition metal compounds. Instructor: Bercaw.

Ch 117. Introduction to Electrochemistry. 6 units (2-0-4); second term. Discussion of the structure of electrode-electrolyte interface, the mechanism by which charge is transferred across it, and experimental techniques used to study electrode reactions. Topics change from year to year but usually include diffusion currents, polarography, coulometry, irreversible electrode reactions, the electrical double layer, and kinetics of electrode processes. Not offered 1994-95.

Ch 118 ab. Experimental Electrochemistry. Units by arrangement; second, third terms. Laboratory practice in the use of selected electrochemical instruments and techniques. The student may pursue a set of expository experiments or elect to carry out a research project in electrochemistry. Not offered 1994-95.

Ch 120 ab. Nature of the Chemical Bond. Part a, 9 units (3-1-5) first term; Part b, 6 units (1-1-4) third term. *Prerequisite:* Ph 2 abc, Ch 21 a or an equivalent introduction to quantum mechanics. Modern ideas of chemical bonding, with emphasis on qualitative concepts and how they are used to make predictions of geometries, energies, excited states, and rules for chemical reactions. Applications will emphasize molecules involving both main-group and transition metals and will include some discussion of impurity states in solids, and the bonding and reactions at surfaces of solids. Part b is a lab in which the student uses modern quantum chemistry computer programs to calculate wavefunctions and properties of molecules. Instructor: Goddard.

Ch 121 ab. Atomic Level Simulations of Materials and Molecules. *Part a, 9 units (3-1-5) second term; Part b, 6 units (1-1-4) third term. Prerequisites: Ma 2 abc, Ph 2 abc, Ch 1 abc, or equivalent. Recommended: Ch 41 abc, Ch 21 a.* Methods for predicting the structures and properties of molecules and solids. The course will highlight theoretical foundations and applications to current problems in: biological systems (proteins, DNA, carbohydrates, lipids); polymers (crystals, amorphous systems, copolymers); semiconductors (group IV, III-V, surfaces, defects); inorganic systems (ceramics, zeolites, superconductors, and metals); and organo-metallics and catalysis (heterogeneous and homogeneous). Both terms will involve the use of computers for building and calculating systems of interest. Part a covers the basic methods. Part b is a laboratory course where the student uses the techniques of the course to carry out the project. Ch 120 a is recommended but not required for Ch 121 a. Instructor: Goddard.

Ch 122 abc. Methods for the Determination of the Structure of Molecules. *9 units (3-0-6); first, second, third terms. Prerequisite: Ch 21 abc or instructor's permission.* Modern methods used in the determination of the structure of molecules, including X-ray, electron, and neutron diffraction; mass spectrometry; optical, infrared, Raman, microwave, Mössbauer, nuclear magnetic, and electron spin resonance spectroscopy. The emphasis will be on diffraction methods (first term), nuclear magnetic resonance (second term), and mass spectrometry (third term). All three terms can be taken independently. Part c not offered 1994-95. Instructors: Burgi, Baldeschwieler.

Ch 125 abc. The Elements of Quantum Chemistry. *9 units (3-0-6); first, second, third terms. Prerequisite: Ch 21 abc or an equivalent brief introduction to quantum mechanics.* A first course in molecular quantum mechanics consisting of a quantitative treatment of quantum mechanics with applications to systems of interest to chemists. The basic elements of quantum mechanics, the electronic structure of atoms and molecules, the interactions of radiation fields and matter, scattering theory, and reaction rate theory. Instructors: Kuppermann, McKoy, Weitekamp.

Ch 126. Angular Momentum in Chemistry. *9 units (3-0-6); second term. Prerequisite: Ch 125 a, or permission of instructor.* A unified discussion of the quantum mechanical foundations of spectroscopy and reaction dynamics based on angular momentum theory. Topics include angular momentum coupling in molecules, interactions with the quantized radiation field, the rovibrational Hamiltonian, and dynamics of large amplitude motion. Not offered 1994-95. Instructor: Okumura.

Ge/Ch 127. Nuclear Chemistry. *9 units (3-0-6).* For course description, see Geology.

Ge/Ch 128. Cosmochemistry. *9 units (3-0-6).* For course description, see Geology.

Ch 130. Spectroscopy. *9 units (3-0-6); third term.* Discussion of various topics in lasers and their applications. Group theory with applications to molecular structure and spectroscopy will also be discussed. Instructor: Zewail.

Bi/Ch 132. Biophysics of Macromolecules. *9 units (3-0-6).* For course description, see Biology.

Ch 135 ab. Chemical Dynamics. 9 units (3-0-6); part a, first term; part b, second term. Prerequisites: Ch 21 abc and Ch 41 abc, or equivalent, or consent of instructor. Part a: Introduction to the dynamics of chemical reactions. Topics include scattering cross sections, rate constants, intermolecular potentials, reactive scattering, nonadiabatic processes, statistical theories of unimolecular reactions, and the application of laser and molecular beam techniques to the study of reaction mechanisms. Part b: The quantum description of chemical reactions. The scattering matrix. The calculation of reaction cross sections, probabilities, and rate constants. Collision lifetimes and resonances. Classical trajectories. The two terms can be taken independently. Part b not offered 1994–95. Instructors: Okumura, Kuppermann.

Ch/ChE 140 ab. Principles and Applications of Semiconductor Photoelectrochemistry. 6 units (4-0-2); second, third terms. The properties and photoelectrochemistry of semiconductors and semiconductor/liquid junction solar cells will be discussed. Topics include: optical and electronic properties of semiconductors; electronic properties of semiconductor junctions with metals, liquids, and other semiconductors, in the dark and under illumination, with emphasis on semiconductor/liquid junctions in aqueous and non-aqueous media. Problems currently facing semiconductor/liquid junctions and practical applications of these systems will be highlighted. The course will meet for four one-hour lectures per week and will be in a tutorial format with instruction predominantly from graduate students and postdoctoral fellows with expertise in the field. Not offered 1994–95. Instructor: Lewis.

Ch 142. Frontiers in Chemical Biology. 4 units (2-0-2); second term. Prerequisite: Bi/Ch 110 abc or instructor's permission. A discussion of enzyme structure and function, and ligand-protein-nucleic acid interactions. Not offered 1994–95.

Ch 143. Basic NMR Spectroscopy. 9 units (3-2-4); second term. Prerequisite: Ch 41 abc. In 1994–95, will cover NMR basics and applications, with emphasis on FT NMR and the multinuclear techniques used in structural analysis, including decoupling, NOSEY, and COSY. The use of NMR to determine reaction rates and conformational equilibration will be described, as well as applications to imaging and spectroscopy of living systems. A number of NMR techniques will be illustrated with the Chapman-Russell *FT NMR Problems* video-disk-based computer program, which features on-screen spectra at a variety of magnetic fields with, and without, decoupling, 2D spectra, and so on. The practical use of NMR will be further demonstrated by laboratory exercises using modern pulse FT NMR techniques with high-field spectrometers for structural analysis. Instructors: Roberts and staff.

Ch 144 ab. Advanced Organic Chemistry. 9 units (3-0-6); first, second terms. Prerequisite: Ch 41 abc or equivalent. An advanced survey of modern organic chemistry. First term: structural and theoretical organic chemistry; kinetic, thermochemical, and orbital symmetry concepts. Second term: organic reaction chemistry emphasizing modern studies of reactive intermediates. Part b not offered 1994–95. Instructors: Myers, Dougherty.

Ch 145. Bioorganic Chemistry of Proteins. 9 units (3-0-6); first term. Prerequisites: Ch 41 abc and Bi/Ch 110 a. This course aims to define the information that can be derived on the structure and function of enzymes through the use of affinity labeling reagents, mechanism-based inactivators, and transition-state analog

inhibitors. While the focus will be on selected classes of enzymes, the material covered is intended to give insight into general rules for the investigation of enzyme mechanisms and inhibitor design. Given in alternate years; not offered 1994–95. Instructor: Imperiali.

Ch 146. Bioorganic Chemistry of Nucleic Acids. 9 units (3-0-6); third term. Prerequisite: Ch 41 ab. Will examine the bioorganic chemistry of nucleic acids, including DNA and RNA structures, molecular recognition, and mechanistic analyses of covalent modification of nucleic acids. Topics such as synthetic methods for the construction of DNA and RNA; separation techniques; recognition of duplex DNA by peptide analogs, proteins, and oligonucleotide-directed triple helical formation; RNA structure and RNA as catalysts (ribozymes) will be discussed. Given in alternate years; not offered 1994–95. Instructor: Dervan.

Ch/ChE 147. Polymer Chemistry. 9 units (3-0-6); second term. Prerequisite: Ch 41 abc. An introduction to the chemistry of polymers, including synthetic methods, mechanisms and kinetics of macromolecule formation, and characterization techniques. Not offered 1994–95. Instructor: Grubbs.

ChE/Ch 148. Polymer Physics. 9 units (3-0-6). For course description, see Chemical Engineering.

Ch 154. Organometallic Chemistry. 9 units (3-0-6); second term. Prerequisite: Ch 112 or equivalent. A general discussion of the reaction mechanisms, and synthetic and catalytic uses of transition metal organometallic compounds. Instructors: Bercau, Labinger.

ChE/Ch 155. Chemistry of Catalysis. 9 units (3-0-6). For course description, see Chemical Engineering.

ChE/Ch 164. Introduction to Statistical Thermodynamics. 9 units (3-0-6). For course description, see Chemical Engineering.

Ch 165. Nonequilibrium Statistical Mechanics. 9 units (3-0-6); second term. Prerequisite: Ch 21 abc or equivalent. Transport processes in dilute gases; Boltzmann equation; Brownian Motion; Langevin and Fokker-Planck equations; linear response theory; time-correlation functions and applications; nonequilibrium thermodynamics. Offered 1994–95. Instructor: Marcus.

Bi/Ch 170. Principles of Three-Dimensional Protein Structure. 9 units (3-3-3). For course description, see Biology.

Env/Ch/Ge 175 abc. Environmental Chemistry. 9 units (3-0-6). For course description, see Environmental Engineering Science.

Ch 180. Chemical Research. Units by arrangement. Offered to M.S. candidates in chemistry. Graded pass/fail.

Bi/Ch 202 abc. Biochemistry Seminar. 1 unit. For course description, see Biology.

Ch 212 ab. Advanced Inorganic Chemistry. 9 units (2-0-7); second, third terms. Prerequisites: Ch 112 and Ch 21 abc or concurrent registration. Topics in modern inorganic chemistry. Part a: electronic structure, spectroscopy, and photochemistry. Part b: bioinorganic chemistry. Instructors: Gray, Barton.

Ch 213 abc. Advanced Ligand Field Theory. 12 units (1-0-11); first, second, third terms. *Prerequisite:* Ch 21 abc or concurrent registration. A tutorial course of problem solving in the more advanced aspects of ligand field theory. Recommended only for students interested in detailed theoretical work in the inorganic field. Instructors: Gray and staff.

Ch 221. Electron Transfer Reactions in Chemistry and Biology. 9 units (3-0-6); second term. *Prerequisite:* Ch 21 abc. Fundamentals of electron transfer reactions. Molecular (statistical) theory, dielectric continua, electronic matrix elements, Franck-Condon principle, relevant thermodynamics, reorganization energy, quantum effects, charge transfer spectra, solvent dynamics. Reactions in solution, at metal electrode-liquid, modified electrode-liquid, semiconductor electrode-liquid, and liquid-liquid interfaces. STM theory. Reactions in photosynthetic reaction centers and in other proteins. Given in alternate years; not offered 1994–95. Instructor: Marcus.

Ch 224. Advanced Topics in Magnetic Resonance. 9 units (2-0-7); third term. *Prerequisites:* Ch 125 abc or Ph 125 abc or concurrent registration or equivalent, Ch 122 b or equivalent. A detailed presentation of some of the important concepts in magnetic resonance unified by the spin density operator formalism. Topics will include both classic phenomena and recent developments, especially in solid-state and two-dimensional NMR. Offered 1994–95. Instructor: Weitekamp.

Ch 227 ab. Advanced Topics in Chemical Physics. 9 units (3-0-6); part a second term; part b first term. *Prerequisite:* Ch 125 abc or Ph 125 abc or equivalent. The general quantum mechanical theory of molecular collisions will be presented in detail. Quasi-classical, semi-classical, and other approximations. Applications to inelastic and reactive molecule-molecule and inelastic electron-molecule collisions. Part b offered 1994–95. Instructor: Kuppermann.

Ch 228. The Dynamics of the Chemical Bond. 9 units (3-0-6); third term. *Prerequisite:* Ch 21 abc. Fundamentals of time-dependent phenomena will be discussed with particular focus on the primary processes important to molecular reaction dynamics. Topics such as reaction dynamics, nonradiative decay, coherence, energy redistribution, and wave packet dynamics will be covered. Instructor: Zewail.

Ch/Bi 231. Advanced Topics in Biochemistry. 6 units (2-0-4); second term. Transcriptional Regulation in Eukaryotes. Topics: The subunit structure of eukaryotic RNA polymerases and their role in transcriptional reaction; the composition of eukaryotic promoters, including regulatory units; general and specific transcription factors; developmental regulatory circuits and factors; structural motifs involved in DNA binding and transcriptional initiation and control. Given in alternate years; offered 1994–95. Instructor: Parker.

Ch 242 ab. Chemical Synthesis. 9 units (3-0-6); part a first term; part b third term. *Prerequisite:* Ch 41 abc. An integrated approach to synthetic problem solving featuring an extensive review of modern synthetic reactions with concurrent development of strategies for synthesis design. Part a will focus on the application of modern methods of stereocontrol in the construction of stereochemically complex acyclic systems. Part b will focus on strategies and reactions for the synthesis of cyclic systems. Part a offered 1994–95. Instructor: Carreira.

Ch 244 a. Topics in Chemical Biology. 6 units (3-0-3); first term. A discussion of biological membrane biogenesis, structure, and function. Topics range from membrane-bound enzymes to receptors for neurotransmitters, hormones, light, proteins, or peptides, and will include current work on models of simple behavior. Not offered 1994–95.

Ch 247 a. Organic Reaction Mechanisms. 6 units (2-0-4); third term. A mechanistic view of free-radical reactions using examples from biological systems. Topics: initiation, termination, and propagation of radical reactions in vivo, mechanisms of lipid damage, spin labeling, photosynthesis, oxygen radicals and oxygen toxicity, and radical reactions in proteins and nucleic acids. Not offered 1994–95.

Ch 280. Chemical Research. Hours and units by arrangement. By arrangement with members of the faculty, properly qualified graduate students are directed in research in chemistry.

CIVIL ENGINEERING

CE 90 abc. Structural Analysis and Design. 9 units (3-0-6); first, second, third terms. Prerequisite: AM 35 abc. Structural loads; influence lines for statically determinate beams and trusses; deflection of beams; moment area and conjugate beam theorems; approximate methods of analysis of indeterminate structures; slope deflection and moment distribution techniques. Generalized stiffness and flexibility analyses of indeterminate structures. Design of selected structures in timber, steel, and reinforced concrete providing an introduction to working stress, load and resistance factor, and ultimate strength approaches. In each of the second and third terms a design project will be undertaken involving consideration of initial conception, cost-benefit, and optimization aspects of a constructed facility. Instructor: Shepherd.

CE 95. Introduction to Soil Mechanics. 9 units (2-3-4); first term. Prerequisite: AM 97. A general introduction to the physical and engineering properties of soil, including origin, classification and identification methods, permeability, seepage, consolidation, settlement, slope stability, and lateral pressures and bearing capacity of footings. Standard laboratory soil tests will be performed. Instructor: Scott.

CE 97. Fluid Mechanics Laboratory. 6–9 units as arranged with instructor; third term. Prerequisite: ME 19 ab. A laboratory course in the basic mechanics of incompressible fluid flow, complementing lecture course ME 19 abc. Students usually select approximately three regular experiments, but they may propose special investigations of brief research projects of their own. Students also gain experience in making engineering reports. Although the course is primarily for undergraduates, it is also open to first-year graduate students who have not had an equivalent course. Instructor: Raichlen. Not offered 1994–95.

CE 100. Special Topics in Civil Engineering. *Units to be based upon work done, any term.* Special problems or courses arranged to meet the needs of first-year graduate students or qualified undergraduate students. Graded pass/fail.

CE/ME 101 abc. Fluid Mechanics. *9 units (3-0-6); first, second, third terms. Prerequisites: ME 19 abc or equivalent; AMa 95 abc or AM 113 abc or 114 abc (may be taken concurrently).* General equations of fluid motion; two- and three-dimensional steady and nonsteady potential motion; cavity and wake flow; surface waves, linear and nonlinear shallow-water waves, flow in stratified fluids, stability; acoustic fields, sound radiation and scattering, acoustic energy transport; one-dimensional steady and nonsteady gasdynamics, expansion fans, shock waves; two- and three-dimensional flow fields; laminar flow, Stokes and Oseen problems, laminar boundary layer; laminar instability, turbulent shear flow; introduction to selected special problems in heterogeneous flow, chemically reacting flow, sediment transport, flow through porous media. Instructor: Brennen.

Ae/AM/CE 102 abc. Mechanics of Structures and Solids. *9 units (3-0-6).* For course description, see Aeronautics.

CE/Ae/AM 108 abc. Computational Mechanics. *9 units (3-0-6); first, second, third terms. Prerequisite: instructor's permission.* Numerical analysis by the finite element method covering fundamental concepts and computer implementation. Solution of systems of linear equations and eigenvalue problems. Solution of the partial differential equations of heat transfer, solid and structural mechanics, and fluid mechanics. Transient and nonlinear problems. Instructor: Papadimitriou.

CE 110. Analysis and Design of Hydraulic Projects. *6 or more units as arranged; any term.* The detailed analysis or design of a complex hydraulic structure or water resources project emphasizing interrelationships of various components, with applications of fluid mechanics and/or hydrology. Students generally work on a single problem for the entire term, with frequent consultations with their instructor. Instructors: Staff.

CE 113 ab. Coastal Engineering. *9 units (3-0-6); first, second terms. Prerequisites: ME 19 abc and CE 111 or equivalents; AMa 95 abc.* Engineering applications of the theory of small and finite amplitude water waves; diffraction, reflection, refraction; wind-generated waves and wave prediction procedures; tides and their interaction with the coastline; effect of waves on coastal structures such as breakwaters and pile-supported structures; coastal processes. Instructor: Raichlen. Not offered 1994–95.

CE 115 ab. Soil Mechanics. *9 units (3-0-6); first term. 9 units (2-3-4); second term. Prerequisite: CE 105 or equivalent; may be taken concurrently.* Study of the engineering behavior of soil through examination of its chemical, physical, and mechanical properties. Classification and identification of soils, surface chemistry of clays, interparticle reactions, soil structure. Linear constitutive relations for soils, including steady-state and transient water flow. Second term: nonlinear soil behavior, theories of yielding, plasticity, constitutive models, and problems of plastic stability. Failure modes of footings, walls, and slopes. Instructor: Scott.

CE 124. Special Problems in Structures. 9 units (3-0-6); any term. Selected topics in structural mechanics and advanced strength of materials to meet the needs of first-year graduate students. Instructors: Staff.

CE 130 abc. Civil Engineering Seminar. 1 unit (1-0-0); each term. All candidates for the M.S. degree in civil engineering are required to attend a graduate seminar, in any division, each week of each term. Graded pass/fail. Instructors: Staff.

CE 150. Foundation Engineering. 9 units (3-0-6); third term. Prerequisite: CE 115 ab. Methods of subsoil exploration. Study of types and methods of design and construction of foundations for structures, including single and combined footings, mats, piles, caissons, retaining walls, cofferdams, and methods of underpinning. Text: *Foundation Analysis*, Scott. Instructor: Scott.

CE 160 abc. Structural and Earthquake Engineering. 9 units (3-0-6); first, second, third terms. Prerequisite: CE 10 or equivalent. Topics forming the foundation for structural analysis and design are covered. Techniques for linear and nonlinear, static and dynamic analysis, including analysis of structure-foundation and structure-fluid systems, the nature of loadings due to wind and earthquake, concepts in design. Special consideration is given to behavior and design of specific structural systems such as buildings, bridges, concrete dams, liquid-storage tanks, tunnels and pipelines, cable structures, and offshore structures. Special emphasis on engineering for earthquakes. Instructor: Hall.

CE 180. Experimental Methods in Earthquake Engineering. 9 units (1-5-3); third term. Prerequisite: AM 151 abc or equivalent. Laboratory work involving calibration and performance of basic transducers suitable for the measurement of strong earthquake ground motion, and of structural response to such motion. Study of principal methods of dynamic tests of structures, including generation of forces and measurement of structural response. Instructors: Staff.

CE 181. Principles of Earthquake Engineering. 9 units (3-0-6); first term. Characteristics of potentially destructive earthquakes from the engineering point of view. Determination of location and size of earthquakes; magnitude, intensity, frequency of occurrence; engineering implications of geological phenomena, including earthquake mechanisms, faulting, fault slippage, and effects of local geology on earthquake ground motion. Not offered 1994-95.

CE 200. Advanced Work in Civil Engineering. 6 or more units as arranged; any term. Members of the staff will arrange special courses on advanced topics in civil engineering for properly qualified graduate students. The following numbers may be used to indicate a particular area of study.

CE 201. Advanced Work in Structural Engineering.

CE 202. Advanced Work in Soil Mechanics.

CE 203. Advanced Work in Hydraulic Engineering. Units to be based upon work done; any term. Special course to meet the needs of advanced graduate students.

ES/CE 204 abc. Hydrodynamics of Free Surface Flows. 9 units (3-0-6). For course description, see Engineering Science.

CE 210 ab. Hydrodynamics of Sediment Transport. 9 units (3-0-6); second, third terms. *Prerequisites:* AMa 95 abc, Env 112 abc, and CE 101 abc. The mechanics of the entrainment, transportation, and deposition of solid particles by turbulent fluids, including discussion and interpretation of results of laboratory and field studies of alluvial streams, and wind erosion. Not offered 1994-95.

CE 211. Advanced Hydraulics Seminar. 4 units (2-0-2); every term. A seminar course for advanced graduate students to discuss and review the recent technical literature in hydraulics and fluid mechanics. Civil and environmental engineering topics that are not available in courses offered by the Division of Engineering and Applied Science. Subject will vary depending upon the needs and interests of the students. May be taken any number of times with the permission of the instructor. Instructors: Staff.

CE 212. Advanced Hydraulics Laboratory. 6 or more units as arranged; any term. *Prerequisite:* instructor's permission. A laboratory course, primarily for first-year graduate students, dealing with flow in open channels, sedimentation, waves, hydraulic structures, hydraulic machinery, or other phases of hydraulics of special interest. Students may perform one comprehensive experiment or several shorter ones. Instructors: Staff.

CE 213. Advanced Coastal Engineering. 9 units (3-0-6); third term. *Prerequisites:* CE 101 abc and CE 113 ab. Selected topics in coastal engineering such as harbor resonance, mooring and berthing of ships, and structural forces due to waves, tsunamis, and other impulsive wave systems. Not offered 1994-95.

CE 300 abc. Research in Civil Engineering. Hours and units by arrangement. Research in the field of civil engineering. By arrangements with members of the staff, properly qualified graduate students are directed in research.

For courses in Environmental Engineering Science, see that section.

COMPUTATION AND NEURAL SYSTEMS

CNS 100. Introduction to Computation and Neural Systems. 3 units (3-0-0); second term. This course is designed to introduce first-year CNS students to the wide variety of research being undertaken by CNS faculty. Topics from all the CNS research labs are discussed and span the range from biology to engineering. Instructors: Staff.

CNS/EE 124. Pattern Recognition. 9 units (3-0-6); third term. *Prerequisite:* Ma 2. Covers classic results from pattern recognition and discusses in this context associative memories and related neural network models of computation. Discriminant functions, capacity of linear discriminant functions, perceptron and related teaching algorithms, parametric (statistical) training techniques, unsupervised learning; nonlinear discriminant functions, associative memories, learning algorithms for layers of discriminant functions. Instructors: Psaltis, Smyth.

Aph/CNS/EE 133. Optical Computing. 9 units (3-0-6). For course description, see Applied Physics.

EE/CNS 148. Selected Topics of Computational Vision. 9 units (3-0-6). For course description, see Electrical Engineering.

Bi/CNS 150. Neurobiology. 10 units (4-0-6). For course description, see Biology.

Bi/CNS 161. Cellular Neurobiology Laboratory. 9 units (0-6-3). For course description, see Biology.

Bi/CNS 162. Central Nervous System Laboratory. 10 units (0-8-2). For course description, see Biology.

CS/CNS 174 abc. Computer Graphics Laboratory. 9 units (3-3-3). For course description, see Computer Science.

CNS 179. Reading in Computation and Neural Systems. Units by arrangement; first, second, third terms. Permission of instructor required.

CNS 180. Research in Computation and Neural Systems. Units by arrangement with faculty. Offered to precandidacy students.

CNS/CS/EE 182 abc. Analog Integrated Circuit Design. 9 units (3-3-3); first, second, third terms. Prerequisites: EE 14, EE 90, Aph 3, CS 10, or their equivalents. Device, circuit, and system techniques for designing large-scale CMOS analog systems. MOS transistor above and below threshold; current mirrors; differential transconductance amplifier; analog addition, subtraction, multiplication, absolute value, interpolation division. Circuits with time constants: linear filters of first and second order, monostable and astable relaxation oscillators. Automatic gain and control system examples from feedback control, vision, and auditory processing. In-depth laboratory work on elementary circuits and subsystems is an integral part of the course. Instructor: Mead.

CNS/CS/EE 184 abc. Analog Integrated Circuit Projects Laboratory. Units by arrangement; second, third, first terms. Prerequisite: CNS 182 abc; may be taken concurrently with CNS 182 bc. Design projects in large-scale analog integrated systems. Each student, or pair of students, is expected to define, design, verify, and submit for fabrication a system of their choice. The project definition and simulation must be finished by the end of the second quarter (184 a), and the final design must be verified and submitted for fabrication by the end of the third quarter (184 b). Testing and characterization of the fabricated circuits will be done in the first quarter of the following year (184 c). A two-term version of the course can be made available by arrangement with the instructor. Graded on a pass/fail basis. Instructor: Mead.

CNS/Bi/Ph 185. Collective Computation. 9 units (3-1-5); first term. Background: EE 14 and CS 10 or equivalent. Model neural networks; differential equations and circuits for a neural net; energy functions that compute; associative memory, analog decoding, combinatorial problems, sequences; neural nets for speech and image processing; systems that learn; self-organizing maps. Course work includes some hardware laboratory and work in the CNS simulation facility. Instructor: Hopfield.

CNS/Bi/EE 186. Vision: From Computational Theory to Neuronal Mechanisms. 12 units (4-4-4); second term. Lecture, laboratory, and discussion course aimed at understanding visual information processing, in both machines and the mammalian visual system. The course will emphasize an interdisciplinary approach aimed at understanding vision at several levels: computational theory, algorithms, psychophysics, and hardware (i.e., neuroanatomy and neurophysiology of the mammalian visual system, analog VLSI circuits). The course will focus on early vision processes, in particular motion analysis, binocular stereo, brightness, color and texture analysis, and boundary detection. Students will be required to hand in approximately three homeworks as well as complete one project (mathematical analysis, computer modeling, psychophysics, or hardware implementation). Instructors: Koch, Perona, Andersen.

CNS 188. Computation Theory and Neural Systems. 9 units (3-0-6); second term. *Prerequisite:* Ma 2. Introduction to computational models and methods that are inspired/related to neural systems as well as relevant mathematical techniques developed in computer science and engineering. Specific topics include: computing with circuits, feedback and computation, associative memories, analog computing, fault tolerance, learning and elements of parallel and distributed computing. Instructor: Bruck.

CNS/Bi 221. Computational Neuroscience. 9 units (4-0-5); third term. *Prerequisites:* Bi/CNS 150, CNS 185; or instructor's consent. Lecture, discussion, and project aimed at understanding computational aspects of information processing within the nervous system. The course will emphasize single neurons and how their biophysical properties relate to neuronal coding, i.e., how is information actually represented in the brain at the level of action potentials. Topics include: linear and nonlinear cable theory, NMDA, synaptic interactions, Hodgkin-Huxley equations, Central Pattern Generators, stochastic activity of neurons, mean rate versus temporal coding, motion perception and its neuronal representation in cortical area MT in the monkey and in the fly, oscillations/synchronization in the olfactory system of crickets and mammals, VLSI neuromorphic models of the nervous system, plasticity and learning. Students are required to hand in three homeworks as well as complete a small research project (mathematical analysis, computer modeling, VLSI implementation). Instructors: Koch and Bower.

CS/CNS 257 abc. Simulation. 9 units (3-3-3) first; (3-5-1) second; (3-5-1) third term. For course description, see Computer Science.

CNS 280. Research in Computation and Neural Systems. Hours and units by arrangement. For graduate students admitted to candidacy in computation and neural systems.

CNS 286. Special Topics in Computation and Neural Systems. Units to be arranged; first, second, and third terms. Students may register with permission of the responsible faculty member.

COMPUTER SCIENCE

CS 1. Introduction to Sequential Programming. 6 units (1-4-1); first term. No prerequisites. Optional course for students who have not seen programming before or who wish to learn C. Basic information on syntax and the central programming ideas: data types, simple linked data structures, assignment, conditional and sequential execution, iteration, and recursion. Involves homeworks and laboratory work to introduce the basic ideas. Instructor: Taylor.

CS 2. Problem Solving and Computing Lab. 9 units (3-4-2); second term. Prerequisite: CS 1 or equivalent. Methodical programming and problem solving. Weekly laboratory exercises, programming in C, and homeworks in problem solving and program design. Data structures: stacks, queues, heaps, graphs, and trees. Complexity, invariants, and metrics. Simple algorithms: sorting, searching, and hashing.

Students who have not encountered programming before should take CS 1 in the first term. Instructor: Taylor.

CS 3. Introduction to Concurrent Programming. 9 units (3-4-2); third term. Prerequisite: CS 2. Introduction to concurrent programming concepts and basic techniques, hands-on use of Caltech multicomputers. Builds on programming methods used in CS 2 but focuses on concurrent programming. Nontrivial programming problems from fluid mechanics and game playing. Instructor: Taylor.

CS/EE 4. Introduction to Digital Electronics. 6 units (2-0-4); first term. An introduction to modern digital design techniques. Boolean algebra and the formulation of logic equations. Hardware realization of combinational and sequential logic circuits. The building blocks and operation of a computer: binary arithmetic, the ALU, and random-access memory. Graded pass/fail. Instructor: Goodman.

Ma/CS 6 abc. Introduction to Discrete Mathematics. 9 units (3-0-6). For course description, see Mathematics.

CS/EE 11. Digital Electronics Laboratory. 6 units (0-3-3); second term. Prerequisites: CS/EE 4. 6 units credit allowed toward freshman laboratory requirement. An introductory laboratory designed to provide practical hardware experience of theory covered in CS/EE 4. The student is expected to design, build, and test a wide variety of commonly used digital circuits using modern integrated circuits. Graded pass/fail. Instructor: Goodman.

CS 20 abc. Computation, Computers, and Programs. 9 units (3-3-3); first, second, third terms. Prerequisite: CS 2 or equivalent. An introduction to computation and computing science. The representation and implementation of computations as programs and machines. Relationships between physical computing machines and abstract processes. Representation of data. Abstraction and composition. Algorithms, complexity, and efficiency. Limitations of computations. Correctness concerns. Nondeterminism. Reversible computations. Concurrent computing. Design of computers and programs. Laboratory work using UNIX workstation computers to explore computations and programs. Instructors: Staff.

EE/CS 51. Principles of Microprocessor Systems. 9 units (3-0-6). For course description, see Electrical Engineering.

EE/CS 52. Microprocessor Systems Laboratory. 12 units (1-11-0). For course description, see Electrical Engineering.

EE/CS 53. Microprocessor Project Laboratory. 9 units (0-9-0) or 12 units (0-12-0) as arranged with the instructor. For course description, see Electrical Engineering.

EE/CS 54. Advanced Microprocessor Projects Laboratory. 9 units (0-9-0) or 12 units (0-12-0) as arranged with the instructor. For course description, see Electrical Engineering.

CS 80 abc. Undergraduate Research in Computer Science. Units in accordance with work accomplished. Consent of both research adviser and course supervisor required before registering. Supervised research in computer science by undergraduates. Topic must be approved by the supervisor, and a formal final report must be presented on completion of research. Graded pass/fail. Instructors: Staff.

Ma/CS 117 ab. Computability Theory. 9 units (3-0-6). For course description, see Mathematics.

CS/EE/Ma 129 abc. Information and Complexity. 9 units (3-0-6), first and second terms; (1-4-4) third term. Prerequisite: Basic knowledge of probability and discrete mathematics. A basic course in information theory and computational complexity with emphasis on fundamental concepts and tools that equip the student for research and provide a foundation for pattern recognition and learning theory. *First term:* What is information and what is computation; entropy, source coding, Turing machines, uncomputability. *Second term:* Topics in information and complexity; Kolmogorov complexity, channel coding, circuit complexity, NP completeness. *Third term:* Theoretical and experimental projects on current research topics. Not offered 1994–95. Instructor: Abu-Mostafa.

AMa/CS 132 abc. Concurrent Scientific Computing. 9 units (3-3-3). For course description, see Applied Mathematics.

CS 138 abc. Computer Algorithms. 9 units (3-0-6); first, second, third terms. Prerequisite: CS 2 or equivalent. Design, analysis, and proofs of correctness of computer programs. Program specification, methods of proving program correctness, and computational complexity. NP-completeness. Models of parallel, concurrent, and distributed computation. Searching, sorting, string matching. Graph, geometric, algebraic, and matrix algorithms. Linear programming. Heuristic search. Discrete-event simulation. Algorithms for distributed systems. Part of the third term is spent studying applications in one branch of science or engineering. Instructor: Chandy.

CS 139 abc. Concurrency in Computation. 9 units (3-0-6); first, second, third terms. Prerequisite: CS 20 or equivalent. Design and verification of concurrent algorithms. Topics: different models of concurrent computations; process synchronization by shared variables and synchronization primitives; distributed processes communicating by message exchange; the concepts of synchronization, indivisible actions, deadlock, and fairness; semantics and correctness proofs; implementation issues; and application to VLSI algorithm design. Parallel machine architecture issues include mapping a parallel algorithm on a

network of processors, and classical parallel algorithms and their complexity. Given in alternate years. Instructor: Martin.

CS 140 abc. Programming Laboratory. 9 units (3-4-2); *first, second, third terms.* An introduction to object-oriented, functional, and logic programming, with laboratory exercises and a full-scale project. Each of these programming paradigms affords its own benefits in particular application domains. C++ and Cosmic C will be used to explore object-oriented and communicating-process programming, Lisp and Scheme to explore functional programming, and Prolog and Strand to explore logic programming. The second term of the course gives students the opportunity to develop, under close guidance, a programming project whose complexity is at the scale of a compiler, using one of the paradigms presented in the first term. The emphasis in the project is not only in achieving the task, but presenting a clear problem specification, a modular design, and a maintainable implementation. Instructors: Staff.

CS 142 abc. Decision Support Systems. 9 units (3-3-3); *first, second, third terms.* *Prerequisite: Programming experience using PASCAL. Permission of the instructor required.* The building of conceptual models as an expression of the patterns perceived in the analysis of data. Data-base systems, discrete simulation, decision support systems, and expert systems. Small group projects and extensive use of the computer. Not offered 1994–95. Instructor: Thompson.

CS/CNS 174 abc. Computer Graphics Laboratory. 9 units (3-3-3); *first, second, third terms.* *Prerequisites: Ma 2 and extensive programming experience.* The art of making pictures by computer. Hardware and algorithms will be described. Topics: graphics input and output, three-dimensional transformations and interactive modeling, physically based modeling, surface rendering, ray tracing, and lighting models. Students will implement several medium-scale projects; there will be an opportunity for independent projects third term. Instructors: Staff.

CS 180. Master's Thesis Research. *Units (total of 45) are determined in accordance with work accomplished.*

CS/EE 181 abc. VLSI Design Laboratory. 12 units (3-6-3); *first, second, third terms.* *Prerequisites: CS/EE 4.* Digital integrated system design, with projects involving the design, verification, and testing of high-complexity CMOS microcircuits. First-term lecture and homework topics emphasize disciplined design, and include CMOS logic, layout, and timing; computer-aided design and analysis tools; and electrical and performance considerations. Each student is required in the first term to complete individually the design, layout, and verification of a moderately complex integrated circuit. Advanced topics second and third terms include self-timed design, computer architecture, and other topics that vary year by year. Projects are large-scale designs done by teams. Instructors: Staff.

CNS/CS/EE 182 abc. Analog Integrated Circuit Design. 9 units (3-3-3). For course description, see Computation and Neural Systems.

CNS/CS/EE 184 abc. Analog Integrated Circuit Projects Laboratory. *Units by arrangement.* For course description, see Computation and Neural Systems.

CS 185 abc. Design of Asynchronous VLSI Circuits. 9 units (3-3-3); first, second, third terms. *Prerequisite:* CS 139. The design of digital integrated circuits whose correct operation is independent of delays in wires and gates. (Such circuits do not use clocks.) Emphasis is placed on high-level synthesis, design by program transformations, and correctness by construction. The first term introduces delay-insensitive design techniques, description of circuits as concurrent programs, circuit compilation, standard-cell layout and other computer-aided design tools, and electrical optimizations. The second term is reserved for advanced topics, and for the presentation and review of mid-size projects, which will be fabricated in CMOS or GaAs technologies, and tested. Given in alternate years; not offered 1994–95. Instructor: Martin.

CS 237 abc. Design and Implementation of Programming Languages. 9 units (3-3-3); first, second, third terms. *Prerequisite:* Advanced programming background. Current practice and research in programming languages. Syntactic and semantic issues with emphasis on the latter. Syntactic topics: finite automata, regular expressions, and lexical analysis; push-down automata and context-free grammars; top-down and bottom-up parsing techniques; syntax-directed translation. Semantic topics: code generation, optimization, binding mechanisms, storage management, and execution environments. Language design topics: abstraction mechanisms, advanced control regimes, very-high-level languages, functional languages, object-oriented languages, logic programming languages. Further topics: interpreter and compiler construction issues, the impact of languages on hardware design. Extensive laboratory work will be required. Not offered 1994–95.

CS/CNS 257 abc. Simulation. 9 units (3-3-3) first; (3-5-1) second; (3-5-1) third term. *Permission of the instructor required.* Mathematical and computational modeling methods. First term: the mathematical foundations of simulation, such as Eulerian equations of motion, tensor analysis, applied 3-D geometry, and the mathematics of continuum dynamics. Second term: the numerical methods of simulation, such as the numerical solution of differential equations, the finite element method, and Monte Carlo techniques. Third term: case studies applying these techniques to selected three-dimensional problems in the physical sciences. Term projects for the third term will involve implementing a case study or other computational application of the methods. Some experience with vector and raster graphics would be helpful. Instructor: Barr.

CS 274 abc. Advanced Topics in Computer Graphics. 9 units (3-3-3); first, second, third terms. *Prerequisite:* CS 174, or permission of instructor. The emphasis of this course is to gain understanding of the theoretical foundations underlying techniques used in computer graphics. The topics treated vary from year to year. Typical past and future topics: differential geometry, probability, stochastic processes and Monte Carlo, differential topology, algebraic geometry. May be repeated for credit with permission of instructor. Not offered 1994–95.

CS 280. Research in Computer Science. *Units in accordance with work accomplished. Approval of student's research adviser and his or her option adviser must be obtained before registering.*

CS 282 abc. Reading in Computer Science. 6 units or more by arrangement; first, second, third terms. *Permission of the instructor required.*

CS 284 abc. Computer Science Seminar on Mathematics of Program Construction. 9 units (3-0-6); first, second, third terms. Prerequisite: CS 20 or permission of instructor. This course addresses the mathematical basis of programming. First term: predicate calculus, lattice theory, sequential programming. Second term: relational calculus, programs as trace-sets, temporal properties. Third term: models of concurrency and concurrent programming. Instructors: Staff.

CS 286 abc. Seminar in Computer Science. 9 units (3-0-6). Permission of the instructor required.

CONTROL AND DYNAMICAL SYSTEMS

CDS 101. Applied Operator Theory. 9 units (3-0-6); first term. Invariant subspaces, Jordan form, Cayley-Hamilton theorem, matrix exponential, singular value decomposition, L_p spaces, Banach and Hilbert spaces, operators, duals, adjoints, induced norms, spectral theory. Instructor: Staff.

CDS 102. Geometry of Nonlinear Systems. 9 units (3-0-6); second term. Prerequisite: CDS 101. Basic differential geometry, oriented toward applications in control and dynamical systems. Topics include: Smooth manifolds and mappings, tangent and normal bundles, transversality. Vector fields and flows. Distributions and Frobenius's theorem. Matrix Lie groups and Lie algebras. Exterior differential forms, Stokes's theorem. Instructor: Murray.

CDS 103. Nonlinear Dynamical Systems and Chaos. 9 units (3-0-6); third term. Prerequisite: AM 114 or equivalent. Invariant manifolds, bifurcations, normal forms, the Smale horseshoe, symbolic dynamics, Melnikov's method. Instructor: Wiggins.

CDS 110 ab. Introduction to Control of Physical Systems. 9 units (3-0-6); first, second terms. Prerequisites: AMa 95 abc. Application of feedback analysis and design to physical systems, including classical control theory in the frequency and time domains. Stability; performance; methods based on Bode, Nyquist, and root-locus diagrams. Representation in state space. Analog and discrete dynamical systems. Introduction to multivariable control. Instructor: Culick.

CDS 111. Introduction to Control Technology. 9 units (3-3-3); third term. Prerequisites: Ae/ME 130 or basic controls course. A survey of the basic ideas and techniques of multivariable control systems suitable for the nonspecialist. The course covers important tools such as singular value decomposition, linear programming, simulation, LQG, H_∞ . Other topics include: static optimization, multivariable PID control, approximate decoupling, robustness. Role of the control engineer in the overall system design; importance of control configuration for overall system performance. All concepts and results are demonstrated with numerical and experimental exercises. Instructors: Doyle, Morari.

CDS 112. Introduction to Theory of Feedback Systems. 9 units (3-0-6); first term. Prerequisite: Ae/ME 130 or basic controls course. Feedback control design, stability and performance analysis in frequency and time domain. Loop shaping for

performance and robustness. Covers *Feedback Control Theory*, by Doyle, Francis, and Tannenbaum, with elementary MIMO generalizations. Instructor: Morari.

CDS 113 ab. Systems Analysis and Control. 12 units (3-3-6); second, third terms. *Prerequisites:* CDS 112, CDS 101. Linear systems, realization theory, time and frequency response, norms and performance, stochastic noise models, robust stability and performance, linear fractional transformations, structured uncertainty, optimal control, model reduction, μ analysis and synthesis, real parametric uncertainty, Kharitonov's theorem, uncertainty modeling, fuzzy set theory and control. Instructor: Doyle.

CDS 121. Nonlinear Systems and Adaptive Control. 9 units (3-0-6); third term. *Prerequisites:* CDS 102, CDS 113 a. Methods for analysis and design of nonlinear control systems emphasizing Lyapunov theory. Second-order systems, describing functions, direct and indirect method of Lyapunov, I/O stability. Model reference adaptive control, self-tuning regulators, sufficient excitation, parameter convergence, stability and robustness issues. Instructor: Staff.

CDS 122. Geometric Nonlinear Control Theory. 9 units (3-0-6); third term. *Prerequisites:* CDS 102, CDS 113 a. Study of the differential geometric approach to nonlinear control theory. Controllability, observability, feedback linearization, invariant distributions, disturbance decoupling, Lagrangian and Hamiltonian control systems, exterior differential systems. Instructor: Murray.

CDS 131. Computational Methods in CDS. 9 units (3-3-3); first term. Applications of symbolic manipulation, linear and nonlinear programming, graphics. Use of software: MATHEMATICA, MAPLE, MINOS, GAMS. Instructor: Staff.

CDS 132. System Identification and Estimation. 9 units (3-0-6); second term. *Prerequisites:* CDS 101, CDS 113 a (may be taken concurrently). Review of probability, statistics, and stochastic processes. Optimal predictors for input-output and state-space models. Nonparametric, prediction-error, and correlation methods. Asymptotic analysis. Computational aspects. Recursive identification. Experiment design. Model validation and closed-loop identification. Instructor: Staff.

CDS 141. Geometrical Mechanics. 9 units (3-0-6); first term. *Prerequisite:* CDS 102. Symplectic and Poisson structures, momentum maps, reduction and symmetry, Lie groups and algebras, energy-momentum method, geometric phases, the rigid body, symplectic integrators. Instructor: Wiggins.

CDS 142. Hamiltonian Dynamics. 9 units (3-0-6); second term. *Prerequisites:* CDS 103, CDS 141. Hamiltonian stability and bifurcation theory, Poincaré-Birkhoff normal forms, KAM theory, Nekhoroshev theory, Arnold diffusion. Instructor: Wiggins.

CDS 240. Advanced Topics in Dynamical Systems Theory. *Prerequisite:* consent of instructor. Topics will vary according to student and instructor interest. Examples include chaotic transport theory, invariant manifold techniques, multi-dimensional geometric perturbation theory, the dynamics of coupled oscillators, rigid-body dynamics, numerical methods in dynamical systems theory. Can be repeated for credit.

CDS 270. Advanced Topics in Systems and Control. *Prerequisite:* CDS 102. Topics dependent on class interests and instructor. Can be repeated for credit.

ECONOMICS

Ec 11. Introduction to Economics. 9 units (3-0-6); first, second terms. An introduction to economic methodology, models, and institutions. Includes both basic microeconomics and an introduction to modern approaches to macroeconomic issues. Instructors: El-Gamal, Plott.

Ec 13. Readings in Economics. Units to be determined for the individual by the department. Not available for credit toward humanities–social science requirement. Graded pass/fail.

Ec 98 abc. Senior Research and Thesis. Prerequisite: instructor's permission. Senior economics majors wishing to undertake research may elect a variable number of units, not to exceed 12 in any one term, for such work under the direction of a member of the economics faculty.

Ec 101. Selected Topics in Economics. 9 units (3-0-6). Instructors: Staff, visiting lecturers.

Ec 112. History of Economic Analysis. 9 units (3-0-6). Prerequisite: Ec 11 or SS 13. History of the development of economic doctrine and theory. Specific periods of emphasis may vary with instructor. Instructors: Border, El-Gamal, Hoffman.

Ec 114. Economics of Crime. 9 units (3-0-6). Prerequisite: Ec 11 or equivalent. This course studies the economic approach to criminal behavior and its application to various related policy issues, such as the deterrent effects of capital punishment, the optimal allocation of social resources to law enforcement, and tax evasion. Both theoretical and empirical analyses will be utilized. Instructors: Staff.

Ec 116. Contemporary Socioeconomic Problems. 9 units (3-0-6); second term. Prerequisites: Ec 11 and PS 12 or equivalents. An analytical investigation of the economic aspects of certain current social issues. Topics: the economics of education, medical-care systems, urban affairs, and the welfare system. Instructor: Dubin.

Ec 118. Environmental Economics. 9 units (3-0-6). Prerequisite: Ec 11 or equivalent. The methods of price and welfare theory are used to analyze the causes of air, water, and other environmental pollution, to examine their impact on economic welfare, and to evaluate selected policy alternatives for managing our environment. Instructors: Staff.

Ec 120. International Economic Theory. 9 units (3-0-6). Factors affecting the exchange of goods and services and the flow of capital between markets. Theory is stressed. Instructors: Staff.

Ec 121 ab. Theory of Value. 9 units (3-0-6); second, third terms. Prerequisites: Ec 11 and Ma 2 (may be taken concurrently). A study of consumer preference, the structure and conduct of markets, factor pricing, measures of economic efficiency, and the interdependence of markets in reaching a general equilibrium. Instructor: Border.

Ec 122. Econometrics. 9 units (3-0-6); second term. Prerequisite: Ma 112 a. The application of statistical techniques to the analysis of economic data. Instructor: Dubin.

Ec 123. Forecasting Economics Time Series. 9 units (3-0-6). *Prerequisite:* Ec 122. Various forecasting techniques; application to business and economics. Not offered 1994–95. Instructors: Staff.

Ec 124 abc. Mathematical Methods of Economics. 9 units (3-0-6). *Prerequisites:* Ma 107 and Ec 121 ab (can be taken concurrently). Mathematical tools of modern economic theory and their applications to consumer theory, general equilibrium, and welfare economics. Emphasis on developing rigorous exposition by the students. Instructor: Border.

Ec 125 ab. The Economics of International Relations. 9 units (3-0-6). Economic and political factors influencing relations among nations. Topics: foreign exchange markets, international banking and business, the pattern of international trade and payments, the International Monetary Fund and the World Bank, the European Common Market, and the American Foreign Aid Program. The foreign economic policy of the U.S. is analyzed in some detail. This course emphasizes theory less than does Ec 120. Not offered 1994–95. Instructors: Staff.

Ec 127. Problems in Economic Theory (Seminar). Units by arrangement; first, second, third terms. *Prerequisite:* Ec 121. Consideration of selected topics in economic theory. Not offered 1994–95. Instructors: Staff and guest lecturers.

Ec/SS 128. Economic Growth in Historical Context. 9 units (3-0-6). *Prerequisite:* Ec 11 or SS 13. Analyzes and compares the growth of per capita product in the developed world since 1750; and, in that context, the problems of economic development in the third world today will be introduced. Not offered 1994–95. Instructor: Davis.

Ec/SS 129. Economic History of the United States. 9 units (3-0-6); first term. *Prerequisite:* Ec 11 or SS 13. An examination of certain analytical and quantitative tools and their application to American economic development. Instructor: Davis.

Ec/SS 130. Economic History of Europe Since the Late Middle Ages. 9 units (3-0-6); second term. *Prerequisite:* Ec 11 or SS 13. Employs the theoretical and quantitative techniques of economics to help explore and explain the development of the European cultural area between 1500 and 1950. Topics include the rise of commerce, the industrial revolution, the demographic transition, and imperialism. Instructor: Hoffman.

Ec 131. Labor Economics. 9 units (3-0-6). *Prerequisite:* Ec 11 or equivalent. Modern theory of labor markets. Uses empirical evidence to supplement theoretical results. Instructors: Staff.

PS/Ec 134. The Political Economy of Urban Areas. 9 units (3-0-6). For course description, see Political Science.

Ec 135. Economics of Uncertainty and Information. 9 units (3-0-6); second term. *Prerequisite:* Ec 11, Ma 2. An analysis of the effects of uncertainty and information on economic decision. Included among the topics are individual and group decision making under uncertainty, expected utility maximization, insurance, financial markets and speculation, product quality and advertisement, and the value of information. Instructor: Palfrey.

Ec 138. Introduction to Welfare Economics. 9 units (3-0-6). *Prerequisite:* Ec 11. Economic efficiency of various market arrangements; modern developments in the theories of decentralization and informational efficiency. Instructors: Staff.

Ec 140. Economics of Energy Policy. 9 units (3-0-6). *Prerequisite:* Ec 121 ab or equivalent. Issues in contemporary resource/energy policies, with particular emphasis on federal energy-independence policy. After a brief survey in the theory of resource economics, major issues are identified and their current solutions are contrasted to other alternatives in terms of feasibility and optimality. Instructor: Dubin.

Ec 145. Public Finance. 9 units (3-0-6). *Prerequisite:* Ec 11 or equivalent. An intermediate-level course on the economics of the public sector. Material is chosen from welfare economics, public expenditure theory and practice, taxation theory and practice, federalism, and public choice theory. Instructor: Ledyard.

BEM/Ec 146. Organization Design. 9 units (3-0-6). For course description, see Business Economics and Management.

Ec/PI 147. Altruism and Fairness in Economics.* 9 units (3-0-6). *Prerequisite:* Ec 11. A study and discussion of altruism and fairness and their congruence with standard economic models. Philosophical theories of justice and fairness will be compared with the treatment of these notions within economics. The emphasis will be on class discussion and short papers or problems. Not offered 1994–95. Instructors: Ledyard, Woodward. *May be used as an advanced economics course.*

Ec 150. Chaotic Dynamics in Economic Systems. 9 units (3-0-6). *Prerequisites:* Ma 2, Ma 112. Nonlinear difference equations arising in partial equilibrium, Keynesian, and capital theoretic models; analysis of symbolic dynamics, periodicity, topological chaos, and ergodicity; numerical and statistical issues of estimation, hypothesis testing, and Monte Carlo experiments. Not offered 1994–95. Instructor: El-Gamal.

Ec 155. Statistical Decision Theory. 9 units (3-0-6). *Prerequisites:* Ma 2, Ma 112 a. Course will cover Bayesian notions of subjective probability and statistics with applications related (but not limited) to economics. Emphasis will be equally shared between axiomatics and theory on the one hand and statistical techniques and algorithms on the other. Not offered 1994–95. Instructor: El-Gamal.

Ec/PS 160 abc. Laboratory Experiments in the Social Sciences. 9 units (3-3-3). An examination of recent work in laboratory testing in the social sciences with particular reference to work done in social psychology, economics, and political science. Students are required to design and conduct experiments. Instructor: Plott.

Ec 161. Business Cycles. 9 units (3-0-6); first term. *Prerequisite:* Ec 11. The role of dynamic decision making in economic fluctuations and growth. Topics include: labor supply decisions and unemployment, behavior of inventories, real investment behavior, productivity, and real capital markets. Instructor: El-Gamal.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

Ec 162. Monetary Theory. 9 units (3-0-6); third term. Prerequisite: Ec 11. The role of money and the payments mechanism in the U.S. economy. Topics include: behavior of the Federal Reserve and the commercial banking system, determination of interest rates and the term structure of interest rates, empirical analysis of the demand and supply of money, and financial markets. Instructor: Fohlin.

PS/Ec 172. Noncooperative Games in Social Science. 9 units (3-0-6). For course description, see Political Science.

PS/Ec 173. Cooperation and Social Behavior. 9 units (3-0-6). For course description, see Political Science.

ELECTRICAL ENGINEERING

EE 1. Introduction to Electrical Engineering. 9 units (3-3-3); third term. Major themes in the EE core courses are introduced through demonstration lectures and home-laboratory experiments. This course is suitable for both EE's and non-EE's, being a head-start for the former and a brief encounter for the latter. Topics: elementary electrical circuits in both time and frequency domains; the electromagnetic spectrum; generating and radiating electromagnetic waves; signals, noise, and information, and how they interact; power conditioning and transmission; characteristics of electronic devices; elementary opto-electronic devices and systems; measurement techniques. This course complements the digital courses CS/EE 4 and CS/EE 11, covering the analog side of EE. Application of electronic fundamentals to systems such as cellular radio, satellite communications, and compact disk recording, will be treated at an introductory level. The home-laboratory provides hands-on experience. Graded pass/fail. Instructor: Bridges.

CS/EE 4. Introduction to Digital Electronics. 6 units (2-0-4). For course description, see Computer Science.

CS/EE 11. Digital Electronics Laboratory. 6 units (0-3-3). For course description, see Computer Science.

EE 14 abc. Introduction to Electronic Engineering and Laboratory. 12 units (3-2-7); first, second, third terms. Prerequisites: Ma 1 abc, Ph 1 abc. Design-oriented analysis approach to the fundamentals of electrical engineering. Linear circuit analysis, Kirchhoff's laws, transient and steady-state network solutions, phasors, Thevenin and Norton theorems, Bode plot, power transfer, resonant circuits. Device physics of diodes, FETs, and bipolar transistors, device characteristics, models, limitations. Transistor bias circuits, multi-transistor circuits, current mirrors, cascades. Digital circuit analysis, DTL, TTL, ECL, MOS logic circuits. Analog circuit analysis, small signal analysis, amplifiers, frequency response. Operational amplifiers, power amplifiers. Feedback circuits, stability, Nyquist's theorem. Laboratory experiments are designed to match course materials. Not offered on pass/fail basis. Instructors: Middlebrook (lectures), Goodman (laboratory).

EE 32 ab. Introduction to Linear Systems. 9 units (3-0-6); first, second terms. *Prerequisites:* Ma 1, Ma 2, and EE 14. An introduction to the analysis and synthesis of analog and digital circuits, signals, and systems. Sampling, modulation, and filtering of signals represented as continuous or discrete functions of time. Input-output relations of linear time-invariant systems, state-space representations, and stability analysis. Special emphasis will be placed on transform techniques (Fourier, Laplace, and Z-Transforms). Instructors: Abu-Mostafa, Perona.

EE 40. Fundamentals of Energy Processing Systems. 9 units (3-0-6); first term. *Prerequisites:* Ma 2 abc, Ph 2 abc, EE 14 abc. Introduction to electrical energy processing systems as distinct from information processing systems. Elementary magnetic devices: generators, motors, and transformers. The special problems of electronic power processing. Instructor: Cuk.

EE 50. Advanced Digital Design. 9 units (3-0-6); third term. *Prerequisite:* CS/EE 11 or permission of instructor. Advanced digital design as it applies to the design of ASICs, in particular gate arrays and standard cells. The course emphasizes the practical aspects of ASIC design such as timing, testing, and fault grading. Topics include: synchronous design, state machine design, design for testability, PALs, FPGAs, Standard Cells, timing considerations, fault vectors, and fault grading. Instructor: George.

EE/CS 51. Principles of Microprocessor Systems. 9 units (3-0-6); first term. The principles and design of microprocessor-based computer systems. Covers both hardware and software aspects of microprocessor system design, including interfacing techniques. The homework emphasis is on software development, especially hardware interfacing, in assembly language. Instructor: George.

EE/CS 52. Microprocessor Systems Laboratory. 12 units (1-11-0); second term. *Prerequisite:* EE/CS 51 or equivalent. The student will design, build, and program a specified microprocessor-based system. This structured laboratory is organized to familiarize the student with electronic circuit construction techniques, modern development facilities, and standard design techniques. Instructor: George.

EE/CS 53. Microprocessor Project Laboratory. 9 units (0-9-0) or 12 units (0-12-0) as arranged with the instructor; third term. *Prerequisite:* EE/CS 52 or equivalent. A project laboratory to permit the student to select, design, and build a microprocessor-based system. Instructor: George.

EE/CS 54. Advanced Microprocessor Projects Laboratory. 9 units (0-9-0) or 12 units (0-12-0) as arranged with the instructor; first term. *Prerequisite:* permission of instructor. A project laboratory to permit the student to design and build a microprocessor-based system. The laboratory is for the experienced student who can work independently and who has taken or has had experience equivalent to EE/CS 53. Instructor: George.

EE 78 abc. Senior Thesis, Experimental. 9 units; first, second, third terms. *Prerequisite:* instructor's permission. Supervised experimental research experience, open only to senior electrical engineering majors. Requirements set by individual faculty members include a written report based on actual laboratory experience. Topic selection and final report must be approved by the Electrical Engineering Undergraduate Committee. Not offered on pass/fail basis. Instructors: Staff.

EE 79 abc. Senior Thesis, Theoretical. 9 units; first, second, third terms. Prerequisite: instructor's permission. Supervised theoretical research experience, open only to senior electrical engineering majors. Requirements set by individual faculty members include a written report based on work performed. Topic selection and final report must be approved by the Electrical Engineering Undergraduate Committee. Not offered on pass/fail basis. Cannot be used to satisfy the laboratory requirement in EE. Instructors: Staff.

EE 91 abc. Experimental Projects in Electronic Circuits. Units by arrangement; 6 units minimum each term. Prerequisites: EE 14 abc. Recommended: EE/CS 51 and 52, and EE 114 abc (may be taken concurrently). Open to seniors; others only with consent of instructor. An opportunity to do advanced original projects in analog or digital electronics and electronic circuits. Selection of significant projects, the engineering approach, modern electronic techniques, demonstration and review of a finished product. DSP/microprocessor development support and analog/digital CAD facilities available. Text: Literature references. Instructor: Megdall.

EE/Mu 107 abc. Projects in Music and Science. Units to be individually arranged, up to a maximum of 9. Students will carry out, singly or in groups, projects of study or research exploring the connections of music with the sciences. EE/Mu 107 a will be devoted to Analytic Listening to Live and Reproduced Sound; it may be taken by itself and has no prerequisites. EE/Mu 107 b and c, devoted to the projects, require instructor's permission. Projects may be done for joint credit with EE 91 if approved by both instructors. EE/Mu 107 projects may be continued into a second year. Instructor: Boyk.

EE 112. Digital Signal Processing Principles. 9 units (3-0-6); first term. Prerequisites: EE 32 ab or equivalent. Course deals with deterministic signal processing topics. Classical filter approximations, IIR digital filters, optimal FIR filters, advanced structures for digital filter implementations, stability test procedures, fast transforms, fast convolutions, allpass filters, frequency transformations, lattice filters, state-space descriptions, freedom from limit cycles, structural passivity and low-sensitivity structures, elements of array signal processing. Possible additional topics: complex-cepstrum and applications, magnitude-only reconstruction, and minimum-phase systems. Instructor: Vaidyanathan.

EE 117 ab. Power Electronics. 9 units (3-1-5) second term; (3-2-4) third term. Prerequisite: EE 14 abc or equivalent. Introduction to repetitively switched power circuits for ac-to-dc, dc-to-ac, and dc-to-dc conversion and/or regulation of voltage or current in high-power applications: power supplies, motor controls, power amplifiers. Components, control techniques, analysis, and design. Laboratory part of the course includes the design of a switching dc-to-dc converter (part a), closed loop regulator (part b), and verification of the analysis technique and measurement methods through the laboratory assignments (part b). Instructor: Cuk.

CNS/EE 124. Pattern Recognition. 9 units (3-0-6). For course description, see Computation and Neural Systems.

EE/Ma 126. Information Theory. 9 units (3-0-6); first term. Prerequisite: Ma 2 abc. Shannon's mathematical theory of communication, 1948-present. Entropy and mutual information for discrete and continuous random variables. Mathematical models for information sources and communication channels, including memoryless, first-order Markov, ergodic, and Gaussian. Shannon's

source and channel coding theorems. Calculation of capacity-cost and rate-distortion functions. Applications to data compression and magnetic recording codes. Discussion of the philosophical and practical implications of the theory for communication engineers. This course, when followed by EE/Ma 127 ab (for which, however, it is not a prerequisite), should prepare the student for research in information theory and coding theory. Instructor: Abu-Mostafa.

EE/Ma 127 ab. Error-Correcting Codes. 9 units (3-0-6); second, third terms. *Prerequisite:* Ma 2 abc. This course, which is a sequel to EE/Ma 126, but which may be taken independently, will cover the most important techniques for combating errors that occur in the transmission or storage of data. Topics: algebraic block codes, e.g., Hamming, Golay, BCH, Reed-Solomon, Fire; convolutional codes; concatenated codes; and the associated encoding and decoding algorithms. Self-contained introduction to the theory of finite fields. Instructors: Staff.

EE 128. Multirate Systems, Filter Banks, and Wavelets. 9 units (3-0-6); second term. *Prerequisites:* EE 112 or equivalent. Sampling rate alterations in discrete time systems, decimation, interpolation, fractional alteration of sampling rate, multi-stage implementations, efficient implementations using polyphase decompositions, Nyquist filtering, maximally decimated filter banks, theory of perfect reconstruction systems, efficient design and implementations based on paraunitary polyphase matrices and lossless lattices, unconventional sampling, wavelet transforms in the context of multirate and paraunitary filter banks, applications in signal compression, digital audio, and speech. Instructor: Vaidyanathan.

CS/EE/Ma 129 abc. Information and Complexity. 9 units (3-0-6) first and second terms; (1-4-4) third term. For course description, see Computer Science.

Aph/EE 130. Introduction to Optoelectronics. 9 units (3-0-6). For course description, see Applied Physics.

Aph/EE 131. Optoelectronic Devices. 9 units (3-0-6). For course description, see Applied Physics.

Aph/EE 132. Fourier Optics. 9 units (3-0-6). For course description, see Applied Physics.

Aph/CNS/EE 133. Optical Computing. 9 units (3-0-6). For course description, see Applied Physics.

Ay/EE 144. Imaging at Radio, Infrared, and Optical Wavelengths by Interferometric and Adaptive Techniques. 9 units (3-0-6). For course description, see Astronomy.

EE/CNS 148. Selected Topics of Computational Vision. 9 units (3-0-6); third term. *Prerequisites:* Familiarity with basic calculus, linear algebra, and geometry. *Some proficiency in computer programming.* The focus is on three-dimensional vision: motion analysis, shape recovery and recognition, vision-based navigation, attention. There will be 2–4 homework assignments, including computer simulations and a final project on a vision topic chosen by the student. Instructor: Perona.

EE 150. Topics in Electrical Engineering. Units and terms to be arranged. Content will vary from year to year, at a level suitable for advanced undergraduate or

beginning graduate students. Topics will be chosen according to the interests of students and staff. Visiting faculty may present all or portions of this course from time to time. Instructors: Staff.

EE 151. Electromagnetic Engineering. 12 units (3-2-7); second term. *Prerequisite:* EE 14. Foundations of circuit theory. Statics, Maxwell's equations, and plane waves. Instructor: Rutledge.

EE 152. Guided Wave Circuits. 12 units (3-2-7); first term. *Prerequisite:* EE 151 or equivalent. Wave propagation in metal waveguides and dielectric waveguides; optical fibers, integrated circuits, and applications to optoelectronic systems. Selections from periodic propagating structures, and coupled mode devices. Offered every other year; not offered 1994–95. Instructor: Bridges.

EE 153. Microwave Integrated Circuits and Antennas. 9 units (3-1-5); third term. *Prerequisite:* EE 14. Computer-aided design, fabrication, and network-analyzer measurements of very-high-speed circuits and antennas for communications, radar, remote sensing, and radio astronomy. Filters, directional couplers, high-speed transistor models, low-noise amplifiers, oscillators, and injection locking. Offered every other year; not offered 1994–95.

EE 154. Antennas. 9 units (3-1-5); first term. *Prerequisite:* EE 151. Fundamentals of radiating systems in communications and radar. Dipoles and slots, traveling-wave antennas, horn and reflector antennas, and arrays. Offered every other year; offered in 1994–95. Instructor: Rutledge.

EE/Ge 157 abc. Introduction to the Physics of Remote Sensing. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ph 2 abc or equivalent. Introduction to the interaction of electromagnetic waves with natural surfaces and atmospheres. Scattering of microwaves by surfaces and volume scatterers. Microwave and thermal emission from atmospheres and surfaces. Spectral reflection of natural surfaces and atmospheres in the near infrared and visible regions of the spectrum. Review of modern spaceborne sensors and associated technology and data analysis. Emphasis on sensor design, new techniques, ongoing developments, and data interpretation. Examples of applications in geology, planetary, oceanography, astronomy, and atmospheric research. Instructor: Elachi.

EE/Ge 158. Application of Remote Sensing in the Field. 6 units (0-5-1); third term. *Prerequisite:* EE/Ge 157 ab. Application of remote-sensing techniques learned in EE/Ge 157 ab to field situations. During spring break students will visit areas in eastern California and western Nevada that have been used as test areas for visible and near-infrared, thermal-infrared, and microwave scattering methods. Satellite, aircraft, and ground spectrometer data will be compared with surface observation by the student. Instructor: Albee.

EE 160. Communication-System Fundamentals. 9 units (3-0-6); third term. *Prerequisite:* EE 32 ab. Laws of radio and guided transmission, noise as a limiting factor, AM and FM signals and signal-to-noise ratio, sampling and digital transmission, errors, information theory, error correction. Emphasis will be on fundamental laws and equations and their use in communication-system designs, including voice, video, and data. Instructor: Zimmerman.

EE 162. Random Processes for Communication and Signal Processing. 9 units (3-0-6); first term. *Prerequisite:* Some familiarity with probability. Introduction to

single-parameter random processes: stationarity; correlation functions; power spectral density; Gaussian processes. Response of linear systems to random processes. Instructor: Simon.

EE 163 ab. Communication Theory. 9 units (3-0-6); second, third terms. Prerequisite: EE 32 ab; EE 162 or equivalent. Least mean square error linear filtering and prediction. Mathematical models of communication processes; signals and noise as random processes; sampling and quantization; modulation and spectral occupancy; intersymbol interference and synchronization considerations; signal-to-noise ratio and error probability; optimum demodulation and detection in digital baseband and carrier communication systems. Instructor: Simon.

EE 164. Adaptive Filters and Optimal Filters. 9 units (3-0-6); third term. Prerequisites: EE 112 ab and EE 162 or equivalents. Adaptive FIR and IIR filters, adaptation algorithms, convergence analysis, adaptive FIR lattice filters and other orthogonalizing techniques, recursive least squares techniques, fast-Kalman techniques, stable IIR adaptive filtering, adaptive filtering in subbands, Wiener and matched digital filters, linear predictive coding, normal equations, Levinson's recursion, and associated lattice structures. Some applications from the following areas will be used as motivators: speech compression, spectral factorization, channel equalization, echo and noise cancellation, interference minimization, and antenna arrays. Offered every other year; not offered 1994-95.

EE 165. Topics in Telecommunication-System Engineering. 9 units (3-0-6); third term. Prerequisite: at least one term of communications or signal processing. For students having some familiarity with telecommunication elements and models. Approaches to the design of overall telecommunication systems based on specifications, constraints, and demand. Topics will be chosen from terrestrial, satellite, and deep-space communication, radar and radio navigation, and switched voice and data networks ranging in size from the office to the world. Topics and examples depend on instructor's and students' interests. Instructor: Ostro.

EE 166. Optimal Signal Processing, Quantization, and Compression. 9 units (3-0-6); third term. Prerequisites: EE 112 or equivalent, EE 162 or equivalent, and elementary matrix algebra. EE 128 will help. Course deals with optimal (statistical) signal processing topics. Optimal subband coders and transform coders, optimal bit-allocation, discrete-time Karhunen-Loeve transforms, DCT, generality of unitary transforms, linear predictive coding, DPCM, coding gain optimization, information theoretic bounds, autoregressive modeling, detection of sinewaves in noise, roundoff noise and its minimization in digital filters, and error spectrum shaping. Instructor: Vaidyanathan.

EE 167. Data Compression. 9 units (3-0-6); third term. Prerequisite: EE 126 or instructor's permission. An introduction to the basic results, both theoretical and practical, of data compression. Review of relevant background from information theory. Fixed model and adaptive Huffman and Arithmetic codes. The Lempel-Ziv algorithm and its variants. Scalar and vector quantization, including the Lloyd-Max quantizers, and the generalized Lloyd algorithm. Transform Coding. Karhunen-Loeve and discrete cosine transforms. The bit allocation problem. Sub-band coding. Practical algorithms for image and video compression. Instructor: McEliece.

EE/Ae 179 abc. Projects in Flight Control. *Units to be arranged in accordance with work accomplished.* Multidisciplinary projects using radio-controlled helicopters and airplanes as test beds for experiments in aerodynamics and flight control. Design, construction, and flight test of sensor, actuator, signal-processing, telemetry, airframe, and propulsion systems. Modeling of vehicle dynamics and the use of an automatic control system. Problems of autonomous vehicles, including guidance and navigation. Projects using land and water vehicles are also possible. Instructors: Doyle, Culick.

EE/Aph 180. Solid-State Devices. *9 units (3-0-6); third term. Prerequisite: EE 151 or Ph 106 (may be taken concurrently).* Starting with the phenomenological statement of physical processes, the operation of a device and its representation in terms of an equivalent circuit are derived from the device's materials and design. Subjects include the motion of charge carriers in solids, equilibrium statistics, the electronic structure of solids, doping, nonequilibrium states, the pn junction, the junction transistor, the Schottky diode, and the field-effect transistor. Instructors: Staff.

CS/EE 181 abc. VLSI Design Laboratory. *12 units (3-6-3).* For course description, see Computer Science.

CNS/CS/EE 182 abc. Analog Integrated Circuit Design. *9 units (3-3-3).* For course description, see Computation and Neural Systems.

CNS/CS/EE 184 abc. Analog Integrated Circuit Projects Laboratory. *Units by arrangement.* For course description, see Computation and Neural Systems.

EE 185 ab. Microfabrication Technology for Solid-State Devices. *9 units (3-0-6); first, second terms. Prerequisites: Aph 9, EE/Aph 180, or instructor's permission.* Course in advanced (silicon) microfabrication technology. Topics: lithography; oxidation; diffusion; ion implantation; thin-film deposition; wet and dry etching; metalization. The use of these techniques to fabricate a wide variety of solid-state devices, including MOSFETs, microsensors, and microactuators will be discussed. Practical equipment for these processes will also be included. Instructor: Tai.

CNS/Bi/EE 186. Vision: From Computational Theory to Neuronal Mechanisms. *12 units (4-4-4).* For course description, see Computation and Neural Systems.

EE 191. Advanced Work in Electrical Engineering. *Units to be arranged.* Special problems relating to electrical engineering will be arranged. Primarily for undergraduates; students should consult with their advisers. Graded pass/fail.

EE 243 abc. Quantum Electronics Seminar. *6 units (3-0-3); first, second, third terms.* Advanced treatment of topics in the field of quantum electronics. Each weekly seminar consists of a review and discussion of results in the areas of quantum electronics and optoelectronics. Instructor: Yariv.

EE 291. Advanced Work in Electrical Engineering. *Units to be arranged.* Special problems relating to electrical engineering. Primarily for graduate students; students should consult with their advisers.

ENGINEERING (GENERAL)

E 5. Laboratory Research Methods in Engineering and Applied Science. 6 units (1-3-2); second term. 6 units credit allowed toward freshman laboratory requirement. An introduction to experimental methods and problems typical of a variety of engineering fields. Staff members representing various areas of interest within engineering and applied science will supervise experiments related to their specialty. As the situation permits, students are given some choice in selecting experiments. Instructors: Staff.

E 10. Technical Seminar Presentations. 3 units (1-0-2); second, third terms. (Only graduating students required to take E 10 are permitted to preregister. Others wishing to take the course should come to the organizational meeting and will be admitted if there is room. NOTE: Those who neither preregister nor attend the O.M. may not be permitted to enroll.) Guidance and practice in organizing and preparing topics for presentation and in speaking with the help of visual aids, including blackboards, overhead projectors, and slide projectors. Instructors: McDonough, staff.

E 150 abc. Engineering Seminar. 1 unit (1-0-0); each term. All candidates for the M.S. degree in applied mechanics, electrical engineering, materials science, and mechanical engineering are required to attend any graduate seminar in any division each week of each term. Graded pass/fail. Instructors: Staff.

ENGINEERING GRAPHICS (see Mechanical Engineering)

ENGINEERING SCIENCE

ES 200 abc. Topics in Bioengineering. 9 units (3-0-6); first, second, third terms. First two terms: the foundation of low-Reynolds-number fluid physics, the motion of a rigid or flexible body, flows of suspensions, and transfer processes. Third term: various applications to rheology, blood flow in living systems, chemical flow problems, motility of micro-organisms, and bioconvection. Instructors: Staff.

ES/CE 204 abc. Hydrodynamics of Free Surface Flows. 9 units (3-0-6); first, second, third terms. Prerequisites: CE/ME 101 abc, AM 113 abc and AM 125 abc, or equivalent. Theory of surface waves in a dispersive medium. Infinitesimal waves and wave resistance of floating or submerged bodies. Ship hydrodynamics. Theory of the planing surface and hydrofoil. Scattering and diffraction of surface waves. Geometrical wave approximation. Hydrodynamic stability. Nonlinear waves and existence theorems. Shallow-water waves. Open-channel flows and river waves. Flows with shear and stratification of density and entropy.

Free streamline theory for jets, wakes, and cavities. General theory for curved obstacles; existence and uniqueness. Unsteady flows with jets and cavities. The course material in the third term may vary, depending upon the needs and interests of the class. Not offered every year. Instructor: Wu.

ES 250 abc. Research in Engineering Science. By arrangement with members of the staff, properly qualified graduate students are directed in research in Engineering Science. Hours and units by arrangement.

ENGLISH

En 1 ab. English as a Second Language. 9 units (3-0-6 or 4-0-5); first, second terms. A program in the fundamentals of English composition for non-native speakers of English, required for foreign students in need of supplementary instruction before entering freshman humanities courses. Students will be assigned to either En 1 b or the two-quarter sequence of En 1 ab on the basis of a diagnostic examination. *Not available for credit toward the humanities–social science requirement.* Instructors: Fonseca, Linden-Martin.

En 2. Basic English Composition. 9 units (2-2-5); first, second terms. A course in the fundamentals of English composition for native speakers of English, required for students in need of supplementary instruction before entering freshman humanities courses. Students will be assigned to En 2 on the basis of a diagnostic examination. *Not available for credit toward the humanities–social science requirement.* Instructor: Fonseca.

ENGLISH AS A SECOND LANGUAGE (ESL)

Please see page 155 for requirements regarding English competency. All of the following courses are open to international graduate students only. None are available for credit.

ESL 101 ab. Oral Communication and Pronunciation. *Noncredit; first and second terms.* Communication and pronunciation in spoken English. Development of pronunciation, vocabulary, listening comprehension, and accuracy and fluency in speaking. Aspects of American culture will be discussed. The first quarter is required for all first-year international students designated by the ESL screening process. Instructors: Linden-Martin and staff.

ESL 102. Advanced Spoken English for Academic Purposes. *Noncredit; first and third terms.* Development of fluency and communication strategies. Emphasis on presentation skills and interpersonal communication on scientific topics. Strongly recommended for first-time international graduate teaching assistants. Instructors: Linden-Martin and staff.

ESL 103. English in Everyday Life. *Noncredit; first, second, and third terms.* Expressions, vocabulary, slang, and idioms used in daily life. Conversation and discussion, with feedback from instructors. Occasional grammar and pronunciation review. Comprehension of newspaper and magazine articles, as well as films and television programs. Instructors: Linden-Martin and staff.

ESL 104. Pronunciation Improvement and Accent Reduction. *Noncredit; second term only.* Aspects of American English pronunciation. Vowels and consonants, word and syllable stress, sentence stress and rhythm, intonation, and linking. Intensive practice and techniques for achieving correct pronunciation through self-monitoring. Instructors: Linden-Martin and staff.

ESL 105. Oral Presentation and Public Speaking. *Noncredit; second and third terms.* Oral presentation in a variety of settings, including oral exams, seminars, conferences, and the classroom. Focus on the organization of ideas, delivery techniques, pronunciation, grammar, and vocabulary. Frequent in-class presentations by students based on their current research interests, followed by critiques. Improvement of confidence and delivery skills. Instructors: Linden-Martin and staff.

ESL 106. Writing Seminar. *Noncredit; third term only.* Strategies for improving academic writing. Emphasis on grammar, word choice, organization, logical connectors, and punctuation. Classroom exercises and editing practice based on student writing samples. Instructors: Linden-Martin and staff.

ENVIRONMENTAL ENGINEERING SCIENCE

Env 1. Engineering Problems of the Environment. *9 units (3-0-6); third term. Prerequisites: Ph 1 ab, Ch 1 ab, and Ma 1 ab. Registration limited to freshmen and sophomores or with the permission of the instructor.* An introduction to the engineering design of measures to limit impacts on the environment. Global and local cycles in the hydrosphere, atmosphere, and biosphere; energy and materials balance in environmental problems; source control of pollutants. The process of establishing environmental goals is discussed. Instructor: Cass.

Ge/Env 2. Global Change. *9 units (3-0-6).* For course description, see Geological and Planetary Sciences.

Env 90. Undergraduate Research in Environmental Engineering Science. *Units by arrangement; any term. Approval of research supervisor required prior to registration.* Independent research on current environmental problems; laboratory or field work is encouraged. A written report is required for each term of registration. Seniors may prepare a thesis with approval of the EES faculty at the beginning of the senior year; in this case, registration should be for at least three consecutive terms. Graded pass/fail. Instructors: Staff.

Env 100. Special Topics in Environmental Engineering Science. *6 or more units as arranged. Prerequisite: instructor's permission.* Special courses of reading, problems, or research for graduate students working for the M.S. degree, or quali-

fied undergraduates. Graded pass/fail. Instructors: Staff.

Env 112 abc. Hydrologic Transport Processes. 9 units (3-0-6); first, second, third terms. *Prerequisites:* AMa 95 abc or AM 114 abc (may be taken concurrently); ME 19 ab; and some knowledge of elements of hydrology (may be satisfied by special reading assignments). The hydrologic cycle and analysis of hydrologic data; dynamic similitude; turbulent shear flow in rivers; and hydraulic models. Transport and dispersion of solutes, sediments, and heat; turbulent plumes and buoyant jets; surface heat transfer, evaporation, and density stratification in natural waters. Engineering of outfalls. Flow and pollutant transport through porous media; groundwater problems. Instructor: Brooks.

Env 116. Experimental Methods in Air Pollution. 9 units (1-4-4); third term. *Prerequisite:* ChE/Env 157, 158, 159 (may be taken concurrently) or permission of instructor. Methods of sampling and measurement of particulate and gaseous pollutants. Projects illustrative of problems in aerosol size distribution measurements, instrument calibration, particle characterization, and sampling systems are performed. Given in alternate years. Instructor: Flagan.

Env 142 ab. Chemistry of Natural Water Systems. 9 units (3-0-6); first, second terms. *Prerequisite:* Ch 1 abc and Ch 14, or Ch 21 ab, or Ch 24 ab, or permission of the instructor. Principles of inorganic and physical chemistry applied to quantitative description of processes in natural waters: Thermodynamic and kinetic aspects of electrolyte solutions, carbon dioxide/carbonate systems, dissolution and precipitation, metal-ligand complexes, electron transfer, surface chemistry of aquatic particles, and aggregation and stabilization processes in water. Instructor: Morgan.

Env 143. Water Chemistry Laboratory. 9 units (0-6-3); third term. *Prerequisite:* Env 142 ab. Laboratory experiments dealing with the major and minor constituents of natural waters. Topics include seawater chemistry, heterogeneous equilibria, redox processes, adsorption, and particle coagulation. Instructor: Morgan.

Env 144. Ecology. 6 units (2-1-3); first term. Basic principles of ecology and ways in which human activities can influence natural populations. Instructor: North.

Env 146. Chemical Reaction Engineering for Water Quality Control. 9 units (3-0-6); third term. *Prerequisite:* Env 142 ab. Basic principles of reaction engineering applied specifically to unit operations used in water and wastewater engineering. Emphasis on underlying chemical principles. Topics: adsorption, catalysis, chlorination, coagulation and flocculation, gas transfer, ion exchange, nitrogen and phosphorus removal, oxidation-reduction, ozonation, precipitation, reverse osmosis, and ultrafiltration. Given in alternate years; not offered 1994–95. Instructor: Morgan.

Env 150 abc. Seminar in Environmental Engineering Science. 1 unit (1-0-0); each term. Seminar on current developments and research within the field of environmental engineering science, with special consideration given to work at the Institute. Graded pass/fail. Instructor: List.

ChE/Env 157. Sources and Control of Air Pollution. 9 units (3-0-6); third term. Open to graduate students and seniors with instructor's permission. Principles necessary to understanding the sources and control of air pollutants; generation of pollutants in combustion systems; control techniques for particulate and

gaseous pollutants; solution of large-scale regional air pollution control problems. Given in alternate years; not offered 1994–95. Instructor: Cass.

ChE/Env 158. Air Pollution Aerosols. 9 units (3-0-6); first term. Open to graduate students and seniors with instructor's permission. Fundamentals of particulate air pollutants; aerosol physics and chemistry; gas-to-particle conversion processes; pollutant effects on visibility. Instructor: Flagan.

ChE/Env 159. Atmospheric Chemistry and Physics of Air Pollution. 9 units (3-0-6); second term. Open to graduate students and seniors with instructor's permission. Principles necessary to understanding the atmospheric behavior of air pollutants; atmospheric gas- and aqueous-phase chemistry; atmospheric diffusion; removal processes and residence times; statistical distributions of pollutant concentrations. Instructor: Cass.

Env/Bi 166. Microbial Physiology. 9 units (3-0-6); second term; alternate years. Recommended prerequisite: one year of general biology. A lecture and discussion course on growth and functions in the prokaryotic cell. Topics covered: growth, transport of small molecules, protein excretion, membrane bioenergetics, energy metabolism, motility, chemotaxis, global regulators, and metabolic integration. Given in alternate years; not offered 1994–95. Instructor: Lidstrom.

Env/Bi 168. Microbial Diversity. 9 units (3-0-6); third term. Recommended prerequisite: one year of general biology. A lecture and discussion course on the metabolic diversity of prokaryotic microorganisms. Each of the major metabolic groups of prokaryotes will be discussed in terms of their biochemistry, genetics, and ecology. The course will comprise a comprehensive survey of the known microbial groups, their capabilities, and their importance in geochemical cycling and industrial applications. Instructor: Lidstrom.

Env/Ch/Ge 175 abc. Environmental Chemistry. 9 units (3-0-6); first, second, third terms. Prerequisites: Env 142 a or Ch 14; ChE/Env 159 or Ch 135; or permission of the instructor. A detailed analysis of important chemical reactions and reaction networks in the atmosphere, biosphere, geosphere, and hydrosphere. Fundamental aspects of thermodynamics, kinetics, and mechanisms are stressed. The first term is focused on global-scale chemistry of the troposphere and stratosphere with an emphasis on biogeochemical cycles; the second term is focused on physical organic chemistry in natural waters; and the third term is focused on inorganic geochemistry in natural waters. Each term may be taken independently. Instructors: Hoffmann, Andreae.

Env 200. Advanced Topics in Environmental Engineering Science. Units by arrangement, any term. Course to explore new approaches to environmental problems. The topics covered vary from year to year, depending on the interests of the students and staff.

Env 208. Special Topics in Microbiology. 6 units (2-0-4); second term; alternate years. Prerequisite: Env/Bi 168 and instructor's permission. A lecture and discussion course to cover topics of current interest in the field of microbiology. As the topics will vary from year to year, it may be taken any number of times. Potential topics: bioremediation, genetics in unusual microorganisms; risk assessment and the release of genetically engineered organisms to the environment; environmental molecular biology. Given in alternate years; offered 1994–95; topic: bioremediation. Instructor: Lidstrom.

Env 210. Advanced Seminar in Microbiology. 3 units (1-0-2); first term. *Prerequisite:* instructor's permission. A seminar course for advanced graduate students and staff to discuss current research and technical literature in the field of microbiology. As the topics will vary, it may be taken any number of times. Instructor: Lidstrom.

Env 214 abc. Advanced Environmental Fluid Mechanics. 9 units (3-0-6); first, second, third terms. *Prerequisites:* CE/ME 101 or Ae/APh 101, AMa 101 or AM 125. A study of the transport and dispersing properties of fluid motions in the air, oceans, estuaries, rivers, lakes, and groundwater. Emphasis is given to the processes and scales of motion that are important to engineering problems of pollution control. Not offered 1994–95. Instructor: List.

Env 216. Seminar in Water Quality Modeling and Engineering Case Studies. 6 or 9 units (2-0-4 without project, or 2-0-7 if project is undertaken); third term. *Prerequisites:* Env 112 ab or 214 ab, Env 142 ab or 175 abc, AM 95 ab or AM 114 ab. Interdisciplinary modeling for assessing and managing water quality in groundwater, lakes, rivers, estuaries, and coastal ocean; each year the seminar will be focused on only one or two of these topics. Since the subjects will vary, students may take the course more than once. Basic principles, recent research, case studies, and student projects and presentations. Instructors: Brooks, List, Morgan.

Env 250. Advanced Environmental Seminar. Units by arrangement, not to exceed 4 units (2-0-2); each term. *Prerequisite:* instructor's permission. A seminar course for advanced graduate students and staff to discuss current research and technical literature on environmental problems. As the subject matter changes from term to term, it may be taken any number of times. Instructors: Staff.

Env 300. Thesis Research.

For other closely related courses see listings under Chemistry, Chemical Engineering, Civil Engineering, Mechanical Engineering, Biology, Geology, Economics, and Social Science.

Graduate students may also enroll in graduate courses offered by Scripps Institution of Oceanography under an exchange program. Graduate students majoring in environmental engineering science, who may take a subject minor in oceanography for the Ph.D. degree, should consult the executive officer for more information.

FRENCH (See Languages)

GEOLOGICAL AND PLANETARY SCIENCES

Geology, Geobiology, Geochemistry, Geophysics, Planetary Science

Ge 1. Introduction to Earth and Planetary Sciences. 9 units (3-3-3); first term. Broad, up-to-date view of the earth, focusing on geological items of current interest; e.g., plate tectonics, continental drift, mountain-building, earthquakes, the earth's interior, mass extinctions and meteorite impacts, and environmental geology. Topics vary with the individual instructor and class interests. Classes are limited in size and individually handled by full-time faculty members. Students must be prepared to devote three weekend days to field trips. Instructor: Wyllie.

Ge/Env 2. Global Change. 9 units (3-0-6); second term. Climate change throughout the earth's history organized as a series of topics, with extensive use of guest lectures and research articles. Students will be asked to write several papers on topics such as the greenhouse effect and the early earth, the rise of oxygen, carbon dioxide and climate, effects of giant impacts, ice ages, nuclear winter, global warming, the ozone hole. Instructors: Ingersoll and Hoffmann.

Ge 4. Introduction to the Solar System. 6 units (3-0-3); third term. An introductory survey of the bodies in our solar system. Meteoritic data and astrophysical observations on young stars provide information on the processes and materials of the early solar system. Interplanetary dust, asteroids, and comets are discussed in relation to the known types of meteorites. The post-Apollo view of the moon is used as a basis for comparison with other small planets such as the Jovian satellites. Venus and Mars are considered in the light of recent planetary missions; Jupiter and Saturn as examples of outer planets. Instructor: Stevenson.

Ge 5. Geobiology. 9 units (3-3-3); third term. Impact of life on the physical and chemical processes of the earth. Topics include the origin of life, diversification of prokaryotes, impact of oxygenic conditions on biochemical evolution, global glaciation and metazoan radiation, biomineralization and the Precambrian-Cambrian boundary, and evolutionary events during the Phanerozoic. Given in alternate years; offered 1995-96. Instructor: Kirschvink.

Ge 10. Frontiers in Geological and Planetary Sciences. 3 units (2-0-1); third term. Open for credit to sophomores, juniors, and seniors; the course may be taken multiple times. Prerequisite: Ge 1, 2, 4, or 5 (enrollment can be concurrent), or permission of the instructor. Weekly seminar by a member of the Division of Geological and Planetary Sciences or a visitor to discuss a topic of his or her current research at an introductory level; a second weekly session will be used to explore background material related to seminar topics, to answer questions that arise, and/or to acquaint students with instrumentation or techniques used on the research topics. The course is designed to introduce students to research and research opportunities in the division and to help students find faculty sponsors for individual research projects. Graded pass/fail. Instructors: Stolper, Wyllie.

Ge 11 ab. General Geology. 9 units (3-3-3); first and second terms. Systematic introduction to the earth and its history: the processes by which the earth and its biota have developed through time, and the observable products of these

processes—rock materials, land forms, fossils. Plate tectonics. Igneous activity including plutonism and volcanism. Weathering, erosion, sedimentation, and sedimentary rocks. Stratigraphy and geologic time; development of sedimentary basins and the evolution of life as recorded in the rocks. Metamorphism and metamorphic rocks. Rock deformation, continental tectonics, and mountain building. Role of aqueous, atmospheric, glacial, and tectonic processes in shaping the earth's surface. History of the ice ages. Earth resources. Field trips, interpretation of geologic maps, and laboratory study of earth materials (minerals, rocks, fossils). Instructors: Wernicke, Kirschvink.

Ge 40. Special Problems for Undergraduates. *Units to be arranged; any term.* This course provides a mechanism for undergraduates to undertake honors-type work in geologic sciences. By arrangement with individual members of the staff. Graded pass/fail.

Ge 41 abc. Undergraduate Research and Bachelor's Thesis. *Units to be arranged; first, second, third terms.* Guidance in seeking research opportunities and in formulating a research plan leading to preparation of a bachelor's thesis is available from the division undergraduate research counselors, Professors Rossman and Kirschvink. Graded pass/fail.

Ge 100 abc. Geology Club. *1 unit (1-0-0); first, second, third terms.* Presentation of papers on research in geological and planetary sciences by guest speakers. Graded pass/fail. Instructor: Kirschvink.

Ge 101. Physical and Historical Geology. *9 units (3-3-3); third term. Prerequisites: Ch 1 or 2, Ma 1, Ph 1, or equivalents.* The constitution of the solid earth and the history of its development based on the record preserved in the rocks and on observation of ongoing processes. Igneous, sedimentary, and metamorphic processes and products, evolution of land masses and oceans and their biota, deformation of the earth in plate tectonics; orogenesis. Surface processes and land forms. Basic principles of physical stratigraphy, biostratigraphy, magnetostratigraphy, geochronology, and tectonics, focused on the understanding of tectonic, geochemical, and biological processes and events which have influenced earth history. One or two weekend field trips to important geological and geobiological sites in the southern California region. Instructors: Silver, Kirschvink.

Ge 102. Geophysics. *9 units (2-1-6); first term. Prerequisites: Ma 2, Ph 2.* An introduction to the physics of the earth. The present internal structure of the earth, theories of the origin and evolution of the earth, the earth's gravity and magnetic field, and fundamentals of wave propagation in earth materials. The contributions that heat-flow, gravity, paleomagnetic, and earthquake-mechanism data have made to our understanding of geodynamics. Instructors: Stock, Ahrens.

Ge 103. Planetary Science. *9 units (3-0-6); second term. Prerequisites: Ma 2, Ph 2.* The planets: their probable composition, physical state, and dynamical behavior. Ground-based observations, spectroscopy, photometry, radio interferometry, radar mapping, observations from spacecraft. Theories of atmospheric structure, surface processes, internal history. Speculations on the origin and evolution of bodies in the solar system. Instructor: Goldreich.

Ge 104. Geochemistry. 9 units (3-0-6); first term. *Prerequisites:* Ma 2, Ph 2. An introduction to geochemical and cosmochemical principles and techniques. Origin of the elements and their classification; origin of the planets. Partitioning of major and trace elements in the earth; geochemical cycles. Applications of thermodynamics and kinetics to geochemistry. Isotope geochemistry of stable and radiogenic nuclides; geothermometry; and geochronology. Instructors: Blake, Farley.

Ge 106. Structural Geology and Tectonics. 9 units (3-3-3); second term. *Prerequisite:* Ge 101. Interpretation of the record of deformation of the earth's crust from rock structures on the megascopic (faults, folds), mesoscopic (foliation, lineation), and microscopic (crystal fabric, dislocations) scales. Mechanics of rock deformation. Structural analysis by geometrical and graphical techniques. Structure of major tectonic features of the earth's crust; tectonics of mountain building and sea-floor spreading. Field trips for study of structural features. Instructor: Saleeby.

Ge 107. Introduction to Field Geology. 9 units (1-7-1); third term. *Prerequisites:* Ge 11 ab or Ge 101. The rationale and techniques of geologic mapping, and their application in making a geologic map of a terrane of moderately deformed, stratified rocks. Synthesis and interpretation in a geologic report of the results of the field work, including structural and stratigraphic sections. One- or two-day field trips; total of seven days in the field. Instructor: Kamb.

Ge 108. Applications of Physics to the Earth Sciences. 9 units (3-0-6); first term. *Prerequisites:* Ph 2 and Ma 2 or equivalent. An intermediate course in the application of the basic principles of classical physics to the earth sciences. Topics will be selected from: mechanics of rotating bodies, the two-body problem, tidal theory, oscillations and normal modes, diffusion and heat transfer, wave propagation, electro- and magneto-statics, Maxwell's equations, and elements of statistical and fluid mechanics. Instructor: Muhleman.

Ge 109. Oral Presentation. 2 units (1-0-1); third term. Practice in the effective organization and delivery of reports before groups. Successful completion of this course is required of all candidates for degrees in the division. Instructors: Wyllie, Ingersoll.

Ge 110. Sedimentary Geology. 9 units (3-3-3); second term. *Prerequisite:* Ge 11 ab or Ge 101. Origin and evolution of sedimentary rocks. 1) Sedimentary materials, processes, and environments; 2) description and classification of sedimentary rocks; 3) interpretation of paleoenvironments and stratigraphic history from field and subsurface observations. Not offered 1994-95. Instructors: Murray, staff.

Ge 114. Mineralogy. 12 units (3-6-3) or 9 units (3-4-2); first term. Atomic structure, composition, physical properties, occurrence, and identifying characteristics of the major mineral groups. The laboratory work involves characterization and identification of important minerals by physical and optical properties. The 12-unit course is required for geology majors, and includes additional laboratory studies on optical crystallography and use of the petrographic microscope. Instructor: Rossman.

Ge 115 ab. Petrology and Petrography. Systematic study of rocks and rock-forming minerals with emphasis on use of the petrographic microscope and

megascope identification; interpretation of mineral assemblages, textures, and structures; problems of genesis.

115 a. Igneous Petrology and Petrography. 12 units (3-6-3) or 6 units (3-0-3) with consent of instructor; second term. Prerequisites: Ge 114, Ch 21 a. The mineralogical and chemical composition, origin, occurrence, and classification of igneous rocks, considered mainly in the light of chemical equilibrium and of experimental studies. Detailed consideration of the structures, phase relations, and identification of the major igneous minerals. Instructor: Stolper.

115 b. Metamorphic Petrology and Petrography. 12 units (3-6-3) or 6 units (3-0-3) with consent of instructor; third term. Prerequisite: Ge 115 a. The mineralogical and chemical composition, occurrence, and classification of metamorphic rocks; interpretation of mineral assemblages in the light of chemical equilibrium and experimental studies. Detailed consideration of structure, phase relations, composition, and determination of the major metamorphic minerals. Instructor: Albee.

Ge 120. Summer Field Geology. 15 units (0-15-0); summer. Prerequisites: Ge 11 ab, Ge 106, Ge 107, Ge 110; or consent of instructor. Intensive course in techniques of field observation. Course includes two and one-half weeks of mapping in a well-exposed area of the southwestern United States and the preparation of a report, in September prior to registration week. Instructors: Saleeby, Wernicke.

Ge 121 abc. Advanced Field and Structural Geology. 12 units (0-9-3); first, second, third terms. Prerequisites: Ge 11 ab or Ge 101, 106, and 107, or consent of instructor. Field mapping and supporting laboratory studies in topical problems related to southern California tectonics and petrogenesis. Each year the sequence offers a breadth of experience in igneous, metamorphic, and sedimentary rocks. Instructors: Sieh and Stock (first term); Wernicke (second term); Saleeby (third term).

Ge 124 ab. Paleomagnetism and Magnetostratigraphy. Application of paleomagnetism to the solution of problems in stratigraphic correlation and to the construction of a high-precision geological time scale. Given in alternate years; offered 1994-95. Instructor: Kirschvink.

124 a. 9 units (3-3-3); first term. Prerequisites: Ge 11 ab or Ge 101, Ge 105 ab. The principles of rock magnetism and physical stratigraphy; emphasis on the detailed application of paleomagnetic techniques to the determination of the history of the geomagnetic field.

124 b. 6 units (0-0-6); second term. Prerequisite: Ge 124 a. A field trip to the southwest U.S. to study the physical stratigraphy and magnetic zonation, followed by lab analysis.

Ge 126. Introduction to Quaternary Geology. 12 units (3-3-6); first term. An introduction to the study of the evolution of the earth's surface during the past million years. Sedimentary, erosional, and tectonic processes involved in the development of landscapes; Pleistocene and Holocene stratigraphy; the use of soils, weathering rates, radiocarbon dating, palynology, and other tools in deciphering recent geological history. The laboratory will involve the use of aerial photographs and an individual research project. Given in alternate years; not offered 1994-95. Instructor: Sieh.

Ge/Ch 127. Nuclear Chemistry. 9 units (3-0-6); second term. Prerequisite: consent of instructor. A survey course in the properties of nuclei, and in atomic phenomena

associated with nuclear-particle detection. Topics include rates of production and decay of radioactive nuclei; interaction of radiation with matter; nuclear masses, shapes, spins, and moments; modes of radioactive decay; nuclear fission and energy generation. Given in alternate years; offered 1994–95. Instructor: Burnett.

Ge/Ch 128. Cosmochemistry. 9 units (3-0-6); third term. *Prerequisite:* consent of instructor. The chemistry of the interstellar medium, of protostellar nebulae, and of primitive solar-system objects with a view towards establishing the relationship of the chemical evolution of atoms in the interstellar radiation field to complex molecules and aggregates in the early solar system. Emphasis will be placed on identifying the physical conditions in various objects, time scales for physical and chemical change, chemical processes leading to change, observational constraints, and various models that attempt to describe the chemical state and history of cosmological objects in general and the early solar system in particular. Given in alternate years; offered 1994–95. Instructor: Blake.

Ge 131. Origin of the Solar System. 9 units (3-0-6). *Offered by announcement. Prerequisite:* instructor's permission. A critical assessment of the physical processes responsible for the formation of the sun and planets, including astrophysical constraints, gravitational instabilities and accretion discs, formation and early evolution of the giant planets and their satellite systems, terrestrial planetary accretion, primary differentiation, outgassing, and thermal evolution of solid bodies. Instructor: Stevenson.

Ge/Ay 132. Atomic and Molecular Processes in Astronomy and Planetary Sciences. 9 units (3-0-6); second term. *Prerequisite:* instructor's permission. Fundamental aspects of atomic and molecular spectra that enable one to infer physical conditions in astronomical, planetary, and terrestrial environments. Topics will include the structure and spectra of atoms, molecules, and solids; transition probabilities; photoionization and recombination; collisional processes; gas-phase chemical reactions; and isotopic fractionation. Each topic will be illustrated with applications in astronomy and planetary sciences, ranging from planetary atmospheres and dense interstellar clouds to the early universe. Given in alternate years; offered 1995–96. Instructor: Blake.

Ge 135. Regional Geology of Southern California (Seminar). 6 units (3-0-3); second term. *Prerequisites:* Ge 11 ab or Ge 101, Ge 105 ab, or equivalent. Reading and discussion of selected topics in the geology of southern California and adjacent areas, with emphasis on outlining the important regional research problems. Instructor: Silver.

Ge 136. Regional Field Geology of the Southwestern United States. 9 units (1-0-8); third term. *Prerequisites:* Ge 11 ab or Ge 101 or Ge 105, or instructor's permission. Includes at least nine days of weekend field trips into areas of the southwestern United States displaying highly varied geology. Each student is assigned the major responsibility of being the resident expert on a pertinent subject for each trip. Graded pass/fail. Instructor: Sharp.

Ge 140 ab. Introduction to Isotope Geochemistry. 9 units (2-0-7); second, third terms. *Prerequisite:* instructor's permission. An introduction to the physics and chemistry of isotopes and a broad overview of the principles and conceptual techniques used in stable and radiogenic isotope geochemistry will be illustrated by examples of geologic or planetary processes.

140 a. second term. The processes responsible for natural variations in the isotopic composition of the lighter elements (H, C, O, N, Si, S), with applications to geochemical problems. Isotopic fractionation mechanisms. Use of oxygen and hydrogen isotopic data to study the origin and history of various types of rocks and to determine the climatic records in cherts, carbonate fossils, ancient woods, and ice cores. Significance of $^{34}\text{S}/^{32}\text{S}$ and $^{13}\text{C}/^{12}\text{C}$ variations in the sulfur and carbon cycles, with applications to problems in geobiology. Use of stable isotopes in the study of meteorites and lunar materials. Instructor: Taylor.

140 b. third term. The origin and evolution of radiogenic parent-daughter systems in nature, with application to the determination of the ages of rocks and minerals, and of the earth, meteorites, and the moon, mainly utilizing the U-Th-Pb-He, Rb-Sr, Sm-Nd, K-Ar, and ^{14}C systems. Applications to problems of igneous petrology and metamorphism, and to the large-scale differentiation of the planets. Instructor: Wasserburg.

Ge 147. Tectonics of Western North America. 9 units (4-0-5); first term. Prerequisites: Ge 101 or Ge 11 ab. Major tectonic features of western North America, including adjacent craton and Pacific Ocean basin. Active plate junctures, igneous provinces, crustal uplift, and basin subsidence. Tectonic evolution from late Precambrian to recent time, and modern analogues for paleotectonic phenomena. Not offered 1994–95. Instructors: Saleeby and staff.

Ge 150. The Nature and Evolution of the Earth. Units to be arranged. Offered by announcement only. Advanced-level discussions of problems of current interest in the earth sciences. Students may enroll for any or all terms of this course without regard to sequence. Instructors: Staff.

Ge 151. Planetary Surfaces. 9 units (3-0-6); third term. Review of processes responsible for the formation and modification of the surfaces of the terrestrial planets, icy satellites, and small bodies, and surface histories so recorded. Topics: exogenic surface processes, especially those associated with impact, gravitational degradation, atmospheric modification of surfaces by wind and water, and the direct interaction of surfaces with plasmas; endogenic modification of surfaces by tectonics and volcanism. Techniques of studying planetary surfaces are also covered in laboratory exercises and lectures. Not offered 1994–95. Instructors: Murray, Muhleman.

Ge 152 abc. Atmospheres and Oceans. 9 units (3-0-6); first, second, third terms. Physical and chemical processes in atmospheric fluid envelopes. First term: atmospheric radiative transfer and remote sensing, atmospheric temperatures and radiative equilibrium, weather and climate. Second term: atmospheric chemistry, numerical modeling, planetary atmospheres. Third term: dynamics of large-scale motions in atmospheres and oceans, physical and chemical oceanography. Instructors: Yung (first and second terms); Ingersoll (third term).

Ge 153. Planetary Radio Astronomy. 9 units (3-0-6); second term. Prerequisite: instructor's permission. Investigates the atmospheres and surfaces of the planets and their satellites using microwave techniques. Information from the literature and current observations in millimeter and submillimeter spectroscopy, thermal microwave emission, radio and visual occultations, and radar astronomy will be discussed from the standpoint of the physics and chemistry of solar-system objects. Given in alternate years; offered 1995–96. Instructor: Muhleman.

EE/Ge 157 abc. Introduction to the Physics of Remote Sensing. 9 units (3-0-6). For course description, see Electrical Engineering.

EE/Ge 158. Application of Remote Sensing in the Field. 6 units (0-5-1). For course description, see Electrical Engineering.

Ge 160 abc. Seismological Laboratory Seminar. *First, second, third terms.* Presentation of current research in geophysics by students, staff, and visitors. Graded pass/fail. Instructor: Kanamori.

Ge 166. Physics of the Earth's Interior. 9 units (3-0-6); *second term.* Interpretation of observed geophysical data describing the earth's interior in terms of the earth's evolution, ongoing geodynamic processes, and the composition and thermal state of the mantle and core. Instructor: Anderson.

Ge 167. Planetary Physics. 9 units (3-0-6); *first term.* Prerequisites: *Ph 106 abc, AMa 95 abc, or AM 113 abc.* Solar-system dynamics, with emphasis on slow changes in the orbit and rotation rates of planets and satellites. Topics: tidal friction, resonant orbits and rotation rates, gravitational fields of planets and satellites, dynamics of polar wandering, continental drift, and planetary rings. Not offered 1994–95. Instructor: Goldreich.

Ge 174. Mechanics of Geologic Structure. 6 units (2-0-4); *first term.* Prerequisites: *Ma 2 and Ge 106.* Rock deformation by brittle and ductile mechanisms and its analysis in terms of tensor stress and finite strain. Application to structures formed by folding and faulting in the earth. Instructor: Kamb.

Env/Ch/Ge 175 abc. Environmental Chemistry. 9 units (3-0-6). For course description, see Environmental Engineering Science.

Ge 176. Physics of Earthquakes. 9 units (3-0-6); *first term.* Prerequisites: *AMa 95 abc or instructor's permission.* Study of earth structure and earthquake phenomena by application of physical principles. Emphasis on understanding complex earthquake phenomena in the light of fundamental physical and mathematical concepts. Topics: structure of the earth in relation to propagation of earthquake waves, static and dynamic models of earthquakes, interpretation of far- and near-field phenomena, significance of earthquakes in plate tectonics, and problems pertaining to earthquake prediction. Instructor: Kanamori.

Ge 177. Geology of Earthquakes. 9 units (3-0-6); *second term.* Prerequisites: *Ge 105 and 106 or equivalents.* Geologic manifestations of recent crustal deformation. Geomorphology, stratigraphy, and structural geology applied to the study of active faults and folds in a variety of tectonic settings. Relation of seismicity and geodetic measurements to geologic structure and active tectonics processes, including case studies of selected earthquakes. Given in alternate years; offered 1995–96. Instructor: Sieh.

Ge 180. Plate Tectonics. 9 units (3-0-6); *third term.* Prerequisites: *Ge 11 ab or Ge 101, Ge 102, and AM 113 or equivalent.* Geophysical and geological observations related to plate tectonic theory. Instantaneous and finite motion of rigid plates on a sphere; marine magnetic and paleomagnetic measurements; seismicity and tectonics of plate boundaries; reference frames and absolute plate motions. Interpretation of geologic data in the context of plate tectonics; plate tectonic evolution of the ocean basins. Given in alternate years; offered in 1995–96. Instructor: Stock.

Ge 203. Advanced Atmospheres and Oceans. 9 units (3-0-6); third term. *Prerequisite:* Ge 152 or equivalent. Advanced topics pertaining to the dynamics, thermodynamics, and chemistry of atmospheres and oceans. Theory of radiative transfer in planetary atmospheres. Offered 1994–95. Instructor: Yung.

Ge 212. Thermodynamics of Geological Systems. 9 units (3-0-6); first term. *Prerequisite:* Ch 21 abc, Ge 115 abc, or equivalents. Chemical thermodynamics, with emphasis on applications to geologic problems. Heat flow, diffusion, phase transformations, silicate phase equilibria, solid solutions, the effect of H₂O in silicate melts, and equilibrium in a gravitational field. Text: *Chemical Thermodynamics*, Prigogine and Defay. Given in alternate years; offered in 1994–95. Instructor: Taylor.

Ge 213. Special Topics in the Earth and Planetary Sciences. Units and prerequisites dependent upon topics. Usually offered for letter grade; offered by announcement only. A course on special topics and problems of current interest.

Ge 214. Spectroscopy of Minerals. 9 units (3-0-6); third term. *Prerequisite:* Ge 114, Ch 21, or instructor's permission. The origin of color, pleochroism, and luminescence in minerals, infrared absorption spectroscopy of mineral substances. The application of spectroscopic methods to mineralogical problems, including site populations and other optical properties. Given in alternate years; offered 1994–95. Instructor: Rossman.

Ge 215 abc. Topics in Advanced Petrology. 12 units each term (3-6-3); first, second, third terms. *Prerequisites:* Ge 115; Ch 21 recommended.

215 a. Chemical Petrology. First term. Lectures, seminars, and laboratory studies of the chemical reactions that occur in rocks. Emphasis on rock–water interactions, mineral deposition, hydrothermal alteration, and the formation of ore deposits. Given in alternate years; offered 1995–96. Instructor: Taylor.

215 b. Advanced Igneous Petrology. Third term. Lectures, seminars, and laboratory studies on igneous petrogenesis and rocks, emphasizing experimental studies. Given in alternate years; offered 1995–96. Instructor: Stolper.

215 c. Advanced Metamorphic Petrology. Third term. Lectures, seminars, and laboratory studies on metamorphic petrogenesis and rocks. Emphasis on the interpretation of natural assemblages and of mineral relations. Given in alternate years; not offered 1994–95. Instructor: Albee.

Ge 225 abc. Planetary Sciences Seminar. 1 unit (1-0-0); first, second, third terms. Required of all planetary-science graduate students; others welcome. First term: current research by staff and students. Second and third terms: planetary research with spacecraft and current developments in planetary science. Instructors: Staff.

Ge 226. Observational Planetary Astronomy. 9 units (3-3-3); second term. Optical and infrared radiation detectors, spectrometers, polarimeters, and photometers will be discussed in the context of the observational study of the planets. Other topics will include the design of observational programs and the assessment of the reliability of data by critical analysis of observational literature. Observing experience (during the course) will be required at the telescope. Given in alternate years; offered 1994–95. Instructor: Westphal.

Ge 229. Glaciology. 9 units (3-0-6); third term. Characteristics of existing glaciers and ice sheets; ice-age glaciers; glacier flow and fracture mechanics in relation

to ice physics; mass and energy balance and response to climatic change; glacial erosion and deposition; causes of glaciation. Given in alternate years; offered 1995–96. Instructor: Kamb.

Ge 232. Chemistry of the Solar System. 9 units (3-0-6); second term. *Prerequisite:* Ge 140 b or consent of instructor. Advanced course using both chemical and isotopic data to evaluate the current state of knowledge concerning the composition of major segments of the solar system, viz., solar and meteoritic abundance data to infer the average solar-system composition; chemistry of meteorites as a clue to initial conditions in the solar nebula; bulk composition of the earth and moon; constraints on the bulk composition of the other planets, emphasizing data on atmospheric constituents. Given in alternate years; offered 1995–96. Instructor: Burnett.

Ge 236. Applications of Rare Gases to Earth Science Problems. 9 units (3-0-6); offered by announcement only; third term. *Prerequisite:* instructor's approval. Discussion of the principles, applications, and limitations of rare gases as records of terrestrial processes. Origin and behavior of rare gases in natural systems. Specific areas to be considered include: K/Ar and $^{40}\text{Ar}/^{39}\text{Ar}$ dating; Ar thermochronology; surface-exposure dating; rare gas constraints on mantle evolution and models of atmosphere formation; additional applications in geology, hydrology, paleoclimatology, and oceanography. Instructor: Farley.

Ge 240. Advanced Isotope Geochemistry. 9 units (3-0-6); offered by announcement only. *Prerequisite:* Ge 140 ab or permission of instructor. Lectures and problems on the variations in the isotopic composition of elements in nature, with applications to studies of the origin of the solar system, planetary evolution, igneous and metamorphic petrology, hydrothermal alteration and ore deposits, and the origin and history of the earth's atmosphere and hydrosphere. Emphasis is placed on the integration of stable and radiogenic isotope studies in current research areas, utilizing problem sets and extensive reading of articles in scientific journals, including discussion of instrumentation and modern techniques of measurement of isotopic and chemical abundances. Instructor: Wasserburg.

Ge 242. Metal Pathways Through Terrestrial and Marine Ecosystems. 6 units (2-0-4); offered by announcement only; third term. *Prerequisite:* instructor's approval. Sources of lead and some other trace metals in the atmosphere, their depositions on oceans and land plants, their cycling through ecosystems, modes of their introduction to and removal from the oceans, and anthropogenic perturbations of their natural cycles. Instructor: Staff.

Ge 244 ab. Paleoecology Seminar. 5 units; second, third terms. Critical review of classic investigations and current research in paleoecology and biogeochemistry. Instructor: Kirschvink.

Ge 248. Geodynamics. 9 units (3-0-6); third term. Application of continuum mechanics to geologic problems of mass and heat transfer; emphasis on problems of plate tectonics. Basic concepts include stress, infinitesimal and finite strain, brittle failure, elastic, plastic, viscous, power law, and visco-elastic deformation. These concepts will be used to examine selected problems such as the mechanics of subduction, the rise of mantle diapirs and generation of oceanic crust, postglacial rebound, postseismic rebound, generation and effects of anisotropy, mantle convection, and the driving mechanism for plate motions. Given in alternate years; offered 1994–95. Instructor: Gurnis.

Ge 260. Mineral Physics. 9 units (3-2-4); third term. Offered by announcement only. Prerequisite: familiarity with basic concepts of thermodynamics and mineralogy; see instructor. Application of high-pressure physics to geologic problems. Topics: concepts of elastic and shock propagation in single and polycrystalline solids and in fluids, and their relation to various thermodynamic processes; phase changes, dynamic yielding, shock metamorphism, high-pressure electrical properties of minerals, and application of shock and ultrasonic equation-of-state data to earth and planetary interiors. Offered 1994–95. Instructor: Ahrens.

Ge 261 abc. Advanced Seismology. 9 units (3-0-6); first, second, third terms. Prerequisite: AMa 95 or equivalent. Essential material in modern seismology; elastic wave propagation, ray theory, normal mode theory, free oscillations, applications to the determination of earth structure and earthquake source mechanisms, the interpretation of seismograms, and geophysical time series analysis and synthesis. Instructors: Harkrider (first term); Helmberger (second term); Harkrider and Helmberger (third term).

Ge 265. Geophysical Digital Signal Analysis. 9 units (3-0-6); first term. Prerequisites: Fourier transforms or permission of instructor. Discrete data analysis with particular emphasis on geophysical problems. Topics: Z-transforms, discrete Fourier transforms, filtering, convolutional models, deconvolution, autoregressive-moving average models, spectral analysis, missing data, model fitting, and two-dimensional and multichannel analysis. Instructor: Clayton.

Ge 266. Analysis of Seismic Reflection Data. 9 units (3-0-6); third term. Prerequisites: partial differential equations and/or permission of instructor. The analysis of densely recorded reflection data as it relates to exploration geophysics. Topics: review of acoustic wave theory, layered earth models, one-way extrapolation operators, migration methods, velocity estimation, multiple suppression, statics, slant stacks, and inversion methods. Instructor: Clayton.

Ge 270. Continental Tectonics. 9 units (3-0-6); third term. Prerequisites: AMa 95 or AMa 113; Ge 11 ab or Ge 101, and Ge 102; Ge 106, Ge 166, Ge 180 or Ge 176. Nature of non-plate, finite deformation processes in the evolution of the continental lithosphere. Rheological stratification; isostatic and flexural response to near-vertical loads; rifting and associated basin development; collision and strike-slip tectonics; heat and mass budgets associated with orogenic magmatism; origin of forces in mountain building. Offered 1995–96. Instructor: Wernicke.

Ge 277. Quaternary Tectonics Seminar. 6 units (1-3-2); second term. Detailed analysis of one or more active tectonic regions, including discussion of published literature, and field examination. Not offered 1994–95. Instructor: Sieh.

Ge 282 abc. Division Seminar. 1 unit; first, second, third terms. Presentation of papers by invited investigators. In charge: Taylor.

Ge 297. Advanced Study. Units to be arranged.

Ge 299. Thesis Research. Original investigation, designed to give training in methods of research, to serve as theses for higher degrees, and to yield contributions to scientific knowledge.

GERMAN (see Languages)**HISTORY**

These courses are open only to students who have fulfilled the freshman humanities requirement.

H 40. Reading in History. *Units to be determined for the individual by the division. Elective, in any term.* Reading in history and related subjects, done either in connection with the regular courses or independently, but under the direction of members of the department. A brief written report will usually be required. Graded pass/fail. *Not available for credit toward humanities–social science requirement.*

H 97 ab. Junior Tutorial. *9 units (2-0-7); second, third terms. Prerequisite: instructor's permission.* Designed for students majoring in history, with frequent meetings between instructor and student. Course subject matter varies according to individual needs. Normally taken junior year. Instructors: Staff.

H 98 ab. Senior Tutorial. *9 units (2-0-7); first, second terms. Prerequisite: instructor's permission.* Designed for students majoring in history, with frequent meetings between instructor and student. Normally taken senior year. Instructors: Staff.

H 99 abc. Research Tutorial. *9 units (1-0-8). Prerequisite: instructor's permission.* Students will work with the instructor in the preparation of a research paper, which will form the basis of an oral examination. Instructors: Staff.

H 109. Protestant, Catholic, and Jew.* *9 units (2-0-7); first term.* Books both nonfiction and fiction that illuminate such topics in the political and social history of religion in Europe as Joan of Arc, Luther, the Spanish Armada, Victorian conformity, and the “final solution.” Instructor: Fay.

H 110. Early Modern Europe.* *9 units (3-0-6); first term.* Topics in the social and economic history of Europe up to the 19th century, with special attention to quantitative analysis. Topics will include the crisis of the later Middle Ages, violence and religious change, and revolution and political stability. Instructor: Hoffman.

H 112. Contemporary Europe.* *9 units (3-0-6).* Public issues, social trends, and cultural developments of special interest in Europe today. Instructors: Staff.

H 113. The Great War 1914–1945.* *9 units (3-0-6).* How and why “The Great War” (as the two World Wars will probably come to be known) began, was fought, recessed in 1919, resumed in 1939, and ended at last, leaving Europe cruelly transformed and deeply divided. Attention will be equally divided between society, politics (including the Russian Revolution and Hitler), and the war itself. Instructor: Fay.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

H 114. European Intellectual History.* 9 units (3-0-6). Topics in the history of European thought since the Enlightenment. Emphasis on philosophy and social theory, and their relations to political, economic, and social developments. Instructors: Staff.

H 115. Science, Weapons, and National Security.* 9 units (2-0-7). The history of the arms race since 1945, with particular attention to its domestic sources, including defense R&D, the scientific community, the national security bureaucracy, Congress, and the president. Instructor: Kevles.

H 116. Population and Economy in Pre-industrial England.* 9 units (3-0-6). Population and resources within Europe and the wider world, and within England. The course of population change in England: patterns of marriage and change over time, natural and controlled fertility, patterns of mortality and change over time, the significance of illegitimacy and the impact of demography on family and household, the escape of England from the shadow of famine in the past. Instructors: Staff.

H 118. Britain and Her Empire.* 9 units (3-0-6). Books, both nonfiction and fiction, that concern such institutions and persons in British history 1815–1945 as Parliament, the universities, the aristocracy, the working class, Winston Churchill, Rudyard Kipling, Virginia Woolf, and George Orwell. Instructor: Fay.

H 122. British India.* 9 units (3-0-6). Indian politics and society since the Sepoy Rebellion (1857), with particular attention to Gandhi and the winning of independence (1947). Instructor: Fay.

H 124. Population and Family History.* 9 units (3-0-6). Four aspects of population and family history in China and Europe: demographic, establishing the parameters of birth, marriage, and death; economic, treating the family as a unit of production as well as consumption; social, analyzing the evolving structure of various kin groupings—lineage, clan, household, and family; cultural, identifying and interpreting the symbolic forms and meanings of the “family.” Instructor: Lee.

H/Hum 131. History on Film.* 9 units (2-2-5). An investigation into the variety of ways history has been and can be represented on the screen. Some terms the focus will be a specific historical period or nation; other terms the focus will be the nature of film as a medium for history and biography. The class will include weekly screenings of films as well as weekly discussion sections. Instructor: Rosenstone.

H 132. Japan.* 9 units (3-0-6). An introduction to Japanese civilization, past and present. The interrelation between art, culture, philosophy, politics, and society. Instructor: Rosenstone.

H 133. History of Ancient China, 2000 B.C.–1200 A.D.* 9 units (3-0-6). A systematic analysis of the growth and character of China from its early origins to the eve of the Mongol invasion. The characteristic development and unique features of pre-imperial and imperial China, including the periods of the first empire, disunion, and the second empire, will be examined in the context of

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

how China developed into an enduring political and social entity. Instructor: Lee.

H 134. History of Late Imperial China, 1200–1800.* *9 units (3-0-6)*. An exploration of several major problems, including the growth of autocracy, population development, social mobility, and the Ming–Qing dynasty transition in the history of China, from the formation of the Mongol empire to the eve of the Opium War. Instructor: Lee.

H 135. History of Modern China, 1800–present.* *9 units (3-0-6)*. Main events of 19th- and 20th-century China, with various interpretations of their historical significance. Focus: modern roots of the Chinese revolution, beginning with Sun Yat-Sen. Instructor: Lee.

H 136. Family, Friendship, and Love in Chinese Culture. *9 units (3-0-6)*. The nature of human relations in China. The purpose of the class is twofold: first, to introduce a number of selected texts on family, friendship, and love in Chinese culture; second, to provide a broad conceptual framework on self and society in traditional and contemporary China. Classes are organized around specific themes. Readings include anthropological, historical, and literary texts. Instructor: Lee.

H 146. American Biography.* *9 units (3-0-6); first term*. Leading Americans as seen through the best of their biographies, with an examination of the changing methods in the art of biography. Instructor: Ridge.

H 147. The Far West and the Great Plains.* *9 units (3-0-6); third term*. The exploration and development of the great regions of western America. Special attention will be paid to the influence of the natural environment, and the exploitation of it by such industries as the fur trade, mining, cattle ranching, farming, and oil. Instructor: Ridge.

H/PS 148 ab. The Supreme Court in U.S. History.* *9 units (3-0-6)*. The development of the Supreme Court, its doctrines, personalities, and role in U.S. history through analyses of selected cases. The first half of the course, which is a prerequisite for the second half, but may also be taken by itself, will deal with such topics as federalism, economic regulation, political rights, and free speech. The second half will cover such issues as the rights of the accused, equal protection, and privacy. Instructor: Kousser.

H 149. American Radicalism.* *9 units (3-0-6)*. The nature of dissident American social and political movements in the 19th and 20th centuries; emphasis on their critiques of American life, role in society, and contributions. Instructor: Rosenstone.

H 151. The Shaping of Modern America, 1890–1917.* *9 units (3-0-6)*. Selected social, economic, and political trends of the era, such as immigration, urbanization, and reform. Instructors: Kousser, Ridge.

H 152. America in the Era of Roosevelt and Truman.* *9 units (3-0-6)*. Topics in the history of the Depression, World War II, and the origins of the Cold War. Instructors: Kevles, Rosenstone.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

H 153 ab. America Since World War II.* 9 units (3-0-6). Topics in the recent social, cultural, and political history of the United States. First term is not a prerequisite for second term. Instructor: Kevles.

H 154. American Social History.* 9 units (3-0-6). The evolution of American society since 1800, with particular emphasis on class, gender, race, and ethnicity. Instructor: Flamming.

H 155. The American Worker.* 9 units (3-0-6). Examines the development of the American working class in the 19th and 20th centuries, with emphasis on radicalism, class consciousness, working-class culture, and unionization. Instructor: Flamming.

SES/H 156. The History of Modern Science.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

SES/H 157. Science in America, 1865–Present.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

SES/H 158. The Scientific Revolution.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

SES/H 159. Science and Society.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

SES/H 160 ab. History of the Modern Physical Sciences.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

H 161. Selected Topics in History. 9 units (3-0-6). *Advanced credit to be determined on a course-by-course basis by instructor.* Instructors: Staff and visiting lecturers.

SES/H 162. Social Studies of Science.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

SES/H 163. Gender in the History of Science, Technology, and Medicine.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

SES/H 164. Sciences of Mind from the French Revolution to the Great War.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

SES/H 165. History of Technology in the United States.* 9 units (3-0-6). For course description, see Science, Ethics, and Society.

H 201. Reading and Research for Graduate Students. *Units to be determined for the individual by the division.*

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

HUMANITIES

All courses numbered 1 through 20 are freshman humanities courses. Courses numbered above 20 are open only to students who have fulfilled the freshman humanities requirement.

Hum 1 ab. Greek Civilization. *9 units (3-0-6); first and second or second and third terms.* Introduction to Greek culture from Homer to Aristotle. Hum 1 a is a prerequisite for Hum 1 b. Instructors: philosophy and literature staff.

Hum 2 ab. Europe: The Roman Empire to the Industrial Revolution. *9 units (3-0-6); first and second terms.* Introduction to European religions and religious change, to value systems, and to the changing structure of political life and its economic base, from the Roman empire to the beginning of the industrial revolution. Instructors: history staff.

Hum 3 ab. Early European Literature. *9 units (3-0-6); first and second or second and third terms.* Critical exploration of a number of texts fundamental to our culture. The time-span will be from the beginnings to the late 17th century; but the precise chronological range, the emphases, and the selection of texts to be read and studied will be determined for each of the two quarters by the instructors teaching these courses. Instructors: literature staff.

Hum 6 ab. The Modern Age: History, Thought, and Culture. *9 units (3-0-6); first and second or second and third terms.* This two-quarter sequence will introduce students to those aspects of the politics and culture of modernity that have profoundly transformed Western society and consciousness since the middle of the 19th century. A variety of literary, historical, philosophical, scientific, and artistic works will be examined, among them those of Marx and Weber, Nietzsche and Freud, James Joyce, Picasso, and Einstein. Instructors: literature and history staff.

Hum 7 ab. American Society and Politics. *9 units (3-0-6); first and second or second and third terms.* An introduction to the major events and forces that shaped the American past, and the way historians and biographers have analyzed them. Depending on the instructor, topics covered may include: the Revolution and the Constitution, the Civil War and Reconstruction, the New Deal, immigration, industrialization, technological change, and 20th-century political movements and culture. Instructors: history staff.

Hum 8 ab. American Literature and Culture. *9 units (3-0-6); first and second and second and third terms.* Studies in American ideas, styles, and general culture from the colonial period to the present. Emphasis on those characteristic features of American experience that have influenced and continue to affect our culture and character. Students may take two quarters of either element or one quarter of each. Instructors: literature and history staff.

Hum 9 ab. Introduction to Asia. *9 units (3-0-6); first and second and second and third terms.* Asia, which may be taken to stretch from Beirut to Beijing and beyond, contains a variety of peoples whose only common property is that they have been defined in opposition to what is "European." This two-term sequence will attempt to introduce students to the history, culture, and present

state of *some* of these peoples. The choice, varying from year to year, will generally be made from East Asia, South Asia, or the Middle East. Instructors: history and literature staff.

Hum 10 ab. Morality, Society, and Politics. 9 units (3-0-6); *first and second or second and third terms.* Theories of morality and politics have generally been shaped not only by the broader intellectual climate of their time, but also by the perceived virtues and defects of the social and political conditions of the time. This two-quarter sequence will provide an introduction to the moral and political theories which helped shape Western societies, with the emphasis on the 17th century to the present. The first quarter will concentrate on moral theory and the second quarter on political theory. Each theory will be presented in historical context but will also be assessed for its relevance to contemporary life and politics. Instructors: philosophy staff.

Hum 12 ab. Belief, Truth, and Knowledge. 9 units (3-0-6); *first and second or second and third terms.* An introduction to two central areas of philosophy: epistemology (theories of knowledge) and metaphysics (theories about the ultimate nature of reality). Readings will be drawn from both historical and contemporary philosophical texts. The first quarter will deal with issues in epistemology. Particular topics may include various forms of skepticism; the nature of knowledge, belief and rationality; paradoxes about knowledge; the nature of scientific knowledge; probability; and logic. The second quarter will address some central questions in metaphysics. Topics to be covered may include the following: the relation between the mind and the body; the existence of God; the existence of a mind-independent reality; the nature of time; freedom and determinism; personal identity; and the nature of right and wrong. Instructors: Philosophy staff.

Hum 104. Plato.* 9 units (3-0-6). The course will cover the major dialogues: the Socratic Myth (*Protagoras, Euthyphro, Apology, Crito*), the Platonic Eros (*Phaedrus, Symposium*), and the *Republic* and selections from the *Laws*. Class reports and final paper. Not offered 1994–95. Instructors: Staff.

Hum 119. Selected Topics in Humanities. 9 units (3-0-6). Advanced courses to be determined on a course-by-course basis by the instructor. Instructors: Staff and visitors.

H/Hum 131. History on Film.* 9 units (2-2-5). For course description, see History.

Hum 132. Humanities on Film. 3 units (1-1-1). A mini-course centered around a series of films (usually five) screened as part of the Caltech Film Program. Students will be required to attend prefilm lectures and postfilm discussions, to do some reading, and to produce a short paper. Instructor: Rosenstone.

Hum 133. Topics in Film History.* 9 units (2-2-5). Will focus each quarter on one kind of motion picture—either a film genre, or films made by an individual director, or from a single nation or region of the world or particular historical era. Included are weekly screenings, readings on film, a weekly discussion meeting, and a term paper. Instructor: Rosenstone.

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

Hum 140 ab. The History of the Book.* 9 units (3-0-6). A chronological survey of the evolution and cultural role of printed materials—specifically the book—in Western society from the 14th century to the present day. Instructors: Staff.

Hum 141 a. Offensive Literature.* 9 units (3-0-6). A survey of literature deemed at various historical periods to have been seditious, blasphemous, obscene, or libelous. Instructor: Sutherland.

INDEPENDENT STUDIES PROGRAM

Students who have chosen to enter the Independent Studies Program (ISP) instead of a formulated undergraduate option may enroll in special ISP courses. These courses are designed to accommodate individual programs of study or special research that fall outside ordinary course offerings. The student and the instructor first prepare a written course contract specifying the work to be accomplished and the time schedule for reports on progress and for work completed. The units of credit and form of grading are decided by mutual agreement between the instructor, the student, and his or her advisory committee. See page 143 for complete details.

JAPANESE (See Languages)

JET PROPULSION

JP 121 abc. Jet Propulsion Systems and Trajectories. 9 units (3-0-6); each term. *Open to all graduate students and to seniors with permission of instructor.* Modern aspects of rocket, turbine, electrical, and nuclear propulsion systems and the principles of their application to lifting, ballistic, and spaceflight trajectories. Combustion and burning characteristics of solid and liquid propellants, liquid-propellant fuel systems, combustion instability. Subsonic and supersonic compressors and turbines, basic gas-turbine propulsion cycle and its variations, and inlets and diffusers. Nuclear rockets, nuclear air-breathing cycles. Instructor: Sterling.

JP 131. Combustion Technology. 9 units (3-0-6); third term. *Prerequisites: APh/ME 17 and ME 19.* Application of fluid dynamic and chemical principles to the study of combustion processes, including the theoretical and experimental treatment

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

of laminar and turbulent flames; the combustion of liquid droplets and solid particles; and technical aspects of gas, oil, and coal combustion. Instructor: F.E.C. Culick.

JP 213. Dynamics of Reacting Gases. 9 units (3-0-6); each term. *Prerequisites:* Ae/APh 101 abc or CE/ME 101 abc, or equivalent. Application of gas dynamic and chemical principles to the study of combustion processes, including theoretical and experimental treatment of laminar and turbulent flames; acoustic and detonation waves; volatilization and combustion of liquid droplets and solid particles; combustion problems of air-breathing engines and liquid- and solid-propellant rockets; flame stability; aspects of gas, oil, and coal combustion. Instructor: Staff. Not offered every year.

JP 270. Special Topics in Propulsion. 6 units (2-0-4); each term. The topics covered will vary from year to year. Instructors: Staff.

JP 280. Research in Jet Propulsion. Units to be arranged. Theoretical and experimental investigations of problems associated with propulsion and related fields. Instructors: Staff.

LANGUAGES

L 101. Selected Topics in Language. Units to be determined by arrangement with the instructor. Graded pass/fail. Instructors: Staff and visiting lecturers.

L 102 abc. Elementary French. 10 units (3-1-6); first, second, third terms. The course aims at providing reading knowledge plus competence in general conversation. Students who have had French in secondary school or college must consult with the instructor before registering. Not open to students with more than one previous year of French. Instructor: Orcel.

L 103 abc. Intermediate French. 9 units (3-0-6); first, second, third terms. *Prerequisite:* L 102 abc or equivalent. Grammar review, conversation practice, introduction to French history, literature, and politics. Literary readings and writing are emphasized in the second and third quarters. Instructor: Orcel.

L 105. French Literature. 9 units (3-0-6). *Prerequisite:* L 103 abc or equivalent. *Advanced humanities credit will be determined by the instructor.* A body of French literature is treated from the standpoint of a dominant theme. Conducted in French. Instructor: Orcel.

L 106 abc. Elementary Japanese. 10 units (5-1-4); first, second, third terms. Emphasis on oral-aural skills, and understanding of basic grammar. Immediate introduction of the native script—*hiragana, katakana*—and gradual introduction to 300 to 500 characters. Instructor: Hirai.

L 107 abc. Intermediate Japanese. 10 units (5-1-4); first, second, third terms. *Prerequisite:* L 106 or equivalent. Continued instruction and practice in conversation, building up vocabulary, and understanding complex sentence patterns. The emphasis, however, will be on developing reading skills. Recognition of approximately 1000 characters. Instructor: Hirata.

L 108 abc. Technical Japanese. 10 units (3-1-6); first, second, third terms. *Prerequisite:* L 107 or equivalent. (Not available for humanities and social science credit.) Primarily reading and translation of technical texts in the natural and applied sciences. Recognition of the 1850 “general-use characters,” as well as more specialized technical vocabulary. Instructor: Hirata.

L 130 abc. Elementary German. 10 units (3-1-6); first, second, third terms. Grammar fundamentals and their use in aural comprehension, speaking, reading, and writing. Students who have had German in secondary school or college must consult with the instructor before registering. Instructor: Washburn.

L 132 abc. Intermediate German. 9 units (3-0-6); first, second, third terms. *Prerequisite:* L 130 abc or equivalent. Reading of short stories and plays, grammar review, aural and oral drills and exercises, expansion of vocabulary, and practice in reading, writing, and conversational skills. Second and third quarters will emphasize written expression, technical/scientific translation, and literary readings. Students who have studied German elsewhere must consult with the instructor before registering. Instructor: Aebi.

L 140 abc. German Literature. 9 units (3-0-6); first, second, third terms. *Prerequisite:* L 132 abc or equivalent. *Advanced humanities credit to be determined by the instructor.* The reading and discussion of works by selected 19th- and 20th-century authors. Conducted in German. Instructors: Staff.

L 141 abc. Elementary Russian. 10 units (3-1-6); first, second, third terms. The course covers grammar and builds toward the capacity to understand, speak, read, and write Russian. Students who have had Russian in secondary school or college must consult with the instructor before registering. Instructor: Lindholm.

L/Lit 152 ab. French Literature in Translation: Classical and Modern. 9 units (3-0-6). *Advanced humanities credit to be determined by the instructor.* First term: French “classical” literature of the 17th and 18th centuries; second term: from 1939 to the present, with literary responses to “the Absurd.” Readings are in English, but students may read French originals. Instructors: Staff.

L 153 abc. Intermediate Russian. 9 units (3-0-6); first, second, third terms. *Prerequisite:* L 141 abc or equivalent. Grammar review, readings, discussion, and reports on material from Russian literature, culture, and history. Writing is emphasized in the second and third quarters. Instructor: Cheron.

L/Lit 154. French Literature in Translation: The French Novel. 9 units (3-0-6). *Advanced humanities credit to be determined by the instructor.* Famous novels of the 16th to the 20th century are read against their historical, sociological, and philosophical background. Readings and discussions are in English, but students may read the French originals. Instructors: Staff.

L/Lit 160 ab. German Literature in Translation.* 9 units (3-0-6). First term: Middle Ages through the Classic/Romantic Age. Second term: 19th and 20th centuries, and exile literature. Instructor: Aebi.

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

L/Lit 165 abc. Russian Literature in Translation.* 9 units (3-0-6); first, second, third terms. The development of Russian literature in its socio-historical context from the Classical period to contemporary texts. Authors will range from Pushkin to Solzhenitsyn. All readings in English. Instructor: Cheron.

L 166 abc. Russian Literature. 9 units (3-0-6); first, second, third terms. *Prerequisite:* L 153 or equivalent and permission of the instructor. Advanced humanities credit to be determined by the instructor. Reading and discussion of representative works of selected 19th- and 20th-century Russian authors. Conducted in Russian. Students are advised to take these courses in sequence. Instructor: Cheron.

L 167 abc. Latin Literature. 9 units (3-0-6); first, second, third terms. *Prerequisite:* three years of high school Latin or equivalent. Advanced humanities credit to be determined by the instructor. Major works of Latin literature, usually one per term. No work will be studied more than once in four years, and students may repeat the course for credit. Instructor: Pigman.

L 168 abc. Elementary Ancient Greek. 9 units (3-0-6); first, second, third terms. The course aims to prepare students to read Attic Greek (5th century B.C.). Instructor: Pigman.

LATIN (See Languages)

LAW

Law 33. Introduction to the Law. 9 units (3-0-6); second term. An introduction to Anglo-American law from both the legal and the social-scientific points of view. Subject can vary from year to year. Available for introductory social science credit. Instructor: Spitzer.

Law 133. Topics in Anglo-American Law. 9 units (3-0-6); second, third terms. An introduction to the American legal system through the study of a particular sub-area of law, which may vary from term to term or year to year. Instructor: Spitzer. *May be taken more than once if the topic is different.*

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

LINGUISTICS

Lin 101 a. Introductory Linguistics. 9 units (3-0-6). Language is a system that carries meaning to sound. Phonology is the study of sound; semantics is the study of meaning. Syntax is about the ways we go from phonology to semantics. Phonetics, phonemic theory, morphology, phrase structure grammar, transformational grammar. Extensive reading required. Instructor: B. Thompson.

Lin 101 b. Linguistic Theory. 9 units (2-1-6). Current models of language structure, especially in syntax and semantics. Transformational generative grammar, case grammar, generative semantics, semantic theories. A research project is required. Instructor: B. Thompson.

Lin/SS 103. Psycholinguistics. 9 units (2-1-6); *third term*. A seminar-type course on language behavior as a reflection of conceptual processes. Language acquisition, aphasia and other language disturbances, linguistic memory and grammar organization, language and the brain, multilingualism. A research project is required. Instructor: B. Thompson.

Lin/SS 104. Sociolinguistics. 9 units (2-1-6). Seminar and research on language in social interaction. Experiments required. Readings in language variation (dialects, slang, jargon, scientific, and other). Instructor: B. Thompson.

Lin/SS 105. Computational Linguistics. 9 units (2-1-6). *Prerequisite: Lin 101 a or Lin 101 b or equivalent.* English as a language for communication with computers. Problems in parsing and semantic data-base analysis. Review through readings of natural language processing systems, including speech recognition and other AI (artificial intelligence) applications. Research required. Instructors: B. Thompson, F. Thompson.

LITERATURE

These courses are open only to students who have fulfilled the freshman humanities requirement.

Lit 30. Reading in English. *Units to be determined for the individual by the division.* Collateral reading in literature and related subjects, done in connection with regular courses in literature or history, or independently of any course, but under the direction of members of the division. Graded pass/fail. Instructors: Staff. *Not available for credit toward humanities-social science requirement.*

Lit 98. Tutorial for Literature Majors. 9 units (2-0-7). *Prerequisite: instructor's permission.* An individual program of directed reading and research for literature majors in an area not covered by regular courses. Instructors: Staff.

Lit 100. Introduction to Poetry. 9 units (3-0-6). What is poetry? Why and how should one read it? What "weapons" does the good poem deploy in order to give pleasure? How does an inexperienced reader develop into an expert and

sensitive one? To illustrate the nature, functions, and resources of poetry, a wide-ranging selection of poems will be read and discussed. Instructor: Mandel.

Lit 103 ab. The Epic of Return.* 9 units (3-0-6); second, third terms. The *Odyssey* and its transformations. First term: the *Odyssey*, the *Aeneid*, Augustine's *Confessions*, and Dante's *Divine Comedy*; second term: *Paradise Lost* and *Ulysses*. The first term is a prerequisite for the second. Not offered 1994–95. Instructor: Bush.

Lit 108 abc. Seminar in Creative Writing. 9 units (3-0-6). Students will develop their writing skills chiefly through their own creative efforts. Lecturers will provide guidance and direction, supervise class discussions of students' works, and assign outside reading as needed. Specifically, the subject for any quarter may be fiction, autobiography, poetry, the essay, or other forms. Information on each quarter's focus will be provided by the Registrar. Enrollment is limited and upperclass undergraduates will be given priority. Students may apply one quarter of Lit 108 to the 36-unit H&SS requirement. Instructors: Staff.

Lit 110. Chaucer.* 9 units (2-0-7). Chaucer's major works, *Troilus and Criseyde*, and selections from *The Canterbury Tales*. Instructor: Pigman.

Lit 112 ab. English Renaissance Literature.* 9 units (3-0-6). The major genres and themes of English Renaissance literature from the Reformation of the early 16th century through the metaphysical poets of the 17th century. Instructors: La Belle, Pigman.

Lit 114 ab. Shakespeare.* 9 units (3-0-6). *Not open to freshmen.* A close study of Shakespeare's plays with an emphasis on his language, dramatic structures, characters, and themes. Each term will concentrate on a detailed consideration of three or four of Shakespeare's major plays. The first term is not a prerequisite for the second. Instructor: La Belle.

Lit 116. Milton.* 9 units (2-0-7). Milton's major works—*Paradise Lost*, *Paradise Regained*, and *Samson Agonistes*—and some of the prose and shorter poems. Instructor: Pigman.

Lit 122 abc. The English Novel.* 9 units (3-0-6). Development of the English novel from the 18th century to the present. First term: early novelists, through Scott; second term: the great Victorians; third term: modern British and Irish novelists. Instructor: Sutherland.

Lit 125 ab. British Romantic Literature.* 9 units (3-0-6). A selective survey of English writing in the late 18th and early 19th centuries. Major authors may include Blake, Wordsworth, Coleridge, Byron, Keats, Percy Shelley, Mary Shelley, and Austen. Particular attention will be paid to intellectual and historical contexts and to new understandings of the role of literature in society. Instructor: Gilmartin.

Lit 127. 19th-Century English Literature and Social Change.* 9 units (3-0-6). Course will explore literary responses to some of the central issues confronting English society in the 19th century: industrialization, the growth of cities, class tension, and shifting gender roles. Authors to be considered may include Shelley, Dickens, Gaskell, Eliot, Carlyle, Arnold, and Ruskin. Instructor: Gilmartin.

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

Lit 130 abc. The 19th- and 20th-Century Novel.* 9 units (3-0-6). A three-term exploration of the late 19th- and 20th-century European, British, and American novel. No term is a prerequisite to the other terms. A study of the great seminal figures. Instructor: Cohen.

Lit 131 ab. Modern European Fiction. * 9 units (2-0-7). French, German, and Italian novels and shorter fiction from the first half of the 20th century by authors such as Broch, Gide, Hesse, Kafka, Malraux, Thomas Mann, Musil, Proust, Schnitzler, and Svevo. Instructor: Pigman.

Lit 132. American Literature Until the Civil War.* 9 units (3-0-6). Will analyze the literature of this period, from the Puritans through Melville, to determine how various writers understood their relationship to a new world of seemingly unlimited possibility. Authors covered may include: Mary Rowlandson, Benjamin Franklin, Hannah Foster, Harriet Jacobs, Emerson, Thoreau, Harriet Beecher Stowe, Hawthorne, and Melville. Instructor: Weinstein.

Lit 134. The Career of Herman Melville.* 9 units (3-0-6). Will focus on Melville's works from *Typee* through *Billy Budd*. Special emphasis will be placed on Melville's relations to 19th-century American culture. Instructor: Weinstein.

Lit 138. Twain and His Contemporaries.* 9 units (3-0-6). Will study the divergent theories of realism that arose in the period after the Civil War and before WW I. Authors covered may include: Howells, James, Charlotte Perkins Gilman, Twain, Sarah Orne Jewett, Jacob Riis, Stephen Crane, and W. E. B. DuBois. Instructor: Weinstein.

Lit 145 ab. James Joyce and Modern Literature.* 9 units (3-0-6). Joyce's major works, along with selected poetry and fiction from his modernist contemporaries (Eliot, Yeats, Pound, Lawrence, Woolf, etc.). First term: through the opening chapters of *Ulysses*. Second term: the rest of *Ulysses* and selections from *Finnegans Wake*. Not offered 1994-95. Instructor: Bush.

Lit 146 ab. 20th-Century American and British Poetry.* 9 units (3-0-6); second, third terms. A two-term seminar on the major poets and poetic theories from the turn of the century to the present. First term: American poets; second term (may be taken independently of the first): British poets. Not offered 1994-95. Instructor: Bush.

Lit/Psy 150 ab. Psychoanalysis and Literature.* 9 units (3-0-6); first, third terms. The application of concepts from contemporary psychoanalytic theory to literature, including such ideas as the unconscious, interpretation, the relation of childhood experience to adult personality, and the nature and function of dreams. Authors covered will vary from term to term and may include Dostoevsky, Kafka, Thomas Mann, and selected 20th-century novelists. Instructor: Breger. *May be taken to satisfy advanced humanities requirement or option elective requirement in social science.*

L/Lit 152 ab. French Literature in Translation: Classical and Modern. 9 units (3-0-6). For course description, see Languages.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

L/Lit 154. French Literature in Translation: The French Novel. 9 units (3-0-6). For course description, see Languages.

L/Lit 160 ab. German Literature in Translation.* 9 units (3-0-6). For course description, see Languages.

L/Lit 165 abc. Russian Literature in Translation.* 9 units (3-0-6). For course description, see Languages.

Lit 170 abc. From Mysteries to Absurdism: A Survey of Drama. 9 units (3-0-6). First term: origins of “modern” drama, from the Middle Ages to the Classical Age in 17th-century France. Second term: theater from the “Age of Elegance” in the late 17th century to the “Triumph of the Bourgeoisie” in the 19th century. Third term: theater from Ibsen to the present. Not offered on a pass/fail basis. Instructor: Mandel.

Lit 180. Special Topics in Literature. 9 units (3-0-6). See Registrar’s announcement for details. Advanced credit to be determined on a course-by-course basis by the instructor. Instructors: Staff.

MATERIALS SCIENCE

MS 15 ab. Principles of Materials. 9 units (3-0-6); first, second terms. The principles involved in the structure and properties of materials. Metallic materials, with some consideration given to ceramics and polymers. Emphasis on the utilization of phase transformations and strengthening mechanisms to obtain desired properties. Instructor: Fultz (MS 15 a).

MS 90. Materials Science Laboratory. 9 units (1-6-2); third term. Prerequisite: MS 15 ab. An introductory laboratory in relationships between the structure and properties of materials. Experiments involve structure determination by x-ray diffraction, mechanical property measurements, crystal defect observation by chemical etching, and failure analysis. Individual projects may be performed, depending upon the student’s interests and abilities.

MS 100. Advanced Work in Materials Science. The staff in materials science will arrange special courses or problems to meet the needs of students working toward the M.S. degree or of qualified undergraduate students. Graded pass/fail for research and reading.

MS 120. Kinetics of Crystal Imperfections. 9 units (3-0-6); first term. Treatment of crystal imperfections, their interactions, and their influence on some physical and mechanical properties; taught at the level of *Dislocations*, by Friedel.

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

MS 121. Phase Transformations in Solids. 9 units (3-0-6); third term. Prerequisites: APh 17 abc and MS 15 a, or graduate standing. Diffusion from atomistic and continuum viewpoints. Thermodynamics and kinetics of first- and second-order phase transformations, decomposition, and ordering reactions. Role of strain energy in solid-solid phase transformations. Diffusionless transformations. Microstructural morphologies. Instructor: Fultz.

APh/MS 122. Diffraction Theory and Applications. 9 units (3-0-6). For course description, see Applied Physics.

MS 123. Transmission Electron Microscopy Laboratory. 9 units (0-7-2); third term. Prerequisite: APh/MS 122 and permission of instructor. Techniques of using the transmission electron microscope (TEM) for the characterization of materials. Operation and alignment of the TEM. Bright field, dark field, and diffraction techniques with specimen tilting. Specimen preparation. Experiments include studies of crystal defects and solid-state precipitation reactions by diffraction contrast methods, and an introduction to high-resolution TEM. Instructor: Ahn.

MS 124. Mechanical Behavior of Materials. 9 units (3-0-6); second term. Prerequisite: MS 120. Mechanical behavior of structural materials. The micromechanics of engineering metals will continue from MS 120, but a wide variety of other materials will be studied, including metallic glasses, polymers, ceramics, and composites. The focus of the course will be on the micromechanics of deformation and their relationship to macroscopic behavior. The course will be based on original work in the literature. A previous or concurrent course in continuum mechanics is recommended.

MS 125. Advanced Transmission Electron Microscopy. 9 units (1-6-2); first term. Prerequisite: MS 123. Theory and practice of phase contrast imaging of crystals in the transmission electron microscope. Physical optics approach to dynamical electron diffraction and image simulation. Optical analysis of high-resolution images for resolution, defocus, astigmatism and drift. Microchemical analysis methods including electron energy loss spectrometry and x-ray energy dispersive spectrometry. Instructor: Ahn.

APh/MS 140. Ion Beam Modification and Analysis of Materials. 6 units (2-0-4). For course description, see Applied Physics.

APh/MS 141 abc. Ion Beam Analysis Laboratory. 5 units (0-4-1). For course description, see Applied Physics.

MS 200. Advanced Work in Materials Science. The staff in materials science will arrange special courses or problems to meet the needs of advanced graduate students.

Ae/AM/MS 213 ab. Mechanics and Materials Aspects of Fracture. 9 units (3-0-6). For course description, see Aeronautics.

MS 300. Thesis Research.

MATHEMATICS

Ma 1 abc. Freshman Mathematics. 9 units (4-0-5); first, second, third terms. Prerequisite: high school algebra and trigonometry. Calculus, ordinary differential equations, and infinite series. Linear algebra, vectors, and analytic geometry. Instructor: Aschbacher.

Ma 1 bc, 2a. Freshman Mathematics, Advanced Placement. 9 units (4-0-5); first, second, third terms. Instructors: Wales, Ramakrishnan.

Ma 2 abc. Sophomore Mathematics. 9 units (4-0-5); first, second, third terms. A continuation of the topics introduced in Ma 1, including linear algebra, calculus of several variables, and probability. Instructors: Mrowka, Ramakrishnan, Knill.

Ma 3. Number Theory for Beginners. 9 units (3-0-6); third term. Some of the fundamental ideas, techniques, and open problems of basic number theory will be introduced. Examples will be stressed. Topics: Euclidean algorithm, primes, Diophantine equations including $a^n + b^n = c^n$ and $a^2 - db^2 = \pm 1$, constructible numbers, composition of binary quadratic forms, and congruences. Not offered 1994–95.

Ma 5 abc. Introduction to Abstract Algebra. 9 units (3-0-6); first, second, third terms. Groups, rings, fields, and vector spaces are presented as axiomatic systems. The structure of these systems is studied, making use of the techniques of automorphisms, homomorphisms, linear transformations, subsystems, direct products, and representation theory. Many examples are treated in detail. Instructor: Wilson.

Ma/CS 6 abc. Introduction to Discrete Mathematics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 1 abc. Set theory, the Peano axiom system and elementary number theory, graph theory, paths and trees, generating functions. Algebraic structures, semigroups, permutation groups, automata, lattices, and Boolean algebras. Finite fields and coding theory. Linear programming. Mathematical logic, propositional calculus and predicate calculus, models, and Gödel's completeness and incompleteness theorems. Natural deduction. Not offered 1994–95.

Ma 92 abc. Senior Thesis. 9 units (0-0-9); first, second, third terms. Prerequisite: approval of adviser. Open only to seniors who are qualified to pursue independent reading and research. The work must begin in the first or second term and be supervised by a member of the staff. Students will submit a thesis at the end of the year. Graded pass/fail.

Ma 98. Reading. 3 units or more by arrangement. Occasionally a supervised reading course will be offered. Topics, hours, and units by arrangement. Only qualified students will be admitted after consultation with the instructor in charge of the course. Graded pass/fail.

Ma 108 abc. Classical Analysis. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 2 a and 2 b or equivalent. May be taken concurrently with Ma 109. Topology of metric spaces, compactness, connectedness, convergence, completeness, conti-

nuity. Contraction mapping theorem and applications: existence and uniqueness of solutions to ordinary differential equations and the implicit function theorem. The theory of the Lebesgue integral and introduction to L^p -spaces. Fourier analysis. Analytic functions of one complex variable, including classification of isolated singularities, analytic continuation, and methods of contour integration. Instructor: Luxemburg.

Ma 109 abc. Introduction to Geometry and Geometric Analysis. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 2 a and 2 b or equivalent. May be taken concurrently with Ma 108. Differential manifolds, differential forms, and calculus on manifolds, including Stokes theorem. Fundamental groups and universal covering space. Degree of a map. Riemann metric, geodesics, curvature. The differential geometry of curves and surfaces. Introduction to modern ideas in topology and differential geometry. Instructors: Kahn, Epstein.

Ma 110 abc. Real and Complex Analysis. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 108 or equivalent. First term: Linear topology: topological and metric spaces, topological vector spaces, Hilbert and Banach spaces, duality, convexity. Measure theory: measure spaces, integral, L^p -spaces, extensions of measures, measures in topological spaces, measures as functionals. Second term: Real analysis: Lebesgue measure in \mathbb{R}^d , change of variables, covering theorems, maximal functions, differentiation of measures and functions, Hausdorff measures, arc length and surface measures, integral and convolution operators, L^p -estimates, interpolation theorems, singular integrals, generalized functions, Sobolev spaces. Harmonic analysis: Fourier analysis of periodic functions, harmonic functions in the unit disc and Fourier series, harmonic analysis in \mathbb{R}^d , Fourier integral, boundary behavior of harmonic functions, convergence of Fourier series and integrals, applications to analysis of convolution operators. Third term: Complex analysis: elementary theory of analytic functions, H^p -spaces, Hilbert transform, functions of several complex variables, entire and meromorphic functions, Fourier integral on the complex plane. Instructor: Makarov.

Ma 112 a. Statistics. 9 units (3-0-6); first term only. The first term is an introductory course in the basic techniques of probability theory, hypothesis testing, and regression analysis. The second and third terms include analysis of variance, estimation, nonparametric inference, sequential analysis, decision theory, and exploratory data analysis. Instructor: Lorden.

Ma 116 abc. Mathematical Logic and Axiomatic Set Theory. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 5 (or equivalent) or consent of instructor. Propositional logic, predicate logic, formal proofs, Gödel Completeness Theorem, the method of resolution, elements of model theory. Computability, undecidability, Gödel Incompleteness Theorems. Axiomatic set theory, ordinals, transfinite induction and recursion, iterations and fixed points, cardinals, Axiom of Choice. Instructor: Kechris.

Ma/CS 117 ab. Computability Theory. 9 units (3-0-6); first, second terms. Prerequisite: Ma 5 abc or equivalent. Various approaches to computability theory, e.g., Turing machines, recursive functions, Markov algorithms; proof of their equivalence. Church's thesis. Theory of computable functions and effectively enumerable sets. Decision problems. Undecidable problems: word problems for groups, solvability of Diophantine equations (Hilbert's 10th problem). Rela-

tions with mathematical logic and the Gödel Incompleteness Theorems. Decidable problems, from number theory, algebra, combinatorics, and logic. Complexity of decision procedures. Inherently complex problems of exponential and superexponential difficulty. Feasible (polynomial time) computations. Polynomial deterministic vs. nondeterministic algorithms, NP complete problems and the $P = NP$ question. Not offered 1994–95.

Ma 120 abc. Abstract Algebra. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 5 abc or equivalent. Abstract development of the basic structure theorems of groups, commutative and noncommutative rings, lattices, and fields. Instructor: Roberts.

Ma 121 abc. Combinatorial Analysis. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 5. Elementary and advanced theory of permutations and combinations. Theory of partitions. Theorems on choice, including Ramsey's theorem and the Hall-König theorem. Existence and construction of block designs with reference to statistical design of experiments, linear programming, and finite geometries. Instructor: Blanchard.

Ma 122 a. Topics in Group Theory. 9 units (3-0-6); first term. Prerequisite: Ma 5 abc or consent of instructor. Representation theory of finite groups with number theoretic applications. Not offered 1994–95.

EE/Ma 126. Information Theory. 9 units (3-0-6). For course description, see Electrical Engineering.

EE/Ma 127 ab. Error-Correcting Codes. 9 units (3-0-6). For course description, see Electrical Engineering.

CS/EE/Ma 129 abc. Information and Complexity. 9 units (3-0-6) first and second terms; (1-4-4) third term. For course description, see Computer Science.

Ma 140 abc. Functional Analysis. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 110. First term: Theory of operators. Second term: Symmetric and selfadjoint operators, spectral analysis of differential operators. Third term: Perturbative theory, functional models for non-selfadjoint operators—methods of complex analysis. Not offered 1994–95.

Ma 142 ab. Ordinary and Partial Differential Equations. 9 units (3-0-6); second, third terms. Prerequisite: Ma 108. Ma 109 is desirable. The mathematical theory of ordinary and partial differential equations, including a discussion of elliptic regularity, maximal principles, solubility of equations. The method of characteristics. Instructor: Graczyk.

Ma 144 ab. Probability. 9 units (3-0-6); first, second terms. Basic theory, including characteristic functions and limit theorems, random walk, Markov chains, Poisson process, Brownian motion. Instructor: Knill.

Ma 145 ab. Introduction to Unitary Group Representations. 9 units (3-0-6); first, second terms. The study of representations of a group by unitary operators on a Hilbert space, including finite and compact groups, and to the extent that time allows, other groups. General representation theory of finite groups. Frobenius' theory of representations of semidirect products. The Young tableaux and the representations of symmetric groups. The Peter-Weyl theorem. The classical compact groups and their representation theory. Weyl character formula. Instructor: Simon.

Ma 147 abc. Dynamical Systems. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 108, Ma 109, or equivalent. First term: One-dimensional dynamics, circle homeomorphisms, rotation numbers. Complex dynamics, Julia sets. Second term: Smooth dynamical systems, hyperbolic sets, stable manifolds, structural stability. Markov partitions, symbolic dynamics. Ergodic theory, entropy, Gibbs measures. Third term: Hamiltonian systems. Basic formalism, symplectic geometry, integrable systems, celestial mechanics. Hyperbolicity, ergodic theory of Hamiltonian systems. Periodic orbits, KAM technique. Infinite-dimensional systems. Not offered 1994–95.

Ma 148 a. Topics in Mathematical Physics. 9 units (3-0-6); second term. The subject matter will vary from year to year. Among the topics that have been covered in the past are the statistical mechanics of lattice gases, the general theory of Schrödinger operators, constructive quantum field theory, and random and almost periodic Jacobi matrices. May be taken for credit in multiple years. Instructor: Simon.

Ma 151 abc. Topology and Geometry. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 108 ab or equivalent. A basic graduate core course. Fundamental groups and covering spaces, homology, cohomology and calculation of homology groups, exact sequences. Fibrations, higher homotopy groups and exact sequences of fibrations, structure of differentiable manifolds, degree theory, De Rham cohomology, elements of Morse theory. Geometry of Riemannian manifolds, covariant derivatives, geodesics, curvature, relations between curvature and topology. Instructors: Ozsvath, Feehan.

Ma 157 a. Geometry and Topology of Manifolds. 9 units (3-0-6); first term. Prerequisite: Ma 151 or equivalent. The relationship between the hyperbolic geometry of two- and three-dimensional manifolds and their underlying topology. Course content varies widely from year to year so that students may take the course in subsequent years. Instructor: Gabai.

Ma 160 ab. Number Theory. 9 units (3-0-6); second, third terms. Prerequisite: Ma 5. In this course, the basic structures and results of algebraic number theory will be systematically introduced. Topics covered will include the theory of ideals/divisors in Dedekind domains, Dirichlet unit theorem and the class group, p -adic fields, ramification, abelian extensions of local and global fields. Instructor: Hajir.

The courses labeled Ma 91 or Ma 191 are one-shot courses reflecting the interests of faculty, visitors, and students. The list below is a selection of titles of Ma 91, Ma 191, and regular courses that have been offered in recent years: Harmonic Analysis in the Complex Plane, Several Complex Variables, Entire Functions and the Fourier Transform, Almost Periodic Functions, Elementary Theory of Meromorphic Functions, Banach Algebras, Asymptotic Series, Theory of von Neumann Algebras, Functional Equations, Uniformly Distributed Sequences Modulo 1, Operational Calculus, Algebraic Geometry, Diophantine Analysis, Representation Theory, Introduction to Lie Algebras, Geometry and Mechanics of Space Curves, Differential Topology, Fixed Point Theory, Coding Theory, Introduction to the Constructive Theory of Functions, Multiparticle Scattering Theory.

Ma 191 ab. Algebraic Combinatorics. 9 units (3-0-6); first, second terms. Instructor: Doran.

Ma 191 c. Analytic Methods in Topology. 9 units (3-0-6); second term. Instructor: Mrowka.

Ma 191 d. Algebraic Curves. 9 units (3-0-6); third term. Instructor: Ramakrishnan.

Ma 191 e. Riemann Surfaces and Teichmüller Spaces. 9 units (3-0-6); first term. Instructor: Epstein.

Other Ma 191 titles may be announced.

Ma 216 abc. Advanced Mathematical Logic. 9 units (3-0-6); first, second, third terms. Prerequisite: Ma 116 or equivalent. Topics to be chosen from model theory and its applications to algebra, infinitary logic and admissible sets, ordinary and generalized recursion theory, consistency and independence results in set theory, large cardinals, descriptive set theory. Content varies from year to year so that students may take the course in successive years. Instructor: Hjorth.

Ma 290. Reading. Hours and units by arrangement. Occasionally, advanced work is given through a reading course under the direction of an instructor.

The following research courses and seminars, intended for advanced graduate students, are offered according to demand. They cover selected topics of current interest. The courses offered, and the topics covered, will be announced at the beginning of each term.

Ma 316 abc. Seminar in Mathematical Logic. 9 units. Three terms. Instructor: Kechris.

Ma 324 abc. Seminar in Combinatorics. Instructor: Wilson.

Ma 325 abc. Seminar in Algebra. 6 units. Three terms. Instructors: Aschbacher, Wales.

Ma 345 abc. Seminar in Analysis. 6 units. Three terms. Instructor: Luxemburg.

Ma 390. Research. Units by arrangement.

Ma 392. Research Conference. Three terms.

See also the list of courses in Applied Mathematics.

MECHANICAL ENGINEERING

Additional advanced courses in the field of mechanical engineering may be found listed in other engineering options such as applied mechanics, applied physics, jet propulsion, and materials science.

ME 18 ab. Thermodynamics. 9 units (3-0-6); first, second terms. An introduction to classical thermodynamics with engineering applications. The first quarter includes: first and second laws; closed and open systems; properties of a pure substance; availability and irreversibility; generalized thermodynamic relations.

Second quarter emphasizes applications: gas and vapor power cycles; propulsion; mixtures; combustion and thermochemistry; chemical equilibrium. Instructor: Goodwin.

ME 19 abc. Fluid Mechanics and Gasdynamics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ma 2 abc, Ph 1 abc. Basic equations of fluid mechanics, theorems of energy, linear and angular momentum, potential flow, elements of airfoil theory. Flow of real fluids, similarity parameters, flow in closed ducts. Boundary-layer theory in laminar and turbulent flow. Introduction to compressible flow. Flow and wave phenomena in open channels. Additional topics may include those related to energy production and conversion, and heat transfer phenomena, at the instructor's discretion. Instructor: Raichlen.

ME 20 ab. Heat Transfer and Thermal Design. 9 units (3-0-6); first, second terms. Prerequisites: ME 18 ab, ME 19 ab, or concurrently. An introduction to heat and mass transfer with emphasis on thermal design. Steady-state and transient conduction, including numerical solutions. Forced and natural convective-heat and mass transfer. Heat exchangers. Radiative heat transfer and solar energy. Multi-mode problems. Included in second quarter is a project involving thermal engineering and design. Instructors: Staff.

ME 71. Introduction to Design. 9 units (3-5-1); third term. Prerequisite: Students must fill out a questionnaire during preregistration. Introduction to mechanical engineering design, fabrication, and visual communication. Concepts are taught through a series of short design projects and design competitions emphasizing physical concepts. Many class projects will involve substantial use of the shop facilities, and construction of simple working models. Instructor: Burdick.

ME 72. Engineering Design Laboratory. 12 units (3-9-0); first term. Prerequisites: AM 35 abc, ME 71, or equivalent and permission of instructor. The design process in engineering, stressing the creative aspects, especially problem definition and concept generation, as well as visual thinking and graphical communication. Techniques in analysis of engineering systems learned previously will be applied. An engineering design contest will be held and will include the design, fabrication, and operation of a device to compete with similar devices designed by other students. These laboratory units of ME 72 can be used to fulfill a portion of the laboratory requirement in the Engineering and Applied Science Division. Instructor: Antonsson.

ME 73 ab. Machine Component Design. 9 units (3-4-2); second, third terms. Prerequisites: AM 35 abc, ME 72, or permission of instructor. Basic machine components, including: bearings, seals, shafts, gears, belts, chains, couplings, linkages, and cams. Analysis and synthesis of these devices, as well as their use in the design of larger engineering systems, will be examined. The laboratory section makes use of contemporary mechanical hardware to provide students with "hands-on" experience with the components discussed in class. Offered 1994-95. Instructor: Antonsson.

ME 90 abc. Senior Thesis, Experimental. 9 units; (0-0-9) first term; (0-9-0) second and third terms. Prerequisite: senior status; instructor's permission. Experimental research supervised by an engineering faculty member. The topic selection is determined by the adviser and the student and is subject to approval by the Mechanical Engineering Undergraduate Committee. First and second terms:

midterm progress report and oral presentation during finals week. Third term: completion of thesis and final presentation. The second and third terms may be used to fulfill laboratory credit for EAS. Not offered on a pass/fail basis.

ME 96. Mechanical Engineering Laboratory. 9 units; offered third term only. Prerequisites: upper division standing, permission of instructor. A laboratory course emphasizing measurement methods, and data acquisition and analysis, with special reference to experiments in thermal fluid science and mechanical systems. Instructors: Staff.

ME 100. Advanced Work in Mechanical Engineering. The staff in mechanical engineering will arrange special courses on problems to meet the needs of qualified undergraduate students. Graded pass/fail for research and reading. A written report is required for each term.

CE/ME 101 abc. Fluid Mechanics. 9 units (3-0-6). For course description, see Civil Engineering.

ME 110. Special Laboratory Work in Mechanical Engineering. 3–9 units per term; maximum two terms. Special laboratory work or experimental research projects may be arranged by members of the staff to meet the needs of individual students as appropriate. A written report is required for each term of work. Instructors: Staff.

ME 115 ab. Introduction to Kinematics and Robotics. 9 units (3-0-6); first and second terms. Prerequisites: Ma 2, AMa 95 ab recommended. Introduction to the study of planar, rotational, and spatial motions with applications to robotics, computers, computer graphics, and mechanics. Topics in kinematic analysis will include screw theory, rotational representations, matrix groups, and Lie algebras. Applications include robot kinematics, mobility in mechanisms, and kinematics of open and closed chain mechanisms. Additional topics in robotics include path planning for robot manipulators, dynamics and control, and assembly. Course work will include laboratory demonstrations using simple robot manipulators. Instructor: Burdick.

ME 119 abc. Heat Transfer and Thermodynamics. 9 units (3-0-6); first, second, third terms. Prerequisites: ME 18, ME 19, ME 20, AMa 95 or equivalent, CE/ME 101 or Ae 101 (may be taken concurrently). The first term covers the fundamentals of classical and statistical thermodynamics. Topics include: basic postulates, thermodynamic potentials, work and heat, chemical equilibrium, phase transitions, and the thermodynamic properties of solids, liquids, and gases. The second and third terms focus on heat, mass, and momentum transfer. Topics include: transport properties, conservation equations, conduction heat transfer in solids, convective heat, mass, and momentum transport in laminar and turbulent flows, phase change processes, thermal radiation, and selected engineering applications. Instructor: Hunt.

ME 125 abc. Design, Construction, and Flight of a Small Spacecraft. 12 units (3-0-9). Prerequisites: AM 113 ab or AM 114 ab (may be taken concurrently), or AMa 95 abc (may be taken concurrently). This course is intended to accompany a proposed program to launch a small spacecraft using a refurbished Minuteman launch system. Lectures and continuing supervision will be provided by personnel from the Jet Propulsion Laboratory and other organizations. In addition to the long-term design project, individual assignments will be given, based on weekly

lectures covering special topics related to spacecraft, such as mechanical configuration; systems integration; thermal design and environmental interactions; solar-power systems; propulsion; communications; data acquisition and processing; and scientific instruments. This course is not offered pass/fail. Instructor: Culick. Text: Larson and Wertz, *Space Mission Analysis and Design*.

ME 131. Advanced Robotics: Manipulation and Sensing. 9 units (3-6-0); third term. Prerequisite: ME 115 ab. The course focuses on current topics in robotics research in the area of robotic manipulation and sensing. Past topics have included advanced manipulator kinematics, grasping and dextrous manipulation using multifingered hands, and advanced obstacle avoidance and motion planning algorithms. The lectures will be divided between a review of the appropriate analytical techniques and a survey of the current research literature. Course work will focus on an independent research project chosen by the student. Offered alternate years; not offered 1994–95. Instructors: Staff.

ME 132. Advanced Robotics: Navigation and Vision. 9 units (3-6-0); third term. Prerequisite: ME 115 ab. The course focuses on current topics in robotics research in the area of autonomous navigation and vision. Topics will include mobile robots, multilegged walking machines, use of vision in navigation systems. The lectures will be divided between a review of the appropriate analytical techniques and a survey of the current research literature. Course work will focus on an independent research project chosen by the student. Offered alternate years; offered 1994–95. Instructors: Staff.

ME 171 ab. Computer-Aided Engineering Design. 9 units (3-0-6); second, third terms. Prerequisites: AMa 95 abc or AMa 113 abc, AM 35 abc, ME 72 abc, CS 10, or equivalent. Knowledge of PASCAL, C, or FORTRAN. Design of engineering systems using computer techniques. Topics include: the design process; interactive computer graphics; curves and surfaces (including cubic and B-splines); solid modeling (including constructive solid geometry and boundary models); kinematic and dynamic mechanism simulation; single and multi-variable optimization; optimal design; and symbolic manipulation. Assessment of CAD as an aid to the design process. Students will design several parts and/or a complete device. Offered 1994–95. Instructor: Antonsson.

ME 200. Advanced Work in Mechanical Engineering. The staff in mechanical engineering will arrange special courses on problems to meet the needs of graduate students. Graded pass/fail; a written report is required for each term of work.

ME 201. Turbomachines. 6 units (2-0-4). Prerequisites: CE/ME 101 or Ae 101 or consent of instructor. A lecture seminar course including the basic theory and behavior of turbomachines; fluid dynamics of cascades, internal flows, unsteady behavior of machines and systems, effects of cavitation, rotordynamic forces, and other special topics of interest in current research. Not offered every year. Instructors: Staff.

ME 202 abc. Engineering Two-Phase Flows. 9 units (3-0-6). Prerequisites: AMa 95 abc, CE/ME 101 abc, or equivalents. Selected topics in engineering two-phase flows with emphasis on practical problems in modern hydro-systems. Fundamental fluid mechanics and heat, mass, and energy transport in multiphase flows. Liquid/vapor/gas (LVG) flows, nucleation, bubble dynamics, cavitating

and boiling flows, models of LVG flows; instabilities, dynamics, and wave propagation; fluid/structure interactions. Discussion of two-phase flow problems in conventional, nuclear, and geothermal power plants, marine hydrofoils, and other hydraulic systems. Not offered 1994–95. Instructor: Brennen.

ME 219. Advanced Topics in Thermal Sciences. *Prerequisite: ME 119 or consent of instructor.* Current topics in thermal sciences research. Course content will depend on interests of students and instructor. Not offered every year. Instructors: Staff.

ME 300 abc. Research in Mechanical Engineering. *Hours and units by arrangement.* Research in the field of mechanical engineering. By arrangement with members of the staff, properly qualified graduate students are directed in research.

MUSIC

These courses are open only to students who have fulfilled the freshman humanities requirement.

Mu 101. Selected Topics in Music. *Units to be determined by arrangement with instructor.* Instructors: Staff and visiting lecturers.

EE/Mu 107 abc. Projects in Music and Science. *Units to be individually arranged, up to a maximum of 9.* For course description, see Electrical Engineering.

Mu 121. Understanding Music. *9 units (3-0-6).* The Listening Experience I. How to listen to and what to listen for in classical and other musical expressions. Listening, analysis, and discussion of musical forms, genres, and styles. Course is intended for musicians as well as nonmusicians and is strongly recommended as an introduction to other music courses. Not offered 1994–95. Instructor: Neenan.

Mu 122. Form and Style in Music. *9 units (3-0-6).* The Listening Experience II. One or more major genres (i.e., symphony, concerto, opera, etc.) will be traced through several periods of music history. Course will include guided listening and analysis intended to deepen the students' understanding of various composers' approaches to similar forms of musical expression. Not offered 1994–95. Instructor: Neenan.

Mu 123. Major Figures. *9 units (3-0-6).* A major personality in the history of music (i.e., Bach, Mozart, Beethoven) will be studied in depth. Course to be coordinated with major off-campus concerts, commemorations, and other events. Specific course content to be announced prior to preregistration. Not offered 1994–95. Instructor: Neenan.

Mu 127. Fundamentals of Music Theory and Elementary Ear Training. *9 units (3-0-6). No prerequisite.* Basic vocabulary and concepts of music theory (rhythm and pitch notation, intervals, scales, function of key signatures, etc.); development of aural perception via elementary rhythmic and melodic dictation, and sight-singing exercises. Instructor: Neenan.

Mu 128. Harmony I. 9 units (3-0-6). *Prerequisite:* Mu 127 or entrance exam. Study of tonal harmony and intermediate music theory; techniques of chord progression, modulation, and melody writing according to common practice; ear training, continued. Instructor: Neenan.

Mu 129. Harmony II. 9 units (3-0-6). *Prerequisite:* Mu 128 or entrance exam. More advanced concepts of music theory, including chromatic harmony, and 20th-century procedures relating to selected popular music styles; ear training, continued. Instructor: Neenan.

Mu 131. Music of Courts and Cathedrals. 9 units (3-0-6). Explores the music of the Middle Ages and Renaissance, including that of the great medieval monasteries, cathedrals, and chapels. Will include study of the music and dances from courts, towns, and countryside by trouveres, troubadours, and other entertainers. Instructor: Neenan.

Mu 132. Monteverdi to Bach: Music of the Baroque. 9 units (3-0-6). Survey of musical forms and composers during the period 1600–1750. To include masterworks of Monteverdi, Purcell, Vivaldi, Handel, Bach, and others. Instructor: Neenan.

Mu 133. Music of the Age of Enlightenment. 9 units (3-0-6). Music of the so-called “pre-Classic” and “Classic” periods (ca. 1750–1825), with emphasis on C. P. E. Bach, Gluck, Haydn, Mozart, and the early works of Beethoven. Instructor: Neenan.

Mu 134. Music of the Early Romantics. 9 units (3-0-6). Romanticism in music during the early 19th century. Examines a wealth of music from late Beethoven to Schubert, Berlioz, Chopin, Mendelssohn, Schumann, and Liszt. Not offered 1994–95. Instructor: Neenan.

Mu 135. Music of the Late Romantics. 9 units (3-0-6). An exploration of the music of the late 19th century. Included will be nationalist composers: Dvořák, Mussorgsky, and Grieg; major symphonists: Brahms, Bruckner, and Mahler; and opera composers: Verdi, Wagner, and Puccini. Not offered 1994–95. Instructor: Neenan.

Mu 136. Music of Our Time. 9 units (3-0-6). The diversity of music in the 20th century will be explored. Included will be music of composers from Stravinsky, Schoenberg, and Bartok to John Adams and Phillip Glass. Course will include music for film, electronically generated music, and a field trip to an electronic music studio. Not offered 1994–95. Instructor: Neenan.

PERFORMANCE AND ACTIVITIES

Courses under this heading cover the instructional content of a range of extra-curricular activities and work in the fine arts and elsewhere. These courses will appear on the student's transcript, and will be graded pass/fail only. The units count toward the total unit requirement for graduation, but they do not count toward the 108-unit requirement in humanities and social sciences.

PA 15 abc. Journalism. *3 units (1-0-2); first, second, third terms.* The elementary principles of newspaper writing and editing, with special attention to student publications at the Institute. Instructors: Staff.

PA 20 abc. Debate. *3 units (1-0-2); first, second, third terms.* Study and discussion of the annual intercollegiate debate topic. Instructors: Staff.

PA 30 abc. Choral Music. *3 units (0-3-0); first, second, third terms.* Instruction in choral ensembles, such as men's and women's glee clubs. Instructors: Staff.

PA 31 abc. Chamber Music. *3 units (0-3-0); first, second, third terms.* Instruction in performing chamber music. Instructors: Staff.

PA 32 abc. Orchestral Music. *3 units (0-3-0); first, second, third terms.* Instruction related to participation in a symphony orchestra. Instructors: Staff.

PA 33 abc. Instrumental Music. *3 units (0-3-0); first, second, third terms.* Instruction related to the performance of instrumental music either as solo instrument or in group performance. Currently offered in three sections: wind ensemble, jazz band, and guitar class. Instructors: Staff.

PA 40 abc. Theater Arts. *3 units (2-0-1); first, second, third terms.* Instruction related to the production of dramatic presentations, including plays, musicals, dramatic readings, etc. Instructors: Staff.

PA 50 abc. Health Advocates. *3 units (1-1-1); first, second, third terms.* A course designed to involve students with health care and education, develop familiarity with common college health problems, and provide peer health services on and off campus. First term: CPR and First Aid certification and basic anatomy and physiology. Second and third terms: lectures and discussions on current student and community health problems, symptoms, and treatment. Each student will be expected to devote one hour per week to a supervised clinical internship at the Health Center. Instructors: Staff.

PA 60 abc. Studio Arts. *3 units (0-3-0); first, second, third terms.* Instruction in "hands-on" art—currently sculpture and painting/drawing. Instructors: Staff.

PHILOSOPHY

These courses are open only to students who have fulfilled the freshman humanities requirement.

PI 30. Reading in Philosophy. *Units to be determined by the instructor. Elective in any term.* Reading in philosophy, done either in connection with the regular courses or independently of any course, but under the direction of members of the department. One or more short papers may be required. Graded pass/fail. *Not available for credit toward humanities–social science requirement.*

PI 85. Philosophy and Current Issues.* *9 units (2-0-7).* Selected current issues involving conflicts about moral right and wrong will be studied, and the various sources of those conflicts investigated. The issues studied will vary but will include some of the following: medical experimentation and the allocation of medical resources; the alleged “right to life,” and its bearing upon abortion, capital punishment, and euthanasia; political liberty and the prohibition of certain minority activities under criminal sanctions (e.g., the use and sale of designated drugs, morally offensive publications, prostitution); civil disobedience and conscientious objection; majority and minority rights. If the course is oversubscribed, preference will be given to students who have successfully completed Hum 10 ab. Instructor: Hilbert.

PI 102. Selected Topics in Philosophy. *9 units (3-0-6).* *Advanced credit to be determined on a course-by-course basis by instructor.* Instructors: Staff and visiting lecturers.

SES/PI 122. Philosophy of Science.* *9 units (3-0-6).* For course description, see Science, Ethics, and Society.

SES/PI 125. Philosophy and Biology.* *9 units (3-0-6).* For course description, see Science, Ethics, and Society.

SES/PI 127. Ethics in Research.* *4 units (2-0-2) or 9 units (2-0-7).* For course description, see Science, Ethics, and Society.

SES/PI 131. Philosophy of Mind and Psychology.* *9 units (3-0-6).* For course description, see Science, Ethics, and Society.

Ec/PI 147. Altruism and Fairness in Economics.* *9 units (3-0-6).* For course description, see Economics.

PI 150. History of Early Modern Philosophy.* *9 units (3-0-6); second term.* A study of important figures and ideas in the empiricist and rationalist traditions in the period from Descartes through Kant. Material covered will vary depending on the decision of the instructor, but will include readings from some of the following: Descartes, Spinoza, Leibniz, Kant, Hobbes, Locke, Berkeley, and Hume. Instructors: Cowie, Hilbert.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

PI 181. Democracy.* 9 units (3-0-6). Alternative concepts of democracy and alternative justifications of a democratic political system, particularly the role of participation and representation in democratic theory. Relevant empirical materials will be presented. Not offered 1994–95. Instructors: Staff.

PI 182. Ethics and International Relations.* 9 units (3-0-6). The course considers whether moral criteria can or should apply to the conduct of international affairs. The topics treated, which will vary with the instructor, include: war and morality; the special problems of nuclear war; disarmament; economic distribution; migration. Not offered 1994–95. Instructors: Staff.

PI 190. Political Philosophy and Public Policy.* 9 units (2-0-7). A critical examination of methods used in the systematic analysis of public policy alternatives, such as cost-benefit and risk-benefit analysis. Not offered 1994–95. Instructors: Staff.

PHYSICAL COMPUTATION AND COMPLEX SYSTEMS *(See Physics)*

PHYSICAL EDUCATION

PE 1. Student Designed Fitness. 3 units. Independent fitness program as arranged with instructor, to include aerobic activities of the student's choice (such as swimming, cycling, running) three times a week. Emphasis is on implementation of a progressive plan of vigorous aerobic activity with a 10% improvement from pre-test to final. Proposals must be submitted in writing during first week of each term. Instructor: O'Brien.

PE 2. Scuba, Beginning. 3 units. Open Water Scuba Diving will involve classroom instruction on diving physics, physiology, water safety, equipment, and oceanography. There will be confined water training (pool), and open water training consisting of two dives from a local beach and two dives from a boat. A third trip will be to conduct snorkeling. Instructor: Dodd.

PE 5. Jazz Dance, Beginning and Intermediate. 3 units. All basic steps in Jazz Dance will be covered with an emphasis placed on proper warm-up techniques, increasing flexibility through stretching, working with rhythm, and memorizing simple routines. Intermediate class will aim to increase knowledge and execution of Jazz Dance movement with emphasis on turns, body isolations, proper alignment, flexibility, endurance, and memorization of more complex routines. Instructor: Eckler.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

PE 10. Aerobic Dance. *3 units.* Each class includes a thorough warm-up, a cardiovascular workout phase that also includes a variety of conditioning exercises designed to tone and strengthen various muscle groups, and a relaxation cool-down and stretch, all done to music. Instructor: Webster.

PE 14. Basketball Skills, Beginning and Beginning/Intermediate. *3 units.* Features fundamental instruction on shooting, dribbling, passing, defensive positioning, and running an offense. Class includes competitive play and free-throw shooting. Instructor: Victor.

PE 20. Fencing, Beginning and Intermediate/Advanced. *3 units.* Introduction to Fencing to include basic techniques of attack, defense, and counter-offense. Lecture topics include fencing history, strategy, scouting and analysis of opponents, and gamesmanship. Intermediate/Advanced covers foil theory and techniques, group drillwork, and video analysis. Instructor: Randolph.

PE 22. Soccer, Beginning. *3 units.* Introductory class emphasizing fundamentals of kicking, passing, dribbling, trapping, heading, throw-in, tackling, and goal-keeping. The areas of endurance, speed, and strength development will be addressed, along with basic offense and defense with scrimmaging. Instructor: Howells.

PE 23. Track and Field, Beginning. *3 units.* Features instruction on ten different track events, allowing the student an opportunity to attempt a variety of skills to include: shot put, discus, javelin, sprints, hurdles, long jump, high jump, middle and long distance running, and the relays. Class emphasis placed on learning new skills safely with time devoted to warm-up and stretching, as well as weight training for specific events. Instructor: O'Brien.

PE 24. Yoga, Beginning. *3 units.* Hatha Yoga is a system of physical postures designed to stretch and strengthen the body, calm the nervous system, and center the mind. It is a non-competitive activity designed to reduce stress for improved health of body and mind while increasing flexibility, strength, and stamina, and reducing the chance of athletic injury. Instructor: Tartaglione.

PE 25. Softball Over the Line. *3 units.* Three-person-per-team softball on a specially designed field. Instruction designed to improve hitting, fielding, and throwing skills, utilizing a special set of rules to simplify the game. Instructor: D'Auria.

PE 27. Ultimate Frisbee. *3 units.* Instruction will center on developing student's knowledge of techniques, rules, strategy, etiquette, and safety regulations of the game. Students will develop the ability to perform all skills necessary to play the game confidently on a recreational basis. Instructor: Birnbaum.

PE 29. Wallyball, Beginning/Intermediate. *3 units.* New and exciting brand of volleyball that is played inside a racquetball court and utilizes the four walls plus the ceiling with the goal of keeping the ball off the floor. All volleyball skills will be taught, including bumping, setting, spiking, and footwork. Instructor: O'Brien.

PE 30. Golf; Beginning, Intermediate, and Advanced. *3 units.* Beginning class covers fundamentals of the game, including rules, terminology, etiquette, basic grip, set-up, swing, and club selection for each shot. The following shots will be covered: full swing (irons and woods), chip, pitch, sand, and putting. Interme-

diate class will focus on swing development of specialty shots and on course play management. Advanced instruction covers identifying club yardages and actual games. Instructor: Jackson.

PE 33. Jogging. 3 units. Basic instruction on proper running form, warm-up, stretching, and cool-down procedures. Information presented on nutrition, weight control, and principles of aerobic conditioning, shoes, clothes, and training schedules. Instructor: O'Brien.

PE 35. Diving, Beginning/Intermediate. 3 units. Teaches the fundamentals of springboard diving to include basic approach, and five standard dives. Intermediate class includes instruction in the back somersault, forward somersault, forward somersault full twist, and reverse somersault. Instructor: Dodd.

PE 36. Swimming, Beginning/Intermediate and Advanced. 3 units. Instruction in all basic swimming strokes, including freestyle, elementary backstroke, racing backstroke, breaststroke, sidestroke, and butterfly. Advanced class focuses on proper technique of the four competitive strokes using video and drills along with instruction on training methods and proper workout patterns. Instructor: Dodd.

PE 38. Water Polo. 3 units. Basic recreational water polo with instruction of individual skills and team strategies. A swimming background is encouraged. Instructor: Dodd.

PE 39. Triathlon. 3 units. Introduction to triathlons with instruction on physiology and training techniques for swimming, cycling, and running. Weight training and stretching routines are covered, along with tips on racing, diet, and development of a year-round training plan. Instructor: O'Brien.

PE 40. Impact, Beginning. 3 units. Designed to provide a knock-out defense against a single unarmed assailant with emphasis on breaking the cycle of violence against women in our society. Simple verbal and physical techniques are taught which allow the individual to safely avert an attack or render her assailant unconscious. Full force is used in a mock assault situation against a fully padded mock assailant. Instructor: Staff.

PE 44. Karate (Shotokan), Beginning and Intermediate/Advanced. 3 units. Fundamental self-defense techniques including form practice and realistic sparring. Emphasis on improving muscle tone, stamina, balance, and coordination, with additional requirement of memorizing one or more simple kata (forms). Instructor: Bankes.

PE 46. Karate (Tang Soo Do), Beginning and Intermediate/Advanced. 3 units. Korean martial art focusing on self-defense and enhancement of physical and mental health. Practical and traditional techniques such as kicks, blocks, hyungs (forms) are taught. Intermediate/Advanced level incorporates technique combinations, sparring skills, jumping and spinning kicks, and history and philosophy. Instructor: Pasqualino.

PE 48. T'ai-Chi Ch'uan, Beginning and Intermediate/Advanced. 3 units. Chinese movement art emphasizing relaxation and calm awareness through slow, flowing, meditative movements using only the minimum of strength needed to accomplish the action. Instructor: Lee.

PE 50. Badminton, Beginning/Intermediate. *3 units.* Basic skills will be taught, including grips, services, overhead and underhand strokes, and footwork. Rules, terminology, and etiquette are covered. Intermediate skills such as drives, service returns, forehand and backhand smash returns, attacking clears, and sliced drop shots are taught. Singles and doubles play along with drill work throughout the term. Instructor: O'Brien.

PE 54. Racquetball, Beginning and Intermediate/Advanced. *3 units.* Fundamentals of the game will be emphasized, including rules, scoring, strategy, and winning shots. All types of serves will be covered, as well as a variety of shots to include kill, pinch-off, passing, ceiling, and off-the-backwall. Singles and doubles games will be played. Intermediate/Advanced course will review all fundamentals with a refinement of winning shots and serves and daily games. Instructors: D'Auria, Monteroso, Nelson, O'Brien, Torres.

PE 56. Squash; Beginning, Intermediate, Advanced. *3 units.* Learn by playing as the basic rules and strokes are taught. Fundamentals to include proper grip, stroke, stance, and positioning, along with serve and return of serve. Intermediate and Advanced classes will concentrate on skill development with the inclusion of forehand and backhand drives, lobs, volleys, and drops, with an emphasis on court movement, shot selection, and tactics. Instructors: Bresanello, Jackson, O'Brien, Schmidt.

PE 60. Tennis; Beginning, Beginning/Intermediate, Intermediate, and Advanced. *3 units.* Stroke fundamentals, singles and doubles play, plus rules, terminology, and etiquette are covered in all classes. Beginning class emphasizes groundstrokes, volleys, serve, and grips. Beginning/Intermediate class is for those players caught between levels and will concentrate on strategy, drills, and match play. Intermediate level focuses on improving technique, footwork, and court positioning, with instruction on approach shots, volleys, overheads, and lobs. Advanced course fine tunes each individual's skills while targeting weaknesses. Instructors: D'Auria, Jackson, Nelson.

PE 65. Flag Football. *3 units.* Students will participate in a variety of learning experiences designed to develop their knowledge and skills in the game of flag football, to enhance their ability to play the game on a recreational basis. Instruction includes techniques, rules, strategy, and safety regulations of the game. Instructor: Jack.

PE 70. Weight Training, Beginning/Intermediate. *3 units.* Active participation in a strength and conditioning program designed for individual skill level and desired effect. Course will enlighten students to various methods, terminology, and techniques in the areas of isokinetic strength and cardiovascular fitness training. Instructors: D'Auria, Jack, Victor.

PE 77. Volleyball; Beginning, Intermediate, and Advanced. *3 units.* Fundamental instruction on drills, strategies, and rules, with game-playing opportunity. Basics of serve, pass, set, spike, defense, and court position will be taught. Intermediate level focuses on skill development to a more competitive standard and features multiple offenses and understanding officiating. Advanced class emphasizes specialization of all skills, court position, and multiple offenses and defenses. Instructor: Monteroso.

PE 80. Sailing, Beginning. 3 units. Instruction will provide basic concepts of sailing theory and practice, in preparation for the safe and proper conduct of sailing craft. Opportunities are provided to display the physical competence, coordination, agility, and stamina necessary for management of small floating craft. Instructor: Thornburg.

PE 82. Rock Climbing, Beginning and Intermediate. 3 units. Basic skills will be covered to utilize each student's strength and endurance while learning to climb safely. Use of climbing rope and other equipment for belaying, rappelling, and emergency ascent will be taught. Skills will be demonstrated and practiced on climbing wall and then later at off-campus climbing site. Intermediate level will include ascents on prussiks or jumars, with more off-campus climbing. Instructor: Penny.

PE 84. Table Tennis, Beginning and Intermediate. 3 units. Introductory course to provide general knowledge of equipment, rules, and basic strokes, including topspin drive, backspin chop, and simple block in both forehand and backhand. Multi-ball exercise with robot machines and video utilized. Intermediate class covers regulations for international competition and fundamentals of winning table tennis, including footwork drills, smash, serve, and attack. Instructor: Wang.

Intercollegiate and Club Teams

PE 6. Club Hockey Team (Men). 3 units. Coach: Staff.

PE 8. Club Water Polo Team (Women). 3 units. Coach: Dodd.

PE 85. Intercollegiate Track and Field Team (Men). 3 units. Coach: O'Brien.

PE 86. Intercollegiate Track and Field Team (Women). 3 units. Coach: O'Brien.

PE 87. Intercollegiate Swimming Team (Men). 3 units. Coach: Dodd.

PE 88. Intercollegiate Swimming Team (Women). 3 units. Coach: Dodd.

PE 89. Intercollegiate Fencing Team (Men and Women). 3 units. Coach: Randolph.

PE 90. Intercollegiate Water Polo Team (Men). 3 units. Coach: Dodd.

PE 91. Intercollegiate Basketball Team (Men). 3 units. Coach: Victor.

PE 92. Intercollegiate Soccer Team (Men). 3 units. Coach: Howells.

PE 93. Intercollegiate Baseball Team (Men). 3 units. Coach: D'Auria.

PE 94. Intercollegiate Golf Team (Men). 3 units. Coach: Cassriel.

PE 95. Intercollegiate Tennis Team (Men). 3 units. Coach: Jackson.

PE 96. Intercollegiate Tennis Team (Women). 3 units. Coach: Nelson.

PE 97. Intercollegiate Cross Country Team (Men). 3 units. Coach: O'Brien.

PE 98. Intercollegiate Cross Country Team (Women). 3 units. Coach: O'Brien.

PE 99. Intercollegiate Volleyball Team (Women). 3 units. Coach: Monteroso.

PHYSICS

Ph 1 abc. Classical Mechanics and Electromagnetism. 9 units (4-0-5); first, second, third terms. The first year of a two-year course in introductory classical and modern physics. Topics: Newtonian mechanics in Ph 1 a; electricity and magnetism, and special relativity, in Ph 1 b, c. Emphasis on physical insight and problem solving. Ph 1 b, c is divided into two tracks: the Practical Track emphasizing practical electricity with take-home lab kits, and the Analytic Track which has no lab component but teaches and uses methods of multivariable calculus. Students will be given information helping them to choose a track at the end of fall quarter. Graded pass/fail. Lecturers: Goodstein, McKeown, Pine, Tombrello. Section leaders: Carlstrom, Cummings, Hogg, Newman, Soifer, Thorne, Yeh.

Ph 2 abc. Waves, Quantum Mechanics, and Statistical Physics.* 9 units (4-0-5); first, second, third terms. Prerequisites: Ph 1 abc, Ma 1 abc, or their equivalents. The second year of a two-year introductory course in classical and modern physics. Topics to be covered include classical waves, introductory quantum mechanics, thermodynamics, and statistical mechanics. Lecturers: Politzer, Raab.

Ph 3. Physics Laboratory. 6 units; first, second, third terms. One three-hour laboratory session per week, an individual conference with the instructor, prelab preparation, and analysis of experimental results outside the laboratory period. This introductory course emphasizes quantitative measurements, the treatment of measurement errors, and graphical analysis. A variety of experimental techniques will be employed: studies of d.c. meters, the oscilloscope, the Maxwell top, electrical and mechanical resonant systems, and radioactivity. The content of each term is identical and only one term may be taken for credit. Graded pass/fail. Instructors: Drever, Skelton.

Ph 4. Physics Laboratory. 6 units; third term only. Prerequisite: Ph 3 or equivalent. One laboratory period per week, plus other activities outside the lab. Choice of a variety of experiments encompassing both classical and atomic physics. Examples: the transient response of a resonant circuit, the Millikan oil drop experiment, electron diffraction, viscosity, diffraction of electromagnetic waves, and sound waves in a cavity. Graded pass/fail. Instructors: Drever, Skelton.

Ph 5. Physics Laboratory. 9 units; first term. Prerequisites: Ph 1 abc, Ph 3, or their equivalents. A laboratory course dealing with "operational" electronics with emphasis on analog electronics. The following topics are studied: RC circuits, electrical oscillations, operational amplifiers, diodes, and transistors. Combining diodes, transistors, and operational amplifiers; computer data acquisitions. The course culminates in a two-week project of the student's choosing. Instructors: Drever, Gomez, Skelton.

*Students may transfer from Ph 12 to Ph 2 any time during the quarter, before the last day for dropping courses. The final grade will be based on the combined record in the two courses.

Ph 6. Physics Laboratory. 9 units; second term. Prerequisites: Ph 1 abc, Ph 2 b or Ph 12 b (or taken concurrently), and Ph 3 or equivalent. Experiments in electromagnetic phenomena such as electromagnetic induction, properties of magnetic materials, and high-frequency circuits. Mobility of ions in gases; precise measurement of the value of e/m of the electron. Instructors: Drever, Skelton.

Ph 7. Physics Laboratory. 9 units; third term. Prerequisite: Ph 5 or Ph 6 or equivalent. Experiments in atomic and nuclear physics, including studies of the Balmer series of hydrogen and deuterium, the decay of radioactive nuclei, absorption of X rays and gamma rays, ratios of abundances of isotopes, and the Stern-Gerlach experiment. Instructors: Drever, Skelton.

Ph 10 abc. Frontiers in Physics. 3 units (2-0-1); first, second, third terms. Open for credit to freshmen and sophomores. Weekly seminar by a member of the physics department or a visitor, to discuss his or her research at an introductory level; the other class meetings will be used to explore background material related to seminar topics and to answer questions that arise. The course will also help students find faculty sponsors for individual research projects. Graded pass/fail. Instructor: Tombrello.

Ph 11 abc. Research Tutorial. 6 units (2-0-4); second and third terms of freshman year and first term of sophomore year. A small number of students from Ph 10 a will be offered the opportunity to enroll in this tutorial, the purpose of which is to demonstrate how research ideas arise, and are evaluated and tested, and how those ideas that survive are developed. This is accomplished by doing individual, original projects. There will be weekly group meetings and individual tutorial meetings with the instructor. Support for summer research at Caltech between the freshman and sophomore years will be automatic for those students making satisfactory progress. Graded pass/fail. Instructor: Tombrello.

Ph 12 abc. Quantum and Statistical Mechanics.* 9 units (4-0-5); first, second, third terms. Prerequisites: Ph 1 abc, Ma 1 abc, or equivalents. A one-year course primarily for students intending further work in the physics option. Topics include: classical waves; wave mechanics, interpretation of the quantum wave-function, one-dimensional bound states, scattering, and tunneling; thermodynamics, introductory kinetic theory, and quantum statistics. May be taken to fulfill the Institute Ph 2 requirement. Instructors: Kimble, Weinstein.

Ph 20, 21, 22. Freshman/Sophomore Computational Physics Laboratory. A series of courses on the application of computational techniques to simulate or solve simple physical systems, with the intent of aiding both physics understanding and programming ability. Instructors: Neugebauer, Prince.

20. 6 units (0-6-0); first, second terms. Prerequisite: CS 1 or equivalent experience with computers. Introduction to computing and its application to problems in classical mechanics. Use of spreadsheets in physical problems, numerical integration, and numerical simulation of differential equations of motion. Simulation of orbital mechanics.

*Students may transfer from Ph 12 to Ph 2 any time during the quarter, before the last day for dropping courses. The final grade will be based on the combined record in the two courses.

21. 6 units (0-6-0); second, third terms. Prerequisite: Ph 20 or equivalent experience with computers and numerical techniques. Introduction to the use of symbolic manipulation programs and expert systems for mathematics. Use of root-finding and Monte Carlo numerical techniques. Multi-variable minimization techniques, including neural networks. Discrete-element electromagnetism.

22. 6 units (0-6-0); third term. Prerequisite: Ph 20 or Ph 21 or equivalent experience with computers. Laboratory applications of computers. Interfacing computers to external sensors and control elements. One supervised project involving development of a computer hardware interface.

Ph 76 a. Atomic/Laser Physics Laboratory. 9 units; first, second, third terms; limited enrollment. Prerequisites: Ph 5 or Ph 6 or APh 24, and Ph 7. A one-term course in which students undertake a series of laboratory experiments in atomic and laser physics. Students will assemble a tunable frequency-stabilized 670-nm diode laser and perform several spectroscopic experiments with it. Topics include saturated absorption spectroscopy, optical pumping, nonlinear spectroscopy, laser cooling and trapping of atoms, and others. Instructor: Libbrecht.

Ph 77 ab. Advanced Physics Laboratory. 9 units; first, second, third terms. Prerequisites: Ph 5 or Ph 6, and Ph 7. A two-term laboratory course open to junior and senior physics majors to familiarize students with equipment and procedures used in the research laboratory. Experiments illustrate fundamental physical phenomena in atomic, low-temperature, nuclear, and particle physics, such as NMR, critical fields in superconductors, positron annihilation, and muon lifetime. Instructors: Gomez, Kavanagh.

Ph 78 abc. Senior Thesis Experimental. 9 units; first, second, third terms. Prerequisite: to register for this course the student must obtain approval of the chair of the Physics Undergraduate Committee (Gomez). Open only to senior physics majors. This research must be supervised by a faculty member, your thesis adviser. Laboratory work is required for this course. Two fifteen-minute presentations to the Physics Undergraduate Committee are required, one at the end of the first term and the second at the midterm week of the third term. The written thesis must be completed and distributed to the committee one week before the second presentation. Not offered on pass/fail basis. See note below.

Ph 79 abc. Senior Thesis Theoretical. 9 units; first, second, third terms. Prerequisite: to register for this course the student must obtain approval of the chair of the Physics Undergraduate Committee (Gomez). Open only to senior physics majors. This research must be supervised by a faculty member, your thesis adviser. Two fifteen-minute presentations to the Physics Undergraduate Committee are required, one at the end of the first term and the second at the midterm week of the third term. The written thesis must be completed and distributed to the committee one week before the second presentation. Not offered on pass/fail basis. See note below.

Note: Students wishing assistance in finding an adviser and/or a topic for a senior thesis are invited to consult with the chair of the Physics Undergraduate Committee, or any other member of this committee. A grade will not be assigned in Ph 78 or Ph 79 until the end of the third term. P grades will be given the first two terms, and then changed at the end of the course to the appropriate letter grade.

Ph 98 abc. Quantum Physics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ph 12 abc or, with permission of the instructor, Ph 2 abc, Ma 2 abc, or their equivalents.

A one-year course in quantum mechanics and its applications, for students who have completed Ph 12. Scattering theory, approximation methods, symmetries, spin- $\frac{1}{2}$ systems, and selected topics in atomic, solid-state, nuclear, and particle physics. Instructor: Zmuidzinas.

Ph 103 abc. Topics in Contemporary Physics. 9 units (3-0-6); first, second, third terms. Prerequisite: permission of the instructor. A series of introductory one-term, independent courses. Students may register for any particular term or terms. In 1994–95, offered all three terms.

Ph 103 a. First term. Physics in neurobiology. A reading and discussion course on topics ranging from the function of single neurons to methods for studying multineural activity in the intact brain. Possible topics are the nerve cell, ion channels, synapses, electrical recording, brain structure, vision, positron tomography, magnetic resonance imaging, neural modeling. Instructor: Pine.

Ph 103 b. Second term. Particle physics without accelerators, emphasizing neutrino physics (e.g., problem of neutrino mass, neutrinos from the sun, neutrinos from cosmic rays) and study of fundamental symmetries. Applications in astrophysics and cosmology will be discussed. Instructor: Vogel.

Ph 103 c. Third term. Order-of-magnitude physics. Emphasis will be on using basic physics to understand complicated systems. Examples will be selected from properties of materials, geophysics, weather, planetary science, astrophysics, cosmology, biomechanics, etc. Instructors: Goldreich, Phinney.

Ph 105. Analog Electronics for Physicists. 9 units; first term. Prerequisites: Ph 1 abc, Ph 3, or their equivalents. A laboratory course dealing with “operational” electronics with emphasis on analog electronics. The following topics are studied: RC circuits, electrical oscillations, operational amplifiers, diodes, and transistors. Combining diodes, transistors, and operational amplifiers; computer data acquisition. The course culminates in a two-week project of the student’s choosing. Instructors: Drever, Gomez, Skelton.

Ph 106 abc. Topics in Classical Physics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ph 2 abc or Ph 12 abc, Ma 2 abc. An intermediate course in the application of basic principles of classical physics to a wide variety of subjects. Roughly half of the year will be devoted to mechanics, and half to electromagnetism. Topics include Lagrangian and Hamiltonian formulations of mechanics, small oscillations and normal modes, boundary-value problems, multipole expansions, and various applications of electromagnetic theory. Instructors: Blandford, Filippone, Cross, Phillips.

Ph 118 ab. Electronic Circuits and Their Application to Physical Research. 9 units (3-0-6); second, third terms. Prerequisite: Ph 105 or equivalent. A lecture course on fundamentals of electronics with emphasis on proven techniques of instrumentation for scientific research. Both the physical principles and properties of electronic components and circuits, with emphasis on analog systems. Common electronic instruments, computer interfaces, and typical control logic in scientific research used as examples. Typically given in alternate years. Not offered 1994–95.

Ph 125 abc. Quantum Mechanics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 2 abc. Recommended: A Ma 95 abc or Ma 108 abc. Not available to students who have completed Ph 98 abc. A fundamental course in quantum mechanics aimed at understanding the mathematical structure of the theory and its application to physical phenomena at the atomic, nuclear, and elementary particle levels. Various formulations of quantum mechanics, properties of operators, one-dimensional and central potentials, angular momentum and spin, scattering theory, perturbation theory, and identical particles. Instructor: Zmuidzinis.

Ph 127 abc. Statistical Physics. 9 units (3-0-6); first, second, third terms. Prerequisites: Ph 98 abc or Ph 125 abc, Ph 106 abc, and knowledge of basic thermodynamics (Ph 12 c or APh 17). A self-contained course beginning with a thorough introduction to the formalism of modern statistical mechanics, then proceeding through a series of progressively more advanced topics including ideal and weakly nonideal classical and quantum fluids; phonons and crystal lattice vibrations; black body radiation; the Mayer cluster expansion and theories of dense fluids; Brownian motion, time-dependent correlations, and linear response; and the modern theory of phase transitions, including an introduction to the renormalization group. In 1994–95, offered first and second terms. Instructor: Weichman.

Ph 129 abc. Mathematical Methods of Physics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 106 abc or the equivalent. Recommended: A Ma 95 abc or Ma 108 abc. Practical methods of summing series, integrating, and solving differential equations, including numerical methods. The special functions (Bessel, Elliptic, Gamma, etc.) arising in physics, as well as partial differential equations, orthogonal functions, integral equations and transforms, tensors, linear spaces and operators, group theory, and probability and statistics. Instructors: Schwarz, Porter, Gottschalk.

Ph 135 abc. Applications of Quantum Mechanics.* 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 125 abc or equivalent. Applications of quantum mechanics to topics in contemporary physics. Typically one term each of three distinct areas. In 1994–95, nuclear physics, quantum optics, and elementary particle physics. Terms may be taken separately. Instructors: McKeown, Kimble, Porter.

Ph 136 abc. Applications of Classical Physics.* 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 106 abc or equivalent. Applications of classical physics to topics of interest in contemporary “macroscopic” physics. Continuum physics and classical field theory; elasticity and hydrodynamics; plasma physics; magneto-hydrodynamics; thermodynamics and statistical mechanics; gravitation theory, including general relativity and cosmology; modern optics. Content will vary from year to year, depending on the instructor. An attempt will be made to organize the material so that the terms may be taken independently. Instructors: Koonin, Politzer, Blandford.

Ay/Ph 145. Signal Processing and Data Analysis. 9 units (3-0-6). For course description, see Astronomy.

*Physics graduate students cannot take Ph 135 or Ph 136 on a pass/fail basis.

Ph 151 ab. Algorithms and Applications of Physical Computation and Complex Systems. 9 units (3-3-3); first, second terms. Computational techniques and the relation between the physical structure of problems and computers, illustrated by applications in a variety of scientific fields. Cellular automata, parallel algorithms, and multiscale methods will be covered. The course will use parallel computers, including hypercube computers and the Connection Machine. Not offered 1994–95.

Ph 161 ab. Introduction to Complex Systems. 9 units (3-0-6); first, second terms. Prerequisites: Ph 136 or AMa 95 or Ph 129 provide a useful but not essential background. An introduction to nonequilibrium physics, using systems from physics, fluid dynamics, chemistry, and biology as examples. The emphasis of the first term will be the formation of spatial structures (sometimes called “dissipative structures” or “pattern formation”). The second term will study dissipative chaos. Some familiarity with solutions to partial differential equations will be assumed, and computer assignments should be expected in the second term. Offered alternate years; not offered 1994–95.

Ph 171. Reading and Independent Study. Units in accordance with work accomplished. Occasionally, advanced work involving reading, special problems, or independent study is carried out under the supervision of an instructor. Approval of the instructor and of the student’s departmental adviser or registration representative must be obtained before registering. Graded pass/fail.

Ph 172. Experimental Research in Physics. Units in accordance with work accomplished. Approval of the student’s research supervisor and department adviser or registration representative must be obtained before registering. Graded pass/fail.

Ph 173. Research in Theoretical Physics and PCCS. Units in accordance with work accomplished. Approval of the student’s research supervisor and departmental adviser or registration representative must be obtained before registering. Graded pass/fail.

Ph 176 ab. Advanced Computational Physics Laboratory. 6 units (0-5-1); second, third terms. Prerequisites: Ph 98, Ph 106, AMa 95 (all may be taken concurrently). A two-term course in the use of computers to model classical and quantum mechanical systems, with emphasis on numerical techniques and on building intuition for the behavior of these simulations. Students are guided through a series of projects carried out in modern computer environments, e.g., PCs and concurrent processors. Not offered 1994–95.

CNS/Bi/Ph 185. Collective Computation. 9 units (3-1-5). For course description, see Computation and Neural Systems.

Ph 203 abc. Nuclear Physics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 98 or Ph 125 or equivalent. Fundamental structure and properties of nuclei from the nucleon to nuclear matter. Topics will include electroweak and hadronic interactions in nuclear systems. Not offered 1994–95.

Ph 205 abc. Relativistic Quantum Mechanics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 125 or Ph 98. Topics: the Dirac equation, second quantization, quantum electrodynamics, scattering theory, Feynman diagrams, non-Abelian gauge theories, Higgs symmetry-breaking, the Weinberg-Salam model, and renormalization. Instructor: Frautschi.

Ph 209 abc. Classical Electromagnetism. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ph 106. Electromagnetic fields in vacuum and in matter; boundary-value problems and Green's functions; retarded potentials; wave propagation; wave-guides and cavities; radiation, dispersion, and absorption; and special relativity. Instructor: Zachariasen.

Ph 220 abc. Condensed Matter Physics. 9 units (3-0-6); first, second, third terms. *Prerequisites:* Ph 98 or Ph 125 or equivalent; introductory courses such as APh 105 or APh 114 are recommended but not required. Fundamental concepts of condensed matter physics emphasizing the application of formal methods such as quantum mechanics and group theory to diverse experimental phenomena in both the solid and liquid state. Topics to be covered will include crystal symmetry, electron band structure, lattice vibrations, transport and optical properties, and new phases such as ferromagnetism and anti-ferromagnetism, superconductivity and superfluidity, and ordered phases of liquid crystals. The third term may consist of a deeper discussion of particular topics of current interest. Not offered 1994–95.

Ph 222 abc. Many-Body Theory. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ph 125 or Ph 98. The concepts and formal tools needed to study many-particle systems. Applications to specific physical systems of interest in condensed matter and nuclear physics: electron gas, superconductors, liquid helium, nuclear matter, and finite nuclei. Not offered 1994–95.

Ph/APh 223 abc. Topics in Condensed Matter Physics. 9 units (3-0-6); first, second, third terms. *Prerequisites:* Ph 98 or Ph 125 or equivalent, APh 105, or permission of instructor. Content includes advanced theoretical and experimental topics at the frontier of research in condensed matter physics, and will vary from year to year. Not offered 1994–95.

Ph 224 abc. Space Physics. 9 units (3-0-6); first, second, third terms. *Prerequisites:* Ph 98, Ph 106, or equivalent. Instrumental and observational aspects of X-ray, cosmic-ray, and gamma-ray astrophysics, with emphasis on topics of current interest. Analysis of astronomical and technical aspects of current and future space physics and astronomy missions. Not offered 1994–95.

Ph 225 ab. Quantum Optics. 9 units (3-0-6); in 1993–94, offered third term only. *Prerequisite:* Ph 98 or Ph 125 or equivalent; the quantum optics term of Ph 135 or permission of the instructor. An introduction to experimental and theoretical quantum optics with emphasis on modern topics related to quantum measurement and to dissipative quantum dynamics. The course will include discussions of the classical and quantum theories of coherence, as well as of the interaction of the radiation field with simple atomic systems. Not offered 1994–95.

Ph 228 ab. Topics in Mathematical Physics. 9 units (3-0-6). *Prerequisite:* instructor's permission. Content changes from year to year. Not offered 1994–95.

Ph 229 abc. Advanced Mathematical Methods of Physics. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ph 129 abc or equivalent. Content changes from year to year. Not offered 1994–95.

Ph 230 abc. Elementary Particle Theory. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ph 205 abc or equivalent. Advanced methods in quantum field theory, with emphasis on quantum chromodynamics, and the quark-gluon theory of strong interactions, including renormalization, confinement, chiral symmetry breaking, anomalies, perturbation theory for high energy, and lattice calculations. The spring term will be devoted to the study of supersymmetry, including the minimal supersymmetric extension of the standard model, supersymmetric grand unification, and an introduction to supergravity. Instructors: Preskill, Schwarz.

Ph 231 abc. High-Energy Physics. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ph 98 or Ph 125 or equivalent. An introduction to elementary particle physics, stressing experimental phenomenology, theoretical interpretations of this phenomenology, and experimental techniques. Classification of elementary particles using invariance principles, evidence for fundamental constituents, and examination of the experimental basis for currently interesting ideas, such as quantum chromodynamics, the "standard model" of weak and electromagnetic interactions, and supersymmetric and unified theories. Offered alternate years; not offered 1994–95.

Ph 234 abc. Topics in Theoretical Physics. 9 units (3-0-6); first, second, third terms.

Ph 234 ab. First, second terms. *Prerequisite:* Ph 205 or equivalent. The course covers the standard model for strong, weak, and electromagnetic interactions based on the gauge group $SU(3) \times SU(2) \times U(1)$. Techniques such as the renormalization group and chiral perturbation theory will be used to make comparisons with experiments. Problems and extensions such as grand unification, low-energy supersymmetry, and axions will be discussed. Instructor: Wise.

Ph 234 c. Third term. *Prerequisite:* Tensor analysis and the fundamental concepts of general relativity, at least at the level of Ph 136 c. **Gravitational-Wave Theory.** Gravitational-wave propagation in flat spacetime and in curved; geometric optics; interaction of waves with matter, with electromagnetic fields, and with background curvature; nonlinear wave-wave coupling; methods of computing wave generation (post-Newtonian expansions, post-Minkowski expansions, perturbation methods, numerical relativity); astrophysical sources (parametric amplification of vacuum fluctuations in the big bang, phase transitions in the early universe, cosmic strings, binary stars, coalescing binaries, supernovae, pulsars); methods of wave detection (microwave background anisotropy, pulsar timing, spacecraft tracking, bars, laser interferometers, LIGO); data analysis issues for LIGO. Instructor: Thorne.

Ph 235 abc. Introduction to String Theory. 9 units (3-0-6); first, second, third terms. *Prerequisite:* Ph 230 and Ph 236 (both may be taken concurrently). Classical and quantum theory of relativistic strings, both bosonic and supersymmetric, with emphasis on the problem of unification. Calculation of tree and one-loop amplitudes. Other topics include compactification of extra dimensions, conformal field theory, and heterotic string phenomenology. Not offered 1994–95.

Ph 236 abc. Relativity. 9 units (3-0-6); first, second, third terms. Prerequisite: a mastery of special relativity at the level of Goldstein's Classical Mechanics, or of Leighton's Principles of Modern Physics. A systematic exposition of Einstein's general theory of relativity, with emphasis on applications to astrophysical and cosmological problems. Offered alternate years. Not offered 1994-95.

Ph 237 abc. Theoretical Nuclear Physics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 98 or equivalent. Microscopic models for finite nuclei. Topics: second quantization, Slater determinants, nuclear shell model, Hartree-Fock model, pairing, collective vibrations, and rotations. Not offered 1994-95.

Ph 241. Research Conference in Physics. No credit; first, second, third terms. Meets weekly for a report and discussion of work appearing in the literature, and in progress at Caltech and elsewhere. Advanced students in physics and members of the physics staff take part.

Ph 242 ab. Physics Seminar. 3 units (2-0-1); first, second terms. Topics in physics emphasizing current research at Caltech. One two-hour meeting per week. Speakers will be chosen from both faculty and students. Graded pass/fail. Instructor: Barish.

Ph 300. Thesis Research. Units in accordance with work accomplished. Ph 300 is elected in place of Ph 172 or Ph 173 when the student has progressed to the point where research leads directly toward the thesis for the degree of Doctor of Philosophy. Approval of the student's research supervisor and department adviser or registration representative must be obtained before registering. Graded pass/fail.

POLITICAL SCIENCE

PS 12. Introduction to Political Science. 9 units (3-0-6); third term. Introduction to the tools and concepts of analytical political science. Subject matter is primarily American political processes and institutions. Topics: spatial models of voting, redistributive voting, games, presidential campaign strategy, Congress, congressional-bureaucratic relations, and coverage of political issues by the mass media. Instructors: Staff.

PS 101. Selected Topics in Political Science. Units to be determined by arrangement with the instructor. Instructors: Staff.

PS 109. The Presidency. 9 units (3-0-6). Presidential elections, executive branch relations, the role of the president in shaping foreign and domestic policy, and the substantial institutional constraints on the exercise of presidential power. Instructors: Staff.

PS 116. War, Diplomacy, and International Politics. 9 units (3-0-6). Prerequisite: PS 12 or SS 13. Various theories of the sources and resolution of international conflicts. The second half will apply these theories to case studies of conflicts such as the First and Second World Wars, the Vietnam War, the Cold War, and the Arab-Israeli conflict. Instructors: Staff.

PS/SS 119. The Politics of the Industrial State. 9 units (3-0-6). *Prerequisite:* PS 12 or SS 13. The institutions of and the behavior within industrialized democracies of the western world. Instructors: Kiewiet, Kousser.

PS 120. American Electoral Behavior and Party Strategy. 9 units (3-0-6). A consideration of existing literature on the voting behavior of the citizen, and an examination of theoretical and empirical views of the strategies followed by the parties. Instructor: Alvarez.

PS 121. Congressional Policy Formation and Legislative Process. 9 units (3-0-6). Decision making in legislative bodies, with emphasis on the American Congress. An investigation into the impact of Congressional structure and practices on the policies adopted by the federal government. Instructor: Alvarez.

PS 122. Problems of Representation. 9 units (3-0-6). *Prerequisite:* PS 12. Considers the theoretical foundations of democratic governments and modern problems of representation, including alternative approaches and solutions to representing minorities. Instructors: Staff.

PS 123. Politics of the Initiative Process. 9 units (3-0-6). *Prerequisite:* PS 12 or equivalent. Theoretical and empirical treatment of issues relevant to the initiative process, including issue voting, campaigns, and information. Comparative analysis of California and other cases. Examination of current initiative campaigns. Instructors: Staff.

PS/SS 125. Peasant Politics. 9 units (3-0-6); second term. *Prerequisite:* PS 12 or SS 13. The political role of the peasantry, with attention to rural political organization and the effect of market relationships. Not offered 1994–95. Instructor: Hoffman.

PS 127. Interest Groups in American Politics. 9 units (3-0-6). Survey of the literature on organized groups. Topics: who joins; internal politics of organizations; activities of interest groups in the larger political arena. An effort will be made to assess interest groups within the context of theories of democracy. Instructors: Staff.

PS 132. Formal Theories in Political Science. 9 units (3-0-6). *Prerequisite:* PS 12 or equivalent. Axiomatic structure and behavioral interpretations of game theoretic and social choice models and models of political processes based on them. Instructors: Staff.

PS/Ec 134. The Political Economy of Urban Areas. 9 units (3-0-6). *Prerequisite:* PS 12 or equivalent. Development of a theory of urban government, using analytic concepts from microeconomics and political science. Instructor: Kiewiet.

PS/SS 139. Comparative Politics. 9 units (3-0-6); first term. *Prerequisite:* PS 12 or SS 13. The politics of non-American political systems. Areas of study: the politics of nondemocratic states, including the Communist nations; the politics of developing societies; the politics of the Western European democracies. Emphasis on the effect of distinctive institutions on the performance of government and the content of public policy. Instructor: Ordeshook.

H/PS 148 ab. The Supreme Court in U.S. History.* 9 units (3-0-6). For course description, see History.

Ec/PS 160 abc. Laboratory Experiments in the Social Sciences. 9 units (3-3-3). For course description, see Economics.

PS/Ec 172. Noncooperative Games in Social Science. 9 units (3-0-6); second term. *Prerequisites:* PS 12 or equivalent. Students must know at least one computer programming language. Axiomatic structure and behavioral interpretations of game theory models in social science. Axiomatic utility theory and general noncooperative games. Instructor: McKelvey.

PS/Ec 173. Cooperation and Social Behavior. 9 units (3-0-6); third term. *Prerequisite:* PS/Ec 172 or consent of instructor. Game theoretic and evolutionary approaches to modeling various types of cooperative, altruistic, and social behavior. Emphasis on economic and political applications. Instructor: McKelvey.

PSYCHOLOGY

Psy 12. Introduction to Abnormal Psychology. 9 units (3-0-6); first term. The development of mental and emotional disturbances. Basic theory will be reviewed in relation to selected case material and relevant research. Instructor: Breger.

Psy 25. Reading and Research in Psychology. Units to be determined by the instructor. Written report required. Graded pass/fail. *Not available for credit toward humanities—social science requirement.*

Psy 101. Selected Topics in Psychology. Units to be determined by arrangement with the instructor. Instructor: Breger.

Psy 112. Abnormal Psychology. 9 units (3-0-6); second term. *Prerequisite:* Psy 12 or consent of instructor. Continuation of material covered in Psy 12. The development of mental and emotional disturbances. Basic theory will be reviewed in relation to selected case material and relevant research. Instructor: Breger.

Psy 125. Reading and Research in Psychology. Same as Psy 25, but for graduate credit. *Not available for credit toward humanities—social science requirement.*

Lit/Psy 150 ab. Psychoanalysis and Literature.* 9 units (3-0-6). For course description, see Literature.

RUSSIAN (See Languages)

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

SCIENCE, ETHICS, AND SOCIETY

SES 101 ab. Introduction to Science, Ethics, and Society.* 9 units (3-0-6). A two-quarter introduction to issues past and present in science, ethics, and society. The first quarter emphasizes historical study, taking up subjects such as cosmology, theories and uses of force and matter, the understanding and control of life, molecular biology and biotechnology, big science; the second emphasizes philosophical study, exploring topics such as theories of scientific method, changes in scientific practices, method, and knowledge, how scientists come to replace one theory with another, the influence of social and political factors on the conduct of science, the moral and political problems raised by science and technology. Instructors: Barkan, Cowie.

SES 102 abc. Senior Seminar.* 9 units (2-0-7). The first two quarters consist of directed tutorial study and research to develop further the student's area of concentration in the option and to prepare the student for the writing of a research paper. Work in the tutorial will comprise intensive reading in the relevant literature and the beginnings of work on the paper. In the third quarter, students will present and discuss the results of their research and successive drafts of their papers in a seminar for discussion and criticism. Open to students in the SES option and the SES graduate minor, and to others by special permission. Instructors: Staff.

SES 103. Public Lecture Series. 1 unit (1-0-0). Lectures offered under the rubric Science, Ethics, and Public Policy, featuring speakers from outside and inside Caltech, that introduce students to a broad variety of SES-related topics past and present. The seminar is held roughly four times per quarter. Not available for credit toward humanities-social science requirement. Instructors: Guest lecturers.

SES/PI 122. Philosophy of Science.* 9 units (3-0-6); first term. An introduction to fundamental philosophical problems concerning the nature of science. Topics may include: the character of scientific explanation, criteria for the confirmation and falsification of scientific theories, the relationship between theory and observation, philosophical accounts of the concept of "law of nature," realism about unobservable entities, the objectivity of science, and issues having to do with the ways in which scientific knowledge changes over time. Instructors: Hajek, Woodward.

SES/PI 125. Philosophy and Biology.* 9 units (3-0-6). Philosophical and conceptual issues relating to the biological sciences. Topics covered may include: the logical structure of evolutionary theory, units of selection, optimization theory, the nature of species, reductionism, teleological and functional reasoning, and ethical issues arising from contemporary biological research. Instructor: Hilbert.

*Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.

SES/PI 127. Ethics in Research.* 4 units (2-0-2) or 9 units (2-0-7). Course will address a number of ethical and philosophical issues arising in scientific research. Among the topics discussed will be the following: fraud and misconduct in science; various theories of the scientific method; the realities of science as practiced in laboratories and the pressures facing scientists in the real world; ethical issues raised by collaborative research; reward and credit in science; responsibilities of mentors, referees, and editors in the conduct of research; the role of government regulation and supervision in dealing with scientific misconduct; the role of the university; and changes in ethical standards due to advancing technology. Undergraduates wishing to take the course for advanced humanities credit should register for 9 units (a term paper will be required). Graduate students may register for 4 units. Instructors: Woodward, D. Goodstein.

SES/PI 131. Philosophy of Mind and Psychology.* 9 units (3-0-6). Philosophical issues regarding the nature of mind and the impact of recent developments in cognitive science on these issues. Topics may include: the nature of belief and other psychological attitudes, perception, mental imagery, and behavior, all with a focus on relevant empirical work. Instructors: Hilbert, Cowie.

SES/H 156. The History of Modern Science.* 9 units (3-0-6); *second term*. Selected topics in the development of the physical and biological sciences since the 17th century. Instructors: Barkan, Kevles.

SES/H 157. Science in America, 1865–Present.* 9 units (3-0-6). A study of the social and political history of American science, emphasizing the relationship of the research community to universities, industry, and government. Instructor: Kevles.

SES/H 158. The Scientific Revolution.* 9 units (3-0-6). The birth of modern Western science from 1400 to 1700. The course examines the intellectual revolution brought about by the contributions of Copernicus, Galileo, Descartes, Kepler, Newton, and Harvey, and their relation to major political, social, and economic developments. Instructor: Barkan.

SES/H 159. Science and Society.* 9 units (3-0-6). A historical examination from a socioeconomic, political, and ethical perspective of selected issues in science and technology—for example, biotechnology, human reproduction, nuclear power, and the environment. Instructor: Kevles.

SES/H 160 ab. History of the Modern Physical Sciences.* 9 units (3-0-6). An exploration of the most significant scientific developments in the physical sciences from the late 19th century to the present. The first part of the course examines the emergence of new theories of radiation, the structure of matter, relativity, and quantum theory. The second part examines quantum mechanics, the developments in nuclear physics, atomic weapons, particle physics, and the organization of modern science. Scientific, historical, and philosophical texts will be used. (The two courses may be offered in alternate years.) Instructor: Barkan.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

SES/H 162. Social Studies of Science.* 9 units (3-0-6). A comparative, multidisciplinary course that examines the practice of science in a variety of locales, using methods from the history, sociology, and anthropology of scientific knowledge. Topics covered include the high-energy particle laboratory as compared with a biological one; Western as compared to non-Western scientific reasoning; the use of visualization techniques in science from their inception to virtual reality; gender in science; and other topics. Instructor: Barkan.

SES/H 163. Gender in the History of Science, Technology, and Medicine.* 9 units (3-0-6). An examination of how notions of masculinity and femininity have influenced the history of science, technology, and medicine since 1600. Topics will include study of the rise of women in scientific and medical institutions and of the ongoing debates about whether men and women have (or have had) different ways of understanding the natural world. Instructor: Winter.

SES/H 164. Sciences of Mind from the French Revolution to the Great War.* 9 units (3-0-6). The history of psychology, psychiatry, and related intellectual developments, beginning with the new definitions of madness and mental functioning in the era of the French Revolution and ending with the emergence of 20th-century psychiatry after World War I. Instructor: Winter.

SES/H 165. History of Technology in the United States.* 9 units (3-0-6). An examination of technological innovation from 19th-century craft and mechanical technologies through the science-based varieties of the 20th century. Attention will also be given to the rise of the industrial research laboratory, technology in American life and culture, and the relationship of technological development to the activities of government, particularly the military. Instructors: Staff.

SES 169. Selected Topics in Science, Ethics, and Society. 9 units (3-0-6). *Advanced credit to be determined on a course-by-course basis by instructor.* Instructors: Staff and visiting lecturers.

**Advanced courses with credit toward the 36-unit humanities requirement. Other advanced courses receive credit toward the 36-unit h&ss requirement. See page 113.*

SOCIAL SCIENCE

SS 13. The Application of Social Scientific Methods to Problems in History. 9 units (3-0-6); second term. The application of theory from economics, political science, and demography to historical subjects, with an emphasis on questions of institutional change. The historical topics covered will depend upon the instructor. Instructor: Davis.

SS 98. Reading in Social Science. *Units to be determined for the individual by the department. Elective, in any term.* Reading in social science and related subjects, done either in connection with the regular courses or independently of any course, but under the direction of members of the department. A brief written report will usually be required. Graded pass/fail. *Not available for credit toward humanities–social science requirement.*

SS 101. Selected Topics in Social Science. 9 units (3-0-6). Not available for social science credit unless specifically approved by social science faculty. Instructors: Staff, visiting lecturers.

Lin/SS 103. Psycholinguistics. 9 units (2-1-6). For course description, see Linguistics.

Lin/SS 104. Sociolinguistics. 9 units (2-1-6). For course description, see Linguistics.

Lin/SS 105. Computational Linguistics. 9 units (2-1-6). For course description, see Linguistics.

PS/SS 119. The Politics of the Industrial State. 9 units (3-0-6). For course description, see Political Science.

PS/SS 125. Peasant Politics. 9 units (3-0-6). For course description, see Political Science.

Ec/SS 128. Economic Growth in Historical Context. 9 units (3-0-6). For course description, see Economics.

Ec/SS 129. Economic History of the United States. 9 units (3-0-6). For course description, see Economics.

Ec/SS 130. Economic History of Europe Since the Late Middle Ages. 9 units (3-0-6). For course description, see Economics.

PS/SS 139. Comparative Politics. 9 units (3-0-6). For course description, see Political Science.

The graduate courses listed below are not necessarily taught each year. They will be offered as need dictates.

SS 200. Selected Topics in Social Science. *Units to be determined by arrangement with instructors.* Instructors: Staff and visiting lecturers.

SS 201 abc. Analytical Foundations of Social Science. 9 units (3-0-6). This course covers the fundamentals of utility theory, game theory, and social choice theory. These basic theories are developed and illustrated with applications to electoral politics, market trading, bargaining, auctions, mechanism design and implementation, legislative and parliamentary voting and organization, public economics, industrial organization, and other topics in economics and political science. Instructors: McKelvey, Palfrey.

SS 202 abc. Political Theory. 9 units (3-0-6). Course will introduce the student to the central problems of political theory and analysis, beginning with the essential components of the democratic state and proceeding through a variety of empirical topics. These topics will include the analysis of electoral and legislative institutions, legislative agenda processes, voting behavior, comparative political economy, and cooperation and conflict in international politics. The student will be sensitized to the primary empirical problems of the discipline and trained in the most general applications of game theoretic reasoning to political science. Instructors: Kiewiet, Kousser, Ordeshook.

SS 203. American Electoral Processes. 9 units (3-0-6). An in-depth analysis of American electoral processes, with emphasis on the application of new theory and quantitative techniques. Instructor: Kousser.

SS 205 abc. Foundations of Economics. 9 units (3-0-6). *Prerequisite: Ec 121 ab or consent of instructor.* This is a graduate course in the fundamentals of economics. Topics include: comparative statics and maximization techniques, the neoclassical theory of consumption and production, general equilibrium theory and welfare economics, public goods and externalities, the economic consequences of asymmetric information and incomplete markets, and recursive methods with applications to labor economics and financial economics. Instructors: Border, Page.

SS 210 abc. Foundations of Political Economy. 9 units (3-0-6). *Prerequisites: SS 202 c, SS 205 b.* Mathematical theories of individual and social choice applied to problems of welfare economics and political decision making as well as to the construction of political economic processes consistent with stipulated ethical postulates, political platform formulation, the theory of political coalitions, and decision making in political organizations. Instructors: Ledyard, McKelvey, Ordeshook, Palfrey.

SS 211 abc. Advanced Economic Theory. 9 units (3-0-6). *May be repeated for credit.* Advanced work in a specialized area of economic theory, with topics varying from year to year according to the interests of students. Instructors: Border, Ledyard, Palfrey.

SS 212 abc. Application of Microeconomic Theory. 9 units (3-0-6). *May be repeated for credit.* A working seminar in which the tools of microeconomic theory are applied to the explanation of events and the evaluation of policy. Instructor: Ledyard.

SS 213 abc. Financial Economics. 9 units (3-0-6). First term: introduction to theoretical financial economics at the graduate level. Course covers leading financial models such as the capital asset pricing model and arbitrage pricing theory in depth. Second term: theory of asset pricing in a dynamic context. Considers both the discrete and continuous time cases. Third term: theory and tests of asset pricing (including option pricing and term structure). Theory and tests of market microstructure. Theory of international finance. Instructors: Bossaerts, Strnad.

SS 215. Legal Aspects of the Economics and Politics of Regulation. 9 units (3-0-6). Relationship between law and governmental regulation of economic enterprise. Instructors: Staff.

SS 216. Interdisciplinary Studies in Law and Social Policy. 9 units (3-0-6). A policy problem or problems involving the legal system will be studied, using concepts from at least one social science discipline. Each offering will be taught by a law professor, alone or in conjunction with a member of the social science faculty. The topic will differ from term to term, so the course may be taken more than once. Selected undergraduates may enroll in this course with the permission of the instructor. Instructor: Spitzer.

SS 222 abc. Econometrics. 9 units (3-0-6). Regression analysis. Introduction to the use of multivariate and nonlinear methods in the social sciences. Students will be required to complete a major empirical project. Instructors: Dubin, El-Gamal, Grether.

SS 223 abc. Advanced Topics in Econometric Theory. 9 units (3-0-6). *Prerequisite:* SS 222 ab; may be repeated for credit. A course in quantitative methods for second- and third-year social science graduate students. Theory of identification and estimation of simultaneous equations system. Instructors: Dubin, El-Gamal, Grether.

SS 229 abc. Theoretical and Quantitative Dimensions of Historical Development. 9 units (3-0-6). *May be repeated for credit.* Introduction to modern quantitative history. The tools of economic and political theory applied to problems of economic, social, and political development in a historical context. Instructors: Davis, Fohlin, Hoffman.

SS 231 abc. American Politics. 9 units (3-0-6). A three-term course in American politics and political behavior. While drawing from contemporary materials, the course will emphasize the historical background of American political institutions. Instructors: Alvarez, Kiewiet, Ordeshook.

SS 232 abc. Historical and Comparative Perspectives in Political Analysis. 9 units (3-0-6). *Prerequisite:* SS-203. Provides a knowledge and understanding of developments in both the American past and in other parts of the world. Instructor: Kousser.

SS 240. Techniques of Policy Research. 9 units (3-0-6). Prerequisites: SS 205 ab. The application of social science theory and methods to the formulation and evaluation of public policy. Instructors: Staff.

SS 260. Experimental Methods of Political Economy. 9 units (3-0-6). Survey of laboratory experimental research related to the broad field of political economy. Topics: the behavior of markets, organizations, committee processes, and election processes. Emphasis on experimental methods and techniques. Students will design and conduct experiments. Instructor: Plott.

SS 300. Research in Social Science. Variable units. Instructors: Staff.

CARNEGIE-SAUNDERS HALL OF ADMINISTRATION

TRUSTEES, ADMINISTRATION, FACULTY

(As of May 11, 1994)

OFFICERS

Gordon E. Moore, *Chair*
 Thomas E. Everhart, *President*
 William F. Kieschnick, *Vice Chair*
 Benjamin M. Rosen, *Vice Chair*

<i>Vice Chairman of the Board
Science Applications International Corp.</i> |

Trustee Elected Committees, 1994

Executive Committee—G.E. Moore, *Chair*; W.F. Kieschnick, *Vice Chair*; V.K. Atkins, D.L. Bren, H.M. Conger, T.E. Everhart, S.M. Hufstedler, R.F. Mettler, S.R. Petersen, S.R. Rawn, Jr., B.M. Rosen, R.M. Rosenberg, D. Stanfill, W.L. Weisman, A.D. Wheelon; *Consulting Members*: R.S. Avery, A.O. Beckman, B.F. Biaggini, E.M. Jorgensen, L.R. Wasserman; *Advisory Members*: T.W. Anderson, P.C. Jennings, D.W. Morrisroe

Audit Committee—S.R. Petersen, *Chair*; D. Stanfill, *Vice Chair*; J.P. Cobb, T.E. Everhart, R.K. Linde, C.J. Medberry III, G.E. Moore, S.R. Onderdonk; *Advisory Members*: P.C. Jennings, D.W. Morrisroe

Budget and Capital Expenditures Committee—S.R. Rawn, Jr., *Chair*; P.W. Mullin, *Vice Chair*; R. Anderson, D.L. Bren, T.E. Everhart, W.R. Gould, R.K. Linde, C.J. Medberry III, G.E. Moore, R.J. Schultz, W.L. Weisman, H. Wetzel; *Consulting Members*: A.O. Beckman, H.G. Vesper, W.E. Zisch; *Advisory Members*: T.W. Anderson, P.C. Jennings, D.W. Morrisroe

Buildings and Grounds Committee—D.L. Bren, *Chair*; S.R. Onderdonk, *Vice Chair*; S.D. Bechtel, Jr., E. Broad, T.H. Cruikshank, T.E. Everhart, C.C. Frost, W.R. Gould, D.E. Guinn, G.E. Moore, P.B. Pesenti, H. Wetzel; *Consulting Members*: A.O. Beckman, B.F. Biaggini, E.M. Jorgensen, H.G. Vesper; *Advisory Members*: T.W. Anderson, P.C. Jennings, D.W. Morrisroe, G. Van Der Werff

Investment Committee—R.M. Rosenberg, *Chair*; B.M. Rosen, *Vice Chair*; G.L. Argyros, V.K. Atkins, D.R. Beall, H.M. Conger, T.E. Everhart, P.M. Hawley, R.K. Linde, R.F. Mettler, G.E. Moore, P.B. Pesenti, S.R. Rawn, Jr., A. Rock, D. Stanfill; *Consulting Members*: A.O. Beckman, B.F. Biaggini; *Advisory Members*: T.W. Anderson, P.C. Jennings, D.W. Morrisroe

Jet Propulsion Laboratory Committee—A.D. Wheelon, *Chair*; B.R. Inman, *Vice Chair*; R. Anderson, H. Brown, W. Burke, M.S. Dresselhaus, T.E. Everhart, S.M. Hufstedler, E.S. Jacobs, R. Landau, Y.T. Lee, R.F. Mettler, G.E. Moore, P.B. Pesenti, S.R. Rawn, Jr.; *Consulting Members*: R.S. Avery, M.L. Scranton; *Advisory Members*: T.W. Anderson, P.C. Jennings, D.W. Morrisroe, E.C. Stone, H.M. Yohalem

Nominating Committee—W.F. Kieschnick, *Chair*; W.L. Weisman, *Vice Chair*; H. Brown, J.P. Cobb, T.E. Everhart, R.M. Ferry, C.C. Frost, P.M. Hawley, B.R. Inman, R.F. Mettler, G.E. Moore, B.M. Rosen, R.M. Rosenberg; *Consulting Members*: R.O. Anderson, R.S. Avery, A.O. Beckman, S. Ramo, M.L. Scranton, L.R. Wasserman; *Advisory Members*: T.W. Anderson, P.C. Jennings

ADMINISTRATIVE OFFICERS

Thomas E. Everhart
President

Thomas W. Anderson
David L. Goodstein
Gary A. Lorden
David W. Morrisroe
Edward C. Stone
Harry M. Yohalem

Chairs of Divisions

John N. Abelson
Peter B. Dervan
John H. Seinfeld
Edward M. Stolper
John O. Ledyard
Charles W. Peck

Student Affairs

Sharyn L. Slavin
Stanley J. Borodinsky
Arden L. Albee
Connie Calderón

The Humanities and Social Sciences
Physics, Mathematics and Astronomy

Assistant Vice President for Student Affairs
Administrator for Student Affairs
Dean of Graduate Studies
Assistant Dean of Graduate Studies
Dean of Students
Associate Dean of Students
Assistant Dean for Minority Student Recruitment and Retention
Master of Student Houses
Director of Residence Life
Assistant Director of Residence Life
Registrar
Director of Admissions
Assistant Director of Admissions
Assistant Director of Admissions
Director of Career Development
Assistant Director of Career Development
Director of Financial Aid
Associate Director of Financial Aid
Assistant Director of Financial Aid
Director of Athletics and Physical Education
Assistant Director of Athletics/Director of Recreational Services
Director of International Student Programs
Special Projects Coordinator/Fellowship Advisor

Administrative Committees, 1994

- Administrative Committee on Affirmative Action** (Reports to the President)—C.E. Brennen, *Acting Chair*; J.M. Andino, S.E. Borbon, A.J. Bussone, C. Calderon, J.J. Hopfield*, D.R. Kiewiet, M.E. Lidstrom, E. Nava, D.C. Rees, N.Z. Scoville, F.M. Vargas, Y.L. Yung
- Administrative Committee on Animal Care and Use** (Reports to the President)—J.M. Allman, *Chair*; J.N. Abelson*, R.A. Anderson, J. Baer, E. Helms, J.H. Richards
- Administrative Committee on Athletic Facilities** (Reports to the President)—B. Sturtevant, *Chair*; C. Beck, D.L. Bridges*, E.H. Davidson, J.C. Doyle*, R.E. Fort*, M. Hunt, J.W. Minges*, H.D. Politzer
- Administrative Committee on Biosafety** (Reports to the President)—J.H. Strauss, *Chair*; E.F. Blum, E.H. Davidson, N. Davidson, J.J. Femino, R.C. Pool*, E. Rothenberg, C. Scislowicz*
- Administrative Committee on Campus Security** (Reports to the President)—F.E. Marble, *Chair*; J.S. Dietrich, H.R. Ginder, J.C. Glaviano, A.D. McMillan, J.W. Minges, C.S. Smith, E.G. Strauss, P.P. Vaidyanathan, K.D. West, D.M. White
- Computing Advisory Committee** (Reports to the Provost)—D.I. Meiron, *Chair*; K.M. Chandy, R.W. Clayton, J.G. Cohen, P.E. Dimotakis, J.A. Dubin, D.L. Goodstein*, C. Koch, A. Kuppermann, T.C. McGill, P.C. Messina, M. Morari, D.W. Morrisroe*, T.A. Prince, B.M. Simon, S. Taylor
- Administrative Committee on Hazardous Chemical Safety** (Reports to the President)—S.I. Chan, *Chair*; D.S. Burnett, R.E. Fort, D.M. Grether, R.H. Grubbs, M.R. Hoffmann, S.R. Marder, A.G. Myers, J-P. Revel, J.D. Roberts, M.L. Roukes, C. Scislowicz
- Institute Academic Council (IACC)** (Reports to the Provost)—P.C. Jennings, *Chair*; J.N. Abelson, P.B. Dervan, T.E. Everhart, J.O. Ledyard, C.W. Peck, J.H. Seinfeld, E.M. Stolper
- Institute Administrative Council (IAC)** (Reports to the President)—T.E. Everhart, *Chair*; J.N. Abelson, T.W. Anderson, P.B. Dervan, D.L. Goodstein, J.J. Hopfield, P.C. Jennings, J.O. Ledyard, G.A. Lorden, D.W. Morrisroe, R.L. O'Rourke, C.W. Peck, J.H. Seinfeld, E.M. Stolper, E.C. Stone, M.L. Webster, H.M. Yohalem
- Administrative Committee on Institute Art** (Reports to the President)—R.A. Rosenstone, *Chair*; D. I. Meiron, J.D. Roberts, M.I. Simon, C.S. Smith, S.A. Walker
- Administrative Committee on Institute Environment** (Reports to the President)—J.J. Morgan, *Chair*; J.G. Cohen, M. Hartmann, W.J. Irwin, J.D. Melvin, R.K. Rickenbrode, W.P. Schaefer, S. Suzuki
- Administrative Committee on Insurance and Annuities** (Reports to Vice President for Business and Finance)—W. Whaling, *Chair*; E.W. Cowan, K.M. Dawson, J.R. Goodstein, M. Greene, D.M. Grether, J. Heie, S. Henry*, J.K. Knowles, K.L. Montes*, G.P. Murdock, D. Petersen*, C.J. Silvio
- Administrative Committee on JPL** (Reports to the President)—F.E.C. Culick, *Chair*; J.D. Baldeschwieler, H.G. Hornung, J.O. Ledyard, T.C. McGill, D.O. Muhleman, A.C.S. Readhead, T.A. Tombrello
- Administrative Committee for the Protection of Human Subjects** (Reports to the President)—C.R. Plott, *Chair*; J.N. Abelson*, K.P. Austin, C.J. Brokaw (alternate member), M. Coffey, E.J. Freise, B. Ho, G.Q. Jung, J.L. Kirschvink, M. McLain, R.C. Pool (alternate member), J.A. Rooney, C. Scislowicz*, H.M. Yohalem, D. Zeh
- Administrative Committee on Radiation Safety** (Reports to the President)—D.S. Burnett, *Chair*; S.E. Celniker, H. Issaian, W.L. Johnson, R.W. Kavanagh, C.S. Parker, C. Scislowicz*

*indicates *ex officio* members

Administrative Committee on Relations with the Community (Reports to the President)—M.E. Alper, S. Asmundson, H. Daily, S. Henry*, J.L. Kirschvink, R.W. Oliver, L.T. Silver

Administrative Committee on Sponsored Research (Reports to the President)—W.D. Iwan, *Chair*; J.F. Bonner, D.L. Goodstein*, B.V. McKoy, R.H. Sabersky, P.J. Wyllie

Administrative Committee on SURF (Reports to the Vice Provost)—T. Cole, *Chair*; F.H. Arnold, S.J. Asmundson*, D.M. Binney*, P. Bjorkman, C.J. Brokaw, R. Bush, G.R. Cass, S.G. Djorgovski, R.H. Grubbs, H.B. Keller, D.R. Kiewiet*, J.L. Kirschvink, C.V. Larson, D.S. Levy*, N.S. Lewis, K.G. Libbrecht, C.A. Merkel*, G.A. Morton*, T.A. Tombrello, D.B. Wales*, W.M. Whitney, R.M. Wilson

*indicates *ex officio* members

FACULTY OFFICERS AND COMMITTEES 1994-95

Officers

Chair: J.J. Hopfield

Vice Chair: M.E. Lidstrom

Secretary: W. Whaling

Faculty Board

Ch., J.J. Hopfield*, *Vice Ch.*, M.E. Lidstrom*, *Sec.*, W. Whaling*, J.N. Abelson*, A.L. Albee*, P.B. Dervan*, T.E. Everhart*, P.C. Jennings*, D.R. Kiewiet*, J.O. Ledyard*, G.A. Lorden*, C.W. Peck*, J.H. Seinfeld*, E.M. Stolper*

Term expires
June 30, 1995

J.M. Bower
R.H. Grubbs
M.R. Hoffmann
H.J. Kimble
J.L. Kirschvink
J.M. Kousser

Term expires
June 30, 1996

G.A. Blake
G.R. Cass
M.H. Cohen
S.E. Fraser
T.C. McGill
B.V. McKoy

Term expires
June 30, 1997

J.E. Bercaw
J.A. Kornfield
D.I. Meiron
J-P. Revel
T.A. Tombrello
K.J. Vahala

Steering Committee

Ch., J.J. Hopfield, M.H. Cohen, S.E. Fraser, R.H. Grubbs, P.C. Jennings, M.E. Lidstrom, T.C. McGill, J-P. Revel, W. Whaling

Faculty Ombudsman:

Academic Freedom and Tenure Committee

Term expires
June 30, 1995

P.E. Dimotakis
P.M. Goldreich
A.H. Zewail

Term expires
June 30, 1996

S.I. Chan
N.R. Corngold
S.E. Koonin

**Ex officio*

Membership and Bylaws

Ch., M.E. Lidstrom, N.H. Brooks, L.E. Davis, R.H. Grubbs, A. Kuppermann, H. Lipshitz, W. Whaling*

Nominating Committee

Ch., R.H. Grubbs, J.M. Bower, D. Dougherty, H. Hornung, J.L. Kirschvink, J.M. Kousser, J.H. Schwarz

Standing Committees

Academic Policies—*Ch.*, M. Aschbacher, K. Gilmartin, J.L. Kirschvink, R.M. Murray

Athletics and Physical Education—*Ch.*, J.C. Doyle, D.L. Bridges*, F.E.C. Culick, E.H. Davidson, H.B. Gray, M.R. Hoffmann, A.G. Myers, B. Sturtevant

Convocations—*Ch.*, J.M. Kousser, J.M. Bower, C.E. Brennen, J.G. Cohen, J.N. Franklin, D.R. Kiewiet*, J. Pine

Curriculum—*Ch.*, K.C. Border, J.L. Beck, D.S. Burnett, S.I. Chan, P.W. Fay, B.W. Filippone, J.R. Goodstein*, D.G. Goodwin, D.R. Kiewiet*, B.V. McKoy, H.B. Newman, H.D. Politzer, J-P. Revel

Foreign Students and Scholars—*Ch.*, D.L. Barkan, F. Cowie, B. Imperiali, P. Kia*, B.C. Murray, M. Okumura, T. Y-T. Wu

Freshman Admissions—*Ch.*, W.B. Bridges, P.M. Bellan, R.L. Bush, T. Cole, P.W. Fay, B.W. Filippone, N.J. Leonard, C. Liebau*, J.D. Roberts, J.H. Schwarz, T. Scudder, B.T. Soifer, Y-C. Tai, N-C. Yeh

Graduate Study—*Ch.*, L.E. Davis, A.L. Albee*, E.K. Antonsson, J.E. Bercaw, G.R. Cass, T.K. Caughey, S.G. Djorgovski, S.C. Frautschi, B.T. Fultz, G.R. Gavalas, J.F. Hall, W.G. Knauss, G. Laurent, W.A.J. Luxemburg, A. Martin, D.L. Meiron, E.M. Meyerowitz, R.D. Middlebrook, M. Morari, F.C. Porter, K.E. Sieh, K.J. Vahala, T.Y. Wu

Health—*Ch.*, C.J. Brokaw, J.E. Bercaw, D. Levy*, S.C. Miller*, E. Rothenberg, J.B. Saleeby, D.B. Wales*

Institute Programs—*Ch.*, S. Epstein, B.W. Filippone, A. Kuppermann, O. Mandel, R.A. Marcus, J.D. Roberts, E.F. Van de Velde, R.M. Wilson

Library—*Ch.*, R.C. Flagan, Director of Libraries*, J.M. Kousser, D.L. Meiron, G.R. Rossman, P. Vogel, W. Whaling, E.E. Zukoski

Outreach—*Ch.*, J.M. Bower, R.A. Cameron, M.C. Cross, J.M. Kousser, P.J. Wyllie

Patents and Relations with Industry—*Ch.*, W.A. Goddard, T.J. Ahrens, R.H. Grubbs, C. Koch, M.L. Roukes, A. Yariv

Scholarships and Financial Aid—*Ch.*, P.E. Dimotakis, P.M. Bellan, S.I. Chan, J.G. Cohen, N.R. Corngold, A. Kuppermann, D. Levy*, D.O. Muhleman, B.T. Soifer, H. Zirin

Student Housing—*Ch.*, D. Flamming, G.A. Blake, D.L. Bridges, G.R. Cass, J.Z. Lee, D.B. Wales*

Undergraduate Academic Standards and Honors—*Ch.*, L.T. Silver, J.R. Goodstein*, J.F. Hall, D.R. Kiewiet*, J.L. Kirschvink, J-P. Revel, D.B. Rutledge, S. Taylor, D.P. Weitekamp

Upperclass Admissions—*Ch.*, D.O. Muhleman, M. Aschbacher, R.W. Flagan, C. Liebau*, R.D. McKelvey, P.H. Patterson, P. Perona, H.D. Politzer

**Ex officio*

STAFF OF INSTRUCTION AND RESEARCH

Division of Biology

John N. Abelson, *Chair*
Norman R. Davidson, *Executive Officer*
Paul H. Patterson, *Executive Officer*

Professors Emeriti

Seymour Benzer, Ph.D., D.Sc.,
Crafoord Laureate
*James G. Boswell Professor of
Neuroscience*
James F. Bonner, Ph.D.
Biology
Derek H. Fender, Ph.D.
Biology and Applied Science
Norman H. Horowitz, Ph.D.
Biology

Edward B. Lewis, Ph.D.
*Thomas Hunt Morgan
Professor of Biology*
Herschel K. Mitchell, Ph.D.
Biology
Ray D. Owen, Ph.D., Sc.D.
Biology

Professors

John N. Abelson, Ph.D.
George Beadle Professor of Biology
John M. Allman, Ph.D.
*Hixon Professor of Psychobiology and
Biology*
Richard A. Andersen, Ph.D.
James G. Boswell Professor of Neuroscience
Giuseppe Attardi, M.D.
*Grace C. Steele Professor of
Molecular Biology*
Charles J. Brokaw, Ph.D.
Biology
Judith L. Campbell, Ph.D.
Chemistry and Biology
Eric H. Davidson, Ph.D.
*Norman Chandler Professor of
Cell Biology*
William J. Dreyer, Ph.D.
Biology
Scott E. Fraser, Ph.D.
Anna L. Rosen Professor of Biology
John J. Hopfield, Ph.D.
*Roscoe G. Dickinson Professor of
Chemistry and Biology*

Mary B. Kennedy, Ph.D.
Biology
Masakazu Konishi, Ph.D.
Bing Professor of Behavioral Biology
Henry A. Lester, Ph.D.
Biology
Elliot M. Meyerowitz, Ph.D.
Biology
Paul H. Patterson, Ph.D.
Biology
Jean-Paul Revel, Ph.D.^{1,2}
*Albert Billings Ruddock Professor of
Biology*
Melvin I. Simon, Ph.D.
*Anne P. and Benjamin F. Biaggini
Professor of Biological Sciences*
James H. Strauss, Ph.D.
*Ethel Wilson Bowles and
Robert Bowles Professor of Biology*
Alexander J. Varshavsky, Ph.D.
*Howard and Guen Laurie Smits
Professor of Cell Biology*

Aeronautics

Michio Ueno, M.E.

Engineering Science

Donald Lloyd Watts, Ph.D.

Computation and Neural Systems

Weijie Yun, M.S.

Electrical Engineering

Xin Zhang, Ph.D.

Aeronautics

Members of the Professional Staff

Robert C. Y. Koh, Ph.D.

Senior Scientist

Jonathan D. Melvin, Ph.D.

Senior Scientist

Wen-King Su, Ph.D.

Senior Scientist

Member of the Beckman Institute

Carl Kesselman, Ph.D.

Division of Geological and Planetary Sciences

Edward M. Stolper, *Chair*
 Robert W. Clayton, *Executive Officer for Geophysics*
 Andrew P. Ingersoll, *Executive Officer for Planetary Science*
 Hugh P. Taylor, *Executive Officer for Geology*
 Hiroo Kanamori, *Director, Seismological Laboratory*

Professors Emeriti

Clarence R. Allen, Ph.D. <i>Geology and Geophysics</i>	Clair C. Patterson, Ph.D., D.h.c. <i>Geochemistry</i>
Samuel Epstein, Ph.D., LL.D. <i>William E. Leonhard Professor of Geology</i>	Robert P. Sharp, Ph.D. <i>Robert P. Sharp Professor of Geology</i>

Professors

Thomas J. Ahrens, Ph.D. <i>Geophysics</i>	Bruce C. Murray, Ph.D. <i>Planetary Science and Geology</i>
Arden L. Albee, Ph.D. <i>Geology</i>	George R. Rossman, Ph.D. <i>Mineralogy</i>
Don L. Anderson, Ph.D. <i>Eleanor and John R. McMillan Professor of Geophysics</i>	Jason B. Saleeby, Ph.D. <i>Geology</i>
Donald S. Burnett, Ph.D. <i>Nuclear Geochemistry</i>	Kerry E. Sieh, Ph.D. <i>Geology</i>
Robert W. Clayton, Ph.D. <i>Geophysics</i>	Leon T. Silver, Ph.D. <i>W. M. Keck Foundation Professor for Resource Geology</i>
Peter Goldreich, Ph.D. <i>Lee A. DuBridge Professor of Astrophysics and Planetary Physics</i>	David J. Stevenson, Ph.D. <i>Planetary Science</i>
David G. Harkrider, Ph.D. <i>Geophysics</i>	Edward M. Stolper, Ph.D. <i>William E. Leonhard Professor of Geology</i>
Donald V. Helmberger, Ph.D. <i>Geophysics</i>	Hugh P. Taylor, Jr., Ph.D. <i>Robert P. Sharp Professor of Geology</i>
Andrew P. Ingersoll, Ph.D. <i>Planetary Science</i>	G. J. Wasserburg, Ph.D., D.h.c., Sc.D., D.Sc., Crafoord Laureate <i>John D. MacArthur Professor of Geology and Geophysics</i>
W. Barclay Kamb, Ph.D. <i>Barbara and Stanley R. Rawm, Jr., Professor of Geology and Geophysics</i>	Brian P. Wernicke, Ph.D. <i>Geology</i>
Hiroo Kanamori, Ph.D. <i>John E. and Hazel S. Smits Professor of Geophysics</i>	James A. Westphal, B.S. <i>Planetary Science</i>
Joseph L. Kirschvink, Ph.D. <i>Geobiology</i>	Peter J. Wyllie, Ph.D., D.Sc. <i>Geology</i>
Duane O. Muhleman, Ph.D. <i>Planetary Science</i>	Yük L. Yüng, Ph.D. <i>Planetary Science</i>

Associate Professors

Geoffrey A. Blake, Ph.D. <i>Cosmochemistry</i>	Joann M. Stock, Ph.D. <i>Geology and Geophysics</i>
Michael C. Gurnis, Ph.D. <i>Geophysics</i>	

Assistant Professor

Kenneth A. Farley, Ph.D.
Geochemistry

Lecturers

Charles Elachi, Ph.D.
Planetary Science

Thomas H. Heaton, Ph.D.
Geophysics

Senior Research Associates

Hermann Engelhardt, Dr.rer.Nat.
Geophysics
Egill Hauksson, Ph.D.
Geophysics

Dimitri A. Papanastassiou, Ph.D.
Geochemistry

Michael L. Jackson, M.S.

Cathy Monteroso, M.Ed.

Karen E. Nelson, M.Ed.

James J. O'Brien, M.A.

Gene P. Victor, M.Sc.

Campus Computing Organization

Staff Members

Tom Boyce, B.S.

James V. Bys, B.S.

Kar M. Cheung

Lauren Connolly

Richard E. Fagen, B.A.

Glen George, M.S.

Lynell Jackson

Robert S. Logan, B.S.

Betty McKenney

Dallas W. Oller, Jr.

Tony C. Ruyter

Heather Sherman, B.A.

Grace Stinson

Angela Swaim

Wayne Waller, M.S.

Larry Watanabe, B.S.

Glenn Wyne

Health Center and Counseling Services

Stuart Miller, M.D.

Director of Health Services

Kevin P. Austin, Ph.D.

Director of Counseling Services

Jeanette Butler, Ph.D.

Staff Psychologist

Aimee Ellicott, Ph.D.

Staff Psychologist

Jon-Patrik Pedersen, Ph.D.

Staff Psychologist

Dinah Lee Schaller

Coordinator, Substance Abuse Prevention

Program

Ombuds and Staff/Faculty Consultation Center Offices

Helen Hasenfeld, *Director*

Phyllis Cohen, *Manager SFCC*

Industrial Relations Center

Gaylord E. Nichols, Jr., B.A.

Director

Institute Libraries

Glenn Brudvig, M.A., M.A. (L.S.)

Director of Libraries

Judith R. Goodstein, Ph.D.

Institute Archivist, Faculty Associate

Janet C. Jenks, M.L.S.

*Head, Humanities and Social Sciences
Libraries*

Kimberly Douglas, M.A., M.S. (L.S.)

Head, Reader Services

Dana L. Roth, M.S., M.L.S.

*Head, Science and Engineering
Libraries, MPS*

Vivian A. Hay, M.L.S.

Library Systems Administrator

Sandra M. Heft, M.L.S.

Head, Technical Services

Representatives for the Departmental Libraries

Norman H. Brooks, Ph.D.

Erick Carreira, Ph.D.

K. Mani Chandu, Ph.D.

William J. Dreyer, Ph.D.

Richard C. Flagan, Ph.D.

Wilfred D. Iwan, Ph.D.

Alexander S. Kechris, Ph.D.

J. Morgan Kousser, Ph.D.

Robert J. McEliece, Ph.D.

Thomas C. McGill, Ph.D.

Daniel I. Meiron, Ph.D.

Gaylord E. Nichols, Jr., B.A.

Timothy J. Pearson, Ph.D.

George R. Rossman, Ph.D.

Bradford Sturtevant, Ph.D.

Petr Vogel, Ph.D.

Edward E. Zukoski, Ph.D.

Jet Propulsion Laboratory

Administered by Caltech for the National Aeronautics and Space Administration

Edward C. Stone, *Director; Vice President, Caltech*

Larry N. Dumas, *Deputy Director*

Executive Council

John R. Casani

Chief Engineer

Moustafa T. Chahine

Chief Scientist

Kirk M. Dawson

Associate Director

Charles Elachi

*Assistant Laboratory Director, Space
Science and Instruments*

John Heie

*Assistant Laboratory Director,
Administrative Divisions*

James King, Jr.

*Assistant Laboratory Director, Technical
Divisions*

James A. Evans

*Assistant Laboratory Director, Technology
and Applications Programs*

Harry M. Yohalem

Caltech General Counsel

Performance and Activities

Delores Bing

Chamber Music Program

William Bing

*Instrumental Music Director and
Chamber Music Program*

James Boyk

Interpretive Music Class

Donald Caldwell

Director of Men's Glee Club

Darryl Denning

*Music Program Coordinator and
Classical and Flamenco Guitar Class*

Allen Gross

Symphony Orchestra Director

Monica Hubbard

Director of Women's Glee Club

Shirley Marneus

Director of Theater Arts

OFFICERS AND FACULTY

* * * *

University of California = UC Berkeley
 California State University = Cal State L.A.

* * * *

Thomas Eugene Everhart, Ph.D., D.L.,
 D.h.c., *President; Professor of Electrical
 Engineering and Applied Physics*
 A.B., Harvard College, 1953; M.Sc., University
 of California (Los Angeles), 1955; Ph.D.,
 Cambridge University, 1958; D.L.h.c., Illinois
 Wesleyan University; Pepperdine University;
 D.h.c., Colorado School of Mines. Caltech,
 1987-.

John Norman Abelson, Ph.D., *George Beadle
 Professor of Biology; Chair, Division of
 Biology*

B.S., Washington State University, 1960; Ph.D.,
 Johns Hopkins University, 1965. Professor,
 Caltech, 1982-91; Beadle Professor, 1991-;
 Chair, 1989-.

Yaser S. Abu-Mostafa, Ph.D., *Associate
 Professor of Electrical Engineering and
 Computer Science*

B.Sc., Cairo University, 1979; M.S.E.E., Georgia
 Institute of Technology, 1981; Ph.D., Caltech,
 1983. Garrett Research Fellow in Electrical
 Engineering, 1983; Assistant Professor,
 1983-89; Associate Professor, 1989-.

Allan James Acosta, Ph.D., *Richard L. and
 Dorothy M. Hayman Professor of Mechanical
 Engineering, Emeritus*

B.S., Caltech, 1945; M.S., 1949; Ph.D., 1952.
 Assistant Professor, 1954-58; Associate
 Professor, 1958-66; Professor, 1966-90;
 Hayman Professor, 1990-93. Hayman
 Professor Emeritus, 1993. Executive Officer for
 Mechanical Engineering, 1988-93.

Christoph Adami, Ph.D., *Division Research
 Fellow in Physics*

B.S., University of Bonn, 1982; Dipl., 1988;
 M.A., State University of New York (Stony
 Brook), 1988; Ph.D., 1991. Caltech, 1992-95.

Andreas Aebi, Ph.D., *Lecturer in German*

M.A., University of Southern California, 1970;
 Ph.D., 1974. Lecturer in French, Caltech, 1978;
 Lecturer in German, 1978-83; 1986-;
 Instructor, 1983-86.

Aharon Agranat, Ph.D., *Visiting Associate in
 Applied Physics*

B.Sc., Hebrew University, 1977; M.Sc., 1980;
 Ph.D., 1986. Assistant Professor, 1990-.
 Research Fellow, Caltech, 1986-89; Senior
 Research Fellow, 1989; Visiting Associate,
 1990-91; 1992-95.

Channing C. Ahn, Ph.D., *Senior Research
 Associate in Materials Science; Lecturer in
 Materials Science*

B.S., University of California, 1979; M.S., 1981;
 Ph.D., University of Bristol, 1985. Senior
 Research Fellow, Caltech, 1987-92; Senior
 Research Associate 1992-; Lecturer, 1988;
 1990-94.

Thomas J. Ahrens, Ph.D., *Professor of
 Geophysics*

B.S., Massachusetts Institute of Technology,
 1957; M.S., Caltech, 1958; Ph.D., Rensselaer
 Polytechnic Institute, 1962. Associate Pro-
 fessor, Caltech, 1967-76; Professor, 1976-.

Norio Akaiwa, Ph.D., *Research Fellow in
 Applied Mathematics*

B.S., Tokyo Institute of Technology, 1985; M.S.,
 1987; Ph.D., Northwestern University, 1993.
 Caltech, 1993-94.

Daniel S. Akerib, Ph.D., *Visiting Associate in
 Physics*

B.A., University of Chicago, 1984; M.S.,
 Princeton University, 1986; Ph.D., 1990. Center
 Fellow, University of California, 1993-.
 Research Fellow, Caltech, 1990-92; Visiting
 Associate, 1993-94.

Yoshiaki Akutsu, Ph.D., *Visiting Associate in
 Environmental Engineering Science*

B.S., University of Tokyo, 1980; M.S., 1982;
 Ph.D., 1985. Research Associate, 1988-.
 Caltech, 1993-94.

Yehuda Albeck, Ph.D., *Research Fellow in
 Biology*

B.Sc., Bar-Ilan University, 1985; M.Sc., 1987;
 Ph.D., Hebrew University of Jerusalem, 1992.
 Caltech, 1992-95.

Arden Leroy Albee, Ph.D., *Professor of
 Geology; Dean of Graduate Studies*

A.B., Harvard College, 1950; A.M., Harvard
 University, 1951; Ph.D., 1957. Visiting Assistant
 Professor, Caltech, 1959-60; Associate
 Professor, 1960-66; Professor, 1966-. Academic
 Officer, Geological and Planetary Sciences,
 1971-79; Chief Scientist, Jet Propulsion Labo-
 ratory, 1979-84; Dean of Graduate Studies,
 1984-.

Lisa Ann Alex, Ph.D., *Senior Research Fellow
 in Biology*

B.A., University of Maryland, 1984; Ph.D.,
 Massachusetts Institute of Technology, 1990.
 Research Fellow, Caltech, 1990-93; Senior
 Research Fellow, 1993-94.

- Alexei B. Aleksandrov, Ph.D., Doctorate, *Visiting Associate in Mathematics*
Ph.D., Leningrad State University, 1979; Doctorate, Steklov Mathematical Institute, 1984. Professor, 1991-. Caltech, 1993.
- Clarence R. Allen, Ph.D., *Professor of Geology and Geophysics, Emeritus*
B.A., Reed College, 1949; M.S., Caltech, 1951; Ph.D., 1954. Assistant Professor, 1955-59; Associate Professor, 1959-64; Professor, 1964-90; Professor Emeritus, 1990-. Interim Director, Seismological Laboratory, 1965-67; Acting Chair, Division of Geology, 1967-68.
- Lew Allen Jr., Ph.D., *Senior Faculty Associate*
B.S., United States Military Academy, 1946; M.S., University of Illinois, 1952; Ph.D., 1954. Vice President and Director, Jet Propulsion Laboratory, Caltech, 1982-91; Senior Faculty Associate, 1991-.
- Mark Andrew Allen, Ph.D., *Visiting Associate in Planetary Science*
B.A., Columbia University, 1971; Ph.D., Caltech, 1976. Member of the Technical Staff, Jet Propulsion Laboratory, 1984-. Research Fellow, Caltech, 1978-81; Institute Visiting Associate, 1987-88; Visiting Associate, 1981-86; 1988-94.
- Karen L. Allendoerfer, Ph.D., *Research Fellow in Biology*
A.B., Princeton University, 1987; Ph.D., Stanford University, 1993. Caltech, 1993-94.
- John Morgan Allman, Ph.D., *Hixon Professor of Psychobiology and Professor of Biology*
B.A., University of Virginia, 1965; A.M., University of Chicago, 1968; Ph.D., 1971. Assistant Professor, Caltech, 1974-77; Associate Professor, 1977-84; Professor, 1984-; Hixon Professor, 1989-.
- R. Michael Alvarez, Ph.D., *Assistant Professor of Political Science*
B.A., Carleton College, 1986; M.A., Duke University, 1990; Ph.D., 1992. Caltech, 1992-.
- Georg Amthauer, Ph.D., *Visiting Associate in Mineralogy*
Ph.D., University of Saarbrücken (Germany), 1974; Professor, University of Salzburg, 1985-. Caltech, 1994.
- Richard A. Andersen, Ph.D., *James G. Boswell Professor of Neuroscience*
B.S., University of California (Davis), 1973; Ph.D., University of California (San Francisco), 1979. Boswell Professor, 1993-.
- Charles Hammond Anderson, Ph.D., *Visiting Associate in Biology*
B.S., Caltech, 1957; Ph.D., Harvard University, 1962. Senior Member of the Technical Staff, Jet Propulsion Laboratory, 1987-. Visiting Associate, Caltech, 1988-93.
- David Jeffrey Anderson, Ph.D., *Associate Professor of Biology; Associate Investigator, Howard Hughes Medical Institute*
A.B., Harvard University, 1978; Ph.D., Rockefeller University, 1983. Assistant Professor, Caltech, 1986-1992; Associate Professor, 1992-. Assistant Investigator, 1989-92; Associate Investigator, 1992-.
- Don Lynn Anderson, Ph.D., *Eleanor and John R. McMillan Professor of Geophysics*
B.S., Rensselaer Polytechnic Institute, 1955; M.S., Caltech, 1958; Ph.D., 1962. Research Fellow, 1962-63; Assistant Professor, 1963-64; Associate Professor, 1964-68; Professor, 1968-89; McMillan Professor, 1989-. Director, Seismological Laboratory, 1967-89.
- Thomas W. Anderson, J.D., *Vice President for Institute Relations*
B.A., Iowa Wesleyan College, 1965; M.A., Michigan State University, 1970; J.D., The University of Dayton School of Law, 1979. Caltech, 1991-.
- Jun Ando, D.E., *Visiting Associate in Mechanical Engineering*
B.E., Kyushu University (Japan), 1985; M.E., 1987; D.E., 1990. Associate Professor, 1990-. Caltech, 1994-95.
- Maria De Fatima Andrade, Ph.D., *Visiting Associate in Environmental Engineering Science*
B.S., University of Sao Paulo, 1983; M.S., 1986; Ph.D., 1993. Professor, University of Sao Paulo, 1988-. Visiting Associate, Caltech, 1994.
- Meinrat O. Andreae, Ph.D., *Sherman Fairchild Distinguished Scholar*
Vordipl., University of Karlsruhe (Germany), 1970; Dipl., University of Göttingen, 1974; Ph.D., Scripps Institute of Oceanography, 1978. Director, Max-Planck-Institut, 1987-. Caltech, 1994.
- Fred Colvig Anson, Ph.D., D.h.c., *Professor of Chemistry*
B.S., Caltech, 1954; Ph.D., Harvard University, 1957; D.h.c., University of Paris VI, 1993. Instructor, Caltech, 1957-58; Assistant Professor, 1958-62; Associate Professor, 1962-68; Professor, 1968-. Executive Officer for Chemistry, 1973-77; Chair, 1984-94.
- Erik Karl Antonsson, Ph.D., *Associate Professor of Mechanical Engineering*
B.S., Cornell University, 1976; M.S., Massachusetts Institute of Technology, 1978; Ph.D., 1982. Assistant Professor, Caltech, 1984-90; Associate Professor, 1990-.
- Tom M. Apostol, Ph.D., *Professor of Mathematics, Emeritus*
B.S., University of Washington, 1944; M.S., 1946; Ph.D., University of California, 1948. Assistant Professor, Caltech, 1950-56; Associate Professor, 1956-62; Professor, 1962-92; Professor Emeritus, 1992-.

- Anna M. Aragay, Ph.D., *Senior Research Fellow in Biology*
B.S., Universitat Autònoma de Barcelona, 1982; M.A., 1984; Ph.D., 1989. Research Fellow, Caltech, 1990-92; Senior Research Fellow, 1993-94.
- Jaime Arenas, Ph.D., *Senior Research Fellow in Biology*
B.S., Catholic University of Valparaiso (Chile), 1977; M.S., 1982; Ph.D., Albert Einstein College of Medicine, Yeshiva University, 1988. Research Fellow, Caltech, 1988-91; Senior Research Fellow, 1991-94.
- Lee Armus, Ph.D., *Research Fellow in Physics*
B.A., Columbia College, 1984; M.S., University of Maryland, 1987; Ph.D., 1989. Caltech, 1991-94.
- Frances Hamilton Arnold, Ph.D., *Associate Professor of Chemical Engineering*
B.S., Princeton University, 1979; Ph.D., University of California, 1985. Visiting Associate, Caltech, 1986; Assistant Professor, 1987-92; Associate Professor, 1992-.
- Christopher E. Arzt, Ph.D., *Research Fellow in Physics*
B.S., Johns Hopkins University, 1988; Ph.D., University of Michigan, 1993. Caltech, 1993-94.
- Kazuya Asano, M.S., *Visiting Associate in Chemical Engineering*
B.S., University of Tokyo, 1981; M.S., 1983. Researcher, Kawasaki Steel Corp., 1983-. Caltech, 1993-94.
- Michael Aschbacher, Ph.D., *Professor of Mathematics*
B.S., Caltech, 1966; Ph.D., University of Wisconsin, 1969. Bateman Research Instructor, Caltech, 1970-72; Assistant Professor, 1972-74; Associate Professor, 1974-76; Professor, 1976-. Executive Officer, 1991-94.
- Giuseppe Attardi, M.D., *Grace C. Steele Professor of Molecular Biology*
M.D., University of Padua, 1947. Research Fellow, Caltech, 1959-60; Assistant Professor, 1963; Associate Professor, 1963-67; Professor, 1967-85; Steele Professor, 1985-.
- Harry A. Atwater, Jr., Ph.D., *Associate Professor of Applied Physics*
B.S., Massachusetts Institute of Technology, 1982; M.S., 1983; Ph.D., 1987. Assistant Professor, Caltech, 1988-94; Associate Professor, 1994-.
- Francisco Martinez Azorin, Ph.D., *Research Fellow in Biology*
Ph.D., University of Murcia (Spain), 1994. Caltech, 1994-95.
- Robert F. Bacher, Ph.D., Sc.D., LL.D., *Professor of Physics, Emeritus*
B.S., University of Michigan, 1926; Ph.D., 1930; Sc.D., 1948; LL.D.h.c., Claremont Graduate School. Professor, Caltech, 1949-76; Professor Emeritus, 1976-. Chair, Division of Physics, Mathematics and Astronomy, 1948-62; Director, Norman Bridge Laboratory of Physics, 1949-62; Provost, 1962-69; Vice President and Provost, 1969-70.
- Andreas B. Bachli, Ph.D., *Research Fellow in Applied Physics*
B.S., Kantonsschule Baden (Switzerland), 1981; Dipl., Federal Institute of Technology (Zurich), 1988; Ph.D., University of Berne, 1992. Caltech, 1993-95.
- Doo-Hyun Baik, Ph.D., *Visiting Associate in Aeronautics*
B.S., Seoul National University, 1981; M.S., 1984; Ph.D., 1988. Senior Researcher, Agency for Defense Development, 1988-. Caltech, 1993-94.
- John Dickson Baldeschwieler, Ph.D., *Professor of Chemistry*
B.Chem.E., Cornell University, 1956; Ph.D., University of California, 1959. Professor, Caltech, 1973-. Chair, Division of Chemistry and Chemical Engineering, 1973-78.
- Pierre Baldi, Ph.D., *Visiting Associate in Biology*
M.S., University of Paris VII (Mathematics), 1980; M.S. (Psychology), 1980; Ph.D., Caltech, 1986. Member of the Technical Staff, Jet Propulsion Laboratory, 1988-. Visiting Associate, Caltech, 1989-94.
- Alexander M. Balk, Ph.D., *von Kármán Instructor in Applied Mathematics*
M.S., Moscow Institute of Physics and Technology, 1984; Ph.D., 1988. Caltech, 1993-94.
- Arno H. Bandilla, Dr.rer.Nat., *Visiting Associate in Physics*
Dr.rer.Nat., Humboldt University (Germany), 1981. Member, Humboldt University, 1992-. Caltech, 1994-.
- Shilpi Banerjee, Ph.D., *Research Fellow in Biology*
B.Sc., Bombay University, 1985; Ph.D., Tufts University, 1993. Caltech, 1993-94.
- Lisa R. Banner, Ph.D., *Research Fellow in Biology*
B.S., San Diego State University, 1983; Ph.D., University of Southern California, School of Medicine, 1991. Caltech, 1992-95.
- Chandrasah Bansal, Ph.D., *Visiting Associate in Materials Science*
B.Sc., Rajasthan University (India), 1968; M.Sc., 1970; Ph.D., Tata Institute of Fundamental Research, 1978. Reader, University of Hyderabad, 1977-. Caltech, 1993-.

Jacob Barhen, D.Sc., Visiting Associate in Applied Physics

B.Sc., University of Paris, 1968; M.Sc., 1970; M.S., Israel Institute of Technology, 1975; D.Sc., 1978. Senior Member of the Technical Staff, Jet Propulsion Laboratory, 1987-. Institute Visiting Associate, Caltech, 1988-89; Lecturer, 1988; Visiting Associate in Mechanical Engineering, 1989-90; Visiting Associate in Applied Physics, 1990-92; 1994-.

Barry Clark Barish, Ph.D., Ronald and Maxine Linde Professor of Physics; Principal Investigator, Laser Interferometer Gravitational-Wave Observatory Project

B.A., University of California, 1957; Ph.D., 1962. Research Fellow, Caltech, 1963-66; Assistant Professor, 1966-69; Associate Professor, 1969-72; Professor, 1972-91; Linde Professor, 1991-. Principal Investigator, 1994-.

Diana L. Barkan, Ph.D., Assistant Professor of History

B.Sc., Israel Institute of Technology, 1981; M.Sc., Tel Aviv University, 1983; A.M., Harvard University, 1985; Ph.D., 1990. Instructor, Caltech, 1989-90; Assistant Professor, 1990-.

Charles Andrew Barnes, Ph.D., Professor of Physics, Emeritus

B.A., McMaster University, 1943; M.A., University of Toronto, 1944; Ph.D., University of Cambridge, 1950. Research Fellow, Caltech, 1953-54; Senior Research Fellow, 1954-58; Associate Professor, 1958-62; Professor, 1962-92; Professor Emeritus, 1992-.

Alan Howard Barr, Ph.D., Associate Professor of Computer Science

B.S., Rensselaer Polytechnic Institute, 1973; M.S., 1976; Ph.D., 1983. Research Fellow, Caltech, 1984; Assistant Professor, 1984-90; Associate Professor, 1990-.

Jacqueline K. Barton, Ph.D., D.Sc.h.c., Professor of Chemistry

A.B., Barnard College, 1974; Ph.D., Columbia University, 1978; D.Sc.h.c., New Jersey Institute. Visiting Associate, Caltech, 1989; Professor, 1989-.

Jesse Lee Beauchamp, Ph.D., Professor of Chemistry

B.S., Caltech, 1964; Ph.D., Harvard University, 1967. Noyes Research Instructor, Caltech, 1967-69; Assistant Professor, 1969-71; Associate Professor, 1971-74; Professor, 1974-.

James L. Beck, Ph.D., Associate Professor of Civil Engineering; Executive Officer for Applied Mechanics and Civil Engineering

B.Sc., University of Auckland, 1969; M.Sc., 1970; Ph.D., Caltech, 1978. Assistant Professor, 1981-87; Associate Professor, 1987-. Executive Officer, 1993-

John R. Beckett, Ph.D., Senior Research Fellow in Geology

B.S., Keene State College, 1976; Ph.D., University of Chicago, 1986. Research Fellow, Caltech, 1986-88; Senior Research Fellow, 1988-94.

Peter Voorhees Bedworth, Ph.D., James Irvine Foundation Research Fellow in Chemistry

B.S., Augusta College, 1988; Ph.D., University of South Carolina, 1993. Research Fellow, Caltech, 1993; Irvine Research Fellow, 1993-94.

Charles Beichman, Ph.D., Visiting Associate in Astronomy

A.B., Harvard College, 1973; M.S. (Astronomy), University of Hawaii, 1975; M.S. (Physics), 1976; Ph.D., 1979. Director, Infrared Processing and Analysis Center, 1991-. Caltech, 1991-94.

Paul Murray Bellan, Ph.D., Professor of Applied Physics

B.Sc., University of Manitoba, 1970; M.A., Princeton University, 1972; Ph.D., 1975. Assistant Professor, Caltech, 1977-83; Associate Professor, 1983-89; Professor, 1990-.

Pascale Bendotti, Ph.D., Research Fellow in Control and Dynamical Systems

B.S., Ecole Supérieure d'Electricité (France), 1989; M.S., Laboratoire d'Automatique de Grenoble, 1990; Ph.D., 1992. Caltech, 1993-94.

Shelley M. Bennett, Ph.D., Lecturer in Art History

B.A., University of California (Riverside), 1969; M.A., University of California (Los Angeles), 1975; Ph.D., 1977. Caltech, 1986-94.

Jean Pierre M. Benoit, Ph.D., Visiting Associate Professor of Economics

B.A., Yale University, 1978; Ph.D., Stanford University, 1983. Associate Professor, New York University, 1989-. Caltech, 1994.

Seymour Benzer, Ph.D., D.Sc., Crafoord Laureate, James G. Boswell Professor of Neuroscience, Emeritus

B.A., Brooklyn College, 1942; M.S., Purdue University, 1943; Ph.D., 1947; D.Sc.h.c., Purdue University. Research Fellow, Caltech, 1949-50; Visiting Associate, 1965-67; Professor, 1967-75; Boswell Professor, 1975-93; Boswell Professor Emeritus, 1993-.

David N. Beratan, Ph.D., Visiting Associate in Chemistry

B.S., Duke University, 1980; Ph.D., Caltech, 1986. Assistant Professor, University of Pittsburgh, 1992-. Caltech, 1989-91; 1992-93.

- John Edward Bercaw, Ph.D., *Centennial Professor of Chemistry*
B.S., North Carolina State University, 1967; Ph.D., University of Michigan, 1971. Arthur Amos Noyes Research Fellow, Caltech, 1972-74; Assistant Professor, 1974-77; Associate Professor, 1977-79; Professor, 1979-93; Shell Distinguished Professor, 1985-90; Centennial Professor, 1993-.
- Robert Ari Berkowitz, Ph.D., *Research Fellow in Biology*
A.B., University of Chicago, 1984; Ph.D., Washington University, 1993. Caltech, 1993-94.
- Jan Ojvind Bernander, Ph.D., *Research Fellow in Biology*
M.S., Upsala University (New Jersey), 1987; Ph.D., Caltech, 1993. Research Fellow, 1993-94.
- Lillian Elizabeth Bertani, Ph.D., *Lecturer in Biology*
B.S., University of Michigan, 1953; Ph.D., Caltech, 1957. Visiting Associate in Biology and Chemistry, 1981-85; Lecturer, 1993-94.
- Nicolas J. Beukes, Ph.D., *Visiting Associate in Geology*
B.Sc. (Chemistry), University of the Orange Free State, Bloemfontein (South Africa), 1966; B.Sc. (Geology), 1967; M.Sc., 1969; Ph.D., Rand Afrikaans University (Johannesburg), 1978. Professor, 1986-. Caltech, 1993-94.
- Kaushik Bhattacharya, Ph.D., *Assistant Professor of Applied Mechanics*
B.Tech., Indian Institute of Technology, 1986; Ph.D., University of Minnesota, 1991. Caltech, 1993-.
- Lars Bildsten, Ph.D., *Lee A. DuBridge Research Fellow in Theoretical Astrophysics*
B.S., Ohio State University, 1985; M.S., Cornell University, 1988; Ph.D., 1991. Caltech, 1991-94.
- Richard J. Bing, M.D., D.h.c., *Visiting Associate in Chemistry*
M.D., University of Munich, 1934; M.D., University of Bern, 1935. M.D.h.c., University of Dusseldorf; D.h.c., University of Bologna. Professor of Medicine, University of Southern California; Director, Cardiology and Intramural Medicine, Huntington Memorial Hospital, 1969-. Research Associate in Engineering Science, Caltech, 1970-72; Visiting Associate in Biomedical Engineering, 1972-78; Visiting Associate in Chemistry and Chemical Engineering, 1978-83; Visiting Associate in Chemistry, 1984-.
- Eric Conrad Birgbauer, Ph.D., *Research Fellow in Biology*
B.A., University of California, 1985; Ph.D., Massachusetts Institute of Technology, 1991. Caltech, 1991-94.
- Pamela Bjorkman, Ph.D., *Assistant Professor of Biology; Assistant Investigator, Howard Hughes Medical Institute*
B.A., University of Oregon, 1978; Ph.D., Harvard University, 1984. Assistant Professor, Caltech, 1988-; Assistant Investigator, 1989-.
- Geoffrey A. Blake, Ph.D., *Associate Professor of Cosmochemistry*
B.S., Duke University, 1981; Ph.D., Caltech, 1986. Assistant Professor, 1987-93; Associate Professor, 1993-.
- John L. Blanchard, Ph.D., *Bateman Research Instructor in Mathematics*
B.A., University of Maine, 1982; M.S., Ohio State University, 1986; Ph.D., 1991. Caltech, 1993-94.
- Roger David Blandford, Ph.D., *Richard Chace Tolman Professor of Theoretical Astrophysics; Executive Officer for Astronomy*
B.A., Magdalene College, University of Cambridge, 1970; Ph.D., 1974. Assistant Professor, Caltech, 1976-79; Professor, 1979-89; Tolman Professor, 1989-; Executive Officer, 1992-.
- Felix Hans Boehm, Ph.D., *William L. Valentine Professor of Physics*
Dipl., Federal Institute of Technology (Zurich), 1948; Ph.D., 1951. Research Fellow, Caltech, 1953-55; Senior Research Fellow, 1955-58; Assistant Professor, 1958-59; Associate Professor, 1959-61; Professor, 1961-85; Valentine Professor, 1985-.
- Emil Bogenmann, Ph.D., *Visiting Associate in Biology*
M.A., Swiss Federal Institute of Technology, 1974; Ph.D., 1977. Assistant Professor, Childrens Hospital of Los Angeles, 1990-. Caltech, 1992-93.
- H. Frederic Bohnenblust, Ph.D., *Professor of Mathematics, Emeritus*
A.B., Federal Institute of Technology (Zurich), 1928; Ph.D., Princeton University, 1931. Professor, Caltech, 1946-74; Professor Emeritus, 1974-. Dean of Graduate Studies, 1956-70; Executive Officer for Mathematics, 1964-66.
- Nancy M. Bonini, Ph.D., *Senior Research Fellow in Biology*
A.B., Princeton University, 1981; Ph.D., University of Wisconsin (Madison), 1987. Research Fellow, Caltech, 1988-91; Senior Research Fellow, 1991-94.
- James F. Bonner, Ph.D., *Professor of Biology, Emeritus*
B.A., University of Utah, 1931; Ph.D., Caltech, 1934. Research Assistant, 1935-36; Instructor, 1936-38; Assistant Professor, 1938-42; Associate Professor, 1942-46; Professor, 1946-81; Professor Emeritus, 1981-.

- Kim Christian Border, Ph.D., *Associate Professor of Economics*
B.S., Caltech, 1974; Ph.D., University of Minnesota, 1979. Assistant Professor, Caltech, 1979-83; Associate Professor, 1983-.
- Peter L. Bossaerts, Ph.D., *Associate Professor of Finance*
Doctorate, Universitaire Faculteiten Sint Ignatius (Belgium), 1982; Ph.D., University of California (Los Angeles), 1986. Assistant Professor, 1990-94; Associate Professor, 1994-.
- Michel Boudart, Ph.D., *Sherman Fairchild Distinguished Scholar*
Cand. Ing., Catholic University of Louvain, 1944; Ing., 1947; Ph.D., Princeton University, 1950. Keck Professor of Engineering, Stanford University, 1980-. Caltech, 1994.
- James Mason Bower, Ph.D., *Associate Professor of Biology*
B.S., Montana State University, 1977; Ph.D., University of Wisconsin (Madison), 1981. Assistant Professor, Caltech, 1984-90; Associate Professor, 1990-.
- Robert C. Bowman, Jr., Ph.D., *Visiting Associate in Materials Science*
B.S., Miami University, 1967; M.S., Massachusetts Institute of Technology, 1969; Ph.D., Caltech, 1983. Senior Specialist, Aerojet Electronic Systems Division, 1990-. Visiting Associate, Caltech, 1991-94.
- James Boyk, M.F.A., *Lecturer in Electrical Engineering/Music*
B.A., Harvard College, 1965; M.F.A., California Institute of the Arts, 1973. Lecturer in Music, Caltech, 1979-86; Artist in Residence, 1979-; Lecturer in Electrical Engineering/Music, 1987-.
- David Carlson Bradley, Ph.D., *Research Fellow in Biology*
A.B., University of California (Davis), 1984; Ph.D., University of Southern California, 1992. Caltech, 1993-94.
- John Francis Brady, Ph.D., *Professor of Chemical Engineering; Executive Officer for Chemical Engineering*
B.S., University of Pennsylvania, 1975; M.S., Stanford University, 1977; Ph.D., 1981. Associate Professor, Caltech, 1985-89; Professor, 1990-. Executive Officer, 1993-.
- Vladimir B. Braginsky, D.Sc., *Visiting Associate in Physics*
M.S., Moscow University, 1954; Ph.D., 1959. Professor, Moscow State University, 1986-. Sherman Fairchild Distinguished Scholar, Caltech, 1990-91; Visiting Associate, 1994.
- Teresa Gail Brainerd, Ph.D., *Research Fellow in Theoretical Astrophysics*
B.Sc., University of Alberta, 1987; Ph.D., Ohio State University, 1992. Caltech, 1992-94.
- Jochen Braun, Ph.D., *Senior Research Fellow in Biology*
B.A., University of Tübingen, 1979; Ph.D., University of California, 1985. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-95.
- Louis Breger, Ph.D., *Professor of Psychoanalytic Studies*
B.A., University of California (Los Angeles), 1957; M.A., Ohio State University, 1959; Ph.D., 1961. Visiting Associate Professor of Psychology, Caltech, 1970-71; Associate Professor, 1971-80; Associate Professor of Psychology and the Humanities, 1980-83; Professor of Psychoanalytic Studies, 1983-.
- Christopher E. Brennen, D.Phil., *Professor of Mechanical Engineering; Executive Officer for Mechanical Engineering*
B.A., University of Oxford, 1963; M.A., D.Phil., 1966. Research Fellow, Caltech, 1969-72; Senior Research Fellow, 1972-75; Research Associate, 1975-76; Associate Professor, 1976-82; Professor, 1982-. Master of Student Houses, 1983-87; Dean of Students, 1988-92; Executive Officer, 1993-.
- Daniel L. Bridges, Ph.D., *Director of Physical Education and Athletics*
B.A., California State University (Long Beach), 1977; M.A., 1982; Ph.D., University of Southern California, 1989. Coach, Caltech, 1984-89; Director, 1989-.
- William Bruce Bridges, Ph.D., *Carl F Braun Professor of Engineering*
B.S., University of California, 1956; M.S., 1957; Ph.D., 1962. Sherman Fairchild Distinguished Scholar, Caltech, 1974-75; Professor of Electrical Engineering and Applied Physics, 1977-83; Braun Professor, 1983-. Executive Officer for Electrical Engineering, 1978-81.
- Roy J. Britten, Ph.D., *Distinguished Carnegie Senior Research Associate in Biology*
B.S., University of Virginia, 1940; Ph.D., Princeton University, 1951. Visiting Associate, Caltech, 1971-73; Senior Research Associate, 1973-81; Distinguished Carnegie Senior Research Associate, 1981-.
- James E. Broadwell, Ph.D., *Visiting Associate in Aeronautics*
B.S., Georgia Institute of Technology, 1942; M.S., Caltech, 1944; Ph.D., University of Michigan, 1953. Consultant, 1991-. Senior Research Fellow, Caltech, 1967-72; Research Associate, 1972-85; Member of the Professional Staff, 1985-92; Visiting Associate, 1992-94.
- Charles Jacob Brokaw, Ph.D., *Professor of Biology*
B.S., Caltech, 1955; Ph.D., University of Cambridge, 1958. Visiting Assistant Professor, Caltech, 1960; Assistant Professor, 1961-63; Associate Professor, 1963-68; Professor, 1968-. Executive Officer for Biology, 1976-80; 1985-89; Associate Chair of the Division of Biology, 1980-85.

- Norman Herrick Brooks, Ph.D., *James Irvine Professor of Environmental and Civil Engineering*
A.B., Harvard College, 1949; M.S., Harvard University, 1950; Ph.D., Caltech, 1954. Instructor in Civil Engineering, 1953-54; Assistant Professor, 1954-58; Associate Professor, 1958-62; Professor, 1962-70; Professor of Environmental Science and Civil Engineering, 1970-76; Irvine Professor of Environmental Engineering Science, 1976-77; Irvine Professor of Environmental and Civil Engineering, 1977-. Academic Officer for Environmental Engineering Science, 1972-74; Director, Environmental Quality Laboratory, 1974-93. Executive Officer for Environmental Engineering Science, 1985-93.
- Harold Brown, Ph.D., D.Eng., LL.D., Sc.D., D.h.c., *President Emeritus*
A.B., Columbia College, 1945; A.M., Columbia University, 1946; Ph.D., 1949; D.Eng. h.c., Stevens Institute; LL.D.h.c., Long Island University; Gettysburg College; Occidental College; University of California; Sc.D.h.c., University of Rochester; Brown University; University of South Carolina; Franklin and Marshall College; Chung-Ang University (Seoul); D.h.c., RAND Graduate School. President, Caltech, 1969-77; President Emeritus, 1991-.
- Lee F. Browne, M.S., *Lecturer in Education, Emeritus*
B.S., West Virginia State College, 1944; M.S., New York University, 1950. Director of Secondary School Relations, Caltech, 1969-77; Director of Secondary School Relations and Special Student Programs, 1977-90; Lecturer, 1971-90; Lecturer Emeritus, 1990-.
- Jehoshua Bruck, Ph.D., *Associate Professor of Computation and Neural Systems and Electrical Engineering*
B.Sc., Technion Institute of Technology, 1982; M.Sc., 1985; Ph.D., Stanford University, 1989. Caltech, 1994-.
- Glenn L. Brudvig, M.A., *Director of Libraries*
B.S.Ed., University of North Dakota, 1954; M.A. (History), 1956; M.A. (Library Science), University of Minnesota, 1962. Director of Information Resources, Caltech, 1983-89; Director of Libraries, 1989-.
- Helmut Brunar, Ph.D., *Research Fellow in Chemistry*
B.S., Technical University of Vienna, 1989; M.S., 1991; Ph.D., University of Frankfurt, 1993. Caltech, 1994-95.
- Lorna A. Brundage, Ph.D., *Research Fellow in Biology*
B.S., Harvard University, 1983; Ph.D., University of California (Los Angeles), 1992; Caltech, 1993-.
- Ratnakumar Bugga, Ph.D., *Visiting Associate in Materials Science*
B.S., Silver Jubilee College (India), 1975; M.S., Sri Venkateswara University, 1977; Ph.D., Indian Institute of Science, 1983. Member of Technical Staff, Jet Propulsion Laboratory, 1990-. Caltech, 1994-.
- Gail D. Burd, Ph.D., *Visiting Associate in Biology*
B.A., Trentub State College, 1974; Ph.D., University of North Carolina (Chapel Hill), 1979. Associate Professor, University of Arizona, 1992-. Caltech, 1993-94.
- Joel W. Burdick, Ph.D., *Associate Professor of Mechanical Engineering*
B.S., Duke University, 1981; M.S., Stanford University, 1982; Ph.D., 1988. Assistant Professor, 1988-94; Associate Professor, 1994-.
- Peter M. Burgess, D.Phil., *Research Fellow in Geology*
B.Sc., University of Nottingham (United Kingdom), 1989; M.Sc., University of Keele, 1990; D.Phil., University of Oxford, 1993. Caltech, 1994-.
- Wilhelm Pascal Burmeister, Ph.D., *Research Fellow in Biology*
Ph.D., Universite Joseph Fourier (Grenoble), 1992. Caltech, 1992-94.
- Donald Stacy Burnett, Ph.D., *Professor of Nuclear Geochemistry*
B.S., University of Chicago, 1959; Ph.D., University of California, 1963. Research Fellow in Physics, Caltech, 1963-65; Assistant Professor of Nuclear Geochemistry, 1965-68; Associate Professor, 1968-75; Professor, 1975-. Academic Officer, 1979-87.
- Ralph Busch, Ph.D., *Research Fellow in Materials Science*
B.S., Georg-August Universitat ze Gottingen, 1985; M.S., 1988; Ph.D., 1992. Caltech, 1993-94.
- Ronald Lee Bush, Ph.D., *Professor of Literature*
B.A., University of Pennsylvania, 1968; B.A., Pembroke College, University of Cambridge, 1970; Ph.D., Princeton University, 1974. Associate Professor, Caltech, 1982-85; Professor, 1985-.
- Daniel A. Buttry, Ph.D., *Visiting Professor of Chemistry*
B.A., University of Colorado, 1979; Ph.D., Caltech, 1983. Professor, University of Wyoming, 1992-. Visiting Professor, Caltech, 1994.

- Alexander Byrne, Ph.D., *Instructor in Philosophy*
B.Sc., University College, Durham University, 1981; B.A., Birkbeck College, London University, 1988; M.A. (Philosophy), King's College, London University, 1989; M.A. (Philosophy), Princeton University, 1991; Ph.D., 1993. Caltech, 1993-.
- Miguel A. Cambor, Ph.D., *Visiting Associate in Chemical Engineering*
B.Sc., Universidad Autonoma de Madrid, 1985; Ph.D., 1992. Researcher, Institute of Chemical Technology, 1987-. Caltech, 1992-94.
- Colin F. Camerer, Ph.D., *Rea A. and Lela G. Axline Professor of Business Economics*
B.A., Johns Hopkins University, 1976; M.B.A., University of Chicago, 1979; Ph.D., 1981. Visiting Associate, Caltech, 1993; Axline Professor, 1994-.
- Robert Andrew Cameron, Ph.D., *Senior Research Associate in Biology*
B.A., San Jose State College, 1968; Ph.D., University of California (Santa Cruz), 1975. Visiting Associate, Caltech, 1984-85; Senior Research Fellow, 1985-89; Senior Research Associate, 1989-.
- Judith Lynn Campbell, Ph.D., *Professor of Chemistry and Biology*
B.A., Wellesley College, 1965; Ph.D., Harvard University, 1974. Assistant Professor of Chemistry, Caltech, 1977-83; Associate Professor, 1983-85; Associate Professor of Chemistry and Biology, 1985-89; Professor, 1989-.
- Greg Scott Cardell, Ph.D., *Research Fellow in Aeronautics*
B.A., Reed College, 1981; M.S., Caltech, 1986; Ph.D., 1993. Research Fellow, 1993.
- Cheryl M. Carey, Ph.D., *Research Fellow in Applied Mathematics*
B.S., University of Liverpool, 1987; M.S. Brunel University, 1988; Ph.D., 1992. Caltech, 1993-95.
- John E. Carlstrom, Ph.D., *Associate Professor of Astronomy*
A.B., Vassar College, 1981; Ph.D., University of California, 1988. Millikan Research Fellow, Caltech, 1989-91; Assistant Professor, 1991-94; Associate Professor, 1994-.
- Oliver H. Carnal, Ph.D., *Research Fellow in Physics*
M.S., Institute of Solid State Physics, 1988; Ph.D., Swiss Federal Institute of Technology, 1991. Caltech, 1992-94.
- Phillip B. Carpenter, Ph.D., *Research Fellow in Biology*
B.S., University of California (Santa Barbara), 1988; Ph.D., University of Illinois, 1993. Caltech, 1994-95.
- Erick M. Carreira, Ph.D., *Assistant Professor of Chemistry*
B.S., University of Illinois (Urbana-Champaign), 1984; Ph.D., Harvard University, 1989. Research Fellow, Caltech, 1989-92; Assistant Professor, 1992-.
- Stephen J. Carter, Ph.D., *Division Research Fellow in Theoretical Physics*
B.S., University of Auckland, 1986; M.S., 1988; Ph.D., University of Queensland, 1993. Caltech, 1993-.
- Glen R. Cass, Ph.D., *Professor of Environmental Engineering and Mechanical Engineering*
B.A., University of Southern California, 1969; M.S., Stanford University, 1970; Ph.D., Caltech, 1978. Senior Research Fellow and Instructor, 1977-79; Assistant Professor, 1979-85; Associate Professor of Environmental Engineering, 1985-88; Associate Professor of Environmental Engineering and Mechanical Engineering, 1988-90; Professor, 1990-.
- Thomas Kirk Caughey, Ph.D., *Richard L. and Dorothy M. Hayman Professor of Mechanical Engineering*
B.Sc., Glasgow University, 1948; M.M.E., Cornell University, 1952; Ph.D., Caltech, 1954. Instructor in Applied Mechanics, 1953-54; Assistant Professor, 1955-58; Associate Professor, 1958-62; Professor, 1962-88; Professor of Applied Mechanics and Mechanical Engineering, 1988-94; Hayman Professor, 1994-.
- German Cavalier, D.E.A., *Visiting Associate in Biology*
Dipl., Universidad de los Andes (Colombia), 1972; Maitrise, Universite de Toulouse, 1973; D.E.A., Universite de Grenoble, 1974. Professor, Universidad de los Andes, 1974-. Caltech, 1992-93.
- Susan Elizabeth Celniker, Ph.D., *Senior Research Associate in Biology*
B.A., Pitzer College, 1975; Ph.D., University of North Carolina, 1983. Research Fellow, Caltech, 1984-86; Senior Research Fellow, 1986-92; Senior Research Associate, 1992-.
- Stephanie T. Chacon, Ph.D., *James Irvine Foundation Research Fellow in Chemistry*
B.Sc., University of British Columbia, 1982; M.Sc., 1986; Ph.D., Indiana University, 1992. Caltech, 1992-94.
- Michael K. Chan, Ph.D., *Research Fellow in Chemistry*
B.S., Harvey Mudd College, 1986; Ph.D., University of California, 1991. Caltech, 1991-95.

- Sunney Ignatius Chan, Ph.D., *George Grant Hoag Professor of Biophysical Chemistry*
 B.S., University of California, 1957; Ph.D., 1961. Assistant Professor of Chemical Physics, Caltech, 1963-64; Associate Professor, 1964-68; Professor, 1968-76; Professor of Chemical Physics and Biophysical Chemistry, 1976-92; Hoag Professor of Biophysical Chemistry, 1992-. Acting Executive Officer for Chemistry, 1977-78; Executive Officer, 1978-80; 1989-94; Master of Student Houses, 1980-83.
- Parkash Chander, Ph.D., *Visiting Professor of Economics*
 M.A., Panjab University, 1969; Ph.D., Indian Statistical Institute, 1975. Professor of Economics, 1985-. Caltech, 1988; 1991-92; 1994-95.
- Kanianthra Mani Chandu, Ph.D., *Professor of Computer Science*
 B.Tech., Indian Institute of Technology, 1965; M.S., Polytechnic Institute of Brooklyn, 1966; Ph.D., Massachusetts Institute of Technology, 1969. Sherman Fairchild Distinguished Scholar, Caltech, 1988; Visiting Professor, 1988-89; Professor, 1989-.
- Caren Chang, Ph.D., *Research Fellow in Biology*
 A.B., University of California, 1982; Ph.D., Caltech, 1988. Visiting Associate, Caltech, 1990-91; Research Fellow, 1991-94.
- Xiao Yan Chang, Ph.D., *Research Fellow in Chemistry*
 B.Sc., Jilin University (China), 1985; M.Sc., 1988; Ph.D., University of Liverpool, 1992. Caltech, 1993-.
- Yu-Chung Chang, Ph.D., *Research Fellow in Applied Mathematics*
 B.S., Fu-Jen University (Taiwan), 1981; M.S., Fu-Jen University (Taiwan), 1983. M.S., University of California (Los Angeles), 1986; Ph.D., 1991. Caltech, 1993-94.
- Barbara Chapman, Ph.D., *Research Fellow in Biology*
 A.B., Harvard-Radcliffe College, 1984; Ph.D., University of California (San Francisco), 1991. Caltech, 1992-95.
- Charles Chavkin, Ph.D., *Visiting Associate Professor of Computation and Neural Systems and Environmental Engineering Science*
 B.A., Cornell University, 1974; Ph.D., Stanford University, 1982. Associate Professor, University of Washington, 1984-; Associate Director, 1991-. Visiting Associate, Caltech, 1991-92; Wiersma Visiting Professor, 1992-93; Visiting Associate Professor, 1993-.
- Chao-Tsen Chen, Ph.D., *Research Fellow in Chemical Engineering*
 B.S., National Taiwan University, 1986; M.S., University of California (San Diego), 1989; Ph.D., 1993. Caltech, 1994-95.
- Chin-Ti Chen, Ph.D., *Research Fellow in Chemistry*
 B.S., TamKang University, 1982; M.S., National Taiwan University, 1984; Ph.D., University of Illinois (Urbana-Champaign), 1992. Caltech, 1992-94.
- Cong-yan Chen, Ph.D., *Research Fellow in Chemical Engineering*
 B.S., Huadong Petroleum Institute (China), 1982; Dipl., University of Karlsruhe (Germany), 1986; Ph.D., University of Oldenburg, 1989. Visiting Associate, Caltech, 1991-92; Research Fellow, 1992-94.
- Jeannie Chen, Ph.D., *Research Fellow in Biology*
 B.A., Occidental College, 1983; Ph.D., University of Southern California, 1990. Research Fellow, Caltech, 1990-94; Senior Research Fellow, 1994-95.
- Jimin Chen, B.S., *Visiting Associate in Solar Astronomy*
 B.S., Yunnan University (China), 1982. Assistant Scientist, Beijing Astronomical Observatory, Chinese Academy of Sciences, 1982-. Caltech, 1993-.
- Tirong Chen, M.S., *Visiting Associate in Applied Physics*
 M.S., Wuhan University (China), 1962. Professor, Chengdu Institute of Radio Engineering, 1962-. Caltech, 1980-82; 1985-.
- Tsuan Chen, Ph.D., *Research Fellow in Electrical Engineering*
 B.S., National Taiwan University, 1987; M.S., Caltech, 1990; Ph.D., 1993. Research Fellow, 1993-.
- Xiaojie Chen, Ph.D., *Research Fellow in Chemistry*
 M.S., International School for Advanced Studies (Italy), 1990; Ph.D., 1990. Caltech, 1992-94.
- Yu Chen, M.S., *Visiting Associate in Physics*
 B.S., Peking University, 1986; M.S., Academia Sinica, 1990. Research Associate, 1993-. Caltech, 1994.
- Jr-Gang Cheng, Ph.D., *Research Fellow in Biology*
 B.S., National Taiwan University, 1985; M.S., 1989; Ph.D., Mount Sinai School of Medicine, City University of New York, 1994. Caltech, 1994-95.
- Po-Yuan James Cheng, Ph.D., *Research Fellow in Chemistry*
 B.S., Fu-Jen University (Taiwan), 1983; Ph.D., University of Georgia, 1990. Caltech, 1994-95.

- George Cheron, Ph.D., *Lecturer in Russian*
B.A., University of California (Irvine), 1974;
M.A., University of California (Los Angeles),
1976; C.Phil., 1978; Ph.D., 1982. Caltech,
1982-.
- John P. Chesick, Ph.D., *Visiting Associate in
Chemistry*
B.S., Purdue University, 1954; Ph.D., Harvard
University, 1958. Professor, Haverford College,
1968-. Caltech, 1993-94.
- Tsung-Mei Chin, Ph.D., *Research Fellow in
Biology*
B.S., Taiwan University, 1986; Ph.D., University
of Chicago, 1992. Caltech, 1993-94.
- Andrei Y. Chistoserdov, Ph.D., *Senior
Research Fellow in Environmental
Engineering Science*
B.S., Moscow University, 1982; Ph.D., Institute
for Genetics and Selection of Industrial Micro-
organisms (Moscow), 1985. Visiting Associate,
Caltech, 1991; Senior Research Fellow, 1991-.
- Ludmila V. Chistoserdova, Ph.D., *Senior
Research Fellow in Environmental
Engineering Science*
B.S., Gorky State University (U.S.S.R.), 1983;
M.S., 1983; Ph.D., Institute for Genetics and
Selection of Industrial Microorganisms
(Moscow), 1988. Research Fellow, Caltech,
1990-93; Senior Research Fellow, 1993-.
- Peter Cho, Ph.D., *Lee A. DuBridge Research
Fellow in Physics*
B.S., Caltech, 1987; M.A., Harvard University,
1989; Ph.D., 1992. Research Fellow, Caltech,
1992-95.
- Kwang-Wook Choi, Ph.D., *Senior Research
Fellow in Biology*
B.S., Seoul National University, 1977; M.S.,
1979; Ph.D., Princeton University, 1988.
Research Fellow, Caltech, 1989-92; Senior
Research Fellow, 1992-95.
- Anne Chomyn, Ph.D., *Senior Research
Associate in Biology*
B.S., Drexel University, 1972; Ph.D., Caltech,
1978. Research Fellow, 1978-82; Senior
Research Fellow, 1982-87; Senior Research
Associate, 1988-.
- David H. Chow, Ph.D., *Visiting Associate in
Applied Physics*
B.S., Case Western Reserve University, 1984;
M.S., Caltech, 1986; Ph.D., 1989. Member of
Technical Staff, Hughes Research Laborato-
ries, 1990-. Research Fellow, Caltech, 1989-90;
Visiting Associate, 1991-94.
- Robert Frederick Christy, Ph.D., *Institute
Professor of Theoretical Physics, Emeritus*
B.A., University of British Columbia, 1935;
Ph.D., University of California, 1941. Associate
Professor of Physics, Caltech, 1946-50;
Professor of Theoretical Physics, 1950-83;
Institute Professor, 1983-85; Institute Professor
Emeritus, 1986-. Executive Officer for Physics,
1968-70; Vice President and Provost, 1970-80;
Acting President, 1977-78.
- Ming-Chung Chu, Ph.D., *Senior Research
Fellow in Physics*
B.S., Caltech, 1983; Ph.D., 1987. Research
Fellow, 1987-90; Senior Research Fellow,
1990-.
- J. Kent Clark, Ph.D., *Professor of Literature,
Emeritus*
A.B., Brigham Young University, 1939; Ph.D.,
Stanford University, 1950. Instructor in
English, Caltech, 1947-50; Assistant Professor,
1950-54; Associate Professor, 1954-60;
Professor, 1960-80; Professor of Literature,
1980-86; Professor Emeritus, 1986-.
- Francis H. Clauser, Ph.D., *Clark Blanchard
Millikan Professor of Engineering, Emeritus*
B.S., Caltech, 1934; M.S., 1935; Ph.D., 1937.
Clark Blanchard Millikan Professor of Engi-
neering, 1969-80; Millikan Professor Emeritus,
1980-. Chair, Division of Engineering and
Applied Science, 1969-74.
- Robert Webster Clayton, Ph.D., *Professor of
Geophysics; Executive Officer for Geophysics*
B.A.Sc., University of Toronto, 1973; M.Sc.,
University of British Columbia, 1976; Ph.D.,
Stanford University, 1981. Assistant Professor
of Exploration Geophysics, Caltech, 1981-85;
Associate Professor, 1985-89; Professor of
Geophysics, 1989-. Executive Officer, 1987-;
Acting Director, Seismological Laboratory,
1989; Deputy Director, 1989-90.
- Andrew N. Cleland, Ph.D., *Research Fellow in
Physics*
B.S., University of California, 1983; Ph.D.,
1991. Caltech, 1993-95.
- Geoffrey W. Coates, Ph.D., *Arthur Amos
Noyes Research Fellow in Chemistry*
B.A., Wabash College (Indiana), 1989; Ph.D.,
Stanford University, 1993. Caltech, 1994-95.
- James A. Coffman, Ph.D., *Senior Research
Fellow in Biology*
B.A., Carleton College, 1981; Ph.D., Duke
University, 1990. Research Fellow, Caltech,
1990-93; Senior Research Fellow, 1993-.
- Bruce N. Cohen, Ph.D., *Visiting Associate in
Biology*
B.A., Brandeis University, 1975; Ph.D., State
University of New York (Albany), 1985.
Research Fellow, Caltech, 1989-92; Senior
Research Fellow, 1992-94; Visiting Associate,
1994-95.

- Donald S. Cohen, Ph.D., *Professor of Applied Mathematics*
 Sc.B., Brown University, 1956; M.S., Cornell University, 1959; Ph.D., Courant Institute, New York University, 1962. Assistant Professor of Mathematics, Caltech, 1965-67; Associate Professor of Applied Mathematics, 1967-71; Professor, 1971-. Executive Officer for Applied Mathematics, 1988-93; Chair, Division of Engineering and Applied Science, 1990.
- Judith G. Cohen, Ph.D., *Professor of Astronomy*
 B.A., Radcliffe College, 1967; M.S., Caltech, 1969; Ph.D., 1971; B.S., University of Arizona, 1978. Associate Professor, Caltech, 1979-88; Professor, 1988-.
- Linda R. Cohen, Ph.D., *Visiting Associate Professor of Economics*
 A.B., University of California, 1974; Ph.D., Caltech, 1979. Caltech, 1993-94.
- Marshall Harris Cohen, Ph.D., *Professor of Astronomy*
 B.E.E., Ohio State University, 1948; M.S., 1949; Ph.D., 1952. Visiting Associate Professor, Caltech, 1965; Professor of Radio Astronomy, 1968-90; Professor of Astronomy, 1990-. Executive Officer for Astronomy, 1981-85.
- Monica F. Cohen, Ph.D., *Assistant Professor of Literature*
 B.A., Yale University, 1987; M.A., Columbia University, 1988; M. Phil., 1990; Ph.D., 1994. Caltech, 1994-.
- Susana Cohen-Cory, Ph.D., *Research Fellow in Biology*
 B.S., Universidad Nacional Autonoma de Mexico, 1984; M.S., 1987; Ph.D., Rockefeller University, 1991. Caltech, 1991-94.
- Terry Cole, Ph.D., *Senior Faculty Associate in Chemistry and Chemical Engineering*
 B.S., University of Minnesota, 1954; Ph.D., Caltech, 1958. Senior Member of the Technical Staff, Jet Propulsion Laboratory, 1980-. Sherman Fairchild Distinguished Scholar, Caltech, 1976-77; Research Associate in Chemistry, 1979-80; Research Associate in Chemistry and Chemical Engineering, 1980-81; Senior Research Associate, 1981-86; Lecturer, 1986; Faculty Associate, 1986-88; Senior Faculty Associate, 1988-.
- Thomas R. Coleman, Ph.D., *Senior Research Fellow in Biology*
 B.A., Dartmouth College, 1983; M.S., Yale University, 1985; M.Ph., 1985; Ph.D., 1988. Research Fellow, Caltech, 1988-91; Senior Research Fellow, 1991-94.
- Donald Earl Coles, Ph.D., *Professor of Aeronautics*
 B.S., University of Minnesota, 1947; M.S., Caltech, 1948; Ph.D., 1953. Research Fellow, 1953-55; Senior Research Fellow, 1955-56; Assistant Professor, 1956-59; Associate Professor, 1959-64; Professor, 1964-.
- Terry R. Coley, Ph.D., *Visiting Associate in Chemistry*
 B.S., University of Illinois, 1985; Ph.D., Caltech, 1993. Consultant, Vestar, Inc., 1993-. Visiting Associate, Caltech, 1994-95.
- Andres Collazo, Ph.D., *Research Fellow in Biology*
 B.S., Cornell University, 1985; Ph.D., University of California, 1990. Caltech, 1991-94.
- Douglas A. Collins, Ph.D., *Research Fellow in Applied Physics*
 B.A., Westmont College, 1986; M.S., Caltech, 1990; Ph.D., 1993. Research Fellow, 1993-94.
- Timothy Colonius, Ph.D., *Assistant Professor of Mechanical Engineering*
 B.S., University of Michigan (Ann Arbor), 1987; M.S., Stanford University, 1988; Ph.D., 1993. Caltech, 1994-.
- Barry Condron, Ph.D., *Research Fellow in Biology*
 B.Sc., University of College Clark (Ireland), 1985; Ph.D., University of Utah, 1991. Caltech, 1991-94.
- Alessandra Conforto, M.D., *James A. Boswell Research Fellow in Environmental Engineering Science*
 M.D., Universita De Firenze (Italy), 1991. Caltech, 1993-94.
- Kathy J. Cooke, M.A., *Lecturer in History*
 B.A., Calvin College, 1986; M.A., University of Chicago, 1987. Caltech, 1993.
- Reid F. Cooper, Ph.D., *Visiting Professor of Geology*
 B.S., George Washington University, 1977; M.S., Cornell University, 1980; Ph.D., 1983. Professor, University of Wisconsin (Madison), 1986-. Caltech, 1994.
- Noel Robert Corngold, Ph.D., *Professor of Applied Physics*
 A.B., Columbia College, 1949; A.M., Harvard University, 1950; Ph.D., 1954. Professor of Applied Science, Caltech, 1966-74; Professor of Applied Physics, 1974-.
- Vincent Courtillot, Ph.D., *Sherman Fairchild Distinguished Scholar*
 M.S., Stanford University, 1972; Ph.D., University of Paris VI, 1974; Ph.D., University of Paris VII, 1977. Physicien de classe exceptionnelle and Head, Department of Geomagnetism and Paleomagnetism, Institute de Physique du Globe de Paris, 1989-. Caltech, 1994.

- Eugene Woodville Cowan, Ph.D., *Professor of Physics, Emeritus*
B.S., University of Missouri, 1941; S.M., Massachusetts Institute of Technology, 1943; Ph.D., Caltech, 1948. Research Fellow, 1948-50; Assistant Professor, 1950-54; Associate Professor, 1954-61; Professor, 1961-86; Professor Emeritus, 1986-.
- Douglas F. Cowen, Ph.D., *Senior Research Fellow in Physics*
B.A., Dartmouth College, 1983; Ph.D., University of Wisconsin (Madison), 1990. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-.
- Fiona Cowie, Ph.D., *Assistant Professor of Philosophy*
B.A., University of Sydney, 1987; M.A., Princeton University, 1991; Ph.D., Princeton University, 1992. Caltech, 1992-.
- Edward T. Croke III, Ph.D., *Visiting Associate in Applied Physics*
B.S., Cornell University, 1986; Ph.D., Caltech, 1991. Member of the Technical Staff, Hughes Research Laboratories, 1991-. Visiting Associate, Caltech, 1992-95.
- Michael Clifford Cross, Ph.D., *Professor of Theoretical Physics*
B.A., University of Cambridge, 1972; Ph.D., 1975. Caltech, 1984-.
- Robyn Leslie Crumbie, Ph.D., *Visiting Associate in Chemistry*
B.Sc., University of Sydney, 1976; Ph.D., 1981. Caltech, 1993-94.
- Attila Csoto, Ph.D., *Visiting Associate in Theoretical Physics*
M.S., Kossuth University (Hungary), 1989; Ph.D., 1992. Research Fellow, Institute of Nuclear Research, Hungarian Academy of Sciences, 1992-. Caltech, 1993-94.
- Slobodan M. Cuk, Ph.D., *Associate Professor of Electrical Engineering*
Dipl. Ing., Belgrade University, 1970; M.S.E.E., University of Santa Clara, 1974; Ph.D., Caltech, 1977. Lecturer, 1977; Research Fellow, 1977; Assistant Professor, 1977-83; Associate Professor, 1983-.
- Fred E. C. Culick, Ph.D., *Professor of Mechanical Engineering and Jet Propulsion*
S.B., S.M., Massachusetts Institute of Technology, 1957; Ph.D., 1961. Research Fellow in Jet Propulsion, Caltech, 1961-63; Assistant Professor, 1963-66; Associate Professor, 1966-71; Professor, 1971-78; Professor of Applied Physics and Jet Propulsion, 1978-88; Professor of Mechanical Engineering and Jet Propulsion, 1988-.
- Jay R. Cummings, Ph.D., *Senior Research Fellow in Physics*
B.A., Carleton College, 1982; Ph.D., University of Minnesota, 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-95.
- John M. D'Auria, M.A., *Coach*
A.A., Pasadena City College, 1972; B.A., California State University, 1974; M.A., Azusa Pacific University, 1988. Caltech, 1989-.
- Dana Dabiri, Ph.D., *Research Fellow in Aeronautics*
B.S., University of California (San Diego), 1985; M.S., University of California, 1987; Ph.D., University of California (San Diego), 1992. Caltech, 1993-95.
- Hananel Davidowitz, Ph.D., *Chaim Weizmann Research Fellow in Biology*
B.Sc., Israel Institute of Technology, 1981; M.Sc., The Weizmann Institute of Science, 1986; Ph.D., 1993. Visiting Associate, Caltech, 1992-93; Weizmann Research Fellow, 1993-94.
- Eric Harris Davidson, Ph.D., *Norman Chandler Professor of Cell Biology*
B.A., University of Pennsylvania, 1958; Ph.D., Rockefeller University, 1963. Visiting Assistant Professor of Biology, Caltech, 1970; Associate Professor, 1971-74; Professor, 1974-81; Chandler Professor, 1982-.
- Norman Ralph Davidson, Ph.D., *Norman Chandler Professor of Chemical Biology, Emeritus; Executive Officer for Biology*
B.S., University of Chicago, 1937; B.Sc., University of Oxford, 1938; Ph.D., University of Chicago, 1941. Instructor in Chemistry, Caltech, 1946-49; Assistant Professor, 1949-52; Associate Professor, 1952-57; Professor, 1957-81; Chandler Professor of Chemical Biology, 1982-86; Chandler Professor Emeritus, 1986-. Executive Officer for Chemistry, 1967-73; Interim Chair, Division of Biology, 1989; Executive Officer, 1989-.
- Melvyn B. Davies, Ph.D., *Richard Chace Tolman Research Fellow in Theoretical Astrophysics*
B.A. Oxford University, 1988; A.M., Harvard University, 1989; Ph.D., 1992. Caltech, 1992-95.
- Andrew J. Davis, Ph.D., *Research Fellow in Physics*
B.A., Washington University, 1986; M.A., 1988; Ph.D., 1993. Caltech, 1993-95.
- Clayton A. Davis, Ph.D., *Senior Research Fellow in Biology*
B.Sc., Queen's University (Canada), 1984; M.Sc., 1986; Ph.D., University of Toronto, 1991. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-95.

- Lance Edwin Davis, Ph.D., *Mary Stillman Harkness Professor of Social Science*
B.A., University of Washington, 1950; Ph.D., Johns Hopkins University, 1956. Professor of Economics, Caltech, 1968–80; Harkness Professor, 1980–. Executive Officer for the Social Sciences, 1982–85.
- Leverett Davis, Jr., Ph.D., *Professor of Theoretical Physics, Emeritus*
B.S., Oregon State College, 1936; M.S., Caltech, 1938; Ph.D., 1941. Instructor, 1941–46; Assistant Professor, 1946–50; Associate Professor, 1950–56; Professor, 1956–81; Professor Emeritus, 1981–.
- Mark E. Davis, Ph.D., *Warren and Katharine Schlinger Professor of Chemical Engineering*
B.S., University of Kentucky, 1977; M.S., 1978; Ph.D., 1981. Professor, 1991–93; Schlinger Professor, 1993–.
- Reinaldo Ramos de Carvalho, Ph.D., *Research Fellow in Astronomy*
B.A., Universidade Federal do Rio de Janeiro, 1979; M.S., Observatorio Nacional (Brazil), 1983; Ph.D., 1988. Caltech, 1988–90; 1994–95.
- Eugenius J. de Geus, Ph.D., *Research Fellow in Astronomy*
B.Sc., University of Leiden, 1981; M.Sc., 1984; Ph.D., 1988. Caltech, 1993–94.
- Eric De Jong, Ph.D., *Visiting Associate in Planetary Science*
B.S., Massachusetts Institute of Technology, 1967; M.S., Stanford University, 1969; M.S., University of California (Santa Barbara), 1975; M.A., 1976; Ph.D., 1982. Adjunct Assistant Professor, University of California (Santa Barbara), 1988–. Caltech, 1989–94.
- Francisco Javier De La Mata, Ph.D., *Research Fellow in Chemistry*
M.S., Universidad de Alcala de Henares (Spain), 1989; Ph.D., 1992. Caltech, 1993–94.
- Erik De Schutter, M.D., Ph.D., *Visiting Associate in Biology*
Dipl., State University of Antwerp, 1980; M.D., University Institution of Antwerp, 1984; Ph.D., 1993. Postdoctoral Researcher, 1993–. Research Fellow, Caltech, 1990–93. Visiting Associate, 1994–95.
- David J. Dean, Ph.D., *Research Fellow in Physics*
B.S., University of Tennessee (Chattanooga), 1985; M.S., Vanderbilt University, 1989; Ph.D., 1991. Caltech, 1992–94.
- Richard Albert Dean, Ph.D., *Professor of Mathematics, Emeritus*
B.S., Caltech, 1945; A.B., Denison University, 1947; M.S., Ohio State University, 1948; Ph.D., 1953. Harry Bateman Research Fellow, Caltech, 1954–55; Assistant Researcher, 1955–59; Associate Professor, 1959–66; Professor, 1966–86; Professor Emeritus, 1987–.
- Peter B. Dervan, Ph.D., *Bren Professor of Chemistry; Chair, Division of Chemistry and Chemical Engineering*
B.S., Boston College, 1967; Ph.D., Yale University, 1972. Assistant Professor, Caltech, 1973–79; Associate Professor, 1979–82; Professor, 1982–88; Bren Professor, 1988–. Chair, 1994–.
- Chand J. Desai, Ph.D., *Senior Research Fellow in Biology*
A.B., University of California, 1980; Ph.D., Massachusetts Institute of Technology, 1988. Research Fellow, Caltech, 1988–92; Senior Research Fellow, 1992–95.
- Raymond Deshaies, Ph.D., *Assistant Professor of Biology*
B.S., Cornell University, 1983; Ph.D., University of California, 1988. Caltech, 1994–.
- Angel J. DiBilio, Ph.D., *Research Fellow in Chemistry*
Ph.D., Universita di Catania (Italy), 1989. Visiting Associate Caltech, 1990–92; Research Fellow, 1992–94.
- Lisa M. DiMagno, Ph.D., *Research Fellow in Biology*
B.S., University of California, 1988; Ph.D., University of Chicago, 1992. Caltech, 1992–94.
- Theodore J. DiMagno, Ph.D., *Research Fellow in Chemistry*
B.S., University of California, 1986; Ph.D., University of Chicago, 1992. Research Fellow, Caltech, 1992–94; Lecturer, 1993.
- Paul Emmanuel Dimotakis, Ph.D., *Professor of Aeronautics and Applied Physics*
B.S., Caltech, 1968; M.S., 1969; Ph.D., 1973. Research Fellow, 1973–74; Research Fellow and Lecturer, 1974–75; Assistant Professor, 1975–81; Associate Professor, 1981–85; Professor, 1986–.
- Wendy Jean Dixon, Ph.D., *Research Fellow in Chemistry*
B.A., Oberlin College, 1985; Ph.D., Johns Hopkins University, 1992. Caltech, 1992–94.
- Nabiha Djebaili, Ph.D., *Research Fellow in Aeronautics*
Ph.D., University of Orleans (France), 1993. Caltech, 1994.
- S. George Djorgovski, Ph.D., *Associate Professor of Astronomy*
B.A., University of Belgrade, 1979; M.A., University of California, 1981; Ph.D., 1985. Assistant Professor, Caltech, 1987–90; Associate Professor, 1990–.
- Allan C. Dobbins, Ph.D., *Research Fellow in Biology*
B.Sc., Dalhousie University (Canada), 1980; B.Eng., McGill University, 1985; M.Eng., 1988; Ph.D., 1993. Visiting Associate, Caltech, 1992–93; Research Fellow, 1993–94.

- Elizabeth G. Dobbins, Ph.D., *Research Fellow in Biology*
B.A., Auburn University, 1979; M.S., University of California (Los Angeles), 1986; Ph.D., 1993. Caltech, 1994-95.
- Clinton Dean Dodd, B.A., *Coach*
B.A., Humboldt State University, 1978. Caltech, 1980-.
- Richard E. Doherty, B.S., *Visiting Associate in Computation and Neural Systems*
B.S., Caltech, 1986. Vice President, Plan Beta Research, 1991-. Lecturer in Computer Science, Caltech, 1986; 1989-90; Visiting Associate in Computation and Neural Systems, 1993-95.
- Robert Jurgen Dohmen, Ph.D., *Research Fellow in Biology*
Dipl., University of Dusseldorf, 1985; Ph.D., 1988. Caltech, 1992-94.
- James F. Dolan, Ph.D., *Research Fellow in Geology*
B.S., University of California (Davis), 1981; Ph.D., University of California (Santa Cruz), 1988. Caltech, 1991-94.
- Dennis A. Dougherty, Ph.D., *Professor of Chemistry; Executive Officer for Chemistry*
B.S., M.S., Bucknell University, 1974; Ph.D., Princeton University, 1978. Assistant Professor, Caltech, 1979-85; Associate Professor, 1985-89; Professor, 1989-; Executive Officer, 1994-.
- Rodney J. Douglas, Ph.D., *Visiting Associate in Biology*
B.Sc., University of Cape Town, 1969; M.B., Ch.B., 1974; Ph.D., 1985. Senior Scientist, Medical Research Council, 1989-. Caltech, 1989; 1990-91; 1992; 1993; 1994-95.
- Craig A. Doupnik, Ph.D., *Research Fellow in Biology*
B.S., Ohio State University, 1984; M.S., University of Cincinnati, 1989; Ph.D., 1992. Caltech, 1993-95.
- John C. Doyle, Ph.D., *Professor of Electrical Engineering*
B.S., M.S., Massachusetts Institute of Technology, 1977; Ph.D., University of California, 1984. Visiting Assistant Professor of Electrical Engineering, Caltech, 1985; Visiting Associate Professor, 1986; Visiting Associate in Chemistry, 1986-87; Associate Professor in Electrical Engineering, 1987-91; Professor, 1991-.
- Ronald William Prest Drever, Ph.D., *Professor of Physics*
B.Sc., Glasgow University, 1953; Ph.D., 1958. Visiting Associate, Caltech, 1977; Professor, 1979-.
- William Jakob Dreyer, Ph.D., *Professor of Biology*
B.A., Reed College, 1952; Ph.D., University of Washington, 1956. Caltech, 1963-.
- Jinqiao Duan, Ph.D., *Instructor in Applied Mechanics*
B.S., Wuhan University, 1983; M.S., Chinese Academy of Sciences, 1988; M.S., University of Massachusetts, 1990; Ph.D., Cornell University, 1993. Caltech, 1993-.
- Jeffrey A. Dubin, Ph.D., *Associate Professor of Economics*
A.B., University of California, 1978; Ph.D., Massachusetts Institute of Technology, 1981. Assistant Professor, Caltech, 1982-88; Associate Professor, 1988-.
- Geir E. Dullerud, M.Sc., *Lecturer in Control and Dynamical Systems*
B.Sc., University of Toronto, 1988; M.Sc., 1990. Caltech, 1994.
- William G. Dunphy, Ph.D., *Assistant Professor of Biology; Assistant Investigator, Howard Hughes Medical Institute*
A.B., Harvard College, 1980; Ph.D., Stanford University, 1985. Caltech, 1989-; Assistant Investigator, 1994-.
- Cynthia M. Dupureur, Ph.D., *Research Fellow in Chemistry*
B.S., Southwest Missouri State University, 1987; Ph.D., Ohio State University, 1992. Caltech, 1992-94.
- Jens O. Duus, Ph.D., *Research Fellow in Chemistry*
M.Sc., The Technical University of Denmark, 1989; Ph.D., 1993. Caltech, 1993-.
- Keiichi Edamatsu, Ph.D., *Visiting Associate in Physics*
B.S., Tohoku University (Japan), 1981; M.S., 1983; Ph.D., 1987. Research Associate, 1987-. Caltech, 1994-95.
- Gerald Eigen, Ph.D., *Senior Research Fellow in Physics*
Ph.D., University of Munich, 1984. Research Fellow, Caltech, 1984-87; Senior Research Fellow, 1987-94; Lecturer, 1991; 1993.
- Fred H. Eisen, Ph.D., *Visiting Associate in Applied Physics*
B.S., Caltech, 1951; M.S., Princeton University, 1953; Ph.D., 1956. Consultant, Rockwell International Science Center, 1989-. Visiting Associate, Caltech, 1991-94.
- Mahmoud A. El-Gamal, Ph.D., *Assistant Professor of Economics*
B.A., The American University (Cairo), 1983; M.A., 1985; M.S., Stanford University, 1985; Ph.D., Northwestern University, 1988. Caltech, 1989-.

- Abdelkrim Elaagouby, Ph.D., *Research Fellow in Biology*
B.S., Université de Rennes, 1985; M.S., Université Claude Bernard Lyon 1, 1987; Ph.D., 1991. Research Fellow, Caltech, 1994-95.
- Charles Elachi, Ph.D., *Lecturer in Electrical Engineering and Planetary Science*
B.Sc., University of Grenoble, 1968; Dipl.Ing., Institut Polytechnique de Grenoble, 1968; M.S., Caltech, 1969; Ph.D., 1971; M.B.A., University of Southern California, 1978. Research Fellow, Caltech, 1971-73; Lecturer in Electrical Engineering, 1982-88; Lecturer in Electrical Engineering and Planetary Science, 1988-94.
- Fernando I. Elichirigoity, M.A., *Ahmanson Postdoctoral Instructor in History*
B.A., Principia College (Illinois), 1979; M.A., New School for Social Science (New York), 1984. Caltech, 1994-96.
- Heinz E. Eilersieck, Ph.D., *Associate Professor of History, Emeritus*
A.B., University of California (Los Angeles), 1942; M.A., 1948; Ph.D., 1955. Instructor, Caltech, 1950-55; Assistant Professor, 1955-60; Associate Professor, 1960-88; Associate Professor Emeritus, 1988-.
- David Clephan Elliot, Ph.D., *Professor of History, Emeritus*
M.A., St. Andrew's University, 1939; A.M., Harvard University, 1948; Ph.D., 1951; M.A., University of Oxford, 1956. Assistant Professor, Caltech, 1950-53; Associate Professor, 1953-60; Professor, 1960-86; Professor Emeritus, 1986-. Executive Officer for the Humanities and Social Sciences, 1967-71.
- Stuart Alan Ende, Ph.D., *Faculty Associate in Literature*
A.B., Cornell University, 1965; M.A., New York University, 1966; Ph.D., Cornell University, 1970. Assistant Professor of English, Caltech, 1970-74; Associate Professor, 1974-80; Associate Professor of Literature, 1980-90; Faculty Associate, 1990-.
- Sverre T. Eng, Ph.D., *Senior Faculty Associate in Applied Physics*
M.A., Chalmers University of Technology (Sweden), 1953; Ph.D., 1967. Professor and Director, Institute of Optoelectronics and Electrical Measurements, Chalmers University of Technology, 1971-. Senior Research Scientist, Jet Propulsion Laboratory, 1978-. Caltech, 1991-.
- Hermann Engelhardt, Dr.rer.Nat., *Senior Research Associate in Geophysics*
Dipl., Technical University of Munich, 1960; Dr.rer.Nat., 1974. Senior Research Fellow, Caltech, 1976-79; Visiting Associate, 1981; Senior Research Associate, 1988-.
- Jose-Antonio Enriquez, Ph.D., *Research Fellow in Biology*
B.S., University of Madrid, 1986; Ph.D., University of Zaragoza, 1992. Caltech, 1993-95.
- Adam L. Epstein, A.M., *Instructor in Mathematics*
A.B., A.M., Harvard University, 1986. Caltech, 1993-.
- Samuel Epstein, Ph.D., LL.D., *William E. Leonhard Professor of Geology, Emeritus*
B.Sc., University of Manitoba, 1941; M.Sc., 1942; Ph.D., McGill University, 1944; LL.D.h.c., University of Manitoba. Research Fellow in Geochemistry, Caltech, 1952-53; Senior Research Fellow, 1953-54; Associate Professor, 1954-59; Professor, 1959-84; Leonhard Professor, 1984-90; Leonhard Professor Emeritus, 1990-.
- Yigal Erel, Ph.D., *Visiting Associate in Environmental Engineering Science*
B.Sc., Hebrew University, 1983; M.Sc., 1985; Ph.D., Caltech, 1990. Associate Professor, Hebrew University, 1991-. Research Fellow, Caltech, 1991-92; Visiting Associate, 1992-93.
- Magda V. Ericson, Ph.D., *Visiting Associate in Physics*
Ph.D., Ecole Normale (Paris), 1958. Professor, University of Lyon, 1967-. Caltech, 1994.
- Torleif E. O. Ericson, Ph.D., *Visiting Associate in Physics*
Ph.D., University of Lund (Sweden), 1956. Senior Physicist, CERN, 1964-. Caltech, 1994.
- Thomas Ernst, Ph.D., *Visiting Associate in Chemistry*
Dipl., University of Freiburg (Germany), 1985; Ph.D., 1990. Senior Clinical Research Assistant, Huntington Medical Research Institute, 1992-. Caltech, 1992-94.
- James H. Espenson, Ph.D., *Visiting Associate in Chemistry*
B.S., Caltech, 1958; Ph.D., University of Wisconsin, 1962. Professor, Iowa State University, 1963-. Visiting Associate, Caltech, 1993-94.
- Robert N. Essick, Ph.D., *Visiting Professor of Literature*
B.A., University of California (Los Angeles), 1965; Ph.D., University of California (San Diego), 1969. Caltech, 1994-.
- Thomas Eugene Everhart, Ph.D., D.L., D.h.c., *President; Professor of Electrical Engineering and Applied Physics*
(See page 390.)
- Maurya Simon Falk, M.F.A., *Lecturer in Creative Writing*
B.A., Pitzer College (Claremont), 1980; M.F.A., University of California, 1984. Caltech, 1991; 1993; 1994.

- Uei-jiun Fan, Ph.D., *Lecturer in Mechanical Engineering*
B.S., Texas A&M University, 1984; M.S., 1985; Ph.D., 1988. Caltech, 1994.
- Kenneth A. Farley, Ph.D., *Assistant Professor of Geochemistry*
B.S., Yale University, 1986; Ph.D., University of California (San Diego), 1991. Caltech, 1993-.
- Patrick J. Farmer, Ph.D., *Research Fellow in Chemistry*
B.S., University of Texas (San Antonio), 1988; Ph.D., Texas A&M University, 1993. Caltech, 1994-95.
- Patrick G. Farrell, Ph.D., *Visiting Associate in Electrical Engineering*
B.Sc., City University (London), 1965; Ph.D., Cambridge University, 1969. Professor, University of Manchester, 1981-. Caltech, 1993.
- Sarah J. Fashena, Ph.D., *Research Fellow in Biology*
B.A., State University of New York (Purchase), 1984; M.S., Yale University, 1987; M.Ph., 1987; Ph.D., 1991. Caltech, 1992-95.
- Peter Ward Fay, Ph.D., *Professor of History*
A.B., Harvard College, 1947; B.A., University of Oxford, 1949; Ph.D., Harvard University, 1954. Assistant Professor, Caltech, 1955-60; Associate Professor, 1960-70; Professor, 1970-.
- Mordechai Feingold, D.Phil., *Visiting Associate Professor of History*
B.A., Jerusalem University, 1972; M.A., 1977; D.Phil., Oxford University, 1980. Associate Professor, Virginia Polytechnic Institute, 1988-. Caltech, 1993-.
- Derek Henry Fender, Ph.D., *Professor of Biology and Applied Science, Emeritus*
B.Sc., Reading University (England), 1939; B.Sc., 1946; Ph.D., 1956. Senior Research Fellow in Engineering, Caltech, 1961-62; Associate Professor of Biology and Electrical Engineering, 1962-66; Professor of Biology and Applied Science, 1966-86; Professor Emeritus, 1986-.
- Xiahong Feng, Ph.D., *Research Fellow in Geochemistry*
B.S., Peking University, 1982; M.S., 1985; Ph.D., Case Western Reserve University, 1991. Caltech, 1991-93.
- John A. Ferejohn, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.A., San Fernando State College, 1966; Ph.D., Stanford University, 1972. Professor, 1983-. Assistant Professor of Political Science, 1972-74; Associate Professor, 1974-77; Professor, 1977-83; Fairchild Scholar, 1993-.
- Patricio Fernandez-Silva, Ph.D., *Research Fellow in Biology*
Dipl., Universidad de Zaragoza (Spain), 1986; Ph.D., 1991. Caltech, 1992-95.
- Michael Fey, Ph.D., *von Kármán Instructor of Applied Mathematics*
Ph.D., Eidgenössische Technische Hochschule (Switzerland), 1993. Caltech, 1993-95.
- Bradley Ward Filippone, Ph.D., *Associate Professor of Physics*
B.S., Pennsylvania State University, 1977; M.S., University of Chicago, 1979; Ph.D., 1982. Research Fellow, Caltech, 1983-84; Assistant Professor, 1984-90; Associate Professor, 1990-.
- Richard Charles Flagan, Ph.D., *Professor of Chemical Engineering*
B.S.E., University of Michigan, 1969; S.M., Massachusetts Institute of Technology, 1971; Ph.D., 1973. Assistant Professor of Environmental Engineering Science, Caltech, 1975-81; Associate Professor, 1981-84; Associate Professor of Environmental Engineering and Mechanical Engineering, 1984-85; Professor, 1986-90; Professor of Chemical Engineering, 1990-.
- Douglas Flammig, Ph.D., *Associate Professor of History*
B.A., University of Texas, 1981; M.A., Vanderbilt University, 1983; Ph.D., 1987. Assistant Professor, 1988-94; Associate Professor, 1994-.
- Eanna Flanagan, Ph.D., *Research Fellow in Physics*
Ph.D., Caltech, 1993; Research Fellow, 1994-95.
- Caroline M. Fohlin, Ph.D., *Assistant Professor of Economics*
B.S., Tufts University, 1988; Ph.D., University of California, 1994. Caltech, 1994-.
- Mary Louise Fonseca, M.A., *Lecturer in English as a Second Language*
B.A., University of California (Los Angeles), 1972; M.A. (English Literature), 1975; M.A. (English as a Second Language), 1981. Caltech, 1981-.
- Bernardo Fontal, Ph.D., *Visiting Associate in Chemistry*
B.S., California State University, 1965; Ph.D., University of California (Los Angeles), 1969; M.A., Universidad Nacional Abierta (Venezuela), 1992. Visiting Associate, Caltech, 1993-94.
- Dominique Fourquette, Ph.D., *Research Fellow in Aeronautics*
B.Sc., Université de Compiegne (France), 1979; M.S., Yale University, 1982; Ph.D., 1985. Caltech, 1991-94.

- William A. Fowler, Ph.D., D.h.c., D.Sc.,
D.H.L., Nobel Laureate, *Institute Professor of Physics, Emeritus*
B.Eng.Phys., Ohio State University, 1933; Ph.D., Caltech, 1936; D.h.c., Observatoire de Paris-Meudon, Université de Liege; D.Sc.h.c., University of Chicago; Ohio State University; Denison University; Arizona State University; D.H.L.h.c., Georgetown University. Research Fellow, Caltech, 1936-39; Assistant Professor, 1939-42; Associate Professor, 1942-46; Professor, 1946-70; Institute Professor, 1970-82; Institute Professor Emeritus, 1982-.
- Joel N. Franklin, Ph.D., *Professor of Applied Mathematics*
B.S., Stanford University, 1950; Ph.D., 1953. Associate Professor of Applied Mechanics, Caltech, 1957-65; Professor of Applied Science, 1965-69; Professor of Applied Mathematics, 1969-.
- Cassandra L. Fraser, Ph.D., *Research Fellow in Chemistry*
B.A., Kalamazoo College, 1984; M.T.S., Harvard Divinity School, Harvard University, 1988; Ph.D., University of Chicago, 1993. Caltech, 1993-94.
- Scott E. Fraser, Ph.D., *Anna L. Rosen Professor of Biology*
B.S., Harvey Mudd College, 1976; Ph.D., Johns Hopkins University, 1979. Caltech, 1991-.
- Steven Clark Frautschi, Ph.D., *Professor of Theoretical Physics; Executive Officer for Physics*
A.B., Harvard College, 1954; Ph.D., Stanford University, 1958. Assistant Professor, Caltech, 1962-64; Associate Professor, 1964-66; Professor, 1966-. Executive Officer, 1988-.
- Glenn Steven Freed, Ph.D., *Lecturer in Accounting*
B.S., University of Florida, 1982; Ph.D., University of Southern California, 1991. Caltech, 1991; 1992-94.
- James R. French, B.S.M.E., *Lecturer in Jet Propulsion*
B.S.M.E., Massachusetts Institute of Technology, 1958. Caltech, 1993-94.
- Michael S. Freund, Ph.D., *Research Fellow in Chemistry*
B.S., Florida Atlantic University, 1985; Ph.D., University of Florida, 1992. Caltech, 1992-94.
- Hans M. Frey, Ph.D., *Research Fellow in Chemistry*
M.Sc., University of Bern, 1987; Ph.D., 1991. Caltech, 1994-95.
- Michael W. Frohlich, Ph.D., *Visiting Associate in Biology*
B.S., University of Michigan, 1969; M.S., Harvard University, 1971; Ph.D., 1978. Associate Professor, Union College, 1983-. Caltech, 1993-94.
- Osamu Fujimura, M.S., *Visiting Associate in Chemistry*
B.S., Kyoto University (Japan), 1988; M.S., 1990. Research Chemist, Ube Industries Ltd., 1990-. Caltech, 1993-94.
- Francis Brock Fuller, Ph.D., *Professor of Mathematics*
A.B., Princeton University, 1949; M.A., 1950; Ph.D., 1952. Research Fellow, Caltech, 1952-55; Assistant Professor, 1955-59; Associate Professor, 1959-66; Professor, 1966-.
- Brent Thomas Fultz, Ph.D., *Associate Professor of Materials Science*
B.Sc., Massachusetts Institute of Technology, 1975; M.Sc., University of California, 1978; Ph.D., 1982. Assistant Professor, Caltech, 1985-90; Associate Professor, 1990-.
- Andrew Fyfe, Ph.D., *Research Fellow in Computer Science*
B. Math., University of Waterloo, 1985; M.Sc., Caltech, 1990; Ph.D., 1992. Research Fellow, 1992-94.
- David Gabai, Ph.D., *Professor of Mathematics*
B.A., Massachusetts Institute of Technology, 1976; M.A., Princeton University, 1977; Ph.D., 1980. Associate Professor, Caltech, 1986-88; Professor, 1988-.
- Fabrizio Gabbiani, Ph.D., *Research Fellow in Biology*
Ph.D., Swiss Institute of Technology, 1992. Caltech, 1994-95.
- Roberto Gallino, Ph.D., *Visiting Associate in Geochemistry*
B.S., University of Torino (Italy), 1961; Ph.D., 1967. Associate Professor, 1980-. Caltech, 1993-94.
- Justine S. Garvey, Ph.D., *Visiting Associate in Biology*
B.S., Ohio State University, 1944; M.S., 1948; Ph.D., 1950. Professor Emeritus, Syracuse University, 1990-. Research Fellow, Caltech, 1951-57; Senior Research Fellow, 1957-74; Research Associate, 1974; Visiting Associate in Chemistry, 1991-92; 1992-93; Visiting Associate in Biology, 1993-94.
- Dale Everett Gary, Ph.D., *Senior Research Associate in Astrophysics*
B.S., University of Michigan, 1976; Ph.D., University of Colorado, 1982. Research Fellow, Caltech, 1982-85; Senior Research Fellow, 1985-90; Lecturer in Physics, 1988-89; 1991; Senior Research Associate in Astrophysics, 1990-.
- Erann Gat, Ph.D., *Visiting Associate in Mechanical Engineering*
B.S., Virginia Polytechnic Institute, 1985; M.S., 1987; Ph.D., 1991. Member of the Technical Staff, Jet Propulsion Laboratory, 1988-. Caltech, 1993-95.

- Jean-Paul Gaudilliere, Ph.D., *Visiting Assistant Professor of History*
M.S., University of Paris VII, 1991; Ph.D., 1991. Research Associate, INSERM, Hospital Necker-Enfants Malades, 1993-. Caltech, 1994.
- George Rousetos Gavalas, Ph.D., *Professor of Chemical Engineering*
B.S., Technical University of Athens, 1958; M.S., University of Minnesota, 1962; Ph.D., 1964. Assistant Professor, Caltech, 1964-67; Associate Professor, 1967-75; Professor, 1975-.
- Murray Gell-Mann, Ph.D., Sc.D., D.Sc., Nobel Laureate, *Robert Andrews Millikan Professor of Theoretical Physics, Emeritus*
B.S., Yale University, 1948; Ph.D., Massachusetts Institute of Technology, 1950; Sc.D.h.c., Columbia University; University of Cambridge; University of Chicago; University of Illinois; University of Utah; Wesleyan University; Yale University; D.Sc.h.c., University of Turin (Italy). Associate Professor, Caltech, 1955-56; Professor, 1956-67; Millikan Professor, 1967-93; Millikan Professor Emeritus, 1993-.
- Glen Arthur George, M.S., *Lecturer in Computer Science and Electrical Engineering*
B.S. (Engineering and Applied Science), 1981, Caltech; B.S. (Electrical Engineering), 1982; M.S., University of California (Los Angeles), 1984. Lecturer in Applied Science, Caltech, 1986-87; 1988-89; 1990-91; Lecturer in Computer Science and Electrical Engineering, 1992-94.
- Doron Gepner, Ph.D., *Senior Research Fellow in Theoretical Physics*
B.Sc., Israel Institute of Technology, 1976; Ph.D., Weizmann Institute, 1985. Caltech, 1992-95.
- Elisabeth R. Gerber, Ph.D., *Assistant Professor of Political Science*
B.A., University of Michigan, 1986; M.A., 1989; Ph.D., 1991. Caltech, 1991-.
- Merrill Joan Gerber, M.A., *Lecturer in Creative Writing*
B.A., University of Florida, 1959; M.A., Brandeis University, 1980. Caltech, 1989-.
- Linda Groves Gerstein, Ph.D., *Visiting Professor of History*
B.A., Radcliffe College, 1959; M.A., 1961; Ph.D., Harvard University, 1966. Professor, Haverford College, 1977-. Caltech, 1993-.
- Morteza Gharib, Ph.D., *Professor of Aeronautics*
B.S., Teheran University, 1976; M.S., Syracuse University, 1978; Ph.D., Caltech, 1983. Professor, 1992-.
- Andrea Ghetti, Ph.D., *Research Fellow in Biology*
Ph.D., University of Pavia (Italy), 1987. Caltech, 1991-95.
- Michel Ghislain, Ph.D., *Research Fellow in Biology*
B.S., University of Louvain, 1982; Ph.D., 1990. Caltech, 1992-95.
- Pratik Ghosh, Ph.D., *Research Fellow in Biology*
B.S., University of New Delhi, 1982; M.S., Indian Institute of Technology, 1984; Ph.D., University of Illinois, 1992. Caltech, 1992-95.
- Konstantinos P. Giapis, Ph.D., *Assistant Professor of Chemical Engineering*
Dipl., National Technical University of Athens, 1984; Ph.D., University of Minnesota, 1989. Lacey Instructor, Caltech, 1992-93; Assistant Professor, 1993-.
- Michael A. Giardello, Ph.D., *Research Fellow in Chemistry*
B.A., Grinnell College, 1988; M.S., Northwestern University, 1989; Ph.D., 1993. Caltech, 1993-94.
- James H. Gilchrist, Ph.D., *Research Fellow in Chemistry*
B.S., Arizona State University, 1987; Ph.D., Cornell University, 1993. Caltech, 1993-95.
- Kevin Michael Gilmartin, Ph.D., *Assistant Professor of Literature*
B.A., Oberlin College, 1985; M.A., University of Chicago, 1986; Ph.D., 1991. Caltech, 1991-.
- Inna Gitelman, Ph.D., *Research Fellow in Biology*
B.S., Bar-Ilan University, 1978; M.S., Tel Aviv University, 1981; Ph.D., Queen's University, 1986. Caltech, 1993-95.
- James L. Gleason, Ph.D., *Research Fellow in Chemistry*
B.S., McGill University, 1989; Ph.D., University of Virginia, 1993. Caltech, 1993-95.
- William Andrew Goddard III, Ph.D., *Charles and Mary Ferkel Professor of Chemistry and Applied Physics*
B.S., University of California (Los Angeles), 1960; Ph.D., Caltech, 1965. Noyes Research Fellow in Chemistry, 1964-66; Noyes Research Instructor, 1966-67; Assistant Professor of Theoretical Chemistry, 1967-71; Associate Professor, 1971-74; Professor, 1974-78; Professor of Chemistry and Applied Physics, 1978-84; Ferkel Professor, 1984-.
- Marvin Leonard Goldberger, Ph.D., Sc.D., D.H.L., LL.D., *President Emeritus*
B.S., Carnegie Institute of Technology, 1943; Ph.D., University of Chicago, 1948; Sc.D.h.c., Carnegie-Mellon University; University of Notre Dame; D.H.L.h.c., Hebrew Union College; University of Judaism; LL.D.h.c., Occidental College. President and Professor of Theoretical Physics, Caltech, 1978-87; President Emeritus, 1991-.

Andy Golden, Ph.D., *Senior Research Fellow in Biology*

B.A., Muhlenberg College, 1982; Ph.D., State University of New York (Stony Brook), 1990. Research Fellow, Caltech, 1990–93; Senior Research Fellow, 1993–95.

Peter Martin Goldreich, Ph.D., *Lee A. DuBridge Professor of Astrophysics and Planetary Physics*

B.S., Cornell University, 1960; Ph.D., 1963. Associate Professor of Planetary Science and Astronomy, Caltech, 1966–69; Professor, 1969–81; DuBridge Professor of Astrophysics and Planetary Physics, 1981–. Acting Chair, Division of Geological and Planetary Sciences, 1989.

Andrea Goldsmith, Ph.D., *Assistant Professor of Electrical Engineering*

B.S., University of California, 1986; M.S., 1991; Ph.D., 1994. Caltech, 1994–.

Edwin L. Goldwasser, Ph.D., *Ron and Maxine Linde Distinguished Scholar of Physics, Mathematics and Astronomy*

B.A., Harvard University, 1940; Ph.D., University of California, 1950. Caltech, 1993–94.

Ricardo Gomez, Ph.D., *Professor of Physics*

S.B., Massachusetts Institute of Technology, 1953; Ph.D., 1956. Research Fellow, Caltech, 1956–59; Senior Research Fellow, 1959–71; Associate Professor, 1971–77; Professor, 1977–.

Martin Gonzalez, Ph.D., *Research Fellow in Biology*

B.S., University of Texas, 1987; M.S., 1987; Ph.D., University of California, 1994. Research Fellow, Caltech, 1994–.

Rodney M. F. Goodman, Ph.D., *Professor of Electrical Engineering*

B.Sc., Leeds University, 1968; Ph.D., University of Kent, 1975. Associate Professor, Caltech, 1985–94; Professor, 1994–.

William J. Goodrich, Ph.D., *Research Fellow in Biology*

B.A., Oxford University, 1983; M.Phil., Cambridge University, 1984; Ph.D., University of East Anglia, 1990. Caltech, 1994–95.

David Louis Goodstein, Ph.D., *Professor of Physics and Applied Physics; Vice Provost*

B.S., Brooklyn College, 1960; Ph.D., University of Washington, 1965. Research Fellow in Physics, Caltech, 1966–67; Assistant Professor, 1967–71; Associate Professor, 1971–75; Associate Professor of Physics and Applied Physics, 1975–76; Professor, 1976–. Vice Provost, 1987–.

Judith R. Goodstein, Ph.D., *Faculty Associate in History; Registrar*

B.A., Brooklyn College, 1960; Ph.D., University of Washington, 1969. Faculty Associate, Caltech, 1982–; Lecturer, 1989. Registrar, 1989–.

David George Goodwin, Ph.D., *Associate Professor of Mechanical Engineering and Applied Physics*

B.S., Harvey Mudd College, 1979; M.S., Stanford University, 1980; Ph.D., 1986. Assistant Professor of Mechanical Engineering, Caltech, 1988–93; Associate Professor of Mechanical Engineering and Applied Physics, 1993–.

Richard M. Goody, Ph.D., *Visiting Professor of Planetary Science*

B.A., St. John's College (England), 1942; M.S., 1945; Ph.D., 1949. Gordon McKay Professor Emeritus, Harvard University, 1991–. Caltech, 1993.

Thomas D. Gottschalk, Ph.D., *Lecturer in Physics*

B.S., Michigan State University, 1973; Ph.D., University of Wisconsin, 1978. Caltech, 1992–94.

Roy Walter Gould, Ph.D., *Simon Ramo Professor of Engineering*

B.S., Caltech, 1949; M.S., Stanford University, 1950; Ph.D., Caltech, 1956. Assistant Professor of Electrical Engineering, 1955–58; Associate Professor, 1958–60; Associate Professor of Electrical Engineering and Physics, 1960–62; Professor, 1962–74; Professor of Applied Physics, 1974–80; Ramo Professor of Engineering, 1980–. Executive Officer for Applied Physics, 1973–79; Chair, Division of Engineering and Applied Science, 1979–85.

Herman L. Govan III, Ph.D., *James Irvine Foundation Research Fellow in Biology*

B.S. (Chemistry), B.S. (Biology), University of California (Los Angeles), 1984; Ph.D., 1992. Caltech, 1992–95.

Rama Govindarajan, M.S., *Visiting Associate in Aeronautics*

B.Tech., Indian Institute of Technology, 1984; M.S., Drexel University, 1986. Scientist, National Aerospace Laboratories, 1988–. Caltech, 1994.

Ronald W. Grant, Ph.D., *Visiting Associate in Applied Physics*

B.S., Case Institute of Technology, 1959; Ph.D., University of California, 1963. Project Leader, Rockwell International Science Center, 1963–. Caltech, 1992–95.

Giorgio Gratta, Laurea, *Senior Research Fellow in Physics*

Laurea, University of Rome, 1986. Research Fellow, Caltech, 1989–92; Senior Research Fellow, 1992–95.

- Harry Barkus Gray, Ph.D., D.Sc., *Laurea h.c., Arnold O. Beckman Professor of Chemistry; Director, Beckman Institute*
B.S., Western Kentucky College, 1957; Ph.D., Northwestern University, 1960; D.Sc.h.c., Northwestern University; University of Rochester; University of Chicago; *Laurea h.c., University of Florence. Visiting Professor of Inorganic Chemistry, Caltech, 1965; Professor of Chemistry, 1966–81; William R. Kenan Professor, 1976–81; Beckman Professor, 1981–. Director, Beckman Institute, 1986–; Chair, Division of Chemistry and Chemical Engineering, 1978–84.*
- Jesse L. Greenstein, Ph.D., D.Sc., *Lee A. DuBridge Professor of Astrophysics, Emeritus*
A.B., Harvard College, 1929; A.M., Harvard University, 1930; Ph.D., 1937; D.Sc.h.c., University of Arizona. Associate Professor, Caltech, 1948–49; Professor, 1949–70; DuBridge Professor, 1970–80; DuBridge Professor Emeritus, 1980–. Executive Officer for Astronomy, 1964–72.
- David M. Grether, Ph.D., *Professor of Economics*
B.S., University of California, 1960; Ph.D., Stanford University, 1969. Associate Professor, Caltech, 1970–75; Professor, 1975–. Executive Officer for Social Sciences, 1978–82; Chair, Division of the Humanities and Social Sciences, 1982–92.
- Sergei A. Grigoryev, Ph.D., *Research Fellow in Biology*
B.S., Moscow State University, 1980; Ph.D., 1985. Caltech, 1992–94.
- Robert T. Grimley, Ph.D., *Visiting Associate in Geochemistry*
B.S., University of Massachusetts, 1951; Ph.D., University of Wisconsin, 1958. Professor, Purdue University, 1969–. Caltech, 1992–94.
- Mark W. Grinstaff, Ph.D., *Research Fellow in Chemistry*
A.B., Occidental College, 1987; Ph.D., University of Illinois (Urbana-Champaign), 1992. Caltech, 1992–94.
- Scott D. Grover, Ph.D., *Visiting Associate in Chemistry*
B.A., University of California (Santa Barbara), 1973; Ph.D., University of California (Los Angeles), 1980. Professor, California State University, 1983–. Caltech, 1993–95.
- Andrew K. Groves, Ph.D., *Research Fellow in Biology*
B.A., Cambridge University, 1988; Ph.D., Ludwig Institute for Cancer Research, 1992. Caltech, 1992–94.
- Robert H. Grubbs, Ph.D., *Victor and Elizabeth Atkins Professor of Chemistry*
B.S., University of Florida, 1963; M.S., 1965; Ph.D., Columbia University, 1968. Professor, Caltech, 1978–90; Atkins Professor, 1990–.
- Yifan Gu, Ph.D., *Visiting Associate in Physics*
B.S., Leningrad University, 1955; Ph.D., Institute for Atomic Energy, 1961. Professor, Institute of High Energy Physics, Academia Sinica, 1985–. Caltech, 1994–95.
- Min-Xin Guan, Ph.D., *Research Fellow in Biology*
B.S., Hangzhou University (China), 1983; Ph.D., Australian National University, 1993. Caltech, 1993–94.
- Poonam Sood Gulati, Ph.D., *Research Fellow in Chemistry*
B.S., Purrjab Agricultural University (India), 1985; M.S., Postgraduate Institute of Medical Education and Research, 1987; Ph.D., University of Medicine and Dentistry of New Jersey, 1993. Caltech, 1993–94.
- Martin A. Gundersen, Ph.D., *Visiting Associate in Applied Physics*
A.B., University of California, 1965; Ph.D., University of Southern California, 1972. Professor, 1980–. Caltech, 1993–94.
- James Edward Gunn, Ph.D., *Visiting Associate in Astronomy*
B.A., Rice University, 1961; Ph.D., Caltech, 1965. Professor, Princeton University, 1980–. Professor, Caltech, 1970–80; Visiting Associate, 1980–84; 1985–94.
- Michael C. Gurnis, Ph.D., *Associate Professor of Geophysics*
B.S., University of Arizona, 1982; Ph.D., Australian National University, 1987. Caltech, 1994–.
- Bernd-Michael Haas, Ph.D., *Research Fellow in Chemistry*
Dipl., University of Konstanz (Germany), 1987; Ph.D., University of Zurich, 1991. Caltech, 1992–94.
- Michael Hadjiargyrou, Ph.D., *Research Fellow in Biology*
B.A., Baruch College, 1986; M.A., Hunter College, 1988; Ph.D., City University of New York, 1992. Caltech, 1992–94.
- Peter K. Haff, Ph.D., *Visiting Associate in Physics*
A.B., Harvard College, 1966; Ph.D., University of Virginia, 1970. Professor, Duke University, 1988–. Research Associate, Caltech, 1980–81; Senior Research Associate, 1981–88; Visiting Associate, 1979–80; 1988–.
- Michael R. Haggerty, Ph.D., *Research Fellow in Physics*
B.S., University of California, 1987; Ph.D., Massachusetts Institute of Technology, 1993. Caltech, 1993–94.
- Kevin I. Hahn, Ph.D., *Research Fellow in Physics*
B.Sc., University of California (Los Angeles), 1984; M.Phil., Yale University, 1987; Ph.D., 1992. Caltech, 1993–95.

Alan Hajek, Ph.D., *Assistant Professor of Philosophy*

B.Sc., University of Melbourne, 1982; M.A., University of Western Ontario, 1986; Ph.D., Princeton University, 1992. Instructor, Caltech, 1992-93; Assistant Professor, 1993-.

Farshid Hajir, Ph.D., *Olga Taussky-John Todd Instructor in Mathematics*

B.A., Princeton University, 1988; Ph.D., Massachusetts Institute of Technology, 1993. Caltech, 1993-95.

John Franklin Hall, Ph.D., *Associate Professor of Civil Engineering*

B.S., West Virginia University, 1972; M.S., University of Illinois, 1973; Ph.D., University of California, 1980. Research Fellow, Caltech, 1980-83; Lecturer, 1981-83; Assistant Professor, 1983-89; Associate Professor, 1989-.

Charles R. Hamilton, Ph.D., *Visiting Associate in Biology*

B.S., University of the South, 1957; Ph.D., Caltech, 1964. Research Scientist, Texas A&M University, 1991-. Senior Research Fellow, Caltech, 1971-74; Senior Research Associate, 1974-89; Visiting Associate, 1991-94.

Tao Han, Ph.D., *Research Fellow in Physics*

B.S., Nankai University, 1980; M.S., 1983; Ph.D., University of Wisconsin, 1990. Caltech, 1993-94.

David Garrison Harkrider, Ph.D., *Professor of Geophysics*

B.A., Rice University, 1953; M.A., 1957; Ph.D., Caltech, 1963. Associate Professor, 1970-79; Professor, 1979-. Associate Director, Seismological Laboratory, 1977-79.

Fiona A. Harrison, Ph.D., *Robert A. Millikan Research Fellow in Physics*

A.B., Dartmouth College, 1985; Ph.D., University of California, 1993. Caltech, 1993-94.

Bruce Hartenbaum, Ph.D., *Visiting Associate in Aeronautics*

S.B., Massachusetts Institute of Technology, 1959; S.M., 1961; Ph.D., 1964. President, H-Tech Laboratories, Inc., 1976-. Caltech, 1990-94.

Masakazu Hashimoto, M.S., *Visiting Associate in Chemistry*

B.S., Kyoto University (Japan), 1989; M.S., 1991. Researcher, Nippon Zeon Company, Ltd., 1991-. Caltech, 1993-94.

Osamu Hatozaki, Ph.D., *Research Fellow in Chemistry*

M.S., Tokyo University of Agriculture & Technology, 1989; Ph.D., 1992. Caltech, 1992-95.

Nicholas Hatsopoulos, Ph.D., *Research Fellow in Biology*

B.A., Williams College, 1984; M.Sc., Brown University, 1991; Ph.D., 1992. Caltech, 1992-94.

Masayuki Hattori, M.S., *Visiting Associate in Electrical Engineering*

B.S., Tokyo Institute of Technology, 1983; M.S., 1985. Assistant Manager and Technical Advisor, Sony Corporation, 1985. Caltech, 1993-94.

Egill Hauksson, Ph.D., *Senior Research Associate in Geophysics*

M.S., University of Trondheim (Norway), 1974; M.A., Columbia University, 1978; M. Phil., 1980; Ph.D., 1981. Research Fellow, Caltech, 1989-92; Senior Research Associate, 1992-95.

Thomas Harrison Heaton, Ph.D., *Faculty Associate in Geophysics; Lecturer in Geophysics*

B.S., Indiana University, 1972; Ph.D., Caltech, 1978. Geophysicist, U.S. Geological Survey, 1979-. Visiting Associate, Caltech, 1978-83; 1984-91; Faculty Associate, 1991-; Lecturer, 1994.

Donald Vincent Helmberger, Ph.D., *Professor of Geophysics*

B.S., University of Minnesota, 1961; M.S., University of California (San Diego), 1965; Ph.D., 1967. Assistant Professor, Caltech, 1970-74; Associate Professor, 1974-79; Professor, 1979-.

Ronald D. Henderson, Ph.D., *Research Fellow in Aeronautics and Applied Mathematics*

B.S., Purdue University, 1989; M.S., Princeton University, 1991; Ph.D., 1993. Caltech, 1994-95.

Polly Sherburne Henninger, Ph.D., *Visiting Associate in Biology*

B.A., Indiana University, 1967; B.A., Pomona College, 1977; M.A., University of Toronto, 1969; Ph.D., University of Alberta, 1982. Assistant Professor, Brock University (Canada), 1987-. Research Fellow, Caltech, 1982-84; Visiting Associate, 1984-94.

Hartmut Herrmann, Ph.D., *Visiting Associate in Environmental Engineering Science*

Dipl., University of Gottingen (Germany), 1987; Ph.D., 1990. Research Assistant, Institute of Physical and Theoretical Chemistry, University of Essen, 1991-. Caltech, 1992-94.

Ralf P. Hertzenberger, D.Sc., *Research Fellow in Physics*

Dipl., Ludwig-Maximilians University (Munich), 1986; D.Sc., 1991. Caltech, 1992-94.

David Hilbert, Ph.D., *Assistant Professor of Philosophy*

A.B., Princeton University, 1981; Ph.D., Stanford University, 1986. Caltech, 1989-.

Michael G. Hill, Ph.D., *Research Fellow in Chemistry*

B.A., Macalester College, 1987; Ph.D., University of Minnesota, 1992. Caltech, 1992-94.

- Kayoko Hirata, Ph.D., *Lecturer in Japanese*
B.A., Kitakyuushuu University (Japan), 1966; M.A., University of Oregon, 1978; M.A., University of Arizona (Tucson), 1987; Ph.D., 1989. Caltech, 1990-.
- Marc M. Hirschmann, Ph.D., *Research Fellow in Geology*
A.B., University of California, 1983; M.S., University of Oregon, 1988; Ph.D., University of Washington, 1993. Caltech, 1993-95.
- David George Hitlin, Ph.D., *Professor of Physics*
B.A., Columbia University, 1963; M.A., 1965; Ph.D., 1968. Associate Professor, Caltech, 1979-85; Professor, 1986-.
- Gregory Hjorth, Ph.D., *Bateman Research Instructor in Mathematics*
B.A., University of Melbourne, 1987; Ph.D., University of California, 1993. Caltech, 1993-94.
- Philip Thomas Hoffman, Ph.D., *Associate Professor of History and Social Science*
A.B., Harvard College, 1969; M.A., University of California, 1971; Ph.D., Yale University, 1979. Lecturer in History, Caltech, 1980-81; Instructor, 1981-82; Assistant Professor, 1982-84; Associate Professor of History and Social Science, 1984-.
- Michael Robert Hoffmann, Ph.D., *Professor of Environmental Chemistry*
B.A., Northwestern University, 1968; Ph.D., Brown University, 1974. Research Fellow, Caltech, 1973-76; Associate Professor, 1980-85; Professor of Environmental Engineering Science, 1986-90; Professor of Environmental Chemistry, 1990-.
- Hans Gotz Hofhaus, Ph.D., *Senior Research Fellow in Biology*
M.Sc., University of Dusseldorf, 1987; Ph.D., European Molecular Biology Laboratory, 1990. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-95.
- Rudolf J. Hofmeister, Ph.D., *Research Fellow in Applied Physics*
B.S., Caltech, 1987; Ph.D., 1993. Research Fellow, 1993-94.
- Michael J. Holst, Ph.D., *Center for Research on Parallel Computation Research Fellow in Applied Mathematics*
B.S., Colorado State University, 1987; M.S., University of Illinois (Urbana-Champaign), 1990; Ph.D., 1993. Caltech, 1993-94.
- John H. Hong, Ph.D., *Lecturer in Electrical Engineering and Computation and Neural Systems and Applied Physics*
B.S., Massachusetts Institute of Technology, 1982; M.S., Caltech, 1983; Ph.D., 1987. Lecturer, 1993.
- Suk-Bong Hong, Ph.D., *Research Fellow in Chemistry*
B.S., Hanyang University (Korea), 1983; M.S., Seoul National University, 1985; Ph.D., Virginia Polytechnic Institute, 1992. Caltech, 1992-93.
- Leroy E. Hood, M.D., Ph.D., D.Sc., D.h.c., *Visiting Associate in Biology*
B.S., Caltech, 1960; M.D., Johns Hopkins University, 1964; Ph.D., Caltech, 1968; D.Sc.h.c., Montana State University; Mount Sinai School of Medicine of the City University of New York; University of British Columbia; University of Southern California; D.h.c., Johns Hopkins University. Professor, Chair of Molecular Biotechnology, University of Washington, 1992-. Assistant Professor of Biology, Caltech, 1970-73; Associate Professor, 1973-75; Professor, 1975-77; Bowles Professor, 1977-92; Visiting Associate in Biology, 1992-94. Chair, Division of Biology, 1980-89; Director, Center for the Development of an Integrated Protein and Nucleic Acid Biotechnology, 1989-92.
- John J. Hopfield, Ph.D., *Roscoe G. Dickinson Professor of Chemistry and Biology*
A.B., Swarthmore College, 1954; Ph.D., Cornell University, 1958. Caltech, 1980-.
- Hans G. Hornung, Ph.D., *C.L. "Kelly" Johnson Professor of Aeronautics; Director of the Graduate Aeronautical Laboratories*
B.S., University of Melbourne, 1960; M.S., 1962; Ph.D., Imperial College, University of London, 1965. Caltech, 1987-.
- Norman H. Horowitz, Ph.D., *Professor of Biology, Emeritus*
B.S., University of Pittsburgh, 1936; Ph.D., Caltech, 1939. Research Fellow, 1940-42; Senior Research Fellow, 1946-47; Associate Professor, 1947-53; Professor, 1953-82; Professor Emeritus, 1982-. Executive Officer for Biology, 1971-76; Acting Chair, Division of Biology, 1973; Chair, 1977-80.
- Yizhao Thomas Hou, Ph.D., *Associate Professor of Applied Mathematics*
B.S., South China University of Technology, 1982; M.S., University of California (Los Angeles), 1985; Ph.D., 1987. Caltech, 1993-.
- Robert Melvin Housley, Ph.D., *Visiting Associate in Physics*
B.A., Reed College, 1956; Ph.D., University of Washington (Seattle), 1964. Member of the Technical Staff, Rockwell International Science Center, 1966-. Visiting Professor, Caltech, 1984-85; 1985-86; Visiting Associate, 1986-95.

- George W. Housner, Ph.D., *Carl F Braun Professor of Engineering, Emeritus*
B.S., University of Michigan, 1933; M.S., Caltech, 1934; Ph.D., 1941. Assistant Professor, 1945-49; Associate Professor, 1949-53; Professor, 1953-74; Braun Professor, 1974-81; Braun Professor Emeritus, 1981-.
- Elizabeth G. Howard, Ph.D., *Lecturer in Art History*
B.F.A., Miami University, 1967; M.A., Rutgers University, 1972; Ph.D., 1979. Caltech, 1988-.
- Lawrence Howe, Ph.D., *Instructor in Literature*
A.B., University of California, 1983; Ph.D., 1991. Mellon Postdoctoral Instructor, Caltech, 1991-93; Instructor, 1993-.
- Tseng-Yang Hsu, Ph.D., *Research Fellow in Electrical Engineering*
B.S., National Taiwan University, 1981; M.S. (Physics), University of Michigan, 1985; M.S. (Electrical Science), 1986; Ph.D., University of Southern California, 1992. Caltech, 1994-95.
- Tun Huang, Ph.D., *Research Fellow in Chemistry*
B.Sc., Guangzhou Teachers' College (China), 1982; M.Sc., Brock University, 1987; Ph.D., University of Alberta, 1993. Caltech, 1993-94.
- Donald E. Hudson, Ph.D., *Professor of Mechanical Engineering and Applied Mechanics, Emeritus*
B.S., Caltech, 1938; M.S., 1939; Ph.D., 1942. Instructor of Machine Design, 1942-43; Assistant Professor of Mechanical Engineering, 1943-49; Associate Professor, 1949-55; Professor, 1955-63; Professor of Mechanical Engineering and Applied Mechanics, 1963-81; Professor Emeritus, 1981-.
- Shaun M. G. Hughes, Ph.D., *Research Fellow in Astronomy*
B.S., University of New South Wales, 1982; Ph.D., Australian National University, 1989. Caltech, 1992-.
- Eugene D. Humphreys, Ph.D., *Visiting Associate in Geophysics*
B.S., University of California (Riverside), 1975; M.S., 1978; Ph.D., Caltech, 1985. Associate Professor, University of Oregon, 1991-. Visiting Associate, Caltech, 1993-94.
- Melany L. Hunt, Ph.D., *Assistant Professor of Mechanical Engineering*
B.S., University of Minnesota, 1983; M.S., University of California, 1985; Ph.D., 1987. Caltech, 1988-.
- Andrew Thompson Hunter, Ph.D., *Visiting Associate in Applied Physics*
B.S., Colorado School of Mines, 1976; Ph.D., Caltech, 1981. Member of the Technical Staff, Hughes Research Laboratories, 1981-. Visiting Associate, Caltech, 1983; 1984-86; 1987-94.
- Jurg Hunziker, Ph.D., *Research Fellow in Chemistry*
Dipl., Swiss Federal Institute of Technology, 1986; Ph.D., 1992. Caltech, 1992-95.
- Behnam Hushmand, Ph.D., *Lecturer in Civil Engineering*
B.S., Arya Mehr University of Technology (Iran), 1977; M.S., Caltech, 1978; Ph.D., 1983. Consulting Engineer, Earth Technology Corporation, 1990-. Visiting Associate, Caltech, 1990-94; Lecturer, 1991; 1992; 1994.
- Barbara Imperiali, Ph.D., *Assistant Professor of Chemistry*
B.Sc., University College (London), 1979; Ph.D., Massachusetts Institute of Technology, 1983. Caltech, 1989-.
- Giacomo Indiveri, Ph.D., *Research Fellow in Biology*
Laurea, University Di Genova (Italy), 1992; Ph.D., University of Genova (Italy), 1993. Caltech, 1994-.
- Andrew Perry Ingersoll, Ph.D., *Professor of Planetary Science; Executive Officer for Planetary Science*
B.A., Amherst College, 1960; A.M., Harvard University, 1961; Ph.D., 1966. Assistant Professor, Caltech, 1966-71; Associate Professor, 1971-76; Professor, 1976-. Executive Officer, 1987-.
- Takashi Ishikida, Ph.D., *Research Fellow in Economics*
B.S., Tokyo Institute of Technology, 1980; M.S., University of California, 1986; Ph.D., 1992. Caltech, 1993-94.
- Joel J. Ita, Ph.D., *Research Fellow in Geophysics*
B.S., University of Nebraska (Lincoln), 1986; Ph.D., University of California, 1992. Caltech, 1993-94.
- Wilfred Dean Iwan, Ph.D., *Professor of Applied Mechanics*
B.S., Caltech, 1957; M.S., 1958; Ph.D., 1961. Assistant Professor, 1964-67; Associate Professor, 1967-72; Professor, 1972-. Executive Officer for Civil Engineering and Applied Mechanics, 1980-86.
- Michael L. Jackson, M.S., *Coach*
B.A., Whittier College, 1967; M.A., Claremont Graduate School, 1971; M.S., University of Southern California, 1981. Caltech, 1985-.
- Steven E. Jacobsen, Ph.D., *Research Fellow in Biology*
B.S., California Polytechnic State University (San Luis Obispo), 1987; Ph.D., University of Minnesota, 1993. Caltech, 1993-94.

- Dieter Jaeger, Ph.D., *Senior Research Fellow in Biology*
B.Sc., Tubingen University (Germany), 1984; Ph.D., University of Michigan, 1990. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-.
- Mary Frances Jagod, Ph.D., *Visiting Associate in Chemistry*
B.S., Boston University, 1983; Ph.D., University of Chicago, 1990. Caltech, 1994.
- Abhinandan Jain, Ph.D., *Visiting Associate in Chemistry; Lecturer in Mechanical Engineering*
B.Tech., Indian Institute of Technology (Kanpur), 1978; M.S., State University of New York (Buffalo), 1982; Ph.D., Rensselaer Polytechnic Institute, 1986. Member of the Technical Staff, Jet Propulsion Laboratory, 1988-. Caltech, 1993-95; Lecturer, 1994.
- Frederick Jelinek, Ph.D., *Visiting Professor of Electrical Engineering*
S.B., Massachusetts Institute of Technology, 1956; S.M., 1958; Ph.D., 1962. Senior Manager, IBM, 1972-. Caltech, 1993-.
- Paul Christian Jennings, Ph.D., *Vice President and Provost; Professor of Civil Engineering and Applied Mechanics*
B.S., Colorado State University, 1958; M.S., Caltech, 1960; Ph.D., 1963. Research Fellow in Civil Engineering, 1965; Assistant Professor of Applied Mechanics, 1966-68; Associate Professor, 1968-72; Professor, 1972-77; Professor of Civil Engineering and Applied Mechanics, 1977-. Executive Officer for Civil Engineering and Applied Mechanics, 1975-80; Chair, Division of Engineering and Applied Science, 1985-89; Vice President and Provost, 1989-.
- Huiping Jiang, Ph.D., *Research Fellow in Biology*
B.S., Nanjing University (China), 1985; Ph.D., Clarkson University, 1991. Caltech, 1991-94.
- Hua-Ming Jin, Ph.D., *Research Fellow in Chemical Engineering*
B.S., Beijing University, 1983; M.S., Beijing Agricultural University, 1986; Ph.D., University of Wisconsin (Madison), 1993. Caltech, 1994-95.
- David L. Johannsen, Ph.D., *Visiting Associate in Computation and Neural Systems*
B.S., Caltech, 1978; M.A., 1978; Ph.D., 1981. President, Plan Beta Research, 1991-. Lecturer in Computer Science, Caltech, 1989; 1990; Visiting Associate in Computation and Neural Systems, 1993-94.
- William Lewis Johnson, Ph.D., *Ruben and Donna Mettler Professor of Engineering and Applied Science*
B.A., Hamilton College, 1970; Ph.D., Caltech, 1975. Assistant Professor, 1977-80; Associate Professor, 1980-84; Professor of Materials Science, 1984-89; Mettler Professor, 1989-.
- Nils Johnsson, Ph.D., *Research Fellow in Biology*
Dipl., University of Tubingen (Germany), 1986; Ph.D., 1989. Caltech, 1992-94.
- Jennifer A. Johnston, Ph.D., *Research Fellow in Biology*
B.S., University of Minnesota, 1987; Ph.D., Dartmouth College, 1992. Caltech, 1992-94.
- Gavin L. Jones, Ph.D., *Visiting Associate in Mathematics*
Ph.D., Cambridge University, 1993. Caltech, 1994.
- Lucile Merrill Jones, Ph.D., *Visiting Associate in Geophysics*
A.B., Brown University, 1976; Ph.D., Massachusetts Institute of Technology, 1981. Research Associate, U.S. Geological Survey, 1984-. Caltech, 1984-.
- William Thomas Jones, Ph.D., *Professor of Philosophy, Emeritus*
A.B., Swarthmore College, 1931; B.Litt., University of Oxford, 1933; A.M., Princeton University, 1936; Ph.D., 1937. Visiting Professor, Caltech, 1970-72; Andrew W. Mellon Professor, 1972-73; Professor, 1973-86; Professor Emeritus, 1986-.
- Hyun Sung Joo, Ph.D., *Research Fellow in Applied Physics*
B.S., Seoul National University, 1988; M.S., 1990; Ph.D., 1993. Caltech, 1993-94.
- Leemor Joshua-Tor, Ph.D., *Senior Research Fellow in Chemistry*
B.Sc., Tel Aviv University, 1982; Ph.D., Weizmann Institute of Science, 1990. Research Fellow, Caltech, 1990-91; 1992-93; Weizmann Research Fellow, 1991-93; Senior Research Fellow, 1993-95.
- Jeremy Kahn, Ph.D., *Assistant Professor of Mathematics*
B.A., Harvard University, 1991; Ph.D., University of California, 1994. Caltech, 1994-.
- William Joseph Kaiser, Ph.D., *Senior Faculty Associate in Chemistry*
B.S., Wayne State University, 1977; Ph.D., 1983. Member of the Technical Staff, Jet Propulsion Laboratory, 1986-. Institute Visiting Associate, Caltech, 1986-89; Visiting Associate, 1989-93; Senior Faculty Associate, 1993-.

- W. Barclay Kamb, Ph.D., *Barbara and Stanley R. Rawm, Jr., Professor of Geology and Geophysics*
B.S., Caltech, 1952; Ph.D., 1956. Assistant Professor of Geology, 1956-60; Associate Professor, 1960-62; Professor, 1962-63; Professor of Geology and Geophysics, 1963-90; Rawm Professor, 1990-. Chair, Division of Geological and Planetary Sciences, 1972-83; Vice President and Provost, 1987-89.
- Hiroo Kanamori, Ph.D., *John E. and Hazel S. Smits Professor of Geophysics; Director, Seismological Laboratory*
B.S., University of Tokyo, 1959; M.S., 1961; Ph.D., 1964. Research Fellow, Caltech, 1965-66; Professor, 1972-89; Smits Professor, 1989-. Director, 1990-.
- Keiko Kanamori, Ph.D., *Visiting Associate in Chemistry*
B.A., University of Tokyo, 1962; B.S., California State University (Los Angeles), 1976; Ph.D., Caltech, 1981. Postdoctoral Research Chemist, University of California (Los Angeles), 1982-. Visiting Associate, Caltech, 1984-.
- Chan Kang, Ph.D., *Research Fellow in Chemistry*
B.S., Seoul National University, 1984; M.S., 1986; Ph.D., Texas A&M University, 1993. Caltech, 1993-95.
- Zaven Kaprielian, Jr., Ph.D., *Senior Research Fellow in Biology*
B.S., Boston University, 1981; M.A., 1983; Ph.D., Johns Hopkins University, 1988. Research Fellow, Caltech, 1988-92; Senior Research Fellow, 1992-95.
- Timothy B. Karpishin, Ph.D., *Research Fellow in Chemistry*
B.S., University of British Columbia, 1987; Ph.D., University of California, 1992. Caltech, 1992-94.
- Arieh A. Katz, Ph.D., *Senior Research Fellow in Biology*
B.Sc., Hebrew University, 1981; M.Sc., Weizmann Institute of Science, 1984; Ph.D., 1990. Weizmann Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-94.
- Wendy Sue Katz, Ph.D., *Senior Research Fellow in Biology; Associate, Howard Hughes Medical Institute*
B.S., University of California, 1977; Ph.D., Massachusetts Institute of Technology, 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-94; Associate, 1992-94.
- Ralph William Kavanagh, Ph.D., *Professor of Physics*
B.A., Reed College, 1950; M.A., University of Oregon, 1952; Ph.D., Caltech, 1956. Research Fellow, 1956-58; Senior Research Fellow, 1958-60; Assistant Professor, 1960-65; Associate Professor, 1965-70; Professor, 1970-.
- Paul S. Kayne, Ph.D., *Senior Research Fellow in Biology*
B.A., University of California (Santa Barbara), 1982; Ph.D., University of California (Los Angeles), 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-94.
- Jon Faiz Kayyem, Ph.D., *Research Fellow in Biology*
B.S., Yale College, 1985; M.S., Yale University, 1985; Ph.D., Caltech, 1992. Research Fellow, 1992-95.
- Patrick C. Kearney, Ph.D., *Research Fellow in Biology*
B.S., Carnegie-Mellon University, 1987; Ph.D., Caltech, 1994. Research Fellow, 1994-95.
- Alexander Sotirios Kechris, Ph.D., D.h.c., *Professor of Mathematics; Executive Officer for Mathematics*
M.S., National Technological University (Athens), 1969; Ph.D., University of California (Los Angeles), 1972; D.h.c., University of Athens. Assistant Professor, Caltech, 1974-76; Associate Professor, 1976-81; Professor, 1981-. Executive Officer, 1994-.
- Herbert Bishop Keller, Ph.D., *Professor of Applied Mathematics*
B.E.E., Georgia Institute of Technology, 1945; M.A., New York University, 1948; Ph.D., 1954. Visiting Professor, Caltech, 1965-66; Professor, 1967-. Executive Officer for Applied Mathematics, 1980-85.
- David V. Kemp, Ph.D., *James Irvine Foundation Research Fellow in Geophysics*
A.B., Princeton University, 1984; Ph.D., University of California (Los Angeles), 1992. Caltech, 1992-95.
- Mary B. Kennedy, Ph.D., *Professor of Biology*
B.S., St. Mary's College, 1969; Ph.D., Johns Hopkins University, 1975. Assistant Professor, Caltech, 1981-84; Associate Professor, 1984-92; Professor, 1992-.
- Daniel Jerome Kevles, Ph.D., *J. O. and Juliette Koepfli Professor of the Humanities*
A.B., Princeton University, 1960; Ph.D., 1964. Assistant Professor, Caltech, 1964-68; Associate Professor, 1968-78; Professor, 1978-86; Koepfli Professor, 1986-. Executive Officer for the Humanities, 1978-81.
- D. Roderick Kiewiet, Ph.D., *Professor of Political Science; Dean of Students*
B.A., University of Iowa, 1974; Ph.D., Yale University, 1980. Assistant Professor, Caltech, 1979-82; Associate Professor, 1982-89; Professor, 1989-. Dean, 1992-.
- Changsoo Kim, Ph.D., *Research Fellow in Biology*
B.S., Seoul National University, 1984; M.S., Korea Advanced Institute of Science and Technology, 1986; Ph.D., University of Iowa. Caltech, 1994-95.

- Jongkook Kim, Ph.D., *Research Fellow in Chemistry***
B.S., Kyoto University (Japan), 1988; M.S., 1990; Ph.D., 1993. Caltech, 1993.
- Sang Kyu Kim, Ph.D., *Arthur Amos Noyes Research Fellow in Chemistry***
B.A., Seoul National University, 1984; M.S., 1986; Ph.D., University of California, 1993. Caltech, 1993–94.
- Soong-Hoon Kim, Ph.D., *Research Fellow in Chemistry***
B.A., New College, 1988; Ph.D., Princeton University, 1993. Caltech, 1993–94.
- Taesung Kim, Ph.D., *Visiting Associate Professor of Economics***
B.A., Seoul National University, 1981; Ph.D., University of Minnesota, 1987. Associate Professor, Seoul National University, 1993–. Assistant Professor, Caltech, 1987–1990; Visiting Associate Professor, 1993.
- Ung-Jin Kim, Ph.D., *Senior Research Fellow in Biology***
B.S., Seoul National University, 1980; M.S., 1982; Ph.D., University of California (Los Angeles), 1989. Research Fellow, Caltech, 1989–92; Senior Research Fellow, 1992–94.
- Yong J. Kim, Ph.D., *Research Fellow in Materials Science***
Ph.D., University of Wisconsin (Madison), 1993. Caltech, 1993–94.
- H. Jeff Kimble, Ph.D., *Professor of Physics***
B.S., Abilene Christian University, 1971; M.S., University of Rochester, 1973; Ph.D., 1978. Caltech, 1989–.
- Stefan Kindler, Ph.D., *Research Fellow in Biology***
Dipl., Pette-Institut (Hamburg), 1987; Ph.D., University of Hamburg, 1991. Caltech, 1993–95.
- Kevin B. Kingsbury, Ph.D., *Research Fellow in Chemistry***
B.S., College of William and Mary, 1986; Ph.D., Stanford University, 1993. Caltech, 1993–95.
- Mathias Kinzler, Ph.D., *Research Fellow in Aeronautics***
B.S., University of Heidelberg, 1989; M.S., 1990; Ph.D., 1993. Caltech, 1994–95.
- Joseph Lynn Kirschvink, Ph.D., *Professor of Geobiology***
B.S., M.S., Caltech, 1975; M.A., Princeton University, 1978; Ph.D., 1979. Assistant Professor, Caltech, 1981–87; Associate Professor, 1987–92; Professor, 1992–.
- Eric P. Klassen, Ph.D., *Visiting Associate in Mathematics***
B.A., Harvard, 1982; M.A., Cornell, 1983; Ph.D., 1987. Assistant Professor, Florida State University, 1991–. Bantrell Research Fellow, Caltech, 1987–90; Lecturer, 1990; Visiting Associate, 1993.
- Burton H. Klein, Ph.D., *Professor of Economics, Emeritus***
A.B., Harvard College, 1940; Ph.D., Harvard University, 1948. Professor, Caltech, 1967–83; Professor Emeritus, 1983–.
- Allen Klinger, Ph.D., *Visiting Associate in Electrical Engineering***
B.E.E., Cooper Union, 1957; M.S., Caltech, 1958; Ph.D., University of California, 1966. Professor, University of California (Los Angeles), 1967–. Caltech, 1994.
- Jeffrey D. Knapp, Ph.D., *Visiting Associate Professor of Literature***
A.B., University of California, 1979; Ph.D., 1988. Associate Professor, University of California, 1990–. Caltech, 1994.
- Wolfgang Gustav Knauss, Ph.D., *Professor of Aeronautics and Applied Mechanics***
B.S., Caltech, 1958; M.S., 1959; Ph.D., 1963. Research Fellow in Aeronautics, 1963–65; Assistant Professor, 1965–69; Associate Professor, 1969–78; Professor, 1978–82; Professor of Aeronautics and Applied Mechanics, 1982–.
- Oliver Knill, Ph.D., *Olga Taussky-John Todd Instructor in Mathematics***
Dipl., Eidgenossische Technische Hochschule (Zurich), 1987; Ph.D., 1992. Caltech, 1993–.
- James Kenyon Knowles, Ph.D., D.Sc., *William R. Kenan, Jr., Professor and Professor of Applied Mechanics***
B.S., Massachusetts Institute of Technology, 1952; Ph.D., 1957; D.Sc.h.c., National University of Ireland. Assistant Professor of Engineering and Applied Science, Caltech, 1958–61; Associate Professor, 1961–65; Professor of Applied Mechanics, 1965–. Kenan Professor, 1991–. Academic Officer for Applied Mechanics, 1971–75; Executive Officer for Civil Engineering and Applied Mechanics, 1986–93; Acting Chair, Division of Engineering and Applied Science, 1989–90.
- Christof Koch, Ph.D., *Professor of Computation and Neural Systems***
M.S., University of Tübingen, 1980; Ph.D., 1982. Assistant Professor, Caltech, 1986–91; Associate Professor, 1991–94; Professor, 1994–.
- Leon Kocharov, M.S., *Visiting Associate in Physics***
M.S., Leningrad Polytechnical Institute, 1978; Candidate of Physical-Math Sciences, Moscow State University, 1981. Associate Professor, St. Petersburg State Technical University, 1990–. Caltech, 1993–95.

- Joseph B. Koepfli, D.Phil., *Senior Research Associate in Chemistry, Emeritus*
A.B., Stanford University, 1924; M.A., 1925; D.Phil., University of Oxford, 1928. Research Associate, Caltech, 1932-72; Research Associate Emeritus, 1972-74; Senior Research Associate Emeritus, 1974-.
- Paulo Kofuji, Ph.D., *Research Fellow in Biology*
B.Sc., University of Sao Paulo, 1986; M.Sc., 1988; Ph.D., University of Maryland, 1993. Caltech, 1993-95.
- Elzbieta Kolawa, Ph.D., *Visiting Associate in Applied Physics*
B.S., Academy of Mining and Metallurgy (Poland), 1981; Ph.D., Jagiellonian University, 1984. Staff Scientist, Jet Propulsion Laboratory, 1993-. Senior Research Fellow, Caltech, 1989-93; Visiting Associate, 1993-94.
- Edwin E. Kolbe, Ph.D., *Research Fellow in Theoretical Physics*
Dipl., University of Munster, 1988; Ph.D., 1992. Caltech, 1993-.
- Hubert Koller, Ph.D., *Research Fellow in Chemical Engineering*
Dipl., University of Konstanz, 1989; M.S., 1990; Ph.D., University of Stuttgart, 1993. Caltech, 1994-95.
- Masakazu Konishi, Ph.D., *Bing Professor of Behavioral Biology*
B.S., Hokkaido University (Japan), 1956; M.S., 1958; Ph.D., University of California, 1963. Professor of Biology, Caltech, 1975-80; Bing Professor, 1980-. Executive Officer for Biology, 1977-80.
- Steven Elliot Koonin, Ph.D., *Professor of Theoretical Physics*
B.S., Caltech, 1972; Ph.D., Massachusetts Institute of Technology, 1975. Assistant Professor of Theoretical Physics, Caltech, 1975-78; Associate Professor of Physics, 1978-81; Professor of Theoretical Physics, 1981-.
- Julie R. Korenberg, Ph.D., M.D., *Visiting Associate in Biology*
B.Sc., McGill University, 1968; M.S., University of Wisconsin, 1976; Ph.D., 1976; M.D., University of Miami School of Medicine, 1979. Assistant Professor, University of California (Los Angeles), 1979-. Caltech, 1991-94.
- Julia A. Kornfield, Ph.D., *Assistant Professor of Chemical Engineering*
B.S., Caltech, 1983; M.S., 1984; Ph.D., Stanford University, 1988. Assistant Professor, Caltech, 1990-.
- Wolfgang Korsch, Ph.D., *Senior Research Fellow in Physics*
Ph.D., University of Marburg (Germany), 1990. Caltech, 1994-.
- Michael E. Kort, Ph.D., *Research Fellow in Chemistry*
B.S., Hope College, 1987; Ph.D., University of Wisconsin (Madison), 1993. Caltech, 1994-95.
- Masa-Toshi Koshihara, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.S., University of Tokyo, 1951; M.S., 1953; Ph.D., University of Rochester, 1955. Professor, TOKAI University, 1987-. Caltech, 1993-94.
- Petros Koumoutsakos, Ph.D., *Research Fellow in Aeronautics*
Dipl., National Technical University of Athens, 1986; M.S. (Naval Architecture and Marine Engineering), University of Michigan, 1987; M.S. (Aeronautics), Caltech, 1988; Ph.D., 1992. Research Fellow, 1992-94.
- Joseph Morgan Kousser, Ph.D., *Professor of History and Social Science*
A.B., Princeton University, 1965; M.Phil., Yale University, 1968; Ph.D., 1971. Instructor in History, Caltech, 1969-71; Assistant Professor, 1971-74; Associate Professor, 1974-79; Professor, 1979-80; Professor of History and Social Science, 1980-.
- Jorg M. Kramer, Ph.D., *Research Fellow in Biology*
Dipl., Swiss Federal Institute of Technology, 1987; M.Sc., Imperial College of Science and Technology, 1988; Ph.D., Swiss Federal Institute of Technology, 1993. Visiting Associate, Caltech, 1993; Research Fellow, 1993-94.
- Mark T. Krejchi, Ph.D., *Research Fellow in Chemical Engineering*
B.S., California State University (San Jose), 1986; Ph.D., University of Massachusetts, 1993. Caltech, 1993-94.
- Doris E. Kretzschmar, Ph.D., *Research Fellow in Biology*
Degree, University of Wuerzburg (Germany), 1987; Ph.D., 1991. Caltech, 1993-94.
- David J. Kriegman, Ph.D., *Visiting Associate in Mechanical Engineering*
B.S., Princeton University, 1983; M.S., Stanford University, 1984; Ph.D., Caltech, 1989. Assistant Professor, Yale University, 1990-. Visiting Associate, Caltech, 1993-95.
- Ramanan Krishnamoorti, Ph.D., *Research Fellow in Chemical Engineering*
B. Tech., Indian Institute of Technology (Madras), 1988; M.A., Princeton University, 1990; Ph.D., 1993. Caltech, 1993-95.
- Beth A. Krizek, Ph.D., *Research Fellow in Biology*
B.S., Duke University, 1988; Ph.D., Johns Hopkins University, 1993. Caltech, 1993-.

- Toshi Kubota, Ph.D., Professor of Aeronautics, Emeritus**
B.E., University of Tokyo, 1947; M.S., Caltech, 1952; Ph.D., 1957. Research Fellow, 1957-59; Assistant Professor, 1959-63; Associate Professor, 1963-71; Professor, 1971-90; Professor Emeritus, 1990-.
- Aleksandre Kuklin, Ph.D., Research Fellow in Environmental Engineering Science**
B.S., Polytechnical University (Kiev), 1981; M.S., 1983; Ph.D., Academy of Sciences, Gas Institute, 1989. Caltech, 1993.
- Shrinivas R. Kulkarni, Ph.D., Professor of Astronomy**
M.S., Indian Institute of Technology, 1978; Ph.D., University of California, 1983. Millikan Research Fellow, Caltech, 1985-87; Assistant Professor, 1987-90; Associate Professor, 1990-92; Professor, 1992-.
- Akiko Kumagai, Ph.D., Senior Research Fellow in Biology**
B.S., Kyoto University (Japan), 1979; Ph.D., 1986. Caltech, 1989-95.
- Aron Kuppermann, Ph.D., Professor of Chemical Physics**
M.Sc., University of Sao Paulo, 1948; Ph.D., University of Notre Dame, 1956. Caltech, 1963-.
- Jenijoy La Belle, Ph.D., Professor of Literature**
B.A., University of Washington, 1965; Ph.D., University of California (San Diego), 1969. Assistant Professor of English, Caltech, 1969-76; Associate Professor, 1977-80; Associate Professor of Literature, 1980-88; Professor, 1988-.
- Marissa A. La Madrid, Ph.D., Senior Research Fellow in Materials Science**
B.S., University of the Philippines, 1978; M.S., University of Illinois, 1982; Ph.D., 1989. Research Fellow in Physics, Caltech, 1990-92; Senior Research Fellow in Materials Science, 1993-94.
- Jay A. Labinger, Ph.D., Lecturer in Chemistry**
B.S., Harvey Mudd College, 1968; Ph.D., Harvard University, 1974. Member of the Professional Staff, Caltech, 1986-. Lecturer, 1988; 1990-.
- Kenneth A. Laderman, Ph.D., Research Fellow in Biology**
B.A., Pomona College, 1986; Ph.D., Johns Hopkins University, 1992. Caltech, 1992-95.
- Paul E. Laibinis, Ph.D., Research Fellow in Chemistry**
S.B. (Chemistry), S.B. (Chemical Engineering), Massachusetts Institute of Technology, 1985; A.M., Harvard University, 1987; Ph.D., 1990. Caltech, 1991-93.
- John Lambros, Ph.D., Research Fellow in Aeronautics**
B.S., University of London, 1988; M.S., Caltech, 1989; Ph.D., 1994. Caltech, 1994-.
- Michele L. Lamka, Ph.D., Research Fellow in Biology**
B.S., Loyola Marymount University, 1985; Ph.D., University of Utah, 1994. Caltech, 1994-95.
- Esther Rose Lamken, Ph.D., Visiting Associate in Mathematics**
B.S., Stanford University, 1975; M.S., University of Michigan (Ann Arbor), 1977; Ph.D., 1983. Associate Professor, Pomona College, 1993-; Visiting Associate, Caltech, 1992; 1993-94.
- Samuel E. Landsberger, Sc.D., Visiting Associate in Mechanical Engineering**
B.S., University of North Carolina, 1980; M.S., Massachusetts Institute of Technology, 1984; Sc.D., 1988. Assistant Professor, Cornell University, 1989-. Caltech, 1993-95.
- Gladys Lang, Ph.D., Research Fellow in Physics**
B.S., Chinese University of Hong Kong, 1988; Ph.D., Caltech, 1993. Research Fellow, 1993.
- Karlheinz Langanke, Dr.rer.Nat., Habil., Senior Research Associate in Theoretical Physics**
Dipl., University of Munster, 1974; Dr.rer.Nat., 1980; Habil., 1985. Visiting Associate, Caltech, 1982-83; 1984; 1987; 1990; 1992-93; Senior Research Associate, 1993-.
- Andrew E. Lange, Ph.D., Professor of Physics**
B.A., Princeton University, 1980; Ph.D., University of California, 1987. Visiting Associate, Caltech, 1993-94; Professor, 1994-.
- Wolfgang Lange, Ph.D., Research Fellow in Physics**
Ph.D., Ludwig-Maximilians University, Max-Planck-Institute, 1993. Caltech, 1994-95.
- Jean-Marc Langlois, Ph.D., Visiting Associate in Chemistry**
B.Sc., University of Sherbrooke (Canada), 1983; M.Sc., University of Sherbrooke (Canada), 1985; M.Sc., Caltech, 1987; Ph.D., 1993. Senior Scientist, Schrodinger, Inc., 1993-. Caltech, 1994-95.
- Ari Laor, Ph.D., Research Fellow in Theoretical Astrophysics**
B.S., Tel Aviv University, 1981; Ph.D., 1990. Caltech, 1994-95.
- Anastasios M. Lappas, Ph.D., Research Fellow in Aeronautics**
Dipl., National Technical University (Athens), 1987; M.S., Caltech, 1988; Ph.D., Caltech, 1992. Research Fellow, 1992.

- Walter Laug, M.D., *Visiting Associate in Biology*
Dipl., University of Basel, 1968; M.D., University of Children's Hospital (Switzerland), 1973. Associate Professor of Pediatrics, University of Southern California School of Medicine, Children's Hospital of Los Angeles, 1983-. Visiting Associate, Caltech, 1987-89; 1991-95.
- Gilles J. Laurent, Ph.D., D.V.M., *Assistant Professor of Biology and Computational and Neural Systems*
B.A., University of Toulouse, 1978; Ph.D., 1985; D.V.M., National School of Veterinary Medicine of Toulouse, 1985. Caltech, 1990-.
- Charles Ryan Lawrence, Ph.D., *Visiting Associate in Radio Astronomy*
B.S., University of Michigan, 1970; Ph.D., Massachusetts Institute of Technology, 1983. Research Fellow, Caltech, 1983-85; Senior Research Fellow, 1986-91; Senior Research Associate, 1991-93; Visiting Associate, 1993.
- John Lazzaro, Ph.D., *Visiting Associate in Computation and Neural Systems*
B.S., University of Pennsylvania, 1984; M.S., Caltech, 1986; Ph.D., 1990. Associate Research Specialist, University of California, 1993-. Caltech, 1994-.
- Michel Le Breton, Doctorat d'Etat, *Visiting Professor of Economics*
Maitrise de Mathematiques, Universite de Rennes I (France), 1983; Doctorat d'Etat, 1986. Professor, Universite d'Aix-Marseille II, 1990-. Caltech, 1994.
- John O. Ledyard, Ph.D., *Professor of Economics and Social Sciences; Chair, Division of the Humanities and Social Sciences*
A.B., Wabash College, 1963; M.S., Purdue University, 1965; Ph.D., 1967. Professor, Caltech, 1985-. Executive Officer for the Social Sciences, 1989-92; Chair, 1992-.
- David Soong-Hua Lee, Ph.D., *Research Fellow in Materials Science*
B.S., Princeton University, 1986; M.S., Caltech, 1992; Ph.D., 1993. Research Fellow, 1993-95.
- James Z. Lee, Ph.D., *Associate Professor of History*
B.A., Yale University, 1974; M.A., University of Chicago, 1975; Ph.D., 1983. Instructor, Caltech, 1981-83; Assistant Professor, 1983-87; Associate Professor, 1987-.
- Jay Hyung Lee, Ph.D., *Visiting Associate in Chemical Engineering*
Ph.D., Caltech, 1991. Assistant Professor, Auburn University, 1991-. Visiting Associate, Caltech, 1991-93.
- Jeffrey Lee, Ph.D., *Visiting Associate in Geology*
B.A., Pomona College, 1980; Ph.D., Stanford University, 1990. Adjunct Professor, Central Washington University, 1993-. Caltech, 1992-93.
- Jeongwoo Lee, Ph.D., *Research Fellow in Astronomy*
B.S., Seoul National University, 1985; M.S., 1987; Ph.D., Caltech, 1994. Research Fellow, 1993-94.
- Junho Lee, Ph.D., *Research Fellow in Biology*
B.S., Seoul National University, 1986; M.S., 1989; Ph.D., Caltech, 1993. Research Fellow, 1994-95.
- Robert W. K. Lee, Ph.D., *Lecturer in Chemistry*
M.Phil., Hong Kong University, 1974; Ph.D., Cambridge University, 1977. Caltech, 1994.
- Sonny C. Lee, Ph.D., *Research Fellow in Chemistry*
B.S., Caltech, 1984; Ph.D., Harvard University, 1993. Research Fellow, Caltech, 1993-94.
- Wheeseong Lee, Ph.D., *Research Fellow in Chemistry*
B.S., Sogang University (Korea), 1984; M.S., 1986; Ph.D., University of Illinois, 1993. Caltech, 1993-94.
- Yabin Lei, Ph.D., *Research Fellow in Chemistry*
B.S., Nankai University, 1982; Ph.D., Wayne State University, 1989. Caltech, 1993-94.
- Robert Benjamin Leighton, Ph.D., *William L. Valentine Professor of Physics, Emeritus*
B.S., Caltech, 1941; M.S., 1944; Ph.D., 1947. Research Fellow, 1947-49; Assistant Professor, 1949-53; Associate Professor, 1953-59; Professor, 1959-84; Valentine Professor, 1984-85; Valentine Professor Emeritus, 1985-. Chair, Division of Physics, Mathematics and Astronomy, 1970-75; Staff Member, Owens Valley Radio Observatory, 1976-85.
- Anthony Leonard, Ph.D., *Professor of Aeronautics*
B.S., Caltech, 1959; M.S., Stanford University, 1960; Ph.D., 1963. Professor, Caltech, 1985-.
- Nelson Jordan Leonard, Ph.D., D.Sc., Sc.D., D.h.c., D.Sc.h.c., *Faculty Associate in Chemistry*
B.S., Lehigh University, 1937; B.Sc., University of Oxford, 1940; Ph.D., Columbia University, 1942; Sc.D.h.c., Lehigh University; D.Sc.h.c., Oxford University; University of Illinois; D.h.c., Adam Mickiewicz University (Poland); D.Sc.h.c., University of Oxford. Sherman Fairchild Distinguished Scholar, Caltech, 1991-92; Faculty Associate, 1992-.

- Wolfgang Georg Lerche, Ph.D., *Visiting Associate in Physics*
Dipl., Technical University of Munich, 1982; Ph.D., Max-Planck-Institute, 1985. Research Fellow, Caltech, 1988–89; Senior Research Fellow, 1989–91; Visiting Associate, 1994.
- Richard A. Leske, Ph.D., *Research Fellow in Physics*
B.S., University of Wisconsin (Whitewater), 1983; Ph.D., University of Chicago, 1992. Caltech, 1992–94.
- Henry Allen Lester, Ph.D., *Professor of Biology*
A.B., Harvard College, 1966; Ph.D., Rockefeller University, 1971. Assistant Professor, Caltech, 1973–76; Associate Professor, 1976–83; Professor, 1983–.
- Joshua Z. Levin, Ph.D., *Research Fellow in Biology*
B.A., University of Pennsylvania, 1984; Ph.D., Massachusetts Institute of Technology, 1992. Caltech, 1992–95.
- Amir Levinson, Ph.D., *Research Fellow in Theoretical Astrophysics*
B.Sc., Ben-Gurion University (Israel), 1985; M.Sc., 1987; Ph.D., 1992. Caltech, 1992–95.
- Frederic Levy, Ph.D., *Research Fellow in Biology*
Ph.D., Karolinska Institute (Sweden), 1992. Caltech, 1993–95.
- Edward B. Lewis, Ph.D., *Thomas Hunt Morgan Professor of Biology, Emeritus*
B.A., University of Minnesota, 1939; Ph.D., Caltech, 1942. Instructor, 1946–48; Assistant Professor, 1948–49; Associate Professor, 1949–56; Professor, 1956–66; Morgan Professor, 1966–88; Morgan Professor Emeritus, 1988–.
- Nathan S. Lewis, Ph.D., *Professor of Chemistry*
B.S., Caltech, 1977; M.S., 1977; Ph.D., Massachusetts Institute of Technology, 1981. Associate Professor, Caltech, 1988–91; Professor, 1991–.
- Susanna Lewis, Ph.D., *Senior Research Fellow in Biology*
B.S., Jackson College, 1976; Ph.D., Massachusetts Institute of Technology, 1985. Visiting Associate, Caltech, 1988; Senior Research Fellow, 1988–.
- Hsin-Yü Li, Ph.D., *Research Fellow in Electrical Engineering*
B.S., National Chiaotung University (Taiwan), 1984; M.S. (Electro-Optics), 1986; M.S. (Electrical Engineering), Caltech, 1990; Ph.D., 1993. Research Fellow, 1993–94.
- Xiuling Li, Ph.D., *Research Fellow in Chemistry*
B.S., Peking University, 1986; Ph.D., University of California (Los Angeles), 1993. Caltech, 1993–94.
- Kenneth George Libbrecht, Ph.D., *Associate Professor of Astrophysics*
B.S., Caltech, 1980; Ph.D., Princeton University, 1984. Visiting Associate, Caltech, 1984; Assistant Professor, 1984–89; Associate Professor, 1989–.
- Mary E. Lidstrom, Ph.D., *Professor of Applied Microbiology*
B.S., Oregon State University, 1973; M.S., University of Wisconsin (Madison), 1975; Ph.D., 1977. Associate Professor, Caltech, 1987–91; Professor, 1991–.
- Hans Wolfgang Liepmann, Ph.D., Dr. Ing., *Theodore von Kármán Professor of Aeronautics, Emeritus*
Ph.D., University of Zurich, 1938; Dr. Ing. h.c., University of Aachen. Assistant Professor of Aeronautics, Caltech, 1939–46; Associate Professor, 1946–49; Professor, 1949–74; Professor of Aeronautics and Applied Physics, 1974–76; Charles Lee Powell Professor of Fluid Mechanics and Thermodynamics, 1976–83; von Kármán Professor of Aeronautics, 1984–85; von Kármán Professor Emeritus, 1985–. Director, Graduate Aeronautical Laboratories, 1972–85; Executive Officer for Aeronautics, 1976–85.
- Paulet Creyke Liewer, Ph.D., *Visiting Associate in Applied Physics*
B.A., Cornell University, 1967; Ph.D., University of Maryland, 1972. Member of the Technical Staff, Jet Propulsion Laboratory, 1986–. Research Associate, Caltech, 1980–81; Senior Research Associate, 1981–86; Institute Visiting Associate, 1986–88; Visiting Associate, 1988–94.
- Dukhwan Lim, Ph.D., *Senior Research Fellow in Biology*
B.S., Seoul National University, 1981; M.S., 1983; Ph.D., Cornell University, 1990. Research Fellow, Caltech, 1990–93; Senior Research Fellow, 1993–94.
- Jeremy Lim, Ph.D., *Research Fellow in Astrophysics*
B.Sc., Macquarie University (Australia), 1985; Ph.D., 1991. Caltech, 1992–94.
- Nancy Fidler Lim, Ph.D., *Research Fellow in Biology*
B.A., Temple University, 1986; Ph.D., University of Pennsylvania, 1991. Caltech, 1991–94.
- Haosheng Lin, Ph.D., *Research Fellow in Physics*
B.S., Tamkang University, 1982; Ph.D., Michigan State University, 1992. Caltech, 1993–95.

- Michael Gerard Linden-Martin, M.A., *Lecturer in English as a Second Language*
B.A., State University of New York (Buffalo), 1977; M.A., University of California (Los Angeles), 1980. Caltech, 1981-.
- Valentina A. Lindholm, M.A., *Lecturer in Russian*
M.A., Moscow State University, 1971. Caltech, 1974-.
- Sara Lippincott, B.A., *Lecturer in Art History and Creative Writing*
B.A., Wellesley College, 1959. Lecturer, Caltech, 1994.
- Howard Lipshitz, Ph.D., *Associate Professor of Biology*
B.Sc. (Biology and Mathematical Statistics), University of Natal (South Africa), 1975; B.Sc. (Biology), 1976; M.Phil., Yale University, 1980; Ph.D., 1983. Assistant Professor, Caltech, 1986-92; Associate Professor, 1992-.
- Dariusz C. Lis, Ph.D., *Senior Research Fellow in Physics*
Ph.D., University of Massachusetts (Amherst), 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-.
- Derek I. Lisoski, Ph.D., *Visiting Associate in Aeronautics*
B.Sc., University of Calgary, 1984; M.S., Caltech, 1987; Ph.D., 1993. Research Fellow, Caltech, 1993-94; Visiting Associate, 1994-95.
- Ericson John List, Ph.D., *Professor of Environmental Engineering Science*
B.E., University of Auckland, 1961; M.E., 1962; Ph.D., Caltech, 1965. Research Fellow, 1965-66; Assistant Professor, 1969-72; Associate Professor, 1972-78; Professor, 1978-. Executive Officer for Environmental Science, 1980-85.
- Cangli Liu, M.S., *Visiting Associate in Geophysics*
B.S., Changsha Institute of Technology (Peking), 1982; M.S., University of Science and Technology, 1992. Associate Professor, Southwest Institute of Fluid Physics, 1992-. Caltech, 1994-95.
- Jinzhong Liu, Ph.D., *Visiting Associate in Chemistry*
M.Sc., China University of Mining and Technology, 1987; Ph.D., Chinese Academy of Sciences, 1990. Associate Professor, 1993-. Caltech, 1994-95.
- Zhongchi Liu, Ph.D., *Senior Research Fellow in Biology*
B.S., Wuhan University (China), 1982; M.A., Harvard University, 1988; Ph.D., 1990. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-.
- Peter Karl Loewenhardt, Ph.D., *Research Fellow in Applied Physics*
B.Sc., University of Saskatchewan, 1987; M.Sc., University of British Columbia, 1989; Ph.D., Australian National University, 1992. Caltech, 1993-95.
- Nathaniel P. Longley, Ph.D., *Research Fellow in Physics*
B.S., Carleton College, 1986; Ph.D., University of Minnesota, 1993. Caltech, 1993-94.
- Gary Allen Lorden, Ph.D., *Professor of Mathematics; Vice President for Student Affairs*
B.S., Caltech, 1962; Ph.D., Cornell University, 1966. Assistant Professor, Caltech, 1968-71; Associate Professor, 1971-77; Professor, 1977-. Dean of Students, 1984-88; Vice President, 1989-.
- Kegong Lou, Ph.D., *Research Fellow in Physics*
B.S., Tsing Hua University (Peking), 1986; M.S., High Energy Institute, Academia Sinica, 1987; Ph.D., Eidgenossische Technische Hochschule (Switzerland), 1993. Caltech, 1994-95.
- Alain Louveau, Doctorat D'Etat, *Visiting Associate in Mathematics*
Ing., Ecole Polytechnique, 1969; Doctorat d'Etat, University of Paris VI, 1976. Director of Research, Centre National de la Recherche Scientifique, 1984-. Visiting Associate, Caltech, 1992; 1994.
- Lynn E. Lowry, M.S., *Visiting Associate in Applied Physics*
B.S., Carnegie Mellon University, 1980; M.S., 1981. Member of the Technical Staff and Principal Investigator, Jet Propulsion Laboratory, 1981-. Caltech, 1992-95.
- Yi Lu, Ph.D., *Research Fellow in Chemistry*
B.S., Beijing University, 1986; Ph.D., University of California (Los Angeles), 1992. Caltech, 1992-94.
- Allison F. Lung, Ph.D., *Research Fellow in Physics*
B.A., Trenton State University, 1981; B.S., The American University, 1984; Ph.D., 1992. Caltech, 1992-94.
- QingXian Luo, *Visiting Associate in Aeronautics*
Senior Engineering, Shanghai Aerospace Design Institute, 1981-. Caltech, 1993-94.
- Arthur W. Lupia, Ph.D., *Visiting Associate in Political Science*
B.A., University of Rochester, 1986; M.A., Caltech, 1988; Ph.D., 1991. Assistant Professor, University of Rochester, 1990-. Visiting Associate, Caltech, 1993.

- Wilhelmus Anthony Joseph Luxemburg, Ph.D., *Professor of Mathematics*
B.A., University of Leiden, 1950; M.A., 1953; Ph.D., Delft Institute of Technology, 1955. Assistant Professor, Caltech, 1958–60; Associate Professor, 1960–62; Professor, 1962–, Executive Officer for Mathematics, 1970–85.
- Richard Francis Lyon, M.S.E.E., *Visiting Associate in Computer Science*
B.S., Caltech, 1974; M.S.E.E., Stanford University, 1975. Senior Staff Scientist, Fairchild Research Center, 1981–. Visiting Associate, Caltech, 1984–95.
- Michael J. Lyons, Ph.D., *Research Fellow in Biology*
B.Sc., McGill University, 1983; M.Sc., University of British Columbia, 1985; Ph.D., 1991. Caltech, 1992–93.
- Chung-Pei M. Ma, Ph.D., *Division Research Fellow in Theoretical Astrophysics*
B.S., Massachusetts Institute of Technology, 1987; Ph.D., 1993. Caltech, 1993–.
- David J. Madar, Ph.D., *Research Fellow in Chemistry*
M.S., University of Michigan (Ann Arbor), 1988; Ph.D., Indiana University (Bloomington), 1993. Caltech, 1994–95.
- G. S. Maddala, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.A., Andhra University (India), 1955; M.A., Bombay University, 1957; Ph.D., University of Chicago, 1963. Graduate Research Professor, University of Florida, 1975–; University Eminent Scholar, The Ohio State University, 1992–. Caltech, 1993–.
- Christopher Cuthbert Madiba, Ph.D., *Visiting Associate in Physics*
M.Sc., University of the Witwatersrand, 1978; Ph.D., 1987. Lecturer/Researcher, 1987–. Caltech, 1993–.
- Kiran Madura, Ph.D., *Research Fellow in Biology*
B.A., Ithaca College, 1981; M.S., State University of New York (Buffalo), 1984; Ph.D., University of Rochester, 1988. Caltech, 1992–94.
- Sela Mager, D.Sc., *Research Fellow in Biology*
B.Sc., Hebrew University, 1985; D.Sc., Israel Institute of Technology, 1991. Caltech, 1992–95.
- Nishith K. Mahanty, Ph.D., *Research Fellow in Biology*
B.Eng., University of Canterbury, 1986; Ph.D., Australian National University, 1992. Research Fellow, Caltech, 1994–.
- Michael P. Maher, Ph.D., *Research Fellow in Biology*
B.S., University of Illinois, 1986; M.S., Cornell University, 1989; Ph.D., 1993. Caltech, 1993–94.
- Kazuhiro W. Makabe, Ph.D., *Research Fellow in Biology*
B.Sc., Kyoto University (Japan), 1984; M.Sc., 1986; Ph.D., 1990. Caltech, 1992–95.
- Kyoko Makabe, M.S., *Visiting Associate in Biology*
B.S., Toho University (Japan), 1983; M.S., 1985. Instructor, Wakayama Medical College, 1988–. Caltech, 1993–95.
- Nikolai G. Makarov, Ph.D., *Professor of Mathematics*
B.A., Leningrad University, 1982; Ph.D., LOMI Mathematics Institute (Leningrad), 1986. Visiting Professor, Caltech, 1991; Professor, 1991–.
- Robert Mallett, Ph.D., *Research Fellow in Aeronautics*
B.Eng., University of Queensland, 1989; Ph.D., 1993. Caltech, 1993.
- Sanku Mallik, Ph.D., *Research Fellow in Chemical Engineering*
B.S., Indian Institute of Technology, 1987; Ph.D., Case Western Reserve University, 1991. Caltech, 1991–94.
- Leonid A. Malozemov, Ph.D., *Harry Bateman Research Instructor in Mathematics*
Ph.D., Moscow State University, 1988. Caltech, 1992–93.
- Donal Thomas Manahan, Ph.D., *Visiting Associate in Biology*
B.A., Trinity College, University of Dublin, 1976; Ph.D., University of Wales, 1980. Associate Professor, University of Southern California, 1990–. Caltech, 1992–94.
- Oscar Mandel, Ph.D., *Professor of Literature*
B.A., New York University, 1947; M.A., Columbia University, 1948; Ph.D., Ohio State University, 1951. Visiting Associate Professor of English, Caltech, 1961–62; Associate Professor, 1962–68; Professor, 1968–80; Professor of Literature, 1980–.
- Frank Earl Marble, Ph.D., *Richard L. and Dorothy M. Hayman Professor of Mechanical Engineering and Professor of Jet Propulsion, Emeritus*
B.S., Case Institute of Technology, 1940; M.S., 1942; A.E., Caltech, 1947; Ph.D., 1948. Instructor in Aeronautics, 1948–49; Assistant Professor of Jet Propulsion and Mechanical Engineering, 1949–53; Associate Professor, 1953–57; Professor, 1957–80; Hayman Professor of Mechanical Engineering and Professor of Jet Propulsion, 1980–89; Hayman Professor Emeritus, 1989–. Administrator, Industrial Relations Center, 1986–89.
- Tadeusz Marciniec, Ph.D., *Senior Research Fellow in Biology*
M.Sc., Adam Mickiewicz University, 1986; Ph.D., Polish Academy of Science, 1989. Caltech, 1990–94.

- Rudolph Arthur Marcus, Ph.D., D.Sc.,
 Fil.Dr., D.Sc., Nobel Laureate, *Arthur
 Amos Noyes Professor of Chemistry*
 B.Sc., McGill University, 1943; Ph.D., 1946;
 D.Sc.h.c., University of Chicago; McGill
 University; Polytechnic University; Fil.Dr.h.c.,
 Gothenburg University; D.Sc.h.c., University of
 New Brunswick; Queen's University. Caltech,
 1978-.
- Eve E. Marder, Ph.D., *Cornelius Wiersma
 Visiting Professor of Biology*
 A.B., Brandeis University, 1969; Ph.D., Univer-
 sity of California (San Diego), 1974. Professor,
 Brandeis University, 1990-. Caltech, 1994.
- Yuri M. Markov, Diploma, *Visiting Associate
 in Physics*
 Dipl., Gubkin Oil Institute, 1959. Staff
 Member, Institute for Nuclear Research,
 Russian Academy of Sciences, 1985-. Caltech,
 1994.
- Ogden J. Marsh, M.S., *Visiting Associate in
 Applied Physics*
 B.S., University of Connecticut, 1953; M.S.,
 University of California (Los Angeles), 1965.
 Manager, Semiconductor Crystal Physics
 Program, Hughes Research Laboratories,
 1963-. Caltech, 1986-95.
- Richard E. Marsh, Ph.D., *Senior Research
 Associate in Chemistry, Emeritus*
 B.S., Caltech, 1943; Ph.D., University of Cali-
 fornia (Los Angeles), 1950. Research Fellow,
 Caltech, 1950-55; Senior Research Fellow,
 1955-73; Research Associate, 1973-81; Senior
 Research Associate, 1981-90; Senior Research
 Associate Emeritus, 1990-.
- Hardy Cross Martel, Ph.D., *Professor of
 Electrical Engineering, Emeritus*
 B.S., Caltech, 1949; M.S., Massachusetts Insti-
 tute of Technology, 1950; Ph.D., Caltech, 1956.
 Instructor, 1953-55; Assistant Professor,
 1955-58; Associate Professor, 1958-82;
 Professor, 1982-90; Professor Emeritus, 1990-.
 Executive Assistant to the President, 1969-83;
 Secretary of the Board of Trustees, 1973-83;
 Executive Officer for Electrical Engineering,
 1981-86.
- Alain Jean Martin, Ing., *Professor of Computer
 Science; Executive Officer for Computer
 Science*
 B.S., University of Marseille, 1965; Ing., Poly-
 technic Institute (Grenoble), 1969. Visiting
 Assistant Professor, Caltech, 1981-83; Visiting
 Associate Professor, 1983; Associate Professor,
 1983-86; Professor, 1986-. Executive Officer,
 1994-.
- Christopher Martin, Ph.D., *Professor of
 Physics*
 B.A., Oberlin College, 1978; Ph.D., University
 of California, 1986. Caltech, 1993-.
- Pedro Martinez, Ph.D., *Senior Research
 Fellow in Biology*
 B.S., Universitat Autònoma de Barcelona,
 1982; M.S., 1983; Ph.D., 1990. Research Fellow,
 Caltech, 1990-93; Senior Research Fellow,
 1993-.
- Nicholas Charles Mascarenhas, Ph.D.,
Research Fellow in Physics
 B.S., University of Bombay, 1981; M.S.
 (Physics), 1983; M.Sc. (Physics), University of
 Chicago, 1985; Ph.D., 1991. Caltech, 1991-93.
- Sami F. Masri, Ph.D., *Visiting Associate in
 Mechanical Engineering*
 B.S., University of Texas, 1960; M.S. (Aerospace
 Engineering), 1961; M.S. (Mechanical Engi-
 neering), Caltech, 1962; Ph.D., 1965.
 Professor, University of Southern California,
 1981-. Research Fellow, Caltech, 1965-66;
 Visiting Associate, 1989-94.
- Arnulf A.C.E. Materny, Dr.rer.Nat., *Research
 Fellow in Chemistry*
 B.S., University of Bayreuth (Germany), 1988;
 Dr.rer.Nat., University of Wurzburg, 1992.
 Caltech, 1993-94.
- Peter M. Mathisen, Ph.D., *Senior Research
 Fellow in Biology*
 B.A., Dowling College, 1980; Ph.D., University
 of Illinois (Chicago), 1987. Research Fellow in
 Chemistry, Caltech, 1987-90; Research Fellow
 in Biology, 1991; Senior Research Fellow,
 1991-93.
- Kayo Matsubara, Ph.D., *Visiting Associate in
 Geochemistry*
 B.S., Okayama University of Science (Japan),
 1986; M.S., Kobe University, 1989; Ph.D., 1992.
 Postdoctoral Fellow, Japan Society for the
 Promotion of Science, Osaka University, 1992-.
 Caltech, 1993-94.
- Stephen Leon Mayo, Ph.D., *Assistant
 Professor of Biology; Assistant Investigator,
 Howard Hughes Medical Institute*
 B.S., Pennsylvania State University, 1983;
 Ph.D., Caltech, 1987. Senior Research Fellow,
 1991-92; Assistant Professor, 1992-; Assistant
 Investigator, 1994-.
- Monica A. Mazurek, Ph.D., *Visiting Associate
 in Environmental Engineering Science*
 A.A., Pasadena City College, 1964; B.S., Univer-
 sity of California (Los Angeles), 1977; Ph.D.,
 1985. Assistant Chemist, Brookhaven National
 Laboratory, 1989-. Research Fellow, Caltech,
 1986-89; Visiting Associate, 1989-94.
- James Oeland McCaldin, Ph.D., *Professor of
 Applied Physics and Electrical Engineering,
 Emeritus*
 B.A., University of Texas, 1944; Ph.D., Caltech,
 1954. Associate Professor of Applied Science,
 1968-73; Professor of Applied Science and
 Electrical Engineering, 1973-76; Professor of
 Applied Physics and Electrical Engineering,
 1976-83; Professor Emeritus, 1983-.

- Gilbert Donald McCann, Ph.D., *Professor of Applied Science, Emeritus*
B.S., Caltech, 1934; M.S., 1935; Ph.D., 1939. Associate Professor of Electrical Engineering, 1946-47; Professor, 1947-66; Professor of Applied Science, 1966-80; Professor Emeritus, 1980-. Director, Willis H. Booth Computing Center, 1966-71.
- James Kevin McCarthy, Ph.D., *Assistant Professor of Astronomy*
B.S. (Astronomy), Pennsylvania State University, 1982; B.S. (Physics), 1982; Ph.D., Caltech, 1988. Assistant Professor, 1991-.
- Nael A. McCarty, Ph.D., *Senior Research Fellow in Biology*
B.S., University of Kansas, 1983; M.S., University of North Carolina, 1987; Ph.D., University of Texas, 1990. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-95.
- Thomas Redmond McDonough, Ph.D., *Lecturer in Engineering*
S.B., Massachusetts Institute of Technology, 1966; Ph.D., Cornell University, 1973. Caltech, 1979-.
- Robert James McEliece, Ph.D., *Professor of Electrical Engineering; Executive Officer for Electrical Engineering*
B.S., Caltech, 1964; Ph.D., 1967. Professor, 1982-. Executive Officer, 1990-.
- Thomas Conley McGill, Ph.D., *Fletcher Jones Professor of Applied Physics*
B.S., Lamar State College of Technology, 1964; M.S., Caltech, 1965; Ph.D., 1969. Assistant Professor, 1971-74; Associate Professor, 1974-77; Professor, 1977-85; Jones Professor, 1985-.
- Dominic V. McGrath, Ph.D., *Research Fellow in Chemistry*
B.S., Yale University, 1986; Ph.D., Caltech, 1992. Research Fellow, 1994-95.
- Brent I. A. McInnes, Ph.D., *Research Fellow in Geology*
B.Sc., McMaster University, 1985; M.Sc., 1987; Ph.D., University of Ottawa, 1992. Caltech, 1992-93.
- Richard D. McKelvey, Ph.D., *Professor of Political Science*
B.A., Oberlin College, 1966; M.A., Washington University, 1967; M.A., University of Rochester, 1970; Ph.D., 1972. Sherman Fairchild Distinguished Scholar, Caltech, 1978-79; Professor, 1979-. Executive Officer for the Social Sciences, 1985-86.
- Robert D. McKeown, Ph.D., *Professor of Physics*
B.S., State University of New York (Stony Brook), 1974; Ph.D., Princeton University, 1979. Assistant Professor, Caltech, 1980-86; Associate Professor, 1986-92; Professor, 1992-.
- Lydia McKinstry, Ph.D., *Research Fellow in Chemistry*
B.S., Fort Lewis College, 1989; Ph.D., Montana State University, 1993. Caltech, 1994-95.
- Basil Vincent McKoy, Ph.D., *Professor of Theoretical Chemistry*
B.S., Nova Scotia Technical University, 1960; Ph.D., Yale University, 1964. Noyes Research Instructor in Chemistry, Caltech, 1964-66; Assistant Professor of Theoretical Chemistry, 1967-69; Associate Professor, 1969-75; Professor, 1975-.
- Mark L. McLaughlin, Ph.D., *Visiting Associate in Chemistry*
B.S., Christian Brothers College, 1979; Ph.D., Georgia Institute of Technology, 1983. Associate Professor, Louisiana State University, 1992-. Caltech, 1994.
- Carver Andrew Mead, Ph.D., D.Sc., D.Hon., *Gordon and Betty Moore Professor of Engineering and Applied Science*
B.S., Caltech, 1956; M.S., 1957; Ph.D., 1960; D.Sc.h.c., University of Lund (Sweden); D.Hon., University of Southern California. Instructor in Electrical Engineering, 1958-59; Assistant Professor, 1959-62; Associate Professor, 1962-67; Professor, 1967-77; Professor of Computer Science and Electrical Engineering, 1977-80; Moore Professor of Computer Science, 1980-92; Moore Professor of Engineering and Applied Science, 1992-.
- Thomas J. Meade, Ph.D., *Senior Research Fellow in Biology*
B.S., Arizona State University, 1979; M.S., Ohio State University, 1982; Ph.D., 1985. Research Fellow in Chemistry, Caltech, 1986-88; Senior Research Fellow in Biology, 1991-94.
- Barry B. Megdal, Ph.D., *Lecturer in Electrical Engineering*
B.S., Caltech, 1977; M.S., 1978; Ph.D., 1983. Lecturer, 1992-94.
- Daniel I. Meiron, Sc.D., *Professor of Applied Mathematics; Executive Officer for Applied Mathematics*
S.B., Massachusetts Institute of Technology, 1976; Sc.D., 1981. Research Fellow, Caltech, 1981-83; Visiting Associate, 1984-85; Assistant Professor, 1985-89; Associate Professor, 1989-94; Professor, 1994-. Executive Officer, 1993-.
- Bartlett Mel, Ph.D., *Senior Research Fellow in Biology*
B.S., University of California, 1982; Ph.D., University of Illinois, 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-94.

- Jane E. Mendel, Ph.D., *Senior Research Fellow in Biology*
B.A., University of Mississippi, 1975; B.S., 1975; Ph.D., University of Tennessee, 1987. Research Fellow, Caltech, 1988-91; Senior Research Fellow, 1991-.
- Ruslan A. Mendybaev, Ph.D., *Visiting Associate in Geochemistry*
B.S., Moscow State University, 1980; Ph.D., Vernadsky Institute of Geochemistry and Analytical Chemistry, 1992. Research Scientist, 1980-. Postdoctoral Fellow, University of Chicago, 1992-. Caltech, 1992-95.
- Kaushiki Menon, Ph.D., *Research Fellow in Biology*
M.Sc., University of California (Los Angeles), 1982; Ph.D., 1990. Research Fellow, Caltech, 1994-95.
- Eric Mercer, Ph.D., *Research Fellow in Biology*
B.S., Cornell University, 1984; Ph.D., University of Washington, 1991. Caltech, 1992-95.
- George A. Meski, Ph.D., *Research Fellow in Chemical Engineering*
M.S., Mendeleev Chemical Technological Institute (Moscow), 1979; Ph.D., Karpov Institute of Physical Chemistry (Moscow), 1989. Caltech, 1992-94.
- Richard A. Mewaldt, Ph.D., *Senior Research Associate in Physics*
B.A., Lawrence University, 1965; M.A., Washington University, 1967; Ph.D., 1971. Research Fellow, Caltech, 1971-75; Senior Research Fellow, 1975-81; Lecturer, 1987; Senior Research Associate, 1981-.
- Elliot M. Meyerowitz, Ph.D., *Professor of Biology*
A.B., Columbia University, 1973; M.Phil., Yale University, 1975; Ph.D., 1977. Assistant Professor, Caltech, 1980-85; Associate Professor, 1985-89; Professor, 1989-.
- Feng Miao, Ph.D., *Senior Research Fellow in Biology*
B.S., East China Institute of Chemical Technology, 1982; Ph.D., Shanghai Institute of Biochemistry, 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-95.
- Douglas G. Michael, Ph.D., *Senior Research Fellow in Physics*
B.S., Stanford University, 1982; M.S., Harvard University, 1984; Ph.D., 1990. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-.
- Thomas Michaelis, Dr.rer.Nat., *James Boswell Research Fellow in Biology*
Dipl., Georg-August Universität (Göttingen), 1989; Dr.rer.Nat., 1992. Caltech, 1993-94.
- Yuichi Michikawa, Ph.D., *Research Fellow in Biology*
B.A., University of Tsukuba, 1989; Ph.D., 1994. Research Fellow, Caltech, 1994-95.
- Jose Luis Micol, Ph.D., *Visiting Associate in Biology*
B.Sc., University of Madrid, 1979; M.Sc., 1983; Ph.D., University de Murcia, 1985. Associate Professor, Universidad de Alicante, 1991-. Research Fellow, Caltech, 1989-91; Senior Research Fellow, 1991; Visiting Associate, 1992; 1993-.
- R. David Middlebrook, Ph.D., *Professor of Electrical Engineering*
B.A., University of Cambridge, 1952; M.S., Stanford University, 1953; Ph.D., 1955; M.A., University of Cambridge, 1956. Assistant Professor, Caltech, 1955-58; Associate Professor, 1958-65; Professor, 1965-. Executive Officer for Electrical Engineering, 1987-90.
- Antonio H. Miguel, Ph.D., *Visiting Associate in Environmental Engineering Science*
M.S., Northeastern University, 1973; Ph.D., University of Illinois, 1976. Associate Professor, University of Sao Paulo, 1987-. Visiting Associate, Caltech, 1994.
- Richard H. Miles, Ph.D., *Visiting Associate in Applied Physics*
B.S., Caltech, 1983; Ph.D., 1989. Member of the Technical Staff, Hughes Research Laboratories, 1988-. Visiting Associate, Caltech, 1988-95.
- Carol Ann Miller, M.D., *Visiting Associate in Biology*
A.B., Mount Holyoke College, 1961; M.D., Jefferson Medical College, 1965. Associate Professor, University of Southern California School of Medicine, 1977-; Chief, Cajal Laboratory of Neuropathology, University of Southern California Medical Center, 1982-. Caltech, 1982-94.
- Scott J. Miller, Ph.D., *Research Fellow in Chemistry*
B.A., Harvard University, 1989; M.S., 1989; Ph.D., 1994. Research Fellow, Caltech, 1994-.
- Stuart C. Miller, M.D., *Director of Health Services*
B.S., University of Illinois, 1975; M.D., 1979. Caltech, 1987-.
- Kyung-Tai Min, Ph.D., *Research Fellow in Biology*
M.S., Korea Advanced Institute of Science, 1987; Ph.D., University of Oxford, 1993. Caltech, 1993-94.
- Kurt M. Mislow, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.S., Tulane University, 1944; Ph.D., Caltech, 1947. Hugh Stott Taylor Professor Emeritus, Princeton University, 1988-. Fairchild Scholar, Caltech, 1989; 1990; 1994.

- Herschel Kenworthy Mitchell, Ph.D., *Professor of Biology, Emeritus*
B.S., Pomona College, 1936; M.S., Oregon State College, 1938; Ph.D., University of Texas, 1941. Senior Research Fellow, Caltech, 1946-49; Associate Professor, 1949-53; Professor, 1953-84; Professor Emeritus, 1984-.
- Jonathan P. Mitchell, Ph.D., *Research Fellow in Chemistry*
B.Sc., University of Durham, 1988; Ph.D., 1992. Caltech, 1992-95.
- Teruaki Mitsuya, M.S., *Visiting Associate in Mechanical Engineering*
B.S., Gifu University, 1980; M.S., 1984. Research Engineer, Hitachi Ltd., 1984-. Caltech, 1994-95.
- Denny K. Miu, Ph.D., *Visiting Associate in Electrical Engineering*
B.S., University of California, 1979; M.S., 1980; Ph.D., 1985. Assistant Professor, University of California (Los Angeles), 1986-. Caltech, 1992-95.
- Rex A. Moats, Ph.D., *Visiting Associate in Chemistry*
B.S., Montana State University, 1984; Ph.D., 1989. Research Fellow, Huntington Medical Research Institute, 1992-. Research Fellow, Caltech, 1990-92; Visiting Associate, 1993-95.
- Fai H. Mok, Ph.D., *Visiting Associate in Electrical Engineering*
B.S., City University of New York, 1981; M.S., Caltech, 1982; Ph.D., 1989. President, Holopex Corporation, 1993-. Visiting Associate, Caltech, 1993-94.
- Catherine A. Monteroso, B.A., *Coach*
B.A., East Tennessee State University, 1990. Caltech, 1992-.
- Robert A. Montgomery, Ph.D., *Visiting Associate in Chemistry*
B.Sc., Harvey Mudd College, 1982; Ph.D., University of Southern California, 1991. Research Fellow, 1991-. Caltech, 1993-94.
- Manfred Morari, Ph.D., *Ross McCollum-William H. Corcoran Professor of Chemical Engineering; Executive Officer for Control and Dynamical Systems*
Dipl., Swiss Federal Institute of Technology, 1974; Ph.D., University of Minnesota, 1977. Professor, Caltech, 1983-91; McCollum-Corcoran Professor, 1991-. Executive Officer for Chemical Engineering, 1990-93; Executive Officer, 1993-.
- Louis-Noel Moresi, D.Phil., *Schlumberger Research Fellow in Geophysics*
B.A., Cambridge University, 1988; D.Phil., Oxford University, 1992. Caltech, 1992-95.
- James John Morgan, Ph.D., D.Sc., *Marvin L. Goldberger Professor of Environmental Engineering Science; Executive Officer for Environmental Engineering Science*
B.C.E., Manhattan College, 1954; M.S.E., University of Michigan, 1956; M.A., Harvard University, 1962; Ph.D., 1964; D.Sc.h.c., Manhattan College. Associate Professor, Caltech, 1965-69; Professor, 1969-87; Goldberger Professor of Environmental Engineering Science, 1987-. Academic Officer for Environmental Engineering Science, 1971-72; Dean of Students, 1972-75; Executive Officer for Environmental Engineering Science, 1974-80, 1993-; Acting Dean of Graduate Studies, 1981-84; Vice President for Student Affairs, 1980-89.
- James J. Mori, Ph.D., *Visiting Associate in Geophysics*
B.A., Oberlin College, 1978; M.A., University of Tokyo, 1980; Ph.D., Columbia University, 1984. Research Seismologist, U.S. Geological Survey, 1988-. Caltech, 1990-94.
- Kazunori Morikawa, Ph.D., *Research Fellow in Biology*
B.A., University of Tokyo, 1983; M.A., 1986; Ph.D., Stanford University, 1993. Caltech, 1993-95.
- Colin Morrison, Ph.D., *Visiting Associate in Environmental Engineering Science*
B.Sc., Heriot-Watt University, 1979; Ph.D., City University (London), 1989. Visiting Associate, 1993.
- David W. Morrisroe, M.B.A., *Lecturer in Business Economics; Vice President for Business and Finance and Treasurer*
B.A., Manhattan College, 1954; M.A., Columbia University, 1956; M.B.A., Harvard School of Business Administration, 1964. Lecturer, Caltech, 1971-. Director of Financial Services, 1969-74; Vice President for Financial Affairs and Treasurer, 1974-78; Vice President for Business and Finance and Treasurer, 1978-.
- A. Stephen Morse, Ph.D., *Lecturer in Control and Dynamical Systems*
B.S., Cornell University, 1962; M.S., University of Arizona, 1964; Ph.D., Purdue University, 1967. Professor, Yale University, 1970-. Lecturer, Caltech, 1994.
- Dale T. Mortensen, Ph.D., *Visiting Professor of Economics*
B.A., Willamette University, 1961; Ph.D., Carnegie-Mellon University, 1967. Ida C. Cook Professor, Northwestern University, 1985; Director of Methods in the Social Sciences Program, 1992-. Caltech, 1993-.
- Steen Mortensen, Ph.D., *Visiting Associate in Biology*
Ph.D., University of Aarhus (Denmark), 1984. Research Scientist, Novo Nordisk, 1984-. Caltech, 1991-.

- Lee Mosher, Ph.D., *Visiting Associate in Mathematics*
B.S., Michigan State University, 1979; Ph.D., Princeton University, 1983. Assistant Professor, Rutgers University, 1987-. Caltech, 1994.
- Jeremy Richard Mould, Ph.D., *Professor of Astronomy*
B.Sc., University of Melbourne, 1972; Ph.D., Australian National University, 1975. Research Fellow, Caltech, 1978-79; Associate Professor, 1982-88; Professor, 1988-. Executive Officer for Astronomy, 1987-90.
- Richard P. Mount, Ph.D., *Senior Research Associate in Physics*
B.A., Jesus College, University of Oxford, 1970; Ph.D., Darwin College, University of Cambridge, 1975. Senior Research Fellow, Caltech, 1982-88; Senior Research Associate, 1988-.
- Jean-Francois Mouscadet, Ph.D., *Research Fellow in Chemistry*
Ph.D., Universite Paris XI, 1994. Research Fellow, Caltech, 1994-95.
- Stephen Mrenna, Ph.D., *Research Fellow in Physics*
B.S., University of Notre Dame, 1986; M.A., Johns Hopkins University, 1988; Ph.D., 1992. Caltech, 1992-94.
- Tomasz Stanoslaw Mrowka, Ph.D., *Associate Professor of Mathematics*
S.B., Massachusetts Institute of Technology, 1983; Ph.D., University of California, 1988. Visiting Assistant Professor, Caltech, 1991-92; Associate Professor, 1992-.
- Eugene G. Mueller, Ph.D., *Research Fellow in Chemistry*
B.S., University of Illinois (Urbana), 1987; Ph.D., Harvard University, 1992. Caltech, 1992-94.
- Paul Mueller, Ph.D., *Senior Research Fellow in Biology*
B.S., University of Wisconsin, 1982; Ph.D., Caltech, 1990. Research Fellow, 1991-93; Senior Research Fellow, 1993-94.
- Duane Owen Muhleman, Ph.D., *Professor of Planetary Science*
B.S., University of Toledo, 1953; Ph.D., Harvard University, 1963. Associate Professor, Caltech, 1967-71; Professor, 1971-. Staff Member, Owens Valley Radio Observatory, 1967-.
- Edwin Stanton Munger, Ph.D., *Professor of Geography, Emeritus*
M.S., University of Chicago, 1948; Ph.D., 1951. Visiting Lecturer, American Universities Field Staff, Caltech, 1954; 1957; 1960; Professor, 1961-88; Professor Emeritus, 1988-.
- Hideobu Murofushi, M.S., *Visiting Associate in Chemistry*
B.S., Shizuoka University, 1988; M.S., University of Tokyo, 1990. Researcher, Asahi Glass Co., Ltd., 1990-. Caltech, 1993-94.
- Bruce Churchill Murray, Ph.D., *Professor of Planetary Science and Geology*
S.B., Massachusetts Institute of Technology, 1953; S.M., 1954; Ph.D., 1955. Research Fellow in Space Science, Caltech, 1960-63; Associate Professor of Planetary Science, 1963-68; Professor of Planetary Science, 1968-92; Professor of Planetary Science and Geology, 1992-. Director of Jet Propulsion Laboratory, 1976-82.
- Richard Martin Murray, Ph.D., *Assistant Professor of Mechanical Engineering*
B.S., Caltech, 1985; M.S., University of California, 1988; Ph.D., 1991. Assistant Professor, Caltech, 1991-.
- Jacob P. Murre, Ph.D., *Visiting Professor of Mathematics*
Ph.D., University of Leiden (Netherlands), 1957. Professor, 1961-. Caltech, 1994.
- Andrew G. Myers, Ph.D., *Professor of Chemistry*
S.B., Massachusetts Institute of Technology, 1981; Ph.D., Harvard University, 1985. Assistant Professor, Caltech, 1986-91; Associate Professor, 1991-94; Professor, 1994-.
- Steven T. Myers, Ph.D., *Robert A. Millikan Research Fellow in Astronomy*
B.S., University of Iowa, 1984; Ph.D., Caltech, 1990. Millikan Research Fellow, 1992-95.
- Serge Nadeau, Ph.D., *Research Fellow in Geology*
B.Sc., Laval University, 1981; M.Sc., Montreal University, 1985; Ph.D., McGill University, 1991. Caltech, 1994-95.
- Janis L. Naeve, Ph.D., *Senior Research Fellow in Biology*
B.S., California Polytechnic University, 1984; M.S., University of Southern California, 1987; Ph.D., 1990. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-.
- Rosemarie C. Nagel, Dipl., *Visiting Associate in Economics*
Dipl., University of Bonn, 1989. Visiting Associate, Caltech, 1994.
- Wolfgang E. Nagel, Dr.rer.Nat., *Visiting Associate in Physics*
University of Aachen (Germany), 1985; Dr.rer.Nat., 1993. Director of Central Institute of Applied Mathematics, 1985-. Caltech, 1994.
- Tadashi Nakajima, Ph.D., *Research Fellow in Astronomy*
B.S., Kyoto University, 1982; M.S., 1984; Ph.D., Caltech, 1989. Research Fellow, 1989; 1991-95.

- P. T. Narasimhan, Ph.D., *Visiting Associate in Biology*
B.Sc., University of Madras, 1947; M.Sc., 1951; Dipl., 1951; Ph.D., Indian Institute of Science, 1955. Caltech, 1993–95.
- Antonio Pastor Navarro, Ph.D., *Research Fellow in Chemistry*
Ph.D., University of Sevilla, 1993. Caltech, 1994–.
- Thomas A. Neenan, M.F.A., *Lecturer in Music*
B.F.A., California State University (Northridge), 1977; M.F.A., University of California (Los Angeles), 1982. Caltech, 1991–94.
- Henry Victor Neher, Ph.D., Sc.D., *Professor of Physics, Emeritus*
A.B., Pomona College, 1926; Ph.D., Caltech, 1931; Sc.D.h.c., Pomona College. Research Fellow, Caltech, 1931–33; Instructor, 1933–37; Assistant Professor, 1937–40; Associate Professor, 1940–44; Professor, 1944–70; Professor Emeritus, 1970–.
- Karen E. Nelson, B.A., *Coach*
B.A., Pitzer College, 1989. Caltech, 1990–.
- Charles F. Neugebauer, Ph.D., *Visiting Associate in Applied Physics*
B.S., Caltech, 1988; Ph.D., 1993. President, Arithmos, Inc., 1993–. Visiting Associate, Caltech, 1993–94.
- Gerry Neugebauer, Ph.D., *Howard Hughes Professor and Professor of Physics*
A.B., Cornell University, 1954; Ph.D., Caltech, 1960. Assistant Professor, 1962–65; Associate Professor, 1965–70; Professor, 1970–; Hughes Professor, 1985–. Acting Director, Palomar Observatory, 1980–81; Director, 1981–94; Chair, Division of Physics, Mathematics and Astronomy, 1988–93.
- Lisa Neuhold, Ph.D., *Senior Research Fellow in Biology*
B.S., University of Maryland, 1981; Ph.D., 1990. Research Fellow, Caltech, 1990–93; Senior Research Fellow, 1993–94.
- Anna Pearl Newman, Ph.D., *Research Fellow in Biology*
A.B., Harvard University, 1982; Ph.D., Yale University, 1991. Caltech, 1991–94.
- Harvey B. Newman, Sc.D., *Professor of Physics*
B.S., Massachusetts Institute of Technology, 1968; Sc.D., 1973. Associate Professor, Caltech, 1982–90; Professor, 1990–.
- Kee Pui Dennis Ng, D.Phil., *Research Fellow in Chemistry*
B.Sc., Chinese University of Hong Kong, 1988; M.Phil., 1990; D.Phil., University of Oxford, 1993. Caltech, 1993–94.
- Kingman Ng, Ph.D., *Research Fellow in Chemical Engineering*
B.Sc., Chinese University of Hong Kong, 1984; M.S., 1986; Ph.D., University of Minnesota, 1990. Caltech, 1994–95.
- Bao-Ugen Nguyen, Ph.D., *Research Fellow in Physics*
B.Sc. (Mathematics), B.Sc. (Physics), University of Ottawa, 1988; Ph.D., McGill University, 1993. Caltech, 1993–95.
- Geoffrey T. Nichols, Ph.D., *Research Fellow in Experimental Petrology*
B.Sc., The Flinders University of South Australia, 1987; Ph.D., University of Tasmania, 1993. Caltech, 1993–94.
- Robert H. Nichols, Jr., Ph.D., *Research Fellow in Geochemistry*
B.S., Davidson College, 1986; M.A., Washington University, 1988; Ph.D., 1992. Caltech, 1994–95.
- Marc-Aurele Nicolet, Ph.D., *Professor of Electrical Engineering and Applied Physics*
Ph.D., University of Basel, 1958. Assistant Professor of Electrical Engineering, Caltech, 1959–65; Associate Professor, 1965–73; Professor, 1973–88; Professor of Electrical Engineering and Applied Physics, 1988–.
- Ernst Niebur, Ph.D., *Senior Research Fellow in Biology*
M.Sc., Swiss Federal Institute of Technology, 1986; Ph.D., University of Lausanne, 1988. Research Fellow, Caltech, 1989–92; Senior Research Fellow, 1992–94.
- Kai-Wie Nieh, Ph.D., *Visiting Associate in Materials Science*
B.S., National Tsing Hua University (Taiwan), 1979; M.S., 1983; Ph.D., 1986. Staff Scientist, Hughes Research Laboratory, 1989–. Research Fellow, Caltech, 1986–90; Visiting Associate, 1991–93.
- Hans Nikol, Dr.rer.Nat., *Research Fellow in Chemistry*
Dipl., University of Regensburg (Germany), 1989; Dr.rer.Nat., 1993. Caltech, 1993–.
- Nikolai Nikolski, Ph.D., D.Sc., *Visiting Associate in Mathematics*
B.S., Leningrad State University, 1963; Ph.D., 1966; D.Sc., Steklov University, 1973. Professor, Leningrad State University, 1991–. Caltech, 1994.
- Shouleh Nikzad, Ph.D., *Visiting Associate in Applied Physics*
B.S., University of Southern California, 1982; M.S., Caltech, 1983; Ph.D., 1983. Staff, Jet Propulsion Laboratory, 1992–. Research Fellow Caltech, 1990–91; Visiting Associate, 1992–94.

- Emerson M. Niou, Ph.D., *Visiting Associate Professor of Political Science*
B.S., National Taiwan University, 1981; Ph.D., University of Texas (Austin), 1987. Associate Professor, Duke University, 1993-. Caltech, 1994.
- Wheeler James North, Ph.D., *Professor of Environmental Science, Emeritus*
B.S. (Electrical Engineering), Caltech, 1944; B.S. (Biology), 1950; M.S., University of California, 1953; Ph.D., 1953. Visiting Professor of Biology, Caltech, 1962; Associate Professor of Environmental Health Engineering, 1963-68; Professor of Environmental Science, 1968-92; Professor Emeritus, 1992-.
- Mark Notcutt, Ph.D., *Visiting Associate in Physics*
B.Sc., University of Natal (South Africa), 1985; Ph.D., 1989. Research Associate, University of Western Australia, 1991-. Caltech, 1993.
- Mark W. Nowak, Ph.D., *Research Fellow in Biology*
B.S., Case Western Reserve University, 1985; Ph.D., State University of New York (Buffalo), 1991. Caltech, 1992-95.
- James Joseph O'Brien, M.A., *Coach*
B.A., San Diego State University, 1979; M.A., 1985. Caltech, 1985-.
- Christine L. O'Day, Ph.D., *Senior Research Fellow in Biology*
B.S., Washington University, 1984; Ph.D., University of Missouri, 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-95.
- Stefan Offermanns, M.D., *Research Fellow in Biology*
M.D., University of Berlin, 1992. Caltech, 1994-95.
- Christopher P. O'Grady, Ph.D., *Research Fellow in Physics*
B.S. (Mathematics), B.S. (Physics), Carleton University, 1986; M.S., Cornell University, 1989; Ph.D., 1993. Caltech, 1993-95.
- John Beverley Oke, Ph.D., *Professor of Astronomy, Emeritus*
B.A., University of Toronto, 1949; M.A., 1950; Ph.D., Princeton University, 1953. Assistant Professor, Caltech, 1958-61; Associate Professor, 1961-64; Professor, 1964-92; Professor Emeritus, 1992-.
- John Dugan O'Keefe, Ph.D., *Visiting Associate in Planetary Science*
B.S., California State University (Long Beach), 1962; M.S., University of Southern California, 1965; M.S., University of California (Los Angeles), 1971; Ph.D., 1977. Senior Scientist, TRW Systems Group, 1976-. Caltech, 1977-83; 1984-.
- Mitchio Okumura, Ph.D., *Associate Professor of Chemical Physics*
B.S., Yale University, 1979; M.S., 1979; C.P.G.S., Cambridge University, 1980; Ph.D., University of California, 1986. Assistant Professor, Caltech, 1988-94; Associate Professor, 1994-.
- Barry D. Olafson, Ph.D., *Visiting Associate in Chemistry*
B.S., Harvard University, 1971; Ph.D., Caltech, 1978. Vice President and Senior Scientist, Polyglon/Molecular Simulations, Inc., 1991-. Research Fellow, Caltech, 1981-84; Visiting Associate, 1986-90; 1993-94.
- Robert Warner Oliver, Ph.D., *Professor of Economics, Emeritus*
A.B., University of Southern California, 1943; A.M., 1948; A.M., Princeton University, 1950; Ph.D., 1957. Assistant Professor, Caltech, 1959-61; Associate Professor, 1961-74; Professor, 1974-88; Professor Emeritus, 1988-; Master of Student Houses, 1987-88.
- R. V. Omkumar, Ph.D., *Research Fellow in Biology*
B.Sc., Madurai Kamaraj University, 1983; M.Sc., University of Kerala, 1986; Ph.D., Indian Institute of Science, 1992. Research Fellow, Caltech, 1994-95.
- Christiane H. Orcel, Ph.D., *Lecturer in French*
M.A., Princeton University, 1987; Ph.D., 1990. Instructor, Caltech, 1990-93; Lecturer, 1993-94.
- Peter C. Ordeshook, Ph.D., *Professor of Political Science; Executive Officer for the Social Sciences*
B.S., Massachusetts Institute of Technology, 1964; Ph.D., University of Rochester, 1969. Professor, Caltech, 1987-. Executive Officer, 1992-.
- Rafael Ortiz, Ph.D., *James Irvine Foundation Research Fellow in Chemistry*
B.S., California State University, 1988; Ph.D., University of California (Los Angeles), 1993. Research Fellow, Caltech, 1993; Irvine Research Fellow, 1993-94.
- Steven J. Ostro, Ph.D., *Lecturer in Electrical Engineering*
A.B., Rutgers University, 1969; B.S., 1969; M.Eng., Cornell University, 1974; Ph.D., Massachusetts Institute of Technology, 1978. Caltech, 1988; 1992; 1994.
- Irene M. Ota, Ph.D., *Senior Research Fellow in Biology*
B.S., University of California (Los Angeles), 1982; Ph.D., 1989. Research Fellow, Caltech, 1992-94; Senior Research Fellow, 1994-95.

- David M. Owen, Ph.D., *Research Fellow in Aeronautics*
B.S., University of California, 1987; M.S., University of California (San Diego), 1991; Ph.D., 1993. Research Fellow, Caltech, 1993-95.
- Ray David Owen, Ph.D., Sc.D., *Professor of Biology, Emeritus*
B.S., Carroll College, 1937; Ph.M., University of Wisconsin, 1938; Ph.D., 1941; Sc.D.h.c., Carroll College; University of the Pacific. Gosney Fellow, Caltech, 1946-47; Associate Professor, 1947-53; Professor, 1953-83; Professor Emeritus, 1983-. Chair, Division of Biology, 1961-68; Vice President for Student Affairs and Dean of Students, 1975-80.
- James Y. Oyang, Ph.D., *Research Fellow in Physics*
B.S., National Taiwan University, 1980; M.S., University of California (Los Angeles), 1984; M.E.E., University of Southern California, 1986; Ph.D., University of California (Los Angeles), 1991. Caltech, 1992-94.
- Scott E. Page, Ph.D., *Assistant Professor of Economics*
B.A., University of Michigan (Ann Arbor), 1985; M.A., 1988; Ph.D., Northwestern University, 1993. Caltech, 1993-.
- Thomas R. Palfrey, Ph.D., *Professor of Economics and Political Science*
B.A., University of Michigan, 1975; M.A., 1976; Ph.D., Caltech, 1981. Professor, 1986-.
- Robert E. A. Palmer, Ph.D., *Research Fellow in Biology*
B.A., University of Delaware, 1982; M.S., Rutgers University, 1985; Ph.D., Johns Hopkins University, 1992. Caltech, 1992-95.
- Sonya D. Z. Palmer, Ph.D., *Research Fellow in Biology*
B.S., University of Rochester, 1985; Ph.D., Johns Hopkins University, 1992. Caltech, 1992-95.
- Dimitri A. Papanastassiou, Ph.D., *Senior Research Associate in Geochemistry*
B.S., Caltech, 1965; Ph.D., 1970. Research Fellow in Physics, 1970-72; Senior Research Fellow in Planetary Science, 1972-76; Research Associate in Geochemistry, 1976-81; Senior Research Associate, 1981-.
- Charles Herach Papas, Ph.D., *Professor of Electrical Engineering, Emeritus*
B.S., Massachusetts Institute of Technology, 1941; M.S., Harvard University, 1946; Ph.D., 1948. Lecturer, Caltech, 1952-54; Associate Professor, 1954-59; Professor, 1959-88; Professor Emeritus, 1988-.
- Nathalie Pardigon, Ph.D., *Senior Research Fellow in Biology*
B.S., University of Paris, 1979; M.S., 1980; Ph.D., 1988. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-95.
- Changmoon Park, Ph.D., *Research Fellow in Chemistry*
B.A., Seoul National University, 1987; Ph.D., Caltech, 1993. Research Fellow, 1993-94.
- Tong Soo Park, Sc.D., *Visiting Associate in Materials Science*
Sc.D., Seoul National University, 1968. Professor Emeritus, Kyungpook National University, 1991-. Visiting Associate, Caltech, 1994-.
- Carl Stevens Parker, Ph.D., *Professor of Chemical Biology*
B.A., University of Rochester, 1973; Ph.D., Washington University, 1977. Assistant Professor, Caltech, 1981-87; Associate Professor, 1987-92; Professor, 1992-.
- Jonathan R. Parquette, Ph.D., *Research Fellow in Chemistry*
B.S., University of California, 1988; Ph.D., Stanford University, 1993. Caltech, 1993-94.
- Torbjorn Pascher, Ph.D., *Research Fellow in Chemistry*
B.S., University of Goteborg (Sweden), 1992; Ph.D., 1992. Caltech, 1993-95.
- Debabrata Patra, Ph.D., *Research Fellow in Biology*
B.Sc., University of Bombay, 1985; M.Sc., 1987; Ph.D., University of Pittsburgh, 1993. Caltech, 1993-94.
- Clair C. Patterson, Ph.D., D.h.c., *Professor of Geochemistry, Emeritus*
A.B., Grinnell College, 1943; M.S., University of Iowa, 1944; Ph.D., University of Chicago, 1951; D.h.c., University of Paris; Grinnell College. Research Fellow, Caltech, 1952-53; Senior Research Fellow, 1953-71; Research Associate, 1971-73; Senior Research Associate, 1973-89; Lecturer, 1986; Professor, 1989-92; Professor Emeritus, 1993-.
- Paul H. Patterson, Ph.D., *Professor of Biology; Executive Officer for Neurobiology*
B.A., Grinnell College, 1965; Ph.D., Johns Hopkins University, 1970. Professor, Caltech, 1983-. Executive Officer, 1989-.
- Steven E. Paulin, Ph.D., *Research Fellow in Chemical Engineering*
B.S., Cleveland State University, 1986; M.Sc., Oklahoma State University, 1990; Ph.D., 1993. Caltech, 1993-94.

- Linus Pauling, Ph.D., Sc.D., L.H.D., U.J.D., D.h.c., D.F.A., LL.D., Nobel Laureate, *Professor of Chemistry, Emeritus*
B.S., Oregon State College, 1922; Ph.D., Caltech, 1925; Sc.D.h.c., Brooklyn Polytechnic Institute; Humboldt University; Oregon State College; Oxford University; Princeton University; University of Cambridge; University of Chicago; University of London; Yale University; L.H.D.h.c., University of Tampa; U.J.D.h.c., University of New Brunswick; D.h.c., University of Liege; University of Montpellier; University of Paris; D.F.A.h.c., Chouinard Art Institute; LL.D.h.c., Reed College. Research Associate, Caltech, 1926-27; Assistant Professor, 1927-29; Associate Professor, 1929-31; Professor, 1931-64; Research Associate, 1964-71; Professor Emeritus, 1971-. Chair, Division of Chemistry and Chemical Engineering, 1936-58.
- Timothy John Pearson, Ph.D., *Senior Research Associate in Radio Astronomy*
B.A., University of Cambridge, 1972; M.A., 1976; Ph.D., 1977. Research Fellow, Caltech, 1977-80; Senior Research Associate, 1988-.
- David W. Peate, Ph.D., *Research Fellow in Geochemistry*
B.A., University of Cambridge, 1985; Ph.D., Open University (Milton Keynes), 1990. Caltech, 1992-95.
- Charles William Peck, Ph.D., *Professor of Physics; Chair, Division of Physics, Mathematics and Astronomy*
B.S., New Mexico College of Agricultural and Mechanical Arts, 1956; Ph.D., Caltech, 1964. Research Fellow, 1964-65; Assistant Professor, 1965-69; Associate Professor, 1969-77; Professor, 1977-. Executive Officer for Physics, 1983-86; Chair, 1993-.
- Atakan Peker, Ph.D., *Visiting Associate in Materials Science*
B.S., Bogazici University (Turkey), 1989; Ph.D., Caltech, 1994. Senior Research Scientist, Amorphous Technologies, Inc., 1994-. Visiting Associate, Caltech, 1994-95.
- Cyriel M. A. Pennartz, Ph.D., *Ron and Maxine Linde Distinguished Scholar*
B.A., Harvard University, 1940; Ph.D., University of California, 1950. Professor Emeritus, University of Illinois, 1988-. Caltech, 1993.
- David J. Perkel, Ph.D., *Research Fellow in Biology*
A.B., Harvard College, 1984; Ph.D., University of California (San Francisco), 1992. Caltech, 1992-96.
- Pietro Perona, D.Eng., Ph.D., *Assistant Professor of Electrical Engineering*
D.Eng., University of Padova (Italy), 1985; Ph.D., University of California, 1990. Caltech, 1991-.
- Jason K. Perry, Ph.D., *Research Fellow in Chemistry*
B.S., Johns Hopkins University, 1987; Ph.D., Caltech, 1994. Research Fellow, 1994-95.
- Joseph Perry, Ph.D., *Visiting Associate in Chemistry*
B.S., University of South Florida, 1977; Ph.D., Caltech, 1984. Member of Technical Staff, Jet Propulsion Laboratory, 1985-. Visiting Associate, Caltech, 1994-.
- Mark T. Peters, Ph.D., *Research Fellow in Geochemistry*
B.S., Auburn University, 1986; Ph.D., University of Chicago, 1992. Caltech, 1993-.
- Lena M. J. Petersson, Ph.D., *Senior Research Fellow in Computation and Neural Systems*
M.S., Lund University, 1985; Ph.D., 1992. Research Fellow, Caltech, 1992-93; Instructor, 1993-94; Senior Research Fellow, 1994-.
- James Anthony Phillips, Ph.D., *Senior Research Fellow in Astronomy*
B.S., University of Florida, 1985; M.S., 1986; M.S., Cornell University, 1989; Ph.D., 1991. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-.
- Mark Phillips, Ph.D., *Research Fellow in Applied Physics*
B.S., University of Kansas, 1987; M.S., Caltech, 1989; Ph.D., 1993. Research Fellow, 1993.
- Thomas G. Phillips, D.Phil., *Professor of Physics; Director, Caltech Submillimeter Observatory*
B.A., University of Oxford, 1961; M.A., 1964; D.Phil., 1964. Visiting Associate in Radio Astronomy, Caltech, 1978-79; Professor of Physics, 1979-. Staff Member, Owens Valley Radio Observatory, 1978-; Associate Director, Owens Valley Radio Observatory, 1981-85; Director, Caltech Submillimeter Observatory, 1986-.
- E. Sterl Phinney, Ph.D., *Associate Professor of Theoretical Astrophysics*
B.S., Caltech, 1980; Ph.D., University of Cambridge, 1983. Assistant Professor, Caltech, 1985-91; Associate Professor, 1991-.
- William Hayward Pickering, Ph.D., D.Sc., D.Eng., *Professor of Electrical Engineering, Emeritus*
B.S., Caltech, 1932; M.S., 1933; Ph.D., 1936; D.Sc.h.c., Clark University; Occidental College; D.Eng.h.c., University of Bologna. Instructor, Caltech, 1936-40; Assistant Professor, 1940-45; Associate Professor, 1945-47; Professor, 1947-79; Professor Emeritus, 1979-. Director, Jet Propulsion Laboratory, 1954-76.

- Gerald S. Picus, Ph.D., *Visiting Associate in Applied Physics*
B.S., University of Chicago, 1947; M.S., 1950; Ph.D., 1954. Retired, Hughes Aircraft, 1992-. Visiting Professor, Caltech, 1976-77; Visiting Associate, 1992-94.
- Andreas G. Piepke, Dr.rer.Nat., *Research Fellow in Physics*
Dipl., Universität Heidelberg, 1987; Dr.rer. Nat., 1990. Caltech, 1994-95.
- John Robinson Pierce, Ph.D., D.Sc.,
D.Eng., E.D., LL.D., *Professor of Engineering, Emeritus*
B.S., Caltech, 1933; M.S., 1934; Ph.D., 1936; D.Sc.h.c., Columbia University; Northwestern University; Polytechnic Institute of Brooklyn; University of Nevada; University of Southern California; Yale University; D.Eng.h.c., Newark College of Engineering; University of Bologna; E.D.h.c., Carnegie Institute of Technology; LL.D.h.c., University of Pennsylvania. Professor, Caltech, 1971-80; Professor Emeritus, 1980-. Executive Officer for Electrical Engineering, 1975-77; Chief Technologist, Jet Propulsion Laboratory, 1977-82.
- George Wood Pigman, Ph.D., *Professor of Literature*
A.B., Harvard College, 1973; M.Phil., Yale University, 1975; Ph.D., 1977. Assistant Professor of English, Caltech, 1977-80; Assistant Professor of Literature, 1980-83; Associate Professor, 1983-93; Professor, 1993-.
- Jerome Pine, Ph.D., *Professor of Physics*
A.B., Princeton University, 1949; M.S., Cornell University, 1952; Ph.D., 1959. Associate Professor, Caltech, 1963-67; Professor, 1967-.
- Mark L. Pitt, Ph.D., *Robert A. Millikan Research Fellow in Physics*
B.S., Caltech, 1985; M.A., Princeton University, 1987; Ph.D., 1992. Caltech, 1992-95.
- Charles Raymond Plott, Ph.D., *Edward S. Harkness Professor of Economics and Political Science*
B.S., Oklahoma State University, 1961; M.S., 1964; Ph.D., University of Virginia, 1965. Professor of Economics, Caltech, 1971-87; Harkness Professor, 1987-.
- Eric Poisson, Ph.D., *Research Fellow in Theoretical Physics; Lecturer in Physics*
B.A., Université Laval (Canada), 1987; M.Sc., University of Alberta, 1989; Ph.D., 1991. Research Fellow, Caltech, 1991-94; Lecturer in Physics, 1993-94.
- Piotr J. Polaczek, Ph.D., *Research Fellow in Chemistry*
M.S., University of Warsaw, 1978; Ph.D., Institute of Biochemistry and Biophysics, Polish Academy of Sciences, 1985. Caltech, 1993-95.
- Hugh David Politzer, Ph.D., *Professor of Theoretical Physics*
B.S., University of Michigan, 1969; Ph.D., Harvard University, 1974. Visiting Associate, Caltech, 1975-76; Associate Professor, 1976-79; Professor, 1979-. Executive Officer for Physics, 1986-88.
- Charles W. Polk, Ph.D., *Research Fellow in Economics*
B.S., Harvey Mudd College, 1983; M.A., University of California (Los Angeles), 1989; Ph.D., Caltech, 1993. Research Fellow, 1993.
- David P. Porter, Ph.D., *Visiting Associate in Economics*
B.S., Arizona State University, 1978; M.S., 1983; Ph.D., 1987. Senior Economist, Jet Propulsion Laboratory, 1984-. Caltech, 1987-88; 1989-94.
- Frank Clifford Porter, Ph.D., *Associate Professor of Physics*
B.S., Caltech, 1972; Ph.D., University of California, 1977. Research Fellow, Caltech, 1977-78; Weizmann Research Fellow, 1978-80; Senior Research Fellow, 1980-82; Assistant Professor, 1982-88; Associate Professor, 1988-.
- Steven M. Potter, Ph.D., *Research Fellow in Biology*
B.A., University of California (San Diego), 1987; Ph.D., University of California (Irvine), 1993. Caltech, 1993-95.
- John P. Preskill, Ph.D., *Professor of Theoretical Physics*
A.B., Princeton University, 1975; A.M., Harvard University, 1976; Ph.D., 1980. Associate Professor, Caltech, 1983-90; Professor, 1990-.
- Frank Press, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.S., City College of New York, 1944; M.A., Columbia University, 1946; Ph.D., 1949. President, National Academy of Sciences, 1981-. Professor of Geophysics, Caltech, 1955-65; Fairchild Scholar, 1994. Director, Seismological Laboratory, 1957-65.
- Thomas Allen Prince, Ph.D., *Professor of Physics*
B.S., Villanova University, 1970; M.S., University of Chicago, 1972; Ph.D., 1978. Research Fellow, Caltech, 1979-80; Robert A. Millikan Research Fellow, 1980-82; Senior Research Fellow, 1982-83; Assistant Professor, 1983-86; Associate Professor, 1986-92; Professor, 1992-.
- Demetri Psaltis, Ph.D., *Professor of Electrical Engineering; Executive Officer for Computation and Neural Systems*
B.Sc., Carnegie-Mellon University, 1974; M.Sc., 1975; Ph.D., 1977. Assistant Professor, Caltech, 1980-85; Associate Professor, 1985-90; Professor, 1990-. Executive Officer, 1992-.

Lin Pu, Ph.D., *Research Fellow in Chemistry*
B.S., Sichuan University, 1984; Ph.D., University of California (San Diego), 1990. Caltech, 1992-95.

Dale Ian Pullin, Ph.D., *Professor of Aeronautics*
B.Sc., University of Melbourne, 1966; B.E., University of Sydney, 1968; Ph.D., Imperial College, University of London, 1974. Visiting Associate, Caltech, 1990; Professor, 1991-.

Hong Qian, Ph.D., *Research Fellow in Chemistry*
B.A., Peking University, 1982; Ph.D., Washington University (St. Louis), 1989. Caltech, 1992-95.

Michael W. Quick, Ph.D., *Research Fellow in Biology*
B.A., Oglethorpe University, 1982; M.A., Emory University, 1990; Ph.D., 1992. Caltech, 1992-95.

Frederick J. Raab, Ph.D., *Assistant Professor of Physics*
B.S., Manhattan College, 1973; M.A., State University of New York (Stony Brook), 1975; Ph.D., 1980. Caltech, 1988-.

Malini Raghavan, Ph.D., *Research Fellow in Biology*
B.Sc., Women's Christian College (India), 1983; M.Sc., Indian Institute of Technology, 1985; Ph.D., Princeton University, 1991. Caltech, 1991-94.

Fredric Raichlen, Sc.D., *Professor of Civil Engineering*
B.E., Johns Hopkins University, 1953; S.M., Massachusetts Institute of Technology, 1955; Sc.D., 1962. Assistant Professor, Caltech, 1962-67; Associate Professor, 1967-72; Professor, 1972-.

Dinakar Ramakrishnan, Ph.D., *Professor of Mathematics*
B.E., University of Madras, 1970; M.S., Brooklyn Polytech, 1973; M.A., Columbia University, 1977; Ph.D., 1980. Caltech, 1988-.

Andrew J. Ransick, Ph.D., *Senior Research Fellow in Biology*
B.A., New College of the University of South Florida, 1982; M.S., California State University (Northridge), 1984; Ph.D., University of Texas, 1988. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-95.

Mahendra S. Rao, Ph.D., *Research Fellow in Biology*
Ph.D., Caltech, 1991. Research Fellow, 1992-94.

Guruswaminaidu Ravichandran, Ph.D., *Assistant Professor of Aeronautics*
B.E., Regional Engineering College, University of Madras, 1981; Sc.M. (Solid Mechanics and Structures), Brown University, 1983; Sc.M. (Applied Mathematics), 1984; Ph.D., 1986. Caltech, 1990-.

Carol A. Raymond, Ph.D., *Visiting Associate in Geophysics*
B.S., University of Georgia, 1982; Ph.D., Columbia University, 1989. Research Scientist, Jet Propulsion Laboratory, 1990-. Caltech, 1994-95.

Anthony C. S. Readhead, Ph.D., *Professor of Astronomy*
B.Sc., University of Witwatersrand, 1968; Ph.D., University of Cambridge, 1972. Research Fellow, Caltech, 1974-75; Senior Research Fellow, 1976-79; Research Associate, 1979-81; Professor of Radio Astronomy, 1981-90; Professor of Astronomy, 1990-. Director, Owens Valley Radio Observatory, 1981-86; Executive Officer for Astronomy, 1990-92.

Carol Readhead, Ph.D., *Visiting Associate in Biology*
B.S., University of Witwatersrand, 1970; Ph.D., University of Cambridge, 1976. Assistant Professor, Cedars Sinai Hospital, 1992-. Research Fellow, Caltech 1977-79; Senior Research Fellow, 1980-83; Member of the Professional Staff, 1983-92; Visiting Associate, 1992-94.

Douglas C. Rees, Ph.D., *Professor of Chemistry*
B.S., Yale University, 1974; Ph.D., Harvard University, 1980. Caltech, 1989-.

Iain Neill Reid, Ph.D., *Senior Research Associate in Astronomy*
B.Sc., University of St. Andrews (Scotland), 1979; Ph.D., Edinburgh University, 1983. Senior Research Fellow, Caltech, 1986-92; Senior Research Associate, 1992-.

Andreas Reisenegger, Ph.D., *Research Fellow in Physics*
Lic., University of Chile, 1987; Ph.D., Caltech, 1993. Research Fellow, 1993-.

Jean-Paul Revel, Ph.D., *Albert Billings Ruddock Professor of Biology*
B.Sc., University of Strasbourg, 1949; Ph.D., Harvard University, 1957. Professor of Biology, Caltech, 1971-78; Ruddock Professor, 1978-.

John Hall Richards, Ph.D., *Professor of Organic Chemistry*
B.A., University of California, 1951; B.Sc., University of Oxford, 1953; Ph.D., University of California, 1955. Assistant Professor, Caltech, 1957-61; Associate Professor, 1961-70; Professor, 1970-.

- Jeffrey T. Richelson, Ph.D., *Lecturer in Political Science*
B.A., City University of New York, 1970; M.A., University of Rochester, 1974; Ph.D., 1975. Consultant/Senior Fellow, National Security Archive, 1987-. Lecturer, Caltech, 1994.
- Martin Ridge, Ph.D., *Professor of History*
B.A., Chicago Teachers College, 1944; M.A., Northwestern University, 1949; Ph.D., 1951. Caltech, 1980-.
- Jose Louis Riechmann, Ph.D., *Research Fellow in Biology*
B.S., Universidad Autonoma (Spain), 1987; Ph.D., 1991. Caltech, 1993-95.
- Murco N. Ringnald, Ph.D., *Visiting Associate in Chemistry*
B.A., Reed College, 1985; Ph.D., University of Texas, 1990. President and C.E.O., Schrodinger, Inc., 1991-. Research Fellow, Caltech, 1990-91; Visiting Associate, 1992-95.
- Robert C. Ritchie, Ph.D., *Visiting Associate in History*
A.B., Occidental College, 1960; Ph.D., University of California (Los Angeles), 1970. W. M. Keck Foundation Director of Research, The Huntington Library and Art Gallery, 1992-. Caltech, 1993-95.
- Douglas A. Roberts, Ph.D., *Research Fellow in Physics*
B.Sc., Caltech, 1988; Ph.D., University of California (Los Angeles), 1993. Caltech, 1994-.
- John D. Roberts, Ph.D., Dr.rer.Nat., Sc.D., D.Sc.h.c., *Institute Professor of Chemistry, Emeritus*
B.A., University of California (Los Angeles), 1941; Ph.D., 1944; Dr.rer.Nat.h.c., University of Munich; Sc.D.h.c., Temple University; D.Sc.h.c., University of Wales; University of Notre Dame. Research Associate, Caltech, 1952-53; Professor, 1953-72; Institute Professor, 1972-1988; Institute Professor Emeritus, 1988-; Lecturer, 1988-93. Chair, Division of Chemistry and Chemical Engineering, 1963-68; Acting Chair, 1972-73; Provost and Vice President, Dean of the Faculty, 1980-83.
- Rachel Roberts, Ph.D., *Bateman Research Instructor in Mathematics*
B.Sc., Memorial University of Newfoundland, 1985; M.Sc., Cornell University, 1988; Ph.D., 1992. Caltech, 1992-93.
- Andrew W. Robertson, D.Phil., *Visiting Assistant Professor of History*
B.A., Franklin and Marshall College, 1974; D.Phil., Oxford University, 1987. Assistant Professor, Louisiana State University, 1986-. Caltech, 1993-.
- Mary T. Rodgers, Ph.D., *Research Fellow in Chemistry*
B.S. (Chemistry), B.S. (Mathematics), Illinois State University, 1985; Ph.D., Caltech, 1992. Research Fellow, 1992-94.
- Chaoying Rong, Ph.D., *Research Fellow in Chemistry*
B.S., Liaoning University (China), 1981; M.S., Northeast Normal University, 1984; Ph.D., Georgetown University, 1992. Caltech, 1992-94.
- Daiting Rong, Ph.D., *Research Fellow in Chemistry*
B.S., Zhongshan University (China), 1984; Ph.D., University of Texas (Austin), 1992. Caltech, 1993-95.
- Kirsten L. Rood, Ph.D., *Research Fellow in Biology*
B.S., University of California (Los Angeles), 1985; Ph.D., University of Michigan, 1991. Caltech, 1992-95.
- Ares J. Rosakis, Ph.D., *Professor of Aeronautics and Applied Mechanics*
B.Sc., University of Oxford, 1978; Sc.M., Brown University, 1980; Ph.D., 1983. Assistant Professor, Caltech, 1982-88; Associate Professor, 1988-93; Professor, 1993-.
- Joseph Rosen, D.Sc., *Research Fellow in Applied Physics*
B.Sc., Israel Institute of Technology, 1984; M.Sc., 1987; D.Sc., 1992. Caltech, 1993-95.
- Robert Allan Rosenstone, Ph.D., *Professor of History*
B.A., University of California (Los Angeles), 1957; Ph.D., 1965. Visiting Assistant Professor, Caltech, 1966-68; Assistant Professor, 1968-69; Associate Professor, 1969-75; Professor, 1975-. Executive Officer for the Humanities, 1983-86.
- Anatol Roshko, Ph.D., *Theodore von Kármán Professor of Aeronautics*
B.Sc., University of Alberta, 1945; M.S., Caltech, 1947; Ph.D., 1952. Research Fellow, 1952-54; Senior Research Fellow, 1954-55; Assistant Professor, 1955-58; Associate Professor, 1958-62; Professor, 1962-85; von Kármán Professor, 1985-. Acting Director, Graduate Aeronautical Laboratories, 1985-87.
- Brian David Ross, D.Phil., *Visiting Associate in Chemistry*
B.Sc., University College, 1958; M.B.B.S., 1961; D.Phil., Trinity College, University of London, 1966. Acting Director, Clinical Spectroscopy Laboratory, Huntington Medical Research Institute, 1986-. Caltech, 1988-94.
- George Robert Rossman, Ph.D., *Professor of Mineralogy*
B.S., Wisconsin State University, 1966; Ph.D., Caltech, 1971. Instructor, 1971; Assistant Professor, 1971-77; Associate Professor, 1977-83; Professor, 1983-.

- Ellen Rothenberg, Ph.D., *Associate Professor of Biology*
A.B., Harvard University, 1972; Ph.D., Massachusetts Institute of Technology, 1977. Assistant Professor, Caltech, 1982–88; Associate Professor, 1988–.
- Michael L. Roukes, Ph.D., *Associate Professor of Physics*
B.A., University of California (Santa Cruz), 1978; Ph.D., Cornell University, 1985. Caltech, 1993–.
- Steven Roy, Ph.D., *Research Fellow in Applied Mathematics*
B.S., Caltech, 1986; M.A., Princeton University, 1988; Ph.D., 1991. Center for Research on Parallel Computation Research Fellow, Caltech, 1991–93; Research Fellow, 1993–95.
- N. Matthieu Roy Barman, Ph.D., *Research Fellow in Geochemistry*
M.S., Université Paris VII, 1988; Ph.D., 1992. Caltech, 1993–94.
- Charles M. Rubin, Ph.D., *Visiting Associate in Geology*
B.S., University of Montana (Missoula), 1974; M.Sc., University of Montana, 1980; Ph.D., Caltech, 1990. Assistant Professor, Central Washington University, 1991–. Visiting Associate, Caltech, 1992; 1994.
- Sara S. Russell, Ph.D., *Research Fellow in Geochemistry*
B.A., Cambridge University, 1988; Ph.D., The Open University, 1992. Caltech, 1993–94.
- David B. Rutledge, Ph.D., *Professor of Electrical Engineering*
B.A., Williams College, 1973; M.A., University of Cambridge, 1975; Ph.D., University of California, 1980. Assistant Professor, Caltech, 1980–84; Associate Professor, 1984–89; Professor, 1989–.
- Eyal Sabatani, Ph.D., *Research Fellow in Chemistry*
B.Sc., Tel Aviv University, 1984; M.Sc., Weizmann Institute of Science, 1986; Ph.D., 1992. Caltech, 1992–94.
- Rolf Heinrich Sabersky, Ph.D., *Professor of Mechanical Engineering, Emeritus*
B.S., Caltech, 1942; M.S., 1943; Ph.D., 1949. Assistant Professor, 1949–55; Associate Professor, 1955–61; Professor, 1961–88; Professor Emeritus, 1988–.
- Inge-Juliana Sackmann, Ph.D., *Faculty Associate in Physics*
B.A., University of Toronto, 1963; M.A., 1965; Ph.D., 1968. Research Fellow, Caltech, 1971–74; Visiting Associate, 1974–76; Senior Research Fellow, 1976–81; Faculty Associate, 1981–.
- Jiro Sadanobu, M.S., *Visiting Associate in Chemistry*
B.S., Osaka University, 1978; M.S., 1980. Research Associate, Teijin Limited, 1980–. Caltech, 1993–94.
- Philip Geoffrey Saffman, Ph.D., *Professor of Applied Mathematics*
B.A., Trinity College, University of Cambridge, 1953; M.A., Ph.D., 1956. Professor of Fluid Mechanics, Caltech, 1964–70; Professor of Applied Mathematics, 1970–. Executive Officer for Applied Mathematics, 1985–88.
- Akikra Saito, Ph.D., *Visiting Associate in Applied Physics*
B.S., Yamagata University (Japan), 1981; M.S., Tohoku University, 1983; Ph.D., 1986. Researcher, Fuji Electric Corporation of America, 1987–. Caltech, 1993–94.
- Tetsuichiro Saito, Ph.D., *Senior Research Fellow in Biology; Associate, Howard Hughes Medical Institute*
B.Sc., University of Tokyo, 1984; M.Sc., 1986; Ph.D., 1989. Research Fellow, Caltech, 1990–93; Associate, 1990–94; Senior Research Fellow, 1993–94.
- Hajime Sakai, Ph.D., *Senior Research Fellow in Biology*
Dipl., University of Munich, 1987; Ph.D., 1989. Research Fellow, Caltech, 1990–93; Senior Research Fellow, 1993–95.
- Makoto Sakai, Ph.D., *Visiting Associate in Biology*
Ph.D., University of Tokyo, 1992. Caltech, 1994–.
- Margaret E. Saks, Ph.D., *Senior Research Fellow in Biology*
B.A., Washington University, 1973; M.S., University of Connecticut, 1976; Ph.D., State University of New York (Stony Brook), 1983. Research Fellow, Caltech, 1989–91; Senior Research Fellow, 1991–95.
- Jason Brian Saleeby, Ph.D., *Professor of Geology*
B.S., California State University (Northridge), 1972; Ph.D., University of California (Santa Barbara), 1975. Associate Professor, Caltech, 1978–88; Professor, 1988–.
- Jeffrey R. Sampson, Ph.D., *Senior Research Fellow in Biology*
B.S., Butler University, 1983; Ph.D., University of Illinois, 1988. Research Fellow, Caltech, 1989; 1991–92; Bantrell Research Fellow, 1989–91; Senior Research Fellow, 1992–94.

- Sten O. Samson, Fil.Dr., Senior Research Associate in Chemistry, Emeritus**
 Fil.Kand., University of Stockholm, 1953; Fil.Lic., 1957; Fil.Dr., 1968. Research Fellow, Caltech, 1953-56; 1957-61; Senior Research Fellow, 1961-72; Research Associate, 1973-81; Senior Research Associate, 1981-86; Senior Research Associate Emeritus, 1986-.
- Konrad Samwer, Ph.D., Visiting Associate in Materials Science**
 Ph.D., University of Gottingen (Germany), 1981. Professor, Universitat Augsburg, 1989-. Research Fellow, Caltech, 1981-82; Visiting Associate, 1987; 1993.
- Joshua R. Sanes, Ph.D., Cornelius Wiersma Visiting Professor of Biology**
 B.A., Yale University, 1970; Ph.D., Harvard University, 1976. Professor, Washington University Medical School, 1989-. Caltech, 1993.
- Maria Germana Sanna, Laurea, Research Fellow in Biology**
 Lic., University of Sassari (Italy), 1983; Laurea, 1988. Caltech, 1992-93.
- Gregorio G. Santillan, Ph.D., Visiting Associate in Chemistry**
 M.S., University of the Philippines, 1969; Ph.D., University of Pennsylvania, 1975. Assistant Professor, California State University, 1985-. Research Fellow, Caltech, 1977-78; Visiting Associate, 1979-81; 1992-94.
- Anneila I. Sargent, Ph.D., Senior Research Associate in Astronomy, Associate Director for Millimeterwave Operations, Owens Valley Radio Observatory**
 B.Sc., University of Edinburgh, 1963; M.S., Caltech, 1967; Ph.D., 1977. Research Fellow in Astronomy, 1977-79; Member of the Professional Staff, 1977-88; Senior Research Fellow, 1988-90; Senior Research Associate, 1990-. Associate Director, 1992-.
- Wallace Leslie William Sargent, Ph.D., Ira S. Bowen Professor of Astronomy**
 B.Sc., University of Manchester, 1956; M.Sc., 1957; Ph.D., 1959. Research Fellow, Caltech, 1959-62; Assistant Professor, 1966-68; Associate Professor, 1968-71; Professor, 1971-81; Bowen Professor, 1981-. Executive Officer for Astronomy, 1975-81; Staff Member, Owens Valley Radio Observatory, 1978-88.
- Alan McLeod Sargeson, Ph.D., Sherman Fairchild Distinguished Scholar**
 B.Sc., Sydney University, 1952; Dipl. of Education, 1955; Ph.D., 1956. Dean, Research School of Chemistry, Australian National University, 1986-. Caltech, 1993; 1994.
- Darryl Y. Sasaki, Ph.D., Research Fellow in Chemical Engineering**
 B.S., University of Hawaii (Manoa), 1984; M.S., University of California (Irvine), 1986; Ph.D., 1989. Caltech, 1992-95.
- Edgar H. Satorius, Ph.D., Lecturer in Electrical Engineering**
 B.Sc., University of California (Los Angeles), 1970; M.S., Caltech, 1971; Ph.D., 1975. Task Manager, Digital Systems Research Group, Jet Propulsion Laboratory, 1986-. Lecturer, Caltech, 1988; 1992; 1993.
- Hitoshi Sawa, Ph.D., Research Fellow in Biology**
 B.S., Kyoto University, 1986; M.S., 1988; Ph.D., 1991. Caltech, 1991-94.
- William P. Schaefer, Ph.D., Senior Research Associate in Chemistry, Emeritus**
 B.S., Stanford University, 1952; M.S., University of California (Los Angeles), 1954; Ph.D., 1960. Instructor, Caltech, 1960-62; Assistant Professor, 1962-66; Senior Research Fellow, 1968-77; Research Associate, 1977-81; Senior Research Associate, 1981-94; Senior Research Associate, Emeritus, 1994-. Assistant Director of Admissions, 1968-73; Registrar, 1971-77; Director of Financial Aid, 1973-77.
- Axel Scherer, Ph.D., Associate Professor of Electrical Engineering**
 B.S., New Mexico Institute of Mining and Technology, 1981; M.S., 1982; Ph.D., 1985. Caltech, 1993-.
- Peter Schilke, Ph.D., Research Fellow in Physics**
 Dipl., University of Bonn, 1989; Ph.D., 1992. Caltech, 1992-95.
- Maarten Schmidt, Ph.D., Sc.D., Francis L. Moseley Professor of Astronomy**
 Ph.D., University of Leiden, 1956; Sc.D., Yale University, 1966. Associate Professor, Caltech, 1959-64; Professor, 1964-81; Institute Professor, 1981-87; Moseley Professor, 1987-. Executive Officer for Astronomy, 1972-75; Chair, Division of Physics, Mathematics and Astronomy, 1976-78; Director, Hale Observatories, 1978-80.
- Marc F. Schmidt, Ph.D., Research Fellow in Biology**
 B.A., Swarthmore College, 1986; Ph.D., Colorado State University, 1993. Caltech, 1993-94.
- Susanne Schneider, Ph.D., Research Fellow in Materials Science**
 M.S., University of Goettingen (Germany), 1988; Ph.D., 1992. Caltech, 1993-94.
- Roger Snowden Schofield, Ph.D., Visiting Professor of History**
 B.A., University of Cambridge, 1959; Ph.D., 1962. Director, Cambridge Group for the History of Population and Social Structure, 1974-. Sherman Fairchild Distinguished Scholar, Caltech, 1984-85; 1990; Visiting Professor, 1992-93.

Verner Schomaker, Ph.D., Faculty Associate in Chemistry

B.S., University of Nebraska, 1934; M.S., 1935; Ph.D., Caltech, 1938. Professor Emeritus, University of Washington, 1984-. George Ellery Hale Fellow, Caltech, 1938-40; Senior Fellow in Chemical Research, 1940-45; Assistant Professor, 1945-46; Associate Professor, 1946-50; Professor, 1950-58; Visiting Associate, 1977-78; 1983-92; Faculty Associate, 1992-.

Walter A. Schroeder, Ph.D., Senior Research Associate in Chemistry, Emeritus

B.Sc., University of Nebraska, 1939; M.A., 1940; Ph.D., Caltech, 1943. Research Fellow, 1943-46; Senior Research Fellow, 1946-56; Research Associate, 1956-81; Senior Research Associate, 1981-86; Senior Research Associate Emeritus, 1986-.

Karl W. Schugerl, Ph.D., Sherman Fairchild Distinguished Scholar

M.S., Technical University (Budapest), 1949; Ph.D., University of Hannover, 1959. Professor and Head, 1969-. Caltech, 1993-.

Erin M. Schuman, Ph.D., Assistant Professor of Biology

B.A., University of Southern California, 1985; M.A., Princeton University, 1987; Ph.D., 1990. Caltech, 1993-.

Heinz Schuster, Ph.D., Visiting Associate in Biology

Dipl., University of Erlangen (Germany), 1968; Ph.D., University of Saarbrücken, 1971. Professor and Chair, University of Kiel, 1987-. Caltech, 1990-91; 1992; 1993; 1994.

Stephan Christoph Schuster, Ph.D., Research Fellow in Biology

Dipl., University of Konstanz (Germany), 1987; Ph.D., University of Munich, 1991. Caltech, 1991-94.

Peter E. Schwab, Ph.D., Research Fellow in Chemistry

Ph.D., University of Wuerzburg, 1994. Caltech, 1994-95.

John H. Schwarz, Ph.D., Harold Brown Professor of Theoretical Physics

A.B., Harvard College, 1962; Ph.D., University of California, 1966. Research Associate, Caltech, 1972-81; Senior Research Associate, 1981-85; Professor of Theoretical Physics, 1985-89; Brown Professor, 1989-.

Ricardo B. Schwarz, Ph.D., Visiting Associate in Materials Science

Ing., University of Chile, 1967; Ph.D., University of Virginia, 1972. Physicist, Materials Science Division, Argonne National Laboratory, 1979-. Visiting Associate in Geophysics and Materials Science, Caltech, 1982-83; 1984-85; Visiting Associate in Materials Science, 1985-94.

Jennifer S. Scott, Ph.D., Research Fellow in Geophysics

B.S., Caltech, 1985; Ph.D., University of California (San Diego), Scripps Institute of Oceanography, 1992. Research Fellow, Caltech, 1993-95.

Ronald Fraser Scott, Sc.D., Dotty and Dick Hayman Professor of Engineering

B.Sc., Glasgow University, 1951; S.M., Massachusetts Institute of Technology, 1953; Sc.D., 1955. Assistant Professor, Caltech, 1958-62; Associate Professor, 1962-67; Professor of Civil Engineering, 1967-87; Hayman Professor of Engineering, 1987-.

Nicholas Zabriskie Scoville, Ph.D., Professor of Astronomy; Director, Owens Valley Radio Observatory

B.A., Columbia University, 1967; Ph.D., 1972. Professor, Caltech, 1984-. Director, 1986-.

Thayer Scudder, Ph.D., Professor of Anthropology

A.B., Harvard College, 1952; Ph.D., Harvard University, 1960. Assistant Professor, Caltech, 1964-66; Associate Professor, 1966-69; Professor, 1969-.

Ernest R. Seaquist, Ph.D., Visiting Associate in Radio Astronomy

B.S., University of British Columbia, 1961; M.S., University of Toronto, 1962; Ph.D., 1966. Department Chair and Professor, 1978-. Caltech, 1993-94.

Eleanor Millard Searle, D.M.S., D.Lit., Edie and Lew Wasserman Professor of History, Emeritus

A.B., Radcliffe College, 1948; M.S.L., Pontifical Institute of Medieval Studies, 1961; D.M.S., 1972; D.Lit.h.c. Professor, Caltech, 1979-87; Wasserman Professor, 1987-93; Wasserman Professor Emeritus, 1993-. Executive Officer for the Humanities, 1989-92.

Mordechay Segev, Ph.D., Senior Research Fellow in Applied Physics

B.Sc., Israel Institute of Technology, 1985; Ph.D., 1990. Research Fellow, Caltech, 1990-92; Senior Research Fellow, 1992-95.

John Hersh Seinfeld, Ph.D., Louis E. Nohl Professor and Professor of Chemical Engineering; Chair, Division of Engineering and Applied Science

B.S., University of Rochester, 1964; Ph.D., Princeton University, 1967. Assistant Professor, Caltech, 1967-70; Associate Professor, 1970-74; Professor, 1974-; Nohl Professor, 1979-. Executive Officer for Chemical Engineering, 1974-90; Chair, 1990-.

- Terrence Joseph Sejnowski, Ph.D., Visiting Associate in *Computation and Neural Systems***
 B.S., Case Western Reserve University, 1968; Ph.D., Princeton University, 1978. Professor, Salk Institute, 1988–; Investigator, Howard Hughes Medical Institute, 1991–. Visiting Wiersma Professor of Neurobiology, Caltech, 1987; Fairchild Scholar, 1992–93; Visiting Associate, 1994–.
- Yyoichi Seki, Ph.D., Visiting Associate in *Physics***
 B.S., Waseda University (Japan), 1962; M.S., Northeastern University, 1964; Ph.D., 1968. Professor, California State University (Northridge), 1976–. Caltech, 1978–83; 1984–95.
- Richard Simon Selesnick, Ph.D., Senior Research Fellow in *Physics***
 B.S., Cornell University, 1983; Ph.D., Massachusetts Institute of Technology, 1988. Research Fellow, Caltech, 1988–91; Senior Research Fellow, 1991–; Lecturer, 1992–93.
- Kang-Seon Seomun, Ph.D., Visiting Associate in *Mechanical Engineering***
 B.S., Hanyang University, 1984; M.E., Iowa State University, 1986; M.S., University of California (Los Angeles), 1990; Ph.D., 1992. Senior Specialist, Samsung Data Systems, 1992–. Visiting Associate in Aeronautics, 1993; Visiting Associate in Mechanical Engineering, 1993.
- Eugene Serabyn, Ph.D., Senior Research Fellow in *Physics***
 B.S., Massachusetts Institute of Technology, 1978; M.S., University of California, 1980; Ph.D., 1984. Research Fellow, Caltech, 1986–89; Senior Research Fellow, 1989–95.
- Joel C. Sercel, Ph.D., Lecturer in *Jet Propulsion***
 B.S., Arizona State University, 1984; M.S., Caltech, 1987; Ph.D., 1993. Lecturer, 1993–.
- Robin Shandas, Ph.D., Research Fellow in *Aeronautics***
 B.S., University of California (Santa Barbara), 1987; M.S., University of California (San Diego), 1990; Ph.D., 1993. Caltech, 1993–95.
- Mukul Sharma, Ph.D., Research Fellow in *Geochemistry***
 B.S., University of Delhi, 1983; M.S., Indian Institute of Technology, 1985; M.S., University of Rochester, 1989; Ph.D., 1992. Caltech, 1992–93.
- Robert Phillip Sharp, Ph.D., Robert P. Sharp Professor of *Geology, Emeritus***
 B.S., Caltech, 1934; M.S., 1935; A.M., Harvard University, 1936; Ph.D., 1938. Professor of Geology, Caltech, 1947–78; Sharp Professor, 1978–79; Sharp Professor Emeritus, 1979–. Chair, Division of Geology, 1952–68.
- C. Hunter Shelden, M.D., Visiting Associate in *Chemistry***
 B.S., University of Wisconsin, 1928; M.D., University of Pennsylvania, 1932; M.Sc., University of Minnesota, 1937. Professor, University of Southern California Medical Center, 1968–; Director of Neurosurgical Research, Huntington Medical Research Institutes, 1970–. Visiting Associate in Biomedical Engineering, Caltech, 1978–84; Visiting Associate in Chemistry, 1985–.
- Jiun-San Jason Shen, Ph.D., Research Fellow in *Geochemistry***
 B.S., National Chung Hsing University (Taiwan), 1980; M.S., 1982; Ph.D., 1992. Caltech, 1993–95.
- Joseph E. Shepherd, Ph.D., Associate Professor of *Aeronautics***
 B.S., University of South Florida, 1976; Ph.D., Caltech, 1980. Associate Professor, 1993–.
- Robin Shepherd, D.Sc., Ph.D., Lecturer in *Civil Engineering***
 B.Sc., University of Leeds, 1953; M.Sc., 1966; D.Sc., 1973; Ph.D., University of Canterbury (New Zealand), 1971. Visiting Associate, Caltech, 1971; Visiting Professor, 1977; Lecturer, 1993–94.
- Peter W. Sherwood, Ph.D., Research Fellow in *Biology***
 B.S., Cornell University, 1985; Ph.D., 1993. Caltech, 1993–.
- Minglian Shi, Ph.D., Visiting Associate in *Chemistry***
 B.S., Peking University (Beijing), 1982; M.S., 1985; Ph.D., 1985. Associate Professor, Beijing Medical University, 1990–. Caltech, 1993–95.
- Keh-Dong Shiang, Ph.D., Visiting Associate in *Physics***
 B.S., National Central University (Taiwan), 1981; M.S., Northeast Louisiana University, 1987; Ph.D., Emory University of Georgia, 1992. Caltech, 1994–.
- John Shih, Ph.D., Research Fellow in *Biology***
 B.S., University of California, 1985; Ph.D., 1991. Caltech, 1991–94.
- Hyunik Shin, Ph.D., Research Fellow in *Chemistry***
 B.Eng., Kyungpook National University, 1982; M.S., Korea Advanced Institute of Science and Technology, 1985; Ph.D., Oregon State University, 1994. Caltech, 1994–.
- Anne M. Sholtz, M.A., Instructor in *Economics***
 B.A., Washington University, 1987; M.A., 1988. Lecturer, Caltech, 1993; Instructor, 1994–.
- William D. Shrader, Ph.D., Research Fellow in *Chemistry***
 B.S., University of Illinois, 1986; Ph.D., University of California, 1993. Caltech, 1993–94.

- David L. Shupe, Ph.D., *Research Fellow in Physics*
S.B., Massachusetts Institute of Technology, 1987; M.S., Cornell University, 1990; Ph.D., 1992. Caltech, 1992-94.
- Prabha Siddarth, Ph.D., *Senior Research Fellow in Chemistry*
B.Sc., Queen Mary's College, University of Madras, 1982; M.Sc., Indian Institute of Technology (Madras), 1984; Ph.D., 1988. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-94.
- Leslie Sieburth, Ph.D., *Senior Research Fellow in Biology*
B.A., Humboldt State University, 1983; B.S., 1983; Ph.D., University of Georgia, 1990. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-94.
- Kerry Edward Sieh, Ph.D., *Professor of Geology; Divisional Academic Officer*
A.B., University of California (Riverside), 1972; Ph.D., Stanford University, 1977. Assistant Professor, Caltech, 1977-82; Associate Professor, 1982-86; Professor, 1986-. Divisional Academic Officer, 1989-.
- Brenda R. Silver, Ph.D., *Visiting Professor of Literature*
B.A., University of Pennsylvania, 1964; Ph.D., Harvard, 1973. Professor, Dartmouth College, 1986-. Visiting Professor, Caltech, 1994-.
- Leon Theodore Silver, Ph.D., *W. M. Keck Foundation Professor for Resource Geology*
B.S., University of Colorado, 1945; M.S., University of New Mexico, 1948; Ph.D., Caltech, 1955. Assistant Professor of Geology, 1955-62; Associate Professor, 1962-65; Professor, 1965-83; Keck Professor, 1983-.
- Linda Ann Silveria, Ph.D., *Visiting Associate in Biology*
B.S., Cornell University, 1984; Ph.D., University of California, 1990; Assistant Professor, University of Redlands, 1993-. Visiting Associate, Caltech, 1994-.
- Barry Martin Simon, Ph.D., *International Business Machines Professor of Mathematics and Theoretical Physics*
A.B., Harvard College, 1966; Ph.D., Princeton University, 1970. Sherman Fairchild Distinguished Scholar, Caltech, 1980-81; Professor, 1981-84; IBM Professor, 1984-.
- Bryant Simon, Ph.D., *Ahmanson Postdoctoral Instructor in History*
B.A., University of North Carolina, 1983; M.A., Yale University, 1985; Ph.D., University of Warwick, 1992. Caltech, 1992-93.
- Marvin K. Simon, Ph.D., *Lecturer in Electrical Engineering*
B.S., City College of New York, 1960; M.S., Princeton University, 1961; Ph.D., New York University, 1966. Caltech, 1979; 1987; 1988-94.
- Melvin I. Simon, Ph.D., *Anne P. and Benjamin F. Biaggini Professor of Biological Sciences*
B.S., City College of New York, 1959; Ph.D., Brandeis University, 1963. Professor, Caltech, 1982-86; Biaggini Professor, 1986-.
- Lawrence R. Sita, Ph.D., *Senior Research Fellow in Chemistry*
B.Sc., Carnegie-Mellon University, 1981; Ph.D., Massachusetts Institute of Technology, 1985. Senior Research Fellow, Caltech, 1990-; Lecturer, 1990-91.
- Shobhana Sivaramakrishnan, Ph.D., *Research Fellow in Biology*
B.S., Bangalore University, 1978; M.S., 1980; Ph.D., University of Texas (Austin), 1989. Caltech, 1991-95.
- Massimo A. Sivilotti, Ph.D., *Visiting Associate in Computational and Neural Systems*
B.Sc., Queen's University (Canada), 1983; M.S., Caltech, 1986; Ph.D., 1991. Chief Scientist, Tanner Research Inc., 1991-. Visiting Associate, Caltech, 1991-93.
- Anthony Skjellum, Ph.D., *Visiting Associate in Chemical Engineering*
B.S., Caltech, 1984; M.S., 1985; Ph.D., 1990. Computer Scientist, Lawrence Livermore National Laboratory, 1990-. Visiting Associate in Chemical Engineering, Caltech, 1990-; Visiting Associate in Computer Science, 1993.
- Lars K. Skov, Ph.D., *Research Fellow in Chemistry*
Ph.D., University of Copenhagen, 1993. Caltech, 1993-94.
- Vladlen Z. Slepak, Ph.D., *Research Fellow in Biology*
B.S., Moscow State University, 1983; Ph.D., Shemyakin Institute of Bioorganic Chemistry, 1988. Visiting Associate, Caltech, 1990-92; Research Fellow, 1992-95.
- Moshe Sluhovsky, Ph.D., *Weismann Instructor in History*
B.A., Hebrew University (Jerusalem), 1984; M.A., 1986; Ph.D., Princeton University, 1992. Caltech, 1992-94.
- Ian R. Smail, Ph.D., *Research Fellow in Astronomy*
B.A., Cambridge University, 1989; Ph.D., University of Durham, 1992. Caltech, 1993-95.
- Annette Jacqueline Smith, Ph.D., *Professor of Literature, Emeritus*
B.A., University of Paris (Sorbonne), 1947; M.A., 1950; Ph.D., 1970. Visiting Assistant Professor of French, Caltech, 1970-71; Lecturer, 1971-81; Associate Professor, 1982-85; Professor, 1985-92; Professor Emeritus, 1993-.

- Hallett D. Smith, Ph.D., L.H.D., *Professor of English, Emeritus*
 B.A., University of Colorado, 1928; Ph.D., Yale University, 1934; L.H.D.h.c., University of Colorado. Professor, Caltech, 1949–75; Professor Emeritus, 1975–. Chair, Division of the Humanities and Social Sciences, 1949–70.
- Jerome K. Snow, Ph.D., *Research Fellow in Geology*
 B.S., Cornell University, 1984; Ph.D., Harvard University, 1990. Caltech, 1992–93.
- Lawrence Hugh Snyder, Ph.D., *Senior Research Fellow in Biology*
 A.B., Princeton University, 1982; M.D., University of Rochester, 1992; Ph.D., 1992. Postdoc, Massachusetts Institute of Technology, 1992–. Senior Research Fellow, 1994–.
- Joaquim J. Soares Neto, Ph.D., *Visiting Associate in Chemistry*
 B.Sc., University of Brasilia, 1983; M.Sc., 1986; Ph.D., University of Aarhus (Denmark), 1991. Associate Professor, University of Brasilia, 1991–. Caltech, 1994–95.
- Alexandr Sobyanin, Ph.D., *Instructor in Political Science*
 Ph.D., Lebedev Physical Institute, Academy of Sciences of the USSR, 1975. Caltech, 1994–.
- William R. Softky, Ph.D., *Research Fellow in Biology*
 B.S., Haverford College, 1984; Ph.D., Caltech, 1993. Research Fellow, 1993–94.
- B. Thomas Soifer, Ph.D., *Professor of Physics*
 B.S., Caltech, 1968; Ph.D., Cornell University, 1972. Senior Research Fellow, Caltech, 1978–81; Senior Research Associate, 1981–89; Professor, 1989–.
- Viatcheslav Solomatov, Ph.D., *Senior Research Fellow in Geophysics*
 B.S., Moscow Physical-Technical Institute, 1986; M.S., 1989; Ph.D., 1990. Research Fellow in Planetary Science, Caltech, 1990–91; Research Fellow in Geophysics, 1991–93; Senior Research Fellow, 1993–95.
- Lukas Sommer, Ph.D., *Research Fellow in Biology*
 B.S., University of Basel, 1987; Ph.D., University of Lausanne, 1992. Caltech, 1993–95.
- Ralf Sommer, Ph.D., *Research Fellow in Biology*
 B.S., University of Munich, 1989; Ph.D., 1992. Caltech, 1993–95.
- Jong Han Song, Ph.D., *Visiting Associate in Applied Physics*
 B.S., Yonsei University (Korea), 1983; M.S., 1985; Ph.D., 1993. Research Associate, 1993–. Caltech, 1993–94.
- David R. Sonneborn, Ph.D., *Visiting Associate in Biology*
 B.A., Swarthmore College, 1957; Ph.D., Brandeis University, 1962. Professor, University of Wisconsin, 1972–. Caltech, 1994–95.
- Jeffrey R. Spencer, Ph.D., *Research Fellow in Chemistry*
 B.S., University of California (Los Angeles), 1987; M.S., University of California (San Diego), 1990; Ph.D., 1993. Caltech, 1993–94.
- Matthew L. Spitzer, J.D., Ph.D., *Professor of Law and Social Science*
 B.A., University of California (Los Angeles), 1973; J.D., University of Southern California, 1977; Ph.D., Caltech, 1979. Visiting Professor, Caltech, 1988; 1990; 1991–92; Professor, 1992–.
- Amy L. Springer, Ph.D., *Research Fellow in Environmental Engineering Science*
 B.A., Mount Holyoke College, 1987; M.A., Princeton University, 1990; Ph.D., 1992. Caltech, 1993–95.
- Livia J. Squires, Ph.D., *O.K. Earl Research Fellow in Geophysics*
 B.A., Barnard College, 1983; M.S., University of Houston, 1988; Ph.D., University of Texas (Austin), 1993. Caltech, 1993–.
- Santosh K. Srivastava, Ph.D., *Visiting Associate in Chemistry*
 M.Sc., University of Agra (India), 1960; M.S., University of Nevada, 1969; Ph.D., University of Southern California, 1973. Member of the Technical Staff, Jet Propulsion Laboratory, 1978–. Caltech, 1993–94.
- Andrea B. Staubli, Ph.D., *Senior Research Fellow in Chemistry*
 B.S., Swiss Federal Institute of Technology, 1985; M.S., 1985; Ph.D., Massachusetts Institute of Technology, 1990. Research Fellow in Chemistry, Caltech, 1990–94.
- Charles C. Steidel, Ph.D., *Assistant Professor of Astronomy*
 A.B., Princeton University, 1984; Ph.D., Caltech, 1990. Assistant Professor, 1994–.
- Beat Paul Steiger, Ph.D., *Research Fellow in Chemistry*
 Dipl., University of Berne, 1986; Ph.D., 1991. Caltech, 1991–94.
- Eric D. A. Stemp, Ph.D., *Research Fellow in Chemistry*
 B.S., University of Denver, 1987; M.S., Northwestern University, 1988; Ph.D., 1993. Caltech, 1993–94.
- James David Sterling, Ph.D., *Lecturer in Jet Propulsion*
 B.S., Texas A&M University, 1983; M.S., Caltech, 1984; Ph.D., 1987. Lecturer, 1989–90; 1991; 1993–94.

- Paul Warren Sternberg, Ph.D., *Associate Professor of Biology; Associate Investigator, Howard Hughes Medical Institute*
B.A., Hampshire College, 1978; Ph.D., Massachusetts Institute of Technology, 1984. Assistant Professor, Caltech, 1987-92; Associate Professor, 1992-. Associate Investigator, 1992-.
- David J. Stevenson, Ph.D., *Professor of Planetary Science*
B.S., Victoria University (New Zealand), 1971; M.S., 1972; Ph.D., Cornell University, 1976. Associate Professor, Caltech, 1980-84; Professor, 1984-. Chair, Division of Geological and Planetary Sciences, 1989-94.
- Brian W. Stewart, Ph.D., *Visiting Associate in Geology*
B.S., Brown University, 1983; Ph.D., University of California (Los Angeles), 1990. Postdoctoral Research Associate, University of California (Riverside), 1994-. Research Fellow, Caltech, 1990-92; Visiting Associate, 1994-95.
- Homer Joseph Stewart, Ph.D., *Professor of Aeronautics, Emeritus*
B.Aero.E., University of Minnesota, 1936; Ph.D., Caltech, 1940. Instructor, 1939-42; Assistant Professor, 1942-46; Associate Professor, 1946-49; Professor, 1949-80; Professor Emeritus, 1980-.
- Joann M. Stock, Ph.D., *Associate Professor of Geology and Geophysics*
B.S., Massachusetts Institute of Technology, 1981; M.S., 1981; Ph.D., 1988. Visiting Assistant Professor, Caltech, 1990; Associate Professor, 1992-.
- Edward Manin Stolper, Ph.D., *William E. Leonhard Professor of Geology; Chair, Division of Geological and Planetary Sciences*
A.B., Harvard College, 1974; M.Phil., University of Edinburgh, 1976; Ph.D., Harvard University, 1979. Assistant Professor, Caltech, 1979-82; Associate Professor, 1982-83; Professor, 1983-90; Leonhard Professor, 1990-. Acting Executive Officer for Geochemistry, 1989; Executive Officer, 1989-94; Chair, 1994-.
- Gunter Hermann Stolz, Ph.D., *Visiting Associate in Mathematics*
Dipl., University of Frankfurt, 1986; Ph.D., 1989. Assistant Professor, University of Frankfurt, 1991-. Caltech, 1994.
- Edward Carroll Stone, Jr., Ph.D., *Vice President; Director of Jet Propulsion Laboratory; David Morrisroe Professor of Physics*
S.M., University of Chicago, 1959; Ph.D., 1964. Research Fellow, Caltech, 1964-66; Senior Research Fellow, 1967; Assistant Professor, 1967-71; Associate Professor, 1971-76; Professor, 1976-94; Morrisroe Professor, 1994-. Chair, Division of Physics, Mathematics and Astronomy, 1983-88; Vice President for Astronomical Facilities, 1988-90; Vice President and Director, 1991-.
- Randall M. Story, Ph.D., *Research Fellow in Biology*
B.A., Rice University, 1987; Ph.D., Yale University, 1991. Caltech, 1993-.
- Ellen Glowacki Strauss, Ph.D., *Senior Research Associate in Biology*
B.A., Swarthmore College, 1960; Ph.D., Caltech, 1966. Research Fellow, 1969-73; Senior Research Fellow, 1973-84; Senior Research Associate, 1984-.
- James Henry Strauss, Ph.D., *Ethel Wilson Bowles and Robert Bowles Professor of Biology*
B.S., Saint Mary's University, 1960; Ph.D., Caltech, 1967. Assistant Professor, 1969-75; Associate Professor, 1975-83; Professor, 1983-93; Bowles Professor, 1993-. Executive Officer for Molecular and Cellular Biology, 1980-89.
- Teresa R. Strecker, Ph.D., *Visiting Associate in Biology*
B.S., University of Washington (Seattle), 1980; Ph.D., University of California (Los Angeles), 1987. Assistant Professor, Pomona College, 1990-. Research Fellow, Caltech, 1987-90; Visiting Associate, 1990-94.
- Georg F. Striedter, Ph.D., *Senior Research Fellow in Biology*
B.A., Cornell University, 1984; Ph.D., University of California (San Diego), 1990. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-.
- James Frank Strnad II, J.D., Ph.D., *Professor of Law and Economics*
A.B., Harvard College, 1975; J.D., Yale University, 1979; Ph.D., 1982. Visiting Assistant Professor, Caltech, 1983; Assistant Professor, 1983-86; Associate Professor, 1986-90; Professor, 1990-.
- Iwona Teresa Stroynowski, Ph.D., *Visiting Associate in Biology*
B.Sc., University of Geneva, 1975; M.Sc., 1975; Ph.D., Stanford University, 1978. Assistant Professor, University of Texas Southwestern Medical Center, 1992-. Research Fellow, Caltech, 1981-84; Senior Research Fellow, 1984-88; Senior Research Associate, 1988-92; Visiting Associate, 1992-94.

- Alexei A. Stuchebrukhov, Ph.D., *Research Fellow in Chemistry*
M.S., Moscow Physical and Technical Institute, 1981; Ph.D., 1984. Visiting Associate, Caltech, 1989-91; Research Fellow, 1991-95.
- Bradford Sturtevant, Ph.D., *Professor of Aeronautics*
B.E., Yale University, 1955; M.S., Caltech, 1956; Ph.D., 1960. Research Fellow, 1960-62; Assistant Professor, 1962-66; Associate Professor, 1966-71; Professor, 1971-. Executive Officer for Aeronautics, 1972-76.
- Marcel Sturzenegger, Ph.D., *Research Fellow in Chemistry*
M.A., University of Fribourg (Switzerland), 1987; Ph.D., University of Zurich, 1992. Caltech, 1993-95.
- Rashid Sunyaev, D.Sc., *Sherman Fairchild Distinguished Scholar*
Ph.D., Moscow University, 1968; D.Sc., 1973. Head of Department, High Energy Astrophysics, Space Research Institute, Russian Academy of Sciences, 1982-. Caltech, 1994.
- John Andrew Sutherland, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.A., Leicester University, 1964; Ph.D., University of Edinburgh, 1973. Northcliffe Professor of Modern English Literature, University College (London), 1992-. Visiting Professor, Caltech, 1983; Professor, 1984-92. Fairchild Scholar, 1993-; Executive Officer for the Humanities, 1986-89.
- Ronald V. Swanson, Ph.D., *Research Fellow in Biology*
B.A., University of California (San Diego), 1985; Ph.D., University of California, 1991. Caltech, 1992-94.
- Alan R. Swezey, Ph.D., *Professor of Economics, Emeritus*
A.B., Harvard College, 1929; Ph.D., Harvard University, 1934. Visiting Professor, Caltech, 1949-50; Professor, 1950-77; Professor Emeritus, 1977-.
- Mehrzad Tabatabaian, Ph.D., *Visiting Associate in Chemical Engineering*
B.Sc., Sharif University (Iran), 1980; M.Eng., McGill University, 1986; Ph.D., 1990. Assistant Professor, Tarbiat Modarres University, 1990-. Caltech, 1994-95.
- Yu-Chong Tai, Ph.D., *Assistant Professor of Electrical Engineering*
B.S., National Taiwan University, 1981; M.S., University of California, 1986; Ph.D., 1989. Caltech, 1989-.
- Ken Takagi, Ph.D., *Visiting Associate in Engineering Science*
B.S., Osaka University, 1982; M.S., 1984; Ph.D., 1989. Lecturer, Osaka University, 1989-. Caltech, 1994-95.
- Bryan K. Takasaki, B.Th., *Research Fellow in Chemistry*
B.Sc., Concordia University of Canada, 1986; B.Th., McGill University of Canada, 1990. Caltech, 1994-.
- Naoko Takemaru, M.A., *Lecturer in Japanese*
B.A., Aoyama Gakuin University, 1976; M.A., Michigan State University, 1990. Caltech, 1993-.
- John E. Tanner, Ph.D., *Visiting Associate in Computer Science*
B.A., Wartburg College, 1979; M.S., Caltech, 1980; Ph.D., 1986. Senior Engineer, State-of-the-Art Computation Corporation, 1986-. Visiting Associate, Caltech, 1986-94.
- Marco Tartagni, Ph.D., *Research Fellow in Electrical Engineering*
Laurea, University of Bologna, 1988; Ph.D., 1993. Caltech, 1994-95.
- Gregory Taylor, Ph.D., *Research Fellow in Astronomy*
B.S., Duke University, 1986; M.S., University of California (Los Angeles), 1988; Ph.D., 1991. Caltech, 1992-94.
- Hugh Pettengill Taylor, Jr., Ph.D., *Robert P. Sharp Professor of Geology; Executive Officer for Geology*
B.S., Caltech, 1954; A.M., Harvard University, 1955; Ph.D., Caltech, 1959. Assistant Professor, 1959-61; Research Fellow, 1961; Assistant Professor, 1962-64; Associate Professor, 1964-69; Professor, 1969-81; Sharp Professor, 1981-. Executive Officer, 1987-.
- Stephen Taylor, Ph.D., *Assistant Professor of Computer Science*
B.Sc., Essex University, 1982; M.Sc., Columbia University, 1985; Ph.D., Weizmann Institute, 1989. Instructor, Caltech, 1988-90; Assistant Professor, 1990-.
- Valentine L. Telegdi, Ph.D., *Faculty Associate in Physics*
M.Sc., Lausanne University, 1946; Ph.D., Swiss Federal Institute of Technology, 1950. Professor Emeritus, 1987-. Visiting Associate, Caltech, 1981; 1983; 1984; 1986; 1988; 1989-90; 1991; 1992; Faculty Associate, 1993-.
- Karl W. Terry, Ph.D., *Research Fellow in Chemistry*
B.A., Southern Illinois University, 1987; Ph.D., University of California (San Diego), 1993. Caltech, 1993-.
- Patrick Thaddeus, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.Sc., University of Delaware, 1953; M.A., University of Oxford, 1955; Ph.D., Columbia University, 1960. Professor of Astronomy and Applied Physics, Harvard University, 1986-. Caltech, 1994.

- Thomas P. Theriault, Ph.D., *Research Fellow in Chemistry*
A.B., Dartmouth College, 1985; Ph.D., Stanford University, 1991. Caltech, 1992-94.
- Bozenna Henisz Thompson, Ph.D., *Lecturer in Linguistics*
M.A., University of Warsaw, 1956; M.S., Georgetown University, 1961; Ph.D., 1965. Lecturer, Caltech, 1969; 1984-. Senior Research Fellow, 1969-73; Research Associate in Linguistics, 1973-81; Senior Research Associate, 1981-94.
- Frederick Burtis Thompson, Ph.D., *Professor of Applied Philosophy and Computer Science, Emeritus*
A.B., University of California (Los Angeles), 1946; M.A., 1947; Ph.D., University of California, 1952. Professor of Applied Science and Philosophy, Caltech, 1965-77; Professor of Applied Philosophy and Computer Science, 1977-93; Professor Emeritus, 1993-.
- Kip Stephen Thorne, Ph.D., D.Sc., D.h.c., *Richard P. Feynman Professor of Theoretical Physics*
B.S., Caltech, 1962; Ph.D., Princeton University, 1965; D.Sc.h.c., Illinois College; D.h.c., Moscow University. Research Fellow in Physics, Caltech, 1966-67; Associate Professor of Theoretical Physics, 1967-70; Professor, 1970-91; William R. Kenan Professor, 1981-91; Feynman Professor, 1991-.
- Stephen Erik Thorsett, Ph.D., *Robert A. Millikan Research Fellow in Physics*
B.A., Carleton College, 1987; M.A., Princeton University, 1989; Ph.D., 1991. Caltech, 1991-94.
- Thomas S. Tighe, Ph.D., *Robert A. Millikan Research Fellow in Physics*
B.S., University of California (Los Angeles), 1987; A.M., Harvard University, 1989; Ph.D., 1993. Caltech, 1993-.
- David Z.-Y. Ting, Ph.D., *Senior Research Fellow in Applied Physics*
B.S., Caltech, 1980; M.S., University of Illinois (Urbana), 1981; Ph.D., 1986. Research Fellow, Caltech, 1988-90; Senior Research Fellow, 1991-.
- Simone Tix, Ph.D., *Research Fellow in Biology*
Dipl., University of Koln (Germany), 1988; Ph.D., University of Freiburg, 1993. Caltech, 1993-94.
- John Todd, B.Sc., *Professor of Mathematics, Emeritus*
B.Sc., Queen's University (Ireland), 1931. Professor, Caltech, 1957-81; Professor Emeritus, 1981-.
- Olga Taussky Todd, Ph.D., D.Sc., *Professor of Mathematics, Emeritus*
Ph.D., University of Vienna, 1930; M.A., University of Cambridge, 1937; D.Sc.h.c., University of Southern California. Research Associate, Caltech, 1957-71; Professor, 1971-77; Professor Emeritus, 1977-.
- Thomas Anthony Tombrello, Jr., Ph.D., *Professor of Physics*
B.A., Rice University, 1958; M.A., 1960; Ph.D., 1961. Research Fellow, Caltech, 1961-62; 1964-65; Assistant Professor, 1965-67; Associate Professor, 1967-71; Professor, 1971-.
- Ritsuko Hirai Toner, Ph.D., *Lecturer in Japanese*
B.A., Kyoto University of Foreign Studies (Japan), 1974; M.A., University of Southern California, 1979; Ph.D., 1987. Caltech, 1992-93.
- Wei Tong, Ph.D., *Research Fellow in Materials Science*
B.Sc., University of Science and Technology of China, 1985; M.Sc., Brown University, 1988; Sc.M. (Mechanics of Solids and Structures), 1988; Sc.M. (Applied Mathematics), 1991; Ph.D., 1991. Caltech, 1992-94.
- Yitzhak Tor, Ph.D., *Research Fellow in Chemistry*
B.Sc., Tel Aviv University, 1981; Ph.D., Weizmann Institute of Science, 1990. Research Fellow, Caltech, 1990-91; 1992-93; Weizmann Research Fellow, 1991-94.
- Alicia Torrado, B.Sc., *Research Fellow in Chemistry*
B.Sc., University of Santiago de Compostela (Spain), 1989. Caltech, 1994-.
- Hien D. Tran, Ph.D., *Research Fellow in Astronomy*
B.S., University of Texas (Austin), 1988; M.S., University of California (Santa Cruz), 1990; Ph.D., 1993. Caltech, 1993-94.
- Marian Tredoux, Ph.D., *Visiting Associate in Geochemistry*
B.Sc., University of Stellenbosch (South Africa), 1974; M.Sc., University of Cape Town, 1977; Ph.D., University of Witwatersrand, 1990. Senior Lecturer, University of Cape Town, 1989-. Caltech, 1993-94.
- William Wood Trevarrow, Ph.D., *Senior Research Fellow in Biology*
B.S., University of Maryland, 1975; Ph.D., 1987. Research Fellow, Caltech, 1988-90; Senior Research Fellow, 1992-94.
- Sandip P. Trivedi, Ph.D., *John A. McCone Research Fellow in Physics*
M.Sc., Indian Institute of Technology (Kanpur), 1985; Ph.D., Caltech, 1990. McCone Research Fellow, 1992-95.

- Gretar Tryggvason, Ph.D., *Visiting Associate in Aeronautics*
B.S., University of Iceland, 1980; Sc.M., Brown University, 1982; Ph.D., 1985. Associate Professor, University of Michigan, 1991–. Caltech, 1994.
- Michael Tsapatsis, Ph.D., *Research Fellow in Chemical Engineering*
Diplom., University of Patras, 1988; M.S., Caltech, 1991; Ph.D., 1993. Caltech, 1994.
- Nicholas William Tschoegl, Ph.D., *Professor of Chemical Engineering, Emeritus*
B.Sc., New South Wales University of Technology, 1954; Ph.D., University of New South Wales, 1958. Associate Professor of Materials Science, Caltech, 1965–67; Professor of Chemical Engineering, 1967–85; Professor Emeritus, 1985–.
- Yuhai Tu, Ph.D., *Research Fellow in Physics*
B.S., University of Science and Technology of China, 1987; M.S., University of California (San Diego), 1988; Ph.D., 1991. Caltech, 1991–94.
- Paola Turano, Ph.D., *Visiting Associate in Chemistry*
Ph.D., University of Florence, 1993. Research Fellow, 1993–. Caltech, 1993–94.
- James Albert Tyburczy, Ph.D., *Visiting Associate in Geophysics*
B.A., Whitman College, 1973; Ph.D., University of Oregon, 1983. Assistant Professor, Arizona State University, 1985–. Research Fellow, Caltech, 1983–85; Visiting Associate, 1986–.
- Tetsuya Uchiki, Ph.D., *Visiting Associate in Economics*
B.A., Keio University, 1982; M.A., 1984; Ph.D., 1987. Assistant Professor, Toyo University, 1990–. Visiting Associate, Caltech, 1994–95.
- Firdaus E. Udawadia, Ph.D., *Visiting Professor of Applied Mechanics and Mechanical Engineering*
B.S., Caltech, 1968; M.S., 1969; Ph.D., 1972; M.B.A., University of Southern California, 1985. Professor, 1974–. Research Fellow, Caltech, 1972–74; Visiting Professor, 1993–94.
- Michio Ueno, M.E., *Visiting Associate in Engineering Science*
B.E., Osaka University, 1983; M.E., 1984. Senior Technical Officer, Ministry of Transport (Japan), 1984–. Caltech, 1993–94.
- N. George Ugras, Ph.D., *Research Fellow in Physics*
B.S., Fairleigh Dickinson University, 1987; M.S., Yale University, 1991; Ph.D., 1993. Caltech, 1993–94.
- Olke C. Uhlenbeck, Ph.D., *Sherman Fairchild Distinguished Scholar*
B.S., University of Michigan, 1964; Ph.D., Harvard University, 1969. Professor of Chemistry and Biochemistry, University of Colorado, 1986–. Caltech, 1993–94.
- Jon Erik Urheim, Ph.D., *Senior Research Fellow in Physics*
B.S., Massachusetts Institute of Technology, 1984; Ph.D., University of Pennsylvania, 1989. Millikan Research Fellow, Caltech, 1989–93; Senior Research Fellow, 1993–.
- Kerry J. Vahala, Ph.D., *Associate Professor of Applied Physics*
B.S., Caltech, 1980; M.S., 1981; Ph.D., 1985. Research Fellow, 1985; Assistant Professor, 1986–90; Associate Professor, 1990–.
- Nagarajan Vaidehi, Ph.D., *Research Fellow in Chemistry*
B.Sc., University of Madras, 1979; M.Sc., Indian Institute of Technology, 1981; Ph.D., 1986. Caltech, 1991–95.
- P. P. Vaidyanathan, Ph.D., *Professor of Electrical Engineering*
B.Sc., University of Calcutta, 1974; B.Tech., 1977; M.Tech., 1979; Ph.D., University of California (Santa Barbara), 1983. Assistant Professor, Caltech, 1983–88; Associate Professor, 1988–93; Professor, 1993–.
- Joan S. Valentine, Ph.D., *Visiting Associate in Chemistry*
A.B., Smith College, 1967; Ph.D., Princeton University, 1971. Professor, University of California (Los Angeles), 1981–. Caltech, 1986–94.
- Marten van Kerkwijk, Ph.D., *Research Fellow in Astronomy*
M.A., Astronomical Institute (Netherlands), 1988; Ph.D., 1993. Caltech, 1993–95.
- Eric F. Van de Velde, Ph.D., *Senior Research Associate in Applied Mathematics; Lecturer in Applied Mathematics and Computer Science*
B.Sc., Katholieke Universiteit Leuven (Belgium), 1982; M.Sc., 1982; Ph.D., Courant Institute, New York University, 1986. von Karman Instructor, Caltech, 1988–89; Senior Research Fellow, 1989–92; Lecturer, 1990; 1991–92; 1993–94; Senior Research Associate, 1992–97.
- Stefan G. H. Vandewalle, Ph.D., *Center for Research on Parallel Computation Research Fellow in Applied Mathematics*
M.S., Katholieke Universiteit Leuven (Belgium), 1985; Ph.D., 1992. Caltech, 1993–94.

Vito August Vanoni, Ph.D., *Professor of Hydraulics, Emeritus*

B.S., Caltech, 1926; M.S., 1932; Ph.D., 1940. Assistant Professor, 1942-49; Associate Professor, 1949-55; Professor, 1955-74; Professor Emeritus, 1974-.

Alexander J. Varshavsky, Ph.D., *Howard and Gwen Laurie Smits Professor of Cell Biology*

B.S., Moscow State University, 1970; Ph.D., Institute of Molecular Biology, 1973. Caltech, 1992-.

Guillaume Vendroux, Ph.D., *Research Fellow in Aeronautics*

Dipl., Ecole Supérieure d'Ingenieurs de Marseille, 1988; M.S., Caltech, 1989; Ph.D., 1993. Research Fellow, 1994.

Santosh S. Venkatesh, Ph.D., *Visiting Associate Professor of Electrical Engineering and Computation and Neural Systems*

B.Tech., Indian Institute of Technology, 1981; M.S., Caltech, 1982; Ph.D., 1987. Associate Professor, University of Pennsylvania, 1986-. Visiting Associate Professor, Caltech, 1994-95.

Joseph M. Verdi, Ph.D., *Senior Research Fellow in Biology*

B.S., Beloit College, 1983; Ph.D., University of California (Los Angeles), 1991. Research Fellow, Caltech, 1991-94; Senior Research Fellow, 1994-95; Associate, Howard Hughes Medical Institute, 1991-94.

Rene Vermeulen, Ph.D., *Senior Research Fellow in Astronomy*

B.A., University of Leiden, 1982; M.A., 1985; Ph.D., 1989. Research Fellow, Caltech, 1989-92; Senior Research Fellow, 1992-.

Martin Vetter, Ph.D., *Research Fellow in Aeronautics*

Dipl., 1987; Ph.D., Technical University of Aachen (Germany), 1993. Caltech, 1993.

Eugene P. Victor, M.S., *Coach*

B.S., California State University (Los Angeles), 1951; M.S., 1959. Caltech, 1989-.

Jost Vielmetter, Ph.D., *Senior Research Fellow in Biology*

Dipl., University of Koln (Germany), 1985; Ph.D., Max-Planck-Institute, 1989. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-.

Petr Vogel, Ph.D., *Senior Research Associate in Physics*

Ph.D., Joint Institute of Nuclear Research (U.S.S.R.), 1966. Senior Research Fellow, Caltech, 1970-75; Research Associate, 1975-81; Lecturer, 1983-90; 1992; Senior Research Associate, 1981-.

Rochus E. Vogt, Ph.D., *R. Stanton Avery Distinguished Service Professor and Professor of Physics; Director, Laser Interferometer Gravitational-wave Observatory Project*

S.M., University of Chicago, 1957; Ph.D., 1961. Assistant Professor, Caltech, 1962-65; Associate Professor, 1965-70; Professor, 1970-; R. Stanton Avery Distinguished Service Professor, 1982-. Chief Scientist, Jet Propulsion Laboratory, 1977-78; Chair, Division of Physics, Mathematics and Astronomy, 1978-83; Acting Director, Owens Valley Radio Observatory, 1980-81; Vice President and Provost, 1983-87; Director, 1987-.

Thad Vreeland, Jr., Ph.D., *Professor of Materials Science, Emeritus*

B.S., Caltech, 1949; M.S., 1950; Ph.D., 1952. Research Fellow in Engineering, 1952-54; Assistant Professor of Mechanical Engineering, 1954-58; Associate Professor, 1958-63; Associate Professor of Materials Science, 1963-68; Professor, 1968-91; Professor Emeritus, 1991-.

Eric T. Vu, Ph.D., *Senior Research Fellow in Biology*

B.A., University of Texas, 1985; Ph.D., University of California (Los Angeles), 1990. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-95.

Carol K. Wada, Ph.D., *Research Fellow in Chemistry*

B.S., University of California, 1989; Ph.D., 1994. Caltech, 1994-95.

Eric S. Wagner, Ph.D., *Visiting Associate in Chemical Engineering; Lecturer in Chemical Engineering*

B.S., Stanford University, 1981; M.S., 1981; Ph.D., University of Ghent (Belgium), 1991. Senior Development Engineer, K.T.I. Corporation, 1981-. Caltech, 1994; Lecturer, 1994.

David Bertram Wales, Ph.D., *Professor of Mathematics; Master of Student Houses*

B.S., University of British Columbia, 1961; M.A., 1962; Ph.D., Harvard University, 1967. Bateman Research Fellow, Caltech, 1967-68; Assistant Professor, 1968-71; Associate Professor, 1971-77; Professor, 1977-. Associate Dean of Students, 1976-80; Dean of Students, 1980-84; Executive Officer for Mathematics, 1985-91; Master of Student Houses, 1991-.

Robert Lee Walker, Ph.D., *Professor of Physics, Emeritus*

B.S., University of Chicago, 1941; Ph.D., Cornell University, 1948. Assistant Professor, Caltech, 1949-53; Associate Professor, 1953-59; Professor, 1959-81; Professor Emeritus, 1981-. Executive Officer for Physics, 1976-81.

- Haimin Wang, Ph.D., *Research Fellow in Solar Astronomy*
B.S., Nanjing University (China), 1982; Ph.D., Caltech, 1988. Research Fellow in Astronomy, 1988-89; Research Fellow in Solar Astronomy, 1992-94.
- Juen-Kai Wang, Ph.D., *Research Fellow in Chemistry*
B.S., National Taiwan University, 1983; M.S., Harvard University, 1986; Ph.D., 1992. Caltech, 1992-94.
- Lin Wang, Ph.D., *Research Fellow in Chemistry*
B.S., Nankai University (China), 1986; M.S., 1989; Ph.D., University of Southern California, 1993. Caltech, 1993-94.
- Lisa Wang, Ph.D., *Research Fellow in Chemistry*
B.S., University of California, 1989; Ph.D., Massachusetts Institute of Technology, 1993. Caltech, 1993-94.
- Ning Wang, Ph.D., *Research Fellow in Physics*
B.S., Peking University, 1984; Ph.D., University of California, 1991. Caltech, 1993-95.
- Zhen-Gang Wang, Ph.D., *Assistant Professor of Chemical Engineering*
B.Sc., Beijing University, 1982; Ph.D., University of Chicago, 1987. Caltech, 1991-.
- Zheng-dong Wang, Ph.D., *Visiting Associate in Mathematics*
Ph.D., Peking University, 1989. Associate Professor, Peking University, 1991-. Caltech 1994-.
- Susan B. Ward, Ph.D., *Research Fellow in Biology*
B.A., Wellesley College, 1985; M.A., Columbia University, 1986; M.Phil., 1988; Ph.D., University of California (Los Angeles), 1991. Caltech, 1991-94.
- Sigrid Washburn, Ph.D., *Lecturer in German*
B.A., California State University (Long Beach), 1970; M.A., 1970; Ph.D., University of Southern California, 1974. Caltech, 1985-.
- Gerald J. Wasserburg, Ph.D., D.h.c., Sc.D., D.Sc., Crafoord Laureate, *John D. MacArthur Professor of Geology and Geophysics*
S.B., University of Chicago, 1951; S.M., 1952; Ph.D., 1954; D.h.c., University of Brussels; University of Paris; Sc.D.h.c., Arizona State University; D.Sc.h.c., University of Chicago. Assistant Professor of Geology, Caltech, 1955-59; Associate Professor, 1959-62; Professor of Geology and Geophysics, 1963-82; MacArthur Professor, 1982-. Chair, Division of Geological and Planetary Sciences, 1987-89; Executive Officer for Geochemistry, 1987-89.
- Alan John Watson, Ph.D., *Research Fellow in Biology*
B.A., Immaculate Heart College, 1979; M.S., University of California (Los Angeles), 1985; Ph.D., 1991. Caltech, 1991-94.
- Donald Lloyd Watts, Ph.D., *Visiting Associate in Computation and Neural Systems*
B.Sc., Queen's University (Canada), 1984; M.Sc., Simon Fraser University, 1989; Ph.D., Caltech, 1993. Senior Engineer, Synaptics, 1992-. Visiting Associate, Caltech, 1993-95.
- J. Harold Wayland, Ph.D., D.Sc., *Professor of Engineering Science, Emeritus*
B.S., University of Idaho, 1931; M.S., Caltech, 1935; Ph.D., 1937; D.Sc.h.c., University of Idaho. Research Fellow in Mathematics, Caltech, 1939-41; Associate Professor of Applied Mechanics, 1949-57; Professor, 1957-63; Professor of Engineering Science, 1963-79; Professor Emeritus, 1979-.
- Robert D. Wayne, M.A., *Associate Professor of German, Emeritus*
Ph.B., Dickinson College, 1935; M.A., Columbia University, 1940. Instructor, Caltech, 1952-62; Assistant Professor, 1962-69; Associate Professor, 1969-78; Associate Professor Emeritus, 1982-.
- David J. Webb, Ph.D., *Visiting Associate in Materials Science*
A.B., University of California, 1977; M.S., University of Maryland, 1982; Ph.D., 1983. Assistant Professor, University of California (Davis), 1987-. Caltech, 1993.
- Peter B. Weichman, Ph.D., *Assistant Professor of Theoretical Physics*
B.Sc., University of Alberta, 1981; M.S., Cornell University, 1984; Ph.D., 1986. Weingart Research Fellow, Caltech, 1986-89; Assistant Professor, 1989-.
- Alexander Weigand, Ph.D., *Research Fellow in Aeronautics*
B.S., University of Stuttgart (Germany), 1988; Ph.D., University of California (San Diego), 1993. Caltech, 1993-95.
- Alan Jay Weinstein, Ph.D., *Assistant Professor of Physics*
A.B., Harvard University, 1978; Ph.D., 1983. Caltech, 1988-.
- Cindy Weinstein, Ph.D., *Assistant Professor of Literature*
B.A., Brandeis University, 1982; Ph.D., University of California, 1989. Caltech, 1989-.
- Daniel Paul Weitekamp, Ph.D., *Associate Professor of Chemical Physics*
B.A., Harvard College, 1974; Ph.D., University of California, 1982. Assistant Professor of Chemistry, Caltech, 1985-91; Associate Professor of Chemical Physics, 1991-.

- Chihyung Wen, Ph.D., *Research Fellow in Aeronautics*
B.S., National Taiwan University, 1986; M.S., Caltech, 1989; Ph.D., 1994. Research Fellow, Caltech, 1994-.
- Yuan-Kai Wen, Ph.D., *Visiting Associate in Biology*
Ph.D., Nanking University (China), 1968. Professor, University of Science and Technology of China, 1986-. Caltech, 1992-93.
- Bradley T. Werner, Ph.D., *Visiting Associate in Physics*
B.S., Caltech, 1981; M.S., 1982; Ph.D., 1987. Assistant Professor, California State University, 1990-. Visiting Associate, Caltech, 1990-95.
- Michael W. Werner, Ph.D., *Lecturer in Physics*
B.A., Haverford College in Pennsylvania, 1963; Ph.D., Cornell University in Pennsylvania, 1968. Lecturer, Caltech, 1992-93.
- Brian P. Wernicke, Ph.D., *Professor of Geology*
B.S., University of Southern California, 1978; Ph.D., Massachusetts Institute of Technology, 1982. Visiting Professor, Caltech, 1990; Professor, 1992-.
- James A. Westphal, B.S., *Professor of Planetary Science; Director, Palomar Observatory*
B.S., University of Tulsa, 1954. Senior Research Fellow, Caltech, 1966-71; Associate Professor, 1971-76; Professor, 1976-. Director, Palomar Observatory, 1993-.
- Ward Whaling, Ph.D., *Professor of Physics, Emeritus*
B.S., Rice University, 1944; M.A., 1947; Ph.D., 1949. Research Fellow, Caltech, 1949-52; Assistant Professor, 1952-58; Associate Professor, 1958-62; Professor, 1962-93. Professor Emeritus, 1993-.
- Gerald Beresford Whitham, Ph.D., *Charles Lee Powell Professor of Applied Mathematics*
B.Sc., University of Manchester, 1948; M.Sc., 1949; Ph.D., 1953. Visiting Professor of Applied Mechanics, Caltech, 1961-62; Professor of Aeronautics and Mathematics, 1962-67; Professor of Applied Mathematics, 1967-83; Powell Professor, 1983-. Executive Officer for Applied Mathematics, 1971-80.
- Marcel Widmer, Ph.D., *Research Fellow in Chemistry*
B.S., Ecole Polytechnique Federale de Lausanne, 1987; Ph.D., 1992. Caltech, 1993-95.
- David J. Wiedenfeld, Ph.D., *Research Fellow in Chemistry*
B.S., University of Texas, 1987; M.A., Columbia University, 1988; Ph.D., 1992. Caltech, 1992-93.
- Debra Kay Wiest, Ph.D., *Research Fellow in Biology*
B.S., Texas A&M University, 1987; Ph.D., University of Oregon, 1993. Caltech, 1993-.
- Stephen R. Wiggins, Ph.D., *Professor of Applied Mechanics*
B.Sc., Pittsburgh State University, 1980; M.A., M.Sc., University of Wisconsin, 1983; Ph.D., Cornell University, 1985. von Karman Instructor in Applied Mathematics, Caltech, 1985-87; Assistant Professor, 1987-92; Associate Professor, 1992-94; Professor, 1994-.
- Dean Michael Willberg, Ph.D., *Research Fellow in Environmental Engineering Science*
B.Sc., University of Alberta, 1987; Ph.D., Caltech, 1993. Research Fellow, 1993-94.
- Jeanne S. M. Willette, Ph.D., *Lecturer in Art History*
B.A., California State University, 1980; M.A., California State University (Long Beach), 1983; Ph.D., University of California (Santa Barbara), 1993. Caltech, 1993; 1994.
- Richard M. Wilson, Ph.D., *Professor of Mathematics*
B.S., Indiana University, 1966; M.S., Ohio State University, 1968; Ph.D., 1969. Sherman Fairchild Distinguished Scholar, Caltech, 1976; Professor, 1980-.
- Carl L. Winstead, Ph.D., *Senior Research Fellow in Chemistry*
B.A., Rice University, 1982; Ph.D., Indiana University, 1987. Visiting Associate, Caltech, 1987; Research Fellow, 1988-89; Senior Research Fellow, 1993-95.
- Alison Winter, Ph.D., *Assistant Professor of History*
B.A., University of Chicago, 1987; M.Phil., Cambridge University, 1989; Ph.D., 1993. Caltech, 1994-.
- Robert B. Wiringa, Ph.D., *Visiting Associate in Theoretical Physics; Lecturer in Theoretical Physics*
B.S., Rensselaer Polytechnic Institute, 1972; M.S., University of Illinois, 1974; Ph.D., 1978. Visiting Associate, Caltech, 1993. Lecturer, Caltech, 1993.
- Mark Brian Wise, Ph.D., *John A. McCone Professor of High Energy Physics*
B.Sc., University of Toronto, 1976; M.Sc., 1977; Ph.D., Stanford University, 1980. Assistant Professor, Caltech, 1982-84; Associate Professor, 1984-85; Professor of Theoretical Physics, 1985-92; McCone Professor, 1992-.
- Barbara J. Wold, Ph.D., *Associate Professor of Biology*
B.S., Arizona State University (Tempe), 1973; Ph.D., Caltech, 1978. Research Fellow, 1978; Assistant Professor, 1981-88; Associate Professor, 1988-.

- Juliann Kay Wolfgram, Ph.D., *Lecturer in Art History***
 B.A., Scripps College, 1979; M.A., University of Kansas, 1986; M.Phil., 1986; Ph.D., 1986. Caltech, 1992–94.
- Donna S. Womble, Ph.D., *Research Fellow in Astronomy***
 B.S., University of California (Irvine), 1986; M.S., University of California (San Diego), 1988; Ph.D., 1992. Caltech, 1992–95.
- Yiu-Fai Wong, Ph.D., *Visiting Associate in Electrical Engineering***
 B.S., Caltech, 1986; M.S., 1987; Ph.D., 1992. Postdoctoral Research Staff Member, Lawrence Livermore National Laboratory, 1993–. Research Fellow, Caltech, 1992; Visiting Associate, 1993.
- Michael K. Woo, M.C.P., *Lecturer in History***
 B.A., University of California (Santa Cruz), 1973; M.C.P., University of California, 1975. Caltech, 1994.
- David Shotwell Wood, Ph.D., *Professor of Materials Science, Emeritus***
 B.S., Caltech, 1941; M.S., 1946; Ph.D., 1949. Lecturer in Mechanical Engineering, 1949–50; Assistant Professor, 1950–55; Associate Professor, 1955–61; Professor, 1961–63; Professor of Materials Science, 1963–88; Professor Emeritus, 1988–. Acting Associate Dean of Students, 1968–69; Associate Dean, 1969–74.
- James Francis Woodward, Ph.D., *Professor of Philosophy; Executive Officer for the Humanities***
 B.A., Carleton College, 1968; Ph.D., University of Texas (Austin), 1977. Mellon Postdoctoral Instructor, Caltech, 1983–86; Assistant Professor, 1986–88; Associate Professor, 1988–92; Professor, 1992–. Executive Officer, 1992–.
- Dorothy S. Woolum, Ph.D., *Visiting Associate in Geochemistry***
 B.A., Cornell University, 1964; Ph.D., Washington University (St. Louis), 1971. Professor, California State University (Fullerton), 1980–. Research Fellow in Geology and Physics, Caltech, 1971–74; Visiting Associate in Geochemistry, 1974–83; 1984–94.
- Stephen A. Woski, Ph.D., *Research Fellow in Chemistry***
 B.S., Emory University, 1986; Ph.D., University of Michigan, 1990. Caltech, 1991–94.
- Dianqing Wu, Ph.D., *Senior Research Fellow in Biology***
 B.S., Nanjing University (China), 1985; Ph.D., Clarkson University, 1990. Research Fellow, Caltech, 1991–93; Senior Research Fellow, 1994–.
- Shuguang Wu, Ph.D., *Research Fellow in Chemistry***
 B.S., Nanjing University (China), 1982; M.S. (Chemistry), Dalian Institute of Chemical Physics, 1985; M.S. (Chemistry), University of Missouri (St. Louis), 1988; Ph.D., University of California (Los Angeles), 1992. Caltech, 1992–95.
- Theodore Yao-Tsu Wu, Ph.D., *Professor of Engineering Science***
 B.S., Chiao-Tung University (China), 1946; M.S., Iowa State University, 1948; Ph.D., Caltech, 1952. Research Fellow, 1952–55; Assistant Professor of Applied Mechanics, 1955–57; Associate Professor, 1957–61; Professor, 1961–66; Professor of Engineering Science, 1966–.
- Yusheng Wu, Ph.D., *Research Fellow in Chemistry***
 B.S., Zhengzhou University (China), 1985; Ph.D., Iowa State University, 1993. Caltech, 1993–94.
- Kurt Wuthrich, Ph.D., *Sherman Fairchild Distinguished Scholar***
 Ph.D., University of Bern and Basel, 1964. Professor of Biophysics, Eidgenossische Technische Hochschule, Institute of Molecular and Biophysics, 1980–. Caltech, 1994.
- Peter John Wyllie, Ph.D., D.Sc., *Professor of Geology***
 B.Sc. (Geology and Physics), Saint Andrews University (Scotland), 1952; B.Sc. (Geology), 1955; Ph.D., 1958; D.Sc.h.c., 1974. Professor, Caltech, 1983–. Chair, Division of Geological and Planetary Sciences, 1983–87.
- Jun Xian, Ph.D., *Research Fellow in Biology***
 B.S., South China Institute of Technology, 1983; M.S., 1986; Ph.D., Wichita State University, 1994. Caltech, 1994–95.
- Yuanwu Xie, Ph.D., *Research Fellow in Chemistry***
 B.S., Wuhan University (China), 1985; M.S., Nanjing University, 1988; Ph.D., Changchun Institute of Applied Chemistry, 1992. Caltech, 1993–95.
- Jing Xing, Ph.D., *Research Fellow in Biology***
 B.S., Chandong University (China), 1983; M.S., China Academy of Science, 1986; Ph.D., University of Pennsylvania, 1993. Caltech, 1993–94.
- Haixin Xu, Ph.D., *Research Fellow in Biology***
 B.S., Beijing University, 1986; Ph.D., University of California (Los Angeles), 1992. Caltech, 1992–93.
- Jun Xu, Ph.D., *Research Fellow in Biology***
 B.S., University of Science and Technology of China, 1988; Ph.D., University of California (San Diego), 1993. Caltech, 1993–95.

- Yinghai Xu, Ph.D., *Research Fellow in Biology*
M.S., Shanghai Research Institute of Chemical Engineering, 1984; Ph.D., Emory University, 1992. Caltech, 1993-95.
- Alok Yadav, Ph.D., *Mellon Postdoctoral Instructor in Literature*
B.A., University of Toronto, 1986; Ph.D., Cornell University, 1992. Caltech, 1992-93.
- Minoru Yaga, Ph.D., *Visiting Associate in Mechanical Engineering*
B.S., Kyushu University (Japan), 1984; M.S., 1986; Ph.D., 1989. Assistant Professor, University of the Ryukyus, 1989-. Visiting Associate, Caltech, 1994-.
- Toshitsugu Yamazaki, Ph.D., *Visiting Associate in Geology*
B.S., Kyoto University (Japan), 1981; Ph.D., 1990. Senior Researcher, Geological Survey of Japan, 1981-. Caltech, 1994-95.
- Zhachuai Yang, Ph.D., *Research Fellow in Biology*
B.S., Beijing Normal University, 1987; Ph.D., Baylor College (Texas), 1993. Caltech, 1994.
- Jian-Sheng Yao, Ph.D., *Research Fellow in Biology*
B.S., Jiang Xi Agriculture University (Japan), 1982; M.S., Tottori University, 1989; Ph.D., Hokkaido University, 1992. Caltech, 1992-94.
- Amnon Yariv, Ph.D., *Thomas G. Myers Professor of Electrical Engineering and Professor of Applied Physics*
B.S., University of California, 1954; M.S., 1956; Ph.D., 1958. Associate Professor of Electrical Engineering, Caltech, 1964-66; Professor, 1966-74; Professor of Electrical Engineering and Applied Physics, 1974-79; Myers Professor and Professor of Applied Physics, 1979-.
- Amir Yeganeh-Haeri, Ph.D., *Research Fellow in Geophysics*
B.A., Albion College, 1981; M.S., University of Illinois (Chicago), 1984; Ph.D., State University of New York (Stony Brook), 1992. Caltech, 1993-95.
- Nai-Chang Yeh, Ph.D., *Assistant Professor of Physics*
B.S., National Taiwan University, 1983; Ph.D., Massachusetts Institute of Technology, 1988. Caltech, 1989-.
- Makoto Yoneda, M.D., Ph.D., *Senior Research Fellow in Biology*
M.D., Nigata University School of Medicine, 1983; Ph.D., 1990. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-94.
- Taeyoung Yoon, M.S., *Research Fellow in Chemistry*
B.S., Seoul National University (Korea), 1985; M.S., 1987. Caltech, 1994-.
- Masaki Yoshikawa, M.S., *Visiting Associate in Chemistry*
B.S., Kyoto University (Japan), 1988; M.S., 1990. Caltech, 1993-94.
- Chiou-Hwa Yuh, Ph.D., *Research Fellow in Biology*
B.S., Fu-Jen Catholic University (Taiwan), 1987; Ph.D., National Yang-Ming Medical College (Taiwan), 1992. Caltech, 1992-93.
- Min Su Yun, Ph.D., *Research Fellow in Astronomy*
B.S., Caltech, 1986; M.S., Harvard University, 1988; Ph.D., 1992. Research Fellow, Caltech, 1992-94.
- Weijie Yun, Ph.D., *Visiting Associate in Electrical Engineering*
B.S., Zhengzhou University (China), 1985; M.S., University of California, 1989; Ph.D., 1992. Senior Research Scientist and Director of Microengineering R & D, BEI Electronics, Inc., 1992-. Caltech, 1993-.
- Yuk Ling Yung, Ph.D., *Professor of Planetary Science*
B.S., University of California, 1969; Ph.D., Harvard University, 1974. Visiting Associate, Caltech, 1976; Assistant Professor, 1977-82; Associate Professor, 1982-86; Professor, 1986-.
- Ulvi Yurtsever, Ph.D., *Visiting Associate in Theoretical Physics*
B.S., Middle East Technical University, 1983; Ph.D., Caltech, 1988. Postdoctoral Fellow, University of Maryland, 1993-. Caltech, 1993-.
- Fredrik Zachariassen, Ph.D., *Professor of Theoretical Physics*
B.S., University of Chicago, 1951; Ph.D., Caltech, 1956. Assistant Professor, 1960-62; Associate Professor, 1962-66; Professor, 1966-.
- Ahmed H. Zewail, Ph.D., D.Sc., *Linus Pauling Professor of Chemical Physics*
B.Sc., Alexandria University, 1967; Ph.D., University of Pennsylvania, 1974; D.Sc.h.c., American University of Cairo. Assistant Professor, Caltech, 1976-78; Associate Professor, 1978-82; Professor, 1982-89; Pauling Professor, 1990-.
- Ji-Hu Zhang, Ph.D., *Research Fellow in Chemical Engineering*
B.S., Nankai University (China), 1982; M.S., 1985; Ph.D., University of Georgia, 1991. Caltech, 1993-95.
- Xin Zhang, Ph.D., *Visiting Associate in Aeronautics*
B.S., East China Normal University, 1982; M.S., 1984; Ph.D., University of California (San Diego), 1992. Postdoctoral Research Fellow, 1993-. Caltech, 1993-95.

- Yinong Zhang, Ph.D.**, *Research Fellow in Biology*
 B.Sc., Chong King Medical University, 1984; M.S., Chinese Academy of Medical Sciences, 1987; Ph.D., State University of New York (Buffalo), 1994. Research Fellow, Caltech, 1994-95.
- Yongfeng Zhang, Ph.D.**, *Visiting Associate in Chemistry*
 B.S., Fudan University (China), 1964; M.S., University of Science and Technology of China, 1978; Ph.D., State University of New York (Stony Brook), 1985. Research Director, Applied Physics and Chemistry Laboratory, 1990-. Research Fellow, Caltech, 1988-89; Visiting Associate, 1991-93.
- Bin Zhao, Ph.D.**, *Visiting Associate in Physics*
 B.S., Tsinghua University (China), 1985; Ph.D., Caltech, 1993. Strategic Technologist, SEMATECH, 1994-. Visiting Associate, Caltech, 1994-95.
- Dapeng Zhao, Ph.D.**, *Texaco Research Fellow in Geophysics*
 B.S., University of Peking, 1984; M.S., Tohoku University (Japan), 1988; Ph.D., 1991. Research Associate, University of Southern California, Southern California Earthquake Center, 1992-. Visiting Associate, Caltech, 1992-93; Texaco Research Fellow, 1993-.
- Min Zhou, Ph.D.**, *Research Fellow in Aeronautics*
 B.S., Taiyuan Heavy Machinery Institute (China), 1982; M.S., Beijing University of Aeronautics and Astronautics, 1985; Sc.M., Brown University, 1990; Ph.D., 1993. Caltech, 1993-94.
- Ren-yuan Zhu, Ph.D.**, *Senior Research Associate in Physics*
 B.S., Tsinghua University (Peking), 1968; Ph.D., Massachusetts Institute of Technology, 1983. Research Fellow, Caltech, 1984-87; Senior Research Fellow, 1987-92; Senior Research Associate, 1992-.
- George A. Zimmerman, Ph.D.**, *Lecturer in Electrical Engineering*
 B.S., Stanford University, 1985; M.S., Caltech, 1988; Ph.D., 1990. Lecturer, Caltech, 1992-94.
- Kai Zinn, Ph.D.**, *Assistant Professor of Biology*
 B.A., University of California (San Diego), 1977; Ph.D., Harvard University, 1983. Caltech, 1989-.
- Konrad E. Zinsmaier, Ph.D.**, *Senior Research Fellow in Biology*
 Dipl., University of Wurzburg (Germany), 1988; Ph.D., 1990. Research Fellow, Caltech, 1990-93; Senior Research Fellow, 1993-94.
- Harold Zirin, Ph.D.**, *Professor of Astrophysics; Director, Big Bear Solar Observatory*
 A.B., Harvard College, 1950; A.M., Harvard University, 1951; Ph.D., 1953. Visiting Associate, Caltech, 1963; Professor, 1964-. Chief Astronomer, Big Bear Solar Observatory, 1970-80; Director, 1980-.
- Jonas Zmuidzinas, Ph.D.**, *Assistant Professor of Physics*
 B.S., Caltech, 1981; Ph.D., University of California, 1987. Caltech, 1989-.
- Christiane V. Zock, Ph.D.**, *Research Fellow in Biology*
 Ph.D., University of Cologne, 1993. Caltech, 1994-95.
- Edward Edom Zukoski, Ph.D.**, *Professor of Jet Propulsion and Mechanical Engineering*
 B.S., Harvard College, 1950; M.S., Caltech, 1951; Ph.D., 1954. Lecturer in Jet Propulsion, 1956-57; Assistant Professor, 1957-60; Associate Professor, 1960-66; Professor, 1966-78; Professor of Jet Propulsion and Mechanical Engineering, 1978-.
- George Zweig, Ph.D.**, *Visiting Associate in Theoretical Physics*
 B.S., University of Michigan, 1959; Ph.D., Caltech, 1964. Staff Scientist, Los Alamos National Laboratory, 1983-. Research Fellow, Caltech, 1963-64; Assistant Professor, 1964-66; Associate Professor, 1966-67; Professor, 1967-83. Visiting Associate, 1983; 1984-93.
