L. A. Violence Spreads to Pasadena

Violence Occurring in the Wake of the Controversial Acquittal of the Officers Indicted in King Beating Approaches Caltech

Linda Marpa

The beating of Rodney King on March 3, 1991 marked the beginning of widespread societal concern over the issue of police brutality. Even the hours of 9am on Wednesday, many people put their day on hold as KTVI broadcast the entire six week trial. When the verdicts of not guilty were read near 3:15pm on April 29 shock, disbelief, and elation raced through separate segments of the Los Angeles community. The disgust and anger being expressed may, in part, be explained by the fact that so many watched the trial, yet reached a different verdict. The jury, composed of six men and six women, was entirely caucasian, except for a Hispanic woman and a Filipino man. Eight of the jury members had military backgrounds. There has been much speculation as to whether or not the change of venue to a mostly white, suburban community affected the trial’s outcome.

The federal government has spent its own investigation into the King beating. Because it is unconstitutional to try anyone for the same crime more than once, the federal investigation is focusing on possible civil rights violations by the LAPD. None of this legal activity, however, has greeted the news of the acquittal with anything but anger. The jury’s decision has enraged many, especially those who watched the trial, yet reached a different verdict. Caltech to Host Industry Conference

On May 29, 1992 Caltech hosts a conference forming part of the government’s "National Technology Initiative." This is one in a series of cabinet-level meetings across the country addressing the sharing of government research with private industry. Expected to be present at the conference are the Secretaries of Energy, Commerce and Transportation, as well as the Administrator of NASA. The government is inviting large and small companies in the area, and representatives from universities.

Nick Nichols of the Caltech Industrial Relations Center states that the purpose of this initiative is for "developing relationships between the government and the private sector." Previous policy, "disallowed exclusive licensing to anyone of developments made through government funded research. Companies did not generally try to utilize technology that was available to their competitors. The government’s concern was that a company might take exclusive rights to a piece of technology, and then leave it on the shelf." Finding that the products of its research are often "left on the shelf" when available to all the companies, the government is now working on policies for issuing some exclusive licensing to companies.

Further encouragement which the government is trying to present to the private sector is access to government facilities for research. Developments made in university laboratories may also be given by the government to private sector companies.

Specific areas that will be addressed for this regional conference are biological, aerospace, and environmental technology. Some dilemmas are likely to arise from the new policy. JPL, as a government funded research lab may become open to profit-making companies for use. The question of who receives exclusive licensing to certain government uses and developments is also probable to come up.

Outward Bound

Chris Launey & Rich Song

The lose figure struggled against the rock face. The calls of his companions below, the cries of the birds above, that little "crkck" noise your boot makes as it slips off of a half-inch foot hold just before you fall; all this was lost to him as he clawed at the unforgiving surface. The menacing granite peak sneered in defiance at the climber.

This unique experience was the Caltech Y sponsored Outward Bound. Student's learned a lot continued on page 3
The Caltech Community Responds

The acquittal of the four police officers, indicted in the Rodney G. King beating, and the violence which has followed have had grave impact, not only on the life of Los Angeles but on that of Caltech community as well. Though we often like to think of ourselves as being in a separate world, the events of the last few days have shown this myopia to be a dangerous self-deception and that we must view ourselves as members of the greater community. Thursday afternoon, the Tech interviewed ten people about their thoughts in the aftermath of the acquittal and the first night of violence in our troubled city. Opinions at Caltech, over the outcome of the trial are sharply divided, as the following statements reflect. This was what some of the members of the community had to say:

"These people got their chance in the system, and they lost, and now they're complaining about it . . . Here's a case where they get the chance and afterwards they complain. If they didn't get the chance, they would complain anyway. They're not happy with any outcome."

-Antonio Ramirez, Sr.

"I think it's very surprising that both Channel-7 news, Peter Jennings, and PBS news—now Bill Lehrer, . . . didn't mention that the jury had no blacks in it, which is obviously one of the main reasons for the anger. And I think that it is absolutely ridiculous that they found the men innocent, as it's not surprising, but pretty terrifying what's happening."

-Carlos Brody

". . . A lot of people weren't given a lot of information on the trial. I think there was obviously unnecessary force used . . . letter of the law needed to be looked at. I do think the public reaction to it was a little extreme. Senseless violence is not going to solve the problem . . . People need to start taking a greater awareness of what is going on in our communities whether it be just Pasadena or all of L.A. or the whole country or world. People don't want to be responsible for their own actions . . ."

-Steven Roe, Technician, Astronomy Dept.

"I think the verdict was expected, if you have an all white jury in an all white neighborhood in which a lot of retired police officers live . . . I would have expected some riots, but its sad that you could expect them. Its just the situation that exists in some parts of L.A. . . . Its a terrible situation, but it was expected, and it all had to do with the fact that the L.A.P.D. was uncontrolled in the first place."

-Zack Berger, Jr.

"I would have expected some version of a guilty verdict for the officers, although possibly with a mild punishment. A thing that really struck me when I watched TV was the phrase "officers fulfilled their duties to the best of their abilities." Is the legal definition of beating up a person different from what we've seen on the tape? Four men kicking one laying on the ground . . . of course, this is what they call their own abilities, they are not guilty. But is this what we expected from the policemen?"

-Alex Zeyliger, So.

"This is a real outrage, because I think that the evidence was pretty irrefutable that they indeed did use excessive force and, unfortunately, I think that the jurors, even though they claimed that they made a fair decision, may have goofed in the sense that they did not foresee what has come of this. And it has been pretty deadly . . . Based on what I've seen and what I've read about Watts, its consequences and its background . . . L.A. was simmering and it was close to the time that something like this was going to happen."

-Mike Nassir, Sr.

"I don't see how virtuously any behavior by Rodney King himself could have been sufficient cause for the officers to do what they obviously didn't exactly deny doing on the videotape, and I guess it was the court's belief that King behaved in a way that scared them enough for that to be reasonable . . . I haven't heard anything that I would construe as anything near reasonable cause for doing what they did to him . . . I'm not exactly surprised about the verdicts, I don't really think that it's a good thing. But I don't particularly have any idea what could have done to prevent it except starting ten or five years ago or whatever . . . there's obviously been enough tension for the last couple of decades that something this stupid . . . this blatantly discriminatory against blacks . . . builds enough tension that it's pretty much expected . . ."

-Noam Bernstein, Sr.
Violence

The Real Verdict

Rajesh "G" Hilimoria

At 11:00 a.m., I just heard that Eddie's Market on Michigan was looted. The acquittal came on Wednesday, and that night the city burned. Tonight, it's Thursday, over twenty-four hours have passed, and now the situation is worse. The violence has not only spread to neighboring cities like Pasadena, but is reaching as far as Atlanta.

I have to admit that I was surprised by the magnitude of the violence that has occurred since Wednesday. If I pleaded for peace, it won't be a new message. But it is sincere. There is no excuse for excessive violence. Either by the police or by the citizens. It's still easy for me to say this, as strong as my convictions are, I'm not moved to violence. Perhaps that's because I'm approaching the issue more philosophically than emotionally. But try to imagine being African American in Los Angeles for the last twenty-five years. What you see is a group of people who have seen the legitimate channels fail to address their issues fairly, in their eyes. And now it seems as if the system has finally failed catastrophically. Several issues come to mind in this case. The question raised in my mind is that how could so many people feel that the outcome was wrong if it were correct. If so many people saw exactly what the jury saw, their disgust with the verdict can be explained by the fact that they draw different conclusions from the same evidence. No person is completely impartial; and the members of the jury are not exempt. I am not proposing mob rule, but I wonder, given that within the Los Angeles area campus students have chosen to remain on-campus for the duration of these incidents. Undergraduate student houses are welcoming people, providing crash pads and sleeping bags. Because there is such a dearth of information about any area other than Los Angeles, it might be interesting to note that there is a telephone grapevine funneling information about the Pasadena area to the student body. Rob Hasly is handling the information dissemination for the graduate students and Kim West is the locus of information for undergraduates. Through her, information is funneled to the RAs and then to the House Presidents. The word from Hal Ginder is, "Stay inside and do not wander the streets and don't go north of Colorado." Sgt. Stacey Koon—NOT GUILTY: Assault with a deadly weapon, Assault under color of authority, Filing a false police report, Accessory after the fact. Officer Laurence Powell—NOT GUILTY: Assault with a deadly weapon, Assault under color of authority, Filing a false police report. MISTRAL: Assault under color of authority and enhancement (great bodily injury). Filing a false police report. RICKETTS FRI. "PM-3PM BLACKER SAT. "PM-3PM ALL UNDERGRAD - SAT. 7PM-1AM.

MISTRIAL: Assault under color of authority and enhancement. The underlying implication of the acquittal of the officers, regardless of whether or not it is correct, is that what we saw in the now famous thirty seconds of amateur videotape is acceptable. It is very easy to perceive that this could happen to any one of us. I've heard people ask, "If that is not excessive force, then what is?" And I wonder the same myself.

While I now have an understanding of the motivation for what I still do not condone the violence it has spawned. Yet I have to wonder what people are to think. One simplistic interpretation of the events might be that violence is the only solution—the only way to fight the violence of the law is to be violent. I honestly believe that only peaceful actions will serve any constructive purpose. But I do not see the attacks and the looting as constructive protests. If the violence is intended to be a protest, it is a gross failure. The violence is an expression of frustration. The acquittal seems to have triggered this response all across the country.

To be fair, I cannot condone the violence of the looters if I do not condone the violence of the officers in trial. It is interesting to notice a similarities between the looting and the officers' beating of King; both would not occur if the participants knew they were on camera, and both appear to only occur when large groups are present. I do not condone the violence, but I feel I have some understanding of causes of the rioting, but not of the police violence. I cannot understand how four men, accompanied by over twenty men and women who are also trained to deal with violent people, can be so intimidated by one unarmed man. Yet both occurrences are so very destructive; the rioting and looting will again prevent new businesses from opening in South Central L.A., while the police violence will further fear of the police among many people.

So, I have argued that the jury did not consider the possible repercussions of their verdict. I certainly hope they did not, for it is not their job to consider how the public will react to their decision; they must however, reasonably and rationally arrive at their verdict. If the jury were to convict an innocent man in order to pacify a community, it would be as incredible a wrong as the misuse of authority by the police officers, if not worse. I very much hope that the jury was true to itself, for if not, it has betrayed not only itself, but the citizens of this country.

Something seems wrong. And while we all wish that the violence would stop, that the fires would be extinguished, that everyone could go home to sleep in peace, we must realize that even if the violence stops, suppressed violence (which may soon be the majority) are treated, this will happen again, and again, until something changes.

I hope for peace. I'm frightened, I'm tired, I'm disappointed. And I hope that we, as a nation, realize what is really happening and take real steps to change.
College Performs at Whisky A Go-Go

The band will join two Caltech bands in S.A.C.

Brandon Bandausher

It didn’t take long for the crowd at the Whisky A Go-Go to get into College’s Tuesday night performance. Just a few minutes after the band they learned to trust each other and work as a team. Ken and Cheryl were cool in structure. They taught the students everything they needed to know for rock climbing. And they managed to gel with nine Techers in different classes from different houses to form a damn good team. What an experience! As El Eckzork put it best, “I didn’t even go, but it sounded really neat.”

But Outward Bound was not just some kind of religious experience, nor was it like some weird combination of boot camp and a huge husk-fest. They climbed some rocks, slept with some rattlesnakes, and got sunburned. They made some good pasta sauce. The tip was a kick, even the tough parts. For all the desert sun, cactus needles, mosquitoes in Red Rock, and other minor bits of joy, it was a spectacular trip. Even belaying someone, being ready to catch them if they fell, was quite an experience.

The Caltech Y is planning to sponsor future excursions which will include five Techers and five students. Their plans are to sponsor future excursions which might really benefit from getting along.:

The set finished up with “Mr. President” and “Dream Your Life Away,” songs that left the crowd still cheering as the band made their way off the stage. So much so that the master of ceremonies was drowned out while he called College back to the stage for one more encore — a lively rendition of “Love the One You With.”

The band was well supported by their entourage — the people helping them to market themselves and the roadies who allowed for the antics of Older, Recht and Weber to happen without any hassles on the small stage.

In the end, what it all comes down to is that these guys are tight, they’re having fun and they have an appealing energy that leads to a great show. College will perform in the SAC courtyard with two Caltech bands and a new band, from 9 to 11 p.m. The concert is an adjunct of the Coffehouse Marathon, which is running this weekend.

The Right Stuff
Playing in a Victory Pointed Swim team event, I had the luxury of watching the event nearly locked up going into the last match. All we had to do is avoid getting blitzed. I pick up a likely swing hand:

- A*K3
- A*K42
- Q
- A*43

I am dealer and have an easy 1♦ opening bid. Partner responds 1♣, which in view of the methods promises a five card suit, and I have a problem. Are going to be trump and a slam is definitely in the picture. I need to get partner to help, though. I choose 4♦, a splitter raising four card support, a singleton diamond, and game going values. Normally, I do not like to splitter into a singleton Ace because partner evaluates his KQx as junk, whereas here it is worth two tricks. On this hand, however, I do not see any sensible alternative; what I need are major suit cards in partners hand, not ♦, so if he devalues ♦ cards, that is just fine.

Partner thinks for at least 30 seconds before making his next call, and fails to Alert my bid as being conventional. I am not entitled to immediately?

He thinks that it might be a useful card, and he is very methods.

fmt
0
and
40
and
0
and

and
0
and
40
and
0
and
40
so it ought to work.

Partner obligingly responds 6NT, showing two of the top three honors, in this case the AQ. What he has, instead, is a filler in my suit, clearly the ♥Q. He thinks that it might be a useful card, and he is very right. Normally, he will have Qx or so to show a filler, so why did he not raise ♥s immediately? He must be good enough to want to find a spade fit. If so, we surely have a slam. If he has five♥ to the AQ and the ♥Q, plus at least two ♥, we have 13 tricks 6♥ in five♥, five ♥, two Aces, and a ruff in the short hand. How can I find out?

We play Roman Key Card Blackwood, so I can ask about the Ace seven with two of the top three honors in trumps.

Honors, in this case the AQ. (The normal version of the Grand Slam Force uses seven of the trump suit show two of the top three honors, scoring slam at matchpoints.)

Partner thinks for at least 30 seconds before making his next call, and fails to Alert my bid as being conventional. I am not entitled to immediately?

lim. Tightly

At this point the film takes on a more surreal quality as the six men set up camp in a mystical and beautiful chateau set upon the gently sloping hillside covered in pure white glistening snow. The splendor of the setting prompts the star and narrator of the film Ethan Hawke who plays Will Knott (or Won't as his friends are quick to call) to remark, "I am having my same problem-nothing-how pretty the world is just when I may be leaving it."
On King, his Trial, and Emotion

I suppose there really isn’t much to say about what’s been going on the past few days—the facts of the case and the results of the verdicts have been made plain. Not guilty on all counts except one, for which there was a mistrial. All four officers cleared of charges, except Powell’s “questionable use of excessive force.” King lost. They won.

Simple as that. This means that we understand the proper channels necessarily maintained for law and order.

Unfortunately, I don’t think that those people rioting in the streets see themselves as anything but lawbreakers. True, no surprise, really. You could see that the only things the ministers are fighting is that they have lost their community. And the power thing—between those who have it and those who feel they have been taken away from themselves as citizens anymore.

So the ministers are right. Peace is the only way ... do not destroy the hands and the heads.

Stop the violence. Increase the peace.

In one crowd it is a people thing versus a LAPD thing. In south-central Los Angeles, it is a black versus a white thing. Some people say it is a power thing—between those who have it and those who feel they have lost it. In come places, it is nothing more than the venting of despair and anger.

But the ministers are right. Peace is the only way ... do not destroy the hands and the heads. But as a people you must abide by the common precepts indicated by the notions of citizenship. This extends to non-violent action and to rational expression of our opinions over the actions of the government.

And so we do do. We do what we know is right. But the ministers are right. Peace is the only way ... do not destroy the hands and the heads.

Kim, and David left at 10:35 PM. And the ministers are right. Peace is the only way ... do not destroy the hands and the heads.

Caltech Chemistry Ranked Number One Worldwide

Robert Fien

The Philadelphia-based Institute for Scientific Information (ISI) has ranked the California Institute of Technology number one in the world for the impact of its research in chemistry. The ranking was based on a citation analysis of 377,790 scientific articles published in the field of chemistry between 1984 and 1990. The "impact" of an article is determined by the number of times that article has been referred to in other scientific papers. According to ISI, the 377,790 papers received a total of 2,012,150 citations, for an average of 5.33 citations per paper. The Caltech average was much higher. The 873 Caltech chemistry papers published during that time were cited and averaged 18.44 times each.

ISI's analysis appears in the February/March 1992 issue of Science Watch, a newsletter that tracks trends and performances in basic research. According to the article (a copy of which is attached), "Measuring the impact of a university's chemistry output by its average citations per paper permits one to compare a large university with a smaller one."

"I am delighted that an objective ranking confirms something that we have believed for some time - research in chemistry at Caltech is second to none," said Fred C. Anson, professor of chemistry and chairman of the Division of Chemistry and Chemical Engineering. "It is gratifying to see that the articles published by Caltech chemists are widely read and have had great impact."

According to the article, "Science Watch identified 65 papers by Caltech scientists that were cited 50 times or more during the 1984-1990 period, which is just 0.6% of the total. The concentration of excellence in chemistry at Caltech is clear."

"Several researchers helped Caltech achieve its stellar ranking," the article continues. "One is Ahmed H. Zewail, a pioneer in ultrafast, or femtosecond chemistry. His team fielded fully 21 of the 65 papers cited 50 times or more...Other Caltech superstars - those who fielded at least a half dozen papers cited 50 times or more during the 1984-1990 period - are Harry Gray (8 papers), Rudolph Marcus (7 papers), and William A. Goddard (6 papers)."

Over the years, 21 Nobel prizes have been awarded to Caltech faculty members and alumni. Thirty-six Caltech faculty members and alumni have received the National Medal of Science, and four and one trustees have on the National Medal of Technology. Since 1958, 12 faculty members have received the annual California Scientist of the Year award. On the Caltech faculty are 64 fellows of the American Academy of Arts and Sciences, and on the faculty, Board of Trustees, and professional staff there are 67 members of the National Academy of Sciences and 34 members in the National Academy of Engineering (NAE). There are also more than 100 Caltech alumni who are members of the NAE, composing 7 percent of the total membership.

If you're still on campus, you're missing not only one, but two exciting Y trips. This morning we left on a mission to Tijuana. We had to go on a mission, since the last people went to Tijuana again. Did you know the Y has been sponsoring voyages to Tijuana and other Mexican communities for over a century? Yes, you did and so have we. But science will have made little progress there had there been no passion. Thomas Kuhn has shown, convincingly in my view, that science progresses as much-if not not more-by subjective decisions as by rational thought. Perhaps the students are removed from the crucial scientific decisions, and thus just see themselves at patient workers who have to get through the next project? We are back in the cold philosophy.

I admit that it is hard to get really excited about the undergraduate curriculum. Mostly it is a nuisance; legwork that has to be done, basics that have to be mastered before one can get to the really interesting stuff. Such stuff is, however, not likely to appear before senior year, or in most cases, before graduate school. So should academicians remain bleak for freshmen, sophomores and juniors?

No. Academicians should not be bleak. I am moving towards a topic that I have discussed before; science education does not have to be the same adventure anymore. I believe, some will say naively, that with proper teaching, every science course can be turned into an adventure of discovery. Even AMAs.

Science, by definition, is profound; it is not concerned with appearances, it is concerned with what is behind the appearances. To learn how something works is to learn something profound. So here is my gripe with my illustrious alma mater. It is not showing me the profound reality behind the science. Harking back to AMAs 95, to take the extreme example, I have lately come to realize that Cauchy Integral Theorem is mathematics at one of its elegant peaks. But I never found it to be really excited about the undergraduate curriculum. Mostly it is a nuisance; legwork that has to be done, basics that have to be mastered before one can get to the really interesting stuff. Such staff is, however, not likely to appear before senior year, or in most cases, before graduate school. So should academicians remain bleak for freshmen, sophomores and juniors?

No. Academicians should not be bleak. I am moving towards a topic that I have discussed before; science education does not have to be the same adventure anymore. I believe, some will say naively, that with proper teaching, every science course can be turned into an adventure of discovery. Even AMAs 95.

Thoughts About Science At Caltech

Caltech, supposedly, is a place full of people who care passionately about science. Or is it? Most of my colleagues are highly intelligent but apparently apathetic. Just the barest hint of suspicion. Can I draw the conclusion that intelligence and passion do not go together?

That indeed is the conventional image; rational, scientific thought is detached and unemotional. Just the barest hint of suspicion. But science would have made little progress there had there been no passion. Thomas Kuhn has shown, convincingly in my view, that science progresses as much-if not not more-by subjective decisions as by rational thought. Perhaps the students are removed from the crucial scientific decisions, and thus just see themselves at patient workers who have to get through the next project? We are back in the cold philosophy.

WHAT GOES ON

NOTICES

Pray for Los Angeles - Come join us for prayer today at 7:45 in Winton Chapel (upper floor), everyone is welcome. Sponsored by CCF.

Grants Apply For 92-93 Housing New - Grant applications are due by May 15th for Caltech housing. For more information call 355-2712.

The Women's and Men's Glee Clubs will present their annual Spring Concert on Friday and Saturday, May 15 and 16 at 8:00 p.m. in Dabney Lounge. The Men's Glee Club will perform movements from Maurice Durufle's "Messe Cum Jubilo" and Carl Cziff's "Come, O Maker of Light." The Women's Glee Club will replicate their Bonnie tour repertoire, including works by Handel, Kornelis, and Matthias. The glee clubs will also present the ever-popular love songs of Brahms, "Liederlieder Wagner." Tickets are now on sale from 8:30 a.m. to 4:30 p.m. on Monday through Thursday in the construction office in conjunction with the YWCA at Baja California, Santa Ana. Tickets are $10 for the May 15 or 16 concerts Visica

Ticket Sales to Be Held on May 13. Student ticket sales for the Caltech Opera will be held Thursday, May 13 from 4 to 7 p.m. in Beckman Auditorium. Tickets are available for $4.95 for orchestra and $6.50 for the terraces. Orchestra seating is limited and sold on a first-come-first-served basis. Tickets may also be purchased at the Box Office in Beckman Auditorium through May 16. For more information call 872-8321.

Department of Physics - Graduate applications for the Funds in Physics and Astronomy are due by May 15. For more information call 355-9411.

Contemporary Music - Applications to the Contemporary Music Competition are due by May 15. For more information call 355-9594.

Multi-Intelligence Corporation - The Government of Canada and theMulti-Intelligence Corporation are hosting a "State of the Art" Symposium in Ottawa, May 18-20. It will provide an overview of the current state of the computer industry. For more information call 355-9661.

Career Development Center - The Career Development Center is sponsoring a "Exploring Your Options" workshop on May 13. For more information call 355-9411.

TO ALL CALTECH STUDENTS, FACULTY, AND STAFF:

GE Corporate RAD is seeking graduating seniors to apply for a Research Analyst/ Applications Position involving computer-based financial modeling.

Columbia Business School is offering the Chair's Fellowship for college seniors who plan a career in international business. An application can be obtained by calling (212) 851-5567.

We sometimes get requests for students to do translations and language tutoring. If you're interested in getting paid to do some, sign up with Carol in the CDC. She will keep your name on file, and when a request comes in, she'll contact you. We have a specific request from XEROX in Pasadena for a 'beige' Arial typewriter to be used in the CDC for more information.

The Society of Women Engineers announces their 1992-93 Frances and Roselyn Ensell Scholarship Competition. The competition is open to female college seniors or graduate students enrolled in a degree program leading to a BS or MS degree in engineering. The competition is open to women who are US citizens. The deadline for application is May 15, 1992.

The California Council of Civil Engineers and Land Surveyors will award several scholarships totaling $5,000. Applications including supportive materials, must be postmarked May 15, 1992.

The California Council of Civil Engineers and Land Surveyors will award several scholarships totaling $5,000. Applications including supportive materials, must be postmarked May 15, 1992.
