Some of the comments included "I am not for war, but I think this was inevitable."
"We can't afford on the for invasion on any bad ill...

1/5 A student of Ricketts House found from Christmas vacation that his room had been vandalized while he was away. Items of clothes were missing and a mirror in the room was broken.

1/11 A student of House noticed that several items of food were missing from the house kitchen refrigerator.

1/12 A student and locked his room, located at the southwest entrance to the dormitory, which was removed overnight. The name Canoodle is on the door and seat.

1/13 A Caltech staff member was in her office when someone unannounced the door and started into the room. When the woman slammed the door, the intruder ran out with the unit.

1/14 A machine was taken from South Mudd room 250 when someone with a key entered the room during the night and out with the unit.

1/15 A small fire was reported burning just north of Lauritsen Lab. Security found a small pile of leaves ablaze and extinguished the remnants of the fire.

On his frosh-interest Mitchell wrote his nickname as "Mitch Rockin' Scientist." Mitch was a blithe and intellectually stimulating person who seemed to be laughing about everything. He enjoyed working on cars and playing music in his spare time and used to be a Guardian Angel.

On his frosh-interest Mitchell wrote his nickname as "Mad Mitchell the Rockin' Scientist." Mitch was a blithe and independent spirit who brought joy, compassion and a sense of fun to all those who encountered him, said Chris Brennan, Dean of Students. "There seems little doubt that he would have gone on to become an outstanding engineer."

Mitch was very close to graduat- ing and a posthumous degree was being looked into.

Funeral services will be held in Chicago next Saturday. There will be a memorial service at Caltech next Thursday, January 23rd at 4 p.m. at the MOSH House, 355 South Holliston. A Mitchell Mirvica Pravica Memorial Scholarship is being created. Anyone wishing to donate should contact the Deans office for information.

Michael Feinstein of the Green Party leads an LA Coalition rally.

The allied forces in the Gulf area launched an attack on Iraqi forces in Kuwait and Kuwait.

CRIME AND INCIDENT BEAT
1/5 A student of Ricketts House found upon returning from Christmas vacation that his room had been vandalized when he was gone. Many items of clothes were missing and a mirror in the room was broken.

1/11 A student of Lloyd House noticed that several items of food were missing from the house kitchen refrigerator.

1/12 A student had parked and locked his bicycle to the iron gate located at the southwest entrance to the Danby courtyard. The bicycle was removed overnight.1/15 A small fire was reported burning just north of Lauritsen Lab. Security found a small pile of leaves ablaze and extinguished the remnants of the fire.

Total value missing or stolen this week: $3000

The kinetic nature of Water Forms requires subtle mechanical balance, design, and construction. The sculpture has two rocking shapes driven by submerged low-energy pumps. Its four rotating shapes are delicately balanced so that the motion of the rocking shapes, and even the motion of the wind, will move them. A separate recycling system drives water jets that can be used during selected hours of the day.
MOSH Prejudice
An Open Letter to the Caltech Alumni Fund:
I recently received a request for money from the Caltech Alumni Fund. The request appeals to house allegiance, encouraging us to help meet the goals set for our houses by the Fund.
I find this quite ironic as current policy at the Institute is that alumni from certain of the houses (mine among them) are not allowed in the houses due to their entomisable bad influences on the undergraduates. This policy is, of course, enforced at the whim of the present Master of Student Houses.
Such a policy is repugnant for a number of reasons that should be quite apparent. First, it is hopelessly patronizing for the Institute to treat the undergraduates in such a manner. Second, the enforcement of this policy is entirely arbitrary, with absolute discretion given to one individual.
Even were this individual a fair and reasonable person (and all the information I have regarding him indicates he is not) that sort of benevolent dictatorship would still be reprehensible.
Finally, I am personally offended that the Institute has decided that I am a part of a group that would exert a bad influence on the current students today, were I allowed in contact with them. It is especially odious to me that, given this situation, the Alumni Fund would make an appeal to me for a financial contribution based on house loyalty.
As long as the Institute maintains its present policies toward the undergraduates I will contribute no money to the Institute, or to any fund associated with the Institute. Furthermore, I will actively discourage all other alumni with whom I am in contact from contributing money to the Institute.

Freedom of Speech
To the Campus community:
Last week I put up in my building an advertisement for the Teach-In on the golf course which took place on Saturday January 5th in Baxter, and another anti-war sign urging Americans to let Mr. Bush know their opinion on the crisis.
I was astounded to find that within 24 hours someone had torn down both signs. How can someone be so bigoted as to not only bury their own head in the sand, but also the heads of others who remain buried in it? There is meant to be free speech in this country, universities are traditionally centres of free thinking. The Caltech-YMI supported both the Caltech Y and many diverse groups from the local community. Surely we are not an honor code violation to destroy an advertisement up by a campus group.
Whoever did this, I am not asking you to become anti-war, nor will I force you to call the White House with your opinions, though I do think both of these actions are wise. But please let us advertise our events and communicate our opinions to other people, we encourage you to do the same. It is only with open communication and respect that the world advances towards peace and harmony.

Hussein Must Be Stopped
By Shane Sausby

It is hard for me to understand the mentality that claims “No blood for oil,” or that cities for peace. I cannot understand why people would want to sit back and let a military dictator invade another country and not even attempt to remove him. I will not listen to people who do not see that Saddam Hussein is a modern Hitler, with parallels beyond number. I do agree with those who say war is not what we wanted, but it was our last option.
There are protests going on around the country, protesting the war. This is both good and bad. It is good because it shows that we are capable of peacefully protesting the government. It is bad because it only helps the propaganda machine of Saddam Hussein. He is a cunning and ruthless leader who will use anything he can to enslave and aggravate his people to futile efforts for him. Scenes of protest and di-vision in the United States are the perfect tool for this purpose.
Many protesters chant “no blood for oil.” I find this a simplistic view of a complicated situation. If we were defending Kuwait just for its oil, I would join the protesters, but we are not. The Uni ted Nations passed a resolution giving Saddam Hussein a deadline to remove the troops from Kuwait and President Bush waited until this deadline passed before he attacked.
Many people said President Bush would not listen to offers of peace, and indeed he did not. President Bush refused to link the invasion of Kuwait with the Palestinian problem. Saddam refused to listen unless he could link the situation in Kuwait to the problems in Israel, thus fragmenting the alliance against him, since the leaders of the Arab nations would not be willing to support Is rael’s position on the Palestinian problem. As I sat here typing this editorial, the radio reported news of an attack on Israel. I ask those who wish for peace whether the actions of this madman should be stopped, or if we should sit back and let him have his way in the Middle East? I ask those who say bombing is evil if they would not stop Saddam, why then think sanctions would work?
I think for peace I believe we have to offer is a conversation with a genuine offer. We talk often and have seldom disagreed on such national or global conflicts. She is much older than me and remembers Vietnam clearly. She spoke recently before the war began, about our first major disagreement. She agreed that if things were handled well she would not protest and I agreed to join her if they were botched like they were in Vietnam. It looks like we both are staying home tonight and watching the news.

Letters
The US seems headed for war in the Middle East. Is the US government chosen this course? The official line has bounced from Seymour Hersh, who wrote from his Herter's ghé, to President Bush, who mentioned the (!egitimate govern- ment of the ?ahabi family), to the Secretary of State, who threatened and removing Saddam Hussein. But how do we find out behind the actions of our government? Before I get to these questions, I would like to make some official US rationalizations for its actions. Iraq is a developing coun- try, not rich in oil reserves, with nuclear weapons, insects and my expectation. Thus, the comparison between Iraq with Hitler's Germany is not a good one. Furthermore, the presence of hostile Syria on one flank and Iran on the other make it very unlikely that Iraq ever had designs on Saudi Arabia. Moreover, the initial 40,000 US troops deployed in the Gulf were for defensive purposes, and the US must have something in mind to explain deploying ten times that number.

What about protecting our oil interests? The oil companies would argue that the United States could make sure that Iraq would not shut down or produce less oil. But this is a clear statement of facts. The US government has organized the oil region that is designed to secure oil flow during a crisis. The US government already had oil flowing from the region is something that is $100 and $300 per barrel. The prevailing price of oil was $18 per barrel, the difference between the prevailing price of oil was a de facto oil tax if you will.

The repositioning of the ruling Sufi family on the people of Kuwait may well be a goal of the Bush Administration. The US military personally owns $100 billion of the US debt and has additional $100 billion that are in the form of assets in major US banks. That kind of money buys influence. Charlie Keating has his own billion-dollar offshore accounts. But consider the well being of the Sufi family does not explain the Iraqi troop movements is not improbably that the US has to guard this area. In any case, the US military is a very powerful group in the US government for a few million. And think of the billions that the oil companies that these millions of profits that they can only withdraw monies from their complex banking system and do other things. But, the US military and the oil companies are not the only group.

At first, we come to the "neutralization" of Saddam Hussein. The US policy is to remove him from power. The prime motivation is to dis- armed Iraq. But this is not the only goal. The US policy is also to solve the domestic economic crisis by gaining military control of the oil resources and all the political leverage over Saudi Arabia and Kuwait which own upwards of $400 billion of our national debt. These ends are best achieved by that is the "neutralization" of Saddam Hussein. Such a move would be a testament to the US's support for the government of Kuwait, US Ambassador to Iraq, and also to the "neutralization" of Saddam Hussein. "We have a direct instruction from the President to seek better relations with Kuwait." This statement, "the new relations turned sour. What then motivates US policy, and why are the US military and the oil companies in favor of achieving these goals? An exam- ination of the record will show that the war is the method of choice and that distracting attention from the devastation and the destruction of control of oil production better ex- plan the actions of our government.

The invasion between Iraq and Kuwait dates from 1922, the date that the borders of Iraq, Kuwait, Jordan, and Saudi Arabia were drawn up by the British. Kuwait for centuries had been part of the Bas- sa region of the Ottoman empire and it was not surprising that the Iraqis never recognized these border. In fact the borders were drawn up to deprive Kuwait of oil. From the points of view of the Gulf, Iraqi military threats to Kuwait occurred in 1964, 1973 and 1976. After the Iran Iraq war, which in addition to the enor- mous loss of life, left Iraq with a great debt. Furturly op- position Kuwait was exceeding its oil production quotas, driving down the price of oil and eroding Iraq's ability to pay off the debt. To add insult to injury, Iraq was exporting oil from the Rumaila field, which just reaches the Kuwait border (the wells were drilled an- glorying northward). Thus, the Iraqis were having a recognized border, $40 billion in debt owed to Kuwait, oil over- production, the US government and the UN from the disputed field, and to re- seque a seaport on the Persian Gulf. The UN Security Council of various officials during the crucial days just before the Kuwait invasion suggest that US policy was to encourage Saddam Hussein to invade. (In the April 25, 1990, the Assistant Secretary of State for the Middle East, John Kelly, told the Congress that the UN had no commitment to defend Kuwait. On July 25, 1990, the UN had already massed on the border, the US, the US secretary of state had instructed him to say that the UN had "no opinion" on the Iraq-Kuwait bor- der disputes. On the same day As- sistant Secretary Kelly killed a planned Voice of America broad- casts directed at Kuwait. It is clear that the US was "strongly committed" to the defense of Kuwait. Although the UN invasion was at least four days before it occurred, on 31 July, Kelly again said before the Congress that the UN had no commitment to de- fend Kuwait. The US policy facts suggest that the US wanted Kuwait to invade Iraq and en- couraged it to do so.

Why would the Bush Admin- istration want Saddam Hussein to invade Kuwait? For the Bush Admin- istration, the prime motivation is to dis- arm Iraq. In addition, the US government also to solve the domestic econom- ic crisis by gaining military control over the oil resources and political leverage over Saudi Arabia and Kuwait which own upwards of $400 billion of our national debt. These ends are best achieved by the "neutralization" of Saddam Hussein. Such a move would be a testament to the US's support for the government of Kuwait, US Ambassador to Iraq, and also to the "neutralization" of Saddam Hussein. Cost of The Persian Gulf War Enormous

By Chad Desai

The US seems headed for war in the Middle East. Is the US government chosen this course? The official line has bounced from Seymour Hersh, who wrote from his Herter's ghé, to President Bush, who mentioned the (!egitimate government of the ?ahabi family), to the Secretary of State, who threatened and removing Saddam Hussein. It is the author's responsibility to check material written about a person to see if they consider it libelous.

This Week's Inside World was written by: Lloyd: Jeff Hagen Ruddock: Chris Martin

Lloyd
Well, it's happened. As our country5 heads into conflict, President Bush has assigned to task of our noise-devastating military force yet. Forget the B-2, you don't need Rambo, Arnold will be shaking in his boots. Yes, it's true. They're here, the Lloyd Ruddock.

This elite, top-secret fighting force has been deployed around the world many times to support American interests abroad through the use of incisive military blows. Assassinations, sabotage, general mayhem, death and destruction. If the job needs to be done, and no one else can or will do it, the Lloyd Ruddock is there. And here they are:

Point Man: Jack "Shadow" Prater. This man owns the night. He moves to task of any terrain and conditions as long as he doesn't smile. His only disadvantage: it's hard to move quietly carrying all those magazines. "Weaponry?" he says, "Emily "Firewrench" Wen and Shiyiis "Wanna Fire" Zysy. These two can use anything from a plastic dinner fork to an M1A2 main battle tank to break havoc on an enemy.

Medic: Steve "The Clint" McLaughlin. When most doctors need a CAT scanner and an electrocardiac resuscitator, he gets by with an ace bandage and a stethoscope.

Transverse: Tim Caylor. If it moves hell fight it. Keith Akana. If it moves hell listen to it. Dave Jeitner. If it moves hell see it.

Machine Gunner: Melinda "Neck-Breaker" Au. The M60 machine gun she carries may be bigger and heavier than she is, but with it she'll set down a covering fire Satan himself can't get through.

Translator: Sam Webb. He speaks only English, but with hand gestures he can converse in a thousand foreign tongues.

Explosives: Scott "Jazzbomb" Harris. He's so tough he chews plasticine as bubble gum. And you thought the Verrazano-Narrows Bridge was a natural.

UnderSea Warfare: Curt "Ace of Spades" Stevenson. His leadership skills are matched only by his ability to turn his ever-present guitar into a unique death-dealing tool.

Ruddock
It's war! That's the most exciting media event of 1991. Twenty-four-hour coverage on all the major networks. But you don't have to just watch. You can participate! Just take this simple test to see if you're eligible. Rate yourself in the following categories:

Language Skills
Level 1: Can understand Ali 0.0

Level 2: Can understand Ali when he's drunk 1.0

Level 3: Get the main ideas from your enemy 2.0

Level 4: Qualify for a Math I T.A. 3.0

Level 5: Can keep them from coming at the top of your spaghetti at lunch 4.0

Survival Skills
Level 1: Live in Braus or Marks House 0.0

Level 2: Live in Dunwoody House 1.0

Level 3: Live in Dunwoody House 2.0

Level 4: Can handle the Troy's Triple Threat 3.0

Level 5: Live with Chris Dietel for a week 4.0

Combat Skills
Level 1: Funnelad reveals on New Year's Eve 0.0

Level 2: Veteran of Blacker's Underwater Lounge attack 1.0

Level 3: Veteran of Alley 3 Sting Along 2.0

Level 4: Snagged a cold drink at a house meeting 3.0

Level 5: Jumped off of Firestone 4.0

If you scored 10 or higher on this test, you can go to Saudi Arabia and be on CNN. What fun! But if you failed, don't worry. You can still be part of the action by getting in on the mass hysteria here at home.

Amy has agreed to give up the women's lounge for a while so we can use it as Ruddock's own personal concentration camp. If you see any suspiciouslooking Arabs lurking around, they've probably come to steal some food from O'Donnell and blow up the house. Beat them into submission and lock them up! Remember, just cause you're paranoid doesn't mean somebody isn't out to get you.

There's a couple Eastern-looking people hanging around who I'm really worried about. One guy I've seen in Keith's garage room, and Keith is missing.

Did he kill him? Is Keith's body stuffed under the sink in there? Is that what 1.0 the size of a human being is? I'm not sure.

There's another short guy with beardy hair and curly hair wearing a green Army jacket that I've seen lurking around. If you see any fresh fish catch him around the house, just put him in a trash can, turn it upside down, and set on it till the fish gets here.

Just in case we are the victim of a nuclear attack, I nominate Hans as the Radiation Frosh. He usually looks like he's been through a war, and he knows 5 as much about stuff as Dave Jeitner did. He needs to keep a geiger counter and a flashlight handy at all times.

I also nominate Steve Mast as the Assistant Radiation Frosh in case Hans 6 loses the geiger counter and flashlight. We can time Steve as he soaks up the rays until he glows, and then we can use him for the flashlight!
Help The Jobless

by Golda Bernstein

Hey, Buddy, Can You Spare a Dime?

You’re leaving the supermarket, having just bought a week’s groceries. A man approaches you and asks, in a voice that’s already asked about a hundred other passersby today, “Got any spare change? I’m hungry, man.”

“Help Wanted. Inquire within.”

Give the man a bag, or a dollar, and wonder why he doesn’t go inside and ask for food. Could he get the job? Does he want it?

Some don’t want a job, or can’t handle a job. Alcoholic and drug-abuse problems are primary reasons for staying unemployed. Homelessness makes it hard to get a job. A non-drug user who wants a job doesn’t know where to go for help, at least in Pasadena. Last week I interviewed the director of Hill House, a shelter for homeless employable men in Pasadena.

Hill House tries to help the problem faced by many homeless: where to go after work, or where for the next day. But men who go there had better be serious about finding a job: Hill House requires them to spend all day searching, and to fill a minimum number of applications, phone, or have interviews each day.

I visited the place at 10 AM, and not one of the fourteen current residents was there— they were all out working or looking for work. Bruce Erikson, the director, told me that practically all residents who fulfilled the requirements found a job—not necessarily ideal, but a job within the allotted three weeks.

When a resident does find a job, he isn’t kicked immediately back onto the street. While he stays, he must turn in 70% of his wages to the Hill House savings account. Then, when he leaves after a maximum of 3 weeks, he has a nest egg of around $1000 to help him get back on his feet. Hill House provides free food, shelter, and some advice.

Another network, called WORKNET, provides counselling and some job search assistance. But most jobs are local, according to Erikson, through the paper or an in-house case worker’s contacts with employers. (Caltech has employed some Hill House graduates.)

Though free food and shelter for a week or so seems like a good deal, Hill House has only a two week waiting list at present. They refer many callers to drug and alcohol treatment programs, and in turn accept successful graduates of such programs—as long as they have been off for 90 days. They serve about 125 clients per annum, including a few repeats from past years.

Since homeless bounce through different shelters and programs as easy as hopping off a moving sidewalk, and spend a few weeks here and there, learning how to work the system. But others Erikson has stayed in contact with have been working and on their own for several years.

Several stand-and-cure-all for the problems of the homeless, but at least the threat of the stone. In case you find someone who would be interested, the phone number for Hill House is 792-5415. For more general information about where to get different help, call INPOLINE (213) 686-0650.

P.S. Prevention is better than cure. We still need volunteer tutors!
Need for Nuclear Power

By Mephisto

Wednesday night, despite the fact that the first reports of the war were still being broadcast, Dr. Hans Bethe was able to draw a capacity crowd to Beckman Auditorium to hear his talk, "The Need for Nuclear Power". Dr. Bethe, a Nobel laureate in Physics, has done extensive work in the theory of nuclear reactions and in nuclear power.

He began his hour-long talk by listing the reasons to revive nuclear power in the U.S. - the greenhouse effect, pollution and acid rain, and a dependence on unstable countries for oil supplies. Since the 1950s and 1960s, high hopes for nuclear power have faded dramatically. No nuclear power plant ordered since 1973 has been completed and many plants ordered earlier were cancelled.

A major reason for this is an immense increase in the costs of building such a plant - by a factor of almost 30, compared to an increase of about 2.6 in the consumer price index.

Also, when the Nuclear Regulatory Commission (NRC) tightens its safety standards, plants under construction must comply with the new standards, even if expensive on-site redesigning is needed.

The biggest obstacle that he feels nuclear power faces in the United States is public misinformation. According to Dr. Bethe, nuclear power is quite safe. If all electricity in the United States were generated by nuclear power, only about a day would be removed from the average life expectancy. This compares with one day for dam failures and 2000 days for remaining uninsured.

An accident such as the one which occurred at Chernobyl could not occur in Western reactors, due to their design. With the new reactor designs, accidents such as the one which occurred at Three Mile Island would occur once in every 100 million years of use. These reactors are similar to the ones in use in France, which generates over 70% of its electricity using nuclear energy. The United States, by comparison, only generates 20% of its electricity this way.

Similarly, nuclear waste presents no serious problems. When spent fuel rods are removed from the reactor, they should be chemically separated into fission products and transuranic elements.

Dr. Hans Bethe gave a Watson Lecture on "The Need for Nuclear Power" last Wednesday. The transuranics, such as plutonium, can be used in breeder reactors to generate more power, finally being converted to fission products. The fusion products have half-lives of about 30 years, and could be safely stored in dirt mines until they are harmless.

Anderson from page 5

back-seat to war-related efforts. He was asked to direct the development of the atomic bomb, a job he turned down. The job eventually went to J. Robert Oppenheimer.

Instead, Anderson spent time working on the solid-propellant rocket head at Caltech physical Charles Lauritsen. Specifically, his work dealt with how to fire these rockets from aircraft, and this effort was successful enough that he was flown to Europe in 1944 to supervise the installation of the first aircraft rockets on Allied planes.

In 1946 Anderson married Loraine Bergman. (Mrs. Anderson died in 1964.) At Caltech he resumed his studies of cosmic radiation. His research group included Robert Leighton and Eugene Cowan, both now Caltech professors of physics-emeritus. It also included Donald Glaser, now a professor at the University of California, Berkeley, who won the 1950 Nobel Prize in physics for the invention of the bubble chamber, another device for detecting atomic particles.

In the course of his research, Anderson and his group took literally tens of thousands of pictures.

Dr. Bethe concluded his talk by stating that "What we need is public education against a lot of misinformation which has been spread and a lot of political will to do it..."

After his talk, Dr. Bethe answered questions from the audience concerning cold fusion (sop), solar energy (good for heating water), breeder reactors (great new type being designed at Argon National Laboratories), hot fusion (more expensive than fission, doesn't work yet), and the safety of eating Norwegian and Swedish fish due to possible irradiation by the Chernobyl accident (go eat your sardines).

Basketball Statistician

The basketball team needs a statistician for next season. If you are interested, you should talk to Emerson Tongco in Page rm. 107, 2374.

When you party remember...

Don't get worked. If you're out sober—or worse still—let someone else do the driving.

A Friendly reminder: Give it some thought.

Caltech Skates Past USC 10-1
by Jim Caron

Coming off a six week break the Caltech hockey team easily beat the USC Trojans 10-1 Wednesday night at the Pasadena Arena. Caltech looked a little sluggish and their passes and plays were not clicking as they once did in early December.

However, considering they only had one practice in preparation for the game, the team did not look bad. Fortunately, the Beavers have another practice before they take on UCLA next Wednesday night in Pasadena at 9:30 pm.

Standing out for Caltech against USC was freshman Max Heitzmann. Heitzmann scored three goals to help push Caltech past USC. His third and prettiest goal served as a heartbreaker with a minute to play in the game. Heitzmann stole the puck and left a USC defenceman flattened and went in alone on the goaltender to score.

Making a debut for the Caltech was Curt Stephens. Stephens was recently playing Junior AAA hockey for the Ottawa Roughrider which serves as Caltech’s secondary team. Coach George Yates gave him the call to play Wednesday’s game because he needed a feisty, hard-nosed winger in the third with moves that can score fed him the shot.

M. Bennett
Mr. Bennett

Mr. Bennett
Mr. Bennett
Mr. Bennett
Mr. Bennett

On the evening of September 29, 1999, Myrtle and John Bennett invited Myrna and Charles Hoffmann over for an evening of rubber bridge. After the score against the Bennetts mounted up, this fatal hand was dealt.

After going down one in four spades, Mrs. Bennett called John a “bum bridge player,” Mr. Bennett came right back at her, reached

across the table and slapped her several times. She repeated, “Nobody but a bum would hit a woman,” and her husband jumped up and shouted, “I’m going to spend the night at a hotel. And tomorrow I’m leaving town.” (John was scheduled to leave on a business trip anyway.)

Mrs. Bennett told the Hoffmans that they had better go. As they were leaving, Mrs. Bennett went to her mother’s room and got a loaded automatic revolver. She then shot Mr. Bennett four times while he was packing.

Mrs. Bennett hired a three time Senator from Missouri to represent her. The jury deliberated for eight hours and it was rumored that three members of the jury learned bridge in the jury room. Mrs. Bennett was acquitted and collected $30,000 on Mr. Bennett’s insurance policy.

This Saturday you can see the Bennett murder trial (or at least a reconstruction because none of the players were good enough to remember the hand) on the tournament t-shirts. In Chandler at 1:00 pm, tomorrow, several local professional bridge players will play here along with the UCLA and Caltech. This is a great opportunity to kibitz.

Ballroom Dancing

Starting this Thursday, Jan. 24, the Caltech will be sponsoring four ballroom dance lessons. Back by popular demand, students will be given lessons in waltz, foxtrot, cha- cha, swing, and rhumba. The classes will be taught by intermediate-advanced level Caltech students Sonny Arcilla and Jessica Bennett, along with several assistant instructors. Classes will be held from 7:00-8:00 pm on Thursday nights in Watson Center, though the first one will be held in Dabney Lounge. There is no signup, so just show up to secure a spot.
