1967

THIRD TERM

March 27  General Registration—8:30 a.m. to 3:30 p.m.
March 28  Beginning of instruction—8:00 a.m.
April 14  Last day for adding courses.
April 15  Examinations for the removal of conditions and incompletes.
April 24-28  Mid-Term Week.
April 29  MID-TERM.
    May 1  Mid-Term deficiency notices due—9:00 a.m.
    May 5  Last day for dropping courses.
    May 5  French examination for admission to candidacy for the degree of
           Doctor of Philosophy.
    May 5-6  Examinations for admission to upper classes, September 1967.
    May 12  German examination for admission to candidacy for the degree
            of Doctor of Philosophy.
    May 15  Registration for summer research (graduate students).
    May 15-19  Pre-registration for first term, 1967-68 and registration for
                undergraduate summer research.
    May 26  Last day for final oral examinations and presenting of theses for
            the degree of Doctor of Philosophy.
    May 26  Last day for presenting theses for Engineers' degrees.
    May 27-June 2  Final examinations for senior and graduate students, third term,
    May 30  Memorial Day holiday.
    May 30  Memorial Day holiday for employees.
    June 3-9  Final examinations for undergraduate students, third term,
    June 7  Curriculum Committee—10:00 a.m.
    June 7  Faculty Meeting—2:00 p.m.
    June 8  Class Day.
    June 9  Commencement—4:30 p.m.
    June 16  Undergraduate Academic Standards and Honors Committee—
             9:00 a.m.
    July 4  Independence Day holiday for employees.

1967

FIRST TERM 1967-68

    September 4  Labor Day holiday for employees.
    September 21  Registration of entering freshmen—8:00 a.m. to 12 noon.
    September 21  Registration of undergraduate students transferring from other
                  colleges—8:00 a.m. to 12 noon.
    September 21-23  Student Camp.
    September 25  General Registration—8:30 a.m. to 3:30 p.m.
    September 26  Beginning of instruction—8:00 a.m.
OFF-CAMPUS UNITS
Jet Propulsion Laboratory

Directors and Faculty

Director of News Bureau ............................................. Graham G. Berry
Editor of Institute Publications ................................. Edward Hutchings, Jr.
Executive Director of Industrial Associates ...................... Richard P. Schuster, Jr.
Master of Student Houses ........................................... Robert A. Huttenback
Superintendent of the Graduate Aeronautical Laboratories .............. Milton J. Wood
Coordinator of Student Activities ................................. Russell M. Pitzer

Administrative Committees

Jet Propulsion Laboratory—Lester Lees (Chairman), Robert Meghérian (Vice Chairman), Barney Huber (Executive Secretary), Robert F. Christy, C. R. Gates, Roy W. Gould, Albert R. Hibbs, Norman H. Horowitz, Jack James, Aron Kuppermann, Robert B. Leighton, Bruce Murray, Cornelius Pings, Eberhardt Rechtin, Robert P. Sharp, Norri Sirri, John G. Small.

Shop Facilities—Thad Vreeland, Jr., Robert B. Gilmore, Geoffrey L. Keighley, Bruce Murray, Bruce Rule, Ernest E. Sechler, James H. Sturdivant.

FACULTY OFFICERS AND COMMITTEES
1966-67

Officers

Chairman: J. L. Greenstein
Vice-Chairman: D. C. Elliot
Secretary: H. C. Martel

FACULTY BOARD—Ch., J. L. Greenstein; Vice-Ch., D. C. Elliot; Sec., H. C. Martel.

Term expires June 30, 1967
F. C. Anson
N. H. Brooks
G. S. Hammond
J. K. Knowles
E. S. Munger
A. R. Sweezy

Term expires June 30, 1968
C. R. Allen
N. H. Horowitz
R. A. Huttenback
R. B. Leighton
R. H. Sabersky
W. Whaling

Term expires June 30, 1969
T. M. Apostol
T. K. Caughey
C. R. DePrima
H. Lurie
R. E. Vogt
R. L. Walker

ACADEMIC FREEDOM AND TENURE COMMITTEE—Ch., R. V. Langmuir.

Term expires June 30, 1967
*D. C. Elliot
*R. V. Langmuir
*R. P. Sharp

Term expires June 30, 1968
*N. H. Brooks
*R. F. Christy
*N. H. Horowitz

*Automatic nominee for election to 2nd two-year term.
**Serving 2nd two-year term, not eligible for re-election.

STANDING COMMITTEES

*Added after ballot

DIVISION OF GEOLOGICAL SCIENCES
Robert P. Sharp, Chairman
Clarence R. Allen, Interim Director, Seismological Laboratory

PROFESSOR EMERITUS
Hugo Benioff, Ph.D. .......................................................... Seismology

PROFESSORS
Clarence R. Allen, Ph.D. .................................................. Geology and Geophysics
Arden L. Albee, Ph.D. ...................................................... Geology
Arthur J. Boucot, Ph.D. .................................................. Paleontology
Harrison S. Brown, Ph.D., LL.D., Sc.D. ............................. Geochemistry
C. Hewitt Dix, Ph.D. ...................................................... Geophysics
Samuel Epstein, Ph.D. ..................................................... Geochemistry
Barclay Kamb, Ph.D. ..................................................... Geology and Geophysics
Heinz A. Lowenstam, Ph.D. ............................................. Paleoecology
Charles F. Richter, Ph.D. ................................................ Seismology
Robert P. Sharp, Ph.D. .................................................. Geology
Leon T. Silver, Ph.D. ...................................................... Geology
Gerald J. Wasserburg, Ph.D. ............................................. Geology and Geophysics

VISITING PROFESSORS
Edmund D. Gill, B.A., B.D. ............................................... Paleontology
Fritz H. Laves, Ph.D. ...................................................... Crystallography

RESEARCH ASSOCIATES
Ian Campbell, Ph.D. ....................................................... Geology
Thane H. McCulloh, Ph.D. ............................................... Geology
Eugene M. Shoemaker, Ph.D. .......................................... Astrogeology

VISITING ASSOCIATE
John H. M. Whitaker, M.A. ............................................... Paleontology

ASSOCIATE PROFESSORS
Don L. Anderson, Ph.D. .................................................. Geophysics
Charles B. Archambeau, Ph.D. ........................................ Geophysics
James N. Brune, Ph.D. ................................................... Geophysics
Peter Goldreich, Ph.D. .................................................. Planetary Science and Astronomy
Bruce C. Murray, Ph.D. .................................................. Planetary Science
Stewart W. Smith, Ph.D. ................................................ Geophysics
Hugh P. Taylor, Jr., Ph.D. ............................................. Geology

VISITING ASSOCIATE PROFESSOR
Peter Eberhardt, Dr. phil. nat. .......................................... Nuclear Geophysics

SENIOR RESEARCH FELLOWS
Claire C. Patterson, Ph.D. ............................................... Geochemistry
Robert F. Roy, Ph.D. ...................................................... Geophysics
James A. Westphal, B.S. ................................................ Planetary Science
ASSISTANT PROFESSORS

Donald S. Burnett, Ph.D. ........................................ Nuclear Geochemistry
Andrew P. Ingersoll, Ph.D. ..................................... Planetary Science

RESEARCH FELLOWS

Sylvester Adegoke, Ph.D. ....................................... Paleontology
Donald D. Bogard, Ph.D. ....................................... Geochemistry
Raymond C. Fletcher, M.S. ..................................... Geology
Lane R. Johnson, Ph.D. ......................................... Geochemistry
Lynton S. Land, Ph.D. ......................................... Geophysics
Anand Prakash, Ph.D. .......................................... Geochemistry
Robert V. Sharp, Ph.D. ......................................... Geology
Simon M. F. Sheppard, Ph.D. .................................. Geology
Bruce N. Smith, Ph.D. .......................................... Geochemistry
John B. Southard, Ph.D. ....................................... Geology
Rudolf H. Steiger, Dr. sc. nat. .................................. Geology
Ryuichi Sugisaki, D.Sc. ......................................... Geochemistry
Ta-liang Teng, Ph.D. ........................................ Geochemistry
N. J. Vlaar, Ph.D. ............................................... Geophysics
Francis T. Wu, Ph.D. .......................................... Geophysics

GRADUATE FELLOWS AND ASSISTANTS, 1965-66

3Harry Bateman Research Fellow, 1966-67
2Richard Chace Tolman Research Fellow, 1966-67
MOUNT WILSON AND PALOMAR OBSERVATORIES
Operated jointly with the Carnegie Institution of Washington
Horace W. Babcock, Director

OBSERVATORY COMMITTEE
Carl D. Anderson
Horace W. Babcock, Chairman
Jesse L. Greenstein

Robert B. Leighton
Allan R. Sandage
Olin C. Wilson

DISTINGUISHED SERVICE MEMBER
CARNEGIE INSTITUTION
Ira S. Bowen, Ph.D., Sc.D.

STAFF MEMBERS
Halton C. Arp, Ph.D.
Horace W. Babcock, Ph.D., Sc.D.
Edwin W. Dennison, Ph.D.
Armin J. Deutsch, Ph.D.
Jesse L. Greenstein, Ph.D.
Robert F. Howard, Ph.D.
Robert F. Kraft, Ph.D.
Robert B. Leighton, Ph.D.
Guido Münch, Ph.D.

J. Beverley Oke, Ph.D.
Bruce H. Rule, B.S., Chief Engineer
Allan R. Sandage, Ph.D., Sc.D.
Wallace L. W. Sargent, Ph.D.
Maarten Schmidt, Ph.D., Sc.D.
Olin C. Wilson, Ph.D.
Harold Zirin, Ph.D.
Fritz Zwicky, Ph.D.

STAFF ASSOCIATES
John B. Irwin, Ph.D.
Bruce C. Murray, Ph.D.
Gerry Neugebauer, Ph.D.

Arthur H. Vaughan, Jr., Ph.D.
James A. Westphal, B.S.

SENIOR RESEARCH FELLOW
Konrad Rudnicki, Ph.D.

RESEARCH FELLOWS IN ASTRONOMY
Robert J. Dickens, B.Sc.
J. W. R. Heintze, Ph.D.
W. Krzeminski, Ph.D.
Barry M. Lasker, Ph.D.
John V. Peach, Ph.D.
David M. Rust, Ph.D.

Aert Schadee, Ph.D.
Robert Stein, Ph.D.
Henrietta H. Swope, A.M.
Takashi Tsuji, Ph.D.
Natarajan Visvanathan, Ph.D.

MOUNTAIN SUPERINTENDENTS
William C. Van Hook

Benjamin B. Traxler

WILLIS H. BOOTH COMPUTING CENTER
Gilbert D. McCann, Director

COMPUTING FACILITIES EXECUTIVE COMMITTEE
Frederick C. Lindvall, Chairman

### DEPARTMENT OF AIR FORCE AEROSPACE STUDIES (AFROTC)

**Professor**

Lieutenant Colonel William R. Knight, U.S.A.F., M.S.

**Assistant Professor**

Captain Donald L. Stearns, U.S.A.F., M.S.

**Assistant**

T/Sgt. Andrew F. Ventimiglia, U.S.A.F.

### DEPARTMENT OF PHYSICAL EDUCATION AND ATHLETICS

Warren G. Emery, M.S., Director of Physical Education and Athletics

**Full-Time Staff**

Thomas Gutman, M.S.
Bert LaBrucherie, B.E.
James H. Nerrie, B.S.
Edward T. Preisler, B.A.
Officers and Faculty

TEAM PHYSICIAN
David Dahl, M.D.

TEAM PHYSICIAN
Harry L. Baldwin, B.S.
Delmar Calvert, B.M.
Harold G. Cassriel, B.S.
Ronald W. Kehoe
John L. Lamb

TRAINER
Paul G. Barthel, M.A.

PART-TIME STAFF
Walter C. Mack, M.A.
Tsutomu Ohshima, B.A.
Jerry Todd, M.S.
Raymond Wallace
Leonard Yandle, M.A.

ATHLETIC COUNCIL
The intercollegiate athletic program is under the supervision of the Athletic Council, which consists of representatives of the faculty, the Associated Students of the California Institute of Technology (ASCIT), and the alumni of the Institute.

INSTITUTE LIBRARIES
Harald Ostvold, M.A., Director

REPRESENTATIVES FOR THE DEPARTMENTAL LIBRARIES
Tom M. Apostol, Ph.D.
John F. Benton, Ph.D.
Arthur James Boucot, Ph.D.
Norman H. Brooks, Ph.D.
Francis S. Buffington, Sc.D.
Armin J. Deutsch, Ph.D.
Joel N. Franklin, Ph.D.
Robert D. Gray, B.S.
Robert B. King, Ph.D.
Paco A. Lagerstrom, Ph.D.
Charles H. Papas, Ph.D.
Rolf H. Sabersky, Ph.D.
Bruce H. Sage, Ph.D.
Wallace L. W. Sargent, Ph.D.
Walter A. Schroeder, Ph.D.
Ernest E. Sechler, Ph.D.
Albert Tyler, Ph.D.

STUDENT HEALTH SERVICES
Richard F. Webb, M.D., Director of Health Services
R. Stewart Harrison, M.D. ................ Assistant Director and Consultant in Radiology
Daniel C. Siegel, M.D. ..................... Consulting Psychiatrist
N. Y. Matossian, M.D. .................... Attending Physician
Robert L. Boardman, M.D., ............... Attending Physician
David J. Dahl, M.D. ....................... Attending Physician
Kenneth W. Eells, Ph.D. ................. Institute Psychologist
Alice A. Shea, R.N. ....................... Nursing Director

The Faculty Committee on Student Health acts in an advisory capacity to the Director of Health Services on all matters of policy pertaining to the Health Program.

STUDENT MUSICAL ACTIVITIES
John C. Deichman, M.S. ................ Director of Instrumental Music
Olaf Frodsham, M.A. ....................... Director of Choral Music
Priscilla C. Remeta, M.A. ............... Assistant Director of Choral Music
Lee Alvin DuBridge, Ph.D., Sc.D., LL. D., President
A.B., Cornell College (Iowa), 1922; A.M., University of Wisconsin, 1924; Ph.D., 1928. California Institute, 1946-. (106 Throop) 415 South Hill Avenue.

Allan James Acosta, Ph.D., Professor of Mechanical Engineering
B.S., California Institute, 1945; M.S., 1949; Ph.D., 1952. Assistant Professor, 1954-58; Associate Professor, 1958-66; Professor, 1966-. (101 Karman) 1779 East Mendocino, Altadena.

Gerold Helge Adam, Ph.D., Research Fellow in Biology

Sylvester Adegoke, Ph.D., Research Fellow in Paleontology

Arden Leroy Albee, Ph.D., Professor of Geology
A.B., Harvard College, 1950; A.M., Harvard University, 1951; Ph.D., 1957. Visiting Assistant Professor, California Institute, 1959-60; Associate Professor, 1960-66; Professor, 1966-. (269 Arms) 1320 Hastings Ranch Drive.

Gustav Albrecht, Ph.D., Research Fellow in Chemistry
B.A., University of California (Los Angeles), 1935; M.S., California Institute, 1939; Ph.D., University of California (Los Angeles), 1941. California Institute, 1963-64; 1964-. (120 Church) 271 East Loma Alta Drive, Altadena.

Clarence Roderic Allen, Ph.D., Professor of Geology and Geophysics; Interim Director, Seismological Laboratory
B.A., Reed College, 1949; M.S., California Institute, 1951; Ph.D., 1954. Assistant Professor, 1955-59; Associate Professor, 1959-64; Professor, 1964-; Interim Director, 1965-. (351 Arms; Seismological Lab) 2915 Lorain Road, San Marino.

Fred Colvig Anson, Ph.D., Associate Professor of Analytical Chemistry
B.S., California Institute, 1954; Ph.D., Harvard University, 1957. Instructor, California Institute, 1957-58; Assistant Professor, 1958-62; Associate Professor, 1962-. (123 Gates) 720 East Sierra Madre Boulevard, Sierra Madre.

Tom M. Apostol, Ph.D., Professor of Mathematics
B.S., University of Washington, 1944; M.S., 1946; Ph.D., University of California, 1948. Assistant Professor, California Institute, 1950-56; Associate Professor, 1956-62; Professor, 1962-. (356 Sloan) 3705 Alzada Road, Altadena.

Charles Bruce Archambeau, Ph.D., Associate Professor of Geophysics
B.S., University of Minnesota, 1955; M.S., 1959; Ph.D., California Institute, 1965. Associate Professor, 1966-. (Seismo) 2529 North Marengo Avenue, Altadena.

**Part-time
Halton Christian Arp, Ph.D., Staff Member, Mount Wilson and Palomar Observatories

Hans-Joachim Astheimer, Dr.Ing., Research Fellow in Chemical Engineering

Giuseppe Attardi, M.D., Associate Professor of Biology
M.D., University of Padua, Italy, 1947. Research Fellow, California Institute, 1959-60; Assistant Professor, 1963; Associate Professor, 1965-. (Mt Wilson) 275 South Oakwood Avenue.

Boris Auksmann, Ph.D., Assistant Professor of Medicine
B.S., University of British Columbia, 1955; M.S., California Institute, 1958; M.E., 1959; Ph.D., 1964. Assistant Professor, 1964-. (307 Thomas) 6748 Provence Road, San Gabriel.

Masao Azegami, Ph.D., Research Fellow in Biology
B.S., Chiba University, 1959; M.A., Tokyo University, 1961; Ph.D., 1964. California Institute, 1965-. (126 Kerckhoff) 258 South Hudson Avenue, Apt. 15.

Charles Dwight Babcock, Jr., Ph.D., Assistant Professor of Aeronautics
B.S., Purdue University, 1957; M.S., California Institute, 1958; Ph.D., 1962. Research Fellow, 1962-63; Assistant Professor, 1963-. (217 Firestone) 2186 Cooley Place.

Horace Welcome Babcock, Ph.D., Sc.D., Director, Mount Wilson and Palomar Observatories
B.S., California Institute, 1934; Ph.D., University of California, 1938; Sc.D., University of Newcastle-upon-Tyne, 1965. Staff Member, Mt. Wilson Observatory, 1946-. Assistant Director, 1956-63; Associate Director, 1963-64; Director, 1964-. (Mt Wilson Office) 439 South Virginia Avenue.

Padmanabhan Babu, Ph.D., Research Fellow in Theoretical Physics

Robert Fox Bacher, Ph.D., Sc.D., Professor of Physics; Provost
B.S., University of Michigan, 1926; Ph.D., 1930; Sc.D., 1948. Professor of Physics, California Institute, 1949-; Chairman, Division of Physics, Mathematics and Astronomy; Director, Norman Bridge Laboratory of Physics, 1949-62; Provost, 1962-. (115 Throop) 345 South Michigan Avenue.

Richard McLean Badger, Ph.D., Professor of Chemistry, Emeritus
B.S., California Institute, 1921; Ph.D., 1924. Research Fellow, 1924-28; International Research Fellow, 1928-29; Assistant Professor, 1929-38; Associate Professor, 1938-45; Professor, 1945-66; Professor Emeritus, 1966-. (154 Crellin) 124 New York Drive, Altadena.

Bennie Lee Badgett, Ph.D., Research Fellow in Biology

John Norris Bahcall, Ph.D., Assistant Professor of Theoretical Physics
A.B., University of California, 1956; M.A., University of Chicago, 1957; Ph.D., Harvard University, 1960. Research Fellow in Physics, California Institute, 1962-63; Senior Research Fellow, 1963-65; Assistant Professor of Theoretical Physics, 1965-. (204 Kellogg) 188 South Catalina Avenue, Apt. 2.

Kirby Alan Baker, Ph.D., Ford Foundation Research Fellow in Mathematics

Robert Barbon, Ph.D., Research Fellow in Physics

Benny Lee Badgett, Ph.D., Research Fellow in Biology

Robert Fox Bacher, Ph.D., Sc.D., Professor of Physics; Provost
B.S., University of Michigan, 1926; Ph.D., 1930; Sc.D., 1948. Professor of Physics, California Institute, 1949-; Chairman, Division of Physics, Mathematics and Astronomy; Director, Norman Bridge Laboratory of Physics, 1949-62; Provost, 1962-. (115 Throop) 345 South Michigan Avenue.

Richard McLean Badger, Ph.D., Professor of Chemistry, Emeritus
B.S., California Institute, 1921; Ph.D., 1924. Research Fellow, 1924-28; International Research Fellow, 1928-29; Assistant Professor, 1929-38; Associate Professor, 1938-45; Professor, 1945-66; Professor Emeritus, 1966-. (154 Crellin) 124 New York Drive, Altadena.

Bennie Lee Badgett, Ph.D., Research Fellow in Biology
Thomas Reed Beebe, Ph.D., Visiting Associate in Chemistry

Isaac Bekhor, Ph.D., Research Fellow in Biology

Kevin Hilton Bell, Ph.D., Research Fellow in Chemistry

Harvey Alan Bender, Ph.D., Gosney Research Fellow in Biology
A.B., Western Reserve University, 1954; M.S., Northwestern University, 1957; Ph.D., 1959. Associate Professor, University of Notre Dame, 1964-. California Institute, 1965-66.

Victor Hugo Benioff, Ph.D., Professor of Seismology, Emeritus
A.B., Pomona College, 1921; Ph.D., California Institute, 1935. Assistant Professor, 1937; Associate Professor, 1937-50; Professor, 1950-64. Professor Emeritus, 1964-. P.O. Box 468, Mendocino, California.

Raymond Dudley Bennett, Ph.D., Research Fellow in Biology

John Frederick Benton, Ph.D., Associate Professor of History
B.A., Haverford College, 1953; M.A., Princeton University, 1955; Ph.D., 1959. Assistant Professor, California Institute, 1965-66; Associate Professor, 1966-. (10 Dabney) 209 South Holliston Avenue.

Seymour Benzer, Ph.D., Visiting Associate in Biology
B.A., Brooklyn College, 1942; M.S., Purdue University, 1943; Ph.D., 1947. Stuart Distinguished Professor of Biology, Purdue University, 1961-. Research Fellow, California Institute, 1949-50; Visiting Associate, 1965-. (392 Alles) 195 South Wilson Avenue.

Glenn Leroy Berge, Ph.D., Research Fellow in Radio Astronomy
B.A., Luther College, 1960; M.S., California Institute, 1962; Ph.D., 1965. Research Fellow, 1965-. (110 Robinson) 631-A Brookside Lane, Sierra Madre.

Klaus-Peter Beuermann, Ph.D., Research Fellow in Physics

S. K. Bhattacherjee, Ph.D., Senior Research Fellow in Physics
B.S., University of Calcutta, 1946; M.S., 1948; Ph.D., University of Notre Dame, 1953. Associate Professor, Tata Institute of Fundamental Research (Bombay), 1966-. California Institute, 1966-67.

Charles Edgar Billings, Ph.D., Senior Research Fellow in Environmental Health Engineering

Francis Bruno Birkner, Ph.D., Research Fellow in Environmental Health Engineering

Lewis Graham Bishop, Ph.D., Research Fellow in Applied Science

Herbert Blumberg, Ph.D., Research Fellow in Physics

David Bodansky, Ph.D., Visiting Associate in Physics

Felix Hans Boehm, Ph.D., Professor of Physics
Dipl., Phys., Federal Institute of Technology, Zurich, 1948; Ph.D., 1951. Research Fellow, California Institute, 1953-55; Senior Research Fellow, 1955-58; Assistant Professor, 1958-59; Associate Professor, 1959-61; Professor, 1961-. (157 W. Bridge) 2510 North Altadena Drive, Altadena.

Donald Dale Bogard, Ph.D., Research Fellow in Geochemistry
44 Officers and Faculty

David B. Bogy, Ph.D., Research Fellow in Applied Mechanics

Henri Frederic Bohnenblust, Ph.D., Professor of Mathematics; Dean of Graduate Studies
A.B., Federal Institute of Technology, Zurich, 1928; Ph.D., Princeton University, 1931. Professor, California Institute, 1946-. Dean of Graduate Studies, 1956-. (388 Sloan, 114 Throop) 1798 North Pepper Drive, Altadena.

James Frederic Bonner, Ph.D., Professor of Biology
A.B., University of Utah, 1931; Ph.D., California Institute, 1934. Research Assistant, 1933-36; Instructor, 1936-38; Assistant Professor, 1938-42; Associate Professor, 1942-46; Professor, 1946-. (128 Kerckhoff) 1740 Homet Road.

Herbert Wesley Booth, M.A., Instructor in Speech

Jon D. B. Bordner, Ph.D., Research Fellow in Chemistry

Henry Borsook, Ph.D., M.D., Professor of Biochemistry
Ph.D., University of Toronto, 1924; M.B., 1927; M.D., 1940. Assistant Professor, California Institute, 1929-35; Professor, 1935-. (326 Kerckhoff) 1121 Constance Street.

Arthur James Boucot, Ph.D., Professor of Paleontology
A.B., Harvard College, 1948; A.M., Harvard University, 1949; Ph.D., 1953. Associate Professor, California Institute, 1961-66; Professor, 1966-. (198 Arms) 419 South Meredith Avenue.

Ira Sprague Bowen, Ph.D., Sc.D., Distinguished Service Member, Carnegie Institution; Mount Wilson and Palomar Observatories
A.B., Oberlin College, 1919; Ph.D., California Institute, 1926. Instructor, 1921-26; Assistant Professor, 1926-38; Associate Professor, 1938-41; Professor, 1941-45; Director, Mt. Wilson and Palomar Observatories, 1946-64; Distinguished Service Member, 1964-. (Mt. Wilson Office) 2398 North Altadena Drive, Altadena.

Volkmar Braun, D.Sc., Research Fellow in Chemistry
D.Sc., University of Munich, 1965. California Institute, 1965-. (102 Church) 378 South Oakland Avenue.

Richard Tuber Brockmeier, Ph.D., Research Fellow in Physics

Charles Jacob Brokaw, Ph.D., Associate Professor of Biology
B.S., California Institute, 1953; Ph.D., Cambridge University, 1958. Visiting Assistant Professor, California Institute, 1942-45; Assistant Professor, 1945-47; Associate Professor, 1947-. (9 Dabney) 707 Auburn Avenue, Sierra Madre.

Volkmar Braun, D.Sc., Research Fellow in Chemistry
D.Sc., University of Munich, 1965. California Institute, 1965-. (102 Church) 378 South Oakland Avenue.

Richard Tuber Brockmeier, Ph.D., Research Fellow in Physics

James Neel Brune, Ph.D., Associate Professor of Geophysics
B.A., University of Nevada, 1956; Ph.D., Columbia University, 1961. California Institute, 1951-. (Seismo) 2465 North Santa Anita Avenue, Altadena.

Edwin Raphael Buchman, D.Phil., Research Associate in Organic Chemistry
Ch.E., Benesch Polytechnic Institute, 1922; S.M., Massachusetts Institute of Technology, 1925; Ph. D., University of Frankfurt, 1933. Research Fellow, California Institute, 1937-38; Research Associate, 1938-. 446 Devonwood Drive, Altadena.
Francis Stephan Buffington, Sc.D., Associate Professor of Materials Science
S.B., Massachusetts Institute of Technology, 1938; Sc.D., 1951. Assistant Professor of Mechanical Engineering, California Institute, 1951-56; Associate Professor, 1956-63; Associate Professor of Materials Science, 1963-. (309 Keck) 1644 Kaweah Drive.

Charles Edwin Bures, Ph.D., Associate Professor of Philosophy
B.A., Grinnell College, 1933; M.A., University of Iowa, 1936; Ph.D., 1938. Assistant Professor, California Institute, 1949-53; Associate Professor, 1953-. (2 Duhney) 364 South Marengo Avenue.

Donald Stacy Burnett, Ph.D., Assistant Professor of Nuclear Geochemistry
B.S., University of Chicago, 1959; Ph.D., University of California, 1963. Research Fellow in Physics, California Institute, 1963-65; Assistant Professor of Nuclear Geochemistry, 1965-. (309 Keck) 505 Atchison Street.

Stephen Howard Caine,** Lecturer in Applied Science

Patrik Robert Callis, Ph.D., Research Fellow in Chemistry

Dan Hampton Campbell, Ph.D., Sc.D., Professor of Immunoheterology
A.B., Wabash College, 1930; M.S., Washington University, 1932; Ph.D., University of Chicago, 1936; Sc.D., Wabash College, 1960. Assistant Professor, California Institute, 1942-45; Associate Professor, 1945-50; Professor, 1950-. (307 Church) 1154 Mount Lowe Drive, Altadena.

Ian Campbell, Ph.D., Research Associate in Geology
A.B., University of Oregon, 1922; A.M., 1924; Ph.D., Harvard University, 1931. Assistant Professor, California Institute, 1931-35; Associate Professor, 1935-46; Professor, 1946-60; Research Associate, 1960-.

Daniel George Carroll, Ph.D., Research Fellow in Chemistry

Brian Case, Ph.D., Research Fellow in Chemistry

Thomas Kirk Caughey, Ph.D., Professor of Applied Mechanics
B.Sc., Glasgow University, 1948; M.M.E., Cornell University, 1952; Ph.D., California Institute, 1954. Instructor, 1953-54; Assistant Professor, 1955-58; Associate Professor, 1958-62; Professor, 1962-. (419 Thomas) 1398 North Lowe Drive, Altadena.

Georgeanne Robertson Caughlan, Ph.D., Visiting Associate in Physics
B.S., University of Washington, 1937; Ph.D., 1964. Associate Professor of Physics, Montana State University, 1965-. Research Fellow, California Institute, 1961; 1962; 1963; Visiting Associate, 1966.

George Roger Chalkley, Ph.D., Research Fellow in Biology

Sunney Ignatius Chan, Ph.D., Associate Professor of Chemical Physics
B.S., University of California, 1957; Ph.D., 1960. Assistant Professor, California Institute, 1963-64; Associate Professor, 1964-. (64 Crellin) 420 Parkman Street, Altadena.

George Tsain-Hong Chang, Ph.D., Research Fellow in Chemical Engineering
B.S., National Taiwan University, 1958; Ph.D., Rice University, 1966. California Institute, 1966-67. (100 Spalding) 1615 Rose Villa.

Teh-Liang Chang, Ph.D., Research Fellow in Chemistry
B.S., National Taiwan University, 1957; M.S., University of Virginia, 1963; Ph.D., 1965. California Institute, 1965-. (21 Gates) 285 North Holliston Avenue, Apt. 5.

Chang-Chih Chao, Ph.D., Research Fellow in Materials Science
B.S., National Taiwan University, 1958; M.S., Virginia Polytechnic Institute, 1961; Ph.D., California Institute, 1965. Research Fellow, 1965-66.

Arthur Noble Chester, Ph.D., Research Fellow in Theoretical Physics
B.S., University of Texas, 1961; Ph.D., California Institute, 1965. Research Fellow, 1965.

Robert Frederick Christy, Ph.D., Professor of Theoretical Physics
B.A., University of British Columbia, 1935; Ph.D., University of California, 1941. Associate Professor, California Institute, 1946-50; Professor, 1950-. (164 Sloan) 1330 South Euclid Avenue.

**Part-time
Donald Sherman Clark, Ph.D., *Professor of Physical Metallurgy; Director of Placements*

B.S., California Institute, 1929; M.S., 1930; Ph.D., 1934. Instructor, California Institute, 1934-37; Assistant Professor, 1937-45; Associate Professor, 1945-51; Professor, 1951-. (24 Throop) 1066 San Pasqual Street.

J. Kent Clark, Ph.D., *Professor of English*

A.B., Brigham Young University, 1939; Ph.D., Stanford University, 1950. Instructor, California Institute, 1947-50; Assistant Professor, 1950-54; Associate Professor, 1954-60; Professor, 1960-. (303 Dabney) 473 Fillmore Street.

Milton John Clausen, Ph.D., *Research Fellow in Physics*

Donald Delbert Clayton, Ph.D., *Visiting Associate in Physics*

B.S., Southern Methodist University, 1956; M.S., California Institute, 1959; Ph.D., 1962. Associate Professor of Space Sciences, Rice University, 1965-; Visiting Associate, California Institute, 1966-67.

Morris G. Cline, Ph.D., *Research Fellow in Biology*

Charles Lewis Cocks, Jr., Ph.D., *Research Fellow in Physics*

Donald S. Cohen, Ph.D., *Assistant Professor of Mathematics*

Emanuel Richard Cohen, Ph.D., *Research Associate in Engineering Science*

A.B., University of Pennsylvania, 1943; M.S., California Institute, 1946; Ph.D., 1949. Associate Director, North American Aviation Science Center, 1964-; Senior Lecturer, California Institute, 1962-63; Research Associate, 1964-. (229 Thomas) 4633 White Oak Place, Encino.

Natalie Schulman Cohen, Ph.D., *Research Fellow in Biology*

Giles Roy Cokelet, Sc.D., *Assistant Professor of Chemical Engineering*

Julian David Cole, Ph.D., *Professor of Aeronautics*

B.M.E., Cornell University, 1944; M.S., California Institute, 1946; Ph.D., 1949. Research Fellow, 1949-51; Assistant Professor, 1951-55; Associate Professor, 1955-59; Professor, 1959-. (306 Karman) 3447 Glenrose Avenue, Altadena.

Donald Earl Coles, Ph.D., *Professor of Aeronautics*

B.S., University of Minnesota, 1947; M.S., California Institute, 1948; Ph.D., 1953. Research Fellow, 1953-55; Senior Research Fellow, 1955-56; Assistant Professor, 1956-59; Associate Professor, 1959-64; Professor, 1964-. (309 Karman) 1416 Wembley Road, San Marino.

Anthony Francis Collings, Ph.D., *Research Fellow in Chemical Engineering*

B.Sc., University of New South Wales, 1962; Ph.D., Imperial College of Science and Technology (London), 1965. California Institute, 1966. (124 Spalding) 1416 Wembley Road, San Marino.

Frederick James Converse, B.S., *Professor of Soil Mechanics, Emeritus*

B.S., University of Rochester, 1914. Instructor, California Institute, 1921-33; Assistant Professor, 1933-39; Associate Professor, 1939-47; Professor, 1947-62; Emeritus, 1962- (107 Thomas) 3447 Glenrose Avenue, Altadena.

William Harrison Corcoran, Ph.D., *Professor of Chemical Engineering*

B.S., California Institute, 1941; M.S., 1942; Ph.D., 1948. Associate Professor, 1952-57; Professor, 1957-. (229 Spalding) 8353 Longden Avenue, San Gabriel.

A. Wallace Cordes, Ph.D., *Visiting Associate in Chemistry*

B.S., Northern Illinois University, 1956; M.S., University of Illinois, 1958; Ph.D., 1960. Associate Professor of Inorganic Chemistry, University of Arkansas, 1963-. California Institute, 1966.

Robert Brainard Corey, Ph.D., D.Sc., *Professor of Structural Chemistry*

B. Chem., University of Pittsburgh, 1919; Ph.D., Cornell University, 1924. D.Sc., University of Pittsburgh, 1964. Senior Research Fellow, California Institute, 1947-49; Research Associate, 1946-49; Professor, 1949-. (215 Church) 352 South Parkwood Avenue.

**Part-time**
Officers and Faculty  47

Noel Robert David Corngold, Ph.D., Professor of Applied Science

Eugene Woodville Cowan, Ph.D., Professor of Physics
B.S., University of Missouri, 1941; S.M., Massachusetts Institute of Technology, 1943; Ph.D., California Institute, 1948; Research Fellow, 1948-50; Assistant Professor, 1950-54; Associate Professor, 1954-61; Professor, 1961-.
(350 West Bridge) 2215 Monte Vista Street.

William Reed Cozart, Ph.D., Assistant Professor of English
A.B., University of Texas, 1958; M.A., Harvard University, 1960; Ph.D., 1963. California Institute, 1965-.
(333 Spalding) 204 South Holliston Avenue, Apt. 11.

John Franklin Crawford, M.A., Instructor in English
(211 Dabney) 1215 Harvard Street, Apt. 6, Claremont.

Peter Linton Crawley, Ph.D., Associate Professor of Mathematics
B.S. California Institute, 1957; Ph.D., 1961. Assistant Professor, 1963-65; Associate Professor, 1965-.
(374 Sloan) 3570 Landfair Road.

Fred E. C. Culick, Sc.D., Associate Professor of Jet Propulsion
S.B., S.M., Massachusetts Institute of Technology, 1957; Sc.D., 1961. Research Fellow, California Institute, 1961-63; Assistant Professor, 1963-66; Associate Professor, 1966-.
(204 Karman) 962 East Woodbury Road.

John Eldridge Cushing, Ph.D., Visiting Associate in Biology
A.B., University of California, 1938; Ph.D., California Institute, 1943. Professor of Immunology, University of California (Santa Barbara), 1958-; Research Fellow in Chemistry, California Institute, 1952; Visiting Associate in Biology, 1965-66.

Ronald Yvon Cusson, Ph.D., Research Fellow in Physics

Everett Clarence Dade,* Ph.D., Professor of Mathematics
A.B., Harvard College, 1958; Ph.D., Princeton University, 1960. Harry Bateman Research Fellow, California Institute, 1960-62; Assistant Professor, 1962-64; Associate Professor, 1964-66; Professor, 1966-.

Lynn Dalgarno, Ph.D., Research Fellow in Biology

Roger Fred Dashen,* Ph.D., Professor of Theoretical Physics
A.B., Harvard College, 1960; Ph.D., California Institute, 1964. Research Fellow, 1964-65; Assistant Professor, 1965-66; Professor, 1966-.

Robert Long Daugherty, M.E., Professor of Mechanical and Hydraulic Engineering.
Emeritus
A.B., Stanford University, 1909; M.E., 1914. California Institute, 1919-56; Professor Emeritus, 1956-.
(115 Thomas) 373 South Euclid Avenue.

Norman Ralph Davidson, Ph.D., Professor of Chemistry
B.S., University of Chicago, 1937; B.Sc., Oxford University, 1938; Ph.D., University of Chicago, 1941. Instructor, California Institute, 1946-49; Assistant Professor, 1949-52; Associate Professor, 1952-57; Professor, 1957-.
(201 Church) 318 East Laurel Avenue, Sierra Madre.

Raymond Jeremy Hugh Davies, Ph.D., Research Fellow in Chemistry

Craig Hale Davis, Ph.D., Research Fellow in Biology
B.S., Oregon State College, 1953; M.S., University of Washington, 1962; Ph.D., 1965. California Institute, 1965-.
(621 Kerckhoff) 1720 Mission Street, South Pasadena.

Donald Robert Davis, Ph.D., Instructor in Chemistry
Ph.D., University of California (Los Angeles), 1965. California Institute, 1965-.

Leverett Davis, Jr., Ph.D., Professor of Theoretical Physics
B.S., Oregon State College, 1936; M.S., California Institute, 1938; Ph.D., 1941. Instructor, 1941-46; Assistant Professor, 1946-50; Associate Professor, 1950-56; Professor, 1956-.
(104 East Bridge) 1772 North Grand Oaks Avenue, Altadena.

Richard Albert Dean, Ph.D., Professor of Mathematics
B.S., California Institute, 1945; A.B., Denison University, 1947; M.S., Ohio State University, 1948; Ph.D., 1953. Harry Bateman Research Fellow, California Institute, 1954-55; Assistant Professor, 1955-59; Associate Professor, 1959-66; Professor, 1966-.
(358 Sloan) 2186 Lambert Drive.

*Leave of absence, 1966-67
Max Delbrück, Ph.D., Professor of Biology
Ph.D., University of Göttingen, 1931. Research Fellow, California Institute, 1937-39; Professor, 1947-. (82 Alles) 1510 Oakdale Street.

Edwin Walter Dennison, Ph.D., Staff Member, Mount Wilson and Palomar Observatories

Charles Raymond DePrima, Ph.D., Professor of Mathematics
B.A., New York University, 1940; Ph.D., 1943. Assistant Professor of Applied Mechanics, California Institute, 1946-51; Associate Professor, 1951-56; Professor, 1956-64; Professor of Mathematics, 1964-. (278 Sloan) 3791 Hampstead Road.

Nicholas Benedict de Takacsy, Ph.D., Research Fellow in Physics

Armin Joseph Deutsch, Ph.D., Staff Member, Mount Wilson and Palomar Observatories
B.S., University of Arizona, 1940; Ph.D., University of Chicago, 1946. Mt. Wilson and Palomar Observatories, 1951-. (Mt. Wilson Office) 625 Coleman, Altadena.

Robert John Dickens, B.S., Research Fellow in Astronomy

Richard Earl Dickerson, Ph.D., Associate Professor of Physical Chemistry
B.S., Carnegie Institute of Technology, 1953; Ph.D., University of Minnesota, 1957. Associate Professor, California Institute, 1963-. (201 Church) 1661 Rose Villa Street.

Robert Palmer Dilworth, Ph.D., Professor of Mathematics
B.S., California Institute, 1936; Ph.D., 1939. Assistant Professor, California Institute, 1943-45; Associate Professor, 1945-51; Professor, 1951-. (286 Sloan) 3121 Doyne Road.

Charles Hewitt DIX, Ph.D., Professor of Geophysics
B.S., California Institute, 1927; A.M., Rice Institute, 1928; Ph.D., 1931. Associate Professor, California Institute, 1948-54; Professor, 1954-. (315 Mudd) 1506 Ramona Avenue, South Pasadena.

Michael Replier Dohan, Ph.D., Assistant Professor of Economics

Robert James Drewer, Ph.D., Research Fellow in Biology

William Jakob Dreyer, Ph.D., Professor of Biology
B.A., Reed College, 1952; Ph.D., University of Washington, 1956. California Institute, 1963-. (271 Church) 2509 Highland Avenue, Altadena.

Henry Dreyfuss, Associate in Industrial Design
California Institute, 1947-. 500 Columbia Street, South Pasadena.

Jean Ture Leonard Dubois, Ph.D., Research Fellow in Physics
B.S., Chalmers University of Technology, Sweden, 1954; Ph.D., 1963. Assistant Professor of Physics, 1965-. California Institute, 1965-. (103 Kellogg) 1090 East New York Drive, Altadena.

Lee Alvin DuBridge, Ph.D., Sc.D., LL.D.
(See page 41.)

Bernardo Oscar Dubrovsky, M.D., Research Fellow in Biology
B.S., National College Mariano Moreno, 1957; M.D., University of Buenos Aires School of Medicine, 1961. California Institute, 1965-. (336 Kerckhoff) 3730 DuFresne Court, Apt. 4, Los Angeles.

Horst Duchatsch, Dr. rer. nat., Research Fellow in Chemistry

Jesse William Monroe DuMond, Ph.D., D.H.C., Professor of Physics, Emeritus
B.S., California Institute, 1916; M.E., Union College, 1918; Ph.D., California Institute, 1929; D.H.C., Uppsala University, 1966. Research Associate, California Institute, 1931-38; Associate Professor, 1938-46; Professor, 1946-63; Professor Emeritus, 1963-. (163 W. Bridge) 550 South Greenwood Avenue.

Pol Edgard Duwez, D.Sc., Professor of Materials Science
Metallurgical Engineer, School of Mines, Mons, Belgium, 1932; D.Sc., University of Brussels, 1933. Research Engineer, California Institute, 1942-47; Associate Professor, 1947-52; Professor, 1952-. (305 Keck) 1535 Oakdale Street.
Harvey Eagleson, Ph.D., *Professor of English, Emeritus*
B.A., Reed College, 1920; M.A., Stanford University, 1922; Ph.D., Princeton University, 1928.
Assistant Professor, California Institute, 1928-38; Associate Professor, 1938-47; Professor, 1947-66; Assistant Emeritus, 1966-.
1706 Fair Oaks Avenue, South Pasadena.

Paul Conant Eaton, A.M., *Associate Professor of English; Dean of Students*
S.B., Massachusetts Institute of Technology, 1927; A.M., Harvard University, 1930. Visiting Lecturer in English, California Institute, 1946; Associate Professor, 1947-; Dean of Students, 1952-.
(116 Throop) 700 Cornell Road.

Peter Xaver Eberhardt, Ph.D., *Visiting Associate Professor of Nuclear Geophysics*
M.S., University of Berne, 1955; Ph.D., 1956. Assistant Professor, University of Berne, 1964-.

Robert Stuart Edgar, Ph.D., *Professor of Biology*
B.Sc., McGill University, 1953; Ph.D., University of Rochester, 1957. Research Fellow, California Institute, 1957; 1958-60; Assistant Professor, 1960-63; Associate Professor, 1963-66; Professor, 1966-.
(59 Church) 2255 East Oakwood Street.

Marshall Hall Edgell, Ph.D., *Research Fellow in Biology*

Olin Jeuck Eggen, Ph.D., *Visiting Associate in Astronomy*
B.A., University of Wisconsin, 1941; Ph.D., 1948. Professor of Astronomy; Staff Member, Mount Wilson and Palomar Observatories, California Institute, 1961-64; Visiting Associate, 1965-66.

David S. Eisenberg, D.Phil., *Research Fellow in Chemistry*

Heinz E. Elersieck, Ph.D., *Associate Professor of History*
A.B., University of California (Los Angeles), 1942; M.A., 1948; Ph.D., 1953. Instructor, California Institute, 1950-55; Assistant Professor, 1955-60; Associate Professor, 1960-.
(13 Dabney) 3175 Del Vina Street.

David Clephan Elliot, Ph.D., *Professor of History*
M.A., St. Andrew's University, 1939; A.M., Harvard University, 1948; Ph.D., 1951. Assistant Professor, California Institute, 1950-53; Associate Professor, 1953-60; Professor, 1960-.
(4 Dabney) 770 Arden Road.

Albert Tromley Ellis, Ph.D., *Associate Professor of Applied Mechanics*
B.S., California Institute, 1943; M.S., 1947; Ph.D., 1953. Senior Research Fellow, 1954-58; Associate Professor, 1958-.
(105 Karman) 430 East Mendocino Street, Altadena.

Sterling Emerson,*** Ph.D., *Professor of Genetics*
B.Sc., Cornell University, 1922; M.A., University of Michigan, 1924; Ph.D., 1928. Assistant Professor of Genetics, California Institute, 1928-37; Associate Professor, 1937-46; Professor, 1946-.
(200 Kerckhoff) 1207 Monada Place, Altadena.

Warren G. Emery, M.S., *Director of Physical Education and Athletics*
B.S., University of Nebraska, 1948; M.S., University of California (Los Angeles), 1959. Coach, California Institute, 1955; Assistant Director, 1963-64; Director, 1964-.
(16 Arms) 1677 Kaweah Drive.

Barry David Epstein, Ph.D., *Research Fellow in Chemistry*

Samuel Epstein, Ph.D., *Professor of Geochemistry*
B.Sc., University of Manitoba, 1941; M.Sc., 1942; Ph.D., McGill University, 1944. Research Fellow, California Institute, 1952-53; Senior Research Fellow, 1953-54; Associate Professor, 1954-59; Professor, 1959-.
(103 Mudd) 1175 Daverick Drive.

Dennis Ray Estes, Ph.D., *Ford Foundation Research Fellow in Mathematics*

James Nelson Ewart, M.B.A., *Secretary*
B.A., Pomona College, 1925; M.B.A., Harvard School of Business, 1928. Director of Personnel, California Institute, 1946-64; Secretary, 1964-.
(108 Throop) 1039 South Pasadena Avenue.

Fraser Partington Fanale, Ph.D., *Research Fellow in Physics*
(116 Arms) 585 East Washington Boulevard, Apt. 6, Altadena.

Paul Stephen Farrington, Ph.D., *Research Associate in Chemistry*
B.S., California Institute, 1941; M.S., 1947; Ch.E., 1948; Ph.D., 1950. Professor of Chemistry; Associate Dean; Student Affairs, College of Letters and Science, University of California (Los Angeles), 1962-. California Institute, 1965.

***Leave of absence, first term, 1966-67
Officers and Faculty

Peter Ward Fay, Ph.D., Associate Professor of History
Assistant Professor, California Institute, 1953-60; Associate Professor, 1960-. (11 Dabney) 400 Church Road, Sierra Madre.

Derek Henry Fender, Ph.D., Professor of Biology and Applied Science
B.Sc., Reading University, England, 1939; B.Sc.(Sp.), 1946; Ph.D., 1956. Senior Research Fellow in Engineering, California Institute, 1961-62; Associate Professor of Biology and Electrical Engineering, 1962-66; Professor of Biology and Applied Science, 1966-. (12 Booth) 2227 East Crescent Drive, Altadena.

Charles K. Ferguson,** Ed.D., Lecturer in Psychology

John Hans Fessler, Ph.D., Senior Research Fellow in Biology

Richard Phillips Feynman, Ph.D., Nobel Laureate, Richard Chace Tolman Professor of Theoretical Physics
B.S., Massachusetts Institute of Technology, 1939; Ph.D., Princeton University, 1942. Visiting Professor, California Institute, 1950-59; Tolman Professor, 1959-. (103 Bridge) 2475 Boulder Road, Altadena.

James Lawrence Finnerty, Ph.D., Visiting Associate in Chemistry
B.S., Marquette University, 1948; M.S., University of Illinois, 1950; Ph.D., Loyola University (Chicago), 1960. California Institute, 1966.

Arrigo Finzi, Laurea, Senior Research Fellow in Physics

Wladyslaw Fizdon, Ph.D., Visiting Professor of Aeronautics

Robert Louis Fleischer, Ph.D., Senior Research Fellow in Physics

Harold Eugene Fleischer,** M.A., Research Fellow in Electrical Engineering

Raymond Charles Fletcher, M.S., Research Fellow in Geology

Marguerite Fling, Ph.D., Research Fellow in Biology

Edward Berel Fomalont, Ph.D., Research Fellow in Radio Astronomy

William Alfred Fowler, Ph.D., Professor of Physics
B.Eng., Physics, Ohio State University, 1933; Ph.D., California Institute, 1936. Research Fellow, California Institute, 1936-39; Assistant Professor, 1939-42; Associate Professor, 1942-46; Professor, 1946-. (101 Kellogg) 1565 San Pasqual Street.

Joel N. Franklin, Ph.D., Professor of Applied Science
B.S., Stanford University, 1950; Ph.D., 1953. Associate Professor of Applied Mechanics, California Institute, 1957-65; Professor of Applied Science, 1965-. (208 Booth) 1763 Alta Crest Drive, Altadena.

Wallace Goodman Fraser, Jr., ** M.D., Senior Research Fellow in Engineering Science
A.B., University of Southern California, 1941; M.D., 1951. Associate Research Professor of Medicine, Loma Linda University. Research Fellow, California Institute, 1961-63; Senior Research Fellow, 1963-. (228 Kellogg) 1607 Amberwood Drive, South Pasadena.

Steven Clark Frautschi, Ph.D., Professor of Theoretical Physics
B.S., Harvard College, 1955; Ph.D., Stanford University, 1958. Assistant Professor, California Institute, 1962-64; Associate Professor, 1964-66; Professor, 1966-. (170 Sloan) 188 South Catalina Avenue.

**Part-time
Sheldon Kay Friedlander, Ph.D., Professor of Chemical and Environmental Health Engineering
B.S., Columbia University, 1949; M.S., Massachusetts Institute of Technology, 1951; Ph.D., University of Illinois, 1954. California Institute, 1964-. (109 Keck) 1591 Oakdale Street.

Julius Jay Friedman, Ph.D., Visiting Associate Professor in Engineering Science
B.S., Tulane University, 1949; M.S., 1951; Ph.D., 1953. Associate Professor of Physiology, Indiana University School of Medicine, 1963-. California Institute, 1967.

Francis Brock Fuller, Ph.D., Professor of Mathematics
A.B., Princeton University, 1949; M.A., 1950; Ph.D., 1952. Research Fellow, California Institute, 1952-55; Assistant Professor, 1955-59; Associate Professor, 1959-66; Professor, 1966-. (256 Sloan) 1591 Oakdale Street.

Isaiah Gallily, Ph.D., Senior Research Fellow in Environmental Health Engineering

Antonio Garcia-Bellido, Ph.D., Gosney Research Fellow in Biology

Gordon Paul Garmire, Ph.D., Senior Research Fellow in Physics

Christopher David Garner, B.Sc., Research Fellow in Chemistry

Justine Spring Garvey, Ph.D., Senior Research Fellow in Chemistry
B.S., Ohio State University, 1944; M.S., 1948; Ph.D., 1950. Research Fellow, California Institute, 1951-57; Senior Research Fellow, 1957-. (117 Steele) 555 Eliza­beth Street.

Nicholas George, Ph.D., Associate Professor of Electrical Engineering
B.S., University of California, 1949; M.S., University of Maryland, 1956; Ph.D., California Institute, 1959. Visiting Associate Professor, 1959-60; Associate Professor, 1960-. (117 Steele) 555 Eliza­beth Street.

Frederick Frank Giarrusso, Ph.D., Research Fellow in Chemistry

Frederick Joseph Gilman, Ph.D., Research Fellow in Theoretical Physics

Robert Blythe Gilmore, Ph.D., Vice President for Business Affairs

William Andrew Goddard III, Ph.D., Arthur Amos Noyes Research Instructor in Chemistry
52 Officers and Faculty

Peter Goldreich, Ph.D., Associate Professor of Planetary Science and Astronomy
B.S., Cornell University, 1960; Ph.D., 1963. California Institute, 1966-.

Ricardo Gomez, Ph.D., Senior Research Fellow in Physics
B.S., Massachusetts Institute of Technology, 1953; Ph.D., 1956. Research Fellow, California Institute, 1956-59; Senior Research Fellow, 1959-. (176 Sloan) 3191 Glenrose Avenue, Altadena.

David L. Goodstein, Ph.D., Research Fellow in Physics

Roy Walter Gould, Ph.D., Professor of Electrical Engineering and Physics
B.S., California Institute, 1949; M.S., Stanford University, 1950; Ph.D., California Institute, 1956. Assistant Professor of Electrical Engineering, 1955-58; Associate Professor, 1958-60; Associate Professor of Electrical Engineering and Physics, 1960-62; Professor, 1962-. (217 Steele) 808 Linda Vista Avenue.

Andrew Luythsen Gram, Ph.D., Assistant Professor of Environmental Health Engineering
B.S., University of California, 1952; M.S., Massachusetts Institute of Technology, 1953; Ph.D., University of California, 1956. Research Fellow, California Institute, 1962-63; Assistant Professor, 1963-. (9 Keck) 1981 North Craig, Altadena.

Harry Barkus Gray, Ph.D., Professor of Chemistry
B.S., Western Kentucky College, 1957; Ph.D., Northwestern University, 1960. Visiting Professor of Inorganic Chemistry, California Institute, 1965; Professor of Chemistry, 1966-.

Robert Davis Gray, B.S., Professor of Economics and Industrial Relations; Director of Industrial Relations Center
B.S., Wharton School of Finance and Commerce, University of Pennsylvania, 1930. Associate Professor, California Institute, 1940-42; Professor, 1942-. (383 South Hill Avenue) 2486 Morsley Road, Altadena.

William Robert Gray, Ph.D., Senior Research Fellow in Biology
B.A., St. John’s College, University of Cambridge, 1957; M.A., Ph.D., University of Cambridge, 1964. Research Fellow, California Institute, 1964-66; Senior Research Fellow, 1966-. (275 Church) 140 South Chester Avenue.

Edward Forbes Greene, Ph.D., Visiting Associate in Chemistry

James Wallace Greenlee, M.A., Instructor in French

Jesse Leonard Greenstein, Ph.D., Professor of Astrophysics; Staff Member, Mount Wilson and Palomar Observatories, Owens Valley Radio Observatory; Executive Officer for Astronomy
A.B., Harvard College, 1929; A.M., Harvard University, 1930; Ph.D., 1937. Associate Professor, California Institute, 1948-49; Professor 1949-; Executive Officer, 1964-. (216 Robinson) 2057 San Pasqual Street.

Eugene Herbert Gregory, Ph.D., Assistant Professor of Physics
B.S., Washington University (St. Louis), 1958; M.S., University of California (Los Angeles), 1961; Ph.D., 1965. California Institute, 1966-.

Thomas Lynn Grettenberg, Ph.D., Assistant Professor of Electrical Engineering
B.A., Pomona College, 1957; B.S., M.S., Massachusetts Institute of Technology, 1957; Ph.D., Stanford University, 1962. California Institute, 1962-. (211 Steele) 2827 North Holliston Avenue, Altadena.

Wesley Otto Griesel, Ph.D., Visiting Associate in Biology
B.A., University of California (Los Angeles), 1934; M.A., 1939; Ph.D., 1952. Professor, California State College (Los Angeles), 1958-. Research Fellow, California Institute, 1957-58; Visiting Associate, 1966. (Earhart) 4730 Hayman, La Canada.

Stanley Joseph Gross, M.D., Visiting Associate in Biology
B.S., Yale University, 1946; M.D., Columbia University, 1950. Associate Professor of Obstetrics and Gynecology, Loma Linda University, 1963-. California Institute, 1965-66.

Thomas Gutman, M.S., Coach
B.S., University of California (Los Angeles), 1962; M.S., 1963. California Institute, 1966-.

Arie Jan Haagen-Smit, Ph.D., Professor of Bio-organic Chemistry
A.B., University of Utrecht, 1922; A.M., 1926; Ph.D., 1929. Associate Professor, California Institute, 1937-40; Professor, 1940-. (118 Kerckhoff) 418 South Berkeley Avenue.
Vlastimil Haberman, M.D., Gosney Research Fellow in Biology

Fred Theodore Haddock, M.S., Visiting Associate in Radio Astronomy
B.S., Massachusetts Institute of Technology, 1941; M.S., University of Maryland, 1950. Professor, Head, Radio Astronomy, University of Michigan, 1959-. California Institute, 1966.

Remon Hagen, Ph.D., Research Fellow in Chemistry

Ralph Stuart Hager, Ph.D., Research Fellow in Physics

Marshall Hall, Jr., Ph.D., Professor of Mathematics; Executive Officer for Mathematics
B.A., Yale University, 1932; Ph.D., 1936. Professor, California Institute, 1959-; Executive Officer, 1966-. California Institute, 1966.

George Simms Hammond, Ph.D., Arthur Amos Noyes Professor of Chemistry

Marjorie Mary Harding, Ph.D., Research Fellow in Chemistry

Gordon Leonard Harris, D.Sc., Research Fellow in Aeronautics

Erich Heftmann, Ph.D., Research Associate in Biology

Johannes W. R. Heintze, Ph.D., Research Fellow in Astrophysics

Ernest Herman Henninger, Ph.D., Research Fellow in Chemical Engineering

Clemens August Heusch, Dr.rer.nat., Senior Research Fellow in Physics
Dipl. Phys., Technische Hochschule, Aachen, 1955; Dr.rer.nat., Technische Hochschule, Munich, 1959. Research Fellow, California Institute, 1963-65; Senior Research Fellow, 1965-. (102 Synchrotron) 522 South Allen Avenue.

Emerson Hibbard, Ph.D., Senior Research Fellow in Biology
B.S., Cornell University, 1950; M.S., University of Michigan, 1957; Ph.D., 1959. Research Fellow, California Institute, 1963-66; Senior Research Fellow, 1966-. (386 Alles) 1160 Cordova Street, Apt. 9.

Albert Roach Hibbs, Ph.D., Lecturer in Government
B.S., California Institute, 1945; S.M., University of Chicago, 1948; Ph.D., California Institute, 1955. Chief, Arms Control Study Group, Jet Propulsion Laboratory, 1965-. Research Fellow in Physics, California Institute, 1955-57; Lecturer in Government, 1965-. (307 Dalbey) 740 South San Rafael Avenue.

Edmund Hlawka, Ph.D., Visiting Professor of Mathematics
Ph.D., University of Vienna, 1938. Professor, University of Vienna, 1948-. California Institute, 1967.

Yuk Lin Ho, Ph.D., Research Fellow in Biology

Alan John Hodge, Ph.D., Professor of Biology
B.Sc., University of Western Australia, 1946; Ph.D., Massachusetts Institute of Technology, 1952. California Institute, 1960-. (199 Alles) 195 South Wilson Avenue.

Dennis Gerald Hoffman, Ph.D., Senior Research Fellow in Electrical Engineering
B.A., Fresno State College, 1952; Ph.D., University of California, 1961. Associate Professor of Physics, Reed College, 1963-. California Institute, 1965-66.

**Part-time
William Charles Hoffman, Ph.D., Visiting Associate in Applied Science
B.A., University of California, 1943; M.A., University of California (Los Angeles), 1947; Ph.D., 1953. Professor of Mathematics, Oregon State University, 1966-. California Institute, 1966.

Mathias Höfler, Dr.rei.nat., Research Fellow in Chemistry

Aladar Hollander, M.E., Professor of Mechanical Engineering, Emeritus
M.E., Joseph Royal University, Budapest, 1904. Professor, California Institute, 1944-51; Professor Emeritus, 1951-. (109 Karman) 2385 Hill Drive, Los Angeles.

Walter Richard Holmquist, Ph.D., Research Fellow in Chemistry

David Horn, Ph.D., Research Fellow in Theoretical Physics

Norman Harold Horowitz, Ph.D., Professor of Biology
B.S., University of Pittsburgh, 1936; Ph.D., California Institute, 1939. Research Fellow, 1940-42; Senior Research Fellow, 1946; Associate Professor, 1947-53; Professor, 1953-. (218 Kerckhoff) 2495 Brigden Road.

George William Housner, Ph.D., Professor of Civil Engineering and Applied Mechanics
B.S., University of Michigan, 1933; M.S., California Institute, 1934; Ph.D., 1941. Assistant Professor, 1945-49; Associate Professor, 1949-53; Professor, 1953-. (323 Thomas) 4084 Chevy Chase Drive.

Jean-Francois Houssais, M.D., Research Fellow in Biology

Robert Franklin Howard, Ph.D., Staff Member, Mount Wilson and Palomar Observatories

Fred Hoyle, M.A., Visiting Associate in Physics
M.A., Fellow, St. John's College, University of Cambridge. Plumian Professor of Astronomy and Experimental Philosophy, University of Cambridge, 1955-. Visiting Professor of Astronomy, California Institute, 1953; 1954; 1956; Addison White Greenway Visiting Professor of Astronomy; Staff Member, Mount Wilson and Palomar Observatories, 1957-62; Visiting Associate, 1963; 1964; 1965; 1966.

Din-Yu Hsieh, Ph.D., Assistant Professor of Engineering Science
B.S., National Taiwan University, Taiwan, 1954; M.Sc., Brown University, 1957; Ph.D., California Institute, 1960. Research Fellow in Applied Mechanics, 1960-63; Assistant Professor, 1963-. (315 Thomas) 475 East Glenarm Street.

Donald Ellis Hudson, Ph.D., Professor of Mechanical Engineering and Applied Mechanics
B.S., California Institute, 1938; M.S., 1939; Ph.D., 1942. Instructor, 1941-43; Assistant Professor, 1943-49; Associate Professor, 1949-55; Professor, 1955-. (323 Thomas) 1968 Skyview Drive, Altadena.

Richard Peter Huemer, M.D., Research Fellow in Biology
B.A., Pomona College, 1954; M.D., University of California (Los Angeles), 1958. California Institute, 1962-. (89 Alles) P.O. Box 236, Sun Valley.

Edward Wesley Hughes, Ph.D., Research Associate in Chemistry
B.Chem., Cornell University, 1924; Ph.D., 1935. Research Fellow, California Institute, 1938-43; Senior Research Fellow, 1945-46; Research Associate, 1946-. (131 Crellin) 1582 Rose Villa Street.

Floyd Bernard Humphrey, Ph.D., Associate Professor of Electrical Engineering
B.S., California Institute, 1950; Ph.D., 1956. Senior Research Fellow, 1960-64; Associate Professor, 1964-. (319 Steele) 1240 Arden Road.

David John Hunt, Ph.D., Research Fellow in Chemistry

Edward Hutchings, Jr., B.A., Lecturer in Journalism, Editor of Institute Publications
B.A., Dartmouth College, 1933. Editor of Engineering and Science Monthly, California Institute, 1948-. Lecturer, 1952-. (2 Throop) 2231 Midlothian Drive, Altadena.

Robert A. Huttenback, Ph.D., Professor of History; Master of Student Houses
B.A., University of California (Los Angeles), 1951; Ph.D., 1959. Master of Student Houses, California Institute, 1958-. Lecturer in History, 1958-60; Assistant Professor, 1960-63; Associate Professor, 1963-66; Professor, 1966-. (Lloyd House) 1245 Arden Road.
Kazuo Ikeda, Ph.D., Visiting Associate in Biology
B.S., Tokyo University of Education, 1952; Ph.D., University of Tokyo, 1960. Associate Professor, Juntendo University, 1960-; Research Fellow, California Institute, 1962-63; Visiting Associate, 1965-. (330 Kerckhoff) 307 South Wilson Avenue, Apt. 7.

Andrew Perry Ingersoll, Ph.D., Assistant Professor of Planetary Science

Robert Ellsworth Ireland, Ph.D., Professor of Organic Chemistry

John Barrows Irwin, Ph.D., Staff Associate, Mount Wilson and Palomar Observatories
B.S., University of California, 1933; Ph.D., 1946. Staff Associate, Carnegie Institution of Washington, 1964-. California Institute, 1966-67.

Wilfred Dean Iwan, Ph.D., Assistant Professor of Applied Mechanics
B.S., California Institute, 1937; M.S., 1958; Ph.D., 1961. Assistant Professor, 1964-. (221 Thomas) 405 North Adams, Sierra Madre.

Ralph A. Jacobson, Ph.D., Research Fellow in Biology

Philippe Jeanteur, M.D., Research Fellow in Biology

Paul Christian Jennings, Ph.D., Assistant Professor of Applied Mechanics
B.S., Colorado State University, 1958; M.S., California Institute, 1960; Ph.D., 1963. Research Fellow in Civil Engineering, 1965; Assistant Professor, 1966-. (227 Thomas) 2340 Olivesa Street, Altadena.

Ronald Harry Jensen, Ph.D., Research Fellow in Biology

Jerome Hugo Johnson, Ph.D., Visiting Associate in Engineering
B.S., University of Idaho, 1942; M.S., Oregon State University, 1947; Ph.D., 1953. Professor of Engineering Science, University of Redlands, 1958-. California Institute, 1966.

Lane Richard Johnson, Ph.D., Research Fellow in Geophysics

Byrd Luther Jones, Ph.D., Assistant Professor of History
B.A., Williams College, 1960; Ph.D., Yale University, 1966. Instructor, California Institute, 1963-69; Assistant Professor, 1966-. (331 Spalding) 383 South Catalina Avenue.

Louis Winchester Jones, A.B., Associate Professor of English; Dean of Admissions; Director of Undergraduate Scholarships
A.B., Princeton University, 1922. Instructor, California Institute, 1925-37; Assistant Professor, 1937-43; Associate Professor, 1943-. Dean of Admissions, 1937-. (112 Throop) 351 California Terrace.

Walter Barclay Kamb,*** Ph.D., Professor of Geology and Geophysics
B.S., California Institute, 1952; Ph.D., 1956. Assistant Professor, 1956-60; Associate Professor, 1960-62; Professor, 1962-. (210 Mudd) 3500 Fairpoint Street.

Takichi Kaneko, Ph.D., Research Fellow in Biology
B.S., University of Tokyo, 1951; Ph.D., 1960. Staff Member, Institute of Physics and Chemical Research, University of Tokyo, 1959-; California Institute, 1965-. (020 Kerckhoff) 393 Waldo Avenue.

Ralph William Kavanagh, Ph.D., Associate Professor of Physics
B.A., Reed College, 1950; M.A., University of Oregon, 1952; Ph.D., California Institute, 1956. Research Fellow, 1956-58; Senior Research Fellow, 1958-60; Assistant Professor, 1960-65; Associate Professor, 1965-. (2 Kellogg) 450 South Bonita Avenue.

Lois Marie Kay, M.S., Research Fellow in Chemistry
B.S., University of California (Los Angeles), 1949; M.S., 1952. Research Fellow, California Institute, 1955-58; 1959-. (220 Church) 4905 Lockhaven Street, Los Angeles.

Daniel George Kehn, Ph.D., Assistant Professor of Applied Science
B.S., University of Dayton, 1956; M.S., University of Southern California, 1958; Ph.D., Stanford University, 1963. Research Fellow in Electrical Engineering, California Institute, 1964-66; Assistant Professor of Applied Science, 1966-. (15 Steele) 1003 Wapello Street, Altadena.

Tohru Komano, Ph.D., Research Associate in Biology
B.A., University of Tokyo, 1926; M.S., California Institute, 1940; Ph.D., 1944. Instructor, 1943-46; Senior Research Fellow, 1946-64; Research Associate, 1964-. (227 Kerckhoff) 3112 Ewing Avenue, Altadena.

Daniel Jerome Kevles, Ph.D., Assistant Professor of History

Fahmy Ibrahim Khattab, Ph.D., Research Fellow in Biology
B.Sc., Cairo University, 1949; M.Sc., Ain Shams University, 1959; Ph.D., 1962. Staff Member, Ain Shams University, 1962-. California Institute, 1964-. (322 Kerckhoff) 230 South Michigan Boulevard.

Taras Kiceniuk, M.S., Lecturer in Engineering Design
B.S., Newark College of Engineering, 1949; M.S., California Institute, 1950. Research Engineer, Hydrodynamics Laboratory, 1951-61; Group Leader, 1961--; Lecturer, 1963-.

John Mathews King, Ph.D., Research Fellow in Chemistry

Robert Burnett King, Ph.D., Professor of Physics
B.A., Pomona College, 1930; Ph.D., Princeton University, 1933. Associate Professor, California Institute, 1948-52; Professor, 1952-. (51 Bridge) 241 South Wilson Avenue, Apt. 104.

Arthur Louis Klein, Ph.D., Professor of Aeronautics
B.S., California Institute, 1921; M.S., 1924; Ph.D., 1925. Research Fellow in Physics and in Aeronautics, 1927-29; Assistant Professor, 1929-34; Associate Professor, 1934-54; Professor, 1954-. (204 Firestone) 437 via Almar, Palos Verdes Estates.

Edward Harris Klevans, Ph.D., Lecturer in Engineering Science

Wolfgang Gustav Knauß, Ph.D., Assistant Professor of Aeronautics
B.S., California Institute, 1958; M.S., 1959; Ph.D., 1963. Research Fellow, 1963-65; Assistant Professor, 1965-. (213 Firestone) 437 via Almar, Palos Verdes Estates.

Lt. Col. William R. Knight, M.S., Professor of Aerospace Studies
B.S., St. Louis University, 1948; M.S., Oklahoma State University, 1960. California Institute, 1963-. (Building T-1) 1415 Michillinda Avenue.

James Kenyon Knowles, Ph.D., Professor of Applied Mechanics
B.S., Massachusetts Institute of Technology, 1952; Ph.D., 1957. Assistant Professor, California Institute, 1958-61; Associate Professor, 1961-65; Professor, 1965-. (309 Thomas) 522 North Michillinda Avenue, Sierra Madre.

Donald Ervin Knuth, Ph.D., Associate Professor of Mathematics
B.S., Case Institute of Technology, 1960; Ph.D., California Institute, 1963. Assistant Professor, 1963-66; Associate Professor, 1966-. (280 Sloan) 630 Fairview Avenue, Sierra Madre.

Hon-Yim Ko, Ph.D., Research Fellow in Civil Engineering

Hans George Edward Kobrak, Ph.D., Senior Research Fellow in Physics
Ph.D., University of Chicago, 1960. Research Fellow, California Institute, 1960-63; Senior Research Fellow, 1964-. (102 Synchrotron) 983 East Howard Street.

Joseph Blake Koepfli, D.Phil., Research Associate in Chemistry
A.B., Stanford University, 1924; M.A., 1925; D.Phil., Oxford University, 1928. California Institute, 1932-37. (119 Church) 1137 Arden Road.

Tohru Komano, Ph.D., Research Fellow in Biology
B.A., Kyoto University, 1937; M.A., 1938; Ph.D., 1942. Assistant Professor of Biochemistry, Kyoto University, 1942-. California Institute, 1945-. (116 Kerckhoff) 1052 East Del Mar Boulevard, Apt. 2.

Ben Zion Kozlovsky, Ph.D., Research Fellow in Physics

Robert Paul Kraft, Ph.D., Staff Member, Mount Wilson and Palomar Observatories

*Leave on detached duty, Kanpur Indo-American Program, 1966-67
**Part-time
Henry Alan Krieger, Ph.D., Assistant Professor of Mathematics
B.A.E., Remseler Polytechnic Institute, 1957; Ph.D., Brown University, 1964. Harry Bateman Research Fellow, California Institute, 1964-65; Assistant Professor, 1965-. (260 Sloan) 661 East Athens Street, Altadena.

Haukur Kristinsson, Ph.D., Research Fellow in Chemistry

Haralampos N. Kritikos, Ph.D., Research Fellow in Electrical Engineering

Wojciech Krzeminski, Ph.D., Research Fellow in Astronomy

Toshi Kubota, Ph.D., Associate Professor of Aeronautics
B.E., Tokyo University, 1947; M.S., California Institute, 1952; Ph.D., 1957. Research Fellow, 1957-59; Assistant Professor, 1959-65; Associate Professor, 1965-. (113 Firestone) 140 Lowell Avenue, Sierra Madre.

Aron Kuppermann, Ph.D., Professor of Chemical Physics
M.Sc., University of Sao Paulo, 1948; Ph.D., Notre Dame University, 1956. California Institute, 1963-. (62 Crellin) 2487 Morslay Road, Altadena.

Herbert R. Kwansnik, Ph.D., Research Fellow in Chemistry

Bert La Brucherie, B.E., Coach
B.E., University of California (Los Angeles), 1929. California Institute, 1949-66. (Gymnasium) 3850 Crestway Drive, Los Angeles.

William Noble Lacey, Ph.D., Professor of Chemical Engineering, Emeritus
A.B., Stanford University, 1911; Ch.E., 1915; M.S., University of California, 1919; Ph.D., 1915. Instructor, California Institute, 1916-17; Assistant Professor, 1917-19; Associate Professor, 1919-31; Professor, 1931-1962. Dean of Graduate Studies, 1946-56; Dean of the Faculty, 1961-62; Professor Emeritus, 1962-. 2928 Second Avenue, San Diego.

Ruth Edna Lack, Ph.D., Research Fellow in Chemistry

Paco Axel Lagerstrom, Ph.D., Professor of Aeronautics
Fil.kand., University of Stockholm, 1935; Fil.lic., 1939; Ph.D., Princeton University, 1942. Research Associate, California Institute, 1945-47; Assistant Professor, 1947-49; Associate Professor, 1949-52; Professor, 1952-. (305 Firestone) 57 San Miguel Road.

Bernard C. Lamb, Ph.D., Gosney Research Fellow in Biology

Lynton S. Land, Ph.D., Research Fellow in Geology

Robert Franklin Landel, Ph.D., Senior Research Fellow in Materials Science
B.S., University of Buffalo, 1949; M.S., 1950; Ph.D., University of Wisconsin, 1954. Section Chief, Solid Propellant Chemistry, Jet Propulsion Laboratory, 1959-. California Institute, 1965-. (229 Keck) 1027 Sunmore Lane, Altadena.

Anton Lang, Ph.D., Research Associate in Biology
Ph.D., University of Berlin, 1939. Director, Plant Research Laboratory, Michigan State University, 1965-. Research Fellow, California Institute, 1950-52; Senior Research Fellow, 1952; Professor, 1959-65; Research Associate, 1966-67.

Robert Vose Langmuir, Ph.D., Professor of Electrical Engineering
A.B., Harvard University, 1935; Ph.D., California Institute, 1943; Senior Research Fellow, 1948-50; Assistant Professor, 1950-52; Associate Professor, 1952-57; Professor, 1957-. (115 Steele) 1855 Homewood Drive, Altadena.

Beach Langston, Ph.D., Associate Professor of English
A.B., The Citadel, 1933; M.A., Claremont College, 1934; Ph.D., University of North Carolina, 1940. Assistant Professor, California Institute, 1947-53; Associate Professor, 1953-. (301 Dabney) 420 South Parkwood Avenue.

*Part-time
58 Officers and Faculty

Barry Michael Lasker, Ph.D., Research Fellow in Astronomy
B.S., Yale University, 1961; M.A., Princeton University, 1963; Ph.D., 1965. California Institute, 1965-.
(Mt. Wilson Office) 963 Emerson Street, Apt. 3.

Charles Christian Lauritsen, Ph.D., LL.D., Professor of Physics, Emeritus
Graduate, Odense Tekniske Skole, 1911; Ph.D., California Institute, 1929; LL.D., University of California, 1965. Assistant Professor, California Institute, 1930-31; Associate Professor, 1931-35; Professor, 1935-62; Professor Emeritus, 1962-.
1444 Del Mar Boulevard.

Thomas Lauritsen, Ph.D., Professor of Physics
B.S., California Institute, 1936; Ph.D., 1939; Senior Research Fellow, 1945; Assistant Professor, 1946-50; Associate Professor, 1950-55; Professor, 1955-.
(103 Kellogg) 1559 Rose Villa Street.

Fritz Henning Laves, Ph.D., Visiting Professor of Geology
Ph.D., University of Zurich, 1930. Professor; Director of Institute of Crystallography and Petrography; Federal Institute of Technology, Zurich, 1954-. California Institute, 1966.

Kelvin Shun-Hung Lee,* Ph.D., Research Fellow in Electrical Engineering
B.S., California Institute, 1960; M.S., 1961; Ph.D., 1964. Research Fellow, 1963-.
73 South Daisy Avenue, Apt. 3.

Peter Anthony Leermakers, Ph.D., Research Fellow in Chemistry
B.A., Wesleyan University, 1958; Ph.D., California Institute, 1962. Assistant Professor of Chemistry, Wesleyan University, 1962-.
California Institute, 1966.

Lester Lees, M.S., Professor of Aeronautics
S.B., Massachusetts Institute of Technology, 1940; M.S., 1941. Associate Professor, California Institute, 1953-55; Professor, 1955-.
(103 Firestone) 925 Alta Fine Drive, Altadena.

Robert Benjamin Leighton, Ph.D., Professor of Physics; Staff Member, Mount Wilson and Palomar Observatories
B.S., California Institute, 1941; M.S., 1944; Ph.D., 1947. Research Fellow, 1947-49; Assistant Professor, 1949-53; Associate Professor, 1953-59; Professor, 1959-. (18 Bridge) 2440 Glen Canyon Road, Altadena.

Anthony Leonard,** Ph.D., Lecturer in Engineering Science
B.S., California Institute, 1959; M.S., Stanford University, 1960; Ph.D., 1963. Staff Member, Rand Corporation, 1963-.
California Institute, 1965-66.

Arnold Vincent Lesikar, Ph.D., Research Fellow in Physics

Edward B. Lewis, Ph.D., Thomas Hunt Morgan Professor of Biology
B.A., University of Minnesota, 1939; Ph.D., California Institute, 1942. Instructor, 1946-48; Assistant Professor, 1948-49; Associate Professor, 1949-56; Professor, 1956-66; Morgan Professor, 1966-.
(303 Kerckhoff) 805 Winthrop Road, San Marino.

Wilbert James Lick, Ph.D., Senior Research Fellow in Aeronautics
(302 Karman) 241 South Hudson Avenue, Apt. 9.

Hans Wolfgang Liepmann, Ph.D., Professor of Aeronautics
Ph.D., University of Zurich, 1938. Assistant Professor, California Institute, 1939-46; Associate Professor, 1946-49; Professor, 1949-.
(303 Karman) 652 Antrim Place.

Bjorn Lindqvist, Fil.lic., Research Fellow in Biology
Fil.kand., Stockholm University, 1961; Fil.lic., 1965. California Institute, 1965-.
(108 Kerckhoff) 368 South Parkwood Avenue.

Frederick Charles Lindvall, Ph.D., D.Sc., Professor of Electrical and Mechanical Engineering; Chairman of the Division of Engineering and Applied Science
B.S., University of Illinois, 1924; Ph.D., California Institute, 1928; D.Sc., National University of Ireland, 1965. Instructor in Electrical Engineering, California Institute, 1930-31; Assistant Professor, 1931-37; Associate Professor of Electrical and Mechanical Engineering, 1937-42; Professor, 1942-.
Division Chairman, 1945-.
(201 Thomas) 1224 Arden Road.

Peter Barry Stuart Lissaman, Ph.D., Assistant Professor of Aeronautics
B.Sc., Natal University, South Africa, 1951; B.A., Cambridge University, 1954; M.S., California Institute, 1955; Ph.D., 1966. Assistant Professor, 1962-.
(301 Firestone) 661 South El Molino Avenue.

Ching-Shi Liu, Ph.D., Senior Research Fellow in Aeronautics
B.S., South Dakota School of Mines and Technology, 1957; M.S., Kansas State University, 1958; Ph.D., Northwestern University, 1961. Assistant Professor of Mechanical Engineering, Northwestern University, 1961-.
(311 Firestone) 100 South Chester Avenue, Apt. 7.

*Part-time
Officers and Faculty  59

Peter Christian Lockemann, Dr.Ing., Research Fellow in Engineering  
Dipl. Ing., Institute of Technology, Munich, 1958; Dr.Ing., 1963. California Institute, 1963-. (17 Steele) 422 Lola Avenue.

Geoffrey Longworth, Ph.D., Research Fellow in Physics  

Heinz Adolph Lowenstam, Ph.D., Professor of Paleozoology  
Ph.D., University of Chicago, 1939. California Institute, 1952-. (361 Arms) 1341 East Orange Grove, Apt. 2.

Peter Herman Lowy, Doctorandum, Senior Research Fellow in Biology  
Doctorandum, University of Vienna, 1936. Research Fellow, California Institute, 1949-65; Senior Research Fellow, 1965-. (219 Kerckhoff) 188 South Meredith Avenue.

Jon Christian Luke, Ph.D., Research Fellow in Applied Mathematics  

Harold Lurie, Ph.D., Professor of Engineering Science; Associate Dean of Graduate Studies  
B.Sc., University of Natal, South Africa, 1940; M.Sc., 1946; Ph.D., California Institute, 1950. Lecturer in Aeronautics, 1948-50; Assistant Professor, 1953-56; Associate Professor, 1956-64; Professor, 1964-; Assistant Dean of Graduate Studies, 1964-66; Associate Dean, 1966-. (325 Thomas) 481 West Loma Alta Drive, Altadena.

Wilhelms A. J. Luxemburg, Ph.D., Professor of Mathematics  
Ph.D., Delft Institute of Technology, 1955. Assistant Professor, California Institute, 1958-60; Associate Professor, 1960-62; Professor, 1962-. (366 Sloan) 817 South El Molino.

A. M. MacBeath, Ph.D., Visiting Professor of Mathematics  

George Eber MacGinitie, M.A., Professor of Biology, Emeritus  
A.B., Fresno State College, 1925; M.A., Stanford University, 1928. California Institute, 1932-57; Professor Emeritus, 1957-.

George Rupert MacMinn, A.B., Professor of English, Emeritus  
A.B., Brown University, 1905. California Institute, 1918-54; Professor Emeritus, 1954-. 255 South Bonnie Avenue.

Jerzy Majkowski, M.D., Ph.D., Research Fellow in Biology  
M.D., Warsaw University, 1952; Ph.D., Warsaw Medical Academy, 1958. Staff Member, Neurological Department, Warsaw Medical Academy, 1954-. California Institute, 1966.

Sudarshan Kumar Malhotra, Ph.D., Senior Research Fellow in Biology  
B.S., University College, Hoshiapur, 1954; M.S., 1955; Ph.D., Panjab University (India), 1957; D.Phil., Oxford University, 1960. Research Fellow, California Institute, 1963-66; Senior Research Fellow, 1966-. (332 Kerckhoff) 231 South Catalina Avenue, Apt. 2.

John Owen Maloy, Ph.D., Senior Research Fellow in Physics  
B.S., University of Arizona, 1954; Ph.D., California Institute, 1958. Research Fellow, 1961-63; Senior Research Fellow, 1963-. (Synchrotron) 365 Cliff Drive.

Oscar Mandel, Ph.D., Associate Professor of English  
B.A., New York University, 1947; M.A., Columbia University, 1948; Ph.D., Ohio State University 1951. Visiting Associate Professor, California Institute, 1961-62; Associate Professor, 1962-. (514 Dabney) 2118 Linnington Avenue, Los Angeles.

Lewis Norman Mander, Ph.D., Research Fellow in Chemistry  

Stephanie Thea Kaye Mander, Ph.D., Research Fellow in Chemistry  

Frank Earl Marble, Ph.D., Professor of Jet Propulsion and Mechanical Engineering  
B.S., Case Institute of Technology, 1940; M.S., 1942; A.E., California Institute, 1947; Ph.D., 1948, Instructor, 1948-49; Assistant Professor, 1949-53; Associate Professor, 1953-57; Professor, 1957-. (203 Guggenheim) 1655 East Mountain Street.

Richard Edward Marsh, Ph.D., Senior Research Fellow in Chemistry  
B.S., California Institute, 1943; Ph.D., University of California (Los Angeles), 1950. Research Fellow, 1950-55; Senior Research Fellow, 1955-. (211 Church) 1947 Sherwood Road, San Marino.
Officers and Faculty

Hardy Cross Martel, Ph.D., Associate Professor of Electrical Engineering
B.S., California Institute, 1949; M.S., Massachusetts Institute of Technology, 1950; Ph.D., California Institute, 1956. Instructor, 1953-55; Assistant Professor, 1955-58; Associate Professor, 1958-. (213 Steele) 1545 Homewood Drive, Altadena.

Laurence Robbin Martin, Ph.D., Research Fellow in Chemistry

Keiji Marushige, Ph.D., Research Fellow in Biology
B.S., Kyoto University, 1937; Ph.D., 1963. California Institute, 1963-. (012 Kerckhoff) 410 South Sierra Madre Boulevard, Apt. 4.

Anita K. Mason, Lie.Ltrs., Lecturer in French

Peter Vroman Mason, ** Ph.D., Lecturer in Electrical Engineering
B.S., California Institute, 1951; M.S., 1952; Ph.D., 1962. Assistant Professor, 1961-66; Lecturer, 1966-. (313 Steele) 3020 North Fair Oaks Avenue, Altadena.

Wiley Roy Mason III, Ph.D., Research Fellow in Chemistry

Sami Faiz Masri, Ph.D., Research Fellow in Mechanical Engineering

David Samuel Mathan, Ph.D., Research Fellow in Biology

Jon Mathews, Ph.D., Professor of Theoretical Physics
B.A., Pomona College, 1952; Ph.D., California Institute, 1957. Instructor, 1957-59; Assistant Professor, 1959-62; Associate Professor, 1962-66; Professor, 1966-. (158 Sloan) 459 West Loma Alta Drive, Altadena.

Ann Matthysse, Ph.D., Research Fellow in Biology

Alan Ian Maxwell, Ph.D., Research Fellow in Biology
B.A., University of Bristol, 1961; Ph.D., 1965. California Institute, 1965-. (316 Kerckhoff) 441 South Catalina Avenue, Apt. 5.

Robert McCredie May, Ph.D., Visiting Associate in Physics
B.S., The University of Sydney, 1957; Ph.D., 1959. Reader in Physics, The University of Sydney, 1965-.

George P. Mayhew, Ph.D., Associate Professor of English
A.B., Harvard University, 1941; M.A., 1947; Ph.D., 1953. Assistant Professor, California Institute, 1954-66; Associate Professor, 1966-. (307 Dalney) 485 South Grand Avenue.

Gilbert Donald McCann, Ph.D., Professor of Applied Science; Director, Willis H. Booth Computing Center
B.S., California Institute, 1934; M.S., 1935; Ph.D., 1939. Associate Professor of Electrical Engineering, 1946-47; Professor, 1947-66; Professor of Applied Science; Director, 1966-. (206 Booth) 2247 North Villa Heights Road.

Donald C. McCollum, Jr., Ph.D., Visiting Associate in Physics
B.S., University of California, 1953; Ph.D., 1960. Associate Professor, University of California (Riverside), 1966-. California Institute, 1966-67.

Caleb W. McCormick, Jr.**, M.S., Associate Professor of Civil Engineering
B.S., University of California, 1945; M.S., 1948; Ph.D., 1951. Associate Professor, 1951-57; Assistant Professor, 1957- (215 Thomas) 1285 Leonard Avenue.

Thane H. McCullough, Ph.D., Research Associate in Geology
B.A., Pomona College, 1949; Ph.D., University of California (Los Angeles), 1953. Staff Member U.S. Geological Survey, 1964-. Assistant Professor, California Institute, 1953-55; Research Associate, 1964.

Jack Edward McKee, Sc.D., Professor of Environmental Health Engineering
B.S., Carnegie Institute of Technology, 1936; M.S., Harvard University, 1939; Sc.D., 1941. Associate Professor of Sanitary Engineering, California Institute, 1949-56; Professor, 1956-69; Professor of Environmental Health Engineering, 1960-. (105 Keck) 635 East Orange Grove, Sierra Madre.

*Leave of absence, 1966-67
**Part-time
Basil Vincent McKoy, Ph.D., Arthur Amos Noyes Research Instructor in Chemistry

Carver Andress Mead, Ph.D., Associate Professor of Electrical Engineering
B.S., California Institute, 1956; M.S., 1957; Ph.D., 1960. Instructor, 1958-59; Assistant Professor, 1959-62; Associate Professor, 1962-. (315 Steele) 2036 Pasadena Glen Road.

Robert W. Meech, Ph.D., Research Fellow in Biology

Herbert Joel Meiselman, Sc.D., Research Fellow in Engineering Science
B.S., Michigan Technological University, 1962; Sc.D., Massachusetts Institute of Technology, 1965. California Institute, 1965-. (09 Thomas) 200 South Catalina Avenue, Apt. F.

Gerhard W. D. Meissner, Dr.rer.nat., Research Fellow in Biology

James Carse Melrose, Ph.D., Visiting Associate in Chemical Engineering

James Edgar Mercereau, Ph.D., Research Fellow in Physics
B.A., Pomona College, 1953; M.S., University of Illinois, 1954; Ph.D., California Institute, 1959. Manager, Cryogenic Devices Department, Ford Motor Company, Newport Beach, 1965-. Assistant Professor, California Institute, 1959-62; Visiting Associate, 1964-65; Research Associate, 1965- (61 Sloan) 32742 Empress Way, Monarch Bay, South Laguna.

Roberta Lee Meyers, Ph.D., Research Fellow in Chemistry

William Whipple Michael, B.S., Professor of Civil Engineering, Emeritus

Richard Graham Miller, Ph.D., Research Fellow in Physics

Richard Lee Miller, Ph.D., Research Fellow in Biology

Herschel Kenworthy Mitchell, Ph.D., Professor of Biology
B.S., Pomona College, 1936; M.S., Oregon State College, 1938; Ph.D., University of Texas, 1941. Senior Research Fellow, California Institute, 1946-49; Associate Professor, 1949-53; Professor, 1953-. (260 Alles) 915 Rosalind Road, San Marino.

Mary B. Mitchell, M.A., Research Fellow in Biology

K. K. Mittal, Ph.D., Research Fellow in Biology

Michael K. Moe, Ph.D., Research Fellow in Physics
B.S., Stanford University, 1959; M.S., Case Institute of Technology, 1961; Ph.D., 1965. California Institute, 1965- (250 Bridge) 716 Fine Street, Altadena.

*Part-time
62 Officers and Faculty

Alan Theodore Moffet, Ph.D., Assistant Professor of Radio Astronomy; Staff Member, Owens Valley Radio Observatory
B.A., Wesleyan University, 1957; Ph.D., California Institute, 1961. Research Fellow, 1962-66; Assistant Professor, Staff Member, 1966-. (111 Robinson) 530 Ladera Street.

Dino Antonio Morelli, Ph.D., Professor of Engineering Design
B.E., Queenslander University, 1937; M.E., 1942; M.S., California Institute, 1945; Ph.D., 1946. Lecturer in Mechanical Engineering, 1948-49; 1958-59; Assistant Professor, 1949-50; Associate Professor, 1953-61; Professor of Engineering Design, 1961-. (301 Thomas) 1375 Chamberlain Road.

James John Morgan, Ph.D., Associate Professor of Environmental Health Engineering
B.S.E., Manhattan College, 1954; M.S.E., University of Michigan, 1956; M.A., Harvard University, 1962; Ph.D., 1964. California Institute, 1965-. (5 Keck) 174 South Sunnyvale, Sierra Madre.

Fernando Bernardo Morinigo,** Ph.D., Research Fellow in Physics
B.S., University of Southern California, 1957; Ph.D., California Institute, 1963. Assistant Professor of Physics, California State College at Los Angeles, 1963-. California Institute, 1962-64; 1965-66.

Guido Joe Hill Mullins, Ph.D., Professor of Astronomy; Staff Member, Mount Wilson and Palomar Observatories

Rokuro Muki, Ph.D., Senior Research Fellow in Applied Mechanics
B.E., Keio University, Tokyo, 1951; Ph.D., 1956. Associate Professor of Mechanics, Keio University, 1961-. Visiting Associate Professor, California Institute, 1965-66; Senior Research Fellow, 1966-67. (327 Thomas) 778 South Euclid Avenue.

Joe Hill Mullins, Ph.D., Senior Research Fellow in Physics
B.S., Agricultural and Mechanical College of Texas, 1950; M.S., California Institute, 1954; Ph.D., 1959. Research Fellow, 1959-60; Senior Research Fellow, 1960-. (102 Synchrotron) 471 West Grand View, Sierra Madre.

Guido Münch, Ph.D., Professor of Astronomy; Staff Member, Mount Wilson and Palomar Observatories
B.S., Universidad Nacional Autonoma de Mexico, 1938; M.S., 1944; Ph.D., University of Chicago, 1947. Assistant Professor, California Institute, 1951-54; Associate Professor, 1954-59; Professor, 1959-. (213-B Robinson) 268 Pleasant Street, Apt. 7.

Edwin Stanton Munger, Ph.D., Professor of Geography
M.S., University of Chicago, 1948; Ph.D., 1951. Visiting Lecturer, American Universities Field Staff, California Institute, 1954; 1957; 1960; Professor, 1951-. (129 Keck) 425 Ninita Parkway.

Bruce Churchill Murray, Ph.D., Associate Professor of Planetary Science; Staff Associate, Mount Wilson and Palomar Observatories

Harold Z. Musselman, A.B., Director of Physical Education and Athletics, Emeritus
A.B., Cornell College, 1920. Instructor, California Institute, 1921-24; Manager of Athletics, 1924-35; Assistant Director of Physical Education and Manager of Athletics, 1935-42; Acting Director of Physical Education, 1942-43; Director of Physical Education and Manager of Athletics, 1943-47; Director of Athletics and Physical Education, 1947-64; Administrative Adviser, 1964-66; Director, Emeritus, 1966-. (105 Mudd) 1535 North Holliston Avenue.

Hirosi Nagao, Ph.D., Visiting Professor of Mathematics
M.S., Osaka City University, 1946; Ph.D., 1955. Professor of Mathematics, Osaka City University, 1963-. California Institute, 1966-67.

George S. Nakai, M.D., Research Fellow in Biology
B.S., University of Utah, 1932; M.D., 1935. Assistant Professor of Medicine, University of California (Los Angeles), 1944-. California Institute, 1963-. (123 Kerckhoff) 382 South San Marino Avenue.

Roddam Narasimha, Ph.D., Senior Research Fellow in Aeronautics

**Part-time
Laslo Nebel, M.D., Research Fellow in Biology
M.D., University of Kolozsvar (Rumania), 1949. Staff Member, The Hebrew University, Jerusalem, 1959-; California Institute, 1966.

Henry Victor Nerrie, Ph.D., Professor of Physics
A.B., Pomona College, 1926; Ph.D., California Institute, 1931. Instructor and Assistant Professor, 1933-40; Associate Professor, 1940-44; Professor, 1944-. (24 Bridge) 885 North Holliston Avenue.

James H. Nerrie, B.S., Coach
Diploma, Savage School for Physical Education, 1933; B.S., Rutgers University, 1941. California Institute, 1946-; (Gymnasium) 1561 Iroquois Avenue, Long Beach.

Gerry Neugebauer, Ph.D., Associate Professor of Physics; Staff Associate, Mount Wilson and Palomar Observatories
A.B., Cornell University, 1954; Ph.D., California Institute, 1960. Assistant Professor, 1962-65; Associate Professor; Staff Associate, 1965-. (22 Bridge) 580 East Alameda Street, Altadena.

Charles Newton, Ph.B., Assistant to the President; Lecturer in English
Ph.B., University of Chicago, 1933. Assistant to the President, California Institute, 1948-; Director of Development, 1961-66; Lecturer, 1953; 1960-62; 1966-. (305 Dabney) 1375 New York Drive, Altadena.

Marc-Aurele Nicolet, Ph.D., Associate Professor of Electrical Engineering
Ph.D., University of Basel, Switzerland, 1958. Assistant Professor, California Institute, 1959-65; Associate Professor, 1965-. (311 Steele) 955 East Del Mar Boulevard.

Andrzej Marek Niechaj, M.D., Research Fellow in Biology

Robert Ye Fong Ning, Ph.D., Research Fellow in Chemistry

Roger Gordon Noll, M.A., Instructor in Economics

Wheeler James North, Ph.D., Associate Professor of Environmental Health Engineering
B.S., California Institute, 1944; M.S., Ph.D., University of California, 1953. Visiting Assistant Professor of Biology, California Institute, 1962; Associate Professor of Environmental Health Engineering, 1963-; (11 Keck) 2336 Minuteman Way, Costa Mesa.

Roman Novins,** M.A., Lecturer in Russian
M.A., Sequoia University, 1952. Staff Member, Department of Slavic Studies, University of Southern California, 1960-. California Institute, 1962-. (9 Dabney) 6701 Drexel Avenue, Los Angeles.

Patrick William Nye, Ph.D., Research Fellow in Applied Science

Orpha Caroline Ochs,** Ph.D., Lecturer in Music
B.M., Central College, Fayette, Missouri, 1947; M.M., Eastman School of Music, University of Rochester, 1948; Ph.D., 1953. California Institute, 1960-. (204 Dabney) 1045 North Marengo Avenue.

David John O'Dell, Ph.D., Research Fellow in Chemistry

Walter Thomas Ogier, Ph.D., Visiting Associate in Physics
B.S., California Institute, 1947; Ph.D., 1953. Associate Professor of Physics, Pomona College, 1962-. Research Fellow, California Institute, 1953; Visiting Associate, 1966-67.

John Beverley Oke, Ph.D., Professor of Astronomy; Staff Member, Mount Wilson and Palomar Observatories
B.A., University of Toronto, 1949; M.A., 1950; Ph.D., Princeton University, 1953. Assistant Professor, California Institute, 1953-61; Associate Professor, 1961-64; Professor, 1964-. (220 Robinson) 1102 Beverly Way, Altadena.

Robert Warner Oliver, Ph.D., Associate Professor of Economics
A.B., University of Southern California, 1943; A.M., 1948; A.M., Princeton University, 1950; Ph.D., 1957. Assistant Professor, California Institute, 1959-61; Associate Professor, 1961-; (209 Dabney) 3197 San Pasqual Street.

Bal dom en o Marquez Olivera, Jr., Ph.D., Research Fellow in Chemistry
B.S., University of the Philippines, 1960; Ph.D., California Institute, 1966. Research Fellow, 1966.

**Part-time
Robert Allen Osteryoung, Ph.D., Visiting Associate in Chemistry

Harald Ostvold, M.A., Director of Libraries
B.A., Hamline University, 1936; B.S., University of Minnesota, 1939; M.A., 1940. California Institute, 1963-. (General Library) 2530 Glen Canyon Road, Altadena.

Ray David Owen, Ph.D., Sc.D., Professor of Biology; Chairman of the Division of Biology
B.S., Carroll College, 1937; Ph.D., University of Wisconsin, 1938; Ph.D., 1941; Sc.D., Carroll College, 1962. Gosney Fellow, California Institute, 1946-47; Associate Professor, 1947-53; Professor, 1953--; Chairman, 1961--; (165 Church) 1583 Rose Villa Street.

William England Palke, Ph.D., Research Fellow in Chemistry

Charles Herach Papas, Ph.D., Professor of Electrical Engineering
B.S., Massachusetts Institute of Technology, 1941; M.S., Harvard University, 1946; Ph.D., 1948. Lecturer, California Institute, 1952-54; Associate Professor, 1954-59; Professor, 1959-. (113 Steele) 543 Vallombrosa Drive.

Cyril Parkanyi, Ph.D., Research Fellow in Chemistry
Dipl.Ch., Charles University, Prague, 1956; Ph.D., Czechoslovak Academy of Sciences, 1962; Staff Member, 1960-. California Institute, 1965-. (320 Church) 307 South Wilson Avenue.

Roger Parsons, Ph.D., D.Sc., Visiting Professor of Chemistry

Claire Cameron Patterson, Ph.D., Senior Research Fellow in Geochemistry
A.B., Grinnell College, 1943; M.S., University of Iowa, 1944; Ph.D., University of Chicago, 1951. Research Fellow, California Institute, 1952-53; Senior Research Fellow, 1953-. (114 Mudd) 5303 Crown Avenue, La Cañada.

Rodman Wilson Paul, Ph.D., Professor of History
A.B., Harvard University, 1936; M.A., 1937; Ph.D., 1943. Associate Professor, California Institute, 1947-51; Professor, 1951-. (8 Dabney) 586 La Loma Road.

B.S., Oregon State College, 1922; Ph.D., California Institute, 1925. Research Associate, 1926-27; Assistant Professor, 1927-29; Associate Professor, 1929-31; Professor, 1931-64; Chairman of the Division of Chemistry and Chemical Engineering, 1936-58; Research Associate, 1964-. 794 Hot Springs Road, Santa Barbara.

John V. Peach, Ph.D., Research Fellow in Astronomy

Charles William Peck, Ph.D., Assistant Professor of Physics
B.S., New Mexico College of Agricultural and Mechanical Arts, 1956; Ph.D., California Institute, 1964. Research Fellow, 1964-65; Assistant Professor, 1965-. (Synchrotron) 105 North San Marino Avenue.

John Robert Penswick, Ph.D., Research Fellow in Biology

Avigdor Persky, Ph.D., Research Fellow in Chemistry

Börje Ingvar Persson, Fil.dr., Research Fellow in Physics

John Andrew Petruska, Ph.D., Senior Research Fellow in Biology
B.Sc., Bishop’s University, Quebec, 1953; M.Sc., McMaster University, Ontario, 1954; Ph.D., University of Chicago, 1962. Research Fellow in Chemistry, California Institute, 1958-60; Research Fellow in Biology, 1960-64; Senior Research Fellow, 1964-. (092 Alles) 721 South Mentor Avenue.

Allen Michael Pfieffer, Ph.D., Research Fellow in Mathematics

Keith Lowell Phillips, Ph.D., Assistant Professor of Mathematics
William Hayward Pickering, Ph.D., *Professor of Electrical Engineering; Director of Jet Propulsion Laboratory*

B.S., California Institute, 1932; M.S., 1933; Ph.D., 1936. Instructor, 1936-40; Assistant Professor, 1940-45; Associate Professor, 1945-47; Professor, 1947--; Director, Jet Propulsion Laboratory, 1954-. (Jet Propulsion Lab.) 292 St. Katherine Drive.

Lajos Piko, D.V.M., *Senior Research Fellow in Biology*

Jerome Pine, Ph.D., *Associate Professor of Physics*

Cornelius John Pings, Ph.D., *Professor of Chemical Engineering*

B.S., California Institute, 1951; M.S., 1952; Ph.D., 1955. Associate Professor, 1959-64; Professor, 1964-. (315 Mudd) 258 South Parkwood Avenue.

Russell Mosher Pitzer, Ph.D., *Assistant Professor of Theoretical Chemistry*

B.S., California Institute, 1959; Ph.D., Harvard University, 1963. A.A. Noyes Research Instructor in Chemistry, 1963-66; Assistant Professor of Theoretical Chemistry, 1966-. (207 Church) 391 South Pomona Avenue.

Milton S. Plesset, Ph.D., *Professor of Engineering Science*

B.S., University of Pittsburgh, 1929; Ph.D., Yale University, 1932. Associate Professor, 1948-51; Professor, 1951-. (311 Thomas) 860 Orlando Road, San Marino.

Anand Prakash, Ph.D., *Research Fellow in Geology*

B.S., Agra University, 1956; M.S., Allahabad University, 1958; Ph.D., Calcutta University, 1965. California Institute, 1965-66. (316 Mudd) 258 South Hudson Avenue, Apt. 38.

Edward T. Preisler, B.A., *Coach*

B.A., San Diego State College, 1941. California Institute, 1947-. (Gymnasium) 2776 Yorkshire Road.

Charles Young Prescott, Ph.D., *Research Fellow in Physics*

Romuald Kazimierz Puzyrewski, Dr.Ing., *Research Fellow in Engineering*

Dr.Ing., Technical University, Gdańsk, 1963. Assistant Professor of Fluid Mechanics, Polish Academy of Sciences, 1963-. California Institute, 1965-66.

Michael Augustine Raftery, Ph.D., *Arthur Amos Noyes Research Instructor in Chemistry*

B.Sc., National University of Ireland, 1956; Ph.D., 1960. California Institute, 1964-. (105 Church) 736 Magnolia Avenue.

Fredric Raichlen, Sc.D., *Assistant Professor of Civil Engineering*

Venkatapathi Esukapalle Raju, Ph.D., *Research Fellow in Chemistry*

Simon Ramo, Ph.D., *Research Associate in Electrical Engineering*

B.S., University of Utah, 1933; Ph.D., California Institute, 1936. California Institute, 1946-. (206 Booth) 278 Tavistock Avenue, Los Angeles.

W. Duncan Rannie, Ph.D., *Robert H. Goddard Professor of Jet Propulsion*

B.A., University of Toronto, 1936; M.A., 1937; Ph.D., California Institute, 1951. Assistant Professor of Mechanical Engineering, 1947-51; Associate Professor, 1951-55; Professor, 1955-. (205 Guggenheim) 272 E. Highland Avenue, Sierra Madre.

Charles vanBlekkingh Ray, M.S., *Lecturer in Applied Science*

B.E.E., Cornell University, 1952; M.S., California Institute, 1956. Senior Engineer, Computing Center, 1964-; Lecturer, 1965-. (212 Booth) 1306 Sonoma Drive, Altadena.

Richard Bradley Read, Ph.D., *Senior Research Fellow in Radio Astronomy; Staff Member, Owens Valley Radio Observatory*

B.S., California Institute, 1955; Ph.D., 1962. Research Fellow, 1962-66; Senior Research Fellow; Staff Member, 1966-. (103 Robinson) 3758 Alrad Road, Altadena.

H. Hollis Reamer, M.S., *Senior Research Fellow in Chemical Engineering*

A.B., University of Redlands, 1937; M.S., California Institute, 1938; Research Assistant, 1938-52; Research Fellow, 1952-53; Senior Research Fellow, 1958-. (357 Spalding) 1835 Woodlyn Road.
Octavio Gaspar de Souza Ricardo, Dr.Eng., Research Associate in Aeronautics
B.Sc., Sao Paulo University, 1944; D.I.C., London University, 1948; Dr.Eng., Sao Paulo University, 1964. Professor of Structures, Sao Paulo University, 1957-; California Institute, 1959-60; 1965.

John Hall Richards, Ph.D., Associate Professor of Organic Chemistry
B.A., University of California, 1951; B.Sc., Oxford University, 1953; Ph.D., University of California, 1958. Assistant Professor, California Institute, 1957-61; Associate Professor, 1961-. (361 Crellin) 677 Deodar Lane, Bradbury.

Ira Richer, Ph.D., Research Fellow in Applied Science

Charles Francis Richter, Ph.D., Professor of Seismology
A.B., Stanford University, 1920; Ph.D., California Institute, 1928. Assistant Professor, 1937-47; Associate Professor, 1947-52; Professor, 1952-. (Seismological Lab.) 1820 Kenneth Way.

Heinrich Rinderknecht, Ph.D., Senior Research Fellow in Chemistry
Dipl.-Sc., Federal Institute of Technology, Zurich, 1936; Ph.D., University of London, 1939. Associate Professor, University of Southern California School of Medicine, 1964-. Research Fellow, California Institute, 1947-48; 1949-54; Senior Research Fellow, 1962-64; 1965-66.

John D. Roberts, Ph.D., Dr.rer.nat., Sc.D., Professor of Organic Chemistry, Chairman of the Division of Chemistry and Chemical Engineering
B.A., University of California (Los Angeles), 1941; Ph.D., 1944; Dr.rer.nat., University of Munich, 1962; Sc.D., Temple University, 1964. Professor, California Institute, 1953-; Division Chairman, 1963-. (162 Crellin) 2659 Tanoble Drive, Altadena.

George Wilse Robinson, Ph.D., Professor of Physical Chemistry
B.S., Georgia Institute of Technology, 1947; M.S., 1949; Ph.D., State University of Iowa, 1952. Associate Professor, California Institute, 1959-61; Professor, 1961-. (5 Gates) 8000 North Grand Avenue, Glendora.

Robert Allan Rosenstone, Ph.D., Visiting Assistant Professor of History

Anatol Roshko, Ph.D., Professor of Aeronautics
B.Sc., University of Alberta, 1945; M.S., California Institute, 1947; Ph.D., 1952. Research Fellow, 1952-54; Senior Research Fellow, 1954-55; Assistant Professor, 1955-58; Associate Professor, 1958-62; Professor, 1962-. (304 Karman) 3130 Maiden Lane, Altadena.

Ronald Steven Rosich, Ph.D., Research Fellow in Chemistry

Ian Walter Roxburgh, Ph.D., Research Fellow in Physics

Robert F. Roy, Ph.D., Senior Research Fellow in Geophysics

George Milton Rubottom, Ph.D., Research Fellow in Chemistry

Konrad Rudnicki, Ph.D., Senior Research Fellow in Astronomy
M.S., Warsaw University, 1949; Ph.D., 1952. Staff Member, Astronomical Observatory, Warsaw University, 1950-. Research Fellow, California Institute, 1961-62; Senior Research Fellow, 1965- (007 Robinson) 1441 San Pasqual Street.

Peter Rüst, Ph.D., Research Fellow in Biology

Bruce Herbert Rule, B.S., Staff Member, Chief Engineer, Mount Wilson and Palomar Observatories; Staff Member, Owens Valley Radio Observatory
B.S., California Institute, 1932. Director, Central Engineering Services, 1943-; Staff Member, Chief Engineer, 1965-. (204-B Central Engineering Services) 2205 Monte Vista.

David M. Rust, Ph.D., Research Fellow in Astronomy

Rolf Heinrich Sabersky, Ph.D., Professor of Mechanical Engineering
B.S., California Institute, 1942; M.S., 1943; Ph.D., 1949. Assistant Professor, 1949-55; Associate Professor, 1955-61; Professor, 1961-. (203 Thomas) 8206 Loma Vista Street.

**Part-time
Philip Geoffrey Saffman, Ph.D., Professor of Fluid Mechanics  

Bruce Hornbrook Sage, Ph.D., Eng.D., Professor of Chemical Engineering  
B.S., New Mexico State College, 1929; M.S., California Institute, 1931; Ph.D., 1934; Eng.D., New Mexico State College, 1953. Research Fellow, California Institute, 1934-35; Senior Fellow in Chemical Research, 1935-37; Assistant Professor, 1937-39; Associate Professor, 1939-44; Professor, 1944-. (213 Spalding).

Miklos Sajben, Sc.D., Assistant Professor of Aeronautics  
Dipl.Ing., Technical University of Budapest, 1953; M.S., University of Pennsylvania, 1961; Sc.D., Massachusetts Institute of Technology, 1964. California Institute, 1964-.

William O. Salivar, Ph.D., Research Fellow in Biology  

Sten Otto Samson, Fil.llic., Senior Research Fellow in Chemistry  
Fil.kand., University of Stockholm, 1953; Fil.llic., 1956. Research Fellow, California Institute, 1953-56; 1957-61; Senior Research Fellow, 1961-. (58 Crellin) 351 South Parkwood Avenue.

Allan Rex Sandage, Ph.D., Staff Member, Mount Wilson and Palomar Observatories  
A.B., University of Illinois, 1948; Ph.D., California Institute, 1953, Mt. Wilson Observatory, 1948-. (Mt. Wilson Office) 701 Santa Barbara Street.

Lawrence B. Sandberg, M.D., Ph.D., Research Fellow in Biology  

Bob G. Sanders, Ph.D., Assistant Professor of Biology  
B.S., Concord College, 1964; M.Ed., Pennsylvania State University, 1958; Ph.D., 1961. Research Fellow, California Institute, 1964-66; Assistant Professor, 1966-. (03 Kerckhoff) 368 South Catalina Avenue.

James Milton Sanders, Ph.D., Research Fellow in Chemistry  

Wallace Leslie William Sargent, Ph.D., Assistant Professor of Astronomy; Staff Member, Mount Wilson and Palomar Observatories  
B.Sc., Manchester University, 1956; M.Sc., 1957; Ph.D., 1959. Research Fellow, California Institute, 1959-62; Assistant Professor; Staff Member, 1966-.

Denis Graham Sargood, Ph.D., Visiting Associate in Physics  
B.S., University of Melbourne, 1950; M.S., Ph.D., 1964. Senior Lecturer in Physics, University of Melbourne, 1965-. California Institute, 1966-67.

Yutaka Sasaki, M.D., Ph.D., Research Fellow in Applied Science  
M.D., Keio University, 1958; Ph.D., 1965. Staff Member, Tokyo Women's Medical College, 1963-. California Institute, 1965-. (26 Steele) 999 Cordova Street, Apt. 8.

Horst Sauer, Ph.D., Research Fellow in Biology  

Aert Schadee, Ph.D., Research Fellow in Astronomy  
Ph.D., University of Utrecht, 1964. California Institute, 1965-. (205 Robinson) 397 South Catalina Avenue.

Peter August Georg Scheuer, Ph.D., Visiting Associate Professor of Astronomy  

Christoph Hans Schmid, Ph.D., Research Fellow in Theoretical Physics  

Maarten Schmidt, Ph.D., Professor of Astronomy; Staff Member, Mount Wilson and Palomar Observatories  
Ph.D., University of Leiden, 1956. Carnegie Fellow, Mount Wilson and Palomar Observatories, 1956-58; Associate Professor, California Institute, 1959-64; Professor, 1964-. (202 Robinson) 152 East Loma Alta Drive, Altadena.

Howard Joel Schnitzer, Ph.D., Visiting Associate in Physics  
B.S., Newark College of Engineering, 1953; Ph.D., University of Rochester, 1960. Associate Professor, Brandeis University, 1964-. California Institute, 1966.
Officers and Faculty

Walter Adolph Schroeder, Ph.D., Research Associate in Chemistry
B.Sc., University of Nebraska, 1939; M.A., 1940; Ph.D., California Institute, 1943. Research Fellow, 1943-46; Senior Research Fellow, 1946-56; Research Associate, 1956-. (109 Church) 307 North Pine Street, San Gabriel.

Henry Gerard Schwartz, Jr., Ph.D., Research Fellow in Environmental Health Engineering

Frank J. Sciulli, Ph.D., Research Fellow in Physics

Richard Anthony Scott, Ph.D., Research Fellow in Applied Mechanics
B.Sc., National University of Ireland (Cork), 1957; M.Sc., 1959; Ph.D., California Institute, 1964. Lecturer, 1964-65; Research Fellow, 1965-. (229 Thomas) 366 South Mentor Avenue.

Ronald Fraser Scott, Sc.D., Associate Professor of Civil Engineering
B.Sc., Glasgow University, 1951; S.M., Massachusetts Institute of Technology, 1953; Sc.D., 1955. Assistant Professor, California Institute, 1955-62; Associate Professor, 1962-. (111 Thomas) 2752 North Santa Anita Avenue, Altadena.

Georgiana Winthrop Scovil, Ph.D., Visiting Associate in Materials Science

Thayer Scudder, Ph.D., Associate Professor of Anthropology
A.B., Harvard College, 1952; Ph.D., Harvard University, 1960. Assistant Professor, California Institute, 1964-66; Associate Professor, 1966-. (325 Spalding) 2484 North Altadena Drive.

Ernest Edwin Sechler, Ph.D., Professor of Aeronautics; Executive Officer for the Graduate Aeronautical Laboratories
B.S., California Institute, 1928; M.S., 1929; Ph.D., 1934. Instructor, 1930-37; Assistant Professor, 1937-40; Associate Professor, 1940-48; Professor, 1948-; Executive Officer, 1946-; (204 Firestone) 2265 Montecito Drive, San Marino.

Joseph J. Seckbach, Ph.D., Research Fellow in Biology

Galen Lathrop Seever, Ph.D., Assistant Professor of Mathematics
A.B., University of Kansas, 1956; M.A., 1959; Ph.D., University of California, 1963. California Institute, 1965-. (276 Sloan) 144 South Catalina Avenue, Apt. 3.

George Andrew Seielstad, Ph.D., Research Fellow in Radio Astronomy
A.B., Dartmouth College, 1959; Ph.D., California Institute, 1963. Research Fellow, 1964-. (110 Robinson) P.O. Box 89, Big Pine.

Edwin Charles Seltzer, Ph.D., Research Fellow in Physics

Fredrick Harold Shair, Ph.D., Assistant Professor of Chemical Engineering
B.S., University of Illinois, 1957; Ph.D., University of California, 1963. California Institute, 1965-. (117 Thomas) 1506 North Allen Avenue, Altadena.

Jerome Lee Shapiro, Ph.D., Assistant Professor of Applied Science

Mark Howard Shapiro, Ph.D., Research Fellow in Physics

David Howland Sharp, Ph.D., Research Fellow in Physics

Robert Phillip Sharp, Ph.D., Professor of Geology; Chairman of the Division of Geological Sciences
B.S., California Institute, 1934; M.S., 1935; A.M., Harvard University, 1936; Ph.D., 1938. Professor, California Institute, 1947-; Division Chairman, 1952-. (158 Arms) 1410 East Palm Street, Altadena.

Robert Victor Sharp, Ph.D., Research Fellow in Geology
Officers and Faculty

Giora Shaviv, D.Sc., Research Fellow in Physics

Neil Rolison Sheeley, Jr., Ph.D., Research Fellow in Physics

Simon M. F. Sheppard, Ph.D., Research Fellow in Geochemistry

Bruce Arne Sherwood, Ph.D., Assistant Professor of Physics
B.S., Purdue University, 1960; M.S., University of Chicago, 1963; Ph.D., 1966. Research Fellow, California Institute, 1966; Assistant Professor, 1966-. (Bldg. T-4) 740 Morada Place, Altadena.

Richard Thorpe Shield, Ph.D., Professor of Applied Mechanics
B.Sc., Kings College, Durham University, 1949; Ph.D., 1952. California Institute, 1965-. (225 Thomas) 5397 Harter Lane, La Canada.

Eugene Merle Shoemaker, Ph.D., Research Associate in Astrogateology

Leon Theodore Silver, Ph.D., Professor of Geology
B.S., University of Colorado, 1945; M.S., University of New Mexico, 1948; Ph.D., California Institute, 1955. Assistant Professor, 1955-62; Associate Professor, 1962-65; Professor, 1965-. (211 Mudd) 3315 Crestford Drive, Altadena.

R. Bruce Simpson, Ph.D., Harry Bateman Research Fellow in Mathematics

Robert Louis Sinzheimer, Ph.D., Professor of Biophysics
S.B., Massachusetts Institute of Technology, 1941; S.M., 1942; Ph.D., 1948. Senior Research Fellow, California Institute, 1953; Professor, 1957-. (188 Alles) 1455 Chamberlain Road.

George Leonard Siscoe, Ph.D., Research Fellow in Physics
B.S., Massachusetts Institute of Technology, 1960; Ph.D., 1964. California Institute, 1964-. (305 E. Bridge) 1644 Huntington Drive, South Pasadena.

Arlan Edward Somerville Smith, Ph.D., Research Fellow in Biology
A.B., University of California, 1951; Ph.D., 1959. California Institute, 1963-. (08 Kerckhoff) 708 East California Boulevard.

Bruce Nephi Smith, Ph.D., Research Fellow in Geochemistry

David Rodman Smith, Ph.D., Associate Professor of English
B.A., Pomona College, 1944; M.A., Claremont Colleges, 1950; Ph.D., 1960. Instructor, California Institute, 1958-60; Assistant Professor, 1960-66; Associate Professor, 1966-. (306 Dabney) 230 West Sierra Madre Avenue, Glendora.

John Michael Smith, Ph.D., Assistant Professor of Chemistry
B.S., University of Michigan, 1962; Ph.D., University of California (Los Angeles), 1966. California Institute, 1966-.

Hallett D. Smith, Ph.D., Professor of English; Chairman of the Division of Humanities and Social Sciences
B.A., University of Colorado, 1928; Ph.D., Yale University, 1934. California Institute, 1949-. (204 Dabney) 1455 South Marengo Avenue.

Stewart Wilson Smith, Ph.D., Associate Professor of Geophysics
S.B., Massachusetts Institute of Technology, 1954; M.S., California Institute, 1958; Ph.D., 1961. Assistant Professor, 1961-64; Associate Professor, 1964-. (Seismological Lab) 555 East Pompyfields Drive, Altadena.

William Ralph Smythe, Ph.D., Professor of Physics, Emeritus
A.B., Colorado College, 1916; A.M., Dartmouth College, 1919; Ph.D., University of Chicago, 1921. National Research Fellow, California Institute, 1923-26; Research Fellow, 1926-27; Assistant Professor, 1927-34; Associate Professor, 1934-40; Professor, 1940-64; Professor Emeritus, 1964-. (107 E. Bridge) 674 Manzanita Avenue, Sierra Madre.

John Michael Soper, Ph.D., Visiting Associate in Physics
70 Officers and Faculty

John Brelsford Southard, Ph.D., Research Fellow in Geology

Stefan Lubomirov Spassov, B.Sc., Research Fellow in Chemistry
B.Sc., Institute of Chemical Technology (Sofia), 1958. Staff Member, Bulgarian Academy of Sciences, 1958-. California Institute, 1965-66.

Roger Wolcott Sperry, Ph.D., Hixon Professor of Psychobiology

Eugene Spiegel, Ph.D., Instructor in Mathematics

Rangasami Sridhar, Ph.D., Associate Professor of Electrical Engineering
B.S., University of Mysore, 1955; M.S., Purdue University, 1957; Ph.D., 1960. California Institute, 1965-. (215 Steele) 241 South Hudson Avenue, Apt. 7.

Richard Henry Stanford, Jr., Ph.D., Senior Research Fellow in Chemistry

Gordon James Stanley, Dipl., Research Associate in Radio Astronomy; Director, Owens Valley Radio Observatory
Dipl., New South Wales University of Technology, 1946. Research Engineer, California Institute, 1955-58; Senior Research Fellow, 1958-62; Research Associate, 1962-. Director, Owens Valley Radio Observatory, 1965-. (102 Robinson) 1654 East Loma Alta Drive, Altadena.

Roger Fellows Stanton, Ph.D., Professor of English, Emeritus
B.S., Colgate University, 1929; M.A., Princeton University, 1924; Ph.D., 1931. Instructor, California Institute, 1925-31; Assistant Professor, 1931-47; Associate Professor, 1947-55; Professor, 1955-65; Director of Institute Libraries, 1949-63; Professor Emeritus, 1966-. 135 South Holliston Avenue, Apt. F.

Captain Donald L. Stearns, M.S., Assistant Professor of Aerospace Studies
B.A., University of Miami, 1956; M.S., 1957. California Institute, 1963-. (Building T-1) 3190 Hermanas Street.

Eli Sternberg, Ph.D., Professor of Applied Mechanics
B.S., University of North Carolina, 1941; M.S., Illinois Institute of Technology, 1942; Ph.D., 1945; D.Sc., University of North Carolina, 1963. California Institute, 1964-. (321 Thomas) 2052 South Catalina Avenue.

Homer Joseph Stewart, Ph.D., Professor of Aeronautics
B.Aero.E., University of Minnesota, 1936; Ph.D., California Institute, 1940. Instructor, 1939-42; Assistant Professor 1942-46; Associate Professor, 1946-49; Professor, 1949-. (205 Firestone) 2393 Tanoble Drive, Altadena.

Thomas Stewart, Ph.D., Research Fellow in Chemistry

William Sheldon Stewart, Ph.D., Research Associate in Biology
B.A., University of California (Los Angeles), 1936; M.A., 1937; Ph.D., California Institute, 1939. Director, Los Angeles State and County Arboretum, 1955-. California Institute, 1955-43 North Vista Avenue, Sierra Madre.
Officers and Faculty 71

Wilhelm Stoffel, M.D., Ph.D., Professor of Biology
M.D., University of Cologne, 1952; Ph.D., 1959. California Institute, 1966-.

Edward Carroll Stone, Jr., Ph.D., Senior Research Fellow in Physics
M.S., University of Chicago, 1957; Ph.D., 1963. Research Fellow, California Institute, 1964-66; Senior Research Fellow, 1966-. (23 Bridge) 1813 Maple Street.

Gill Strejan, Ph.D., Research Fellow in Chemistry
B.S., Bucharest University, 1949; M.Sc., 1953; Ph.D., The Hebrew University, Jerusalem, 1965. California Institute, 1965-. (312 Church) 165 South Holliston Avenue, Apt. E.

Thomas Foster Strong, M.S., Associate Professor of Physics; Dean of Freshmen
B.S., University of Wisconsin, 1928; M.S., California Institute, 1937; Assistant Professor, 1944-65; Associate Professor, 1965-. Dean of Freshmen, 1945-47; (116 Throop) 1791 East Mendocino Street, Altadena.

Felix Strumwasser, Ph.D., Associate Professor of Biology
B.A., University of California (Los Angeles), 1953; Ph.D., 1957. California Institute, 1964-. (308 Kerckhoff) 526 East Alta Fine Drive, Altadena.

James Holmes Sturdivant, Ph.D., Professor of Chemistry
B.A., University of Texas, 1926; M.A., 1927; Ph.D., California Institute, 1930. Research Fellow, 1930-35; Senior Research Fellow, 1935-38; Assistant Professor, 1938-45; Associate Professor, 1945-47; Professor, 1947-. (68 Crellin) 270 South Berkeley Avenue.

Alfred Henry Sturtevant, Ph.D., Sc.D., Thomas Hunt Morgan Professor of Biology, Emeritus
A.B., Columbia University, 1912; Ph.D., 1914; Sc.D., Princeton University, 1947; Sc.D., University of Pennsylvania, 1949. Professor, California Institute, 1928-51; Thomas Hunt Morgan Professor of Genetics, 1951-62; Professor Emeritus, 1962-. (305 Kerckhoff) 1244 Arden Road.

Bradford Sturtevant, Ph.D., Associate Professor of Aeronautics
B.E., Yale University, 1955; M.S., California Institute, 1956; Ph.D., 1960. Research Fellow, 1960-62; Assistant Professor, 1962-66; Associate Professor, 1966-. (307 Karman) 1262 Sunny Oaks Circle, Altadena.

Easwaran Subramanian, Ph.D., Research Fellow in Chemistry
B.Sc., Presidency College (Madras), 1959; M.Sc., University of Madras, 1960; Ph.D., 1965. California Institute, 1965-. (208 Church) 118 South Craig Avenue.

Ryuichi Sugisaki, D.Sc., Research Fellow in Geochemistry

Clare C. C. Yu Sun, Ph.D., Research Fellow in Biology

Mahiko Suzuki, Ph.D., Richard Chace Tolman Research Fellow in Theoretical Physics

Alan R. Sweezy, Ph.D., Professor of Economics
B.A., Harvard University, 1929; Ph.D., 1934. Visiting Professor, California Institute, 1949-50; Professor, 1950-. (311 Dabney) 433 South Greenwood Avenue.

Ernest Haywood Swift, Ph.D., LL.D., Professor of Analytical Chemistry
B.S., University of Virginia, 1918; M.S., California Institute, 1920; Ph.D., 1924; LL.D., Randolph-Macon College, 1960. Instructor, California Institute, 1920-28; Assistant Professor, 1928-39; Associate Professor, 1939-43; Professor, 1943-; Division Chairman, 1958-63. (203 Gates) 572 La Paz Drive, San Marino.

John Edward Swisher, Ph.D., Research Fellow in Biology
B.S., Stetson University, 1958; M.S., University of Florida, 1961; Ph.D., 1965. California Institute, 1965-. (381 Alles) 315 South Catalina Avenue, Apt. 5.

Henrietta Hill Swope, A.M., Research Fellow in Astronomy

Michael J. Tanner, Ph.D., Research Fellow in Biology
Officers and Faculty

Hugh Pettingill Taylor, Jr., Ph.D., Associate Professor of Geology
B.S., California Institute, 1954; A.M., Harvard University, 1955; Ph.D., California Institute, 1959. Assistant Professor, 1959-61; Research Fellow, 1961; Assistant Professor, 1962-64; Associate Professor, 1964-.(313 Mudd) 231 South Catalina Avenue, Apt. 7.

Michael Gleeson Taylor, M.D., Ph.D., Visiting Professor of Engineering Science

Evelyn May Lee-Teng, Ph.D., Research Fellow in Biology
B.S., National Taiwan University, 1959; M.A., Stanford University, 1960; Ph.D., 1963. California Institute, 1963-.(382 Alles) 1116 Lura Street.

Ta-Liang Teng, Ph.D., Research Fellow in Geophysics
B.S., National Taiwan University, 1959; Ph.D., California Institute, 1966. Research Fellow, 1966-67. 1116 Lura Street.

Ulfr Thewalt, Dr. rer. nat., Research Fellow in Chemistry

Frederick Burtis Thompson, Ph.D., Professor of Applied Science and Philosophy
A.B., University of California (Los Angeles), 1946; M.A., 1947; Ph.D., University of California, 1952. California Institute, 1965-.(103 Steele) 3353 Villa Knolls Drive.

Kip Stephen Thorne, Ph.D., Research Fellow in Physics

Chen-Hanson Ting, Ph.D., Research Fellow in Chemistry
B.S., National Taiwan University, 1961; M.S., University of Chicago, 1963; Ph.D., 1965. California Institute, 1965-.(128 Crellin) 258 South Hudson Avenue, Apt. 28.

John Todd, B.Sc., Professor of Mathematics
B.Sc., Queen's University, Ireland, 1931. California Institute, 1937-.(262 Sloan) 1625 Sierra Bonita Lane.

Olga Taussky Todd, Ph.D., Research Associate in Mathematics
Ph.D., University of Vienna, 1930; M.A., University of Cambridge, 1937. California Institute, 1957-.(264 Sloan) 1625 Sierra Bonita Lane.

Alvin Virgil Tollestrup, Ph.D., Professor of Physics
B.S., University of Utah, 1944; Ph.D., California Institute, 1950. Research Fellow, 1950-53; Assistant Professor, 1953-58; Associate Professor, 1958-62; Professor, 1962-.(172 Sloan) 461 Mariposa Drive, Altadena.

Thomas Anthony Tombrello, Jr., Ph.D., Assistant Professor of Physics

Sander Trajmar, Ph.D., Research Fellow in Chemistry
Dipl., University of Science, Hungary, 1955; Ph.D., University of California, 1961. Senior Scientist, Jet Propulsion Laboratory, 1961-. California Institute, 1964-.

Nicholas William Tschoegl, Ph.D., Associate Professor of Materials Science

Takashi Tsuji, Ph.D., Research Fellow in Astrophysics
B.S., University of Tokyo, 1960; M.A., 1962; Ph.D., 1965. Staff Member, Okayama Observatory, University of Tokyo, 1960-. California Institute, 1966-67.

Albert Tyler, Ph.D., Professor of Biology
A.B., Columbia University, 1927; M.A., 1928; Ph.D., California Institute, 1929. Instructor, 1929-38; Assistant Professor, 1938-46; Associate Professor, 1946-50; Professor, 1950-.(84 Alles) 330 Bonita Avenue, San Marino.

Ray Edward Untereiner, Ph.D., Professor of Economics
A.B., University of Redlands, 1930; M.A., Harvard University 1921; J. D., Mayo College of Law, 1925; Ph.D., Northwestern University, 1932. California Institute, 1925-.(10 Dahney) 1089 San Pasqual Street.

Paul Eugene Marie Vandenplas, D.Sc., Research Fellow in Engineering

Anthonie van Harreveld, Ph.D., M.D., Professor of Physiology
B.A., Amsterdam University, 1925; M.A., 1928; Ph.D., 1929; M.D., 1931. Research Assistant, California Institute, 1934-35; Instructor, 1935-40; Assistant Professor, 1940-42; Associate Professor, 1942-47; Professor, 1947-. (324 Kerckhoff) 764 South Oakland Avenue.
John George Waugh, Ph.D., Senior Research Fellow in Engineering
B.S., University of Missouri, 1931; M.A., 1932; Ph.D., Cornell University, 1935. Physicist, Naval Ordnance Test Station, 1945-. California Institute, 1964-. (104 Karman) 655 Cliff Drive.
74 Officers and Faculty

J. Harold Wayland, Ph.D., Professor of Engineering Science
B.S., University of Idaho, 1931; M.S., California Institute, 1935; Ph.D., 1937. Research Fellow, 1939-41; Associate Professor, 1949-57; Professor, 1957-. (0013 Thomas) 361 South Greenwood Avenue.

Robert D. Wayne, M.A., Assistant Professor of German
Ph.B., Dickinson College, 1935; M.A., Columbia University, 1940. Instructor, California Institute, 1952-62; Assistant Professor, 1962-. (304 Dabney) 909 Lyndon Street, South Pasadena.

Richard Fouke Webb, M.D., Director of Health Services
A.B., Stanford University, 1932; M.D., University of Pennsylvania, 1936. California Institute, 1953-. (Health Center) 1025 Highland Street, South Pasadena.

Jean J. Weigle, Ph.D., Research Associate in Biology
Ph.D., University of Geneva, 1923. California Institute, 1949-. (67 Church) 551 South Hill Avenue.

John R. Weir, Ph.D., Associate Professor of Psychology
B.A., University of California (Los Angeles), 1948; M.A., 1951; Ph.D., 1951. Associate, California Institute, 1951-53; Associate Professor, 1953-. (156 Throop) 3193 Mesaloa Lane.

David F. Welch, I.D., Associate Professor of Engineering Design
A.B., Stanford University, 1941; I.D., California Institute, 1943. Instructor in Engineering Graphics, 1943-51; Assistant Professor, 1951-61; Associate Professor of Engineering Design, 1961-. (307 Thomas) 2367 Lambert Drive.

John Brewer Weldon, M.A., Registrar
A.B., Culver-Stockton College, 1924; M.A., University of Nebraska, 1934. California Institute, 1964-. (119 Throop) 400 South Los Robles Avenue.

James Adolph Westphal, B.S., Senior Research Fellow in Planetary Science; Staff Associate, Mount Wilson and Palomar Observatories
B.S., University of Tulsa, 1954. Senior Research Fellow, California Institute; Staff Associate, 1966-. (0010 Mudd) 3042 Highview Avenue, Altadena.

Russell Allison Westmann, Ph.D., Assistant Professor of Civil Engineering
B.S., University of California, 1959; M.S., 1960; Ph.D., 1962. Research Fellow in Aeronautics, California Institute, 1963-65; Assistant Professor of Civil Engineering, 1965-. (121 Thomas) 2363 Porter Avenue, Altadena.

Ward Whaling, Ph.D., Professor of Physics
B.A., Rice Institute, 1944; M.A., 1947; Ph.D., 1949. Research Fellow, California Institute, 1949-52; Assistant Professor, 1952-58; Associate Professor, 1958-62; Professor, 1962-. (1 Kellogg) 401 South Parkwood Avenue.

John Harry McDonald Whitaker, M.A., Visiting Associate in Paleontology

Gerald Beresford Whitham, Ph.D., Professor of Aeronautics and Mathematics

Nalin Chandra Wickramasinghe, Ph.D., Research Fellow in Physics

Jack Milton Widholm, Ph.D., Research Fellow in Biology
B.S., University of Illinois, 1961; Ph.D., California Institute, 1965. Research Fellow, 1965-. (017 Kerckhoff) 236 South Mentor Avenue, Apt. 8.

Cornelis A. G. Wiersma, Ph.D., Professor of Biology
B.A., University of Leiden, 1926; M.A., University of Utrecht, 1929; Ph.D., 1933. Associate Professor, California Institute, 1933-47; Professor, 1947-. (321 Kerckhoff) 350 South Greenwood Avenue.

Charles Frederick Wilcox, Jr., Ph.D., Visiting Associate Professor of Organic Chemistry
S.B., Massachusetts Institute of Technology, 1952; Ph.D., University of California (Los Angeles), 1957. Associate Professor of Chemistry, Cornell University, 1963-. California Institute, 1967.

Harold Edwin Wilcox, Ph.D., Visiting Associate in Chemistry
B.A., Ohio Wesleyan University, 1934; M.Sc., Ohio State University, 1937; Ph.D., 1939. Professor of Chemistry, Ohio Wesleyan University, 1939-. California Institute, 1966-67.

Neil Wilkie, Ph.D., Research Fellow in Biology
Ronald Howard Willens, Ph.D., Associate Professor of Materials Science
B.S., California Institute, 1953; M.S., 1954; Ph.D., 1961. Research Fellow in Engineering, 1961-63; Assistant Professor of Materials Science, 1963-66; Associate Professor, 1966-. (333 Keck) 1155 Daverick Drive.

Olin Chaddock Wilson, Ph.D., Staff Member, Mount Wilson and Palomar Observatories
A.B., University of California, 1929; Ph.D., California Institute, 1934. Mt. Wilson Observatory, 1931-. (Mt. Wilson Office) 1754 Locust Street.

Charles Harold Wilts, Ph.D., Professor of Electrical Engineering
B.S., California Institute, 1940; M.S., 1941; Ph.D., 1948. Assistant Professor, 1947-52; Associate Professor, 1952-57; Professor, 1957-. (321 Steele) 1431 Brixton Road.

Richard Alan Wolf, Ph.D., Research Fellow in Physics

David Shotwell Wood, Ph.D., Professor of Materials Science
B.S., California Institute, 1941; M.S., 1946; Ph.D., 1949. Lecturer, 1949-50; Assistant Professor, 1950-55; Associate Professor, 1955-61; Professor, 1961-. (305 Keck) 590 Elm Avenue, Sierra Madre.

William Barry Wood III, Ph.D., Assistant Professor of Biology
A.B., Harvard University, 1959; Ph.D., Stanford University, 1963. California Institute, 1964-.. (204 Kerckhoff) 302 South Hill Avenue.

Robert Louis Woodbury, M.A., Instructor in History

Joe William Woodward, Ph.D., Research Fellow in Chemical Engineering

Dean Everett Wooldridge, Ph.D., Research Associate in Engineering

Chin-Hua Wu, Ph.D., Research Fellow in Chemistry
B.S., Chiao-Tung University, China, 1949; Ph.D., University of California (Los Angeles), 1955. California Institute, 1955-57; 1958-. (252 Crellin) 3300 Las Lunas Street.

Francis Taming Wu, Ph.D., Research Fellow in Geophysics
B.S., National Taiwan University, 1959; Ph.D., California Institute, 1966. Research Fellow, 1966-67.

Theodore Yao-Tsu Wu, Ph.D., Professor of Applied Mechanics
B.S., Chiao-Tung University, 1946; M.S., Iowa State University, 1948; Ph.D., California Institute, 1953. Research Fellow, 1952-53; Assistant Professor, 1953-57; Associate Professor, 1957-61; Professor, 1961-. (117 Karman) 3500 Las Lunas Street.

Oliver Reynolds Wulf, Ph.D., Research Associate in Physical Chemistry
B.S., Worcester Polytechnic Institute, 1920; M.S., American University, 1922; Ph.D., California Institute, 1926. California Institute, 1945-. (55 Crellin) 557 Berkeley Avenue, San Marino.

Robert J. Wyman, Ph.D., Research Fellow in Applied Science

John Derek Wyndham, Ph.D., Research Fellow in Radio Astronomy
B.S., University of Cambridge, 1959; Ph.D., 1963. California Institute, 1963-. (103 Robinson) 75 South San Marino Avenue.

Wei-Hsuan Yang, Ph.D., Senior Research Fellow in Aeronautics
B.S., Chung Kung University, 1958; M.S., University of Washington, 1962; Ph.D., Stanford University, 1964. Assistant Professor of Engineering Mechanics, University of Michigan, 1965-. Research Fellow in Materials Science, California Institute, 1964-65; Senior Research Fellow in Aeronautics, 1966.

Amnon Yariv, Ph.D., Professor of Electrical Engineering
B.S., University of California, 1954; M.S., 1956; Ph.D., 1958. Associate Professor, California Institute, 1964-66; Professor, 1966-. (305 Steele) 3236 Arrowhead Court, Altadena.

Foch Fu-Hsie Yew, Ph.D., Research Fellow in Chemistry
B.S., National Taiwan University, 1959; Ph.D., Carnegie Institute of Technology, 1965. California Institute, 1963-. (112 Church) 569 North El Molino Avenue.

**Part-time
76  Officers and Faculty

Harry Young, Ph.D., Research Fellow in Chemistry

Don M. Yost, Ph.D., Professor of Inorganic Chemistry, Emeritus
B.S., University of California, 1923; Ph.D., California Institute, 1926. Instructor, 1927-29; Assistant Professor, 1929-35; Associate Professor, 1935-41; Professor, 1941-64; Professor Emeritus, 1964-. (127 Gates) 1111 Blanche Street, Apt. 209.

Fredrik Zachariasen, Ph.D., Professor of Theoretical Physics
B.S., University of Chicago, 1951; Ph.D., California Institute, 1956. Assistant Professor, 1960-62; Associate Professor, 1962-66; Professor, 1966-.. (160 Sloan) 2510 North Altadena Drive, Altadena.

Kenneth L. Zankel, Ph.D., Research Fellow in Biology
B.S., Rutgers University, 1951; M.S., Florida State University, 1955; Ph.D., Michigan State University, 1958. Instructor, 1958-60; Assistant Professor, 1960-62; Associate Professor, 1962-66; Professor, 1966-.. (80 Alles) 1147 Constance Street.

Fredrik Zachariasen, Ph.D., Professor of Theoretical Physics
B.S., University of Chicago, 1951; Ph.D., California Institute, 1956. Assistant Professor, 1960-62; Associate Professor, 1962-66; Professor, 1966-.. (160 Sloan) 2510 North Altadena Drive, Altadena.

Kenneth L. Zankel, Ph.D., Research Fellow in Biology
B.S., Rutgers University, 1951; M.S., Florida State University, 1955; Ph.D., Michigan State University, 1958. Instructor, 1958-60; Assistant Professor, 1960-62; Associate Professor, 1962-66; Professor, 1966-.. (80 Alles) 1147 Constance Street.

John Stoufer Zeigel, M.A., Instructor in English

Harold Zirin, Ph.D., Professor of Astrophysics; Staff Member, Mount Wilson and Palomar Observatories

Edward Edom Zukoski, Ph.D., Professor of Jet Propulsion
B.S., Harvard College, 1950; M.S., California Institute, 1951; Ph.D., 1954. Research Engineer, Jet Propulsion Laboratory, 1950-57; Lecturer, California Institute, 1956-57; Assistant Professor, 1957-60; Associate Professor, 1960-66; Professor, 1966-.. (202 Karman) 3815 Fairmeade Road.

George Zweig, Ph.D., Associate Professor of Physics
B.S., University of Michigan, 1959; Ph.D., California Institute, 1964. Research Fellow, 1963; Assistant Professor, 1964-66; Associate Professor, 1966-.. (178 Sloan) 1804 Pasadena Glen Road, Altadena.

Fritz Zwicky, Ph.D., Professor of Astrophysics; Staff Member, Mount Wilson and Palomar Observatories
B.S., Federal Institute of Technology, Zurich, 1920; Ph.D., 1922. Research Fellow, California Institute, 1925-27; Assistant Professor of Theoretical Physics, 1927-29; Associate Professor, 1929-41; Professor of Astrophysics, 1941-.. (201 Robinson) 2065 Oakdale Street.
Graduate Apointments

GRADUATE FELLOWS, SCHOLARS, AND ASSISTANTS, 1965-66

Roger Henry Abel, National Science Foundation Fellow, Graduate Teaching Assistant, Chemistry
B.A., Hope College, 1965

Mashood Olayide Adegbola, Graduate Research Assistant, Electrical Engineering
B.S.E.E., Purdue University, 1965

Eric George Adelberger, Graduate Teaching Assistant, Physics
B.S., California Institute, 1960

David George Agresti, Graduate Teaching Assistant, Murray Scholar, Physics
B.S., Ohio State University, 1959; M.S., California Institute, 1962

Nawal Abd El-Hay Ahmed, Egyptian Government Fellow, Biology
B.Sc. (Hons), Ain Shams University, 1959; B.Sc. (Hons) (Zoo. & Ch.), 1961

Irwin Emanuel Alber, North American Aviation Fellow, Aeronautics
B.S., University of California (Los Angeles), 1962; M.S., California Institute, 1963

William Longstreet Ames, National Science Foundation Fellow, Physics
S.B., Massachusetts Institute of Technology, 1964

John Philip Andelin, Jr., Graduate Research Assistant, Blacker Scholar, Physics
B.S., California Institute, 1955; M.S., Stanford University, 1956

Christopher Marlowe Anderson, National Aeronautics and Space Administration Trainee, Astronomy
B.S., University of Arizona, 1963

Kurt Steven Anderson, Graduate Teaching Assistant, Astronomy
B.S., California Institute, 1963

Gerassimos George Aperghis, Graduate Research Assistant, Civil Engineering
B.A. (Hons), Cambridge University, 1964; M.S., California Institute, 1965

Walter Joseph Arabasz, Graduate Teaching Assistant, Geology
B.S., Boston College, 1964

Johann Arbocz, Graduate Teaching Assistant, Aeronautics
B.S., Northrop Institute of Technology, 1963; M.S., California Institute, 1964

James Louis Aronson, National Science Foundation Trainee, Geology
B.A., Rice University, 1959; M.S., California Institute, 1961

Jeanette Asay, National Defense Education Act Fellow, Chemistry
B.A., University of Utah, 1965

Gerald Richard Ash, National Aeronautics and Space Administration Trainee, Electrical Engineering
B.S., Rutgers University, 1964; M.S., California Institute, 1965

Robert Carl Ashenfelter, Graduate Teaching Assistant, Blacker Scholar, Physics
B.S., Harvey Mudd College, 1961

John David Atkinson, Graduate Teaching Assistant, Applied Mechanics
B.Sc., University of Sydney, 1961; B.E. (Hons), 1963

Barbara Joan Furman Attardi, National Defense Education Act Fellow, Biology
B.S., Cornell University, 1964

Richard Harold Ault, National Science Foundation Cooperative Fellow, Physics
B.S., University of Miami, 1964

Soe Aung, Graduate Research Assistant, Chemistry
B.Sc. (Gen. Hons), University of Rangoon, 1963

Raymond Dean Ayers, National Aeronautics and Space Administration Trainee, Materials Science
B.S., California Institute, 1963; M.S., 1964

*Assistantship so marked carries tuition award.
Andrew Dow Bacher, *Graduate Research Assistant, Dobbins Scholar, Physics*
A.B., Harvard College, 1960

Dennis Dillon Baker, *National Aeronautics and Space Administration Fellow, Astronomy*
B.A., University of California, 1964

Steven Worth Baldwin, *National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry*
A.B., Dartmouth College, 1964

Benedict William Bangerter, *Graduate Teaching Assistant,* Chemistry
B.A., Macalester College, 1963

Brian Thomas Barcelo, *National Aeronautics and Space Administration Trainee, Aeronautics*
B.A., University of California, 1965

John Roger Barker, *Graduate Research Assistant, Anthony Scholar, Chemical Engineering*
B.Sc. (Hons), College of Science and Technology (England), 1961

J. Frederick Bartlett, *Anthony Scholar, Astronomy*
B.S., Yale University, 1958; M.S., California Institute, 1961

Kenneth Paul Bartos, *Graduate Teaching Assistant,* Applied Mechanics
B.S., University of Nebraska, 1962

Jerry Levy Basch, *Graduate Teaching Assistant,* Biology
B.A., University of Miami, 1962; M.S., 1965

Michael I. Baskes, *National Science Foundation Trainee, Materials Science*
B.S., California Institute, 1965

Richard George Batt, *Murray Scholar, Aeronautics*
B.S.E., Princeton University, 1955; M.S., California Institute, 1958

Luc Olivier Bauer, *Graduate Research Assistant,* Engineering Science
Dipl., Ecole Polytechnique (Lausanne), 1962; M.S., California Institute, 1964

William Robert Bauer, *National Science Foundation Fellow, Graduate Teaching Assistant, Chemistry*
B.S., California Institute, 1961; B.A., Oxford University, 1963

Eric Edward Becklin, *Graduate Research Assistant, Murray Scholar, Physics*
B.S., University of Minnesota, 1963

Wayne Metcalf Beebe, *Coates Scholar, Anthony Scholar, Aeronautics*
B.S., California Institute, 1951; M.S., 1952

Wilhelm Behrens, *E. N. Brown Scholar, Aeronautics*
Dipl.Ing., Technical University (Munich), 1960

John Winston Belcher, *National Science Foundation Fellow, Physics*
B.A., Rice University, 1965

Lon Edward Bell, *National Science Foundation Trainee, Mechanical Engineering*
B.S., California Institute, 1962; M.S., 1963

Edward Anton Bender, *National Science Foundation Cooperative Fellow, Mathematics*
B.S., California Institute, 1963

Thomas Livingston Benjamin, *Tuition Award, Biology*
B.A., Amherst College, 1959

David Bernard Benson, *National Aeronautics and Space Administration Trainee, Electrical Engineering*
B.S., California Institute, 1962; M.S., 1963

Thomas Robert Berger, *National Science Foundation Fellow, Graduate Teaching Assistant, Mathematics*
B.S., Trinity College, 1963

*Assistantship so marked carries tuition award.*
Kostia Bergman, National Defense Education Act Fellow, Graduate Teaching Assistant, Biology
B.A., Johns Hopkins University, 1965

Barbara Wyman Bernstein, Graduate Teaching Assistant, Biology
A.B., Oberlin College, 1964

Elliot R. Bernstein, Graduate Research Assistant, Chemistry
A.B., Princeton University, 1963

Uri Bernstein, National Science Foundation Fellow, Graduate Teaching Assistant, Physics
S.B., Massachusetts Institute of Technology, 1963

Charles Edgar Billings, United States Public Health Service Air Pollution Fellow, Civil Engineering
B.S., Northeastern University, 1950; S.M., Harvard University, 1953

David Albert Bird, National Science Foundation Trainee, Electrical Engineering
B.S.E.E., Purdue University, 1964

Steven Allen Bissell, National Defense Education Act Fellow, Biology
B.S., Harvey Mudd College, 1965

David Jordan Blakemore, Graduate Research Assistant, Electrical Engineering
B.S., California Institute, 1960; M.S., 1961

Elliott Daniel Bloom, General Atomic Fellow, Physics
B.A., Pomona College, 1962

James Lawrence Blue, Schlumberger Foundation Fellow, Graduate Teaching Assistant, Physics
A.B., Occidental College, 1961

Fred Andrew Blum, Jr., Graduate Teaching Assistant, Murray Scholar, Physics
B.S., University of Texas, 1962; M.S., California Institute, 1964

Joseph William Blum, National Defense Education Act Fellow, Applied Mathematics
B.S., Purdue University, 1963; M.S., 1964

George Wallace Bluman, Graduate Teaching Assistant, Applied Mathematics
B.Sc., University of British Columbia, 1964

Alan Brian Blumenthal, Graduate Teaching Assistant, Biology
A.B., Lafayette College, 1964

Donald Lawrence Blumenthal, Douglas Aircraft Company Fellow, Aeronautics
B.S., California Institute, 1965

Kenneth Paul Bogart, National Science Foundation Fellow, Mathematics
B.S., Marietta College, 1965

David Beauregard Bogy, Anthony Scholar, Applied Mechanics
B.A., Rice University, 1959; M.S., 1961

Charles LaMonte Borders, Jr., National Institutes of Health Trainee, DuPont Postgraduate Teaching Assistant, Chemistry
B.A., Bellarmine College, 1964

William Gravenor Bounds, Graduate Teaching Assistant, Electrical Engineering
B.S., Northrop Institute of Technology, 1965

James David Bowman, Graduate Research Assistant, Physics
B.S., California Institute, 1961

Ray Douglas Bowman, National Institutes of Health Trainee, Chemistry
A.B., Indiana University, 1964

James Ross Boyd, Graduate Research Assistant, Anthony Scholar, Chemical Engineering
B.Eng., Royal Military College of Canada, 1965

Gerald Lee Bradley, Graduate Teaching Assistant, Mathematics
B.S., Harvey Mudd College, 1962

*Assistantship so marked carries tuition award.
Graduate Appointments

Arthur Gerald Brady, Graduate Teaching Assistant,* Civil Engineering
B.E., University of Auckland, 1959; M.E., 1960; B.Sc., 1961

Gary Duane Brinker, National Aeronautics and Space Administration Trainee, Engineering Science
S.B., Massachusetts Institute of Technology, 1962

Richard Runyon Brock, National Science Foundation Trainee, Civil Engineering
B.S., University of California, 1961; M.S., 1962

Byron Richard Brown, National Science Foundation Trainee, Physics
B.S., University of California, 1963

Peter Lorin Bryant, National Science Foundation Trainee, Mechanical Engineering
Sc.B., Brown University, 1965

Robert Jay Buck, Graduate Teaching Assistant,* Mathematics
B.A., University of Buffalo, 1963

Patricia Norgorden Burke, Graduate Teaching Assistant,* Biology
B.A., Pomona College, 1964

Thomas Edmund Burke, Graduate Teaching Assistant,* Chemistry
B.A., University of Minnesota, 1962

William Lionel Burke, National Science Foundation Cooperative Fellow, Graduate Teaching Assistant, Physics
B.S., California Institute, 1963

Donald Maxwell Burland, Graduate Teaching Assistant,* Chemistry
A.B., Dartmouth College, 1965

Bryan Virge Butler, United States Public Health Service Trainee, Civil Engineering
B.S., University of Utah, 1965

Jerry Butman, Graduate Research Assistant,* Electrical Engineering
B.Eng., McGill University, 1965

Stanley Butman, Radio Corporation of America Fellow, Electrical Engineering
B.Eng. (Hons), McGill University, 1960; S.M., Massachusetts Institute of Technology, 1962

Robert David Carlitz, Woodrow Wilson Foundation Fellow, Physics
B.S., Duke University, 1965

Bruce Alan Carter, Graduate Teaching Assistant,* Geology
M.S., California Institute, 1965

Lucian Carlton Carter III, Graduate Teaching Assistant, Murray Scholar, Physics
B.A., University of Texas, 1960; B.S. (Chem.), 1960; B.S. (Physics), 1961

David Chapman Cartwright, Graduate Research Assistant,* Chemistry
B.S., Hamline University, 1962; M.S., California Institute, 1963

Philip Earl Cassady, Graduate Teaching Assistant,* Aeronautics
S.B., Massachusetts Institute of Technology, 1963; S.M., 1963

Richard Guy Casten, National Defense Education Act Fellow, Applied Mathematics
A.B., Temple University, 1965

John Irvin Castor, Graduate Research Assistant,* Astronomy
B.S., Fresno State College, 1961

John Millard Caywood, Graduate Teaching Assistant,* Electrical Engineering
B.S., California Institute, 1963; M.S., 1964

Clyde Chadwick, National Aeronautics and Space Administration Trainee, Planetary Science
S.B., Massachusetts Institute of Technology, 1965

Tsiu Chiu Chan, Laws Scholar, Electrical Engineering
B.E., McGill University, 1961; M.S., California Institute, 1962

Subhash Chandra, Anthony Scholar, Astronomy
B.S., University of Lucknow, 1954; M.S., 1958; M.S., California Institute, 1961

*Assistantship so marked carries tuition award.
Milton M. T. Chang, *Drake Scholar, Electrical Engineering*
B.S., University of Illinois, 1964; M.S., California Institute, 1965

Chia-Chun Chao, *Graduate Research Assistant,* Aeronautics
B.Sc., Taiwan Provincial Cheng Kung University, 1962; M.S., California Institute, 1964

Chih-Chieh Chao, *Graduate Teaching Assistant,* Electrical Engineering
B.S., University of Illinois, 1965

George Frederick Chapline, Jr., *National Aeronautics and Space Administration Trainee, Physics*
B.A., University of California (Los Angeles), 1961

Richard Bruce Chapman, *National Science Foundation Trainee, Engineering Science*
B.S., Purdue University, 1965

Willfred Peter Charette, *North American Aviation Company Fellow, Electrical Engineering*
B.S., California Institute, 1962; M.S., 1964

Jay-Chung Chen, *Graduate Research Assistant,* Aeronautics
B.Sc., Taiwan Provincial Cheng Kung University, 1962; M.S., California Institute, 1964

Sung-jen Chen, *Graduate Teaching Assistant, Chemical Engineering*
B.S., National Taiwan University, 1962; M.S., Kansas State University, 1965

Shieu-lang Cheng, *Graduate Research Assistant,* Chemistry
B.S., National Taiwan University, 1963

Shui-uh Cheng, *Graduate Research Assistant, Anthony Scholar, Physics*
B.S., National Taiwan University, 1963; M.S., Tufts University, 1966

Ronald Benjamin Chesler, *Murray Scholar, Physics*
A.B., University of Pennsylvania, 1961

Man-Cheong Cheung, *Graduate Teaching Assistant,* Aeronautics
B.S., Taiwan Provincial Cheng Kung University, 1964; M.S., California Institute, 1965

Ko-Chuan Chi, *Anthony Scholar, Electrical Engineering*
B.A., National Taiwan University, 1960; B.S., University of Wisconsin, 1965

Wu-sun Chia, *Graduate Teaching Assistant, Anthony Scholar, Chemical Engineering*
B.S., National Taiwan University, 1962; M.S., University of Saskatchewan, 1965

Dennis Don Chilcote, *United States Public Health Service Trainee, Chemical Engineering*
B.S., University of Minnesota, 1965

Joe Ching, *Graduate Teaching Assistant,* Engineering Science
B.S., University of California, 1965

Donald Ray Chivens, *National Science Foundation Trainee, Graduate Teaching Assistant, Mechanical Engineering*
B.S., California Institute, 1965

Louise Tsi Chow, *Graduate Teaching Assistant,* Chemistry
B.S., National Taiwan University, 1965

Theresa Kee-Yu Chow, *Graduate Teaching Assistant,* Mathematics
B.S., National Taiwan University, 1962; M.A., Oregon State University, 1965

Charles Richard Christensen, *Graduate Research Assistant,* Chemistry
B.E., Vanderbilt University, 1960

Daphne Stewart Christensen, *Aerojet-General Fellow, Aeronautics*
B.S., University of Southern California, 1947; M.S., 1957

Joseph Herman Christie, *North American Aviation Fellow, Chemistry*
B.S., Rensselaer Polytechnic Institute, 1959; M.S., Louisiana State University, 1962

Billie Mae Chu, *Anthony Scholar, Aeronautics*
B.A., Agnes Scott College, 1948; M.A., Emory University, 1949

*Assistantship so marked carries tuition award.*
82 Graduate Appointments

Frank I-Chien Chu, Graduate Teaching Assistant, Anthony Scholar, Chemical Engineering
B.S., National Taiwan University, 1964

Delo Kwai Kum Chun, R. C. Baker Foundation Fellow, Mechanical Engineering
B.S., University of Hawaii, 1965

George Richmond Clark II, Graduate Teaching Assistant,* Geology
A.B., Cornell University, 1961

Milton John Clauser, Graduate Research Assistant, Roeser Scholar, Physics
S.B., Massachusetts Institute of Technology, 1961

Don Paul Clausing, National Science Foundation Cooperative Fellow, Materials Science
B.S., Iowa State University, 1952; M.S., California Institute, 1962

Dean Norman Clay, Graduate Teaching Assistant,* Geophysics
B.Sc., McGill University, 1963

David Alvin Clayton, National Science Foundation Trainee, Biology
B.S., Northern Illinois University, 1965

Glenn Gary Clinard, National Science Foundation Cooperative Fellow, Mechanical Engineering
B.S., California Institute, 1965

Edward Thomas Cline, Jr., Graduate Teaching Assistant,* Mathematics
B.S., California Institute, 1962

Carl Rudolph Clinesmith, Graduate Research Assistant, Rutherford Scholar, Physics
B.S., University of Washington, 1959

Charles Lewis Cocke, Jr., National Science Foundation Fellow, Graduate Teaching Assistant, Physics
B.A., Haverford College, 1962

Ronald Sinclair Cole, Graduate Research Assistant,* Chemistry
A.B., University of California (Riverside), 1962

Donald James Collins, National Science Foundation Fellow, Aeronautics
B.S., University of Arizona, 1962; M.S., 1963

Steven Douglas Colson, Graduate Research Assistant,* Chemistry
B.S., Utah State University, 1963

Robert William Conn, National Science Foundation Fellow, Graduate Teaching Assistant, Engineering Science
B.Ch.E., Pratt Institute, 1964; M.S., California Institute, 1965

Claude Robert Cooke, Howard Hughes Fellow, Electrical Engineering
B.S., Lehigh University, 1962; M.S., University of Southern California, 1965

John Thomas Cookson, Jr., United States Public Health Service Trainee, Civil Engineering
B.S., Washington University, 1961; M.S., 1962

Larry Cooper, National Science Foundation Trainee, Mechanical Engineering
B.S., University of Missouri School of Mines and Metallurgy, 1965

Thomas Dennis Coskren, Graduate Teaching Assistant,* Geology
S.B., Massachusetts Institute of Technology, 1963

Harold Thompson Couch, Anthony Scholar, Chemical Engineering
B.S.E., Princeton University, 1958; M.S., University of Southern California, 1961

Donald Gerald Coyne, Graduate Research Assistant,* Physics
B.S., University of Kansas, 1958

Lelia Mary Coyne, Graduate Research Assistant,* Chemistry
B.S., University of California (Los Angeles), 1961

Oakley Hamilton Crawford, Graduate Research Assistant,* Chemistry
B.S., Carson-Newman College, 1959; Ph.D., University of Illinois, 1964

*Assistantship so marked carries tuition award.
Stephen Paul Creekmore, National Aeronautics and Space Administration Trainee, Physics
A.B., Williams College, 1963

Antonio Crespo-Martinez, National Aeronautics and Space Administration Fellow, Aeronautics
Ing., Escuela Técnica Superior de Ingenieros Aeronáuticos (Madrid), 1964; M.S., California Institute, 1965

Jon Byron Cross, Graduate Research Assistant, Chemistry
B.A., University of Colorado, 1960

Steven Collins Crow, National Science Foundation Cooperative Fellow, Aeronautics
B.S., California Institute, 1962; M.S., 1963

Iain George Currie, Graduate Research Assistant, Applied Mechanics
Associate, Royal College of Science and Technology (Glasgow), 1960; M.A.Sc., University of British Columbia, 1962

John Gillette Curro, Graduate Research Assistant, Anthony Scholar, Materials Science
B.Chem.E., University of Detroit, 1965

James Alfred John Cutts, Graduate Research Assistant, Geophysics
B.A. (Hons), St. John's College (Cambridge), 1965

Frederick Willis Dahlquist, National Institutes of Health Trainee, Chemistry
B.A., Wabash College, 1964

Michael Edward Dahmus, Graduate Teaching Assistant, Biology
B.S., Iowa State University, 1963

Dikran Damlamayan, Graduate Research Assistant, Electrical Engineering
B.S., California Institute, 1963; M.S., 1964

Joseph Jay Dannenberg, United States Public Health Service Trainee, Chemistry
A.B., Columbia College, 1962

Ted Herbert Davey, Graduate Research Assistant, Electrical Engineering
B.S., California Institute, 1962; M.S., 1963

Charles Newbold David, Graduate Teaching Assistant, Biology
A.B., Harvard College, 1962

Cary Nathan Davids, Imperial Oil Fellow, Graduate Teaching Assistant, Physics
B.Sc. (Hons), University of Alberta, 1961; M.Sc., 1962

John Bruce Davies, Graduate Research Assistant, Geophysics
B.S., University College of Swansea (Wales), 1963

Allyn Merrill Davis, National Science Foundation Trainee, Chemical Engineering
B.S., Clarkson College of Technology, 1964; M.S., California Institute, 1965

Daniel Lee Davis, Woodrow Wilson Foundation Fellow, Mathematics
B.S., Georgia Institute of Technology, 1965

Ronald Wayne Davis, National Institutes of Health Trainee, Chemistry
B.S., Eastern Illinois University, 1964

Roger Carl Davison, National Science Foundation Fellow, Engineering Science
B.S., California Institute, 1965

Guy de Balbine, Graduate Teaching Assistant, Electrical Engineering
Dipl. Ing., Ecole Centrale des Arts et Manufactures, 1963; M.S., California Institute, 1964

James Leslie Deleget, Graduate Teaching Assistant, Applied Mechanics
B.S., Purdue University, 1965

Raymond Kay DeLong, Graduate Teaching Assistant, Mechanical Engineering
B.S., Kansas State University, 1962; M.S., California Institute, 1965

Martin Gary Delson, National Science Foundation Fellow, Physics
B.S., Queens College, 1962; M.S., California Institute, 1965

Andrea DeMari, Graduate Research Assistant, Electrical Engineering
Ing., Politecnico di Torino, 1962; M.S., California Institute, 1964

*Assistantship so marked carries tuition award.
84 Graduate Appointments

Joseph Bernard Dence, Graduate Teaching Assistant, Chemistry
B.A., Bowling Green State University, 1963

Paul Claire Denny, Anthony Scholar, Biology
A.B., Westmont College, 1960

William Michael Denny, Graduate Research Assistant, Murray Scholar, Physics
B.S., St. Louis University, 1964

Satish Vithal Desai, Graduate Teaching Assistant, Anthony Scholar, Chemical Engineering
B.Tech., Indian Institute of Technology, 1964; M.S., California Institute, 1965

John Randall Dickerson, Howard Hughes Fellow, Applied Mechanics
B.S., Illinois Institute of Technology, 1963; M.S., California Institute, 1964

John Crockett Diebel, Graduate Teaching Assistant, Electrical Engineering
B.S., California Institute, 1965

Andrew Dienes, Graduate Teaching Assistant, Physics
B.Eng., McGill University, 1962; M.S., California Institute, 1963

Dennis Jon Diestler, National Science Foundation Fellow, Chemistry
B.S., Harvey Mudd College, 1964

John Cedric Dill, National Institutes of Health Trainee, Electrical Engineering
B.S.C., University of British Columbia, 1962; M.S., North Carolina State College of Agriculture and Engineering, 1964

Raymond Benedict Dirling, Jr., Graduate Teaching Assistant, Aeronautics
B.S., Virginia Polytechnic Institute, 1964; M.S., 1965

John David Ditmars, National Science Foundation Trainee, Civil Engineering
B.S.E., Princeton University, 1965

Peter Gerard Dodds, Graduate Teaching Assistant, Mathematics
B.Sc. (Hons), University of New England (Australia), 1964

Anthony John Doheny, National Science Foundation Trainee, Graduate Teaching Assistant, Chemistry
B.S., University of Notre Dame, 1965

Richard Dolen, Rutherford Scholar, Physics
B.E.Ph., Cornell University, 1957

Charles Lawrence Dorsett, Graduate Teaching Assistant, Electrical Engineering
B.S., University of Redlands, 1965

James Germain Downward IV, National Defense Education Act Fellow, Physics
S.B., Massachusetts Institute of Technology, 1965

Theodore Arthur Drescher, National Science Foundation Trainee, Geophysics
G.P.E., Colorado School of Mines, 1965

Alan Sander Dubin, Graduate Research Assistant, Chemistry
Ch.E., University of Cincinnati, 1960

James Johnson Duderstadt, Atomic Energy Commission Fellow, Engineering Science
B.E., Yale University, 1964; M.S., California Institute, 1965

Jean-Guy Dufour, Woodrow Wilson Foundation Fellow, Physics
B.A., University of Montreal, 1960; B.Sc., 1965

Robert Barry Dunbar, Graduate Teaching Assistant, Mechanical Engineering
B.Sc., University of Alberta, 1965

Thomas Harold Dunning, Jr., Woodrow Wilson Foundation Fellow, Graduate Teaching Assistant, Chemistry
B.S., University of Missouri, 1965

Mirmira Ramarao Dwarakanath, Graduate Research Assistant, Rutherford Scholar, Physics
B.Sc. (Hons), The Central College (Bangalore), 1958; M.Sc., 1961

*Assistantship so marked carries tuition award.
Richard Timothy Eakin, United States Public Health Service Fellow, Biology
B.S., University of Texas, 1963

Stanley Duane Ecklund, Graduate Teaching Assistant, Rutherford Scholar, Physics
B.S., University of Minnesota, 1961

Robert Ellis Edelson, Graduate Teaching Assistant, Aeronautics
S.B., Massachusetts Institute of Technology, 1960; S.M., 1963

Michel Sadek El Raheb, Anthony Scholar, Aeronautics
B.Sc., Cairo University (Egypt), 1964

Christopher England, Graduate Research Assistant, Anthony Scholar, Chemical Engineering
B.S., University of Southern California, 1965

Terry Eugene Ernest, Graduate Teaching Assistant, Anthony Scholar, Chemical Engineering
B.S., California Institute, 1963; M.S., 1965

David Albert Evans, United States Public Health Service Fellow, Chemistry
A.B., Oberlin College, 1963

Jon Kenner Evans, Graduate Research Assistant, Planetary Science
B.S., California Institute, 1965

William Warren Everett, Graduate Teaching Assistant, Applied Mathematics
E.Math., Colorado School of Mines, 1965

Helio Vasconcelos Fagundes, Brazil Ministry of Education Fellow, Physics
Bachelor, Universidade de Sao Paulo, 1963

Douglas McIntosh Fambrough, National Science Foundation Fellow, Biology
B.A., University of North Carolina, 1963

Loh-Nien Fan, Graduate Research Assistant, Civil Engineering
B.S., National Taiwan University, 1961; M.S., California Institute, 1964

Steven Mark Farber, National Aeronautics and Space Administration Trainee, Electrical Engineering
B.S., California Institute, 1964; M.S., Stanford University, 1965

Paul Lee Fehder, Graduate Teaching Assistant, Chemistry
S.B., Massachusetts Institute of Technology, 1964

Fernando Lawrence Fernandez, Aerospace Fellow, Aeronautics
M.E., Stevens Institute of Technology, 1960; M.S., 1961

Shaukat Hayat Michael Feroz, Graduate Research Assistant, Civil Engineering
B.E., University of Peshawar (West Pakistan), 1964

Rena Fersht, Graduate Teaching Assistant, Aeronautics
B.Sc., Israel Institute of Technology, 1962; M.Sc., 1964

Michael Timberlake Field, Graduate Teaching Assistant, Geology
S.B., Massachusetts Institute of Technology, 1961; M.S., California Institute, 1963

John Lionel Firkins, Graduate Teaching Assistant, Chemistry
B.Sc. (Hons.), University of Victoria, 1965

Hugo Breed Fischer, Fannie and John Hertz Foundation Fellow, Civil Engineering
B.S., California Institute, 1958; M.S., 1963

James Louis Fisher, Ford Foundation Fellow, Mathematics
B.Sc. (Hons.), University of Alberta, 1965

Raymond Kurt Fisher, National Science Foundation Fellow, Physics
S.B., Massachusetts Institute of Technology, 1965

Gary Arnold Flandro, National Aeronautics and Space Administration Trainee, Aeronautics
B.S.M.E., University of Utah, 1957; M.S., California Institute, 1960

*Assistantship so marked carries tuition award.
Graduate Appointments

Jeffrey Edward Flatgaard, *National Science Foundation Cooperative Fellow, Graduate Teaching Assistant, Biology*
A.B., Johns Hopkins University, 1962

Edward Berel Fomalont, *Graduate Research Assistant, Astronomy*
B.S., University of Pennsylvania, 1961

Douglas Gun Fong, *Graduate Research Assistant, Rutherford Scholar, Physics*
A.B., Princeton University, 1961

Kenneth William Foster, *Arthur McCallum Fellow, Graduate Teaching Assistant, Biology*
B.Sc. (Hons), University of Victoria, 1965

Gary Scott Fraley, *National Aeronautics and Space Administration Trainee, Physics*
B.S., California Institute, 1962

Robert Elliot Frank, *National Science Foundation Trainee, Chemistry*
A.B., Harvard College, 1965

Jonathan Akin French, *Title Insurance and Trust Company Foundation Fellow, Civil Engineering*
A.B., Harvard College, 1961; M.S., California Institute, 1964

Richard Skipp Frenk, *Graduate Teaching Assistant, Applied Mechanics*
B.S., California Institute, 1965

Lyman Jefferson Fretwell, Jr., *Graduate Research Assistant, Laws Scholar, Physics*
B.S., California Institute, 1956

Jeffrey Langman Friedberg, *Graduate Research Assistant, Geology*
S.B., Massachusetts Institute of Technology, 1964

Lo-chung Fu, *Graduate Research Assistant, Electrical Engineering*
B.S., National Taiwan University, 1961; M.S., Cornell University, 1965

Bing-Man Fung, *Graduate Research Assistant, Chemistry*
B.S., Chung Chi College (Hong Kong), 1963

Fergus John Gaines, *Graduate Research Assistant, Mathematics*
B.Sc., University College (Dublin), 1960; M.Sc., 1961

David Charles Gakenheimer, *National Aeronautics and Space Administration Trainee, Applied Mechanics*
B.E.S., Johns Hopkins University, 1965

William Claude Galley, *Graduate Research Assistant, Chemistry*
B.Sc., McGill University, 1962

John Daniel Gallivan, *Graduate Research Assistant, Laws Scholar, Physics*
B.Sc., University College (Dublin), 1961; M.Sc., 1962

Terry Randolph Galloway, *Peter E. Fluor Memorial Fellow, Graduate Research Assistant, Chemical Engineering*
B.S., University of California, 1962; M.S., California Institute, 1963

Stephen Hopkins Garrison, *Hicks Memorial Fellow, Graduate Teaching Assistant, Mechanical Engineering*
B.S., California Institute, 1965

William Lester Gavan, *Graduate Teaching Assistant, Mechanical Engineering*
B.S. (M.E.), California State Polytechnic College, 1965; B.S. (Math), 1965

Michael James George, *Graduate Research Assistant, Drake Scholar, Physics*
B.S., University of North Carolina, 1963

Donald Allen Germann, *National Institutes of Health Trainee, Electrical Engineering*
B.S.E.E., Purdue University, 1965

Melbourne Fernald Giberson, *Graduate Teaching Assistant, Applied Mechanics*
B.S., University of Pennsylvania, 1963; M.S., California Institute, 1964

David Scott Gilbert, *International Business Machines Fellow, Biology*
A.B., Harvard College, 1963

*Assistantship so marked carries tuition award.
Robert Allen Gillham, Jr., National Science Foundation Trainee, Graduate Teaching Assistant, Chemistry
B.S., San Jose State College, 1965

Robert Ridgeway Gilpin, Daniel and Florence Guggenheim Foundation Fellow, Spalding Scholar, Engineering Science
B.Sc., University of Alberta, 1964; M.S., California Institute, 1965

Georges Pierre Alexis Giraudbit, Graduate Teaching Assistant, Mechanical Engineering
Dipl., Ecole Nationale d'Ingénieurs Arts et Métiers (Paris), 1963; M.S., California Institute, 1964

Edward Stanley Glazer, Graduate Teaching Assistant, Chemistry
A.B. (Hons), University of Pennsylvania, 1961

Ellen Rose Glowacki, Graduate Teaching Assistant, Biology
B.A., Swarthmore College, 1960

Alexander Franklin Hermann Goetz, National Aeronautics and Space Administration Trainee, Geology
B.S., California Institute, 1961; M.S., 1962

Mark Goldstein, National Science Foundation Fellow, Physics
B.S., Harvey Mudd College, 1965

Stuart Frederick Goldstein, Graduate Teaching Assistant, Biology
B.A., University of Minnesota, 1962

Ernest William Goodell, Graduate Teaching Assistant, Biology
B.S., Colorado State University, 1964

David Reeves Goosman, National Science Foundation Fellow, Physics
B.A., Reed College, 1962

Sankaraiyer Gopalakrishnan, Graduate Teaching Assistant, Aeronautics
B.Sc., Loyola College (India), 1960; B.Tech., Indian Institute of Technology, 1964

David Marshall Gordon, Graduate Research Assistant, Drake Scholar, Physics
B.S., Ohio State University, 1963; M.S., 1965

Edward Kent Gordon, National Science Foundation Fellow, Chemistry
B.S., University of Arkansas, 1964

Robert Gordon, Graduate Teaching Assistant, Mathematics
A.B., University of California (Los Angeles), 1962

Jeffrey Archibald Gorman, Atomic Energy Commission Fellow, Engineering Science
B.C.E., Cornell University, 1958

Robert Lee Gran, Graduate Teaching Assistant, Mechanical Engineering
B.S., University of Washington, 1965

Paul Sheldon Grand, National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry
B.S., Queens College, 1963

Jean-Marie François Grange, Blacker Scholar, Anthony Scholar, Aeronautics
Ing., Ecole Nationale Supérieure de l'Aéronautique (Paris), 1963; M.S., California Institute, 1964

James Michael Gray, National Science Foundation Trainee, Mathematics
B.S., Texas Christian University, 1965

Richard Rutherford Green, Graduate Teaching Assistant, Electrical Engineering
B.S., California Institute of Technology, 1964; M.S., 1965

Charles August Greenhall, National Science Foundation Fellow, Mathematics
B.A., Pomona College, 1961

William Franklin Greenman, R. C. Baker Foundation Fellow, Graduate Research Assistant, Materials Science
B.S., California Institute, 1960; M.S., 1962

David Henry Griffel, Francis J. Cole Fellow, Physics
B.Sc. (Hons), Birmingham University, 1961

*Assistantship so marked carries tuition award.
Graduate Appointments

Michael Meehan Griffin, National Science Foundation Trainee, Aeronautics
B.S., Georgia Institute of Technology, 1965

Jack Denney Griffith, Graduate Teaching Assistant,* Biology
B.A., Occidental College, 1964

Richard William Griffith, National Aeronautics and Space Administration Trainee, Physics
B.S., California Institute, 1963

William Paul Gruber, Shell Companies Foundation Fellow, Mechanical Engineering
B.S., University of Washington, 1962; M.S., California Institute, 1963

James Edward Gunn, Leonard Scholar, Astronomy
B.A., Rice University, 1961; M.S., California Institute, 1965

Roger Allison Haas, Daniel and Florence Guggenheim Foundation Fellow, Spalding Scholar, Engineering Science
B.S., University of Florida, 1964; M.S., California Institute, 1965

Arthur Barry Haffner, Howard Hughes Fellow, Electrical Engineering
B.S., Polytechnic Institute of Brooklyn, 1963; M.S., 1965

Ralph Stuart Hager, Graduate Research Assistant, Anthony Scholar, Physics
B.S., University of Minnesota, 1961

Thomas Arthur Halgren, Graduate Teaching Assistant,* Chemistry
A.B., Wabash College, 1963

David Barnett Hall, National Science Foundation Trainee, Physics
S.B., Massachusetts Institute of Technology, 1965

Steven David Hall, Graduate Research Assistant,* Geophysics
B.S., California Institute, 1965

Edwin John Hamilton, Graduate Teaching Assistant,* Chemistry
B.A., New York University, 1963

James Raymond Hannigan, National Science Foundation Fellow, Electrical Engineering
B.S., United States Military Academy, 1963

David Marvin Hanson, Graduate Teaching Assistant,* Chemistry
B.A., Dartmouth College, 1964

Roy Woodrow Harding, Jr., Graduate Teaching Assistant,* Biology
B.S., George Washington University, 1962

William Douglas Harrison, Graduate Research Assistant, Anthony Scholar, Physics
B.Sc., Mount Allison University (Canada), 1958; B.Sc., (Spec.), Imperial College of Science and Technology, 1960

Howard Elliot Harry, Jr., Howard Hughes Fellow, Electrical Engineering
B.S., California Institute, 1964; M.S., 1965

Kenneth Gunder Harstad, Graduate Teaching Assistant,* Aeronautics
B.S.M.E., University of North Dakota, 1961; S.M., Massachusetts Institute of Technology, 1962

William George Harter, National Defense Education Act Fellow, Physics
A.B., Hiram College, 1964

Donald LeRoy Hartill, National Science Foundation Fellow, Physics
S.B., Massachusetts Institute of Technology, 1961

James Keith Hartman, Howard Hughes Fellow, Geology
B.S., Cornell University, 1965

Ryusuke Hasegawa, Graduate Teaching Assistant,* Electrical Engineering
B.E., Nagoya University (Japan), 1962; M.E., 1964

Harold Jay Haskins, Dobbins Scholar, Mechanical Engineering
B.S., California Institute, 1963

G. Laurie Hatch, Graduate Research Assistant, Anthony Scholar, Physics
B.S., Tufts University, 1959

*Assistantship so marked carries tuition award.
Loren Endicott Hatlen, *Graduate Teaching Assistant, Biology*
B.A., University of California (Santa Barbara), 1962

Edward Gerald Hauptmann, *Graduate Teaching Assistant, Applied Mechanics*
B.Sc., University of Alberta, 1960; M.S., California Institute, 1961

Michael George Hauser, *National Science Foundation Fellow, Graduate Teaching Assistant, Physics*
B.E.Ph., Cornell University, 1962

Mathilde Jeannette Hebb, *Graduate Research Assistant, Drake Scholar, Physics*
A.B., Bryn Mawr College, 1961

Kenneth Leon Heitner, *National Science Foundation Trainee, Applied Mechanics*
B.S., Webb Institute of Naval Architecture, 1964

Norman Lewis Helgeson, *Standard Oil Company of California Fellow, Chemical Engineering*
B.S., University of Idaho, 1963; M.S., University of Utah, 1964

Robert Jack Hemstead, *Graduate Teaching Assistant, Mathematics*
B.S., Stanford University, 1964

Carl William Hennrich, *National Science Foundation Faculty Fellow, Aeronautics*
B.A.E., University of Virginia, 1959; B.E.E., 1960; M.A.E., 1961

David Cecil Hensley, *National Aeronautics and Space Administration Trainee, Physics*
B.S., University of Arizona, 1960

Frank Stephen Henyey, *National Science Foundation Cooperative Fellow, Physics*
A.B., University of California, 1963

Thomas Louis Henyey, *Standard Oil Company of California Fellow, Geology*
A.B., University of California, 1962

Leslie Creighton Higbie, *Graduate Teaching Assistant, Mathematics*
B.S., St. Lawrence University, 1963

Theodore William Hilgeman, *Graduate Research Assistant, Drake Scholar, Physics*
S.B., Massachusetts Institute of Technology, 1964

Jack Hubert Hill, *Rand Corporation Fellow, Aeronautics*
B.S., University of Oklahoma, 1952; M.S., 1954

Roger Calvert Hill, *National Science Foundation Fellow, Physics*
B.S., California Institute, 1963

William Aro Hill, *National Defense Education Act Fellow, Biology*
B.A., Cornell University, 1965

Frederick Lee Hinton, *National Science Foundation Fellow, Physics*
B.S.E., University of Michigan, 1962; M.S., 1963

William David Hixson, *Graduate Teaching Assistant, Mechanical Engineering*
B.S., California Institute, 1965

Chee Leung Ho, *Graduate Teaching Assistant, Applied Mechanics*
B.Sc., Queen's University (Ontario), 1963; M.S., California Institute, 1964

Alan Lowell Hoffman, *National Science Foundation Cooperative Fellow, Aeronautics*
B.E.Ph., Cornell University, 1963; M.S., California Institute, 1964.

Brian Mark Hoffman, *National Science Foundation Fellow, Chemistry*
B.S., University of Chicago, 1962

Donald Richard Hoffman, *National Science Foundation Trainee, Chemistry*
A.B., Harvard College, 1965

Lincoln Steffens Hollister, *Kennecott Copper Corporation Fellow, Graduate Teaching Assistant, Geology*
A.B., Harvard College, 1961

Hwei-kwan Hong, *Graduate Teaching Assistant, Chemistry*
B.S., National Taiwan University, 1963; M.S., National Tsing Hua University, 1965

*Assistantship so marked carries tuition award.*
Graduate Appointments

Leroy Edward Hood, *United States Public Health Service Fellow, Biology*
B.S., California Institute, 1960; M.D., Johns Hopkins University, 1964

Fritz Herbert Hormann, *Clinedinst Scholar, Aeronautics*
Dipl. Ing., Technische Universität (Berlin), 1965

James MacGregor Howell, *National Aeronautics and Space Administration Trainee, Graduate Teaching Assistant, Chemistry*
A.B., Harvard College, 1964

S.B., Massachusetts Institute of Technology, 1965

Daniel I. Huaco-Oviedo, *Carnegie Institution of Washington Fellow, Instituto Geofisico del Peru Fellow, Geology*
Bachelors, Universidad National de San Agustin de Arequipa (Peru), 1959; Ing., Instituto Geofisico (Peru), 1961

Arthur Thornton Hubbard, *National Science Foundation Fellow, Chemistry*
B.A., Westmont College, 1963

Joel Anthony Huberman, *United States Public Health Service Fellow, Biology*
A.B., Harvard College, 1963

Evan Eugene Hughes, Jr., *National Science Foundation Fellow, Graduate Teaching Assistant, Physics*
B.S., California Institute, 1962; M.S., 1963

Glen Owen Hultgren, *Anthony Scholar, Chemistry*
B.S., University of California, 1958

Raul Husid, *Graduate Teaching Assistant, Civil Engineering*
C.E., University of Chile, 1960; M.S., California Institute, 1964

Robert John Huskey, *Graduate Teaching Assistant, Biology*
B.S., University of Oklahoma, 1960; M.S., 1962

Clyde Allen Hutchison III, *Graduate Teaching Assistant, Biology*
B.S., Yale University, 1960

Richard Walter Hyman, *National Institutes of Health Trainee, Chemistry*
B.S., University of California, 1962; M.S., Cornell University, 1964

Harry Lester Hyndman, *Graduate Teaching Assistant, Chemistry*
B.S., University of Illinois, 1962

James Reid Ipser, *National Science Foundation Fellow, Physics*
B.S., Loyola University (New Orleans), 1964

Martin Henry Israel, *National Science Foundation Cooperative Fellow, Physics*
S.B., University of Chicago, 1962

Martin Stanley Itzkowitz, *National Science Foundation Fellow, Chemistry*
A.B., Columbia College, 1962

Robert Tamotsu Iwamasa, *United States Public Health Service Fellow, Graduate Teaching Assistant, Chemistry*
B.S., University of California, 1959; M.A., University of California (Riverside), 1963

Kenneth Charles Jacobs, *Graduate Research Assistant, Graduate Teaching Assistant, Murray Scholar, Physics*
S.B., Massachusetts Institute of Technology, 1964

Richard Norman Jacobson, *John Stauffer Fellow, Chemical Engineering*
B.S., Michigan State University, 1965

David Fielding James, *Graduate Teaching Assistant, Mechanical Engineering*
B.Sc., Queen's University (Ontario), 1962; M.S., California Institute, 1963

Robert Francis Jeffers, *Graduate Teaching Assistant, Applied Mechanics*
B.Sc., National University of Ireland (Cork), 1964; M.Sc., 1965

Robert Theodore Jenkins, *Dobbins Scholar, Electrical Engineering*
B.S., California Institute, 1965

*Assistantship so marked carries tuition award.*
Lane Richard Johnson, National Science Foundation Fellow, Geology  
B.S., University of Minnesota, 1960; M.S., 1962

Janet Gretchen Jones, Graduate Teaching Assistant,* Chemistry  
B.A., Swarthmore College, 1961

Lorella Margaret Jones, National Science Foundation Fellow, Graduate Teaching Assistant, Physics  
B.A., Radcliffe College, 1964

Nora Sigrun Josephson, Graduate Teaching Assistant, Oberholtz Scholar, Physics  
B.A., University of California (Riverside), 1962

Richard Douglas Kerr Josslin, Graduate Teaching Assistant,* Biology  
S.B., Massachusetts Institute of Technology, 1965

Bruce Rene Julian, National Science Foundation Fellow, Geophysics  
B.S., California Institute, 1964

Howard Arthur Kabakow, Graduate Teaching Assistant, Oberholtz Scholar, Physics  
B.S., California Institute, 1962

David Kabat, National Science Foundation Fellow, Graduate Teaching Assistant, Biology  
Sc.B., Brown University, 1962

Edwin Charles Kampmann, Woodrow Wilson Foundation Fellow, Astronomy  
S.B., Massachusetts Institute of Technology, 1965

Joseph Francis Karnicky, National Science Foundation Fellow, Graduate Teaching Assistant, Chemistry  
B.S., Villanova University, 1965

Elton Neil Kaufmann, Atomic Energy Commission Fellow, Graduate Research Assistant, Physics  
B.S., Rensselaer Polytechnic Institute, 1964

Steven Kenneth Kauffman, National Defense Education Act Fellow, Physics  
B.S., California Institute, 1965

Susan Elizabeth Kayser, Roeser Scholar, Astronomy  
A.B., Radcliffe College, 1960

Douglas Allan Keeley, Van Maanen Fellow, T.S. Brown Scholar, Astronomy  
B.Sc. (Hons), University of Manitoba, 1964

Regis Baker Kelly, Arthur McCallum Fellow, Graduate Teaching Assistant, Biology  
B.Sc. (Hons), Edinburgh University, 1961; Dipl. Bioph., 1961

John Joseph Kenny, Howard Hughes Fellow, Electrical Engineering  
B.S., University of Rhode Island, 1963; M.S., California Institute, 1964

Ronald Lee Kerber, National Science Foundation Trainee, Engineering Science  
B.S., Purdue University, 1965

Vassilios Kerdemelidis, Graduate Research Assistant,* Electrical Engineering  
B.E., National School of Engineering, University of New Zealand, 1957; M.S., California Institute, 1961

Hugh Hartman Kieffer, National Aeronautics and Space Administration Trainee, Geology  
B.S., California Institute, 1961

John Andrew Kiger, Jr., National Aeronautics and Space Administration Trainee, Graduate Teaching Assistant, Biology  
B.S., California Institute, 1963

Jonathan Alan King, United States Public Health Service Fellow, Biology  
B.S., Yale University, 1962

William Morris Kinnersley III, National Science Foundation Fellow, Physics  
B.S., Rensselaer Polytechnic Institute, 1964

*Assistantship so marked carries tuition award.
92 Graduate Appointments

William Herbert Kirby, Richfield Oil Corporation Fellow, Chemical Engineering
B.S., Iowa State University, 1961; M.Sc., Ohio State University, 1962

Ronald Brian Kirk, National Science Foundation Trainee, Mathematics
B.A., University of Colorado, 1963

Mark Brecher Kislinger, National Science Foundation Fellow, Physics
B.A., University of California, 1965

Alan Frank Klein, National Science Foundation Trainee, Aeronautics
B.E., Cornell University, 1960; M.Ae.E., 1961

Richard Ira Klein, National Aeronautics and Space Administration Trainee, Electrical Engineering
B.E.E., Cornell University, 1964; M.S., California Institute, 1965

John Michael Klineberg, Anthony Scholar, Aeronautics
B.S.E., Princeton University, 1960; M.S., California Institute, 1962

Denny Ru-Sue Ko, Graduate Research Assistant,* Aeronautics
B.S., National Taiwan University, 1960; M.S., University of California, 1964

Hon-Yim Ko, Graduate Research Assistant,* Civil Engineering
B.Sc., University of Hong Kong, 1962; M.S., California Institute, 1963

Paul Craig Kochendorfer, National Science Foundation Trainee, Aeronautics
B.S., California Institute, 1965

John Kent Koester, National Science Foundation Trainee, Applied Mechanics
B.S., University of Notre Dame, 1964; M.S., California Institute, 1965

Stewart Milton Kohler, Graduate Teaching Assistant,* Mechanical Engineering
B.A., Rice University, 1964; B.S., 1965

Ralph Yutaka Komai, Graduate Teaching Assistant,* Chemistry
A.B., Whittier College, 1964

Stanley Garson Krane, Tuition Award, Biochemistry
B.S., City College of New York, 1957; M.S., Michigan State University, 1958

David Louis Kreinick, Graduate Teaching Assistant, Oberholtz Scholar, Physics
B.A., Brandeis University, 1963; M.S., California Institute, 1965

Mark Howard Kryder, National Science Foundation Trainee, Electrical Engineering
B.S., Stanford University, 1965

Jen Kai Kung, Graduate Teaching Assistant,* Electrical Engineering
B.Sc., Taiwan Provincial Cheng Kung University, 1963

Julio Horiuchi Kuroiwa, Organization of American States Fellow, Civil Engineering
Ing., Universidad Nacional de Ingenieria (Peru), 1960

Harold Charles Kurtz, Graduate Teaching Assistant,* Mathematics
B.S., California Institute, 1962; M.S., 1965

Mitsuru Kurosaka, Graduate Research Assistant,* Mechanical Engineering
B.S., University of Tokyo, 1959; M.S., 1961

Theodore Willis Laetsch, National Defense Education Act Fellow, Applied Mathematics
B.S., Washington University, 1961; S.M., Massachusetts Institute of Technology, 1962

Bruce Meno Lake, Graduate Research Assistant,* Aeronautics
B.S.E., Princeton University, 1963; M.S., California Institute, 1964

Ernest Yee Yeung Lam, Graduate Teaching Assistant,* Chemistry
B.Sc., University of Hong Kong, 1959; B.Sc.Sp. (Hons), 1960

John Ling-Yee Lam, Graduate Teaching Assistant, Oberholtz Scholar, Physics
B.A., Rice University, 1962

Arthur Lonne Lane, Graduate Research Assistant,* Chemistry
A.B., Harvard College, 1961; M.S., University of Illinois, 1963

Richard Neil Lane, National Defense Education Act Fellow, Mathematics
B.S., California Institute, 1965

*Assistantship so marked carries tuition award.
Alvin Henry Larsen, *National Science Foundation Trainee, Chemical Engineering*
B.S. (Chem. Eng.) (Hons.), University of Utah, 1965; B.A. (Physics), 1965

Harold Theodore Larson, *Graduate Research Assistant, Oberholtz Scholar, Physics*
B.A., Los Angeles State College, 1963; M.S., California Institute, 1965

Richard Bondo Larson, *Graduate Teaching Assistant,* *Astronomy*
B.Sc., University of Toronto, 1962; M.A., 1963

Francis Jean-Pierre Latapie, *French Ministry of Foreign Affairs Fellow, Aeronautics*
Ing., Ecole Nationale Supérieure de l'Aéronautique (Paris), 1965

John Thomas Latimore, *National Defense Education Act Fellow, Applied Mathematics*
A.B., Occidental College, 1965

Joseph Po-keung Lau, *Graduate Research Assistant,* *Engineering Science*
B.Sc., Purdue University, 1962; M.S., California Institute, 1963

George Lauer, *North American Aviation Fellow, Graduate Teaching Assistant, Chemistry*
B.S., University of California (Los Angeles), 1961

Michael John Laughlin, *National Science Foundation Trainee, Aeronautics*
B.S., Purdue University, 1965

Jean-Pierre Laussade, *Graduate Research Assistant,* *Electrical Engineering*
Ing., Ecole Supérieure d'Electricité (Paris), 1964; M.S., California Institute, 1965

Stephen Stuart Lavenberg, *National Science Foundation Fellow, Electrical Engineering*
B.E.E., Rensselaer Polytechnic Institute, 1963; M.S., California Institute, 1964

James Robert Lawrence, *Graduate Teaching Assistant,* *Geochemistry*
B.S., Union College, 1964

Chong Sung Lee, *Graduate Research Assistant,* *Chemistry*
B.S., Seoul National University, 1964

Don Howard Lee, *Graduate Teaching Assistant,* *Electrical Engineering*
B.S., California Institute, 1963; M.S., 1964

Jen-shih Lee, *Graduate Research Assistant,* *Aeronautics*
B.S., National Taiwan University, 1961; M.S., California Institute, 1963

Jo Woong Lee, *Graduate Teaching Assistant,* *Chemistry*
B.S., Seoul National University, 1964; M.S., 1965

Alfred Bryan Lees, *Graduate Teaching Assistant,* *Chemistry*
S.c.B., Brown University, 1964

George Thaddius Lengyel, *National Science Foundation Trainee, Chemical Engineering*
B.S., Lehigh University, 1965

Joel Eric Lerendu, *French Foreign Ministry Fellow, Electrical Engineering*
Ing., Université de Grenoble, 1965

John Seymour Letcher, Jr., *National Science Foundation Cooperative Fellow, Aeronautics*
B.S., California Institute, 1963; M.S., 1964

Menachem Levanoni, *Graduate Research Assistant, Oberholtz Scholar, Physics*
B.Sc., Hebrew University (Jerusalem), 1964

John Victor Levy, *National Science Foundation Trainee, Electrical Engineering*
B.E.Ph., Cornell University, 1965

George Wladimir Lewicki, *Laws Scholar, Electrical Engineering*
S.B., Massachusetts Institute of Technology, 1960; M.S., California Institute, 1961

John Eldon Lewis, *TRW Space Technology Laboratories Fellow, Aeronautics*
B.S., University of California, 1962; M.S., California Institute, 1963

Leroy Chi-tsun Lin, *Graduate Research Assistant,* *Chemistry*
B.S., Tunghai University (China), 1960; M.S., Texas Christian University, 1963

*Assistantship so marked carries tuition award.*

*Assistantship so marked carries tuition award.
James Andrew Magnuson, National Defense Education Act Fellow, Graduate Teaching Assistant, Chemistry  
B.S., Stanford University, 1964

Michael James Mahon, National Aeronautics and Space Administration Trainee, Electrical Engineering  
B.S., Saint Louis University, 1963; M.S., California Institute, 1965

Philippe Louis Maitrepierrre, Graduate Research Assistant,* Materials Science  
Ing., Ecole Nationale Supérieure des Mines (Paris), 1965

Saurindranath Majumdar, Graduate Research Assistant,* Aeronautics  
B.E., University of Calcutta, 1963; M.Eng., McGill University, 1965

Dean Anthony Malencik, National Science Foundation Fellow, Biology  
B.S., Notre Dame University, 1965

Ramani Mani, Francis J. Cole Fellow, Mechanical Engineering  
B.E., University of Bombay, 1963; M.S., California Institute, 1964

Jerry Mar, Graduate Teaching Assistant, Murray Scholar, Geophysics  
B.Sc., University of British Columbia, 1964

Dominique René Jacques Marchand, Graduate Teaching Assistant,* Electrical Engineering  
Ing., Ecole Supérieure d'Electricité (Malakoff), 1964; M.S., California Institute, 1965

Franklin Lester Marshall, National Aeronautics and Space Administration Trainee, Mechanical Engineering  
B.S., California Institute, 1962; M.S., 1963

Frederick Voegtlin Martin, Ford Foundation Fellow, Mathematics  
B.Sc., University of Alberta, 1963

Dennis Ludwig Matson, National Aeronautics and Space Administration Trainee, Geophysics  
A.B., San Diego State College, 1964

John Wallace Matthews, National Science Foundation Cooperative Fellow, Electrical Engineering  
B.S., University of California (Los Angeles), 1962; M.S., California Institute, 1963

Donald Eugene Maurer, National Science Foundation Fellow, Mathematics  
B.A., University of Colorado, 1964

Joyce Bennett Maxwell, Graduate Teaching Assistant,* Biology  
A.B., University of California (Los Angeles), 1963

David James McCloskey, Graduate Teaching Assistant,* Engineering Science  
B.S., Stanford University, 1958; M.S., 1959

Thomas Bard McCord, National Aeronautics and Space Administration Trainee, Geophysics  
B.S., Pennsylvania State University, 1964

John Thomas McCrickerd, Laws Scholar, Engineering Science  
S.B., Massachusetts Institute of Technology, 1964; M.S., California Institute, 1965

Patrick Joseph McDaniel, Atomic Energy Commission Fellow, Mechanical Engineering  
B.S., United States Air Force Academy, 1965

Arthur Bruce McDonald, Graduate Research Assistant, Oberholtz Scholar, Physics  
B.Sc., Dalhousie University, 1964; M.Sc., 1965

Robert Norman McDonnell, National Science Foundation Fellow, Mathematics  
S.B., University of Chicago, 1962; S.M., 1963

Stewart Douglas McDowell, National Science Foundation Trainee, Geology  
B.S., Pennsylvania State University, 1960; M.S., California Institute, 1962

Robert James McEliece, National Science Foundation Fellow, Mathematics  
B.S., California Institute, 1964

*Assistantship so marked carries tuition award.
Graduate Appointments

James Thomas McFarland, National Science Foundation Trainee, Chemistry
B.A., College of Wooster, 1964

Thomas Richard McGetchin, National Aeronautics and Space Administration Trainee, Geology
A.B., Occidental College, 1959; Sc.M., Brown University, 1961

Thomas Conley McGill, Jr., National Science Foundation Fellow, Electrical Engineering
B.S. (Math), Lamar State College of Technology, 1963; B.S. (E.E.), 1964; M.S., California Institute, 1965

John Robert McGinley, Jr., National Science Foundation Fellow, Geology
S.B., Massachusetts Institute of Technology, 1952; M.S., University of Tulsa, 1963

Patrick Anthony McGovern, Graduate Research Assistant, National Aeronautics and Space Administration Trainee, Electrical Engineering
B.S. (Hons), University of Queensland, 1961; B.Sc., 1962; M.S., California Institute, 1963

Michael Herbert McLaughlin, National Science Foundation Fellow, Electrical Engineering
B.M.E., Cornell University, 1965

James Henry McNally, Graduate Research Assistant, Anthony Scholar, Physics
B.E.Ph., Cornell University, 1959

William Atwood McNeely, Jr., National Science Foundation Trainee, Physics
A.B., San Diego State College, 1965

Thomas Edmond McSweeny, National Science Foundation Trainee, Aeronautics
B.S., Northrop Institute of Technology, 1965

Dallas Joel Meggitt, Dobbins Scholar, Aeronautics
B.S., California Institute, 1965

Axel Meisen, Graduate Research Assistant, Anthony Scholar, Chemical Engineering
B.Sc., Imperial College of Science and Technology (London), 1965

Robert Thomas Menzies, National Science Foundation Fellow, Physics
S.B., Massachusetts Institute of Technology, 1965

Charles Marvin Merrow, Naval Ordnance Test Station Fellow, Applied Mathematics

Edward Thomas Meschko, Atomic Energy Commission Fellow, Engineering Science
B.S., United States Air Force Academy, 1965

Robert Melville Metzger, United States Public Health Service Fellow, Chemistry
B.S., University of California (Los Angeles), 1962

Georges Joseph Michaud, Quebec-Hydro Fellow, Rutherford Scholar, Astronomy
B.A., Université Laval (Quebec), 1961; B.Ph., 1961; B.Sc., 1965

Charles King Michener, Graduate Teaching Assistant, Mechanical Engineering
B.S., California Institute, 1965

Ralph Edward Miller, National Science Foundation Fellow, Graduate Teaching Assistant, Chemistry
B.S., Washington State University, 1964

Richard Graham Miller, Graduate Research Assistant, Murray Scholar, Physics
B.Sc., University of Alberta, 1960; M.Sc., 1961

William Walter Miller, National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry
B.S., University of California, 1963

Catalin Dan Mitescu, Dobbins Scholar, Physics
B.Eng., McGill University, 1958

Tse-Chin Mo, Anthony Scholar, Electrical Engineering
B.S., National Taiwan University, 1964

*Assistantship so marked carries tuition award.
David Michael Mog, United States Public Health Service Fellow, Chemistry  
B.S., Case Institute of Technology, 1964

Douglas Crane Mohr, National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry  
B.S., San Diego State College, 1965

Robert Alan Moline, National Science Foundation Cooperative Fellow, Physics  
B.S., California Institute, 1964

Lawrence Carlton Moore, Jr., National Science Foundation Fellow, Graduate Teaching Assistant, Mathematics  
B.S., North Carolina State College, 1961

Wade Katsuto Morikone, United States Public Health Service Trainee, Civil Engineering  
B.S., University of Hawaii, 1965

Malcolm Cameron Morrison, Graduate Teaching Assistant, Anthony Scholar, Chemical Engineering  
B.S., California Institute, 1964

Paul Frederick Morrison, Graduate Teaching Assistant,* Chemistry  
B.S., University of Michigan, 1965

Michael Philip Mortell, Graduate Teaching Assistant,* Applied Mathematics  
B.S., University College (Cork), 1961; M.S., 1963; M.S., California Institute, 1964

Calvin Elroy Moss, National Aeronautics and Space Administration Trainee, Physics  
B.S., University of Virginia, 1961; M.S., California Institute, 1963

Adolph Vincent Mrstik, Jr., National Science Foundation Trainee, Electrical Engineering  
B.S., University of Illinois, 1964; M.S., 1965

Hans-Karl Christian Alfred Mueller, Graduate Research Assistant,* Aeronautics  
Dipl., Technische Hochschule Aachen, 1963; M.S., California Institute, 1964

Aftab Ahmed Mufti, Graduate Research Assistant,* Aeronautics  
B.E., University of Karachi, 1962; M.Eng., McGill University, 1965

Stanley Tetsu Murayama, National Science Foundation Fellow, Chemistry  
B.S., University of California (Los Angeles), 1963

John Stalker Murray, Jr., United States Public Health Service Trainee, Engineering Science  
B.A., Pomona College, 1964

Stephen S. Murray, National Defense Education Act Fellow, Physics  
B.S., Columbia University, 1965

K. R. Ananda Murthy, Inland Steel-Ryerson Scholar, Aeronautics  
B.E., University of Mysore, 1951; M.S.E., Princeton University, 1958

Stephen Auguste Muscanto, National Science Foundation Trainee, Electrical Engineering  
B.S., Yale University, 1965

Thomas Andrew Nagylaki, Anthony Scholar, Physics  
B.Sc. (Hons.), McGill University, 1964

Carlos Navarro-Cantero, National Aeronautics and Space Administration International Fellow, Aeronautics  
Ing., Escuela Técnica Superior de Ingenieros Aeronáuticos (Madrid), 1964; M.S., California Institute, 1965

Richard Stevens Naylor, National Science Foundation Fellow, Geology  
S.B., Massachusetts Institute of Technology, 1961

Robert David Nebes, Graduate Teaching Assistant,* Biology  
B.S., Tufts University, 1965

Gary Lawrence Neil, Graduate Research Assistant,* Chemistry  
B.Sc. (Hons.), Queen's University (Ontario), 1962

*Assistantship so marked carries tuition award.
James Henry Nelson, National Institutes of Health Trainee, Chemistry
B.S., Brigham Young University, 1964

Michael Harvey Nesson, Graduate Teaching Assistant, Biology
S.B., Massachusetts Institute of Technology, 1960

Patrick Henly Nettles, Jr., Graduate Research Assistant, Dobbins Scholar, Physics
B.S., Georgia Institute of Technology, 1964

John Edward Newbold, Arthur McCallum Fellow, Graduate Teaching Assistant, Biology
B.Sc., Birmingham University (England), 1962

Alexander Massey Nicholson, Graduate Teaching Assistant, Mathematics
B.A. (Hons), University of Saskatchewan, 1963; B.E., 1964; M.A., 1965

Navin Chandra Nigam, Graduate Teaching Assistant, Civil Engineering
B.Sc., University of Allahabad, 1955; B.E., University of Roorkee, 1958; M.S., Purdue University, 1964

Eric Arden Noe, Graduate Teaching Assistant, Chemistry
B.S., University of Cincinnati, 1965

Frederick Reyes Norwood, National Aeronautics and Space Administration Trainee, Applied Mechanics
B.S., University of California (Los Angeles), 1962; M.S., California Institute, 1963

Susann Jane Novalis, National Science Foundation Fellow, Graduate Teaching Assistant, Aeronautics
B.S., Cornell University, 1965

Richard John O'Connell, Graduate Research Assistant, Geology
B.S., California Institute, 1963

Robert West O'Connell, National Science Foundation Fellow, Astronomy
A.B., University of California, 1964

James Theodore O'Farrell, Clinedinst Scholar, Electrical Engineering
B.S., United States Naval Academy, 1960

Heiko Herbert Ohlenbusch, Graduate Research Assistant, Chemistry
B.S., Columbia University, 1959

Hiroshi Ohtakay, Francis J. Cole Fellow, Electrical Engineering
B.S., Tokyo Institute of Technology, 1961

Valdar Oinas, National Defense Education Act Fellow, Astronomy
A.B., Indiana University, 1965

Justin Taro Okada, Atomic Energy Commission Fellow, Engineering Science
B.S., Oregon State University, 1965

Patricia Marie O'Keefe, National Defense Education Act Fellow, Chemistry
B.S., University of Delaware, 1965

Josephat Kanayo Okoye, Graduate Teaching Assistant, Civil Engineering
B.S., Purdue University, 1965

Baldomero Marquez Olivera, Jr., Graduate Research Assistant, Chemistry
B.S., University of the Philippines, 1960; B.S.Chem., 1961

Edward Tait Olsen, Graduate Research Assistant, Dobbins Scholar, Physics
S.B., Massachusetts Institute of Technology, 1964

Mervyn Daniel Olson, Laws Scholar, Aeronautics
B.A.Sc., University of British Columbia, 1962; M.S., California Institute, 1963

Charles Douglas Orth, Graduate Research Assistant, Dobbins Scholar, Physics
B.S., University of Washington, 1964

Patrick Stewart Osmer, National Science Foundation Fellow, Astronomy
B.S., California Institute, 1965

*Assistantship so marked carries tuition award.
Michael John O'Sullivan, *Gillette-Paper Mate Fellow, Applied Mechanics*
B.E., University of Auckland, 1962; B.Sc., 1963

Martin Lawrence Pall, *Arthur McCallum Fellow, Graduate Teaching Assistant, Biology*
B.A., Johns Hopkins University, 1962

Dimitri Anastassios Papanastassiou, *Graduate Research Assistant, Dobbins Scholar, Physics*
B.S., California Institute, 1965

Gerhard Hans Parker, *Graduate Teaching Assistant, Electrical Engineering*
B.S., California Institute, 1965

John Stansfield Parkinson, Jr., *Graduate Teaching Assistant, Biology*
B.A., Haverford College, 1965

Christopher Alan Parr, *National Aeronautics and Space Administration Trainee, Chemistry*
B.S., University of California, 1962

Stanley Monroe Parsons, *Graduate Teaching Assistant, Chemistry*
B.S., California Institute, 1965

S. P. Parthasarathy, *Graduate Research Assistant, Aeronautics*
B.Sc.(Hons), Central College (Bangalore), 1958; M.Sc. (Physics), 1959; M.Sc., Indian Institute of Science (Aeronautics), 1964

Navin Bhailalbhai Patel, *Graduate Teaching Assistant, Dobbins Scholar, Physics*
B.Sc., University of Bombay, 1963; M.Sc., 1965

M. V. Pattabhiraman, *Graduate Teaching Assistant, Mathematics*
B.A., Nizam College (India), 1949; M.A., Osmania University (India), 1951

Carl Elliott Patton III, *National Aeronautics and Space Administration Trainee, Electrical Engineering*
S.B., Massachusetts Institute of Technology, 1963; M.S., California Institute, 1964

Harold James Payne, *Howard Hughes Fellow, Applied Mathematics*
B.S., Purdue University, 1963

Charles Brady Peck, *National Science Foundation Trainee, Engineering Science*
B.S., Harvey Mudd College, 1965

Rex Bredesen Peters, *National Science Foundation Trainee, Mechanical Engineering*
B.S., California Institute, 1956; M.S., 1963

Arsine Victoria Peterson, *National Science Foundation Trainee, Astronomy*
S.B., Massachusetts Institute of Technology, 1963

Bruce Alrick Peterson, *National Aeronautics and Space Administration Trainee, Astronomy*
S.B., Massachusetts Institute of Technology, 1963

Lee Louis Peterson, *United States Public Health Service Trainee, Engineering Science*
B.S., California Institute, 1964

George Arthur Petersson, *Graduate Teaching Assistant, Chemistry*
B.S., The City College of New York, 1964

Allen Michael Pfeffer, *National Science Foundation Fellow, Graduate Teaching Assistant, Mathematics*
B.S., California Institute, 1963

Wayne Wallace Pfeiffer, *National Science Foundation Fellow, Applied Mathematics*
B.S., Wichita State University, 1965

Joram Paul Piatigorsky, *Graduate Teaching Assistant, Biology*
A.B., Harvard College, 1962

Albert Bernard Pincince, *United States Public Health Service Trainee, Civil Engineering*
B.S., Northeastern University, 1963; M.S., California Institute, 1965

*Assistantship so marked carries tuition award.
100  Graduate Appointments

Natalia Vojislav Pisker, Graduate Teaching Assistant, Chemistry
Dipl., University of Belgrade, 1965

Leonard William Piszkiewicz, National Institutes of Health Trainee, Chemistry
B.S., Loyola University (Chicago), 1962

Robert Leslie Poeschel, Howard Hughes Fellow, Electrical Engineering
B.S., University of Illinois, 1960; M.S., 1960

Ronald James Pogorzelski, National Science Foundation Trainee, Electrical Engineering
B.S., Wayne State University, 1964; M.S., 1965

David Peter Pope, Graduate Research Assistant, Materials Science
B.S., University of Wisconsin, 1961; M.S., California Institute, 1962

Sylvie Françoise Potigny, Graduate Teaching Assistant, Engineering Science
Ing., Ecole Supérieure de Physique et de Chimie Industrielles (Paris), 1965

Charles Young Prescott, Graduate Research Assistant, Dobbins Scholar, Physics
B.A., Rice University, 1961

Richard Henry Price, National Science Foundation Fellow, Physics
B.E.Ph., Cornell University, 1965

Eldon Bruce Priestley, Graduate Teaching Assistant, Chemistry
B.Sc. (Hons), University of Alberta, 1965

William Paul Proffitt, Tau Beta Pi Fellow, Laws Scholar, Electrical Engineering
B.S., University of Maryland, 1965

Thomas Antone Pucik, Boeing Fellow, Aeronautics
B.S., California Institute, 1965

Jason Niles Puckett, Jr., National Science Foundation Trainee, Electrical Engineering
B.S., California Institute, 1965

Paul Walton Purdom, Jr., Inland Steel-Ryerson Scholar, Graduate Research Assistant, Physics
B.S., California Institute, 1961; M.S., 1962

Roger James Radloff, Graduate Teaching Assistant, Biology
B.S., Iowa State University, 1962

David Lawrence Randall, National Institutes of Health Trainee, Electrical Engineering
B.S.E. (E.E.), University of Michigan, 1963; B.S.E. (Math), 1963; M.S., California Institute, 1965

Philip Wayne Randles, National Science Foundation Fellow, Applied Mechanics
B.S., Oklahoma State University, 1962; M.S., 1963

Charles Forest Raymond, National Science Foundation Fellow, Geology
A.B., University of California, 1961

John Douglas Reichert, Roesser Scholar, Physics
B.A., University of Texas, 1961; B.S., 1961

Thomas Charles Reihman, United States Steel Foundation Fellow, Mechanical Engineering
B.S., Iowa State University, 1961; M.S., University of Denver, 1963

Donald Sherwood Remer, National Science Foundation Trainee, Chemical Engineering
B.S.E., University of Michigan, 1965

James Thomas Renfrow, National Science Foundation Trainee, Graduate Teaching Assistant, Mathematics
B.S., University of Michigan, 1964

David Allen Rennels, National Aeronautics and Space Administration Trainee, Electrical Engineering
B.S., Rose Polytechnic Institute, 1964; M.S., California Institute, 1965

Carl James Rice, National Science Foundation Cooperative Fellow, Physics
B.A., University of Utah, 1964

*Assistantship so marked carries tuition award.
Graduate Appointments

James Kinsey Rice, National Science Foundation Fellow, Chemistry
B.S., Indiana University, 1963

Paul Granston Richards, Graduate Research Assistant, Geophysics
B.A., Cambridge University, 1965

Arthur Dale Riggs, Arthur McCallum Fellow, Graduate Teaching Assistant, Biology
A.B., University of California (Riverside), 1960

Merle Eugene Riley, National Science Foundation Fellow, Chemistry
B.S., Marietta College, 1963

Peter Paul Augustine Rispin, Graduate Teaching Assistant, Applied Mechanics
B.Sc., University College (Cork), 1959; M.Sc., 1961

Donald Lewis Robberson, Graduate Teaching Assistant, Biology
B.S., Oklahoma Baptist University, 1963

Phillip Howard Roberts, Jr., Graduate Teaching Assistant, Inland Steel-Ryerson Scholar, Physics
B.S., University of Kansas, 1963; M.S., California Institute, 1965

William McKinley Robinson, Jr., National Aeronautics and Space Administration Trainee, Aeronautics
B.S., University of Tennessee, 1963; M.S., Arizona State University, 1965

Leon S. Rochester, National Science Foundation Cooperative Fellow, Physics
A.B., University of Chicago, 1962

Richard Dale Rocke, Howard Hughes Fellow, Applied Mechanics
B.S.M.E., Bradley University, 1960; M.S., University of Southern California, 1962

Stephen Dell Rockwood, Graduate Research Assistant, Oberholtz Scholar, Physics
B.A., Grinnell College, 1965

David John Roddy, Coates Scholar, Geology
A.B., Miami University, 1955; M.S., 1957

Valentin Rodriguez, Graduate Research Assistant, Electrical Engineering
B.E.E., Catholic University of America, 1964; M.S., California Institute, 1965

David Herbert Rogstad, Graduate Research Assistant, Physics
B.S., California Institute, 1962; M.S., 1964

Freeman Harding Rose, Jr., Tektronix Foundation Fellow, Electrical Engineering
B.S., California Institute, 1965

James Robert Rose, National Research Council of Canada Fellow, Bennett Scholar, Aeronautics
B.A.Sc., University of Toronto, 1964; M.S., California Institute, 1965

John Brandt Rose, National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry
B.A., Western Reserve University, 1965

Robert Rosen, Anthony Scholar, Mechanical Engineering
B.S., University of Miami, 1960; M.S., Northwestern University, 1962

William Joseph Rosenberg, Howard Hughes Fellow, Electrical Engineering
B.S., California Institute, 1964

Richard Lawson Russell, Graduate Teaching Assistant, Biology
A.B., Harvard College, 1962

Anil Sadgopal, Lucy Mason Clark Fellow, Graduate Teaching Assistant, Biology
B.Sc. (Hons.), University of Delhi, 1960; M.Sc., Indian Agricultural Research Institute, 1962

Yilmaz Esref Sahinkaya, Graduate Teaching Assistant, Electrical Engineering
Dipl., (M.E.), Loughborough College of Technology (England), 1961; M.S.E., University of Michigan, 1962

Charles George Sammis, National Defense Education Act Fellow, Geophysics
Sc.B., Brown University, 1965

*Assistantship so marked carries tuition award.
Samuel Marvin Savin, *Graduate Teaching Assistant,* Geology  
B.A., Colgate University, 1961

Jeffrey Drexel Scargle, *National Science Foundation Fellow, Graduate Teaching Assistant,* Astronomy  
B.A., Pomona College, 1963

Phillip Cuthbert Schaefer, *United States Public Health Service Fellow, Chemistry*  
B.A., Dartmouth College, 1964

Arnold Martin Schaffer, *Graduate Research Assistant,* Chemistry  
B.S., Polytechnic Institute of Brooklyn, 1963

Charles Albert Schaffner, *Howard Hughes Fellow, Electrical Engineering*  
B.S., Drexel Institute of Technology, 1961; M.S., University of Southern California, 1963

Herbert Schiller, *National Science Foundation Trainee, Mechanical Engineering*  
B.M.E., Polytechnic Institute of Brooklyn, 1965

Roger Selig Schluter, *National Science Foundation Trainee, Engineering Science*  
B.S.Engr.Sc., Purdue University, 1964; M.S., California Institute, 1965

Donald Emil Schmidt, Jr., *National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry*  
B.S., Iowa State University, 1963

Robert Jay Schmulian, *Graduate Teaching Assistant,* Applied Mathematics  
B.S., California Institute, 1963

Henry Gerard Schwartz, Jr., *United States Public Health Service Trainee, Civil Engineering*  
B.S.C.E., Washington University, 1961; M.S., 1962

Rena Rachel Schwartz, *Graduate Teaching Assistant,* Mathematics  
B.Sc., McGill University, 1965

Robert Benson Scott, *Lockheed Leadership Fund Fellow, Aeronautics*  
B.S., California Institute, 1965

William Addison Scott, *Graduate Teaching Assistant,* Biology  
B.S., University of Illinois, 1962

John William Sedat, *National Science Foundation Trainee, Biology*  
B.A., Pasadena College, 1963

Serge Seletzky, *French Foreign Ministry Fellow, Electrical Engineering*  
Ing., Ecole Supérieure d'Electricité (Paris), 1965

Robert Seliger, *Howard Hughes Fellow, Applied Mathematics*  
B.S., Polytechnic Institute of Brooklyn, 1963

Edwin Charles Seltzer, *Graduate Research Assistant, Anthony Scholar, Physics*  
B.S., California Institute, 1959

Pattamadai Narasimhan Shankar, *General Electric International Fellow, Engineering Science*  
B.Sc., Imperial College of Science and Technology (London), 1964

Wesley Loren Shanks, *Graduate Teaching Assistant, Oberholtz Scholar, Physics*  
B.S., California Institute, 1960; M.S., 1964

Allen David Shearn, *United States Public Health Service Fellow, Graduate Teaching Assistant, Biology*  
B.A., University of Chicago, 1964

Cheng-chung Shen, *Graduate Research Assistant,* Engineering Science  
B.S., National Taiwan University, 1959; S.M., Massachusetts Institute of Technology, 1964

Joyce Yueh Shen, *Arthur McCallum Fellow, Graduate Teaching Assistant, Biology*  
B.S., National Taiwan University, 1964

Harvey Kenneth Shepard, *Roeser Scholar, Physics*  
B.S., University of Illinois, 1960; M.S., California Institute, 1962

*Assistantship so marked carries tuition award.*
Richard David Sherman, *National Science Foundation Trainee, Electrical Engineering*
S.B., Massachusetts Institute of Technology, 1965

Yuch-ning Shieh, *Graduate Research Assistant,* Geology
B.Sc., National Taiwan University, 1962

Thomas Yu-tzung Shih, *Graduate Teaching Assistant,* Biology
M.B., National Taiwan University, 1965

Sang Chul Shim, *Graduate Research Assistant,* Chemistry
B.S., Seoul National University, 1962

Gerson Seth Shostak, *National Aeronautics and Space Administration Trainee, Astronomy*
B.A., Princeton University, 1965

Arnold Louis Shugarman, *National Defense Education Act Fellow, Graduate Teaching Assistant, Chemistry*
B.Sc., Los Angeles State College, 1964

Bernard Jose Sitt, *French Ministry of Foreign Affairs Scholar, Mechanical Engineering Ing., Ecole Polytechnique (Paris), 1964*

John Edward Smart, *National Science Foundation Fellow, Biology*
B.S., Ohio State University, 1965

Stephen Chester Smelser, *National Science Foundation Trainee, Chemical Engineering*
B.S., University of Michigan, 1964; M.S., California Institute, 1965

Douglas Smith, *National Science Foundation Fellow, Graduate Teaching Assistant, Geology*
B.S., California Institute, 1962; A.M., Harvard University, 1963

Jerome Allan Smith, *Graduate Research Assistant,* Aeronautics
B.S.E., University of Michigan, 1962; M.S., California Institute, 1963

Ronald Lee Smith, *Graduate Research Assistant, Anthony Scholar, Chemical Engineering*
B.E., Vanderbilt University, 1958; M.S., Rice University, 1965

Stephen Charles Smith, *Graduate Teaching Assistant,* Chemistry
A.B., Western Reserve University, 1964

Furman Yates Sorrell, Jr., *Graduate Research Assistant,* Aeronautics
B.S., North Carolina State College, 1960; M.S., California Institute, 1961

Edmund Eugene Spaeth, *United States Public Health Service Trainee, Applied Mechanics*
B.S., Stanford University, 1962; M.S., California Institute, 1963

Hartmut A. W. Spetzler, *National Defense Education Act Fellow, Geophysics*
B.S., Trinity University, 1961; M.S., 1962

Robert John Spiger, *National Science Foundation Cooperative Fellow, Physics*
B.S., University of Washington, 1962

James Lawrence Spivack, *National Science Foundation Fellow, Graduate Teaching Assistant, Chemistry*
B.S., Polytechnic Institute of Brooklyn, 1965; M.S., 1965

Richard Anthony Sramek, *National Science Foundation Trainee, Astronomy*
S.B., Massachusetts Institute of Technology, 1965

Ramachandra Srinivasan, *Graduate Teaching Assistant,* Electrical Engineering
B.E., Madras University, 1960; M.E., Indian Institute of Science (Bangalore), 1962; M.S.E.E., Purdue University, 1963

William C. Stavro, *National Aeronautics and Space Administration Trainee, Aeronautics*
B.S., University of California (Los Angeles), 1962; M.S., 1964

Gaetan Joseph St-Cyr, *Howard Hughes Fellow, Electrical Engineering*
B.S., California Institute, 1962; M.S., 1963

*Assistantship so marked carries tuition award.*
Vivian Louise Steadman, *Graduate Teaching Assistant,* Chemistry
B.S., Colorado State University, 1963

Rainer Ludwig Stenzel, *German National Scholarship Foundation Fellow, Electrical Engineering*
Dipl., Technische Hochschule Braunschweig, 1965

Leonard Merriman Stephenson, Jr., *National Science Foundation Fellow, Graduate Teaching Assistant, Chemistry*
B.S., University of North Carolina, 1964

Robert Grandin Stokstad, *Rand Corporation Fellow, Physics*
B.S., Yale University, 1962

James Henry Strauss, Jr., *Graduate Teaching Assistant,* Biology
B.S., Saint Mary’s University, 1960

Dieter Stumpel, *National Aeronautics and Space Administration International Fellow, Aeronautics*
Dipl., Technische Hochschule Braunschweig, 1964

James Walter Surhigh, *Howard Hughes Fellow, Electrical Engineering*
B.S., Wayne State University, 1964; M.S., California Institute, 1965

Alexander James Sutherland, *Graduate Research Assistant, Oberholtz Scholar, Civil Engineering*
B.E. (Hons), University of Auckland, 1961; M.E., 1962.

Bob Hiro Suzuki, *National Aeronautics and Space Administration Trainee, Aeronautics*
B.S., University of California, 1960; M.S., 1962

Takao Suzuki, *Graduate Teaching Assistant,* Electrical Engineering
B.S., Waseda University, 1962; M.S., 1964

Robert James Tait, *Graduate Research Assistant,* Geology
B.S., California Institute, 1962

Christopher Kwong Wah Tam, *Graduate Research Assistant,* Applied Mechanics
B.Eng., McGill University, 1962; M.S., California Institute, 1963

Ivo Tammaru, *Graduate Teaching Assistant, Oberholtz Scholar, Physics*
B.S., California Institute, 1959

Richard Forsythe Taylor, *Graduate Teaching Assistant,* Mathematics
A.B., University of Kansas, 1964

Joseph Dean Taynai, *Graduate Teaching Assistant,* Electrical Engineering
B.S., California Institute, 1964

Richard King Teague, *Union Carbide Corporation Fellow, Chemical Engineering*
B.S., Washington University, 1963; M.S., California Institute, 1965

Ta-liang Teng, *Graduate Research Assistant,* Geology
B.S., National Taiwan University, 1959

Milton Earl Teske, Jr., *Howard Hughes Fellow, Aeronautics*
B.S., Iowa State University, 1965

Nathan Raymond Thach, Jr., *Fannie and John Hertz Foundation Fellow, Aeronautics*
B.S., University of Tennessee, 1964; M.S., 1965

Wayne Raymond Thatcher, *Graduate Teaching Assistant,* Geophysics
B.Sc., McGill University, 1964

Henry Archer Thiessen, *Graduate Teaching Assistant, Oberholtz Scholar, Physics*
B.S., California Institute, 1961; M.S., 1962

Jeffrey Robert Thomas, *National Science Foundation Fellow, Chemical Engineering*
B.S., Drexel Institute of Technology, 1965

William Alvis Thomasson, *National Science Foundation Fellow, Biology*
B.A., University of Chicago, 1955; M.A., California State College (Long Beach), 1965

*Assistantship so marked carries tuition award.*
Ansel Frederick Thompson, Jr., *United States Public Health Service Trainee*, Civil Engineering  
B.S., Pennsylvania State University, 1963; M.S., California Institute, 1965

Karvel Kuhn Thornber, *National Science Foundation Cooperative Fellow*, Electrical Engineering  
B.S., California Institute, 1963; M.A., 1964

Dino Sabatino Tinti, *National Aeronautics and Space Administration Trainee*, Chemistry  
B.A., University of California (Riverside), 1962

Alan Morton Title, *Graduate Research Assistant, Oberholtz Scholar*, Physics  
A.B. (Hons), University of California (Los Angeles), 1959; M.S., Columbia University, 1960

B.Sc., University of Colorado, 1964

Lois Anne Toevs, *Graduate Teaching Assistant*, Biology  
B.A., University of Colorado, 1964

Zoltán András Tókes, *Graduate Teaching Assistant*, Biology  
B.S., University of Southern California, 1964

Jeffrey Monroe Tollinger, *National Defense Education Act Fellow, Applied Mathematics*  
B.S., Purdue University, 1965

Ivar Harald Tombach, *National Science Foundation Cooperative Fellow*, Aeronautics  
B.S., California Institute, 1963; M.A.E., Cornell University, 1964

Pin Tong, *Graduate Teaching Assistant*, Aeronautics  
B.S., National Taiwan University, 1960; M.S., California Institute, 1963

John Burgess Trenholme, *Graduate Teaching Assistant*, Materials Science  
B.S., California Institute, 1961; M.S., 1962

Virginia Louise Trimble, *Graduate Research Assistant*, Astronomy  
B.A., University of California (Los Angeles), 1964; M.S., California Institute, 1965

B.E., McGill University, 1961

Donald Gene Truhlar, *John Stauffer Fellow, Graduate Teaching Assistant*, Chemistry  
B.A., Saint Mary's College, 1965

Nien-chien Tsai, *Graduate Teaching Assistant*, Civil Engineering  
B.S., National Taiwan University, 1961; M.S., California Institute, 1965

Chang-chyi Tsuei, *Graduate Research Assistant*, Materials Science  
B.S., National Taiwan University, 1960; M.S., California Institute, 1963

Dorothy Yung Hsun Tuan, *Arthur McCallum Fellow, Graduate Teaching Assistant*, Biology  
S.B., National Taiwan University, 1962

Lawrence Sturtevant Turnbull, Jr., *Sinclair Oil Corporation Foundation Fellow*,  
Dobbin Scholar, Geology  
B.A., Occidental College, 1963

Arthur P. Leigh Turner, *Fannie and John Hertz Foundation Fellow*, Materials Science  
B.S., California Institute, 1964

Thomas Janney Tyson, *Drake Scholar*, Aeronautics  
B.S., California Institute, 1954; M.S., University of California, 1958

B.A., Pomona College, 1965

Shui Pong Van, *Graduate Teaching Assistant*, Chemistry  
B.Sc., Chung Chi College (Hong Kong), 1965

B.S., University of Minnesota, 1954; M.S., University of California (Los Angeles), 1956

*Assistantship so marked carries tuition award.*
Larry Shelton Varnell, *Drake Scholar, Physics*
B.S., University of the South, 1961

Athanassios Demetrius Varvatsis, *Xerox-Electro-Optical Systems Fellow, Graduate Research Assistant, Electrical Engineering*
Dipl., National Technical University (Greece), 1960; M.S., California Institute, 1965

George Francis Vesley, Jr., *United States Public Health Service Fellow, Graduate Teaching Assistant, Chemistry*
A.B., Ripon College, 1962; M.A., Wesleyan University, 1964

Keith Jordis Victoria, *National Aeronautics and Space Administration Trainee, Aeronautics*
B.S.E., University of Michigan, 1962; M.S., California Institute, 1964

Quat Thuong Vu, *Agency for International Development Fellow, Electrical Engineering*
B.S., University of Kentucky, 1965

John Longstreet Wallace, *National Aeronautics and Space Administration Trainee, Physics*
A.B., Temple University, 1964

Myles Alexander Walsh III, *Graduate Teaching Assistant, Aeronautics*
A.B., Harvard College, 1963; M.S., California Institute, 1964

Uso Walter, *National Aeronautics and Space Administration International Fellow, Aeronautics*
Dipl., Technische Hochschule Braunschweig, 1965

Charles Chang-Ping Wang, *Graduate Teaching Assistant, Aeronautics*
B.S., National Taiwan University, 1959; M.S., National Tsing Hua University, 1961; M.S., California Institute, 1963

Chiu-sen Wang, *Graduate Research Assistant, Anthony Scholar, Chemical Engineering*
B.S., National Taiwan University, 1960; M.S., Kansas State University, 1963

Samuel Ward, *National Defense Education Act Fellow, Biology*
A.B., Princeton University, 1965

John Clinton Webber, *National Aeronautics and Space Administration Trainee, Astronomy*
B.S., California Institute, 1964

Edmund John Weber, *Graduate Teaching Assistant, Anthony Scholar, Physics*
B.Eng., McGill University, 1963; M.S., California Institute, 1965

Pax Samuel Pin Wei, *Graduate Teaching Assistant, Chemistry*
B.S., National Taiwan University, 1960; M.S., University of Illinois, 1963

Patrick Dan Weidman, *Graduate Teaching Assistant, Aeronautics*
B.S., California State Polytechnic College, 1963; California Institute, 1964

Frank Julian Weigert, *National Science Foundation Fellow, Graduate Teaching Assistant, Chemistry*
S.B., Massachusetts Institute of Technology, 1965

Kurt Walter Weiler, *Graduate Research Assistant, Anthony Scholar, Physics*
B.S., University of Arizona, 1964

Martin Eric Weiner, *Graduate Research Assistant, Materials Science*
B.S., California Institute, 1964; M.S., 1965

Robert William Weinman, *Graduate Teaching Assistant, Anthony Scholar, Physics*
B.E.Ph., Cornell University, 1960

Jon Edward Weinzierl, *National Institutes of Health Trainee, Chemistry*
B.S., University of Illinois, 1963

Donna Etta Weistrop, *Woodrow Wilson Foundation Fellow, Astronomy*
B.A., Wellesley College, 1965

John Campbell Wells, *National Science Foundation Trainee, Mathematics*
S.B., Massachusetts Institute of Technology, 1963; S.M., 1963

*Assistantship so marked carries tuition award.
David Bruce Wenner, *Graduate Research Assistant,* Geochemistry  
B.S., University of Cincinnati, 1963

Adolf Erich Klaus-Peter Wenzel, *National Aeronautics and Space Administration International Fellow, Physics*  
Dipl., University of Heidelberg, 1964

Susan Elizabeth Werner, *National Aeronautics and Space Administration Trainee, Geophysics*  
B.S., Allegheny College, 1964

Pieter Wesseling, *National Aeronautics and Space Administration International Fellow, Aeronautics*  
Ing., Technological University of Delft, 1964

James Gerard Wetmur, *National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry*  
B.S., Yale University, 1963

Lewis Turner Wheeler, *National Science Foundation Trainee, Applied Mechanics*  
B.S., University of Houston, 1963; M.S., 1964

Douglas Cecil White, *John Stauffer Fellow, Chemical Engineering*  
B.Ch.E., University of Florida, 1965

John Dinwiddie White, Jr., *Graduate Teaching Assistant,* Electrical Engineering  
B.E.S., Johns Hopkins University, 1964

John Michael White, *Graduate Research Assistant,* Chemistry  
B.S., Harding College, 1960; M.S., University of Illinois, 1962

Quinn Ernest Whiting, *Graduate Teaching Assistant,* Mathematics  
B.A., University of Utah, 1963

Arthur Karl Whitney, *National Science Foundation Trainee, Engineering Science*  
B.Sc., Washington University, 1964

Howard Alexander Wiener, *United States Public Health Service Trainee, Civil Engineering*  
B.S., Lehigh University, 1964; M.S., Washington University, 1965

Allan Edward Williams, *National Institutes of Health Trainee, Graduate Teaching Assistant, Chemistry*  
B.S., University of Redlands, 1965

Larry Gale Williams, *National Science Foundation Fellow, Graduate Teaching Assistant, Biology*  
B.S., University of Nebraska, 1961; M.S., 1963

Richard R. Williams, *Leonard Scholar, Aeronautics*  
B.S., Purdue University, 1961; M.S., California Institute, 1962

Stephen Andrew Williams, *National Science Foundation Fellow, Mathematics*  
B.S., Illinois Institute of Technology, 1964

Charles Arthur Willus, *National Aeronautics and Space Administration Trainee, Mechanical Engineering*  
B.M.E., Cornell University, 1965

Michael Barron Wilson, *National Science Foundation Trainee, Applied Mechanics*  
B.S.E., University of Michigan, 1963; M.S., 1964

Sandra Winicur, *Graduate Teaching Assistant,* Biology  
B.A., Hunter College, 1960; M.S., University of Connecticut, 1963

Melvin Winokur, *Graduate Teaching Assistant,* Chemistry  
B.S., The City College of New York, 1964

Bruce Darrell Winston, *National Defense Education Act Fellow, Physics*  
B.S., University of California (Los Angeles), 1965

Nicholas Wilhelm Winter, *Graduate Teaching Assistant,* Chemistry  
B.S., Northern Illinois University, 1965

*Assistantship so marked carries tuition award.*
Peter Heinz Wirtz, *Ford Motor Company International Fellow, Mechanical Engineering*
Dipl., Rheinisch-Westfälische Technische Hochschule (Aachen), 1965

Warren Jackman Wiscombe, *National Science Foundation Fellow, Applied Mathematics*
B.S., Massachusetts Institute of Technology, 1964

Jefferson K. Wise, *Graduate Research Assistant, Electrical Engineering*
B.S., California Institute, 1965

Arvel Benjamin Witte, *Oberholtz Scholar Aeronautics*
B.Sc., University of Nebraska, 1957; M.Sc., 1959

Richard Alan Wolf, *Graduate Research Assistant, Anthony Scholar, Physics*
B.E.Ph., Cornell University, 1962

Stephen Howard Wolfe, *National Aeronautics and Space Administration Trainee, Geophysics*
B.A., Cornell University, 1964

Franklin Bruce Wolverton, *Graduate Research Assistant, Anthony Scholar, Physics*
B.S., University of Michigan, 1961

Felix Shek Ho Wong, *Graduate Teaching Assistant, Engineering Science*
B.S., Purdue University, 1964; M.S., California Institute, 1965

David Clark Wooten, *Graduate Research Assistant, Applied Mechanics*
B.A., Rice University, 1960; M.S., 1962

Francis Taming Wu, *Graduate Research Assistant, Geology*
B.S., National Taiwan University, 1959

Tiunn-jenq Wu, *Rutherford Scholar, Aeronautics*
B.S., National Taiwan University, 1964

Shyue Yuan Wu, *Graduate Teaching Assistant, Anthony Scholar, Chemical Engineering*
B.S., National Taiwan University, 1960

Max Wyss, *Graduate Research Assistant, Geophysics*
Dipl., Eidgenössische Technische Hochschule (Zurich), 1964

I-min Yang, *Graduate Teaching Assistant, Applied Mechanics*
B.S., National Taiwan University, 1958; M.S., 1964; M.S., California Institute, 1965

Thomas Man Yang, *Graduate Teaching Assistant, Applied Mechanics*
B.S., National Taiwan University, 1961; M.S., University of North Carolina, 1964

Tyan Yeh, *Graduate Teaching Assistant, Applied Mathematics*
B.S., National Taiwan University, 1959; M.S., Cornell University, 1963

Steven Joseph Yellin, *National Science Foundation Fellow, Physics*
B.S., California Institute, 1963

Ka Bing Winson Yip, *Graduate Research Assistant, Astronomy*
S.B., Massachusetts Institute of Technology, 1965

James Yoh, *Howard Hughes Fellow, Electrical Engineering*
B.S., California Institute, 1962; M.S., 1963

John Yoh, *National Science Foundation Fellow, Physics*
B.A., Cornell University, 1964

Gerold Yonas, *Drake Scholar, Engineering Science*
B.E.Ph., Cornell University, 1962

Elton Theodore Young II, *Graduate Teaching Assistant, Biology*
B.A., University of Colorado, 1962

Clyde Stewart Zaidins, *United States Steel Foundation Fellow, Physics*
B.S., California Institute, 1961; M.S., 1963

Tse-Fou Zien, *Graduate Teaching Assistant, Aeronautics*
B.S., National Taiwan University, 1958; M.S., Brown University, 1963

John Andrew Zoutendyk, *National Science Foundation Trainee, Engineering Science*
B.S., University of Washington, 1959; M.S., University of California (Los Angeles), 1961

Laurence Bei-yu Zung, *Graduate Research Assistant, Engineering Science*
B.Sc., Purdue University, 1962; M.S., California Institute, 1963

*Assistantship so marked carries tuition award.

The California Institute Associates are a group of public-spirited citizens, interested in the advancement of learning, who were incorporated in 1926 as a non-profit organization for the purpose of promoting the interests of the California Institute of Technology. Information concerning the terms and privileges of membership can be secured from the Assistant Secretary of the Associates, on the Institute campus.

Officers

Samuel F. Bowlby

INDUSTRIAL ASSOCIATES

The Office for Industrial Associates was established in 1949 to provide a practical channel for communications and intellectual interchange between the scientists and engineers of industry and the faculty of the Institute. Companies with a strong research interest have been attracted by this program. Features of the program are special conferences, an exchange of visits by faculty and company scientists, both on campus and at the research laboratories of the member companies, and early distribution of research reports. The membership fees make up a significant part of the unrestricted income available to the Institute for the support of faculty, salaries, and research.

Inquiries should be directed to the Executive Director, Office for Industrial Associates.

The membership as of July 1, 1966, was as follows:

Aerojet-General Corporation
Aerospace Corporation
Armour and Company
Atlantic Richfield Company
Beckman Instruments, Inc.
Bell & Howell Research Center
Bell Telephone Laboratories, Inc.
The Boeing Company
Campbell Soup Company
Carnation Company
Chevron Research Company
Chrysler Corporation
Continental Oil Company
Douglas Aircraft Company, Inc.
Eastman Kodak Company
E. I. du Pont de Nemours and Company, Inc.
FMC Corporation
Ford Motor Company
The Garrett Corporation
General Dynamics Corporation
General Motors Corporation
The Goodyear Tire & Rubber Company
Gulf Research and Development Company
Hughes Aircraft Company
International Business Machines Corporation
International Minerals & Chemical Corporation
Litton Industries, Inc.
Lockheed Aircraft Corporation
Marathon Oil Company
Mobil Oil Corporation
North American Aviation, Inc.
Northrop Corporation
Phelps Dodge Corporation
The Procter & Gamble Company
Shell Oil Company
Standard Oil Company of California
The Superior Oil Company
Texaco Inc.
TRW Systems
Union Carbide Corporation
Union Oil Company of California
Xerox Corporation
Electro-Optical Systems, Inc.
Section II

GENERAL INFORMATION

THE California Institute of Technology is an independent, privately supported and privately controlled institution, officially classed as a university, carrying on undergraduate and graduate instruction and research, principally in the various fields of science and engineering.

The primary purpose of the undergraduate school of the California Institute of Technology, as stated by the Trustees, is "to provide a collegiate education which will best train the creative type of scientist or engineer so urgently needed in our educational, governmental, and industrial development." It is believed that this end will be more readily attained at the Institute because of the contacts of its relatively small group of undergraduate students with the members of its relatively large research staff. Advancement in understanding is best acquired by intimate association with creative workers who are, through research and reflection, extending the boundaries of knowledge.

The Institute offers a four-year undergraduate course with options available in various fields of science, engineering, applied science, and certain humanities subjects, all leading to the degree of Bachelor of Science. The curricula are planned so that interchange between options is not too difficult to the end of the second year. During the first year, the work of all undergraduates is identical, but there is opportunity for some differentiation between the various options during the second year.

The courses in engineering and applied science are of a general fundamental character, with a minimum of specialization in the separate branches. There is an unusually thorough training in the basic sciences of physics, chemistry, and mathematics, as well as in the professional subjects common to all branches of engineering. The major concentration in a chosen field occurs during the fourth year.

The science courses afford even more fully an intensive training in physics, chemistry, and mathematics, with further specialization in a chosen field of science during the third and fourth years.

Since the fall of 1965, the Institute has offered options toward the Bachelor of Science degree in the fields of English literature, history, and economics—subjects which are included in the Division of the Humanities and Social Sciences. Students electing a humanities option will pursue the same curriculum as all other students during the freshman year, and will continue with the regular sophomore courses in mathematics, physics, and chemistry. During the last two years, they may specialize in a chosen field of humanities, but will continue substantial work in science and engineering subjects.

The undergraduate options in science, engineering, and applied science themselves contain a large proportion of humanistic and cultural studies—with 20 percent, or more, of the time during the entire four years being devoted to such subjects. The purpose of this requirement is to provide a combination of fundamental scientific training with a broad human outlook and to enlarge the student's mental horizon beyond the limits of his immediate pro-
fessional interest. This combination of cultural and scientific training—first offered by the Institute in 1920—is now being followed by other leading institutions of science and engineering, for it provides students with the opportunity to prepare themselves to fulfill their responsibilities as citizens and members of the community.

It is in the Division of the Humanities and Social Sciences that the Institute offers its work in nonscientific subjects, including literature, history, government, economics, philosophy, geography, psychology, and anthropology. All freshman and sophomore students take required courses in English literature and history, and a wide range of elective courses is available during the third and fourth years, to which juniors and seniors devote approximately one-quarter of their time. Formal instruction in the humanities and social sciences is supplemented by lectures and conferences with distinguished visiting scholars, some of whom are carrying on research at the Huntington Library and Art Gallery, and others, including scholars in international fields who are members of the American Universities Field Staff.

The Institute also encourages a reasonable participation in extracurricular activities, largely managed by the students themselves. These include student publications, debating, dramatics, music, and public affairs. All freshmen and sophomores are required to take physical education, and juniors and seniors may elect to take such work largely through participation in a well-rounded program of intercollegiate and intramural sports.

In short, every effort is made to provide the undergraduate student with a well-rounded, well-integrated program which will not only give him sound training in his professional field, but which will also develop character, breadth of view, general culture, and physical well-being.

In the graduate section the Institute offers courses leading to the degree of Master of Science, which normally involves one year of graduate work; the engineer's degree in certain branches of engineering, with a minimum of two years; and the degree of Doctor of Philosophy. In all the graduate work, research is strongly emphasized, not only because of its importance in contributing to the advancement of science and thus to the intellectual and material welfare of mankind, but also because research activities add vitality to the educational work of the Institute. Graduate students constitute a comparatively large portion (over 50 percent) of the total student body. Engaged themselves on research problems of varying degrees of complexity, and taught by faculty members who are also actively engaged in research, they contribute materially to the general atmosphere of intellectual curiosity and creative activity which is engendered on the Institute campus.

In order to utilize Institute resources most effectively, two general lines of procedure are followed. First, the Institute restricts the number of fields in engineering and science in which it offers undergraduate and graduate study, believing that it is better to provide thoroughly for a limited number of curricula than to risk diffusion of personnel, facilities, and funds in attempting to cover a wide variety of fields. Second, and in line with this policy of conservation of resources, the student body is strictly limited to that number which can be satisfactorily provided for. The size of the undergraduate group is limited by the admission of 180 freshmen each September. Admission is granted, not on the basis of priority of application, but on a careful study of the merits of each
applicant, including the results of competitive entrance examinations, high school records, and interviews by members of the Institute staff. Applicants for admission with advanced standing from other institutions and for admission to graduate study are given the same careful scrutiny. These procedures result, it is believed, in a body of students of exceptionally high ability. A high standard of scholarship is also maintained, as is appropriate for students of such high competence.

Pasadena is at the foot of the San Gabriel Mountains, 15 miles from Los Angeles. In the foreground, the Caltech campus.

HISTORICAL SKETCH

The California Institute of Technology, as it has been called since 1920, developed from a local school of arts and crafts, founded in Pasadena in 1891 by the Honorable Amos G. Throop and named, after him, Throop Polytechnic Institute. It had at first been called Throop University, but the title was soon considered too pretentious. The Institute included, during its first two decades, a college, a normal school, an academy, and, for a time, an elementary school and a commercial school. It enjoyed the loyal support of the citizens of Pasadena, and by 1908 the Board of Trustees had as members Dr. Norman Bridge, Arthur H. Fleming, Henry M. Robinson, J. A. Culbertson, C. W. Gates, and Dr. George Ellery Hale. It was the dedication, by these men, of their time, their brains, and their fortunes that transformed a modest vocational school into a university capable of attracting to its faculty some of the most eminent of the world’s scholars and scientists. A statement in the Throop Institute Bulletin of December 1908 shows the situation at this time and the optimism of the friends of the Institute:

“Although Throop Institute requires from $80,000 to $90,000 a year to pay its operating expenses and meet its current obligations, the financial con-
dution of the school was never sounder than at present. Its revenues are not sufficient to pay its expenses, but good friends are each year found willing and able to contribute to its deficiency fund. It is in the certainty of a continuance of this confidence in its work and mission that its officers and trustees are pressing forward toward a realization of larger plans for the Institute.

These larger plans were the vision of George Ellery Hale, astronomer and first director of the Mount Wilson Observatory, who foresaw the development in Pasadena of a distinguished institution of engineering and scientific research. Hale well knew that a prime necessity was modern, well-equipped laboratories, but he stressed to his fellow Trustees that the aim was not machines, but men. "We must not forget," he wrote in 1907, "that the greatest engineer is not the man who is trained merely to understand machines and apply formulas, but is the man who, while knowing these things, has not failed to develop his breadth of view and the highest qualities of his imagination. No creative work, whether in engineering or in art, in literature or in science, has been the work of a man devoid of the imaginative faculty."

The realization of these aims meant specializing, so the Trustees decided in 1907 to separate the elementary department, the normal school, and the academy, leaving only a college of technology which conferred Bachelor of Science degrees in electrical, mechanical, and civil engineering.

In 1910 Throop Polytechnic Institute moved from its crowded quarters in the center of Pasadena to a new campus of twenty-two acres on the southeastern edge of town, the gift of Arthur H. Fleming and his daughter Marjorie. The president, Dr. James A. B. Scherer, and his faculty of 16 members, opened the doors to 31 students that September. When, on March 21, 1911, Theodore Roosevelt delivered an address at Throop Institute, he declared, "I want to see institutions like Throop turn out perhaps ninety-nine of every hundred students as men who are to do given pieces of industrial work better than any one else can do them; I want to see those men do the kind of work that is now being done on the Panama Canal and on the great irrigation projects in the interior of this country—and the one hundredth man I want to see with cultural scientific training."

It would have surprised Roosevelt to know that within a decade the little Institute, known beginning in 1914 as Throop College of Technology, would have again raised its sights, leaving to others the training of mere efficient technicians and concentrating its own efforts on Roosevelt's "hundredth man." On November 29, 1921, the Trustees declared it to be the express policy of the Institute to pursue scientific researches of the greatest importance and at the same time, "to continue to conduct thorough courses in engineering and pure science, basing the work of these courses on exceptionally strong instruction in the fundamental sciences of mathematics, physics, and chemistry; broadening and enriching the curriculum by a liberal amount of instruction in such subjects as English, history, and economics; and vitalizing all the work of the Institute by the infusion in generous measure of the spirit of research."

Perhaps some causes of this change were the rapid growth of southern California between 1911 and 1921, the springing up everywhere of high schools and vocational schools which relieved Throop of some of its responsibilities, and the increasing public interest in scientific research as the implications of modern physics became better known. But the immediate causes of the change
in the Institute at Pasadena were men. George Ellery Hale still held to his dream. Arthur Amos Noyes, Professor of Physical Chemistry and former Acting President of the Massachusetts Institute of Technology, served part of each year as Professor of General Chemistry and Research Associate from 1913 to 1919, when he resigned from M.I.T. to devote full time to Throop as Director of Chemical Research. In a similar way Robert Andrews Millikan began, in 1916-17, to spend a few months a year at Throop as Director of Physical Research. In 1921, when Dr. Norman Bridge agreed to provide a research laboratory in physics, Dr. Millikan resigned from the University of Chicago and became administrative head of the Institute as well as director of the Norman Bridge Laboratory. The name of the Institute was changed in 1920 to its present one.

The great period of the Institute's life began, then, under the guidance of three men of vision—Hale, Noyes, and Millikan. They were distinguished research scientists, and they soon attracted graduate students. In 1920 the enrollment was 9 graduate students and 359 undergraduates under a faculty of 60; a decade later there were 138 graduate students, 510 undergraduates, and a faculty of 180. At the present time there are about 700 undergraduates, 750 graduate students, and a faculty (including postdoctoral fellows) of about 600.

The Institute also attracted financial support from individuals, corporations, and foundations. In January 1920 the endowment had reached half a million dollars. In February of that year it was announced that $200,000 had been secured for research in chemistry and a like amount for research in physics. Other gifts followed from Trustees and friends who could now feel pride in the Institute as well as hope for its future. The Southern California Edison Company provided a high-voltage laboratory, with the million-volt Sorensen transformer. Philanthropic foundations bearing the names of Carnegie, Rockefeller, and Guggenheim came forth with needed help when new departments or projects were organized.

In 1923 Millikan received the Nobel Prize in Physics. (Within two years, if anyone had known where to look, he could have found four future Nobel Laureates on the campus.) He had attracted to the Institute such men as Charles Galton Darwin, Paul Epstein, and Richard C. Tolman. In 1924 the Ph.D. degree was awarded to nine candidates.
It was inevitable that the Institute would enlarge its field; it could not continue to be merely a research and instructional center in physics, chemistry, and engineering. But the Trustees pursued a cautious and conservative policy, not undertaking to add new departments except when the work done in them would be at the same high level as that in physics and chemistry. In 1925 a gift of $25,000 from the Carnegie Corporation of New York made possible the opening of a department of instruction and research in geology. A seismological laboratory was constructed, and Professors John P. Buwalda and Chester Stock came from the University of California to lead the work in the new division. Later gifts, especially from Mr. and Mrs. Allan C. Balch and the gift of the Arms and Mudd laboratories, contributed further to the establishment of the geological sciences at Caltech.

In 1928 the California Institute began its program of research and instruction in biology. There had been a chair of biology, named for Charles Frederick Holder, in the old Throop Institute, but it was not until the efforts of the C.I.T. Trustees, the General Education Board, the Carnegie Institution of Washington, and William G. Kerckhoff were combined that a program of research and teaching at the highest level was inaugurated. Thomas Hunt Morgan became the first chairman of the new Division of Biology and a member of the Executive Council of the Institute. Under Morgan’s direction the work in biology developed rapidly, especially in genetics and biochemistry. Morgan received the Nobel Prize in 1933.

The Guggenheim Graduate School of Aeronautics was founded at the Institute in the summer of 1926 and a laboratory was built in 1929, but courses in theoretical aerodynamics had been given at the Institute for many years by Professors Harry Bateman and P. S. Epstein. As early as 1917 Throop Institute had had a wind tunnel in which, the catalog proudly boasted, constant velocities of 4 to 40 miles an hour could be maintained, “the controls being very sensitive.” The new program, under the leadership of Theodore von Karman, included graduate study and research at the level of
the other scientific work at the Institute, and GALCIT (Guggenheim Aeronautical Laboratory at C.I.T.) was soon a world-famous research center in aeronautics.

In 1928 George Ellery Hale and his associates at the Mount Wilson Observatory developed a proposal for a 200-inch telescope and attracted the interest of the General Education Board in providing $6,000,000 for its construction. The Board proposed that the gift be made to the California Institute, and the Institute agreed to be responsible for the construction and operation. The huge instrument was erected on Palomar Mountain, and the Mount Wilson and Palomar Observatories are now operated jointly through an agreement between the Institute and the Carnegie Institution of Washington. Teaching and research in astronomy and astrophysics thus became a part of the Institute program.

Although the emphasis upon the humanities or liberal arts as an important part of the education of every scientist and engineer was traditional even in the Throop College days, a reiterated insistence upon this principle was made when Hale, Noyes, and Millikan created the modern Caltech. In 1924, when a five-year engineering course leading to the M.S. degree was offered, the humanities requirement was included. In 1925 William Bennett Munro, chairman of the Division of History, Government and Economics at Harvard, joined the Institute staff, and soon became a member of the Executive Council. In 1928 Mr. and Mrs. Joseph B. Dabney gave the Dabney Hall of Humanities, and friends of the Institute provided an endowment of $400,000 for the support of instruction in humanistic subjects. Later, Mr. Edward S. Harkness added a gift of $750,000 for the same purpose.

Largely on the initiative of Henry M. Robinson, the California Institute Associates were organized in 1925. These men and women, now numbering 300, are the successors of those early dedicated pioneers who saw in Throop College the potentiality of becoming a great and famous institution. The Institute Associates, by their continued support, have played a vital part in the Institute's progress. In 1949 the Industrial Associates Program was organized as a mechanism for providing corporations with the opportunity of supporting fundamental research at the Institute and of keeping in touch with new developments in science and engineering.

For the five years beginning with the summer of 1940, the Institute devoted an increasingly large part of its personnel and facilities to the furthering of national defense and the war effort. The Institute's work during this period fell for the most part into two main categories: special instructional programs, and research on the development of the instrumentalities of war. The first included participation in the Engineering, Science, and Management War Training Program, in which a total of over 24,000 students were enrolled in Institute-supervised courses: advanced meteorology for Army Air Force cadets; advanced work in aeronautics and ordnance for Army and Navy officer personnel; and the provision of instruction (as well as housing and subsistence) for a unit of the Navy V-12 Engineering Specialists. The research and development work was carried on for the most part under nonprofit contracts with the Office of Scientific Research and Development. These contracts had a total value of more than $80,000,000 and at their peak involved the employment of more than 4,000
persons. Rockets, jet propulsion, and anti-submarine warfare were the chief fields of endeavor. The Jet Propulsion Laboratory in the upper Arroyo Seco continues, under Institute management, a large-scale program of research. It was operated under contract with the Department of the Army until 1958 when it was transferred to the newly established National Aeronautics and Space Administration. JPL is now devoted wholly to the science and technology of space exploration. The laboratory launched the first U.S. satellite, Explorer I, in 1958; the Ranger VII, VIII, and IX moon probes in 1964 and 1965; the Mariner II and IV probes to Venus and Mars; and then in 1966 the highly successful Surveyor I probe to the moon.

In 1945 Robert A. Millikan retired as chairman of the Executive Council but served as vice chairman of the Board of Trustees until his death in 1953. Dr. Lee A. DuBridge became president of the California Institute on September 1, 1946.

Today the Institute has over 9000 alumni scattered all over the world, many eminent in their fields of engineering and science. Six of them have received Nobel Prizes: Carl D. Anderson (B.S. '27, Ph.D. '30), Edwin M. McMillan (B.S. '27, M.S. '29), Linus Pauling (Ph.D. '25), William Shockley (B.S. '32), Donald A. Glaser (Ph.D. '50), and Charles H. Townes (Ph.D. '39).

As the Institute has developed in effectiveness and in prestige, it has attracted a steady flow of gifts for buildings, for endowment, and for current operations. The gifts invested in plant now total $55,000,000 and those invested in endowment about $75,000,000. Very substantial grants and contracts from the federal government support many important research activities.

In recent years new developments have taken place in all of the divisions. In 1948 the Palomar Observatory and the 200-inch Hale telescope were dedicated. In 1949 the Earhart Plant Research Laboratory was completed; in 1950 the Thomas Laboratory of Engineering; and in 1951 a cosmic ray laboratory. The next year a synchrotron was constructed for the study of atomic nuclei. In 1954 the generosity of the alumni and of the late Scott Brown, a member of the Associates, provided a gymnasium and swimming pool. In 1955 the completion of the Norman W. Church Laboratory for Chemical Biology pointed to new activities in an important field of science. The Eudora Hull Spalding Laboratory of Engineering, an important addition to the facilities available for instruction and research in chemical and electrical engineering, was completed in 1957. A new radio astronomy observatory—one of the finest in the world—was completed in the Owens Valley in 1959 and is now being substantially enlarged.
In February 1958 the Trustees announced the launching of a drive to secure $16,100,000 to finance 18 needed buildings and an enlarged faculty salary fund. The goal was later raised, and by April 1962 the pledges to this campaign totaled over $19,350,000. The first unit, a physical plant building, was completed in May 1959; and construction was completed by June 1961 of a new mathematics and physics building, the gift of the Alfred P. Sloan Foundation; of a new laboratory of molecular biology, the gift of Dr. Gordon A. Alles (B.S., '22, Ph.D., '26) and the U.S. Public Health Service; of the Campbell Plant Research Laboratory, the gift of the Campbell Soup Company and the U.S. Public Health Service; the W. M. Keck Engineering Laboratories; three undergraduate student houses (the Page, Lloyd, and Ruddock Houses); and the Harry Chandler Dining Hall.

During 1961-62, there were completed four graduate houses (the Keck, Mosher-Jorgensen, Marks, and Braun Houses), the Firestone Flight Sciences Laboratory (gift of the Firestone Tire and Rubber Company), and the Karman Laboratory of Fluid Mechanics and Jet Propulsion (gift of the Aerojet-General Corporation). The P. G. Winnett Student Center was completed in the summer of 1962. The Willis H. Booth Computing Center was completed in 1963, the beautiful Arnold O. Beckman Auditorium in 1964, and the Harry G. Steele Laboratory of Electrical Sciences in 1966. Construction has begun on the Robert A. Millikan Memorial Library (gift of Dr. Seeley G. Mudd) and on the Arthur Amos Noyes Laboratory of Chemical Physics (made possible by an anonymous donor plus a grant from the National Science Foundation). Design and funding plans are under way for a laboratory for high-energy physics. Funds will soon be needed for several other essential academic, housing, and other facilities; and there is an urgent need for funds to cover increased expenses for the expanding program of education and research.

THE INDUSTRIAL RELATIONS CENTER

The Industrial Relations Center was established in 1939 through special gifts from a substantial number of individuals, companies, and labor unions and is maintained primarily by annual contributions from Sponsors. The basic objectives of the Center are to increase and disseminate a knowledge and understanding of the philosophies, principles, policies, and procedures affecting employer-employee relationships, including the motivation, development, compensation, and supervision of rank-and-file, professional, and managerial personnel, without duplicating unnecessarily the work of other organizations. Its program is guided by the Committee on the Industrial Relations Center, consisting of Trustees and Faculty.

The Center provides a variety of services to its Sponsors in return for their regular financial support: (1) The Center assists Sponsors in the development and self-development of (a) supervisors and other line or operating management at various levels and (b) members of the personnel administrative staff. This assistance is through regular meetings and conferences held on campus or through special programs developed for specific companies. (2) The Center helps representatives of Sponsors, who participate in special conferences and workshops, develop and improve specific personnel programs for use in their
companies. (3) It counsels with representatives of Sponsors, on request, concerning individual company problems of management and personnel administration. (4) The Center maintains a library of materials on industrial relations and management, with emphasis on the personnel practices of many companies. Reference assistance is available. Each of these services supplements, and is supplemented by, the other services. As a result of its activities, the Center issues a variety of publications including bulletins, circulars, and research monographs.

One of its special services is conducting employee opinion polls for specific companies. The individual surveys have proved of value to organizations of various sizes in many industries. The general results supplement the other research and teaching activities.

The Center participates in the education of undergraduate and graduate students of the California Institute of Technology, emphasizing the fundamentals of supervision and working with people.

The increasing complexity of business operations has emphasized the fact that a manager must not only know how to do the work being supervised but must also know how to supervise—a separate and distinct function.

The Center offers training in the field of management in general and in the specialized field of personnel administration. A wide range of courses is presented on a number of bases: on-campus or off-campus; full-time or part-time; and for representatives of a variety of companies, or specially designed for the management of a specific company. These courses do not carry academic credit.

In all of its activities the Center cooperates with a large number of trade and professional organizations and with other colleges and universities to pool resources and to avoid unnecessary duplication of effort. The Caltech Industrial Relations Center is affiliated with the Industrial Relations Center of The University of Chicago.

The office, library, and conference rooms of the Center are located on the campus at 383 South Hill Avenue, but the mailing address is Industrial Relations Center, California Institute of Technology, Pasadena, California 91109.

Detailed information about the specific services of the Center and the fees involved can be secured from the Director of the Industrial Relations Center.

THE WILLIS H. BOOTH COMPUTING CENTER

The Computing Center, established some years ago as part of the Engineering Division, has recently been expanded and is separately administered as a general facility for the research and educational activities of all divisions of the Institute.

Two successive large scale systems have been designed for this center. The first of these, installed in 1963, is an integrated system of essentially four large computers—an IBM 7094, an IBM 7040, a Burroughs 220 and a core buffered multiplexor (the 7288) acting as a central communication exchange for a series of remote input/output stations and peripheral processors.

In December 1965 installation started on the second system, which will ultimately supplant this one. Initially installed has been the IBM 360/50 with a large array of core, drum, disc and tape memory together with a series of

Athenaeum

Harry G. Steele Laboratory of Electrical Sciences
remote typewriter consoles, and cathode ray display and communication consoles. There are also a variety of remote input/output devices and peripheral computers. This system is designed to multiplex a large number of simultaneous users in four or five basic modes of operation, all of which also can occur simultaneously.

One of these basic modes is designed for formal course work and other educational uses. This function is centered within the IBM 360/50 computer, a large portion of its bulk disc and drum memory and the remote typewriter consoles. The educational system employs an algebraic language that can be learned quickly and easily and provides good two-way communication between the creative thought processes of a human and interpretation by the computer of the human’s wishes. This language, CITRAN, is a modification of JOSS, developed by the Rand Corporation.

Another important system mode of operation (in addition to production computing, compiling modes, and modes for directly collecting experimental data) employs a combination of communication media including keyboards and cathode ray display consoles. It emphasizes the use of richer, more general experimental data language communications to further enhance the use of computers as adjuncts to human thought processes in the examination and conceptual analysis of data.

## Buildings and Facilities

**THROOP HALL**, 1910. The administration building; erected with funds supplied by a large number of donors, and named for the Honorable Amos G. Throop, founder of Throop Polytechnic Institute from which the California Institute of Technology developed.

**GATES AND CRELLIN LABORATORIES OF CHEMISTRY**: first unit, 1917; second unit, 1927; third unit, 1937. The first two units were the gift of Messrs. C. W. Gates and P. G. Gates of Pasadena; the third unit was the gift of Mr. and Mrs. E. W. Crellin of Pasadena.

**CULBERTSON HALL**, 1922. Named in honor of Mr. James A. Culbertson of Pasadena, vice president of the Board of Trustees, 1908-1915.

**NORMAN BRIDGE LABORATORY OF PHYSICS**: first unit, 1922; second unit, 1924; third unit, 1925. The gift of Dr. Norman Bridge of Los Angeles, president of the Board of Trustees, 1896-1917.

**HIGH VOLTAGE RESEARCH LABORATORY**, 1923. Erected with funds provided by the Southern California Edison Company. Retired in 1959 with basic research completed, and rebuilt in 1960 as the Alfred P. Sloan Laboratory of Mathematics and Physics.

**HEATING PLANT**, 1926. Erected with funds provided in part by Dr. Norman Bridge and in part from other sources.

**DABNEY HALL OF THE HUMANITIES**, 1928. The gift of Mr. and Mrs. Joseph B. Dabney of Los Angeles.

**GUGGENHEIM AERONAUTICAL LABORATORY**, 1929. Erected with funds provided by the Daniel Guggenheim Fund for the Promotion of Aeronautics. A substantial addition was erected in 1947.
WILLIAM G. KERCKHOFF LABORATORIES OF THE BIOLOGICAL SCIENCES: first unit, 1928; second unit, 1939; annex, 1948. The gift of Mr. and Mrs. William G. Kerckhoff of Los Angeles.

DOLK PLANT PHYSIOLOGY LABORATORY, 1930. Named in memory of Herman E. Dolk, Assistant Professor of Plant Physiology from 1930 until his death in 1932.

ATHENAEUM, 1930. A clubhouse for the use of the California Institute Associates and the staffs of the California Institute, the Huntington Library, and the Mount Wilson Observatory. The gift of Mr. and Mrs. Allan C. Balch of Los Angeles. He was president of the Board of Trustees, 1933-1943.

UNDERGRADUATE HOUSES, 1931:

Blacker House. The gift of Mr. and Mrs. R. R. Blacker of Pasadena.

Dabney House. The gift of Mr. and Mrs. Joseph B. Dabney of Los Angeles.

Fleming House. Erected with funds provided by some twenty donors and named in honor of Mr. Arthur H. Fleming of Pasadena, president of the Board of Trustees, 1917-1933.

Ricketts House. The gift of Dr. and Mrs. Louis D. Ricketts of Pasadena.

CENTRAL ENGINEERING MACHINE SHOP, 1931. Erected with funds provided by the International Education Board and the General Education Board. Known as the Astrophysical Instrument Shop until the completion of the 200-inch Hale telescope for Palomar Observatory.

W. K. KELLOGG RADIATION LABORATORY (Nuclear Physics), 1932. The gift of Mr. W. K. Kellogg of Battle Creek, Michigan.

HENRY M. ROBINSON LABORATORY OF ASTROPHYSICS, 1932. Erected with funds provided by the International Education Board and the General Education Board, and named in honor of Mr. Henry M. Robinson of Pasadena, member of the Board of Trustees, 1907-1937, and of the Executive Council of the Institute.

SYNCHROTRON LABORATORY, 1933. Originally Optical Shop, erected with funds provided by the International Education Board and the General Education Board. Following completion of the 200-inch Hale telescope the building was converted into the Synchrotron Laboratory.

CHARLES ARMS LABORATORY OF THE GEOLOGICAL SCIENCES, 1938. The gift of Mr. and Mrs. Henry M. Robinson of Pasadena, in memory of Mrs. Robinson's father, Mr. Charles Arms.

SEELEY W. MUDD LABORATORY OF THE GEOLOGICAL SCIENCES, 1938. The gift of Mrs. Seeley W. Mudd of Los Angeles, in memory of her husband.

CLARK GREENHOUSE, 1940. The gift of Miss Lucy Mason Clark of Santa Barbara.
Franklin Thomas Laboratory of Engineering: first unit, 1945; second unit, 1950. Funds for the first unit were allocated from the Eudora Hull Spalding Trust with the approval of Mr. Keith Spalding, Trustee. Named in honor of Dean Franklin Thomas, Professor of Civil Engineering and first chairman of the Division of Engineering, 1924-1945.

Cosmic Ray Laboratory, 1952.

Scott Brown Gymnasium, 1954. Erected with funds provided by a trust established by Mr. Scott Brown of Pasadena and Chicago, a member and director of the California Institute Associates.

Norman W. Church Laboratory for Chemical Biology, 1955. Erected with funds provided through gift and bequest by Mr. Norman W. Church of Los Angeles, a member of the California Institute Associates.

Eudora Hull Spalding Laboratory of Engineering, 1957. Erected with funds allocated from the Eudora Hull Spalding Trust.

Archibald Young Health Center, 1957. The gift of Mrs. Archibald Young of Pasadena, in memory of her husband, a member and director of the California Institute Associates.

Physical Plant Building and Shops, 1959. Erected with funds provided by many donors to the Caltech Development Program.

Campbell Plant Research Laboratory, 1960. Erected with funds given by the Campbell Soup Company of Camden, New Jersey, and by the Health Research Facilities Branch of the National Institutes of Health, Bethesda, Maryland.

Gordon A. Alles Laboratory for Molecular Biology, 1960. Erected with the gift of Dr. Gordon A. Alles of Pasadena, Research Associate in Biology at the Institute, an alumnus and a member of the California Institute Associates, 1947-1963; and with funds provided by the Health Research Facilities Branch of the National Institutes of Health.

Undergraduate Houses, 1960. Erected with funds provided by the Lloyd Foundation and other donors to the Caltech Development Program.

Lloyd House. Named in memory of Mr. Ralph B. Lloyd and his wife Mrs. Lulu Hull Lloyd of Beverly Hills. He was a member of the Board of Trustees, 1939-1952.

Page House. Named in honor of Mr. James R. Page of Los Angeles, a member of the Board of Trustees from 1931 to 1962 and chairman from 1943 to 1954.

Ruddock House. Named in honor of Mr. Albert B. Ruddock of Santa Barbara, a member of the Board of Trustees since 1938 and chairman from 1954 to 1961.
HARRY CHANDLER DINING HALL, 1960. The gift of the Chandler family, the Pfaffinger Foundation, and the Times Mirror Company of Los Angeles.

GRADUATE HOUSES, 1961:

Braun House. Erected with funds provided by the trustees of the Carl F. Braun Trust Estate in his memory.

Keck House. The gift of Mr. William M. Keck, Jr. of Los Angeles.

Marks House. The gift of Dr. David X. Marks of Los Angeles.

Mosher-Jorgensen House. The gift of Mr. Samuel B. Mosher of Los Angeles and Mr. Earle M. Jorgensen of Los Angeles. Mr. Jorgensen is a member of the Board of Trustees.

KARMAN LABORATORY OF FLUID MECHANICS AND JET PROPULSION, 1961. The gift of the Aerojet-General Corporation and named in honor of Dr. Theodore von Karman, Professor of Aeronautics at the Institute, 1929-1949.

WINNETT STUDENT CENTER, 1962. The gift of Mr. P. G. Winnett of Los Angeles, a member of the Board of Trustees.

WILLIS H. BOOTH COMPUTING CENTER, 1963. Erected with funds given by the Booth-Ferris Foundation of New York, and by the National Science Foundation. Named in memory of Mr. Willis H. Booth, a member of the California Institute Associates.

BECKMAN AUDITORIUM, 1964. The gift of Dr. and Mrs. Arnold O. Beckman of Corona del Mar. Dr. Beckman, an alumnus, was a member of the Institute's faculty from 1928 to 1939, and is now chairman of the Board of Trustees.

HARRY G. STEELE LABORATORY OF ELECTRICAL SCIENCES, 1965. Erected with funds provided by the Harry G. Steele Foundation and the National Science Foundation.

CENTRAL ENGINEERING SERVICES BUILDING, 1966.

LIBRARIES

The General Library, as the center of the Institute library system, houses the administrative office, which serves nine departmental libraries located in as many buildings on the campus. The departmental libraries house the collection of books, periodicals, and basic reference works in aeronautics, astronomy and astrophysics, biology, chemistry, chemical engineering, geology, humanities, industrial relations, and physics. The General Library houses the
collections in mathematics and engineering, as well as the master catalog for the entire system. The campus libraries collectively subscribe to about 3,500 periodicals and contain about 150,000 volumes.

Off-Campus Facilities

Kresge Seismological Laboratory, 1928 (of the Division of the Geological Sciences), 220 North San Rafael Avenue, Pasadena. Named in recognition of a gift from The Kresge Foundation of Detroit, Michigan.

William G. Kerckhoff Marine Biological Laboratory, Corona del Mar, 1930.

Palomar Observatory, San Diego County, 1948. Owned by the Institute and, with the Mount Wilson Observatory, operated jointly by the Carnegie Institution of Washington and the Institute.

Donnelley Seismological Laboratory, 1957 (of the Division of the Geological Sciences), 295 North San Rafael Avenue, Pasadena. The gift of Mr. and Mrs. C. Pardee Erdman of Santa Barbara, The Kresge Foundation of Detroit, and the James Irvine Foundation of San Francisco. Named in honor of Mrs. Erdman’s father, Mr. Reuben H. Donnelley.

Owens Valley Radio Observatory, near Bishop, 1958.

Radio observatory in Owens Valley near Bishop, California
The Sciences

Applied Mathematics

A program for graduate study in applied mathematics is organized jointly by the Division of Physics, Mathematics and Astronomy and the Division of Engineering and Applied Science. The course of study leads to the Ph.D. degree and requires three or four years. This program is aimed at those students with a background in mathematics, physics, or engineering who wish to obtain a thorough training and to develop their research ability in applied mathematics. Students will be admitted to one of the two divisions according to background and interests. A special committee coordinates the program and provides over-all guidance to students.

As the joint sponsorship by the two divisions indicates, several different groups in the Institute contribute to the teaching and supervision of research. Conversely, students in applied mathematics should combine their basic mathematical studies with deep involvement in some field of application. In accordance with this, basic general courses are listed specifically under Applied Mathematics (see page 288); these are to be supplemented according to the student's interests from the courses offered under Mathematics, and from the whole range of Institute courses in specific areas of physics, engineering, etc. Further advanced courses will be added as this new program develops. There is also an applied mathematics colloquium in which visitors, faculty, and students discuss current research.

Research is particularly strong in fluid dynamics (including magnetohydrodynamics, plasma physics, and kinetic theory), elasticity, dynamics and celestial mechanics, numerical analysis, differential equations, integral equations, asymptotic methods, and other related branches of analysis.

Entering graduate students are admitted for the Ph.D. program. Details of the scholastic requirements for the Ph.D. degree in Applied Mathematics are given under Section IV (page 243). The master's degree may be awarded in exceptional cases. The general Institute regulations (see Section IV) require the candidate for the master's degree to take at least 135 units of graduate work as a graduate student at the Institute, including 81 units of advanced graduate work in applied mathematics and 54 units of free electives.
The Rockefeller Boards provided in 1928 for the construction by the Institute of an astronomical observatory on Palomar Mountain, equipped with a 200-inch reflecting telescope, 48-inch and 18-inch Schmidt wide-angle telescopes, and other auxiliary instruments, together with an astrophysical laboratory on the Institute campus. This observatory is supplemented by the facilities of the Mount Wilson Observatory of the Carnegie Institution of Washington, which, while not a part of the California Institute, is located even closer to Pasadena than is Palomar Mountain. Much of the graduate student thesis research is carried out at Mount Wilson. The increased light-gathering power of the 200-inch telescope permits further studies of the size, structure, and motion of the galactic system; of the distance, motion, radiation, composition, and evolution of the stars; the interstellar gas; the distance, motion, and nature of remote nebulae; and of many phenomena bearing directly on the constitution of matter. The 48-inch Schmidt has made possible a complete survey of the sky as well as an attack upon such problems as the structure of clusters of nebulae, the luminosity function of nebulae, extended gaseous nebulae, and the stellar contents of the Milky Way. These two unique instruments supplement each other as well as the telescopes and solar equipment on Mount Wilson; the one reaches as far as possible into space in a given direction, while the other photographs upon a single plate an entire cluster of distant nebulae or a star cloud in our own galaxy.

The Mount Wilson and Palomar Observatories constitute a unique and unprecedented concentration of scientific facilities in astronomy. Outstanding scientific talent is present both in the field of astronomy and in the related field of physics. The California Institute of Technology and the Carnegie Institution of Washington recognized the advantages in the creation of a great astronomical center in which a unitary scientific program would be pursued under favorable circumstances and which would draw young men of ability to graduate studies where they might familiarize themselves with powerful tools of exploration. For this purpose, a plan for the operation of the two observatories, under which they now function as a single scientific organization, under the direction of Dr. H. W. Babcock, was approved by the Trustees of the two institutions. Under this plan all the equipment and facilities of both observatories are made available for the astronomical investigations of the combined staff and students. The unified research program is paralleled by undergraduate and graduate training in astronomy and astrophysics by members of the Institute faculty, the staff of Mount Wilson and Palomar Observatories, and the Radio Observatory.

In 1956 work started in radio astronomy, and advanced study and research in this field are under way. A 32-foot paraboloid and two precision 90-foot-diameter, steerable paraboloids suitable for high frequencies are now in operation at a field station near Bishop. The two are used together as a variable-spacing interferometric radio telescope for exact position finding. In 1965 construction began on additional antenna of 130-foot diameter, to be used in conjunction with the present equipment. This is one of the most advanced installations in this new, rapidly growing field. Special receivers, masers, and other advanced techniques make it possible to identify the most distant radio
sources, study their spatial distribution and physical properties, and also to study the planets. The radio astronomy group works in close cooperation with the optical astronomers in Pasadena; the program of study in the two fields is essentially the same, except for specialized advanced courses. Work in physics and geology is expanding in the field of astronomical research in space and in the ground-based study of the planetary system. There will be close cooperation between these groups and the students and astronomers interested in space science.

As a result of the cooperation possible over a broad range of astronomy, astrophysics, and radio astronomy, unsurpassed opportunities exist at the California Institute for advanced study and research. The instructional program is connected with a broad and thorough preparation in physics, mathematics, and relevant subjects, as well as instruction in astronomy, planetary physics, radio astronomy, astrophysics, and observations with large telescopes.
Neurobiologist records information storage and retrieval in a single nerve cell

Biology

Undergraduate and Graduate Work

Biology is today one of the most rapidly expanding and exciting of the sciences. Advances of a spectacular kind are being made in our understanding of living things. This is in large part so because it has been found possible to apply the methods, concepts, and approaches of mathematics, physics, and chemistry to the investigation of such biological problems as the manner in which molecules, genes, and viruses multiply themselves; the nature of enzyme reaction and of enzymatic pathways; the mechanisms of growth and development; and the nature of nerve activity, brain function, and behavior. There is great and increasing demand for experimental biologists, and qualified individuals will find opportunities for challenging work in basic research and in the applied fields of medicine, agriculture, and chemical industry.

Because of the preeminent position of the California Institute of Technology in both the physical and biological sciences, students at the Institute have an unusual opportunity to be introduced to modern biology. The undergraduate option is designed to give the student an understanding of the basic facts, techniques, and logic of biology as well as a solid foundation in physical science. Emphasis is placed on the general and fundamental properties of living creatures, thus unifying the traditionally separate fields of the life sciences. The undergraduate option serves as a basis for graduate study in any field of biology or for admission to the study of medicine.

The undergraduate course for premedical students is essentially the same as that for biology students and is intended as a basis for later careers in research as well as in the practice of medicine. It differs in some respects from premedical curricula of other schools; however, it has been quite generally accepted as satisfying admission requirements of medical schools. Slight modifications in the curriculum may be required for admission to certain medical schools, or in cases in which the student wishes to try to complete admission requirements in three years instead of four. The student should consult with the premedical advisor about this.
Graduate work leading to the Ph.D. degree is chiefly in the following fields: biochemistry, biophysics, cell biology, developmental biology, genetics, neurophysiology, plant physiology, and psychobiology. These represent the fields in which active research is now going on in the Division. Most of these fields are approached at the molecular as well as higher levels of organization; thus, no separate discipline of "molecular biology" is recognized in the Division. The disciplines of biochemistry and biophysics, of course, encompass most directly the area of molecular biology. Neurobiology and behavior are receiving increasing emphasis within the Division of Biology. Related developments in the Divisions of Chemistry, Engineering, and the Humanities and Social Sciences serve to fortify doctoral programs concerned with the study of brain and behavior. The emphasis in graduate work is placed on research. This is supplemented by courses and seminars in advanced subjects aimed at developing the student's insight and critical ability as an investigator.

PHYSICAL FACILITIES

The campus biological laboratories are housed in three buildings, the William G. Kerckhoff Laboratories of the Biological Sciences, the Gordon A. Alles Laboratory for Molecular Biology, and the Norman W. Church Laboratory for Chemical Biology. The Alles Laboratory links the Kerckhoff and Church laboratories at all floor levels. The three laboratories contain classrooms and undergraduate laboratories, a biology library, an annex housing experimental animals, and numerous laboratories equipped for biological, biochemical, biophysical, and physiological research at the graduate and doctoral level. The constant-temperature equipment includes rooms for the culturing of the Institute's valuable collection of mutant types of Drosophila and Neurospora and complete facilities for plant and animal tissue culture.

Adjacent to the campus the Plant Research Center consists of the Campbell Plant Research Laboratory, the Earhart Plant Research Laboratory, and the Dolk and Clark Greenhouses. In the Earhart Laboratory all the elements of climate, such as light, temperature, humidity, wind, rain, and gas content of air can be controlled simultaneously. These laboratories offer the opportunity to study plants under different synthetic climatic conditions, yet with reproducibility of experimental results.

About 50 miles from Pasadena, at Corona del Mar, is the William G. Kerckhoff Marine Laboratory. The building houses several laboratories for teaching and research in marine zoology, embryology, and physiology. It is equipped with its own shop, has boats and tackle for collecting marine animals, and running seawater aquaria for keeping them. The proximity of the marine station to Pasadena makes it possible to supply the biological laboratories with living material for research and teaching. The fauna at Corona del Mar and at nearby Laguna Beach is exceptionally rich and varied, and is easily accessible. In 1966 the Laboratory was extensively rehabilitated for work in modern biology.

Reference should also be made to the Biological Systems Laboratory, which houses the joint research programs of the Biology and Engineering Divisions dealing with data processing systems and systems theory as they relate to the nervous system and sensory perception (see page 162).
Chemistry and Chemical Engineering

The laboratories of chemistry consist of four adjacent units. Gates Laboratory and Gates Annex are the gift of Messrs. C. W. Gates and P. G. Gates. Crellin Laboratory, which was completed in 1937, affords space approximately equal to that of the first two units and is the gift of Mr. and Mrs. E. W. Crellin. The Norman W. Church Laboratory for Chemical Biology, completed in 1955, is shared equally with the Division of Biology.

The first three units include laboratories and other facilities for undergraduate and graduate instruction and research in inorganic, analytical, physical, and organic chemistry. Church Laboratory is used primarily for research on the applications of chemistry to biological and medical problems. These four laboratories provide space for about 150 graduate students and postdoctoral workers.

It is expected that the new Arthur Amos Noyes Laboratory for Chemical Physics will be completed in 1967. This building will have many special facilities for research in chemical physics and physical inorganic chemistry.

The chemical engineering facilities are located in the Eudora Hull Spalding Laboratory of Engineering and in the adjoining Chemical Engineering Laboratory. These laboratories are well equipped for instruction in chemical engineering and for research programs involving studies of the phase relations and thermodynamic properties of fluids at moderately high pressures and temperatures, reaction kinetics, the transfers of material and energy in fluid systems, the structure of liquids, the physics and chemistry of plasmas, and the mechanics of dispersions and suspensions.
There are two undergraduate options in the Division, one in chemistry and the other in chemical engineering, and the curricula are the same for the first two years. Study in these options leads, especially when followed by graduate work, to careers in teaching and research in colleges and universities, in research in government and industry, in operation and control of manufacturing processes, and in management and development positions in chemical industry.

The first-year general chemistry course, which is taken by all freshman students, emphasizes fundamental principles and their use to systematize descriptive chemistry. The laboratory work in the first two terms is essentially quantitative analysis, but is designed to train the student to plan, execute, and critically interpret experiments involving quantitative measurements of various physical quantities. The third-term laboratory work involves a system of qualitative and semi-quantitative analysis and is used to extend and organize the student’s knowledge of inorganic chemistry. Students who show themselves to be qualified by having done well in an Advanced Placement or equivalent course and having passed a short additional departmental examination may elect to take an advanced general chemistry course that differs chiefly from the main course by having different lectures.

In the second year the two options are identical. There is a basic course covering the properties and reactions of covalent organic and inorganic compounds and a laboratory course in which fundamental manipulative and spectroscopic techniques are acquired through studies of reactions and preparations of covalent compounds. In addition there are elective courses which can be used by the student to enlarge his understanding of other fields of science and engineering.

Throughout the third year both the chemistry and chemical engineering options require a basic course in physical chemistry, as well as courses in analytical chemistry and physical chemistry laboratory. This is the year, however, where the requirements of the options begin to diverge. The chemistry option provides time for some of the elective courses described on page 260, whereas the chemical engineering option requires professional courses which include chemical engineering thermodynamics, stage operations, and engineering mathematics.

In the fourth year the chemistry option has no required professional courses but permits specialization by electives of an advanced nature. The chemical engineering curriculum contains courses in industrial chemistry, adaptive design, transport phenomena, applied physical chemistry, and chemical engineering laboratory, as well as electives in engineering and science.

Chemical engineers study gas separation by preferential ionization in a glow discharge.
Undergraduate research is emphasized in both options and students are encouraged even in the freshman year to participate in research in association with staff members. Over the past years these researches have resulted in a significant number of publications in scientific journals.

GRADUATE WORK IN CHEMISTRY

The graduate program in chemistry emphasizes research; this emphasis reflects the Institute's traditional leadership in chemical research and the conviction that has permeated the Division of Chemistry and Chemical Engineering from its founding, that participation in original research is the effective stimulus to awaken, develop, and give direction to the creative force.

Soon after the graduate student arrives in the laboratories, he attends a series of orienting seminars that introduce him to the active research interests of the staff. He is then expected to talk in detail with each of several staff members whose fields attract him, eventually to settle upon the outlines of a problem that interests him, and to begin research upon it early in his first year. He can elect to do research which crosses the boundaries of areas that are commonly distinguished by schismatic names; for in this relatively compact division a man is encouraged to go where his scientific curiosity drives him; he is not confined to a biochemical or physical or organic laboratory. A thesis that involves more than one advisor is common, and interdisciplinary programs with biology, physics, and geology are open and recommended.

For an advanced degree, no graduate courses in chemistry are specifically required, but the student may plan a program of advanced courses (see pp. 304-310) in consultation, at first with a representative of the divisional committee on graduate study, and later with his research advisor.

An extensive program of seminars enables the student to hear of and discuss notable work in his own and other areas. In the weekly Divisional Research Conference, members of the staff and distinguished visitors present accounts of research of broad interest. More specialized seminars are devoted to such subjects as theoretical chemistry, physical organic chemistry, electrochemistry, crystal structure analysis, and biological chemistry. Graduate students are encouraged also to attend seminars in other divisions.

Before the end of the winter term of his second year, the student should be ready to seek formal admission to candidacy for the Ph.D. degree. He then presents a research report that describes and justifies what he has done and what he hopes to do, and propositions, or brief scientific theses, that he has originated and can defend. The independence, creativity, and intellectual maturity that he demonstrates in his presentation provide the basis for the decision as to his admission to candidacy.

The division has both M.S. and Ph.D. programs, but most students work directly toward the Ph.D. Requirements for the master’s degree in chemistry are given on page 274; those for the doctor’s degree on page 229.

AREAS OF RESEARCH

A detailed listing of individual research interests is to be found on pages 309 and 310, in the description of course Ch 280. These can be grouped into the following general areas of interest:
1. **Structural chemistry**, including X-ray diffraction, nuclear magnetic resonance and electron-spin resonance spectroscopy, optical and electron-impact spectroscopy and mass spectrometry. Substances under study include crystalline enzymes, nucleic acids and nucleotides, intermetallic compounds, inorganic chelates, antibiotics, and liquids.

2. **Chemical dynamics**, including studies of organic, inorganic, and biochemical reaction mechanisms, the mechanisms of electrochemical and photochemical processes, and molecular beam kinetics.

3. **Theoretical chemistry**, involving molecular quantum mechanics, computer "experiments" in chemical kinetics, and the theory of relaxation processes.

4. **Biochemistry**, including studies of oxidation and proteolytic enzymes, the determination of amino acid sequences of proteins, the systematic modification of proteins, the physical chemistry of solutions of macromolecules, immunochemistry, and the fundamental processes of photosynthesis.

5. **Synthetic chemistry**, with recently increased emphasis on the synthesis of natural products and also including synthesis of theoretically interesting small molecules.

**GRADUATE WORK IN CHEMICAL ENGINEERING**

Instruction and research in chemical engineering is offered leading to the degrees of Master of Science and Doctor of Philosophy.

The Institute was one of the earliest schools to use the engineering science approach to chemical engineering. The emphasis in both instruction and research is on basic subjects rather than on specialized material relating primarily to particular industries or processes. It is believed that the basic subjects essential to constructive thinking in engineering are most easily mastered with sympathetic and continuous instruction, whereas the material of applied nature is more properly learned in the industrial environment.

The general objective of the graduate work in chemical engineering is to produce men who are exceptionally well trained to apply the principles of mathematics, the physical sciences, and engineering to new situations involving chemical reactions and the transport of momentum, energy, and material.

**Degrees.** The master's degree is intended for students who plan to pursue careers in design, process engineering, development, or management. The degree is normally obtained in one academic year. The requirements include ChE 102, Applied Physical Chemistry and ChE 167 abc, Introduction to Chemical Engineering Research, the latter involving one term of research under the supervision of a chemical engineering staff member. In addition there are electives, which may include humanities as well as graduate courses from other branches of science and engineering. A thesis is not required for the master's degree. The master's degree is not a prerequisite for Ph.D. work; however, at the cost of about one term of added residence it can be earned by those intending ultimately to obtain the Ph.D. degree.

The work leading to the Ph.D. degree prepares students especially for careers in universities and in the research laboratories of industry and government, although Ph.D. graduates are also well qualified for the areas listed for the master's degree. In addition to acquiring proficiency at a high level in sev-
eral areas vital to chemical engineering and satisfying Institute requirements in foreign languages and a minor program, the Ph.D. candidate must complete a significant program of scientific investigation and prepare a thesis describing this research. Usually the first year of graduate work is principally devoted to course work in chemical engineering and in the minor program. The research program is also started during this period. During the second year the student is expected to spend at least half time on his research, and to complete his minor and the candidacy examination. Some time is available for elective courses. It is expected that the research project will occupy full time during the third year. Thus, if summers are spent on research and other academic pursuits, the Ph.D. requirements should be completed in three calendar years.

Ph.D. requirements are shown in more detail on page 229.

**Instruction and Research.** The major areas in which graduate research is currently concentrated are:

1. Reaction kinetics and combustion including both homogeneous and catalytic oxidation reactions; plasma chemistry; the decomposition of inorganic sulfur compounds; and both experimental and theoretical studies of oscillatory combustion.

2. Transport phenomena including turbulent heat and mass transfer in gases and liquids; measurements of diffusion coefficients, viscosities, and thermal conductivities over a wide range of pressures; and the development of mathematical methods for solution of complex transfer problems.

3. Liquid state physics involving studies of forces and configurations at the molecular level in simple systems; determination of structure by X-ray diffraction; other studies of local order by optical, magnetic, and ultrasonic experiments.

4. Thermodynamics and phase behavior including the volumetric and phase behavior of hydrocarbons; heats of vaporization of hydrocarbons.

5. Mechanics of suspensions and dispersions; rheology of blood; chemistry and physics of aerosols.

Graduate courses in chemical engineering are described starting on page 301. The 100-series courses are open to first-year graduate students while those in the 200 series are ordinarily taken only by more advanced students.

**Facilities and Equipment.** Chemical engineering is housed in the Eudora Hull Spalding Laboratory of Engineering and in the Chemical Engineering Laboratory which is contiguous to Spalding. The laboratories are well equipped both for instruction and for research and include the following major subdivisions:

The Transfer Laboratory, which is equipped for measurements of turbulent transfer of momentum, energy, and material. Combustion studies are also carried out in this laboratory.

The High Pressure Laboratory, which is equipped for precision measurements at pressures up to 15,000 psi and, in one case, to a temperature of
Measurements include diffusion coefficients in liquids and gases, viscosity, thermal conductivity, heats of vaporization, Joule-Thomson coefficients, and volumetric and phase behavior of fluids.

The Kinetics Laboratory, which contains several research-scale chemical reactors, chiefly of the flow type, and appropriate equipment for the measurement of pressures, temperatures, and flow rates. Extensive use is made of gas chromatography for analysis.

The Liquid State Physics Laboratory, which is equipped for X-ray diffraction measurements on cryogenic fluids at moderate pressures. Apparatus is also available for refractive index, ultrasonic velocity and absorption, and magnetic experiments over a range of temperature and pressure.

The Plasma Chemistry Laboratory, which includes equipment for generation of and measurements in plasma jets, electron beams, and glow discharges.

The Rheology Laboratory, which has a viscometer for precise and accurate rheology studies in blood and other suspensions.

The instructional laboratories are equipped for making precise measurements of transport and other phenomena.

Specialized Institute facilities are also available to students and staff. The Computing Center, which has exceptional capabilities, is described on page 126.
The Division of Geological Sciences is closely allied with the other active and creative fields of science and engineering at Caltech. Accordingly, a favorable intellectual atmosphere exists for education and research in geology, geobiology, geochemistry, geophysics, and aspects of planetary science. The geographic position and geological setting of the Institute are nearly ideal for students and research workers, who can derive materials, ideas, and inspiration from the wide variety of easily accessible field environments. The staff as listed on an earlier page of this catalog represents a variety of allied and integrated interests and is active in both teaching and research.

Physical facilities, both natural and man-made, are excellent. All the classroom instruction and most of the laboratory research in geology and geochemistry, as well as part of that in geophysics, are carried on in the Arms and Mudd laboratories. These are modern, five-story buildings which were specifically designed for these activities and to provide office space for the staff and students. They also house the Division Library; paleontologic, rock, and mineral collections; a laboratory for planetary studies; organic-constituents laboratory; spectrographic, X-ray, and X-ray fluorescent equipment; wet chemical laboratories; an electron microprobe facility; and facilities for rock and mineral analyses, sedimentation studies, thin- and polished-section work, and other requirements for comprehensive studies in the earth sciences. A new suite of laboratories for mineral separation and analyses is available for student use.
Extensive facilities are provided for the application of techniques of nuclear chemistry to problems in the earth sciences. These facilities include chemical laboratories for trace-element studies, a silicate analysis laboratory, and mass spectrometric and counting facilities for isotopic work. Available equipment includes mass spectrometers, emission counters, an induction furnace, and extensive mineral separation facilities in addition to the usual geological and chemical items.

Favorable opportunity for study of dynamic aspects of paleontology and evolution as revealed by morphology, ecology, and biogeochemistry is provided by the combination of personnel, reference collections, and modern geochemical tools and techniques available here. Biologic principles and processes, past and present, of significance to geology may be interpreted from experimentation and studies at the Kerckhoff Marine Laboratory at Corona del Mar, operated under the auspices of the Division of Biology.

The Seismological Laboratory of the California Institute, with ample space and excellent facilities, including a computer and extensive shops in the Donnelley and Kresge laboratories, is located about three miles west of the campus on crystalline bedrock affording firm foundation for the instrument piers and tunnels. The central laboratory, together with seventeen outlying auxiliary stations in southern California—built and maintained with the aid of cooperating companies and organizations—constitutes an outstanding center for education and research in seismology. Other phases of geophysical training and investigation are carried on in the regular campus buildings. Also, lunar and planetary observations are being carried out at the Mt. Wilson and Palomar Observatories with moderate-size reflecting telescopes especially designed and built to meet the needs of Division personnel.

Conditions for field study and research in the earth sciences in southern California are excellent. A great variety of rock types, geologic structures, active geologic processes, physiographic forms, and geologic environments occur within convenient reach of the Institute. The relatively mild climate
Study and Research

permits field studies throughout the entire year; consequently, year-round field training is an important part of the divisional program.

The student body is purposely kept small and usually consists of no more than 50 graduate students and 15-20 undergraduates. The small size of the student group and large size of the staff give a highly favorable ratio of students to staff and result in close associations and contacts which enhance the value of the educational program.

UNDERGRADUATE WORK

The aim of the undergraduate program in the geological sciences is to provide thorough training in basic geological disciplines and, wherever possible, to integrate the geological studies with and build upon the courses in mathematics, physics, chemistry, and biology taken during the earlier years at the Institute. Special emphasis is also placed on field work because it provides first-hand experience with geological phenomena that can never be satisfactorily grasped or understood solely from classroom or laboratory treatment. Options are offered in geology (including paleontology and paleoecology), geophysics, and geochemistry. Sufficient flexibility in electives is provided to permit a student to follow lines of special interest in related scientific or engineering fields. Research in pertinent aspects of planetary science is increasing. Men who do well in the basic sciences and at the same time have a compelling curiosity about the earth and its natural features are likely to find their niche in the geological sciences, especially if they possess a flexible and imaginative mind that enables them to grapple with complex problems involving many variables. Most students majoring in the earth sciences now find further training at the graduate level highly desirable, and even necessary.

Men trained in the earth sciences find employment in research and teaching in colleges and universities, and research in a wide variety of other professional endeavors. Many work for the petroleum industry, both in the field and in the laboratory, on theoretical as well as applied problems. Some eventually become administrators and executives. Mining companies, railroads, large utilities, and other organizations engaged in development of natural resources employ men trained in the geological sciences, as do a number of government agencies such as the U.S. Geological Survey and the Bureau of Reclamation.

GRADUATE WORK

The number of courses required within the Division for an advanced degree is held to a minimum to permit individuality and flexibility in the various programs. Facilities are available for research and study in such subjects as geochemistry, geophysics, seismology, paleoecology, paleontology, petrology, geomorphology, glaciology, structural geology, stratigraphy, sedimentation, tectonophysics, mineral deposits, and planetary science.

The Division is especially interested in graduate students who have a sound and thorough training in physics, chemistry, biology, and mathematics as well as geology. Applicants with majors in these subjects and with a strong interest in the earth sciences will be given equal consideration for admission and appointment with geology majors.
The four-year undergraduate program in mathematics leads to the degree of Bachelor of Science. The purpose of the undergraduate option is to give the student an understanding of the broad outlines of modern mathematics, to stimulate his interest in research, and to prepare him for later work, either in pure mathematics or allied sciences. Unless a student has done exceptionally well in his freshman and sophomore years, he should not contemplate specializing in mathematics. An average of at least "B" in his mathematics courses is expected of a student intending to major in mathematics.

Since the more interesting academic and industrial positions open to mathematicians require training beyond a bachelor's degree, the student who expects to make mathematics his profession must normally plan to continue, either here or elsewhere, with graduate work leading to the degree of Doctor of Philosophy. The undergraduate should bear this in mind in choosing his course of study. In particular he is urged to include at least one year, and preferably two years, of language study in his program. Overloads in course work are strongly discouraged; students are advised instead to deepen and supplement their course work by independent reading. The excellent mathematics library with its large collection of journals is housed in the general library in the Norman Bridge Laboratory. In addition, there is a reference library of duplicate books and periodicals located on the third floor of the Sloan Laboratory of Mathematics and Physics. Books that are not on reserve for special courses may be borrowed from the general library. Current periodicals may be consulted in either library.

Normally the undergraduate will have joined the option by the beginning of his sophomore year. He is required to take the course Ma 5 abc during his
second year. Students transferring from another option at the end of the sophomore year who have not yet taken this course will take it as their selected course in mathematics during their junior year concurrently with Ma 108, and will also take two selected courses in mathematics during their senior year.

The schedule of courses in the undergraduate mathematics option is flexible. It enables the student to adapt his program to his needs and mathematical interests and gives him the opportunity of becoming familiar with creative mathematics early in his career. Each term during his junior and his senior year the student will normally take 18 units of courses in mathematics, including the required course Ma 108. These courses are chosen from the subjects of instruction listed under A on page 345 of this catalog. The courses Ma 102, 103, 104, 109, 112, 116 and AMa 105 are recommended to juniors and seniors. The other courses demand more maturity and prerequisites. They are recommended to seniors only.

GRADUATE WORK

Graduate work in mathematics is planned to give the student a broad knowledge of classical and modern mathematics and to stimulate him to do creative and independent work. The normal course of study leads to the Ph.D. degree and requires three or four years. Exceptional ability and graduate work done elsewhere may shorten this time.

The general Institute requirements for the Ph.D. degree are listed in Section IV under A and D. Additional requirements for mathematics are found on pages 242-243; they give information on placement examinations, admission to candidacy, and final examinations.

Entering graduate students are normally admitted directly to the Ph.D. program, since the Institute does not offer a regular program in mathematics leading to the master's degree. This degree may be awarded in exceptional circumstances either as a terminal degree or as a degree preliminary to the Ph.D. degree. The general Institute requirements (see parts A and B of Section IV) specify that the candidate for the master's degree must take at least 135 units of graduate work as a graduate student at the Institute, including at least 81 units of advanced graduate work in mathematics. This advanced work is interpreted as work with a course number greater than 115 and may include a master's thesis. The remaining 54 graduate units are electives from any field.

The candidate for the master's degree will be expected to have acquired, in the course of his studies as an undergraduate or graduate student, a comprehensive knowledge of the main fields of mathematics comparable to 180 units of work in mathematics at the Institute with course numbers greater than 90. This general knowledge will be tested through an oral examination. This examination can be waived at the discretion of the department.

Courses. The graduate courses which are offered are listed in Section VI. They are divided in three categories. The courses numbered between 100 and 199 are basic graduate courses open to all graduate students. The course Ma 108 is the fundamental course in Analysis. It is a prerequisite to most courses, and its equivalent is expected to be part of the undergraduate curriculum of the entering graduate student. The basic course in Algebra, Ma
presupposes an undergraduate introductory course in modern algebra similar to Ma 5 abc. Particular mention is made of Ma 190. It is a seminar required of all first-year graduate students and restricted to them. It is intended to stimulate independent work, to train students in the presentation of mathematical ideas, and to develop an independent critical attitude.

The courses in the second category are numbered between 200 and 299. They are taken normally by second-year and more advanced graduate students. They are usually given in alternate years. The 300 series includes the more special courses, the research courses, and the seminars. They are given on an irregular basis depending on demand and interest.

The first-year graduate program, in addition to the elementary seminar Ma 190, will consist as a rule of two or three 100-series courses. The student is reminded of the language requirements and of the requirements for a subject minor or a distributed minor. It is advisable for a student to satisfy these requirements as early as possible. In particular, the student should fill out the form listing his intended courses outside of mathematics and secure approval for this part of his plan of study.

Beginning with the second year, at the latest, the student will be expected to begin his independent research work and will be strongly encouraged to participate in seminars.

Research. Although supervision and guidance will be provided by members of the staff of the Institute, the thesis research, including the choice of a topic, is the responsibility of the student. Proper guidance can be given in almost any field in pure or applied mathematics and is not restricted to the immediate interests of the staff in mathematics. At present these interests include: group theory; algebraic and analytic theory of numbers; algebraic geometry; lattice theory; matrix theory; combinatorial analysis; ordinary and partial differential equations; measure and integration theory; Fourier and harmonic analysis; functional analysis; numerical analysis; differential geometry; topology; probability; some areas of applied mathematics.

A program of applied mathematics has been organized as a joint program of the Division of Physics, Mathematics and Astronomy, and the Division of Engineering and Applied Science. The course of study will lead to the Ph.D. degree and requires three or four years. This program is aimed at those students with a background in mathematics, physics, or engineering who wish to obtain a thorough training and to develop their research ability in applied mathematics. For details, see the separate section on applied mathematics.

Financial Aid. Besides the help provided by the nationwide fellowship programs, financial assistance may be provided by tuition scholarships and research or teaching assistantships. A scholarship and an assistantship may be held concurrently. The duties required of an assistant are light enough to allow the student to carry a full program of study.
The distinctive feature of the undergraduate work in physics at the California Institute is the creative atmosphere in which the student at once finds himself. This results from the combination of a large and very productive graduate school with a small and carefully selected undergraduate body.

In order to provide the thorough training in physics required by those who are going into scientific or engineering work, two full years of general physics are required of all students. This first course in physics introduces modern ideas at the beginning of the first year and develops these along with the principles of classical mechanics and electricity as they apply to the dynamics of particles. More complex problems including the mechanics of continuous media, electromagnetic fields, and atomic structure will be treated in the second year. Those who want to major in physics take intensive courses during their junior and senior years that provide a more than usually thorough preparation for graduate work. The curriculum provides for the teaching of classical and modern physics from the first year through the entire undergraduate course of study. Elective courses during the junior and senior years provide flexibility which enables the student to select a program to fit his individual requirements. Many of the undergraduate students who elect physics are also given an opportunity to participate in some of the thirty to sixty research projects which are always under way and the graduate seminars which are open to undergraduates at all times.

Graduate students working toward the Ph.D. degree should complete the requirements for admission to candidacy for the doctor's degree as soon as possible (see page 239). The courses required to be passed either regularly or by examination provide an unusually thorough grounding in the fundamentals of physics, and the student learns to use these principles in the solution of problems. After the first year of graduate work, students with special technical training will find it comparatively easy to obtain part-time work during the summer on one or another of the research projects in physics. Students so employed are also expected to register for 15 or more units of research.

The Norman Bridge Laboratory of Physics is equipped to carry on research in most of the principal fields of physics. An addition to this laboratory has been especially constructed for the work in cosmic rays and the study of elementary particles. Special facilities for research in nuclear physics are also provided in the W. K. Kellogg Radiation Laboratory, which is equipped with three electrostatic generators and a variety of auxiliary equipment. A 12-mev tandem electrostatic accelerator is installed in the Alfred P. Sloan Laboratory of Mathematics and Physics, which also contains laboratories for the investigation of the properties of matter at temperatures down to the milli-degree range. The Synchrotron Laboratory houses an electron accelerator which is now operating at energies up to 1.5 billion electron volts. Work in high-energy physics bridges the gap between the nuclear physics research in the Kellogg and Sloan laboratories and the cosmic ray and elementary particle investigations that have been carried on for many years in the
Norman Bridge Laboratory. Special facilities are available in the Norman Bridge Laboratory for the precision investigation of X-rays and gamma rays and the study of beta ray spectra. Opportunities for study in theoretical physics in any one of a number of fields are particularly good for a limited number of students whose ability and background qualify them for theoretical work.

The student may either select his own problem in consultation with the department or work into one of the research projects already under way.

There is a general seminar or research conference each week which is regularly attended by all research workers and graduate students. In addition, a weekly theoretical seminar is conducted for the benefit of those interested primarily in mathematical physics, and there are several seminars on special fields of work such as nuclear physics, X-rays, and high-energy physics.

For graduates in physics the main outlets are positions in colleges and universities, in the research laboratories of the government, and in the increasing number of industrial research laboratories of the country.

In order to make it possible for students to carry on their researches even after they have satisfied the requirements for the Ph.D. degree, a number of postdoctoral research fellowships are available.

*The 1.5-billion-volt Caltech synchrotron is used to study the photoproduction of mesons and hyperons from the proton and neutron*
"The four-year Undergraduate Course in Engineering," as prescribed in the Educational Policies of the Institute, "shall be of general, fundamental character, with a minimum of specialization in the separate branches of engineering. It shall include an unusually thorough training in the basic sciences of physics, chemistry, and mathematics, and a large proportion of cultural studies."

The course is designed to give the greatest possible flexibility as preparation for graduate study and for professional practice. The course involves four years of study leading to the degree of Bachelor of Science. The first year is common for all students at the Institute. At the end of this year a student who elects engineering is assigned an advisor in his general field of interest and together they develop a program of study for the next three years. This program includes the Institute-wide requirements in physics, mathematics, and humanities, and an additional, or third year, of advanced mathematics. Beyond these specifications the student and his advisor choose from a wide range of engineering and science electives to build a solid foundation for the kind of engineering activity toward which the student aims. For most students, graduate study in a specialized branch of engineering will be the goal. These men may wish to elect some foreign language also as graduate preparation. For others, immediate industrial work is the objective, and ultimately administration. Such students will be able to build a course of study from specialized professional courses and more general engineering science subjects suitable for more immediate engineering practice. Among such professional courses are a number which are nominally graduate subjects but which may be elected by undergraduates with adequate preparation.

The engineering curriculum is thus extremely flexible and a student will be advised to seek breadth as well as reasonable concentration in a technical area. No one rigidly prescribed curriculum can serve the needs of all students. Nor do the traditional curricula of the specialized branches of engineering properly reflect the interdisciplinary character of modern engineering. Consequently, the California Institute of Technology has adopted a single engineering curriculum strong in the sciences and humanities, with great flexibility of choice among the engineering sciences. This four-year bachelor's program leads logically toward graduate study in some specialized engineering field. It recognizes the increasing national growth in graduate engineering education and through good counseling and elective freedom builds an adequate preparation.

GRADUATE WORK

Graduate study and research opportunities exist in aeronautics, applied mechanics, chemical, civil, electrical, and mechanical engineering, engineering science, and materials science. An interdivisional program in applied mathematics is offered as explained on page 149. The courses leading to the degree of Master of Science normally require one year of work following the bache-
lor's degree and are designed to prepare the engineer for professional work of a more specialized and advanced nature. A second year of graduate work leads to the degree of Aeronautical Engineer, Civil Engineer, Electrical Engineer, or Mechanical Engineer. In addition, advanced work is offered in aeronautics, applied mathematics, applied mechanics, chemical engineering, civil engineering, electrical engineering, mechanical engineering, materials science, and engineering science leading to the degree of Doctor of Philosophy. In all phases of the graduate program students are encouraged to include in their courses of study a considerable amount of work outside of their specialized fields, particularly in mathematics and physics.

The Division of Engineering and Applied Science includes those curricula and facilities which are a part of the options of civil, electrical, or mechanical engineering, aeronautics, applied mathematics, applied mechanics, materials science, and engineering science in which degrees designated with these options are given. In addition, the Division includes subjects and research facilities in which no specific degree is offered, but which form a part of a student's course of study or are available to him as optional work. These subjects are hydraulics and hydrodynamics, jet propulsion, nuclear energy, physical metallurgy, polymers, biological engineering sciences, environmental health engineering, and information science. Some of the specialized laboratory facilities available for instruction and research are the various wind tunnels; the Computer Center, which includes the analog and digital computers; the Dynamics Laboratory; Nuclear Measurements Laboratory; and the several facilities for work in hydraulic structures, hydrodynamics, physical metallurgy and properties of materials, hydrology, water supply, environmental health, and biological systems.

Strong-motion accelerograph for earthquake studies to be installed in Caltech's Millikan Library building
The Graduate School of Aeronautics and the Guggenheim Aeronautical Laboratory, widely known as the GALCIT, were established in 1928 at the California Institute with the aid of the Daniel Guggenheim Fund for the Promotion of Aeronautics. In 1948 a Jet Propulsion Center, to provide facilities for study in that field, was established by the Daniel and Florence Guggenheim Foundation (see page 165). At about the same time an addition to the original Guggenheim Laboratory was constructed in an attempt to cope with the demands which twenty years of growth had imposed. The subsequent attainment of supersonic flight, and the more recent opening of what has been called the "Space Age," by the first Russian and United States orbiting satellites, tremendously increased both the scope and the research facility requirements of the field involving both science and engineering which is here called aeronautics. Generous donors have recently made it possible for the California Institute to more nearly satisfy the needs thus created. Both the Karman Laboratory of Fluid Mechanics and Jet Propulsion (a gift of the Aerojet-General Corporation) and the Firestone Flight Sciences Laboratory (donated by the Firestone Tire and Rubber Company) were completed and occupied during the academic year 1961-62. Together with the original Guggenheim Laboratory, to which they are contiguous, they constitute an integrated group of Graduate Aeronautical Laboratories (also known as GALCIT) in which the enlarged activities resulting from the extension of the aeronautical environment into space can adequately be accommodated. In particular, the Jet Propulsion Center is now able to concentrate its major activities in the Karman Laboratory rather than having its work scattered in several Institute buildings as has been necessary in the past. The Karman Laboratory also contains extensive facilities for researches in true hydrodynamics (using water as the fluid) which have long been a part of the Institute's program. The staffs housed in this group of laboratories are actively engaged in the fields of aeronautics, jet propulsion, hydrodynamics, space flight, and the allied sciences. The following are the major areas in which postgraduate instruction and advanced research are currently concentrated:

1) Fluid mechanics including classical hydrodynamics and aerodynamics; turbulence; stochastic and molecular approaches; hypersonic and rarefied gas flows including the effects of very high temperatures; magnetohydrodynamics and plasma physics.

2) Solid mechanics relating to the properties of materials; statics and dynamics of elastic, plastic, and viscoelastic bodies; fracture; finite strains; elastic waves; thermal stress; shell theory and photoelasticity.

3) Performance, structural mechanics, and flight dynamics of aircraft and spacecraft, including air and space vehicle performance, stability and control with the associated aerodynamic, propulsive, and environmental inputs; multistage rocket performance; aeroelasticity; orbital mechanics, trajectories, reentry mechanics and thermodynamics.

4) Jet and rocket propulsion of aircraft and spacecraft (see page 165).
In all four of the above areas primary emphasis is placed on the underlying mathematics, physics, and chemistry and on their application to the solution of the scientific and engineering problems involved.

The group of Graduate Aeronautical Laboratories contains very complete and diversified facilities in support of the above program. The 200-m.p.h., 10-foot-diameter wind tunnel which has been in continuous service for nearly 35 years continues to be a valuable tool for low-speed research and model testing. The fluid mechanics laboratory contains several smaller wind tunnels and a considerable amount of special apparatus and equipment suitable for the study of basic problems connected with turbulent flows. The problems of transonic, supersonic, and hypersonic flows may be investigated in other wind tunnels specifically designed for such purposes. In these tunnels velocities up to 10 times the speed of sound can be attained. Shock tubes, plasmajets, inverse pinch facilities, mercury tunnels, and other special items of laboratory apparatus are available for studies of extreme temperature, rarefied gas, and magnetohydrodynamic effects. The solid mechanics laboratories contain standard and special testing machines for research in aircraft and spacecraft structures and materials. Fatigue machines are also available as is photoelastic equipment for the study of stress distribution by optical methods. Special apparatus, including very high speed cameras, is used in studies of elastic waves, stress propagation, panel flutter, and the mechanics of static and dynamic fracture. The laboratory facilities for jet propulsion and hydrodynamics are described in the sections on the Jet Propulsion Center and on Hydrodynamics, starting on page 165. The laboratories also include excellent shop and library facilities, conference and study rooms, in addition to the usual lecture halls and offices.

Another activity which had its origin at the GALCIT and with which the aeronautics and jet propulsion groups continue to maintain close contact is the Jet Propulsion Laboratory. Currently it has a staff of 4000 persons, of which some 1350 are professional engineers or scientists. The Laboratory is owned and supported by NASA and is administered by the Institute. Its primary responsibility is the “development of spacecraft and the carrying out of unmanned lunar and interplanetary exploration.” This includes an extensive supporting research and advanced technical development program on the fundamental problems of propulsion; fuels and combustion; high-temperature materials; rocket-motor design, guidance, and control; and electronic instrumentation for tracking and telemetering. Among the experimental facilities are two supersonic wind tunnels (a 20-inch tunnel capable of speeds of 4.8 times the velocity of sound and a 21-inch hypersonic wind tunnel capable of speeds of 7 to 9 times sound velocity); a space environmental simulator; over a dozen rocket and thermal jet test cells; large laboratories devoted to space sciences, refractory materials, hydraulics, instrumentation, chemistry, combustion, heat transfer; and high-speed digital and analog computers. The Laboratory extends the use of these facilities to properly accredited Institute students who are doing thesis work.

As in the fields of physics, chemistry, and mathematics, emphasis is placed primarily upon the development of graduate study and research; but provision also has been made in the four-year undergraduate program for work leading
to such graduate study and research. This affords a broad and thorough preparation in the basic science and engineering upon which aeronautics rests.

The graduate courses may be taken either by students who have completed a four-year course at the Institute, or by students from other colleges who have had substantially the same preparation. The field of aeronautics is so many-sided that a student who has completed the undergraduate course either in engineering or in applied science will be admitted to the first-year graduate course. The second-year work, however, may be taken only by students who have completed the first-year course at the Institute or who have had substantially the same preparation elsewhere.

Still more advanced study and research are offered for the degree of Doctor of Philosophy. This degree is given under the same general conditions as those that obtain in the other courses offered at the Institute.

**Applied Mathematics**

*(See pages 133 and 149)*

**Applied Mechanics**

Advanced instruction and research leading to degrees of Master of Science and Doctor of Philosophy in Applied Mechanics is offered in such fields as elasticity, plasticity, wave propagation in solid and fluid media, fluid mechanics, dynamics and mechanical vibrations, stability and control, and certain areas in the fields of propulsion, and heat transfer.

Research studies in these areas which illustrate current interests include: linear and nonlinear vibrations, random vibrations, structural dynamics and design for earthquake and blast loads, linear and nonlinear problems in static and dynamic elasticity, plasticity and viscoelasticity, wave propagation in elastic and viscoelastic media, diffraction of elastic waves by cavities and inclusions, boundary layer problems in plates and shells, stratified flow, unsteady cavity flow, and rheology of blood in small tubes.

The work for the degree of Master of Science in Applied Mechanics ordinarily consists of three terms of formal instruction in basic courses in applied science. Students are given considerable latitude in selecting these courses, in consultation with the staff, and are encouraged to elect basic courses in mathematics and physics as well as courses in other options of the Division of Engineering and Applied Science. Students who have completed four-year B.S. programs in undergraduate options such as applied mechanics, engineering science, physics, mathematics, or engineering options having a strong background in applied mathematics, will in general be eligible to apply for admission to M.S. candidacy status.

The degree of Doctor of Philosophy in Applied Mechanics will ordinarily involve a second year of graduate work in advanced courses and research, plus at least one additional year on a comprehensive thesis research project. Such study and research programs are individually planned to fit the interests and background of the student.

In addition to the regular facilities of the Division of Engineering and Applied Science, such as the extensive digital computing facilities of the Computing Center, and the special facilities for studies in solid and fluid mechanics of the Graduate Aeronautical Laboratories, certain special facilities have grown
up in connection with applied mechanics activities. The Dynamics Laboratory is equipped with a good selection of modern laboratory apparatus and instrumentation for experimental research in shock and vibration, and the Earthquake Engineering Research Laboratory contains specialized equipment for the analysis of complex transient loading problems, and for the recording and analysis of strong-motion earthquakes. Several analog computers are also available. Other specialized laboratories include the Heat Transfer Laboratory, which contains a forced convection heat transfer loop, and the Laboratory of Microhydrodynamics and Rheology, with equipment for precision viscosimetry and studies in streaming birefringence.

**Biological Engineering Sciences**

Graduate study and research in areas involving the application of the engineering sciences to problems of health and biology are of continually increasing importance at the California Institute of Technology. The primary areas of interest at present are in the fields of biosystems, environmental health engineering, transport processes, and circulatory mechanics. Close cooperation exists among the different groups and joint seminars are held frequently.

Students interested in any of these fields may work for advanced degrees in engineering science or any of the other branches of engineering at Caltech, including chemical engineering. Details of the program are worked out by the student and his advisor depending on individual interest.

*Biological Systems Laboratory.* (See page 162)

**Environmental Health Engineering.** Population growth and industrial expansion place increasing strains on our water supplies and air resources. The environmental health group is concerned with the application of engineering and science to the protection and control of our atmosphere and water supplies.

Research is currently in progress in the W. M. Keck Laboratory of Environmental Health Engineering on several phases of waste-water reclamation including the adsorption and desorption of viruses, the fate of chemical pesticides in surface waters, and the removal of trace concentrations of radioisotopes from sewage. Studies are also under way on the biochemical stabilization of urine in space vehicles and the ecological role of discharged wastes in marine communities. Methods of controlling changes induced by marine waste disposal are being developed.

Extensive work in aerosol physics with application to air pollution problems is also in progress. Included are theoretical studies of the size spectra of dispersed phases, and aerosol filtration by fibrous filters. Experiments on filtration of solid particles from air are being carried out in a low-speed wind tunnel built for the purpose in the Keck Laboratories.

**Transport Processes.** A number of studies of interfacial transfer in systems of physiological interest are being carried out in the W. M. Keck Engineering Laboratories. An investigation of convective diffusion in blood is under way with an apparatus specially designed for the control of the blood velocity at a membrane interface. The results will have application to the design of membrane oxygenators (heart-lung machines) and to material transfer in the large vessels of the circulatory system. This investigation has been assisted by several
medical institutions in the Los Angeles area. Studies have also been initiated on the theory of particle and gas transport in the lungs and the theory of convective diffusion in the proximal tubule of the kidney. This work is being carried out in cooperation with chemical engineering.

**Circulatory Mechanics.** Studies on the effects of the rheological properties of blood and the vascular structures on flow, particularly in the microcirculation, are being carried on in collaboration with the Cardiovascular Research Laboratory of the University of Southern California. Studies are currently being made of the rheology of complex suspensions, and blood in Couette flow and in flow through tubes of diameters in the size range of interest in microcirculatory studies (5 to 500 micra). Also in progress are living microcirculatory tests of small animals. This research is being correlated with work on larger animals by active participation in work at the Cardiovascular Research Laboratory, located at the Los Angeles County Hospital, about nine miles from the California Institute of Technology.

Facilities are available in the Thomas Engineering Laboratory for measurement of viscosity, streaming birefringence, tube flow, and still and cine photomicrography, as well as for the necessary chemical and physiological preparations. Equipment has also been developed for measurement of the rheological properties of vessel walls as well as pressure-flow relations in living microcirculatory vessels.

**Chemical Engineering**

*(See pages 138-141)*

**Civil Engineering**

In civil engineering, instruction is offered leading to the degrees of Master of Science, Civil Engineer, and Doctor of Philosophy.

Civil engineering is a branch of engineering covering a broad spectrum of interests concerned with man's relationship to the environment. Problems which the profession is called upon to handle range from the analysis of structures subjected to dynamic loadings to radioactive waste disposal, from arctic soil problems to sediment transportation in streams.

Advances in recent years in the general field of engineering have encouraged a reappraisal of civil engineering education and increased the scope of research in that field. New problems have presented exciting challenges to the civil engineer well trained in the fundamentals of his profession. For this reason, in the advanced study of civil engineering at the Institute, emphasis is placed on the application of mathematics and basic scientific principles to the solution of civil engineering problems, and the student is discouraged from depending on handbooks and empirical formulas. The general areas in which advanced work is offered are: (1) structural engineering and applied mechanics, (2) soil mechanics and foundation engineering, (3) hydraulics: hydrodynamics, hydraulic engineering, hydrology, and coastal engineering, and (4) environmental health engineering.

The emphasis in the undergraduate school of the Institute is on the basic subjects in science and engineering. In particular, strong emphasis is placed on physics, mathematics, and solid and fluid mechanics. The first year of graduate study involves more specialized engineering subjects, but the student
working for the Master of Science degree is encouraged not to overspecialize in one particular field of civil engineering.

Greater specialization is provided by work for the engineer's and for the doctor's degree. The candidate for these degrees is allowed wide latitude in selecting his program of study, and is encouraged to elect related course work of advanced nature in the basic sciences. The degree of Civil Engineer is considered to be a terminal degree for the student who desires advanced training more highly specialized and with less emphasis on research than is appropriate to the degree of Doctor of Philosophy. However, research leading to a thesis is required for both degrees.

Students who have not specialized in civil engineering as undergraduates may be admitted for graduate study. As preparation for advanced study and research, a good four-year undergraduate program in mathematics and the sciences may be substituted for a four-year undergraduate engineering course with the approval of the faculty. However, for students with a science background, the master's degree program will usually require two years instead of the usual one year for students with an engineering background. The qualifications of each applicant will be considered individually, and, after being enrolled, the student will arrange his program in consultation with a member of the faculty. In some cases, the student may be required to make up deficiencies in engineering science courses at the undergraduate level. However, in every case the student will be urged to take some courses which will broaden his understanding of the over-all field of civil engineering, as well as courses in his specialty. Most graduate students are also required to take further work in applied mathematics.

Excellent research facilities are available to qualified graduate students in all of the general areas of civil engineering which have been mentioned. Facilities for structural engineering and soil mechanics are located in the Thomas Laboratory of Engineering. Hydraulic research is carried on in the Laboratory of Hydraulics and Water Resources, which is located in the W. M. Keck Engineering Laboratories, and is described in detail under the section on Hydrodynamics (page 166). The Laboratory for Environmental Health Engineering is also located in the W. M. Keck Engineering Laboratories. Work in this field is closely integrated with research in hydraulics and water resources, as well as with biology and chemistry. It is also included among the Biological Engineering Sciences as described on page 157.

In recent years, graduate students and members of the staff have pursued a variety of research programs including analysis of structures subjected to dynamic loadings (such as earthquakes); the use of digital computers for structural analysis; soil deformation under stress; lunar soils studies; permafrost; investigation of laws of sediment transportation in streams; the flow of stratified fluid; wave-induced harbor oscillations; design criteria for various hydraulic structures; aerosol filtration; radioactive waste disposal; water reclamation; and the disposal of wastes in the ocean.

**Electrical Engineering**

Electrical engineering at the Institute is a growing, dynamic field. It no longer emphasizes power systems and standard electronics, but has expanded into several diverse and exciting areas. New materials and techniques, and the con-
cepts and approaches of physics and mathematics are being applied in a wide variety of studies, including plasma dynamics, electromagnetic radiation, quantum electronics, new solid state materials and devices, circuit function design, control systems, communication theory, and machine learning. The broad spectrum of problems falling within this branch of engineering provides exceptional and challenging opportunities for both theoretical and experimental work.

The distinctive feature of undergraduate courses in electrical engineering is the strong emphasis on the underlying fundamental principles as opposed to techniques and applications. This, coupled with the abundance of mathematics and physics courses in the curriculum, the variety of elective choice, and the creative atmosphere in which the student finds himself, provides an excellent background for either advanced graduate work or industrial employment.

For many students the four-year program leading to the Bachelor of Science degree is followed by additional graduate work for the Master of Science degree in Electrical Engineering, usually completed in one year. For exceptional students, instruction is offered leading to the degrees of Electrical Engineer and Doctor of Philosophy. The graduate curriculum is sufficiently flexible to allow the student to select courses closely aligned with his particular field of interest. Students are encouraged to participate in graduate seminars and in research projects with the electrical engineering faculty.

Laboratory facilities are available for a wide variety of research activities. At present electrical engineering activities are housed mainly in a new building, the Harry G. Steele Laboratory of Electrical Sciences. This is a modern, 55,000-square-foot laboratory building located immediately north of the Booth Computing Center and designed specifically for the research needs of the electrical engineering faculty and students.
The Communication and Control Systems Laboratory is a center of research in the fields of statistical communication theory and modern control theory. Students and faculty of the laboratory are actively engaged in research on many important problems of communication and control theory, such as machine learning and pattern recognition, signal selection and coding, detection of signals in noise, spectral estimation, optimal control and stochastic optimal control.

The Plasma Dynamics Laboratory is involved in studying wave phenomena in plasmas and methods of producing laboratory plasmas. Facilities are available for the generation and diagnosis of a variety of plasmas. Current studies involve theoretical and experimental investigations of the scattering of microwaves from non-uniform plasma columns. Also under investigation are electromagnetic waves in a plasma-filled waveguide, the detailed theory and application of Langmuir probes, and nonlinear beam-plasma interactions.

The Electromagnetic Radiation Laboratory is devoted to theoretical and experimental studies of electromagnetic radiation phenomena. It provides facilities for the investigation of basic problems arising from recent developments in antenna theory and design, quantum electronics, and plasma physics. Theoretical research now in progress includes topics in the mathematical theory of diffraction, wave propagation and oscillations in plasmas, artificial dielectrics, and surface wave antennas. Experimental work in progress includes the study of magnetohydrodynamics, and microwave interactions with plasmas.

The Quantum Electronics Laboratory is engaged in research in the area of generation and control of coherent light and in the study of related physical phenomena. Research projects now in progress include: interaction of coherent light with atomic systems, non-linear effects in laser media, non-linear optics, light-hypersound interactions and electromagnetics of optical resonators. The facilities include a laser fabrication setup and equipment for spectroscopic studies in the ultraviolet, visible, near and medium infrared region.

The Solid State Electronics Laboratories engage in studies of the physical properties of solids, device electronics, and circuit applications. Research projects now in progress include tunneling phenomena in thin dielectric layers, generation of infrared radiation in small-gap semiconductors, recombination and injection mechanisms in semiconductors, generalized theory of field-effect and diffusion transistors, and analysis and design of multiple-loop feedback systems. Facilities are available for vacuum evaporation and deposition, and for a variety of measurements on materials and devices.

Research in the Magnetics Laboratory centers around the investigation of ferromagnetic anisotropy and flux reversal, the two effects which are the basis of modern digital magnetic devices. Anisotropy studies in thin films of nickel, iron, and cobalt alloys are concerned with both field-induced and magneto-crystalline anisotropy, with a goal of understanding both the origin and consequences of the anisotropy. Studies of the flux-reversal mechanism in films and toroids and ferromagnetic resonance experiments are used to investigate the loss mechanism in ferromagnetically ordered atomic structures.
ENGINEERING SCIENCE

Advanced programs of study leading to the degree of Master of Science and Doctor of Philosophy in Engineering Science are offered by the Division of Engineering. These programs are designed to meet the needs of currently developing fields of engineering and applied science that are not emphasized in already established engineering disciplines. The general requirements for advanced degrees in engineering science are similar to those in the other fields of engineering and include for the doctorate the completion of satisfactory thesis research. The program for the Master of Science degree in Engineering Science is described on page 277. The fields of study may include such topics as fluid mechanics, dynamics of deformable solids, rheology of biological fluids, reactor physics, plasma physics, combustion, and other applications of modern physics and chemistry to engineering.

Note: Students wishing to pursue graduate studies in nuclear engineering may apply for admission in this option. Such applicants are encouraged to apply for AEC Special Fellowships in nuclear science and engineering, details of which may be obtained from Oak Ridge Associated Universities, Oak Ridge, Tennessee.

INFORMATION SCIENCE

Students who wish to follow a program in Information Science may do so in Engineering Science. Information Science can be described as a number of scientific interests which are gathered around the study of information processing. These can be classified broadly as follows along lines reflecting the research and educational interests of the associated faculty: *

Mathematical theory of languages and the synthesis of information processing systems

Computational mathematics and the analysis of data

Information processing in living systems

Candidates for advanced degrees in Engineering Science pursuing a program in Information Science may choose from a coordinated group of courses in Information Science and related disciplines and choose a research program in the subject area. The program for the Master of Science degree in Engineering Science is described on page 277.

Research laboratories important to this field are the Willis H. Booth Computing Center (see page 126) and the Biological Systems Laboratory.

Biological Systems Laboratory. This laboratory contains facilities for research on living nervous systems. It is close to and integrated with the Willis H. Booth computer facilities and includes newly developed experiment control and data analysis systems. In addition, special facilities have been developed for advanced research on stimulus and response instrumentation. Present experimental research is concentrating on nervous and motor systems of insects and the visual systems of vertebrates, including humans.

* A closely related area of interest is that of communication theory and control theory. Courses in this area are offered under Electrical Engineering.
Materials Science

The Division of Engineering offers programs of study leading to the degrees of Master of Science and Doctor of Philosophy in Materials Science. Graduate courses and research on solids is offered in the following general fields:

1. Electrical Properties
2. Magnetic Properties
3. Mechanical Properties
4. Dynamical Properties
5. Alloy Systems
6. Radiation Effects
7. Fracture Mechanics
8. Polymer Properties
9. Mechanics of Granular Media

Study for the degree of Master of Science in Materials Science ordinarily will consist of three terms of course work totaling at least 135 units. The student is allowed considerable freedom in choosing his courses. However, he must obtain the approval of his advisor for the program and any subsequent changes. Formal thesis work is not required, although laboratory courses are provided as elective courses so that the student can utilize the basic equipment and techniques employed in a variety of research fields.

Work toward the degree of Doctor of Philosophy in Materials Science usually requires a minimum of two years following completion of the master's degree program. Ordinarily, at least one year of this time is devoted to research work leading to a doctoral thesis. The course work and thesis work are planned by the student and his advisory committee so as to fit best the background and interests of the student.

Instruction and research in materials science is available. Current research activities include: properties of thin metallic and insulating films, anisotropy with respect to magnetic and electrical properties, electron transport processes, relationship between mechanical properties and structure, fracture and fatigue damage in metals and polymers, behavior of metals under dynamic loading conditions, model representation of material behavior for viscoelastic media on both micro and macro scales, structure of alloys, kinetics of phase transformation, crystal structure and properties of metastable phases, theoretical and experimental studies of deformation processes, diffusion in solids, radiation effects on physical and mechanical properties of materials, and studies in the mechanics of granular materials.

Work in metallic materials is carried on in the Laboratory of Engineering Materials occupying two floors of the W. M. Keck Engineering Laboratories. These facilities include a 2-mev electron accelerator and a helium cryostat. Special laboratories are provided for studies on the mechanics of materials and for the dynamic application of stress.

The work on the magnetic and electrical properties of materials is carried on in the Steele Laboratory of Electrical Sciences. The work in the field of polymers and fracture mechanics is done with extensive facilities in the Spalding Laboratory of Engineering and Firestone Flight Sciences Laboratory. Facilities are available for work with granular materials in the Thomas Laboratory of Engineering.

Mechanical Engineering

Instruction in mechanical engineering is offered leading to the degrees of Master of Science, Mechanical Engineer, and Doctor of Philosophy.
The undergraduate program of instruction in mechanical engineering is organized within the engineering option for the Bachelor of Science degree. The first-year graduate program is open to qualified students who have completed the four-year engineering course for the Bachelor of Science degree from the Institute, or have had substantially the same preparation in other colleges. The first four years at the Institute are concerned with basic subjects in science and engineering and in the humanities. The first graduate year, therefore, is somewhat more specialized, with options in general mechanical engineering, jet propulsion, or nuclear engineering. A schedule of subjects is specified for each of these first-year graduate options which may be modified with the approval of the student's advisor and the faculty in mechanical engineering to satisfy the special interest of the student.

Greater specialization is provided by the work for the engineer's or doctor's degree. The student is allowed considerable latitude in selecting his course of subjects, and is encouraged to elect related course work of advanced character in the basic sciences. The engineer's degree of Mechanical Engineer is considered as a terminal degree for the student who wishes to obtain advanced training more highly specialized than is appropriate to the degree of Doctor of Philosophy. Research work leading to a thesis is required for the engineer's degree and for the doctor's degree.

Facilities for advanced work in mechanical engineering are provided in four general areas: (1) hydrodynamics, (2) design, mechanics, and dynamics, (3) thermodynamics and heat power, and (4) nuclear energy. Extensive facilities are available in hydrodynamics as described on page 166. A Dynamics Laboratory is provided for the study of problems in vibration, transient phenomena in mechanical systems, and experimental stress analysis by means of special mechanical and electronic equipment. Work in the field of thermodynamics and heat power is implemented by laboratories containing internal combustion engines and heat-transfer apparatus. Work is in progress on certain phases of gas turbines which provides problems and facilities research in this field.

An additional activity of interest to all advanced students in engineering is the Analysis Laboratory. This laboratory is built around an analog com-

An electron microscope used in studying the effects of very rapid cooling of alloys
puter, which merges the various interests in applied mechanics, applied mathematics, and electrical engineering in the solution of problems. The computer is valuable not only for the solution of specific research problems but also as research in itself in the development of new elements to extend the usefulness of the computer to more general mathematical analysis.

Close connections are maintained by the mechanical engineering staff with the many industries and governmental research agencies in the area which provide new, basic problems and facilities for study and research in the broad field of mechanical engineering.

**JET PROPULSION**

During 1948 a Jet Propulsion Center was established at the California Institute of Technology by the Daniel and Florence Guggenheim Foundation. This Center was created specifically to provide facilities for postgraduate education and research in jet propulsion and rocket engineering, with particular emphasis on peacetime uses: to provide training in jet propulsion principles, to promote research and advanced thinking on rocket and jet-propulsion problems, and to be a center for peacetime commercial and scientific uses of rockets and jet propulsion. The Guggenheim Jet Propulsion Center is a part of the Division of Engineering of the California Institute of Technology. All instruction in the Guggenheim Center is on the graduate level.

The solution of the engineering problems in jet propulsion requires new techniques as well as drawing on the knowledge and practice of the older branches of engineering, in particular mechanical engineering and aeronautics. Thus it is appropriate that the program of instruction includes material from both of these engineering fields. In general, students entering the course work in jet propulsion will have had their undergraduate preparation in mechanical engineering or aeronautics, but the courses are also available to students whose preparation has been in applied mechanics, engineering science, or physics. The complete program of instruction in jet propulsion for first-year graduate students is available to those candidates for the degree of Master of Science in Mechanical Engineering electing the jet propulsion option. Candidates for the degree of Master of Science in Aeronautics may take some of the courses in jet propulsion as electives. Candidates for the degree of Aeronautical Engineer or Mechanical Engineer may elect an option in jet propulsion for more advanced courses and research in this field.

Students admitted to work for the degree of Doctor of Philosophy in
Aeronautics, Applied Mechanics, Engineering Science, or Mechanical Engineering may take part of their courses of instruction in jet propulsion and choose a research problem in jet propulsion as a thesis topic. The degree of Doctor of Philosophy does not carry a designation specifying the field of jet propulsion.

The Jet Propulsion Center is located in the new Karman Laboratory of Fluid Mechanics and Jet Propulsion. Facilities for experimental research are available to students working toward advanced degrees. The dynamics of two-phase flows, the mechanics of jets injected into a supersonic stream, heat transfer to the electrodes of plasma accelerators, and ionization rates in gases represent a few of the topics that are currently under investigation.

**HYDRODYNAMICS**

Instruction and research in hydrodynamics and hydraulic engineering are concerned with various subjects which complement other Institute work in fluid mechanics. Current interests in this field include, for example, water waves, hydrodynamics of submerged or floating bodies, physics of cavitation, jets and cavity flows, flows of stratified fluids, turbulence and diffusion, open channel flow, sediment transportation, and flow through porous media. No specific degree in Hydrodynamics is given; however, advanced students working in this field may select enrollment and obtain degrees in Applied Mechanics, Civil Engineering, Mechanical Engineering or Engineering Science, depending upon their field of interest. The laboratories described below provide excellent facilities for graduate student research.

*Hydraulic Machinery Laboratory.* The purpose of this laboratory is to carry out basic research in the hydrodynamics of centrifugal and axial flow turbomachines and components thereof. The facilities include basins, dynamometers, pumps, venturis, and calibrating tanks.

*Hydrodynamics Laboratory.* This laboratory is located in the Karman Laboratory of Fluid Mechanics and Jet Propulsion. It contains three major experimental facilities—the high-speed water tunnel, the free-surface water tunnel and the controlled-atmosphere launching tank. The high-speed water tunnel has a closed working section 14 inches in diameter and an alternate
two-dimensional working section 6 by 30 inches, in which a maximum flow velocity of 85 feet per second can be obtained. The free-surface water tunnel can provide a maximum velocity of 27 feet per second in a working section 20 by 20 inches and 8 feet in length. The ambient pressure in the launching tank can be controlled down to 1/11 atmospheric pressure for modeling water entry and underwater trajectories.

Hydraulics and Water Resources Laboratory. The W. M. Keck Engineering Laboratories provide space for an expanded basic research program in various phases of fluid mechanics and hydraulic engineering related to development and control of water resources. The facilities include: four recirculating tilting flumes for research in open channel flow, density currents and sediment transport (one is 130 feet long with cross section 43 inches wide by 24 inches deep, and others are respectively 60 feet, 40 feet, and 18 feet long); two fixed flumes for studies of boundary layer growth at low velocity, density currents, and flow in hydraulic structures; a low-turbulence water tunnel; a wave basin (32 feet long by 16 feet wide); a tank 8 feet long for studies of groundwater flow; special tanks and circulation systems needed in research; miscellaneous equipment for a variety of student laboratory experiments; and extensive electronic instrumentation systems. A laboratory in nearby Azusa houses a large wave tank and wave basin and other facilities suitable for wave studies. Research projects are an integral part of the academic program and are carried out by the faculty, and by graduate students as thesis projects.
The Humanities and Social Sciences

Throughout its history the California Institute has placed a strong emphasis upon the humanities as an important and necessary part of the education of a scientist or engineer. In recent years increased attention has been paid to the social sciences. At the undergraduate level all students are required to devote a substantial part (between one-fifth and one-fourth) of their curriculum to humanistic studies. At the graduate level, humanities courses are required for the Master of Science degree in Aeronautical Engineering, Civil Engineering, and Astronomy, and are recommended in other options. At the doctoral level, a Ph.D. minor may be taken in Economics, Philosophy, History, or English, with a Ph.D. major in any branch of science or engineering.

Beginning with the academic year 1965-66, the California Institute offers undergraduate options in English, history, and economics, leading to the B.S. degree in Humanities. Students electing one of these options will take the regular courses prescribed for all freshmen in their first year and the required courses in mathematics, physics, and American history in the sophomore year. In the last two years, students in these options will take 60 units of electives in science, mathematics, or engineering courses as well as the advanced work in their humanities option. The purpose of the humanities options at the California Institute is to produce a special kind of student—one who has an exceptionally strong background in science or engineering, yet who is well prepared for graduate work in humanities, professional schools, business, or government service.

Dabney Hall of the Humanities was given to the Institute in 1928 by Mr. and Mrs. Joseph B. Dabney. At the same time a special fund of $400,000 for the support of instruction in humanistic fields was subscribed by several friends of the Institute. In 1937 Mr. Edward S. Harkness gave the Institute an additional endowment of $750,000 for the same purpose.

The proximity of the Henry E. Huntington Library and Art Gallery, one of the great research libraries in the world, offers rich opportunities for the humanities staff, especially in history and literature, and a close but informal relationship is maintained between the Institute and visiting scholars at the Library.
Student Life

Student Houses. The seven undergraduate Student Houses are situated on both sides of the Olive Walk near the eastern end of the campus. The original four—Blacker, Dabney, Fleming, and Ricketts—were built in 1931 from the plans of Mr. Gordon B. Kaufmann in the Mediterranean style to harmonize with the adjacent Athenaeum. The other three, designed by Smith, Powell and Morgridge, and generally consistent in appearance with the older group, were completed in 1960, and are named Page, Lloyd, and Ruddock. Each of the seven is a separate unit with its own dining room and lounge, providing accommodations for about seventy-five students.

Each House has its own elective officers, and is given wide powers to arrange its own social events and preserve its own traditions. The immediate supervision of the activities of each House is the responsibility of the House Resident Associate, generally a graduate student or unmarried faculty member. All Houses are under the general supervision and control of a member of the faculty known as the Master of Student Houses.

Since the demand for rooms may exceed the supply, newly entering students are advised to file room applications with the Master of Student Houses immediately upon being notified by the Dean of Admissions of admittance to the Institute. All freshmen are expected to live in the Houses. Those who have reason to believe they should live elsewhere should discuss the matter with the Dean of Freshmen.

Interhouse Activities. There is representation of each of the undergraduate houses on the Interhouse Committee, which determines matters of general policy for all seven Houses. While each sponsors independent activities, there is at least one joint dance held each year. The program of intramural sports is also carried on jointly. At present it includes touch football, softball, cross-country, swimming, basketball, tennis, track, and volleyball.
The Student Houses are pleasantly located in the east campus.

UNDERGRADUATE HOUSES

Blacker

Dabney

Ricketts

Fleming

The Student Houses are pleasantly located in the east campus.
Interhouse Scholarship Trophy. A trophy for annual competition in scholarship among the seven Student Houses has been provided by an anonymous donor. With the approval of the donor the trophy has been designated as a memorial to the late Colonel E. C. Goldsworthy, who was Master of Student Houses, and it commemorates his interest and efforts in the field of undergraduate scholarship.

"ASCIT:" The undergraduate students are organized as the "Associated Students of the California Institute of Technology, Incorporated," (ASCIT). All students pay the student-body fees and are automatically members of this organization, which deals with affairs of general student concern and with such matters as may be delegated to it by the faculty. Membership in the corporation entitles each student to (a) admission to all regular athletic or forensic contests in which Institute teams participate, (b) one vote in each corporate election, and (c) the right to hold a corporate office. The executive body of the ASCIT corporation is the Board of Directors, which is elected by the members in accordance with the provisions of the By-Laws. The Board interprets the By-Laws, makes awards for athletic and extracurricular activities, authorizes expenditures from the corporation funds, and exercises all other powers in connection with the corporation not otherwise delegated.

Board of Control. The Honor System is the fundamental principle of conduct for all students. More than merely a code applying to conduct in examinations, it extends to all phases of campus life. It is the code of behavior governing all scholastic and extracurricular activities, all relations among students, and all relations between students and faculty. The Honor System is the outstanding tradition of the student body, which accepts full
responsibility for its operation. The Board of Control, which is composed of elected representatives from each of the seven Houses, is charged with interpreting the Honor System. If any violations should occur, the Board of Control investigates them and recommends appropriate disciplinary measures to the Deans.

**Faculty-Student Relations.** Faculty-student coordination and cooperation with regard to campus affairs is secured through periodic joint meetings of the Faculty Committee on Student Relations and certain student body officers and elected representatives. These conferences serve as a clearing house for suggestions originating with either students or faculty.

**Option Advisors.** Each member of the three undergraduate upper classes is assigned to an Option Advisor, a faculty member in the option in which the student is enrolled. The advisor interests himself in the student's selection of optional courses, progress toward his degree, and, eventually, in assisting the student toward satisfactory placement in industry or in graduate school. Normally, the association between student and advisor, which is primarily professional, is established before the beginning of the sophomore year and continues through graduation.

**Athletics.** The California Institute maintains a well-rounded program of athletics and, as a member of the Southern California Intercollegiate Athletic Conference, schedules contests in nine sports with the other members of the Conference—Occidental, Pomona, Redlands, Whittier, and Claremont—Harvey Mudd—as well as many other neighboring colleges. In addition, the Caltech Sailing Club sails a fleet of Institute-owned dinghies based at Los Angeles Harbor; and the Caltech Flying Club owns a Cessna 150.

The California Institute Athletic Field of approximately 23 acres includes a football field, a standard track, a baseball stadium, and championship tennis courts. The Scott Brown Gymnasium and the Alumni Swimming Pool, completed in 1954, provide attractive modern facilities for intercollegiate, intramural, or recreational competition in badminton, basketball, volleyball, swimming, and water polo. Funds for the pool were contributed by the alumni of the California Institute; construction of the gymnasium was made possible through a bequest of Scott Brown.

The Institute sponsors an increasingly important program of intramural athletics. There is spirited competition among the seven Houses for the possession of three trophies. The Interhouse Trophy is awarded annually to the group securing the greatest number of points in intramural competition during the year. The Varsity and Freshman Rating Trophy is presented to the group having the greatest number of men participating in intercollegiate athletics. The third trophy, "Discobolus," is a bronze replica of Myron's famous statue of the discus thrower. It is a challenge trophy, subject to competition in any sport, and it remains in the possession of one group only so long as that group can defeat the challengers from any of the other groups.
**Student Body Publications.** The publications of the student body include a weekly paper, the *California Tech*; an annual; a literary magazine; and a student handbook, which gives a survey of student activities and organizations and serves as a campus directory. These publications are staffed entirely by undergraduates. Through them ample opportunity is provided for any student who is interested in obtaining valuable experience not only in creative writing, art work, and in the journalistic fields of reporting and editing, but in the fields of advertising and business management as well.

**Musical Activities.** The Institute provides qualified directors and facilities for a band and glee club. A series of chamber music concerts is given on Sunday evenings in the lounge of Dabney Hall. The Musicale is an organization which encourages interest in and appreciation for classical recordings. The extensive record library of the Institute provides opportunity for cultivation of this interest and for the presentation of public programs. From a special loan library, records may be borrowed for students' private use.

**Student Societies and Clubs.** There is at the Institute a range of undergraduate societies and clubs wide enough to satisfy the most varied interests. The American Institute of Electrical Engineers, the American Society of Civil Engineers, and the American Society of Mechanical Engineers all maintain active student branches.

The Institute has a chapter (California Beta) of Tau Beta Pi, the national scholarship honor society of engineering colleges. Each year the Tau Beta Pi chapter elects to membership students from the highest ranking eighth of the junior class and the highest fifth of the senior class.

The Institute also has a chapter of Pi Kappa Delta, the national forensic honor society. Members are elected annually from students who have represented the Institute in intercollegiate debate, or in oratorical or extempore speaking contests.
Special interests and hobbies are provided for by the Chemistry, Mathematics, and Physics Clubs, the Radio, Sailing, Flying, and Ski Clubs. The Christian Fellowship Group, Christian Science Group, Episcopal Group and the Newman Club are organized on the basis of religious interests. The Inter-Nations Association is composed of foreign students from various countries, as well as interested Americans. Its object is to make the students' stay at Caltech more valuable by introducing them to Americans, their customs and way of life. Conferences, weekly teas, and trips to points of interest in the vicinity are among the activities.

**Student Shop.** The Student Shop is housed in the new Winnett Student Center. It is equipped by the Institute, largely through donations, and is operated by the students under faculty supervision. It has no connection with regular Institute activities, and exists only as a place where qualified students may work on private projects that require tools and equipment not otherwise available. All students are eligible to apply for membership in the Student Shop; applications are acted on by a governing committee of students. Members who are not proficient in power tools are limited to hand tools and bench work; however, instruction in power tools will be given as needed. Yearly dues are collected to provide for maintenance and replacement.

**Speech Activities.** Practical training in public speaking is the keynote of the Institute's forensic program. A variety of experiences ranging from intercollegiate debate tournaments to local speech events can be had by all who wish to improve their abilities. Debaters take part in an average of six intercollegiate tournaments during the year. These tournaments, including extempore speaking, oratory, impromptu speaking and discussion, comprise such events as the Western Speech Association tournament, the regional Pi Kappa Delta speech tournament, and the annual Caltech invitational debate tournament held at the Institute. Bi-annually the Institute is represented at the national Pi Kappa Delta tournament.

**YMCA.** The California Institute YMCA is a service organization whose purpose is to supplement a technical and scientific education with a program emphasizing social and religious values. The "Y" is one of the most active student organizations on the campus and welcomes as members all students taking an active part in its regular program of activities. The program includes weekly luncheon clubs, discussion groups which bring speakers representing many interests to the campus, forums and lectures, student-faculty firesides, intercollegiate conferences, and work with local church groups. The "Y" services to the student body include a used-textbook exchange, a loan fund, an all-year calendar of student events, and the use of the lounge and offices.

**Bookstore.** The student store serving students, faculty, and staff is located on the ground floor of the Winnett Center. The store, which is owned and operated by the Institute, carries a complete stock of required books and supplies, reference books, and such extracurricular items as athletic supplies, stationery, and fountain pens. There is, on open shelves, an extensive collection of paperbacks and other books of general interest.
The California Institute of Technology unit of the Air Force Reserve Officers Training Corps (AFROTC) was established on campus at the beginning of the academic year 1951-52 as a four-year program. In the fall of 1964 an Act of Congress authorized the establishment of a two-year AFROTC program at the Institute. This program was initiated in the fall of 1965.

Students under the two-year program are free to concentrate on general Institute requirements during the freshman and sophomore years. In the summer between the sophomore and junior years the applicants must attend a six-week summer course conducted at an Air Force base. The successful completion of this summer course will qualify the student for entry into the Professional Officer Course. In the Professional Officer Course studies are directed toward preparation of students for Junior Management positions in a rapidly changing and highly technical Air Force organization. Upon entry into the Professional Officer Course, the student must agree to faithfully pursue the Institute's established course of study leading to a degree, accept an Air Force Commission as a 2nd Lieutenant if tendered, and then serve an active duty tour of four years.

The Professional Officer Course provides a proving ground for the training and evaluation of individual leadership and management abilities. Techniques of problem solving and use of gaming theories are proved in mock air defense and field exercises during special periods. The Department of Air Force Aerospace Studies conducts a planned program of Air Force installation and aerospace industry visitations, orientation rides in jet aircraft, and other events which supplement and reinforce the AFROTC curriculum.

For interested students who qualify, an established Flight Instruction Program provides 30 hours of ground school, and 35 hours of actual flight training. Free flight training is conducted at a nearby civilian-contract flying school, which is approved by the Federal Aviation Authority.

Graduates of the Institute's AFROTC program are normally assigned to scientific, engineering, and technological positions within the Air Force organization. As a major portion of its primary mission, the USAF manages and operates a series of the world's most advanced development and test complexes. Here military scientists and engineers work in a professional, intellectual atmosphere in all areas of basic and applied research to advance the state of military and space hardware technology. Extensive physical laboratory facilities as well as the research environment and support are considered excellent in every respect, providing an extremely favorable opportunity for creative accomplishment.

Physically qualified graduates who have completed the Flight Instruction Program have the option to apply for a program of pilot or navigator flight training in the USAF. Air Force Distinguished Graduates may work toward advanced degrees as an initial military assignment with full tuition and other expenses paid by the Air Force, and they will receive the full pay and allowances of an officer during this graduate study period. In some instances other graduates may apply for advanced academic work as their first military assign-
ment, provided they have a grade-point average of 2.5 or better. Also, all AFROTC graduates may elect to defer their active duty obligated tour for certain valid reasons such as that of pursuing graduate work on a personal basis.

Under the two-year program, the Air Force furnishes books and uniforms for its courses as well as $40 per month retainer pay for every month of participation in the program and approximately $180 plus travel pay for the six-week summer training. The government also offers to defer students participating in AFROTC from induction into the Armed Services, provided required academic and other standards are maintained.
INFORMATION AND REGULATIONS FOR THE GUIDANCE OF UNDERGRADUATE STUDENTS

Requirements for Admission to Undergraduate Standing

The undergraduate school of the California Institute of Technology is not coeducational and applications are accepted from men students only. The academic year consists of one twelve-week term and two eleven-week terms extending from late September until the middle of June. There are no summer sessions, except that undergraduates and graduate students are permitted to register for summer research. Undergraduates are admitted only once a year—in September. All undergraduates at the California Institute are expected to carry the regular program leading to the degree of Bachelor of Science in the option of their choice. Special students who wish to take only certain subjects and are not seeking a degree cannot be accepted.

Admission to the Freshman Class

The freshman class of approximately 180 men is selected from the group of applicants on the basis of (a) high grades in certain required high school subjects, (b) results of the College Entrance Examination Board tests, and (c) recommendation forms, and a personal interview when this is feasible. The specific requirements in each of these groups are described below. An application fee of $10 is due at the time an application for admission is submitted. No application will be considered until this fee is paid. The fee is not refundable whether or not the applicant is admitted or cancels his application, but it is applied on the first-term bills of those who are admitted and who register in September.

Application for Admission

Application for admission is made on a form which may be obtained by writing to the Office of Admissions, California Institute of Technology, Pasadena, California 91109. It is to be returned directly to the Institute.

Completed admission application blanks and the $10 application fee must reach the Admissions Office not later than February 15, 1967. (Application to take entrance examinations must be made directly to the College Board at an earlier date, for which see page 180.

Applicants living outside of the United States must submit their credentials by November 1, 1966.

Transcripts of records covering three and a half years of high school should be submitted as soon as the grades of the first semester of the senior year are available, but not later than March 1, 1967. Those attending schools which operate on the quarter system should submit records covering the first three years and the first quarter of the senior year. They must also arrange for a supplementary transcript showing the grades for the second quarter to be sent
as soon as possible. Applicants must be sure to list in space provided on the application blank all the subjects they will take throughout the senior year.

**HIGH SCHOOL CREDITS**

Each applicant must be thoroughly prepared in at least fifteen units of preparatory work, each unit representing one year’s work in a given subject in an approved high school at the rate of five recitations weekly. Each applicant must offer all of the units in Group A and at least five units in Group B.

**Group A:**
- English .................................................. 3
- Mathematics ........................................ 4
- Physics ................................................. 1
- Chemistry ............................................. 1
- United States History and Government ............ 1

**Group B:** Foreign Languages, Shop, additional English, Geology, Biology or other Laboratory Science, History, Drawing, Commercial subjects, etc. ............................................. 5

The three units of English are a minimum and four units are strongly recommended.

The four-year program in mathematics should include the principal topics of algebra, geometry, analytic trigonometry, and the elementary concepts of analytic geometry and probability in a way which displays the underlying relationships between these branches of mathematics. The program should emphasize the principles of logical analysis and deductive reasoning and provide applications of mathematics to concrete problems.

The Admissions Committee recommends that the applicant’s high school course include at least two years of foreign language, a year of geology or biology, and as much extra instruction in English grammar and composition as is available in the high school curriculum.

**ENTRANCE EXAMINATIONS**

In addition to the above credentials, all applicants for admission to the freshman class are required to take the following examinations given by the College Entrance Examination Board: the Scholastic Aptitude Test (morning program); the afternoon program consisting of the Level II Achievement Test in Mathematics and any two of the following: Physics, Chemistry, English Composition. The Level II Mathematics Test is designed for the students who have completed three and one-half years of a mathematics program of the type outlined above. The Level II test does not presuppose an advanced placement course in mathematics. Note that the Scholastic Aptitude and the Level II Mathematics tests must be taken,* and that the choice lies only among Physics, Chemistry, and English—of which two must be taken. No substitution of other tests can be permitted.

*Very occasionally the applications of those who have taken the Level I instead of the Level II Mathematics Test will be considered. It should be pointed out, however, that the Institute feels it can better judge the qualifications of an applicant who has taken the Level II test, and those who have not done so will be handicapped in the competition for admission.
For admission in September 1967, the Scholastic Aptitude Test and achievement tests must be taken no later than the January 14 College Board test date. *It is important to note that no applicant can be considered in 1967 who has not taken the required tests by January 14, but tests taken on any prior date are acceptable.* No exception can be made to the rule that all applicants must take these tests.

Full information regarding the examinations of the College Entrance Examination Board is contained in the *Bulletin of Information* which may be obtained without charge at most schools or by writing to the appropriate address given below. The tests are given at a large number of centers, but should any applicant be located more than 65 miles from a test center, special arrangements will be made to enable him to take the tests nearer home.

Applicants who wish to take the examinations in any of the following states, territories, or foreign areas should address their inquiries by mail to College Entrance Examination Board, P.O. Box 1025, Berkeley, California 94701:

- Alaska, Nevada, Province of British Columbia
- Arizona, New Mexico, Province of Manitoba
- California, Oregon, Province of Saskatchewan
- Colorado, Utah, Republic of Mexico
- Hawaii, Washington, Australia
- Idaho, Wyoming, Pacific Islands, including Japan and Formosa
- Montana, Province of Alberta

Candidates applying for examination in any state or foreign area not given above should write to College Entrance Examination Board, P.O. Box 592, Princeton, New Jersey 08540.

Each examination application submitted for registration must be accompanied by the examination fee of $4.50 for the Scholastic Aptitude Test and $6.75 for the three Achievement Tests. Please note that the examination fee is *not* sent to the California Institute, but to the appropriate College Board office. The application fee of $10 is the only fee sent to the California Institute at the time an application is made.

All examination applications and fees should reach the appropriate office of the Board not later than the dates specified below.

*For examination centers located* in the United States, Canada, the Canal Zone, Mexico, or the West Indies, applications must be received by November 5 for December 3, 1966; December 10 for January 14, 1967. In Europe, Asia, Africa, Central and South America, and Australia, applications must be received by October 15 for December 3, 1966; November 19 for January 14, 1967.

Candidates are urged to send in their examination applications and fees to the Board as early as possible, preferably at least several weeks before the closing date, since early registration allows time to clear up possible irregularities which might otherwise delay the issue of reports. No candidate will be permitted to register with the supervisor of an examination center at any time. Only properly registered candidates, holding tickets of admission to the
centers at which they present themselves, will be admitted to the tests. Requests for transfer of examination center cannot be considered unless these reach the Board office at least one week prior to the date of the examination.

Please note that requests to take the examinations and all questions referring exclusively to the examinations are to be sent to the College Entrance Examination Board at the appropriate address as given above, and not to the California Institute.

PERSONAL INTERVIEWS AND RECOMMENDATION FORMS

By March 1, recommendation forms will be sent out for each applicant who has an application on file. These forms are sent directly to the principal or headmaster of the school which the applicant is attending, with the request that they be filled out and returned directly to the California Institute. These recommendation forms provide valuable information on candidates. The College Board scores, the last of which will be received by about February 15, provide further important data. Since, however, there are many more applicants to the California Institute than our facilities can accommodate, as much information as possible is desired on each candidate for admission. Wherever preliminary information shows that an applicant has a chance of gaining admission, an attempt is made to hold a personal interview with him at the school he is attending. It is not possible to visit all of the schools involved; but if a personal interview cannot be held, this in no way prejudices an applicant's chances of admission. The applicant has no responsibility with regard to the personal interview unless and until he receives a notice giving the time and date when a representative will visit his school. These visits occur between March 1 and April 6.

NOTIFICATION OF ADMISSION

Final selections will ordinarily be made and the applicants notified of their admission or rejection well before May 1. Most College Board member colleges have agreed that they will not require any candidate to give final notice of acceptance of admission or of a scholarship before this date. Upon receipt of a notice of admission an applicant should immediately send in the registration fee of $10. In the event of subsequent cancellation of application, the registration fee is not refundable unless cancellation is initiated by the Institute. Places in the entering class will not be held after May 1, if the applicant could reasonably be expected to have received notice at least ten days before this date. Otherwise, places will be held not more than ten days after notification. When the registration fee has been received, each accepted applicant will be sent a registration card which will entitle him to register, provided his physical examination is satisfactory. The registration card should be presented at Dabney Hall Lounge on the date of registration.

Checks or money orders should be made payable to the California Institute of Technology.

EARLY DECISION PLAN

The Institute will consider a few outstanding candidates who wish to make the California Institute their first choice under an early decision plan. Such candidates must have taken the required College Board tests by the end of
their junior year or at the following July administration, must have an excellent school record, and must have the thorough backing of their high school.

An applicant for admission under the early decision plan must have his credentials on file by October 15 of his senior year. He will be notified by December 15 whether he has been accepted. An accepted applicant is then expected to withdraw all applications to other colleges. An applicant who is not accepted under the early decision plan will be considered without prejudice for admission at the regular time in April, unless he receives notice of final rejection in December.

ADVANCED PLACEMENT PROGRAM

A number of high schools and preparatory schools offer selected students the opportunity to accelerate and to take in the senior year one or more subjects which are taught at the college level and cover the material of a college course. The College Entrance Examination Board gives each year in May a set of Advanced Placement examinations covering this advanced work. The regulations governing Advanced Placement at the California Institute in the subjects concerned are as follows:

Chemistry. Students who took the College Board Advanced Placement examination in chemistry and received a score of 5 or 4 and who have passed an additional short departmental examination may elect to take Ch 2, Advanced Placement in Chemistry rather than Ch 1, General and Quantitative Chemistry. It is assumed that such students have reasonable competence in the following areas: (1) elementary theories of atomic structure and electronic theories of valence, (2) chemical stoichiometry, and (3) computations based upon equilibrium relationships. Anyone who feels that prior to entrance he has covered the equivalent of the freshman chemistry but who has not taken the College Board Advanced Placement examination may take the California Institute transfer examination in chemistry covering the work of the freshman year. Units from which a student has been excused by reason of advanced placement courses must be made up before graduation and may be taken in any subject offered in any division for which the student has the necessary prerequisites, except that those who wish to major in chemistry or chemical engineering may be required to make up the units by additional work in chemistry.

English and History. In view of the greatly altered character of freshman work in the fields of English and European history, beginning with 1965-66, the practice of granting advanced placement and credit has been suspended. The question will be reconsidered after the new freshman offerings in English and history have received a full trial. In the meantime, individual students who have received exceptionally high marks in college-level courses and in the College Board Advanced Placement examinations in those same subjects may petition for special consideration.

Students who have received high marks in college-level courses in American history and government and high scores in the College Board Advanced Placement examination may be excused from sophomore history and government (H 2 abc: History and Government of the United States) in order to take advanced courses in that same subject.
NOTE: Because of a California state law requiring colleges to give instruction in the Constitutions of the United States and of the State of California, it will be necessary for students to do a small amount of supplementary reading if they are excused from H 2 abc.

Mathematics. In exceptional cases an entering freshman may be allowed to take Ma 2 abc and to receive credit for Ma 1 abc. All other freshmen are required to take the lecture part of the course Ma 1 abc and to obtain credit for the recitation part of this course. Credit for the recitation part will be obtained by passing appropriate examinations covering the various topics discussed in Ma 1 abc. Entering freshmen will be given an opportunity to pass some or all of these examinations before registration day or at repeated intervals during the academic year, and thus be excused from taking the corresponding recitation part of the freshman course Ma 1 abc. Students receiving such advanced placement are invited and encouraged to take Ma 3 in any term for which they have been excused from the recitation part of Ma 1.

Physics. As currently organized, the required course in physics in the freshman year, Ph 1 abc, contains so little that might duplicate material in advanced placement work elsewhere that for the time being it is not contemplated that any advanced placement in physics will be given to entering freshmen.

NOTE: The Advanced Placement tests are in no way a substitute for the College Board Aptitude and Achievement Tests at the ordinary high school level required for admission. The latter are the only tests considered in granting freshman admission. After admission, those who offer advanced credits and examinations will be considered for credit and advanced placement in the subjects involved.

MEDICAL EXAMINATION
Prior to final acceptance for admission, each applicant is required to submit a report of Medical History and Physical Examination on a form which will be sent him at the time he is notified of admission. It is the applicant's responsibility to have this form filled out by a Doctor of Medicine (M.D.) of his own choosing. Admission is tentative pending such examination, and is subject to cancellation if the report indicates the existence of a condition that the Director of Health Services deems unsatisfactory (see page 197). Vaccination and a standard two-injection tetanus inoculation (or booster shot if appropriate) and tuberculosis testing are required at the time of the examination. Students will not be admitted unless the report of the physical examination bears evidence of such vaccination, inoculation, and testing.

Students who have been on leave of absence for three terms or more must submit Medical History and Physical Examination reports under the same conditions as for new students.

SCHOLARSHIPS AND LOANS
For information regarding scholarships for entering freshmen and deadline for application see pages 204-205. No one can be considered for a scholarship grant who has not sent in a scholarship form according to the instructions on page 204. In computing need the California Institute uses the figure $3413 as covering all expenses of an academic year for those who live on campus or
wherever they must pay for board and lodging. This figure includes tuition, board and lodging, books and supplies, incidental fees and dues, and about $400 for personal expenses. To this figure is added an allowance for travel between Pasadena and the student's home. The travel allowance varies with the distance involved but in no case exceeds $450 for one academic year. The figure of $2563 is used for the expenses of those who live at home or with relatives or friends to whom they pay nothing for board and lodging. This figure includes the items listed above with the exception of board and lodging and with the addition of allowances for commuting expense and lunches. For further information on tuition and other costs, and on loans and the deferred plan see pages 200-203.

NEW STUDENT CAMP

All undergraduate students entering the Institute for the first time, either as freshmen or as transfer students, are required to attend the New Student Camp as part of the regular registration procedure. This meeting occupies three days of registration week preceding the fall term, and is usually held at Camp Radford, a large well-equipped camp owned by the city of Los Angeles and located in the San Bernardino Mountains east of Redlands.

A large number of faculty members and student leaders attend the camp. During the three-day program the new students hear what life at the Institute is like. They learn what is expected of them and what aids are available to them to help them live up to these expectations. Because of the comparatively small student body and the pressure of work once academic activity starts, it is important both to the student and to the Institute that new students become, at the very beginning, part of a homogeneous group sharing a common understanding of purpose and a common agreement on intellectual and moral standards. The three days at the camp afford the best possible opportunity for achieving this necessary unity.

STUDENTS' DAY

The California Institute holds an annual invitational Students' Day on the first Saturday in December. This popular event is conducted by invitation to allow a more intimate view of the work in the laboratories of science and engineering with the hope that this contact will assist the high school student in his choice of a future career. Science students and their teachers are invited, upon nomination by secondary schools throughout southern California, to view exhibits of the work in the various divisions of the Institute and to attend selected demonstration lectures given by students and faculty members. Student life on the campus is an important feature of Students' Day, with the undergraduate student body serving as host and responsible for the actual operation under the direction of a joint faculty-student committee. To avoid overcrowding at the exhibits and lectures it is necessary to limit attendance at this event to those who have been selected by their schools and whose names have been sent to the Students' Day Committee in advance.

ADMISSION TO AIR FORCE ROTC

Applicants for admission to the United States Air Force Reserve Officers Training Corps curriculum must be citizens of the United States, and must meet all other admission requirements and regulations as specified by the California
Institute of Technology. All students who meet the requirements may apply for the two-year AFROTC program at the end of their sophomore year. Foreign students who will subsequently qualify for U.S. citizenship may be permitted to pursue the AFROTC program upon approval by the Professor of Air Force Aerospace Studies.

**Admission to Upper Classes by Transfer from Other Institutions**

The Institute admits to its sophomore or junior year a limited number of able men who have made satisfactory records at other institutions of collegiate rank and who do satisfactorily on the transfer entrance examinations. Transfer students are not normally admitted to the senior year. In general only students whose grades, especially those in mathematics and science, are above average can expect to be permitted to take the entrance examinations.

A student who is admitted to the upper classes pursues a full course in engineering or in one of the options in science or humanities leading to the degree of Bachelor of Science. The Institute has no special students. Men are admitted either as freshmen in accordance with the regulations set forth on pages 178-181 or as upperclassmen in the manner described below. Those who have pursued college work elsewhere, but whose preparation is such that they have not had the substantial equivalent of the freshman courses in English, mathematics, and physics, will be classified as freshmen and should apply according to the instructions on pages 178-181. They may, however, receive credit for the subjects which have been completed in a satisfactory manner.

An applicant for admission as a transfer student must write to the Office of Admissions of the California Institute stating his desire to transfer, his choice of engineering or one of the options in science or humanities, and the number of years of college he will have completed by the date of transfer. At the same time he must present a transcript of his record to date, showing in detail the character of his previous training and the grades received both in high school and college. If the college transcript does not list subjects and grades for high school work, the applicant must see that his high school sends the Admissions Office a transcript of this work. After the transcripts have been evaluated by the Admissions Office, an application blank will be sent, provided the grades and subjects on the transcripts meet the transfer requirements.

Please note that an application blank is not sent until the transcripts have been received and evaluated, and that the applicant must write a letter giving the information outlined in the preceding paragraph. Transcripts are held in the files until such a letter is received.

Application blanks must be on file in this office by April 1. Transcripts should, therefore, be sent no later than March 15. Applicants living in foreign countries must have applications and transcripts on file by March 1 at the latest and should understand that no information with regard to acceptance or rejection can be sent before June 20.

Applicants who are enrolled in a college at the time applications are made do not ordinarily complete the academic year until May or June. Such applicants should make sure that a list of subjects being taken during the final semester is included in the transcript sent for evaluation and that a supplementary transcript showing the grades for the final semester is sent at the end of the academic year as soon as these grades are available. All transfer
applicants must arrange to have sent in their scores on the Scholastic Aptitude Test (SAT) of the College Entrance Examination Board. If they have taken the SAT in previous years, these scores will be acceptable; but applicants must instruct the College Board (see address on page 180) to send the scores to the Institute. If the SAT has not been taken previously, it must be taken by the March 4 series at the latest. College Board Achievement Tests are not required of transfer applicants.

In addition, before their admission to the upper classes of the Institute, all students are required to take entrance examinations in mathematics, physics, and English composition covering the work for which they desire credit, except that in addition an examination in chemistry is required of those desiring to major in chemistry or chemical engineering. Students must offer courses, both professional and general, substantially the same as those required in the various years at the Institute (see pages 251-270) or make up their deficiencies as soon as possible after admission.

It is not possible to answer general questions regarding the acceptability of courses taken elsewhere. The nature of the work at the Institute is such as to demand that all courses offered for credit be scrutinized individually. Even when a transcript of record is submitted, it is not always possible to tell whether the courses taken are equivalent to the work at the Institute. In case the standard of the work taken elsewhere is uncertain, additional examinations may be required before the question of credit is finally determined.

Applicants are advised to read the descriptions of the freshman and sophomore courses, particularly those in physics, mathematics, and chemistry, and to note that the work in freshman mathematics includes differential and integral calculus, vector algebra, and infinite series. If an entering sophomore has not had the last two topics he will enroll in a special section of the sophomore mathematics course. Note also the references to freshman and sophomore chemistry on this page and 187.

The Institute has recently made a radical revision of its basic two-year course in physics which is required of all students. The new course is a course in classical and modern physics in which the emphasis is on modern ideas and applications, to be introduced to the student as early as possible. The revised first-year course covers kinematics, the Lorentz transformation, nonrelativistic and relativistic particle mechanics, electric and magnetic forces, Rutherford scattering, planetary motion, harmonic motion, geometrical optics, kinetic theory, thermodynamics, and black body radiation. Students wishing to transfer into the sophomore class, therefore, will be expected to have covered material not found in the ordinary freshman physics course. Unless a student can demonstrate proficiency in most of the areas covered by Physics 1 abc, he would probably do well to wait for another year and apply for admission as a junior. It is felt that the regular two-year program in physics at other colleges, although the sequence of topics may be different, will enable a good applicant to deal adequately with our physics test for admission to the junior level.

Two examinations of a comprehensive character are offered in each of the three subjects, mathematics, physics, and chemistry. One examination in each subject covers the work of the first year, the other examination that of the first and second years. Representative examination papers will be sent to approved applicants upon request. The English examination covers composi-
tion only and is the same, regardless of the level at which the applicant is seeking admission. The Institute courses for which those admitted will receive credit will be determined by the Committee on Admission to Upper Classes and the departments concerned, on the basis of the applicants' previous records and the results of their examinations.

It is not possible to give definite assurance that a transfer student entering the sophomore year will graduate in three years or that one entering as a junior will graduate in two years. Much depends on the amount and nature of the credit granted at the time a student registers in September and on the possibility of fitting deficiency make-ups into the regular schedule.

Applications will not be considered unless the applicant has had the substantial equivalent of the mathematics, physics, and English courses given at the California Institute at the first-year level for sophomore standing, and at the first- and second-year levels for junior standing in the option of the applicant's choice.

The first-year chemistry course at the California Institute differs from those given at many other colleges because of the inclusion of a substantial amount of quantitative analysis in the laboratory work. A transfer student who has had a one-year college course in inorganic chemistry and qualitative analysis will be considered to have met the first-year chemistry requirements, provided, of course, that his grades have been satisfactory. Those wishing to major in biology, chemistry, or geology will be required to take certain portions of freshman chemistry if they have not had the equivalent laboratory work elsewhere.

The transfer examination in chemistry is required only of those wishing to major in chemistry or chemical engineering. For admission to the sophomore year this examination will cover general chemistry and qualitative analysis. The examination for admission to the third year is a comprehensive test covering general chemistry, qualitative and quantitative analysis. Transfer students entering the junior year in chemistry will be able to take the sophomore organic chemistry course during their first year at the Institute.

No application fee is charged in the case of transfer students, but only those whose records are good will be permitted to take the tests. Applicants should not come to the Institute expecting to be admitted to the examinations, without first receiving definite permission to take them.

The schedule for the examinations for admission to upper classes, September 21, 1967, is as follows:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Duration</th>
<th>Time</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemistry</td>
<td>3 hours</td>
<td>1:00 P.M.</td>
<td>May 5, 1967</td>
</tr>
<tr>
<td>English</td>
<td>1 hour</td>
<td>9:00 A.M.</td>
<td>May 6, 1967</td>
</tr>
<tr>
<td>Mathematics</td>
<td>2 hours</td>
<td>10:30 A.M.</td>
<td>May 6, 1967</td>
</tr>
<tr>
<td>Physics</td>
<td>3 hours</td>
<td>2:00 P.M.</td>
<td>May 6, 1967</td>
</tr>
</tbody>
</table>

No other examinations for admission to upper classes will be given in 1967.

Applicants residing at a distance may take the examinations under the supervision of their local college authorities, provided definite arrangements are made well in advance. Arrangements for examinations in absentia should include a letter to the Dean of Admissions from the person directing the tests stating that the required supervision will be given.
The attention of students planning to transfer to junior standing is called to the fact that, until they have satisfactorily completed three full terms of residence at the Institute, they are subject to the same scholastic requirements as are freshmen and sophomores (see pages 191-196). In addition, they should note that to be permitted to register for any science, engineering, or humanities options during their junior and senior years they must meet the scholastic requirements of the divisions concerned (see page 193).

Physical examinations, vaccination, etc. are required as in the case of students entering the freshman class (see page 183). Admission is conditional upon a satisfactory report on the physical examination.

Transfer students are required to pay a registration fee of $10 upon notification of admission to the Institute. In the event of subsequent cancellation of application, the registration fee is not refundable unless cancellation is initiated by the Institute. Transfer students are expected to attend the New Student Camp (see page 184).

Scholarship grants for transfer students are awarded on the same basis as are those for freshmen: namely, high standing on the entrance examinations and demonstrated financial need. To secure consideration for a scholarship, a transfer student must file a special form which will be sent on request and must be completely filled out by the parent or guardian responsible for the applicant's support. This form must reach the Admissions Office no later than April 15, and no applicant will be considered for a scholarship grant who does not have such a form on file here by that date.

THE 3-2 PLAN

Arrangements exist between the California Institute and certain liberal arts colleges whereby students enrolled in these liberal arts colleges may follow a certain prescribed course for the first three years and then transfer into the third year of the engineering option at the Institute without further formality, provided that they have the unqualified recommendation of the officials at the liberal arts college which they are attending. After satisfactorily completing in two years at the Institute all the remaining work required for a bachelor's degree in engineering, they will be awarded a Bachelor of Arts degree by the college from which they transferred and a Bachelor of Science degree by the California Institute. Application for admission at the freshman level under this plan should be made to the liberal arts college.

The list of colleges with which these arrangements exist is as follows:

- Bowdoin College, Brunswick, Maine
- Grinnell College, Grinnell, Iowa
- Occidental College, Los Angeles, California
- Ohio Wesleyan University, Delaware, Ohio
- Pomona College, Claremont, California
- Reed College, Portland, Oregon
- Wesleyan University, Middletown, Connecticut
- Whitman College, Walla Walla, Washington
REGISTRATION REGULATIONS

| Upperclassmen and Graduate Students | Sept. 26, 1966 | Sept. 26, 1966 | Sept. 27, 1966 |

For Second and Third Term dates refer to the Academic Calendar on page 4.

FEES FOR LATE REGISTRATION

Registration is not complete until the student has personally turned in the necessary registration and class assignment cards for a program approved by his registration officer and has paid his tuition and other fees. A penalty fee of four dollars is assessed for failure to register on the scheduled date, and a similar fee is assessed for failure to pay fees within the specified dates. These requirements apply to all three terms.

SPECIAL STUDENTS

Applicants who wish to take a special program without working toward a degree are not accepted for undergraduate admission. Registered undergraduates who register for programs which make it appear that they are no longer candidates for a B.S. degree may be refused further registration by the Undergraduate Academic Standards and Honors Committee.

CHANGES OF REGISTRATION

All changes in registration must be reported to the Registrar's Office by the student. Such changes are governed by the last dates for adding or dropping courses as shown on the Institute calendar. A grade of F will be given in any course for which a student registers and which he does not either complete satisfactorily or drop. A course is considered dropped only after the student has turned in to the Registrar's Office a drop card properly filled out and signed by the instructor concerned and any other required persons. A student may not at any time withdraw from a course which is required for graduation in his option without permission of one of the Deans. Senior students must also have the approval of the Registrar before dropping any course.

A student may not withdraw from a course after the last date for dropping courses without, in addition to his instructor's consent, the approval of the Undergraduate Academic Standards and Honors Committee. A student may, with the consent of the instructor concerned, add a course after he has completed his regular registration, provided the addition does not bring the total units for which he is registered above 55, plus Physical Education or ROTC. To carry excess units he must obtain the recommendation of his Departmental Advisor and the approval of the Undergraduate Academic Standards and Honors Committee (see page 195). A student may not add a course after the last date for adding courses without, in addition to his instructor's consent, the approval of the Undergraduate Academic Standards and Honors Committee. Registration for added courses is complete only after a student has turned in to the Registrar's Office an add card properly filled out and signed by the instructor concerned. No credit will be given for a course for which a student has not properly registered. The responsibility for seeing to it that drop cards and add cards are in the Registrar's office before the deadlines for dropping or adding courses each term rests entirely with the student. Failure
to fulfill the responsibility because of oversight or ignorance is not sufficient grounds to petition for permission to drop or add courses after the deadline. It is the policy of the Undergraduate Academic Standards and Honors Committee that no petitions for the retroactive dropping or adding of courses will be considered except under very extenuating circumstances.

**Summer Research**

Qualified undergraduate students who are regular students in the Institute are permitted to engage in research during the whole or a part of the summer, but in order to receive academic credit the student must have the approval of his division and must file a registration card for such summer work in the Office of the Registrar on May 15. Students who are registered for summer research will not be required to pay tuition for the research units.

**General Regulations**

Every student is expected to attend all classes and to satisfy the requirements in each of the courses in such ways as the instructor may determine.

Students are held responsible for any carelessness, willful destruction, or waste. At the close of the year, or upon the severance of their connection with any part of the work of the Institute, students are required to return immediately all locker keys and other Institute property.

It is taken for granted that students enter the Institute with serious purpose. The moral tone here is exceptionally good; the honor system prevails in examinations, and in all student affairs. A student who is known to be engaging in immoral conduct or exercising a harmful influence on the student life of the Institute may be summarily dismissed, whatever his scholastic standing.

**Auditing of Courses**

Persons not regularly enrolled in the Institute may, with the consent of the instructor in charge of the course and the chairman of the division concerned, be permitted to audit courses upon payment of a fee in the amount of $25.00 per term, per lecture hour. The cost of auditing courses by non-academic staff members may be covered through the Institute Tuition Support Plan. Registration cards for the auditing of courses may be obtained in the Registrar’s Office.

Regularly enrolled students and faculty members of the Institute staff are not charged for auditing. “Auditing” cards are not required, but the instructor’s consent is necessary in all cases. No grades for auditors are turned in to the Registrar’s Office and no official record is kept of the work done.

**Student Trainees**

Non-registered students engaged in recognized and approved training programs at the Institute are required to pay the applicable health fee to be eligible for benefits as provided from the Emergency Health Fund. Such benefits are described under “Student Health Services” on page 197.

1. A $15 fee will be assessed each participant in such a program conducted during the academic year.

2. A health fee of $7.50 will be assessed each participant in such a program conducted during the summer period.

In addition, a charge of two dollars, plus cost of medicine and laboratory services, will be charged for each visit to the Health Center during the academic year and summer period.
Scholastic Grading and Requirements

Scholastic Grading

For the 1966-67 academic year, grades in all freshman courses will be either “P,” indicating passed, or “F,” indicating failed. For other undergraduate courses, the following system of grades is used to indicate the character of the student’s work in his various subjects of study: “A” excellent, “B” good, “C” satisfactory,* “D” poor, “E” conditioned, “F” failed, “Inc” incomplete.

In addition, Grades of A+ and A-, B+ and B-, C+ and C-, and D+ may, where appropriate, be used for undergraduates only.

In certain designated courses (see page 192), the grade of “P” indicating Pass may be given, but it is not counted in computing the grade-point average of an undergraduate student. The grade of “H” is given for satisfactory completion of freshman honor elective courses and is likewise not used in computing the grade-point average.

“Conditions” indicate deficiencies that may be made up without actually repeating the subject. A grade of “D” is given when the work is completed.

The grade “incomplete” is given only in case of sickness or other emergency which justifies non-completion of the work at the usual time. An incomplete will be recorded only if the reasons for giving it are stated by the instructor on a form which will be sent with each grade sheet and only if, in the opinion of the appropriate committee (Undergraduate Academic Standards and Honors Committee for undergraduates, and Graduate Study for graduate students), the reasons justify an incomplete. If, in the opinion of the committee, the incomplete is not justified, a condition will be recorded.

An incomplete or a condition in any term’s work must be removed during the next term in residence by the date fixed for the removal of conditions and incompletes. Each student receiving such grades should consult with his instructor at the beginning of his next term in residence. Any condition or incomplete not so removed becomes a failure automatically unless otherwise recommended in writing to the Registrar by the instructor prior to the date for removal of conditions and incompletes.

“Failed” means that no credit will be recorded for the course. The units, however, count in computing the student’s grade-point average. He may register to repeat the subject in a subsequent term and receive credit without regard to his previous grade, the new grade and units being counted as for any other course. In special cases the Undergraduate Academic Standards and Honors Committee may, with the instructor’s approval, authorize the completing of a failed course by three 3-hour examinations, the units and new grade being recorded as in the case of repeating the subject. The original “F” and units for the course remain on the record and are counted in computing the grade-point average.

Scholastic Requirements

All undergraduates are required to meet certain scholastic standards as outlined below. In addition, students who have been reinstated after having failed to make the required number of credits in the junior year are subject to these scholastic requirements in the senior year.

*Except that C — is considered poor.
Each course in the Institute is assigned a number of units corresponding to the total number of hours per week devoted to that subject, including classwork, laboratory, and the normal outside preparation.* Credits are awarded on the basis of the number of units multiplied by four if the grade received is "A," three if "B," two if "C," and one if "D." Thus, a student receiving a grade of "B" in a twelve-unit course receives 36 credits for his course. For the assignment of credits to undergraduate grades with plus or minus designations, see the following table.

<table>
<thead>
<tr>

</tbody>
</table>

Grade-point average is computed by dividing the total number of credits earned in a term or an academic year by the total number of units taken in the corresponding period. Units for which a grade of "F" has been received are counted, even though the "F" may have subsequently been removed (see above). Units and credits in military subjects taken by Air Force ROTC students are counted in computing grade-point average. Physical education units and credits, and units for honor elective courses are not included in computing grade-point average. A grade of Pass may be given for courses bearing a number 200 or greater, for Ph 172, for research conferences and undergraduate research, and is not used in computing the grade-point average. Grade-point averages will not be computed for freshmen in the academic year 1966-67.

Ineligibility for registration. Freshmen who receive no "Fail" grades during the year are academically eligible to register for the sophomore year. Freshmen who have accumulated 48 or more units of "Fail" will automatically be evaluated by the Committee on Undergraduate Standards and Honors at the end of any term. Any freshman accumulating "Fail" grades in less than 48

*The units used at the California Institute may be reduced to semester hours by multiplying the Institute units by the fraction 2/9. Thus a twelve-unit course taken throughout the three terms of an academic year would total thirty-six Institute units or eight semester hours. If the course were taken for only one term, it would be the equivalent of 2.6 semester hours.
units during the year may, at the end of the year, be referred to the Committee by the Dean of Freshmen and the student's adviser. If it is the opinion of the Committee on Undergraduate Academic Standards and Honors that any freshman referred to it is unprepared for the work of the sophomore year, he may be declared ineligible to register for academic reasons.

Freshmen whose records are to be reviewed at any meeting of the Committee will be notified in advance and invited to meet with the Committee to discuss their performance; freshmen so notified should also plan to submit a written statement to the Committee in advance of its meeting.

Any undergraduate student, except a freshman, is ineligible to register for another term:

(a) If he fails during any one term to obtain a grade-point average of at least 1.4.

(b) If he fails to obtain a grade-point average of at least 1.9 for the academic year. A student who has completed at least three full terms of residence at the Institute and has been registered for his senior year shall no longer be subject to the requirement that he make a grade-point average of at least 1.9 for the academic year. Seniors are subject to the requirement, however, that they must receive a grade-point average of at least 1.4 each term to be eligible for subsequent registration. (Special note should be made of the graduation requirement described on page 194.)

(c) Any undergraduate student, including seniors, who has been reinstated and who fails to make a grade-point average of at least 1.9 for the following term is ineligible to register.

(d) An undergraduate student who incurs a deficiency in one term of physical education in the freshman or sophomore year must make up the deficiency in the first term of the junior year. If he fails to do so, he is ineligible to register. An undergraduate student who incurs deficiencies in any two terms of physical education in the freshman and/or sophomore year is ineligible to register.

A student ineligible for registration because of failure to meet the requirements stated in the preceding paragraphs may, if he desires, submit immediately to the appropriate Dean a petition for reinstatement, giving any reasons that may exist for his previous unsatisfactory work and stating any new conditions that may lead to better results. Each such application will be considered on its merits. If this is the first such occurrence the Dean can, after consultation with the student and examination of his record, reinstate him. At the Dean's discretion, special cases may be referred to the Undergraduate Academic Standards and Honors Committee. A reinstated student who again fails to fulfill the scholastic requirements for registration must petition the Undergraduate Academic Standards and Honors Committee through the appropriate Dean. In any case the student may, if he wishes, appear before the committee or, at the discretion of the Dean, he may be required to appear. A second reinstatement will be granted only under very exceptional conditions.
Deficiency. Any upperclassman whose grade-point average during a term falls between 1.4 and 1.9 shall receive the usual letter of warning that his work is below the satisfactory minimum, but he shall not be required to obtain the approval of the Dean of Students before registering.

Leave of Absence. Leave of absence involving non-registration for one or more terms must be sought by written petition. A petition for a medical leave of absence must carry the endorsement of the Director of Health Services or his representative before being acted upon. Such leave up to one year can be granted by the appropriate Dean for a student whose grade-point average is 2.3 or more. Other petitions should be addressed to the Undergraduate Academic Standards and Honors Committee, and the student must indicate the length of time and the reasons for which absence is requested. In case of brief absences from any given exercise, arrangements must be made with the instructor in charge.

Departmental regulations. Any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed under his Division may, at the discretion of his department, be refused permission to continue the work of that option. (See note at head of each option in schedule of undergraduate courses, for special departmental applications of this rule.) Such disbarment, however, does not prevent the student from continuing in some other option provided permission is obtained, or from repeating courses to raise his average in his original option.

Graduation requirement. To qualify for graduation a student must complete the prescribed work in one of the options with a passing grade in each required subject and with a grade-point average of 1.90. A grade of "F" in an elective course need not be made up, provided the student has received passing grades in enough other accepted units to satisfy the minimum total requirements of his option. In addition to the above requirement, a member of the Air Force ROTC unit must satisfactorily complete the basic course unless relieved of this obligation by the Air Force. If a member of the AFROTC has entered the advanced course or if he has at any time at the California Institute secured deferment under Selective Service by reason of his membership in the AFROTC, he must satisfactorily complete the AFROTC course and must accept a commission in the Air Force if one is offered unless excused from these obligations by action of the Air Force.

Graduation in the normally prescribed time. Any undergraduate student who fails to complete the requirements for graduation at the end of the normally prescribed time must petition the Undergraduate Academic Standards and Honors Committee for approval to register for further work.

Residence Requirement. All transfer students who are candidates for the Bachelor of Science degree must complete at least one full year of residence

*The curriculum of the Institute is organized under six divisions, as follows:
Division of Biology.
Division of Chemistry and Chemical Engineering.
Division of Engineering and Applied Science.
Division of Geological Sciences.
Division of Humanities.
Division of Physics, Mathematics and Astronomy.
in the undergraduate school at the Institute immediately preceding the completion of the requirements for graduation. At least ninety of the units taken must be in subjects in professional courses. A full year of residence is interpreted as meaning the equivalent of registration for three terms of not less than 49 units each.

Honor standing. At the close of each academic year the Committee on Undergraduate Academic Standards and Honors awards Honor Standing to twenty to thirty students in the sophomore and junior classes in residence.* These awards are based on the scholastic records of the students. A list of these students attaining Honor Standing on the basis of their academic records 1965-66 appears on page 377.

Graduation with honor. Graduation with honor will be granted a student who has achieved an over-all grade-point average of 3.2, including such an average in the senior year. In addition, a student may be graduated with honor under joint recommendation of his division and the Committee on Undergraduate Academic Standards and Honors, with the approval of the Faculty.

Term examinations will be held in all subjects unless the instructor in charge of any subject shall arrange otherwise. No student will be exempt from these examinations. Permission to take a term examination at other than the scheduled time will be given only in the case of sickness or other emergency and upon the approval of the instructor in charge and of one of the Deans. A form for applying for such permission may be obtained in the Registrar's Office. Another form must be filled out when conflicts exist in a student's examination schedule. It is the student's responsibility to report the conflict to the instructor in charge of one of the conflicting examinations and to request the instructor to leave a copy of the examination in the Registrar's Office to be given at the time and place scheduled for conflict examinations.

Excess or fewer than normal units. Undergraduates who wish to register in any term for more than 58 units inclusive of Physical Education or Air Science (55 academic units for Juniors and Seniors) must obtain the recommendation of the Option Advisor and the approval of the Undergraduate Academic Standards and Honors Committee. Master's candidates, see page 220. Petitions to carry excess units will not be accepted later than the last day of pre-registration.

Registration for fewer than 33 units must be approved by the Undergraduate Academic Standards and Honors Committee. See page 215 for graduate students.

Freshman honor electives. Honor Electives are available, on a voluntary basis, to all freshmen in the second and third terms of the freshman year. This Honors work is intended to maintain, or to rekindle, an interest the student brought with him to the Institute, or to develop an interest suggested by the work or the staff at the Institute. The Honor Electives are available campus-wide; any reasonable program of work, including critical reading, is acceptable. Upon satisfactory completion of a term of Honors work, a grade of "H" will be re-

*No honor standing will be granted for the freshman class since grades in all freshman courses are only "P," indicating passed, or "F," indicating failed.
corded for three units of credit; however, these units will not be included in computing the grade-point average.

**Sophomore Honor Sections.** Individual sophomore honor sections are organized in mathematics, physics, and history. An eligible student may register for only one, any two, or all three of these sections.

To be eligible, a student must have received grades of "P" in all courses in the freshman year, be recommended by the instructor in the prior course in the field of the particular honor section and have the permission of the instructor who is to teach the honor section.

**Selection of option.** In the middle of the third term freshmen must notify the Registrar’s Office of their selection of an option in engineering, humanities, or science to be pursued in subsequent years. Upon the selection of an option, a freshman will be assigned an adviser in that option, whose approval must then be obtained for pre-registration for the following year.

An undergraduate may be allowed to major in two options for the Bachelor of Science degree. In order to do so he must obtain the approval of the Curriculum Committee prior to the beginning of his senior year. He will then be assigned an advisor in each option.

**Change of option.** Students wishing, or required, to change options must first obtain a Change of Option petition from the Registrar’s Office. The completed petition must be signed by the Option Representative for the new option who will assign a new adviser. After final approval for the change is obtained from the Chairman of the Curriculum Committee, the petition should be returned to the Registrar’s Office.

**Requirement for a second Bachelor of Science degree.** Students who wish to receive a second degree of Bachelor of Science in another option are required to have one additional year of residence (three years of study involving at least 45 units per term) beyond the first Bachelor of Science degree.

**Candidacy for the Bachelor’s Degree**

A student must file with the Registrar a declaration of his candidacy for the degree of Bachelor of Science on or before the first Monday of November preceding the date at which he expects to receive the degree. His record at the end of that term must show that he is not more than 21 units behind the requirement in the regular work of his course as of that date. All subjects required for graduation, with the exception of those for which the candidate is registered during the last term of his study, must be completed by the second Monday of May preceding commencement.

**Transcripts of Records**

At the request of a student, or former student, official transcripts of record bearing the seal of the Institute and signature of the Registrar will be forwarded to designated institutions or individuals. Requests should be filed at the Registrar’s Office at least five days prior to the date on which the transcripts are to be mailed.

One transcript of a record will be furnished without charge. A charge of one dollar ($1.00) will be made for each transcript requested after the first.
STUDENT HEALTH AND PHYSICAL EDUCATION

PHYSICAL EDUCATION
Starting with the freshmen year, all undergraduate students are required to participate in some form of physical training for at least one hour a day three days a week, until they can show credit for 6 terms of physical education at the college level. This requirement may be satisfied by engaging in organized sports, which include both intercollegiate and intramural athletics, or by regular attendance at physical education classes.

Men may be excused from the requirement of physical education by petitioning the Physical Education and Athletics Committee for such excuse (1) because of physical disability, or (2) can show credit for 6 terms of physical education at the college level. It is the responsibility of students who wish to be excused and who are eligible under this ruling to make application for excuse at the Athletic Office. A transfer student accepted with junior standing will not be required to take Physical Education regardless of Physical Education credit from his previous institution or the lack of it.

For Graduate Students there is no required work in physical education, but opportunities are provided for recreatonal exercise.

STUDENT HEALTH
PRE-ADMISSION MEDICAL EXAMINATION AND VACCINATION
All admissions, whether graduate or undergraduate, are conditional until the Medical History and Physical Examination report is received and approved by the Director of Student Health (see page 183). Required are: smallpox vaccination, tetanus immunization, and tuberculosis testing, all within six months of matriculation.

STUDENT HEALTH SERVICES
The Archibald Young Health Center is located at 1239 Arden Road, south of California Boulevard. Facilities include a Dispensary and a ten-bed Infirmary, with provision for expanding this to sixteen beds in an emergency. The Health Center provides general office medical care, minor emergency surgery, and certain psychological and psychiatric services. Complete laboratory facilities are available through the Pasadena Clinical Laboratory.

The services of the Health Center are available to undergraduate and graduate students. They are available for faculty on a limited basis, covering emergency care, on-the-job injuries, inoculations, and annual physical examinations under certain conditions. They are available for employees of the Institute for on-the-job injuries and inoculations.

The staff of the Health Center consists of attending physicians, retained consultants, a psychologist, nurses, and a receptionist. A medical consultant in radiological safety is on the consulting staff. Close cooperation is maintained with leading specialists in all fields within the Pasadena area. The services of these doctors are used freely in maintaining high standards of modern medical care.

The Dispensary is open for all regular service from 9:00 a.m. to 5:00 p.m., Monday through Friday, and 9:00 a.m. to noon on Saturday, except during the vacation periods (Thanksgiving, Christmas, and spring recesses) and the
summer months, when a slightly restricted schedule is observed. The Infirmary is operated (with a registered nurse available for emergency care, and a physician on call for emergencies) twenty-four hours a day, seven days a week, except during holidays and the summer period.

The Health Center is financed by the Institute and by a Health Fee. During the summer, a special health fee of $7.50 is charged to student trainees and to students who have not been enrolled during the preceding three school terms, except that those graduate students who pay regular tuition during the summer months are exempt from this special fee. Supplementary fees are charged for certain services during the summer months only.

STUDENT HEALTH PLAN

In addition to services available at the Health Center, year around coverage under California Physicians Service is provided. This integrated two-part plan includes basic hospital and surgical and major medical coverage for 80% of costs up to $10,000 after a $100 deductible. Details of coverage are contained in booklets available at the Personnel Office. All students are included, and benefits continue for twelve months, on campus and off campus, provided students remain enrolled through the school year. Students have available the following services:

1. Office consultations and treatment with a staff physician at prescribed hours.
2. Laboratory tests and radiographs as prescribed or ordered by the staff physician.
3. Inoculations and treatments administered by nurses.
4. Routine drugs and medicine which may be dispensed at the Health Center.
5. Infirmary and hospital care.
6. Emergency care, hospital benefits, physician visits while in the hospital, and surgical benefits outlined in the Student Health Plan brochure available at the Personnel Office and also distributed upon registration.
7. Funds are available to the Faculty Health Committee to assist students with the first $100 of expenses under the major medical coverage.
8. Psychological counseling and psychiatric service to the extent that these can be provided on a short-term basis. A staff psychiatrist and a staff psychologist are available at the Health Center. Cases requiring intensive or long-time care will be referred to outside physicians at the discretion of the Health Center staff and with the concurrence of the student or his family.
9. A charge of $5.00 is made for special physical examinations and the filling out of forms for insurance applications, transfer to other institutions, and similar personal services outside the purview of student care.
10. The Department of Physical Education maintains an insurance plan covering accidents in intercollegiate athletic participation.
COVERAGE OF DEPENDENTS

Besides the student coverage outlined above, a student's spouse and all unmarried dependent children over 14 days and under 19 years of age are eligible under the California Physicians Service contract. Dependent care is not administered at the Health Center except in case of severe emergency.

Application for dependent's insurance must be made at the time of registration or within 31 days of registration for any one school term. Rates applicable to dependent coverage are contained in the Student Health Plan brochure.

SERVICES NOT PROVIDED BY STUDENT HEALTH PLAN

1. Services provided to the student not authorized or requested by the Health Center staff (except during vacations or emergencies when the student is unable to utilize services of the Student Health Center).

2. Services for pregnancy or conditions arising therefrom, except for ectopic pregnancies.

3. Workmen's Compensation cases.

4. Services provided by federal or state governmental agencies or without cost to the student by any other governmental agency.

5. Services provided by any other medical or hospital service organization.

6. Eye refractions.

8. Dental services, including oral surgery and hospitalization for such, except that up to $300 is provided for care of injury to the permanent teeth.

RESPONSIBILITY OF THE STUDENT

The responsibility for securing adequate medical attention in any contingency, whether emergency or not, is solely that of the student, whether the student is residing on or off campus. Apart from providing the opportunity for consultation and treatment at the Dispensary and Infirmary, as described above, the Institute bears no responsibility for providing medical attention.

Any expenses incurred in securing advice and attention in any case are entirely the responsibility of the student, except as specified above. To secure payment and substantiate a claim for services rendered away from the Institute, the student is required to retain bills for such services and present them with appropriate documentation when major medical claim is made through the Personnel Office.
UNDERGRADUATE EXPENSES

For freshmen applying for admission, there is a $10.00 Application Fee, not refundable, but applicable upon registration to the Tuition Fee.

For freshmen and transfer students, there is a $10.00 Registration Fee payable upon notification of admission. Not refundable if admission cancelled by applicant.

ANNUAL EXPENSE SUMMARY

Tuition (3 terms) .................................. $1,800.00
General Deposit .................................. 25.00
Health Fee ........................................ 25.00
Student Body Dues, including California Tech ........... 22.00
Assessment for Big T ................................ 6.00

Books and Supplies (approx.) ........................ 130.00
Student House Living Expenses (21 meals per week)

Board .......... $595.00
Room 1 .......... 405.00
Dues ............. 30.00

$1,878.00

$3,038.00

The following is a list of undergraduate student expenses at the California Institute of Technology for the Academic Year 1966-67, together with the dates on which the various fees are due. These charges are subject to change at the discretion of the Institute.

1There are a few single rooms available which will rent for $470.00 per year. A charge of $35.00 will be assessed for withdrawal during the course of a term, except as stipulated in the Room Agreement. Rates for room and board are subject to revision prior to beginning of any term upon notice to student.
Tuition Fees for fewer than normal number of units:

- Over 35 units ........................................ Full Tuition
- Per unit per term ..................................... $17.00
- Minimum per term .................................... $170.00
- Auditor's Fee (p. 190) ................ $25.00 per term, per lecture hour

Withdrawals. Students withdrawing from the Institute during the first three weeks of a term, for reasons deemed satisfactory to the Institute, are entitled to a refund of tuition fees paid, less a reduction of 20% and a pro rata charge for time in attendance. No portion of the Student Body Dues, or subscription to California Tech, is refundable upon withdrawal at any time.

Associated Student Body Dues. Associated Student Body Dues of $22.00 are payable by all undergraduate students. These are used for the support of athletics and any other student activity that the Board of Directors of the Associated Students of the California Institute of Technology may deem necessary. The subscription to the student newspaper, California Tech, $3.00 per year, is included in the A.S.B. Dues. In addition, each undergraduate student is assessed $2.00 per term for the college annual, the Big T.

General Deposit. Each student is required to make a general deposit of $25, to cover possible loss and/or damage of Institute property. Upon his graduation or withdrawal from the Institute, any remaining balance of the deposit will be refunded.

Winnett Student Center. Winnett Student Center facilities are reserved for the use of Caltech undergraduate and graduate students and their guests. A voluntary contribution of fifty cents a year is made by each student to help defray the expenses of the game room.

Student Houses. Students in the Houses must supply their own blankets, but bed linens and towels are furnished and laundered by the Institute.

Application for rooms in the Student Houses may be made by addressing the Master of Student Houses (see page 169).

Special Fees. Students taking the Summer Field Geology course (Ge 123) should consult with the Division about travel and subsistence arrangements and costs.

Unpaid Bills. All bills owed the Institute must be paid when due. Any student whose bills are delinquent may be refused registration for the term following that in which the delinquency occurs. Students who have not made satisfactory arrangements regarding bills due and other indebtedness to the Institute by the date of graduation will be refused graduation.

Loans. Loans are available to members of all undergraduate classes including entering freshmen, who need such aid to continue their education. They are made upon application, subject to the approval of the Scholarships and Financial Aid Committee and the extent of the available funds. There are two sources of loan funds and the conditions governing each are described below.

1Although the Institute charges full tuition for over 35 units, the Veterans Administration allows the following subsistence percentages: 25% for 10 through 20 units per term; 50% for 21 through 29; 75% for 30 through 41; and 100% for 42 and over. See footnote page 251.

2Pro rata refunds are allowed students who are drafted (not volunteers) at any time in the term provided the period in attendance is insufficient to entitle student to receive final grades.
1. California Institute loan funds are available in amounts not to exceed $750 in any one year and a maximum of $3000 during undergraduate residence. No interest is charged and no repayment of principal is required during undergraduate residence as long as residence is continuous (the term "residence" includes the usual vacation periods). For those who do not go on to graduate school, repayment commences after the graduation of their class and is at the rate of $50 per month including simple interest at 4 percent per annum on the unpaid balance. If the borrower withdraws from undergraduate or graduate registration at any time before receiving the last degree for which he has been working, the total amount owed the Institute becomes due and payable at once, unless the Scholarships and Financial Aid Committee agrees to some exception to this rule.

It is inadvisable for foreign students from countries with seriously adverse rates of exchange to borrow more than they can repay from savings (after taxes) out of salaries earned in the United States. The Federal Government grants a maximum extension of only 18 months on students' visas for holders who engage in full-time commercial employment after they take their degrees. For practical purposes, this means that total indebtedness may not exceed $1000.

2. Federal loans under the National Defense Education Act are available to undergraduate students in amounts not to exceed $1000 for any individual in a single year up to a total of $5000. The borrower must demonstrate financial need. A further requirement is that he must be willing to sign a loyalty oath. No interest is charged on these loans nor is any repayment of principal required until nine months after the final degree has been earned. At that time repayment commences and interest is charged at the rate of 3 percent per annum on the unpaid balance.

For loans to graduate students under the National Defense Education Act see page 250.

3. The Higher Education Act of 1965 contains provisions for student assistance through state and private non-profit insured loan programs (Title IV, Part 3). When this assistance has been implemented in California, these benefits will be made available to Caltech students to the extent of the funds allocated.

To the extent of available funds, students who wish to borrow and who meet the stipulated requirements will be given their choice of loan sources as stated on page 211.

Deferred Payment Plan. In addition to loans there is available a plan under which any student in good standing may defer up to $1300 of his college bills each year to a total of $5200 and may pay the deferred portion in installments after his graduation. The sum of $50.70 a year is added to the deferred por-
tion and represents the premiums on a life insurance policy in the amount of any balance due the Institute under this plan. The insurance policy covers the life of the student for the duration of the obligation, and during the four undergraduate years it covers in addition the life of the parent or guardian responsible for the student's support. Interest on the amount deferred is charged at the rate of 7 percent per annum payable quarterly. The interest is the only payment made on this plan during the undergraduate years. On November 1 following his class's graduation the student commences repayment on the deferred portion at the rate of $65.00 a month including interest at 7 percent on the unpaid balance. For those who go on to graduate school more favorable repayment arrangements may be made for the duration of graduate work. As in the case of loans, the total of any balance owed the Institute under this plan becomes due and payable at once if continuous residence is not maintained unless in the opinion of the Scholarships and Financial Aid Committee some exception to this rule should be made.

Loans and the Deferred Payment Plan may be used in combination, but the total that may be borrowed or deferred may not exceed $1300 in any year (maximum of $5200).

Entirely aside from loans and the Deferred Payment Plan a student may arrange with the business office to pay his college bills monthly rather than at the beginning of each term as is customary. No interest is charged on such monthly payments, but arrangements with the business office must be made in advance.
SCHOLARSHIPS, STUDENT AID AND PRIZES

1. FRESHMAN SCHOLARSHIP GRANTS

The recipients of scholarship grants are selected by the Freshman Admissions Committee from the candidates who have satisfied the entrance requirements of the Institute, and have submitted a Parents' Confidential Statement (see below).

Scholarship grants are awarded to the extent of available funds where financial need is demonstrated. Awards are made on the basis of all the information available in regard to the applicants—the results of their examinations, their high school records and recommendations, the statements submitted as to their student activities and outside interests, and the result of personal interviews where these are possible. A list of scholarship funds will be found on pages 206-210.

The California Institute uses the uniform scholarship grant application that has been adopted by many colleges in the United States. All applications for scholarship grants where financial need exists must be made on this form. This form, called a Parents' Confidential Statement, may be obtained in nearly all cases at the school where the applicant is attending. If his school does not have a supply, he should write to the College Scholarship Service at one of the College Entrance Examination Board offices, the addresses of which are given on page 180. The form is put out by the College Scholarship Service of the College Board and is to be returned directly to the appropriate office of the College Board (see page 180) and not to the California Institute. Space is provided on the form for the applicant to indicate that he wishes a copy sent to the California Institute and to such other colleges as he may desire. A fee of three dollars is charged by the service for sending a copy of the form to one college, and an additional two dollars each for copies sent to additional colleges. This fee must accompany the form when it is returned to the College Board office.

Parents' Confidential Statement forms must be sent to the appropriate College Board office not later than February 15 of the year in which admission is desired. All applicants who have submitted this form by the above date are considered for scholarship grants. It is not necessary to apply for any particular scholarship by name.

HONORARY SCHOLARSHIPS

In addition to the above, there are three honorary awards which carry stipends. The Sloan Scholarships, the General Motors Scholarships, and the California Institute National Prize Scholarships described on following pages are given without consideration of financial need. All applicants for admission are automatically considered for these scholarships. Only when need exists is it necessary to file a Parents' Confidential Statement in connection with these awards.

STATE AND NATIONAL SCHOLARSHIP AWARDS

Candidates for freshman scholarships are urged to make exhaustive inquiry of their school advisers and to watch their school bulletin boards for announcements of scholarship contests the winners of which may use the awards at the college of their choice. The State of California, for example, awards such scholarships annually to residents of the state who wish to attend a college
within the state. Residents of the State of California who request financial aid will be penalized in consideration for scholarship grants if they do not apply for California State scholarships, provided their test scores indicate that they would have won a State award had they applied. Among the nationwide awards are the National Merit Scholarships, and the Westinghouse Talent Search Awards. Applicants in need of financial assistance should enter any such contest for which they are eligible, in addition to applying for California Institute Scholarship grants. While duplicate awards will not be given beyond the actual extent of need, the more sources to which a candidate applies the greater are his chances of receiving scholarship assistance.

REGULATIONS AND RENEWALS

Recipients of honorary scholarships and of scholarship grants are expected to maintain a satisfactory standing in their academic work during the year for which the scholarship is granted. If the recipient fails to maintain such an academic standing, or if, in the opinion of the Scholarships and Financial Aid Committee, the recipient in any other way fails to justify the confidence placed in him, the Committee may cancel the scholarship for the balance of the academic year. Recipients of scholarships which run for more than one year are in general expected to maintain at least a 2.5 grade-point average. The amount of the award carried by these scholarships may be increased or decreased at the beginning of any year if the financial need has changed. Freshmen who receive scholarship awards for the freshman year only will be considered for scholarship aid in subsequent years on the basis of need according to the regulations in the following paragraph.

2. UPPERCLASS SCHOLARSHIP GRANTS

Sophomores, juniors, and seniors are considered for scholarships if need is demonstrated and if throughout the preceding year they have carried at least the normal number of units required in their respective options, and if they have completed the preceding academic year with a grade-point average of at least 2.0. Awards are made in order of rank in class to the extent of the funds available. Most awards are for full or part tuition. When individual scholarships carry amounts in excess of full tuition, that fact is noted in the list of scholarships below. A student who believes he will end the academic year with a grade-point average of 2.0 or higher and who wishes to apply for a scholarship grant for the next year should obtain a scholarship form from the Admissions Office in March. This form is to be filled out by the student and his parents (or guardian) and returned to the Admissions Office by May 1. No one will be considered for a scholarship grant unless a scholarship form completely filled out and signed by parents (or guardian) is submitted by the proper date. If a scholarship applicant feels that his parents should no longer be responsible for his support, he may attach an explanatory note to the form, but the form must be filled out.

It is expected that students to whom awards are made will maintain a high standard of scholarship and conduct. Failure to do so at any time during the school year may result in the termination of the award. The amount of a scholarship may be reduced if a student pays less than full tuition because of registration for less than a full academic load.
3. Scholarship Funds

Funds for freshman and upperclass scholarships are provided in large part from the special scholarship funds named below. Where the amount of a grant is not specified, there is a certain total sum available each year to be distributed among several scholarship holders in any proportion. Grants from these funds are usually for full tuition, or less if the need of the recipient is less. It is not necessary to apply for any particular scholarship by name. Applicants for admission who have a Parents' Confidential Statement on file will be considered for the best award to which their relative need and academic standing entitle them. For Honorary Scholarships see above.

Alcoa Scholarships: The Alcoa Foundation of the Aluminum Company of America has given funds for two undergraduate scholarships.

Alumni Scholarships: The Alumni Association of the California Institute provides scholarships covering full tuition to be awarded to entering freshmen. The recipients of these scholarships can expect to receive this amount for four years provided their conduct and grades continue to be satisfactory.

ARCS Foundation (Achievement Rewards for College Scientists) of Los Angeles: The ARCS Foundation has established a fund for the award of several undergraduate and graduate scholarships.

R. C. Baker Foundation Scholarship: The R. C. Baker Foundation of Los Angeles has established a fund for undergraduate engineering scholarships.

Edward C. Barrett Scholarship: Friends of Edward C. Barrett, who for forty-one years was Secretary of the California Institute, established in his name a scholarship to be awarded annually to an undergraduate student.

Meridan Hunt Bennett Scholarships and Fellowships: Mrs. Russell M. Bennett of Minneapolis in January 1946 made a gift to the Institute to constitute the Meridan Hunt Bennett Fund as a memorial to her son, Meridan Hunt Bennett, a former student at the Institute. The income of this fund is to be used to maintain scholarships which shall be awarded to undergraduate and graduate students of the Institute, the holders of such scholarships to be known as Meridan Hunt Bennett Scholars.

Blacker Scholarships: Mr. and Mrs. Robert Roe Blacker of Pasadena, in 1923, established the Robert Roe Blacker and Nellie Canfield Blacker Scholarship and Research Endowment Fund. A portion of the income of this fund, as determined by the Board of Trustees, may be used for undergraduate scholarships.

C. F. Braun and Company Scholarships: C. F. Braun and Company of Alhambra, California, established three scholarships of $1000 each to be awarded to entering freshmen. In selecting candidates preference will be given to those who indicate that they wish to pursue a course in engineering.

California Institute National Prize Scholarships: Seven National Prize Scholarships not related to need and amounting to $1000 for the freshman year may be awarded at the discretion of the Admissions Committee.

California Scholarship Federation Scholarship: The California Institute each year awards a scholarship to a C.S.F. member who is also a seal-bearer provided that such a candidate is available who has met the Institute's
requirements for a freshman scholarship grant. Sealbearer status must be verified by the C.S.F. adviser at the time of submitting the regular application for a scholarship grant.

Chisholm Scholarship: Mr. William Duncan Chisholm made provision for an annual scholarship to be awarded to an undergraduate.

Class of 1927 Scholarship: The Class of 1927 established the Class of 1927 Scholarship Endowment Fund. The income from this fund is to be used for an undergraduate scholarship.

Crellin Scholarships: Mrs. Amy H. Crellin made provision for annual scholarships to be awarded to undergraduates.

Crown Zellerbach Foundation Scholarships: The Crown Zellerbach Foundation of San Francisco provides two scholarships of $1200 each for juniors or seniors majoring in a science option.

Cyprus Mines Corporation Scholarships: The Cyprus Mines Corporation of Los Angeles gave $1000 to be used for undergraduate scholarships.

Dabney Scholarships: Mrs. Joseph B. Dabney made provision for annual scholarships to be awarded at the discretion of the Institute to members of the undergraduate student body. The recipients are designated Dabney Scholars.

Douglas Aircraft Company Scholarship: The Douglas Aircraft Company of Los Angeles made provision for a $1500 scholarship to be awarded to a junior or senior in engineering or physics, in that order of preference.

Drake Scholarships: Mr. and Mrs. A. M. Drake of Pasadena made provision for an annual scholarship available for a graduate of the high schools of St. Paul, Minnesota, and a similar annual scholarship available for a graduate of the high school of Bend, Oregon. If there are no such candidates, the Institute may award the scholarships elsewhere. Mr. and Mrs. Drake, by a Trust Agreement of July 23, 1927, also established the Alexander McClurg Drake and Florence W. Drake Fellowship and Scholarship Fund, the income of which may be used for fellowships and scholarships as determined by the Board of Trustees of the Institute.

Robert S. and Nellie V. H. Dutton: Mrs. Robert S. Dutton established a fund, the interest from which is used for undergraduate scholarships.

General Motor Corporation Scholarships: The General Motors Corporation established two scholarships at the California Institute to be awarded to entering freshmen. The award may range from a prize scholarship of $200 for a student not in need of financial assistance to an amount as high as $2000 a year depending on need. A holder of this scholarship may expect it to be renewed in each of the three upperclass years provided the holder's grades and conduct remain satisfactory.

The Gnome Club Scholarship: The alumni of the Gnome Club established a scholarship usually awarded to a student in the senior class.

Goodyear Scholarship: The Goodyear Foundation, Inc., of Akron, Ohio, established a scholarship of $1000 to be awarded to a junior or senior in engineering who may be interested in a career in business or industry.

Graham Scholarships: Mrs. John D. Graham of Santa Barbara has made possible the award of several undergraduate scholarships.

Grant Foundation Scholarship: The Grant Foundation of Anaheim, California, has given a scholarship of $1000 to be awarded to an undergraduate in any major field of study.
Robert E. Gross—Lockheed Aircraft Corporation: These scholarships are part of an award program to perpetuate the memory of Robert E. Gross, who founded Lockheed and served as its principal officer until his death in 1961.

Harriet Harvey and Walter Humphry Scholarships: Miss Harriet Harvey and Mrs. Emily A. Humphry made provision for two scholarships. The first of these, the Harriet Harvey Scholarship, is to be awarded preferably to a well-qualified candidate from the state of Wisconsin. If there is no such candidate the Institute may award the scholarship elsewhere. The second, the Walter Humphry Scholarship, is to be awarded preferably to a well-qualified candidate from the state of Iowa. If there is no such candidate, the Institute may award the scholarship elsewhere.

Robert Haufe Memorial Scholarship: This scholarship is supported by a fund established in 1950 by Mr. and Mrs. J. H. Haufe as a memorial to their son, Robert Haufe.

Hewlett-Packard Scholarship: The Neely Sales Division of Hewlett-Packard gave $2000 for undergraduate scholarships with preference to be given to sophomores.

The Holly Scholarship: The Holly Manufacturing Company has established a half-tuition scholarship to be awarded to a senior in the engineering option.

The International Nickel Company Scholarship: The International Nickel Company of New York established a four-year scholarship of $1900 a year for a student entering the freshman year in 1962, and another four-year award for a student entering in 1966.

J. W. and Ida M. Jameson Foundation: The Jameson Foundation has made possible the award of three scholarships.

Earle M. Jorgensen Scholarship: Mr. Earle M. Jorgensen has made possible the award of two scholarships.

J. B. Keating Scholarships: Mr. John B. Keating has made possible the award of two scholarships for undergraduate juniors or seniors.

Kennecott Copper Corporation Scholarship: The Kennecott Copper Corporation has given a $1000 scholarship for a junior or senior student majoring in chemical engineering.

Lockheed National Engineering Scholarship: The Lockheed Aircraft Corporation of Burbank, California, established a scholarship covering tuition and certain other expenses. This scholarship is to be awarded to an entering freshman who indicates that he intends to pursue a course in engineering. The recipient of this scholarship may expect to continue to receive this award during each of the three upperclass years, provided that his grades and conduct remain satisfactory.

Management Club of California Institute of Technology Scholarship: The Management Club at the Institute gives two tuition scholarships to be awarded to undergraduate students in any of the three upper classes.

Mayr Foundation Scholarships: The George H. Mayr Foundation of Beverly Hills granted funds for a number of undergraduate scholarships. Not open to freshmen.

William C. McDuffie Scholarship: Friends of Mr. William C. McDuffie, for many years a Trustee of the California Institute, have given a fund, the income from which is used for undergraduate scholarships.
Undergraduate Scholarships 209

Seeley Mudd Scholarships: The Seeley W. Mudd Foundation of Los Angeles provided funds for scholarships to cover non-tuition expenses of students in the geology option.

David Lindley Murray Educational Fund: Mrs. Katherine Murray of Los Angeles, by her will, established the David Lindley Murray Educational Fund, the income to be expended in assisting worthy and deserving students to obtain an education, particularly in engineering.

Frances W. Noble Scholarship: This scholarship has been established from funds given to the Institute by Mrs. Frances W. Noble.

La Verne Noyes Scholarship: Under the will of La Verne Noyes of Chicago, funds are provided for paying the tuition, in part or in full, for deserving students needing this assistance to enable them to procure a university or college training. This is to be done without regard to differences of race, religion or political party, but only for those who shall be citizens of the United States of America and either: first, shall themselves have served in the army or navy of the United States of America in the war into which our country entered on the 6th of April, 1917, and were honorably discharged from such service, or second, shall be descended by blood from someone who has served in the army or navy of the United States in said war, and who either is still in said service or whose said service in the army or navy was terminated by death or an honorable discharge. The recipients are designated La Verne Noyes Scholars.

Pasadena Optimists Club Scholarship Endowment Fund: The Pasadena Optimists Club gave a fund the interest from which is to be used for undergraduate scholarships.

Edgar H. Pflager Scholarship Fund: Mr. Edgar H. Pflager established, by gift and bequest, a fund the income from which is to be used for undergraduate scholarships.

Phillips Foundation Scholarship: The Charlotte Palmer Phillips Foundation of New York established a four-year scholarship to be awarded to an entering freshman, with no restriction as to major field of study.

Procter and Gamble Scholarship: The Procter and Gamble Fund provides a four-year undergraduate scholarship covering tuition and certain other expenses. This four-year award is open to entering freshmen only.

Radio Corporation of America Scholarship: The Radio Corporation of America provided funds for an $800 undergraduate scholarship.

Rayonier Foundation Scholarship: The Rayonier Foundation is providing two scholarships of $500 each for undergraduates majoring in chemical engineering or engineering.

Alfred P. Sloan National Scholarships: The Alfred P. Sloan Foundation of New York established at the California Institute a minimum of six scholarships to be awarded to entering freshmen without restriction as to the field of study to be pursued. Original selection of the holders of these scholarships is made without regard to financial need. Once selection has been made, awards will range from a prize scholarship of $200 per year for students not in need of financial assistance to amounts as high as $2400 per year to those whose need warrants such consideration. Holders of these scholarships may expect them to be renewed in each of the three upperclass years provided the conduct and grades of the holders remain satisfactory.
Standard Oil Company of California Scholarships: The Standard Oil Company of California provided two scholarships for undergraduates majoring in engineering.

Elizabeth Thompson Stone Scholarship: Miss Elizabeth Thompson Stone of Pasadena established, in her will, a scholarship known as the Elizabeth Thompson Stone Scholarship.

William W. Stout Scholarship Endowment Fund: Mr. William W. Stout established a scholarship fund the interest from which is to be used for undergraduate scholarships.

Superior Oil Company Scholarship: The Superior Oil Company of Los Angeles established a four-year scholarship covering tuition and certain other expenses. Preference is given to a student interested in geology, chemical engineering, or physics.

Systems Technology Scholarship: Systems Technology, Inc. has provided money for an undergraduate scholarship.

Texaco Scholarships: Texaco Inc. is providing for one or more scholarships to be awarded to juniors or seniors majoring in a field of engineering or science that would prepare them for a career in the petroleum industry.

Waltmar Foundation: The Waltmar Foundation of Garden Grove, California, has given $2000 for scholarships with preference to be given to students from Garden Grove High School or from Orange County.

Western Electronic Manufacturers Association Scholarship: Western Electronic Manufacturers Association of Los Angeles provided for one or more scholarships for junior and senior students in engineering. The purpose of these scholarships is to promote interest in the electronics field.

Claudia Wheat Scholarship: Mr. A. C. Wheat established a full-tuition scholarship in memory of his wife. The award goes to an entering freshman, and preference is given to a graduate of Alhambra High School in Alhambra, California.

Brayton Wilbur–Thomas G. Franck Scholarship: Mr. Brayton Wilbur and Mr. Thomas G. Franck of Los Angeles established the Brayton Wilbur–Thomas G. Franck Scholarship Fund, the income to be used for a scholarship for a deserving student at the Institute.

In addition to the foregoing named scholarships, there is a Scholarship Endowment Fund made up of gifts from various donors.

Of the scholarship donors listed above the following include with their scholarship gifts an unrestricted grant to the Institute’s general funds to help defray educational costs in excess of that portion covered by tuition.

Alcoa Foundation
The R. C. Baker Foundation
Crown Zellerbach Foundation
Cyprus Mines Corporation
Douglas Aircraft Company, Inc.
Douglas Oil Company
General Motors Corporation
Goodyear Foundation, Inc.

International Nickel Co., Inc.
Kencnecott Copper Corporation
Lockheed Leadership Fund
The Procter & Gamble Fund
Radio Corporation of America
Alfred P. Sloan Foundation
Texaco Inc.
Thanks to funds presented by a number of generous donors, the Institute is enabled to lend money to many students who, without aid, could not complete their education. Each fund is administered according to the wishes of the donor, but in general, as outlined on pages 202-203. Borrowers must be making satisfactory progress toward their degrees. The Institute Loan Funds are named as follows:

The Gustavus A. Axelson Loan Fund
The Olive Cleveland Fund
The Hosea Lewis Dudey Loan Fund
The Dudley Foundation Loan Fund
The Claire Dunlap Loan Fund
Ford Foundation Loan Fund
Susan Baker Geddes Loan Fund
Thomas Lain Gordon Memorial Loan Fund
The Roy W. Gray Fund
The Raphael Herman Loan Fund
The Vaino A. Hoover Student Aid Fund
The Howard R. Hughes Student Loan Fund
The Thomas Jackson Memorial Fund
The Ruth Wydman Jarmie Loan Fund
Eugene Kirkeby Loan Fund
The Gustav D. Koehler Loan Fund
The Frank W. Lehan Loan Fund
The John McMorris Memorial Loan Fund
The James K. Nason Memorial Loan Fund
The Noble Loan and Scholarship Fund
The James R. Page Loan Fund
The Sloan Foundation Loan Fund
The Albert H. Stone Educational Fund
Scholarship and Loan Fund—Sundry Donors

NATIONAL DEFENSE STUDENT LOAN PROGRAM

All students are eligible to apply for loans from these limited funds provided they are: citizens or permanent residents of the United States; meeting the Institute's academic standards and standards of conduct; and are recommended by the Scholarships and Financial Aid Committee.

A student may apply for a maximum of $1000 a year for five years. Beginning one year after he has completed his education, he pays 3 percent interest per year on the unpaid balance of his loan. He pays no interest as long as he is a full-time student, nor if he is serving in the armed forces (maximum three years).
Applicants must show evidence of need (statement of family income and resources, personal resources, and an estimated annual budget); sign an oath of allegiance; and (if applicant is under 21) obtain signature of parent or guardian to the effect that he has read the application.

DEFERRED PAYMENT PLANS FOR TUITION
See detailed information on pages 202-203.

STUDENT EMPLOYMENT
The Institute tries to help students to find suitable employment when they cannot continue their education without thus supplementing their incomes. The requirements of the courses at the Institute are so exacting, however, that under ordinary circumstances students who are entirely or largely self-supporting should not expect to complete a regular course program satisfactorily in the usual time. It is highly inadvisable for freshman students to attempt to earn their expenses. Students wishing employment are advised to write, before coming to the Institute, to the Director of Placements.

PLACEMENT SERVICE
The Institute maintains a Placement Office under the direction of a member of the Faculty. With the services of a full-time staff, this office assists graduates and undergraduates to find employment.

Interviews with candidates for the Ph.D. degree are arranged during any term. Interviews with candidates for other degrees are arranged during the second and third terms. Students, both graduate and undergraduate, wanting part-time employment during the school year or during vacations, should register at the Placement Office. Assistance will be given whenever possible in securing employment for summer vacations. Alumni who are unemployed or desire improvement in their positions should register at the Placement Office.

A large number of brochures published by industrial organizations and government agencies are available. These show placement opportunities in the fields of science and engineering. The Director of Placements is always available for consultation and guidance on placement problems.

The Placement Office maintains information on fellowships and scholarships offered by universities, foundations, and industry throughout the world.

It should be understood that the Institute assumes no responsibility in obtaining employment for its graduates, although the Placement Office will make every effort to find employment for those who wish to make use of this service.

5. PRIZES
THE FREDERIC W. HINRICHs, JR., MEMORIAL AWARD
The Board of Trustees of the California Institute of Technology established the Frederic W. Hinrichs, Jr., Memorial Award in memory of the man who served for more than twenty years as Dean and Professor at the Institute. In remembrance of his honor, courage, and kindness, the award bearing his name is made annually to the senior who, in the judgment of the undergraduate Deans, throughout his undergraduate years at the Institute has made
the greatest contribution to the welfare of the student body and whose qualities of character, leadership, and responsibility have been outstanding. At the discretion of the Deans, more than one award or none may be made in any year. The award, presented at commencement without prior notification, consists of $100 in cash, a certificate, and a suitable memento.

THE CONGER PEACE PRIZE

The Conger Peace Prize was established in 1912 by the Reverend Everett L. Conger, D.D., for the promotion of interest in the movement toward universal peace, and for the furtherance of public speaking. The annual income from $1000 provides for a first and second prize to be awarded at a public contest. The contest is under the direction of representatives of the Division of the Humanities.

THE MARY A. EARLE MCKINNEY PRIZE IN ENGLISH

The Mary A. Earle McKinney Prize in English was established in 1946 by Samuel P. McKinney, M.D., of Los Angeles. Its purpose is to cultivate proficiency in writing. The terms under which it is given are decided each year by the faculty in English. It may be awarded for essays submitted in connection with regular English classes, or awarded on the basis of a special essay contest. The prize consists of cash awards and valuable books.

THE DON SHEPARD AWARD

Relatives and friends of Don Shepard, class of 1950, have provided an award in his memory. The award is presented to a student, the basic costs of whose education have already been met but who would find it difficult, without additional help, to engage in extracurricular activities and in the cultural opportunities afforded by the community. The recipient, an upperclassman, is selected on the basis of his capacity to take advantage of and to profit from these opportunities rather than on the basis of his scholastic standing.

THE DAVID JOSEPH MACPHERSON PRIZE IN ENGINEERING

The David Joseph Macpherson Prize in Engineering was established in 1957 by Margaret V. Macpherson in memory of her father, a graduate of Cornell University in civil engineering, class of 1878. A prize of $100 is awarded annually to the graduating senior in engineering who best exemplifies excellence in scholarship. The winning student is selected by a faculty committee of three, appointed annually by the chairman of the Division of Engineering.

TRAVEL PRIZE

Each year those juniors who are in the top 15-20% of their class, scholastically, are eligible to compete for a Travel Prize. This prize provides funds for the winners (about three annually) to travel during the summer between their junior and senior years almost anywhere to pursue individual vocational or avocational interests.
The Eric Temple Bell Undergraduate Mathematics Research Prize

In 1963 the Department of Mathematics established an Undergraduate Mathematics Research Prize honoring the memory of Professor Eric Temple Bell and his long and illustrious career as a research mathematician, teacher, author, and scholar. His writings on the lives and achievements of the great mathematicians continue to inspire many hundreds of students at the California Institute and elsewhere. A prize of $150 is awarded annually to one or more juniors or seniors for outstanding original research in mathematics, the winners being selected by members of the mathematics faculty. The funds for this prize come from winnings accumulated over the years by Caltech undergraduate teams competing in the William Lowell Putnam Mathematics Contest, an annual nationwide competition.

The George W. Green Memorial Prize

The George W. Green Memorial Prize was established in 1963 based on contributions given in memory of George W. Green, who for fifteen years served on the staff of the Caltech business office and was from 1956-1962 Vice President for Business Affairs. The prize of $400 is awarded annually to an undergraduate student, in any class, selected by the division chairmen and the deans on the basis of original research, an original paper or essay in any field, or other evidence of creative scholarship beyond the normal requirements of specific courses.

The SCAAPT Prize

A prize of $250 is awarded each year in connection with the annual high school contest of the Southern California section of the American Association of Physics Teachers. The prize goes to the highest ranking man in the contest who applies, is admitted, and registers at the California Institute in the fall following his senior high school year, provided that the candidate does not rank below the top five in the contest.
Section IV

INFORMATION AND REGULATIONS FOR THE GUIDANCE OF GRADUATE STUDENTS

A. General Regulations

I. REQUIREMENTS FOR ADMISSION TO GRADUATE STANDING

1. The Institute offers graduate work leading to the following degrees: Master of Science, after a minimum of one year of graduate work; Aeronautical Engineer, Civil Engineer, Electrical Engineer, Geological Engineer, Geophysical Engineer, and Mechanical Engineer, after a minimum of two years of graduate work; and Doctor of Philosophy after a minimum of three years of graduate work.

2. To be admitted to graduate standing an applicant must in general have received a bachelor's degree representing the completion of an undergraduate course in science or engineering substantially equivalent to one of the options offered by the Institute. He must, moreover, have attained such a scholastic record and, if from another institution, must present such recommendations as to indicate that he is fitted to pursue with distinction advanced study and research. In some cases examinations may be required.

3. Application for admission to graduate standing should be made to the Dean of Graduate Studies, on a form obtained from his office. Admission to graduate standing will be granted only to a limited number of students of superior ability, and application should be made as early as possible. No application fee is required. Women students are admitted only in exceptional cases. In general, admission to graduate standing is effective for enrollment only at the beginning of the next academic year. If the applicant's preliminary training has not been substantially that given by the four-year undergraduate options at the Institute, he may be admitted subject to satisfactory completion of such undergraduate subjects as may be assigned. Admission sometimes may have to be refused solely on the basis of limited facilities in the department concerned. Students applying for assistantships or fellowships (see page 245) need not make separate application for admission to graduate standing, but should submit their applications before February 15. For requirements in regard to physical examination, see pages 183 and 197.

4. Admission to graduate standing does not of itself admit to candidacy for a degree. Application for admission to candidacy for the degree desired must be made as provided in the regulations governing work for the degree.

5. Special students, not working for degrees, are admitted only under exceptional circumstances.

II. GRADUATE RESIDENCE

1. One term of residence shall consist of one term's work of not fewer than 36 units of advanced work in which a passing grade is recorded. If fewer than 36 units are successfully carried, the residence will be regarded as shortened.
in the same ratio; but the completion of a larger number of units in any one term will not be regarded as increasing the residence. See pages 215, 216, 219 for special requirements for residence.

2. Graduate students who cannot devote full time to their studies are allowed to register only under special circumstances. Except by specific action of the Committee on Graduate Study, graduate students will be required to register for at least 36 units during each of their first three terms of attendance at the Institute. A graduate student who is registered for 36 or more units is classed as a full-time graduate student.

3. Graduate students expecting to receive a degree will be required to maintain their admission status until the degree is obtained, either by continuity of registration or on the basis of approved leave of absence. In case of lapse in graduate standing, readmission must be sought before academic work may be resumed or the degree may be conferred.

4. Graduate students are encouraged to continue their research during the whole or a part of the summer, but in order that such work may count in fulfillment of the residence requirements, the student must file a registration card for such summer work in the office of the Registrar on May 15. A minimum of 10 units must be taken. Students who are registered for summer research must pay the Summer Insurance Accident fee. They will not in general be required to pay tuition for the research units, but will be required to pay minimum tuition of $170 if Ph.D. or engineer's degree thesis requirements are completed during the summer.

III. REGISTRATION

1. Students are required to register and file a program card in the Registrar's Office at the beginning of each term of residence, whether they are attending a regular course of study, carrying on research or independent reading only, writing a thesis or other dissertation, or utilizing any other academic service.

2. Before registering, the student should consult with members of the department in which he is taking his major work to determine the studies which he can pursue to the best advantage.

3. The number of units allowed for a course of study or for research is so chosen that one unit corresponds roughly to one hour a week of work throughout the term for a student of superior ability.

4. A student will not receive credit for a course unless he is properly registered. At the first meeting of each class he should furnish the instructor with a regular assignment card for the course, obtained on registration. The student himself is charged with the responsibility of making certain that all grades to which he is entitled have been recorded.

5. All changes in registration must be reported, on drop or add cards, to the Registrar's Office by the student. Such changes are governed by the last dates for adding or dropping courses as shown on the academic calendar on pages 4 and 5. A student may not withdraw from or add a course after the last date for dropping or adding courses without, in addition to his department's consent, the approval of the Dean of Graduate Studies.
6. In registering for research, students should indicate on their program card the name of the instructor in charge, and should consult with him to determine the number of units to which the proposed work corresponds. At the end of the term the instructor in charge may decrease the number of units for which credit is given in case he feels that the progress of the research does not justify the full number originally registered for.

7. A graduate student who undertakes activities related to the Institute (studies, research, and assisting or other employment) aggregating more than 62 hours per week must receive prior approval therefor from the Dean of Graduate Studies. Petition forms for this purpose may be obtained from the Graduate Office, and must carry the recommendation of the student’s major department before submission to the Graduate Office.

8. Registration, with at least minimum tuition (see page 219), is required for the term or summer period in which the requirements for an advanced degree are completed, including either the final examination or submission of thesis. Registration with minimum tuition will be allowed for at most one term.

9. A graduate student doing unsatisfactory work may be declared ineligible to register at the beginning of any term.

10. The registration of a graduate student is not complete unless his photograph for the Registrar’s record card is affixed thereto, or a certification from the photographer is obtained to show that such photograph is in course of preparation on the date of registration. The Registrar provides the opportunity to have these photographs made, without cost to the student, on the registration days of the first and second terms of each year. Photographs taken for this purpose at other times are provided by the student at his own expense.

IV. GRADES IN GRADUATE COURSES

1. Term examinations are held in all graduate courses unless the instructor, after consultation with the Chairman of the Division, shall arrange otherwise. No student taking a course for credit shall be exempt from these examinations when they are held.

2. Grades for all graduate work are reported to the Registrar’s office at the close of each term.

3. The following system of grades is used to indicate class standing in graduate courses: “A” excellent, “B” good, “C” satisfactory, “D” poor, “E” conditioned, “F” failed, “Inc” incomplete. In addition to these grades, which are to be interpreted as having the same significance as for undergraduate courses (see page 191), the grade “P,” which denotes passed, may be used at the discretion of the instructor, for all or some of the students, in the case of seminar or other work which does not lend itself to more specific grading. In graduate research, only the grades of “P” and “F” are given.

V. TUITION AND OTHER FEES

The tuition charge for all students registering for graduate work is currently $1800 per academic year, payable in three installments at the beginning of each term. Graduate students who cannot devote full time to their studies are
allowed to register only under special circumstances. Students desiring permission to register for fewer than 36 units should petition therefor on a blank obtained from the Registrar. If reduced registration is permitted, the tuition for each term is at the rate of $17 a unit for fewer than 36 units with a minimum of $170 a term. Additional tuition will be charged to students registering for special courses made available to them which are not part of the normal educational facilities of the Institute.

The payment of tuition by graduate students is required (a) without reference to the character of the work of the student, which may consist in the prosecution of research, in independent reading, or in the writing of a thesis or other dissertation, as well as in attendance at regular classes; (b) without reference to the number of terms in which the student has already been in residence; and (c) without reference to the status of the student as an appointee of the Institute, except that members of the academic staff of rank of Instructor or higher are not required to pay tuition.

A yearly health fee of $25 is charged to every student. This fee is applied to provide medical services; for details, see page 197. A summer fee of $7.50 must be paid by students who register for summer work, and who have not paid the $25 health fee during the preceding academic year.

Each graduate student is required to make a general deposit of $25 to cover any loss of, or damage to, Institute property used in connection with his work in regular courses of study. Upon completion of his graduate work, or upon withdrawal from the Institute, any remaining balance of the deposit will be refunded.

Unpaid bills: All bills owed the Institute must be paid when due. Any student whose bills are delinquent may be refused registration for the term following that in which the delinquency occurs. No degrees are awarded until all bills due the Institute have been paid.

In regard to fellowships and assistantships, see page 245 of this catalog. In addition, to students of high scholastic attainments there may be awarded graduate scholarships covering the whole or a part of the tuition fee. For such students loans also may be arranged, for which application should be made to the Scholarships and Financial Aid Committee.

Graduate students are eligible to borrow from certain funds under the jurisdiction of the Committee on Student Aid (see page 250).
GRADUATE EXPENSES

Tuition (3 terms) .................................... $1,800.00
General Deposit .................................... 25.00
Health Fee ........................................ 25.00 $1,850.00
Books and Supplies (approx.) .......................... 80.00
Graduate House Living Expenses (see page 245 for details)
   Room—$382.50 to $450.00 per academic year
   Meals—Available at the Chandler Dining Hall
   or the Athenaeum (members only)

First Term
September 26, 1966
Tuition .......................... 600.00
General Deposit ................. 25.00
(see page 201)
Health Fee ........................ 25.00

Second Term
January 3, 1967
Tuition .......................... 600.00

Third Term
March 27, 1967
Tuition .......................... 600.00

*Summer Accident Insurance Fee ........................ 7.50
Tuition fees for fewer than normal number of units:
   Over 35 units .................. Full Tuition
   Per unit per term ................. $ 17.00
   Minimum per term ................ 170.00

Auditor's Fee (p. 190) .................... $25.00 per term, per lecture hour

A voluntary contribution of fifty cents a year is made by each student to help defray the expenses of the Winnett Student Center game room.

Withdrawals. Students withdrawing from the Institute during the first three weeks of a term, for reasons deemed satisfactory to the Institute, are entitled to a refund of tuition fees paid, less a reduction of 20% and a pro rata charge for time in attendance.

B. REGULATIONS CONCERNING WORK FOR THE DEGREE OF MASTER OF SCIENCE

1. The Master of Science degree is a professional degree intended to prepare a student for teaching, for further graduate studies, or for more advanced work in industry. Detailed requirements are based primarily on professional studies, and the program should be planned in consultation with the faculty in the appropriate discipline. Under normal circumstances, the requirements for the M.S. degree can be completed in one academic year, but students from other schools who do not have completely adequate preparation may require longer. Regulations governing registration will be found on page 216.

2. Residence. At least one academic year of residence (as defined on page 215) and 135 units of graduate work subsequent to the baccalaureate degree are required for the master's degree. Included in these are at least 27 units of

*An Accident Insurance Fee of $7.50 will be charged to all students taking summer research who were not enrolled during the previous academic year.

1Although the Institute charges full tuition for 36 units, the Veterans Administration allows the following subsistence percentages: 25% for 10 through 20 units per term; 50% for 21 through 29; 75% for 30 through 41; and 100% for 42 and over.
free electives or of required studies in the humanities. Courses used to fulfill requirements for the bachelor’s degree may not be counted as graduate residence. A student will not, in general, be admitted to graduate standing until he has completed work equivalent to that required for the bachelor’s degree.

To qualify for a master’s degree, a student must complete the work indicated in the schedule of first-year graduate courses (see pages 271-282) with a grade-point average of at least 1.90, considering the grade of P as being equivalent to C, and excluding grades for research.

3. Admission to Candidacy. Before mid-term of the first term of the academic year in which the student expects to receive the degree, he must file in the office of the Dean of Graduate Studies an application for admission to candidacy for the degree desired. On the candidacy form, the student will submit his proposed plan of study, which must have the approval of his department. This plan of study, if approved, shall then constitute the requirements for the degree, and changes in the schedule will not be recognized unless initialed by the proper authority. No course which appears on the approved schedule and for which the applicant is registered may be removed after the last date for dropping courses as listed in the catalog.

4. Special Requirements for the Master’s Degree

(a) Students admitted to work toward the master’s degree in the Division of Chemistry and Chemical Engineering are required to take placement examinations. See pages 273-274.

(b) Students admitted to work toward the degree of Master of Science in Electrical Engineering are required to take a placement examination in the subject of engineering mathematics and complex variables. This examination is given on the Friday of the week preceding registration, and will be concerned primarily with subject matter of the undergraduate course, AM95abc. The result of this examination has no bearing on a student’s admission to graduate study, but in the event that preparation in this subject area is judged to be inadequate, the student will be required to enroll in AM113ab, for which graduate credit may be received. In cases where there is a clear basis for ascertaining the student’s preparation, the examination may be waived. Notices of the placement examination are sent well in advance of the examination date.

(c) A written placement examination is required of incoming graduate students in the Division of Geological Sciences. For details see page 235. Candidates for the master’s degree in the Division of Geological Sciences should familiarize themselves with, and are expected to meet, certain special requirements concerning basic sciences and field geology. Detailed information on these requirements may be obtained from the Division Secretary.

(d) Students admitted to work toward the master’s degree in the Division of Physics, Mathematics and Astronomy are required to take placement examinations to be used as a guide in selecting the proper course of study. See page 239.

(e) In the case of a required thesis two final copies must be filed with the Division concerned ten days before the degree is to be conferred. Instruc-
C. REGULATIONS CONCERNING WORK FOR THE ENGINEER'S DEGREE

1. The work for an engineer's degree must consist of advanced studies and research in the field appropriate to the degree desired. It must conform to the special requirements established for the degree desired and should be planned in consultation with the members of the faculty concerned. Advanced studies are defined on page 215. Regulations governing registration will be found on page 216. Students who have received the master's degree and wish to pursue further studies leading toward either the engineer's or the doctor's degree must file a new application to continue graduate work toward the desired degree. Students who have received an engineer's degree will not in general be admitted for the doctor's degree.

2. Residence. At least six terms of graduate residence (as defined on page 215) subsequent to a baccalaureate degree equivalent to that given by the California Institute are required for an engineer's degree. Of these, at least the last three terms must be at the California Institute. It must be understood that these are minimum requirements, and students must often count on spending a somewhat longer time in graduate work.

To qualify for an engineer's degree, a student must complete the work prescribed by his supervising committee with a grade-point average of at least 1.90, considering the grade of P as being equivalent to C and excluding grades for research. Work upon research and the preparation of a thesis must constitute no fewer than 55 units. More than 55 units may be required by certain departments and the student should determine the particular requirements of his department when establishing his program.

In the case of a student registered for work toward an engineer's degree, and holding a position as graduate assistant or other Institute employee, the actual number of hours per week required by his teaching or research services shall be deducted from the total number of units for which he might otherwise register. This number of units shall be determined by his department.

3. Admission to Candidacy. Before mid-term of the first term of the academic year in which the student expects to receive the degree he must file in the office of the Dean of Graduate Studies an application for admission to candidacy for the degree desired. Upon receipt of this application, the Dean, in consultation with the chairman of the appropriate division, will appoint a committee of three members of the faculty to supervise the student's work and to certify to its satisfactory completion. One of the members of the committee must be in a field outside of the student's major field of study. The student should then consult with this committee in planning the details of this work. The schedule of his work as approved by the committee shall be entered on the application form and shall then constitute a requirement for the degree. Changes in the schedule will not be recognized unless initialed by the proper authority. No course which appears on the approved schedule and for which the applicant is registered may be removed after the last date for dropping courses as listed in the catalog.
The student will be admitted to candidacy for the degree when his supervising committee certifies: (a) that all the special requirements for the desired degree have been met, with the exception that certain courses of not more than two terms in length may be taken after admission to candidacy; (b) that the thesis research has been satisfactorily started and probably can be finished at the expected time.

Such admission to candidacy must be obtained by mid-term of the term in which the degree is to be granted.

4. Thesis. At least two weeks before the degree is to be conferred, each student is required to submit to the Dean of Graduate Studies two copies of his thesis in accordance with the regulations governing the preparation of doctoral dissertations, obtained from the Graduate Office.

The use of "classified" research as thesis material for any degree will not be permitted. Exceptions to this rule can be made only under special circumstances, and then only when approval is given by the Dean of Graduate Studies before the research is undertaken.

Before submitting his thesis, the candidate must obtain written approval of it by the chairman of the division and the members of his supervising committee, on a form obtained from the office of the Dean of Graduate Studies.

5. Examination. At the option of the department representing the field in which the degree is desired a final examination may be required. This examination would be conducted by a board to be appointed by the candidate's supervising committee.

Special Requirements for the Degree of Electrical Engineer. To be recommended for the degree of Electrical Engineer the applicant must pass the same subject requirements as listed for the doctor's degree on page 234.

Special Requirements for the Degree of Mechanical Engineer. Each student admitted to work for the degree of Mechanical Engineer shall meet with a committee before registration for the purpose of planning the student's work.

Not less than a total of 55 units of this work shall be for research and thesis, the exact number of units to be left to the discretion of the supervising committee appointed by the Dean of Graduate Studies. The courses shall be closely related to mechanical engineering, and the specific courses to be taken and passed with a grade of C or better by each candidate shall be determined by the supervising committee, but must include an advanced course in mathematics or applied mathematics, such as AM 125 abc or Ph 129 abc, acceptable to the faculty in mechanical engineering.

A list of possible courses from which a program of study may be organized will be found on page 279.
D. REGULATIONS CONCERNING WORK FOR THE
DEGREE OF DOCTOR OF PHILOSOPHY

I. GENERAL REGULATIONS

The degree of Doctor of Philosophy is conferred by the Institute primarily in recognition of breadth of scientific attainment and of power to investigate scientific problems independently and efficiently, rather than for the completion of definite courses of study through a stated period of residence. The work for the degree must consist of scientific research and the preparation of a thesis describing it, and of systematic studies of an advanced character primarily in science or engineering. In addition, the candidate must have acquired the power of expressing himself clearly and forcefully both orally and in written language, and he must satisfy the foreign language requirements.

Subject to the general supervision of the Committee on Graduate Study, the student's work for the degree of Doctor of Philosophy is specifically directed by the department in which he has chosen his major subject. Each student should consult his department concerning special divisional and departmental requirements. See pages 226-245.

With the approval of the Committee on Graduate Study, any student studying for the doctor's degree whose work is not satisfactory may be refused registration at the beginning of any term by the department in which the student is doing his major work.

II. REQUIREMENTS FOR ADMISSION TO WORK FOR DOCTOR'S DEGREE

With the approval of the Committee on Graduate Study, students are admitted to graduate standing by the department in which they choose their major work toward the doctor's degree. In some cases, applicants for the doctor's degree may be required to register for the master's or engineer's degree first. These degrees, however, are not general prerequisites for the doctor's degree. Students who have received the master's degree and wish to pursue further studies leading toward either the engineer's or the doctor's degree must file a new application to continue graduate work toward the desired degree. Students who have received an engineer's degree will not in general be admitted for the doctor's degree.

During the second or third term of work toward the engineer's degree, a student may apply for admission to work toward the doctor's degree. If this admission is granted, his admission for the engineer's degree will be cancelled.

III. GENERAL REQUIREMENTS FOR THE DEGREE OF DOCTOR OF PHILOSOPHY

1. Major and Minor Program of Study. The work for the doctor's degree must consist of scientific research and advanced studies in some branch of science and engineering, called the major program of study; and of additional advanced work outside of this branch, called the minor program of study. The minor program of study will be at the option of the student, either a general minor or a subject minor.

Advanced studies include courses with numbers of 100 or over. However, only in approved cases is graduate residence credit given for such courses
when they are required in the undergraduate option corresponding to the student's major field. No residence credit is given for courses with numbers under 100 when they constitute prerequisites to the student's minor subject courses. Credit in the amount to be determined by the Committee on Graduate Study may be allowed for other courses with numbers under 100 when they are outside the student's major field.

(a) General minor. The work will consist of at least 45 units of advanced work in one or more disciplines in the humanities or science or engineering other than that of the major subject. The choice and scope of this work must be approved by the division in charge of the major subject, on a form obtainable from the Graduate Office.

(b) Subject minor. The work is concentrated in one discipline, including at least 45 units of advanced work in this discipline, and must be comprehensive enough to give the student a fundamental knowledge of it. The minor subject may be in the humanities or in any discipline listed on pages 226-244, under special requirements adopted by the various divisions of the Institute. The program must be approved by both major and minor divisions on a form obtainable from the Graduate Office. The candidate will be examined on this work (see item 5, page 226). A student who has satisfied the requirements for such a minor program of study will be given recognition for this work by explicit mention on his Ph.D. diploma of the minor subject or minor subjects if the requirements have been satisfied in more than one discipline.

2. Residence. At least three academic years of residence subsequent to a baccalaureate degree equivalent to that given by the Institute are required for the doctor's degree. Of this at least one year must be in residence at the Institute. It should be understood that these are minimum requirements, and students must usually count on spending a somewhat longer time in residence. However, no student will be allowed to continue work toward the doctor's degree for more than 15 terms of graduate residence, nor more than 18 registrations for full- or part-time academic work except by special action of the Committee on Graduate Study. In either case graduate study taken elsewhere will be counted when residence credit at the Institute has been allowed. (See page 216 regarding summer registration for research.)

Graduate students will be permitted only by special arrangement made in advance to conduct all or a portion of their research in the field, in government laboratories, or elsewhere off the campus. In order that such research be counted in fulfillment of residence requirements, the graduate student must file in advance a registration card for this work. The work must be carried out under the direct supervision of a member of the Institute staff. The number of units to be credited for such work shall be determined by the Dean of Graduate Studies in consultation with the chairman of the division in which the student is carrying his major work; and a recommendation as to the proportion of the full tuition to be paid for such work shall be made by the Dean to the Vice President in charge of Business Affairs.

A student whose undergraduate work has been insufficient in amount or too narrowly specialized, or whose preparation in his special field is inadequate, must count upon spending increased time in work for the degree.
3. Admission to Candidacy. On recommendation of the chairman of the division concerned, the Committee on Graduate Study will admit a student to candidacy for the degree of Doctor of Philosophy after he has been admitted to work toward the doctor's degree and been in residence at least one term thereafter; has initiated a program of study approved by his major department and, if needed, by his minor department; has satisfied the several departments concerned by written or oral examination or otherwise that he has a comprehensive grasp of his major and minor subjects as well as of subjects fundamental to them; has fulfilled the language requirements; has shown ability in carrying on research with a research subject approved by the chairman of the division concerned. For special departmental regulations concerning admissions to candidacy, see pages 226-245. Members of the Institute staff of rank higher than that of assistant professor are not admitted to candidacy for a higher degree.

A standard form, to be obtained from the Dean of Graduate Studies, is provided for making application for admission to candidacy. Such admission to candidacy must be obtained before the close of the second term of the year in which the degree is to be conferred. The student himself is responsible for seeing that admission is secured at the proper time. A student not admitted to candidacy before the beginning of the fourth academic year of graduate work at the Institute must petition through his Division to the Dean of Graduate Studies for permission to register for further work.

4. Language Requirements. To be admitted to candidacy for the degree of Doctor of Philosophy a student must have a good reading knowledge of at least two foreign languages chosen among French, German, and Russian. With the permission of the department concerned and the Dean of Graduate Studies, another modern language may be substituted for one of these languages. As soon as possible after beginning their graduate study, students are urged to consult with the department of languages to determine the best means of satisfying these requirements early. The language requirements in either or both of the approved languages can be met in one of three ways:

a. To pass language examinations. Examinations in French and German are given three times a year. The dates are announced on the calendar on pages 4 and 5.

b. To pass with a grade of B− or better one of the following courses: L 1abc in French, L 32abc in German, or L 51a in Russian.

c. With the approval of the department of languages, to complete a translation project. A knowledge of the fundamentals of the language is presupposed in such a case. (At the discretion of the department of languages, graduate students may be required to pass an elementary examination before becoming eligible to undertake a translation project.)

Alternative requirement: A limited number of students will be permitted to satisfy all language requirements by successfully completing a two-year experimental program in French. Permission to enter this program must be obtained from the faculty in languages, from the chairman of the student's division, and from the Dean of Graduate Studies.
5. **Examination.** During his course of study every doctoral candidate shall be examined broadly and orally on his major subject, the scope of his thesis and its significance in relation to his major subject, and, if the candidate has a subject minor, on the subject of that program. These examinations, subject to the approval of the Committee on Graduate Study, may be taken at such time after admission to candidacy as the candidate is prepared, except that they must take place at least two weeks before the degree is to be conferred.

The examinations may be written in part, and may be subdivided into parts or given all at one time at the discretion of the departments concerned. The examination relating to the subject minor need not be included in the final examination. It may be given at a time to be determined by agreement between the minor and the major departments. The student must petition for these examinations on a form obtained from the Dean of Graduate Studies in time for the examination to be announced in the Institute’s weekly calendar. For special departmental regulations concerning candidacy and final examinations, see pages 226-244.

6. **Thesis.** Two weeks before the degree is to be conferred, the candidate is required to submit to the Dean of Graduate Studies two copies of his thesis in accordance with the regulations governing the preparation of doctoral dissertations obtainable from the Graduate Office. For special departmental regulations concerning theses, see pages 226-244.

With the approval of the department concerned, a portion of the thesis may consist of one or more articles published jointly by the candidate and members of the Institute staff or others. In any case, however, a substantial portion of the thesis must be the candidate’s own exposition of his work. For regulations regarding use of “classified” material, see page 222.

Regulations and directions for the preparation of theses may be obtained from the office of the Dean of Graduate Studies, and should be followed carefully by the candidate.

Before submitting his thesis to the Dean of Graduate Studies, the candidate must obtain approval of it by the chairman of his division and the members of his examining committee. This approval must be obtained in writing on a form which will be furnished at the office of the Dean. *The candidate himself is responsible for allowing sufficient time for the members of his committee to examine his thesis.*

**IV. SPECIAL REQUIREMENTS FOR THE DOCTOR’S DEGREE**

In agreement with the general requirements for the doctor’s degree adopted by the Committee on Graduate study, as set forth in III; page 223, the various divisions of the Institute have adopted the following supplementary regulations.

**DIVISION OF BIOLOGY**

1. **Aims and Scope of Graduate Study in Biology.** Graduate students in Biology come with very diverse undergraduate preparation—majors in physics, chemistry, and mathematics, as well as in biology and its various branches. The aims of the graduate program are to provide, for each student, depth of experience and competence in his particular chosen major specialty; perception of the nature and values of biology as a whole; sufficient strength in the
basic sciences to allow him to continue self-education after his formal training has been completed and keep in the forefront of his changing field; and the motivation and training to serve that field productively through a long career. In accordance with these aims the graduate study program in biology leading to the doctor's degree includes the following parts: (a) The major program which is to provide the student with early and intense original research experience in a discipline of biology of his own choice, supplemented with advanced course work and independent study in this discipline; (b) the minor program, designed to provide him with professional insight into a discipline outside his major one and consisting of specialized course work, or course work and a special research program; and as a rule (c) a program of course work in advanced subjects, designed to provide him with a well-rounded and integrated training in biology and the appropriate basic sciences, and adjusted to his special interests and needs. (b) and (c) may include supervised, independent study. An individual program will be recommended to each student when he meets with his advisory committee (see section 4). A student majoring in psychobiology may arrange to do one or more terms on another campus to obtain relevant course work in psychology and medicine not offered at the Institute.

2. Admission. Applicants are expected to meet the following minimal requirements: mathematics through calculus, general physics, organic chemistry, physical chemistry, and biology approximately equaling the content of two of the following courses: Bi 3 (Plant Biology), Bi 10 (Animal Biology) and Bi 9 (Cell Biology). Students with deficient preparation in one or more of these categories may be admitted but required to remedy their deficiencies in the first years of graduate training, no graduate credit being granted for such remedial study. This will usually involve taking the courses in the categories in which the student has deficiencies. In certain instances, however, deficiencies may be corrected by examinations following independent or supervised study apart from formal courses. Furthermore, the program of the Biology Division is diverse, and in particular fields such as psychobiology or in interdisciplinary programs such as neurophysiology-electrical engineering, other kinds of undergraduate preparation may be substituted for the general requirements listed above. Graduate Record Examinations are required of applicants for graduate admission intending to major in the Biology Division.

3. Placement Examinations. All students admitted to graduate work towards the Ph.D. in the Division of Biology are required either to take placement examinations in two of the following areas: cell biology, plant biology, animal biology; or to pass or have passed two of the equivalent courses (Bi 3, Bi 10, Bi 9), with a grade of B– or better. These examinations or courses must be taken before the end of the first year of graduate study.

4. Advisory Committee. During the week preceding registration for the first term, each entering student confers with his Advisory Committee. The committee consists of a chairman and three other members of the faculty representing diverse fields of biology. The committee will advise the student of deficiencies in his training; will design a remedial study program where necessary; and will recommend an individual study program of advanced course
work in accordance with item (c), section 1. The committee will also be available for consultation and advice throughout his graduate study. Its chairmanship and constitution may, however, change as the student ascertains the subject of his specialization or changes it. Such changes are readily made.

5. **Teaching Requirements for Graduate Students.** All students must acquire some teaching experience.

6. **Major Subjects of Specialization.** A student may pursue major work leading to the doctor's degree in the Division of Biology in any of the following disciplines:

   - Biochemistry
   - Biophysics
   - Cell Biology
   - Developmental Biology
   - Genetics
   - Neurophysiology
   - Plant Physiology
   - Psychobiology

7. **Minor Subjects.** A student majoring in one of the above disciplines may elect to take a minor in any of the following ways, subject to the approval of his advisory committee: (a) a subject minor in another discipline of biology, which must be markedly different in content and techniques from the major; (b) a subject minor in another division of the Institute, or (c) a general minor consisting of not less than 45 units of advanced course work in one or more disciplines in the humanities, sciences (other than biology), or engineering. When a student takes a subject minor, his degree designates the disciplines of his major and minor (e.g., Biophysics and Psychobiology or Cell Biology and Chemistry). When he takes a general minor, his degree designates only his major discipline, e.g., Biochemistry or Neurophysiology. Courses listed jointly by the Biology Division and another Division are not credited toward a general minor for majors in a closely related discipline of biology, even if the student registers for the course under the other Division’s course number.

   A student majoring in another division of the Institute may, with the approval of the Biology Division and his major division, elect a subject minor in any one of the disciplines listed in section 6. The requirements for such a minor consist of (a) passing the placement examination in plant biology, cell biology, or animal biology, and (b) passing the qualifying examination in the discipline elected. There is no program for a minor in General Biology, but advanced courses in the Biology Division can, of course, be included in a general minor under the supervision of the student’s major division. A student majoring in another division who elects a subject minor in one of the disciplines of Biology may arrange to have his minor designated as Biology rather than with the name for his minor discipline. The Institute’s general requirements for major and minor programs of study are noted on pages 223-226.

8. **Admission to Candidacy.** To be recommended by the Division of Biology for admission to candidacy for the doctor's degree, the student must have demonstrated his ability to carry out original research and have passed, with a grade of B or better, the candidacy examination in his major. With regard to his minor: (a) A student who elects to take a subject minor in the Biology Division is required to pass a candidacy examination in the minor field with a grade of B or better; (b) in case the minor is taken outside the Biology Division, the student is required to fulfill the minor requirements of the outside division and of the Institute.
Students majoring in other divisions and electing a subject minor in the Biology Division see paragraph 2 of section 7 above.

9. Thesis and Final Examination. Two weeks after copies of the thesis are provided to the examination committee, the candidate collects the copies and comments for correction. At this time, the date for the final examination is set at the discretion of the major professor and the division chairman, to allow as necessary for such matters as publication of the examination in the Institute calendar, thesis corrections, preparation of publications, and checking out and ordering of the student’s laboratory space. The final oral examination covers principally the work of the thesis, and according to Institute regulation must be held at least two weeks before the degree is conferred. Two copies of the thesis are required of the graduate and are deposited in the Institute library. A third copy is retained in the Division library. The examining committee will consist of such individuals as may be recommended by the Chairman of the Division and approved by the Dean of Graduate Studies.

Division of Chemistry and Chemical Engineering

1A. Chemistry. On Monday and Tuesday of the week preceding General Registration for the first term of graduate study, graduate students admitted to work for the Ph.D. degree will be required to take three written placement examinations, one each in the fields of physical chemistry, organic chemistry, and inorganic/analytical chemistry. An optional fourth examination in chemical physics is available for those interested in this field (see sec. 1B). These examinations will cover their respective subjects to the extent that these subjects are treated in the undergraduate chemistry option offered at this Institute. In general they will be designed to test whether the student possesses an understanding of general principles and a power to apply these to specific problems, rather than a detailed informational knowledge. Graduate students are expected to demonstrate a proficiency in the subjects of the first three examinations not less than that acquired by abler undergraduates. Students who have demonstrated this proficiency in earlier residence at this Institute may be excused from these examinations.

In the event that a student fails to show satisfactory performance in one or more of the placement examinations he may be required to register for a prescribed course, or courses, in order to correct the deficiency promptly. In general no graduate credit will be allowed for these prescribed courses. These courses must be completed in a satisfactory manner before the graduate student can be admitted to candidacy.

To be recommended for candidacy for the doctor’s degree in chemistry the applicant, in addition to demonstrating his understanding and knowledge of the fundamentals of chemistry, must give satisfactory evidence of his proficiency at a higher level in that field of chemistry elected as his primary field of interest and approved by the Division of Chemistry and Chemical Engineering. In general the applicant will be required to pass an oral examination and to submit to his examining committee and to the Divisional graduate secretary not less than one week prior to his examination (1) a written progress report giving evidence of his industry and ability in research and of his power to present his results in clear, concise language and with discrimination as to
what is essential in scientific reports, and (2) three propositions (as described under 5 below) which the applicant is prepared to defend during his oral examination.

In the event that any of the candidate's propositions is found to be unsatisfactory he will not be recommended for candidacy at that time, but will be required to submit and defend a set of new or revised propositions at an examination to be taken at least three terms prior to his final examination.

The Institute language requirements (q.v.) must also have been completed before admission to candidacy is complete.

Candidacy examinations are normally taken during the fifth term of graduate residence at the Institute. A student admitted to work for the Ph.D. degree in chemistry who fails to satisfy the requirements for candidacy, including languages and placement examination remedial courses, by the end of his sixth term of residence will not be allowed to register in subsequent terms except by special permission of the Division of Chemistry and Chemical Engineering. This permission, to be requested via a petition submitted to the Divisional Graduate Committee in advance of registration day, stating a proposed timetable for correction of deficiencies, must be obtained prior to registration for each subsequent term until admission to candidacy is achieved.

1B. Chemical Physics. Students working for the Ph.D. degree in chemistry may elect to do research in chemical physics. Except for the differences mentioned below, all of the requirements regarding graduate students in chemistry are applicable to students who wish to work in the field of chemical physics.

On Tuesday of the week preceding General Registration, but at a different time than the physical chemistry examination, there will be a placement examination in chemical physics. It will be designed specifically to test the preparation of students who wish to carry on research in this area, and will require a knowledge of physics and mathematics beyond the corresponding courses normally required for the undergraduate chemistry option at this Institute. These students must also take the placement examinations in inorganic, organic, and physical chemistry.

Students taking the chemical physics examination may, with permission, substitute demonstration of proficiency in that field for establishment of proficiency in one or more of the other fields covered by the placement examinations. Students who choose chemical physics as their primary field of interest will, in general, take a larger fraction of their graduate courses in mathematics and physics than students in other fields of chemistry.

1C. Chemical Engineering. During the week preceding General Registration for the first term of graduate study, students admitted to work for the Ph.D. degree will be required to take three written placement examinations in the fields of industrial and general chemistry (on Monday), transport phenomena and equilibrium stage operations of chemical engineering (on Tuesday), and engineering thermodynamics of one-component systems (on Wednesday). These examinations will cover their respective subjects to the extent that they are treated in the undergraduate chemical engineering option at this Institute. In general they will be designed to test whether the student possesses an understanding of general principles and a power to apply these to specific problems, rather than a detailed informational knowledge. Students who have
demonstrated proficiency in earlier residence at this Institute may be excused from these examinations. Any remedial work prescribed as a result of unsatisfactory performance in one or more of these placement examinations must be satisfactorily completed prior to the candidacy examination.

To be recommended for candidacy the student must demonstrate proficiency at a graduate level in chemical engineering. This will be done in chemical engineering courses and in the Divisional oral candidacy examination which is to be taken before the end of the second term of the student's second year of graduate residence at the Institute. At least one week before the examination the student will submit three propositions and a written progress report on his research to his examining committee. The examination will cover the progress report and propositions. Questions on applied physical chemistry, thermodynamics, applied chemical kinetics, transport phenomena, and the joint application of these and related subjects to practical problems will also be included, with emphasis at the discretion of the committee. A student who fails to satisfy the Division’s candidacy requirements by the end of the third term of his second year of graduate residence at the Institute will not be allowed to register in a subsequent academic year except by special permission of the Division of Chemistry and Chemical Engineering.

Applicable to All Chemistry and Chemical Engineering Students

2. It is expected that each applicant for graduate study in the Division of Chemistry and Chemical Engineering will have studied mathematics and physics substantially to the extent that these subjects are covered in the required undergraduate courses in the student's field of interest. In case the applicant's training is not equivalent to this, the Division may prescribe additional work in these subjects before recommending him as a candidate.

3. The units of study offered to satisfy a minor requirement are to consist in general of graduate courses other than research; however, the Division of Chemistry and Chemical Engineering may, by special action, permit up to one-half of these units to consist of appropriate research. If a student elects a minor program of study of the general type, 45 units or more of advanced work are required and must represent an integrated program approved by the Division; for students in chemistry it must consist of courses other than chemistry; for students in chemical engineering it must consist of courses other than chemical engineering. A grade of C or better is required in these courses.

4. The candidate must submit a copy of his thesis and propositions in final form to the chairman and to each member of his examining committee, and a copy of the propositions and an abstract of the propositions to the Divisional graduate secretary, not less than two weeks prior to his final examination, which according to the Institute regulation must be held at least two weeks before the degree is conferred. After his examination two copies of the thesis are to be submitted to the office of the Dean of Graduate Studies to be proofread. One must be either the original ribbon copy or an electrostatic copy on 20 pound bond paper; the other may be an electrostatic vellum copy reproduced from the original. In addition, one reproduced copy, corrected after proofreading by the Graduate Office, is to be submitted to the Divisional graduate
secretary for the Divisional library. All reproduced copies may be either an electrostatic bond copy (Xerox or similar) or an electrostatic vellum (Xerox or similar).

5. The final examination will consist in part of the candidate's oral presentation and defense of a brief résumé of his research and in part of the defense of a set of propositions prepared by the candidate.

Five propositions are required. In order to obtain diversity with respect to subject matter not more than two shall be related to the immediate area of the candidate's thesis research. Each proposition shall be stated explicitly and the argument presented in writing with adequate documentation. Propositions of exceptional quality presented at the time of the candidacy examination may be included among the five submitted at the time of the final examination.

The propositions, prepared by the candidate himself, should display his originality, breadth of interest, and soundness of training; the candidate will be judged on his selection and formulation of the propositions as well as on his defense of them. It is recommended that the candidate begin the formulation of his set of propositions early in his course of graduate study.

Chemistry as a Minor Subject

Graduate students taking chemistry as a subject minor shall complete a program of study which in general shall include Ch 125 or Ch 144 or Ch 148-149 and one or more graduate courses in chemistry so selected as to provide an understanding of at least one area of chemistry. The total number of units shall not be less than 45, and a grade of C or better in each course included in the program will be required.

DIVISION OF ENGINEERING AND APPLIED SCIENCE

1. Aeronautics. In general, a graduate student is not admitted to work for the doctor's degree in aeronautics until he has completed at least 20 units of research in his chosen field. Thus, upon completion of his fifth year's work, he will be admitted to work towards the engineer's degree. If his course work and research during the sixth year show that he is capable of carrying on work at the doctoral level and if he satisfactorily passes a qualifying oral examination, he may then be admitted to work towards the doctor's degree. Upon being admitted to work towards the doctor's degree, his admission to work for the engineer's degree will be cancelled.

To be recommended for candidacy for the doctor's degree in aeronautics the applicant must pass one of the following subjects with a grade of C or better:

- AMa 101 abc Methods of Applied Mathematics
- AM 125 abc Engineering Mathematical Principles
- Ma 108 abc Advanced Calculus
- Ph 129 abc Methods of Mathematical Physics

and the following subjects:

- Ae 201 abc Fundamentals of Fluid Mechanics
- Ae 203 abc Applied Aerodynamics and Flight Mechanics II
- Ae 210 abc Fundamentals of Solid Mechanics
If any of the above subjects were taken elsewhere than at the Institute, the candidate may be required to pass special examinations indicating an equivalent knowledge of the subject.

2. Applied Mechanics, Engineering Science, Materials Science, and Mechanical Engineering. To be recommended for candidacy for the Ph.D. degree in Applied Mechanics, Engineering Science, Materials Science, or Mechanical Engineering, the student must, in addition to the general Institute requirements (including languages):

a. Complete 12 units of research.

b. Complete at least 50 units of advanced courses arranged by the student in conference with his adviser and approved by the relevant faculty in applied mechanics, engineering science, materials science or mechanical engineering. If any course submitted for candidacy was taken elsewhere than at the Institute, the student may be required to pass special examinations indicating a satisfactory knowledge of the subject.

c. Pass with a grade of at least C an advanced course in mathematics or applied mathematics, such as AM 125 abc, Ph 129 abc, or AMa 101 abc, acceptable to the relevant faculty in applied mechanics, engineering science, materials science, or mechanical engineering. Such courses shall be in addition to requirement (b) above.

d. Complete at least 45 units of advanced courses as a minor as arranged by the student in conference with his advisor and approved by the relevant faculty in applied mechanics, engineering science, materials science or mechanical engineering, and if a subject minor is specified, with the approval of the faculty concerned with the subject minor. The minor requirement may be satisfied in any one of the following ways: (i) a subject minor in another division of the Institute; (ii) a subject minor in another discipline of engineering, which must differ markedly in content from the major; (iii) a general minor consisting of courses listed as Advanced Subjects in the catalog, in one or more disciplines in the sciences, engineering, or the humanities.

A portion of the courses in a general minor should preferably be outside the Division of Engineering; the course used to satisfy the mathematics requirement (c) above may not be included. Courses for either a subject minor or a general minor may be included only if they differ from the field of the student's thesis research. The diploma designates the disciplines of both the major and the minor if the requirements for a subject minor have been satisfied. If a general minor is selected and approved, the diploma designates only the major discipline.

e. Pass a three-hour oral examination on his major subject, and if the student has a subject minor, examination on the subject of that program shall be included.

A final oral examination will be given after the thesis has been formally completed. This thesis examination will be a defense of the doctoral thesis and a test of the candidate's knowledge in his specialized field of research.

A student majoring in another branch of engineering, or another division of the Institute, may, with the approval of the relevant faculty in applied me-
chanics, engineering science, materials science, or mechanical engineering, elect a discipline in one of these fields as a minor subject, consisting of a group of courses that differ markedly from the major subject of study or research.

3. Civil Engineering. Before the end of the second year of graduate residence the student must pass a Ph.D. qualifying oral examination, demonstrating his knowledge of the field of civil engineering. The examination will include, but will not be limited to, presentation and defense of one or more propositions which should be controversial or unresolved topics in civil engineering for which there is more than one point of view. At least eight weeks before the examination the student must submit his propositions for approval. Furthermore, ten days before the examination the student must present (a) a brief exposition of the arguments for each of his propositions, and (b) a brief statement of his proposed thesis research.

To be recommended for admission to candidacy for the Ph.D. degree, the student must, in addition to general Institute requirements (including languages):

a. Pass the qualifying examination described above.
b. Pass a candidacy oral examination on the major subject, and minor subject (if the student has elected a subject minor).
c. Submit a satisfactory written progress report on his thesis research.
d. Pass the courses required for the M.S. degree (except Humanities elective) and other advanced courses as required by the staff.
e. Pass at least 27 units of course work in advanced mathematics such as AM 125, Ph 129, or satisfactory substitution. For a student whose program is more closely related to the sciences of biology or chemistry than physics, AM 113 abc will be an acceptable substitution for the mathematics requirement.

Minor. The purpose of the minor program of study is to broaden the student's outlook by acquainting him with subject matter outside his major field. The minor requirement is completion of at least 45 units of advanced courses arranged by the student in conference with his advisor, and approved by the faculty in civil engineering, in one of the three following ways:

(i) a subject minor in another division of the Institute;
(ii) a subject minor in another discipline of engineering, which must differ markedly in content from the major subject; or
(iii) a general minor consisting of courses listed as Advanced Subjects in the catalog in one or more disciplines; a portion of such courses should preferably be outside the Division of Engineering and Applied Science.

Furthermore, the minor program (subject or general) may not include (a) the courses used to satisfy the mathematics requirement (including prerequisites); nor (b) any course in the specialized field of the student's thesis research.

4. Electrical Engineering. In general, a graduate student is not admitted to work for the doctor's degree in Electrical Engineering until he has received a degree of Master of Science or equivalent.
Admission to graduate work beyond the M.S. degree is by recommendation of the EE faculty, based upon their evaluation of the student's academic record, future research potential, and performance in a preliminary oral examination normally taken in the January before he obtains his M.S. degree.

To be recommended for candidacy for the doctor's degree the applicant must satisfy the requirements listed below.

a. Complete 18 units of research in his field of interest.

b. Complete at least 45 units of advanced courses in a minor field. Courses for either a subject or a general minor may be offered only if their content is primarily in a field other than that of the student's thesis research. Preferably some of the courses in a general minor should be outside the Division of Engineering.

c. Pass with a grade of C or better one of the following subjects:
   
<table>
<thead>
<tr>
<th>Code</th>
<th>Subject</th>
</tr>
</thead>
<tbody>
<tr>
<td>AMa 101 abc</td>
<td>Methods of Applied Mathematics</td>
</tr>
<tr>
<td>AM 125 abc</td>
<td>Engineering Mathematical Principles</td>
</tr>
<tr>
<td>Ma 108 abc</td>
<td>Advanced Calculus</td>
</tr>
<tr>
<td>Ph 129 abc</td>
<td>Methods of Mathematical Physics</td>
</tr>
</tbody>
</table>

An applicant may also satisfy any of the above course requirements by taking an examination in the subject with the instructor in charge. Every examination of this type will cover the whole of the course specified, and the student will not be permitted to take it either in parts (e.g. term by term) or more than twice.

d. Pass a qualifying oral examination covering broadly his major field and minor program of study. This examination is normally taken in the third term of the student's first post-M.S. year.

The candidate is required to take a final oral examination covering his doctoral thesis and its significance in and its relation to his major field. This final examination will be given not less than one month after the doctoral thesis has been presented in final form, and prior to its approval.

DIVISION OF GEOLOGICAL SCIENCES

The following statement summarizes the regulations governing the doctoral program. A circular which provides more detail on these matters is available upon request at the Division Office.

1. Graduate Record Examination Test Scores. All North American applicants for admission to graduate study in the Division of the Geological Sciences are required to submit Graduate Record Examination test scores for verbal and quantitative aptitude tests and the advanced test in geology, or their field of undergraduate specialty if other than geology.

2. Placement Examinations. On Wednesday, Thursday, and Friday of the week preceding registration for his first term of graduate work, the student will be required to map a small field area and to take written placement examinations covering basic aspects of the earth sciences and including elementary physics, mathematics, chemistry, and biology. These examinations will be used to determine the student's understanding of basic scientific principles and his ability to apply these principles to specific prob-
lemas. It is not expected that he possess detailed informational knowledge, but it is expected that he demonstrate a degree of proficiency not less than that attained by abler undergraduate students at the California Institute. A student who has demonstrated proficiency in earlier residence at the Institute may be excused from these examinations.

The student's past record and his performance in the placement examinations will be used to determine whether he should register for certain undergraduate courses. Any deficiencies must be corrected at the earliest possible date.

Each member of the Division faculty serves as an advisor to a small number of graduate students. Each graduate student will be notified, prior to his arrival, who his advisor will be, and prior to registration day the student should seek the counsel of his advisor in planning his program for each term. If the student has, or develops, an interest in a particular field, he should also consult with staff members in that field concerning his program of study and research.

Well-qualified graduate students are encouraged to apply for National Science Foundation Fellowships, but each student should consult with his advisor prior to making application for, seeking a renewal of, or terminating such a fellowship.

It is the wish of the Division that its graduate students become productively research-minded as early as possible. To that end it is strongly recommended that each student register for not less than 10 units of research in two out of the first four terms of residence. Each of these terms of research shall be under the direction of different staff members. Guidance in arranging for research should be sought from that student’s advisor and from individual members of the staff. The primary objective is to communicate to the students the excitement of discovery based on original investigations. An important by-product can be the formulation of propositions for the Ph.D. oral examination or even an orientation toward Ph.D. thesis research.

3. Field Requirement. Many problems in the earth sciences require for their solution an understanding of field techniques and field relations. All students in the Division of Geological Sciences will therefore be required to pursue a program of study in field geology which, at minimum, develops a competence in the solution of field problems equivalent to that achieved in Ge 120 abc. In general, all entering graduate students should expect to take at least one year of field geology during their first year at the Institute, or to take Ge 123 during the first summer. Graduate students majoring in geology in general will be required to take more than the minimal one-year program. The equivalent of the undergraduate field geology program (Ge 120 abc, Ge 121 abc, Ge 123) at the Institute is the basic requirement.

Students who exhibit exceptional ability in physics and mathematics and whose program of study and research is devoted strictly to problems unrelated to surface or subsurface geology or to the characteristics of rocks and geological relations as they can be observed in the field may be excused from the minimal program of study in field geology. Individual decisions on these matters are made by a special committee appointed by the Division Chairman upon request of the student’s advisor.
4. **Proficiency in Mathematics.** For good work in most modern earth-science fields, a proficiency in mathematics equivalent at least to that represented by the course AM 113 abc (Engineering Mathematics) is essential. Students will be required to take that course or demonstrate equivalent training. Much higher proficiency is required in some fields, but a lower proficiency is acceptable in certain fields such as paleontology.

5. **Major Subject.** The work for the doctorate in the Division of the Geological Sciences shall consist of advanced studies and of research in some discipline in the geological sciences which will be termed the "major subject" of the candidate. The Division will accept as major subjects any of the disciplines listed herewith, provided that the number of students working under the staff members in that discipline does not exceed the limit of efficient supervision.

   Geology           Geochemistry
   Geobiology        Geophysics
   Planetary Science

6. **Minor Requirement.** The purpose of the minor requirement is to give diversification of training and a broadening of outlook. It should involve basic approaches, techniques, and knowledge distinct from those of the major subject. The Division prefers to have its students satisfy the minor requirement by work in other divisions of the Institute as prescribed on pages 223-224 of this catalog. However, the student may propose a subject minor in one of the five fields listed in section 3 above, that is different from the major subject, or he may include Geology Division courses within a minor program of general type, if they are pertinent to an intelligently integrated program. However, Ch 124 ab will ordinarily not be acceptable toward the 45 units of minor work. Students from other divisions can obtain a subject minor in geology by offering a suitable combination of graduate-level Geology Division courses which can be, but need not be, concentrated solely in one of the five fields specified in section 3. All proposed minor programs are subject to review and approval by the Division and the Dean of Graduate Studies.

   A proposed minor program for the Ph.D. must be submitted to the staff for preliminary evaluation before the end of the 6th term of residence, and preferably earlier.

7. **Additional Requirements for Ph.D.**

   **In Geochemistry:** In addition to the general Institute and Division requirements, the candidate for the Ph.D. in Geochemistry must have as a minimum the equivalent of the courses that are required for the undergraduate curriculum in geochemistry. The candidate will be expected to take a minimum of 45 units of advanced courses in chemistry and geochemistry. These same courses cannot be presented to satisfy the requirements for a minor or for a distributed minor.

   Substitution for courses equivalent to the undergraduate requirement may be permitted by the Division upon petition. The natures of the substitutions that are permitted will depend upon the abilities and interests of the student.

   **In Geophysics:** Students entering work for a Ph.D. in Geophysics should have completed the following courses or their equivalents: Ph 106 abc, and
either Ma 108 abc or AM 113 abc. If a student is not qualified in these courses, or their equivalents, he may have to spend extra time in residence to acquire this training. In addition, Ph.D. candidates in geophysics are required to take Ph 129 abc and 18 units of advanced (200 level) geophysics courses, plus at least 100 units of advanced course work elected from the following disciplines: Electromagnetic Theory, Advanced Mechanics, Geophysics (200 level), Solid Mechanics—Elasticity, Quantum and Solid State Physics, Statistical Physics—Communication Theory, Applied Mathematics—Numerical Analysis, Thermodynamics, Linear Systems—Signal Analysis, Geology (100 and 200 level courses) including the field geology courses specified in the field requirement above (item 2). The study program is subject to approval by the student’s advisor and faculty members supervising his work.

In Planetary Science: In addition to the general Institute and Divisional requirements, the candidate for a Ph.D. degree in planetary science is required to demonstrate special competence in the geological, geophysical, or geochemical aspects of the moon and planets. This requirement may be satisfied by successful completion of 60 hours of advanced work pertinent to planetary science approved by the Division, including one of the following course combinations:

- Geological emphasis—Ge 220 ab, Ge 221, Ge 222, Ge 225
- Geophysical emphasis—Ge 265 ab, Ph 129 abc, Ge 225
- Geochemical emphasis—Ge 220 ab, Ge 222, Ge 225

All candidates for the Ph. D. degree in planetary science are strongly urged to take a minor in astronomy; however, a distributed minor with a strong emphasis on astronomy may be permitted with Division approval. The candidate’s Divisional advisor will take particular care to see that the study program is constituted to develop a high level of competence in some specific aspect of planetary science.

8. Qualifying Examination. This examination will consist of: (1) the oral defense of 4 propositions prepared by the student and each supported by a succinct one-paragraph statement of the problem and of the candidate’s specific approach to it. The propositions offered must represent a knowledge and breadth of interest judged acceptable by the Division in terms of the student’s maturity. The student has the privilege of consultation and discussion with various staff members concerning his ideas on propositions, but the material submitted must represent the work of the student and not a distillation of comments and suggestions from the staff. Candidates should realize that propositions based on field investigations are just as acceptable as those arising from laboratory or theoretical work. In general, the examination is designed to evaluate a student’s background in the earth sciences and allied fields and to determine his capabilities in applying scientific principles to the solution of specific problems. The ideal candidate will display originality and imagination as well as scholarship.

Propositions must be submitted to the Division office at least one week before registration day of the 4th term of residence, and the examination will be taken within the ensuing two-week period at a time and before a committee arranged by the Division.

Graduate students are encouraged to register for as many as 15 units per
term of research, or advanced study under appropriate staff members to gain experience and background for preparation of their propositions.

9. Admission to Candidacy. A student admitted to work for the Ph.D. degree who fails to satisfy the Division's requirements for candidacy by the end of his fifth term of residence will not be allowed to register in a subsequent academic year except by special permission of the Division of Geological Sciences. Successful completion of the qualifying examination is a necessary step in admission to candidacy. Other requirements are outlined on page 225, item 3, and on pages 236-239.

Before the end of the ninth term of residence, the student will be required to file with the Division the regular form for application for admission to candidacy with specification of major field, the Ph.D. work, a minor program, and evidence of having satisfied the language requirement.

10. Thesis and Paper for Publication. The doctoral candidate must complete his thesis and submit it in final form by May 10 of the year in which the degree is to be conferred. A first draft of the thesis must be submitted by March 1 of the year in which it is proposed to take the degree. The candidate must also prepare a paper for publication embodying the results of his thesis work in whole or in part. He should consult with the member of the staff supervising the major research on the choice of subject and on the scope of the paper.

11. Final Examination. The final oral examination for the doctorate will be scheduled following submission of the thesis and, in conformity with an Institute regulation, it must be scheduled at least two weeks before the degree is to be conferred.

DIVISION OF PHYSICS, MATHEMATICS AND ASTRONOMY

The disciplines offered by the Division in which major or minor work may be undertaken, as specified on page 223, are Astronomy, Mathematics, and Physics.

1. PHYSICS

a. Placement Examinations. On Thursday and Friday preceding the beginning of instruction for his first term of graduate study, a student admitted to work for an advanced degree in physics is required to take placement examinations to be used as a guide in selecting the proper course of study. These examinations will cover material in Mechanics and Electromagnetism, Atomic and Nuclear Physics, Quantum Mechanics, and Advanced Calculus, approximately as covered in Ph 106, Ph 112, Ph 125, and Ma 108. In general, they will be designed to test whether the student possesses an understanding of general principles and a power to apply these to concrete problems, rather than detailed informational knowledge. In cases in which there is a clear basis for ascertaining the status of the entering graduate student, the placement examinations may be waived.

If the placement examinations reveal a need for courses prerequisite to those listed in section b, the student will be required to register for a prescribed course or courses. If he does not obtain grades of C or better in
these courses, he will be allowed to continue his graduate studies only by special permission of the Physics Department Graduate Committee.

**b. Course Groups.** In the statements below of courses required for the oral candidacy examination, admission to candidacy, and recommendation for the Ph.D. degree, the courses are divided into groups as follows:

<table>
<thead>
<tr>
<th>Group I, Required Courses</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ph 129 Methods of Mathematical Physics</td>
<td>18</td>
</tr>
<tr>
<td>Ph 205 Advanced Quantum Mechanics</td>
<td>18</td>
</tr>
<tr>
<td>Ph 209 Electromagnetism and Electron Theory</td>
<td>18</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Group II, Elective Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ph 201 Analytical Mechanics</td>
</tr>
<tr>
<td>Ph 203 Nuclear Physics</td>
</tr>
<tr>
<td>Ph 204 Low Temperature Physics</td>
</tr>
<tr>
<td>Ph 213 Nuclear Astrophysics</td>
</tr>
<tr>
<td>Ph 214 Introduction to Solid State Physics</td>
</tr>
<tr>
<td>Ph 216 Introduction to Plasma Physics</td>
</tr>
<tr>
<td>Ph 217 Spectroscopy</td>
</tr>
<tr>
<td>Ph 221 Topics in Solid State Physics</td>
</tr>
<tr>
<td>Ph 227 Thermodynamics, Statistical Mechanics and Kinetic Theory</td>
</tr>
<tr>
<td>Ph 230 Elementary Particle Theory</td>
</tr>
<tr>
<td>Ph 231 High Energy Physics</td>
</tr>
<tr>
<td>Ph 234 Topics in Theoretical Physics</td>
</tr>
<tr>
<td>Ph 236 Relativity</td>
</tr>
<tr>
<td>Ph 240 Current Theoretical Problems in Particle Physics</td>
</tr>
<tr>
<td>Ay 131 Astrophysics I</td>
</tr>
<tr>
<td>or</td>
</tr>
<tr>
<td>Ay 132 Astrophysics II</td>
</tr>
<tr>
<td>Ay 133 Radio Astronomy</td>
</tr>
</tbody>
</table>

Since the purpose of the Group II course requirements is to broaden the student's knowledge of physics and acquaint him with material outside his own field of specialization, no more than 18 units of any given course may be counted toward any requirement for courses in Group II.

The student is expected to obtain a grade of C or better in each of his courses. If he obtains grades below C in the courses of Group I and those courses he elects from Group II, or in the courses presented to fulfill the requirements for 45 units in a discipline other than physics, or in the oral candidacy examination, the Physics Department Graduate Committee will review the student's entire record, and if it is unsatisfactory, will refuse permission for him to continue work for the Ph.D.

**c. Oral Candidacy Examination.** Prior to the oral candidacy examination, a student must have taken at least 18 units of research and should have passed (or passed the written candidacy examination in) 45 units of the courses listed in Group I and in 27 units of the courses in Group II. The requirement for 18 units of research may be waived if the student has clearly demonstrated his familiarity with research in a particular field. The oral candidacy examination will cover those subjects in physics and the minor subject with which the student may be expected to have gained familiarity through course work, independent study, and laboratory research. It may also include material from the advanced undergraduate courses required of physics majors at the Cali-
fornia Institute. At the discretion of the examining committee this examination may be supplemented by a written examination and, in special cases, may be broken off early without reaching any decision, adjourning to a later date.

Candidates who have selected a minor subject must pass a special oral examination in their minor subject. It is the responsibility of the candidate to make arrangements for this examination. It should be held as soon as possible after completion of the required course work in the minor.

d. Admission to Candidacy. To be recommended for candidacy for the Ph.D. degree in physics, a student must, in addition to the general Institute requirements, pass (or pass the written candidacy examinations in) all 54 units of Group I and 36 units of Group II, pass the physics oral candidacy examination, and be accepted for thesis research by a staff member.

A student, admitted to work toward the Ph.D. degree, who does not satisfy the Division requirements for 54 units of Group I, 36 units of Group II, and the Physics oral candidacy examination by the end of the second year of graduate study at the Institute will not be allowed to register in a subsequent academic year without special permission of the Physics Department Graduate Committee. When a student is required to take courses prerequisite to those listed in section b, this committee ordinarily will grant at that time a suitable extension of the time allowed to complete the candidacy requirements.

e. Further Requirements for the Ph.D. Degree. In order to be recommended for the Ph.D. degree, each candidate must, in addition to the requirements for candidacy and the general Institute requirements for a Ph.D. degree, pass satisfactorily the 54 units from Group I and a total of 54 units from Group II. In addition to these requirements, the student will normally take other advanced courses, particularly in his field of specialization. In general a student will find it desirable to continue his graduate study and research for two years after admission to candidacy.

A final examination will be given not less than one month after the thesis has been presented in final form. This examination will cover the thesis topic and its relation to the general body of knowledge of physics.

The candidate himself is responsible for completing his thesis early enough to allow the fulfillment of all Division and Institute requirements, having due regard for the impossibility of scheduling by the Division of more than one final oral examination per day.

f. Subject Minor. A subject minor program in physics (see page 223) will be approved by the minor division if it includes at least 18 units of Physics courses from Groups I and II, excluding Ph 129, Ay 131, Ay 132, Ay 133, and any specified course in physics required for the major. Physics courses with numbers over 100 but for which reduced units are given to graduate students in physics will be allowed for the subject minor, but will count at the same reduced rate toward the required total of 45 units. The required oral examination in the subject minor will normally be a separate examination but may be part of one of the oral examinations in the major subject if sufficient time is made available. It is the responsibility of the candidate to arrange for this examination.
2. MATHEMATICS

a. Each new graduate student admitted to work for an advanced degree in mathematics will be given an informal interview on Thursday or Friday of the week preceding the beginning of instruction in the fall term. The purpose of this interview is to ascertain the preparation of the student and assist him in mapping out a course of study. The work of the student during the first year will include independent reading and/or research.

b. To be recommended for candidacy for the degree of Doctor of Philosophy in Mathematics the applicant must satisfy the general requirements and pass an oral candidacy examination.

This examination will usually be held at the end of the first term of the second year of graduate study, but in special cases the department may change the date. The purpose of this examination is to evaluate the work of the student up to date, including independent work done by the candidate during his first year. On the basis of the performance, the examining committee will map out the further program of study of the student and specify the course and research requirements which he will have to satisfy to be admitted to candidacy. At the discretion of the department the examination may be supplemented by a written examination.

Students are urged to satisfy the requirements for admission to candidacy as early as possible. Under any circumstances they must have been admitted to candidacy before the beginning of the spring term of the year in which the degree will be conferred.

c. On or before the first Monday in April of the year in which the degree is to be conferred, a candidate for the degree of Doctor of Philosophy must deliver a typewritten or reproduced copy of his thesis to his supervisor. This copy must be complete and in the exact form in which it will be presented to the members of the examining committee. The candidate is also responsible for supplying the members of his examining committee, at the same time or shortly thereafter, with reproduced copies of his thesis. The department will assign to the candidate, immediately after the submission of his thesis, a topic of study outside his field of specialization. During the next four weeks the candidate is expected to assimilate the basic methods and the main results of the assigned topic with the aim of recognizing the direction of further research in this field.

d. The final oral examination in mathematics will be held as closely as possible four weeks after the date the thesis has been handed in. It will cover the thesis and fields related to it and the assigned topic of study.

e. Candidates who have selected a subject minor must pass a special examination in their minor subject. It is the responsibility of the candidate to make arrangements for this examination. It should be held as soon as possible after admission to candidacy and completion of the course work in his minor subject.

f. Subject minor in Mathematics. Students majoring in other fields may take a subject minor in mathematics (see page 223) provided their program consists of 45 units or more units of advanced work in mathematics and is
approved by the Mathematics Committee on Minors. The required oral examination in the subject minor will normally be a separate examination but may be a part of one of the oral examinations in the major subject. It is the responsibility of the candidate to submit the proposed program for approval and to arrange for the examination.

3. APPLIED MATHEMATICS

a. Placement examinations. Each new graduate student admitted to work for the Ph.D. in Applied Mathematics will be given an informal interview on Thursday or Friday of the week preceding the beginning of instruction for the fall term. The purpose of this interview is to ascertain the preparation of the student and assist him in mapping out a course of study. The work of the student during the first year will include some independent reading and/or research.

b. Categories of courses. Courses which are expected to form a large part of the student’s program are divided into three categories as follows:

Group A. Courses in mathematics and mathematical methods. Examples of these would include:

- AMa 101 Methods of Applied Mathematics I
- AMa 201 Methods of Applied Mathematics II
- AMa 104 Matrix Algebra
- AMa 105 Introduction to Numerical Analysis
- Ma 109 Delta Functions and Generalized Functions
- Ma 137 Introduction to Lebesgue Integrals
- Ma 143 Functional Analysis and Integral Equations
- Ma 144 Probability

Group B. Courses of a general nature in which common mathematical concepts and techniques are applied to problems occurring in various scientific disciplines. Examples of these include:

- AMa 151 Perturbation Methods
- AMa 152 Linear and Non-Linear Wave Propagation
- AMa 153 Stochastic Processes
- AMa 251 Applications of Group Theory
- IS 181 Linear Programming

Group C. Courses dealing with special topics in the sciences. A complete list cannot be given here but examples are courses in elasticity, fluid mechanics, dynamics, quantum mechanics, electromagnetism, communication theory, etc.

c. The Oral Candidacy Examination. In order to be recommended for candidacy the student must, in addition to satisfying the general Institute requirements, pass an oral candidacy examination. This examination will normally be given during the first term of the second graduate year. It will be based upon one year’s work in courses of the type described in Group A above, and upon one year’s work in courses of the type described in Groups B and C. The examination will also cover the independent study carried out by the student during his first graduate year.

d. Further Requirements. In order to be recommended for the Ph.D. in Applied Mathematics, the student must do satisfactory work in a program con-
taining at least 45 units of work in courses of the type indicated in Group A, and at least 45 units of courses chosen from Groups B and C. This is intended to prevent undue specialization in either the more mathematical or the more engineering type of courses.

e. Submission of Thesis. On or before the first Monday in April of the year in which the degree is to be conferred, a candidate for the degree of Ph.D. in Applied Mathematics must deliver a typewritten or printed copy of his completed thesis to his research supervisor.

f. Final Examination. The final oral examination will be held as nearly as possible four weeks after the submission of the thesis. The examination will cover the thesis and related areas.

g. The Minor. The minor requirement for students majoring in Applied Mathematics will be satisfied by 45 units of study in a field or fields sufficiently far removed from the candidate’s major field of study. In accordance with Institute requirements, candidates who elect a subject minor must pass a special examination in this subject. It is the responsibility of the candidate to arrange for this examination. It should be held as soon as possible after completion of course work in the minor subject.

Students majoring in other fields may take a subject minor in Applied Mathematics provided the program consists of 45 units sufficiently far removed from their major program of study and is approved by the Applied Mathematics Committee.

4. ASTRONOMY

The Placement Examinations in Physics, page 239, Section 1a, covering material equivalent to Ph 106, Ph 112 and Ph 125, and an oral examination in astronomy by the staff, covering the material in Ay 112, will be required of first-year students. Their goal is to ascertain whether the student’s background of atomic and nuclear physics, mathematical physics, and astronomy is sufficiently strong to permit advanced study in these subjects.

To be recommended for candidacy for the doctor’s degree in astronomy the applicant must (a) complete satisfactorily 18 units of research, Ay 142, (b) pass with a grade of C or better, or by special examination, Ay 131 ab, Ay 132 ab, Ay 133 ab, Ay 210, and Ay 211, and (c) select a satisfactory program, approved by the Department, in fields which will depend on the student’s specialty. Students in radio astronomy may substitute 18 units of Ay 133 ab and Ay 234 for the required course Ay 132 ab. Students in space science may omit Ay 132 ab, Ay 210 and Ay 211, substituting Ay 136, Ge 220 ab or Ge 265 ab, after prior consultation with the instructors.

The student’s program during the first two years of graduate study should include a minimum of 63 units of advanced subjects in physics; for those students specializing in radio astronomy or in applied astronomical electronics, advanced courses in electrical engineering and applied mechanics can be substituted. Students in space science should substitute advanced courses in geophysics and geochemistry. This program of study must be planned, and approved by the Department during the first year. Fields in which subject minors are usually taken include physics, geology, or engineering, dependent on the student’s field of specialization. See page 241 for the physics subject minor.
For admission to candidacy an oral examination will be given covering the entire field of study. This examination must be taken before the end of the second term of the second year. Special permission will be required for further registration if the candidacy course requirements and the oral examination are not satisfactorily completed by the end of the second year of graduate work.

A final draft of the thesis must be submitted at least six weeks before the commencement at which the degree is to be conferred. At least two weeks after submission of the thesis the student will be examined orally on the scope of his thesis and its relation to current research in astronomy.

E. LIVING ACCOMMODATIONS FOR GRADUATE STUDENTS

Housing Facilities. The Institute has four resident houses providing single rooms for 166 male graduate students. These handsome and comfortable residences, located on the campus, were donated by William M. Keck, Jr., Samuel B. Mosher and Earle M. Jorgensen, David X. Marks Foundations, and the family of Carl F. Braun. The rates per academic year vary from $436.50 to $504.00, depending upon the accommodations and services provided. During the summer only, rooms may be rented on a month-to-month basis. Complete information may be obtained and reservations made by writing to the Office of Residence and Dining Halls, California Institute of Technology.

The Athenaeum has a limited number of rooms available for women graduate students. Information about membership and rates may be obtained from the Athenaeum, 551 South Hill Avenue, Pasadena.

There are no facilities available on the campus at present for married graduate students. They should write to the Off-Campus Housing Office, California Institute of Technology, for assistance in finding suitable accommodations in the community.

Dining Facilities. Graduate students are privileged to join the Athenaeum (Faculty Club), which affords the possibility of contact not only with fellow graduate students but also with others using the Athenaeum, including the Associates of the Institute, distinguished visitors, and members of the professional staffs of the Mount Wilson Observatory, the Huntington Library, and the California Institute.

The Chandler Dining Hall, located on the campus, is open Monday through Friday from 7 a.m. to 4 p.m. and 5:30 p.m. to 7:30 p.m.; Saturday and Sunday from 9 a.m. to 1 p.m. and 5:30 p.m. to 7:30 p.m.; serving breakfast, lunch, dinner, and snacks, cafeteria style.

F. FINANCIAL ASSISTANCE

The Institute offers in each of its divisions a number of fellowships, scholarships, and graduate assistantships. In general, scholarships carry tuition awards; assistantships, cash stipends; and fellowships often provide both tuition awards and cash grants. Graduate assistants are eligible to be considered for scholarship grants.

Forms for making application for fellowships, scholarships, or assistantships may be obtained on request from the Dean of Graduate Studies. In using these forms it is not necessary to make separate application for admission to graduate standing. These applications should reach the Insti-
tute by February 15. Appointments to fellowships, scholarships, and as­
sistantships are for one year only; and a new application must be filed each
year by all who desire appointments for the following year, whether or not
they are already holders of such appointments.

In addition, loans are available to graduate students who need such aid to
continue their education. They are made upon application, subject to the
approval of the Scholarships and Financial Aid Committee, and the extent of
the available funds (see page 250).

In addition to loans, the Deferred Payment Plan is also available to gradu­
ate students (see page 250).

I. GRADUATE ASSISTANTSHIPS

Graduate Assistants devote during the school year not more than fifteen hours
a week to teaching, laboratory assistance, or research of a character that af­
foards them useful experience. This time includes that required in preparation
and in marking notebooks and papers, as well as that spent in classroom and
laboratory. The usual assistantship assignment calls for fifteen hours per week
at most and ordinarily permits the holder to carry a full graduate residence
schedule as well.

II. GRADUATE SCHOLARSHIPS AND FELLOWSHIPS*

Institute Scholarships: The Institute offers a number of tuition awards to
graduate students of exceptional ability who wish to pursue advanced study
and research.

Earle C. Anthony Scholarship: A fund has been established by Mr. Earle
C. Anthony for scholarships for graduate students.

ARCS Foundation (Achievement Rewards for College Scientists) of Los
Angeles: The ARCS Foundation has established a fund for the award of
several graduate and undergraduate scholarships.

Meridan Hunt Bennett Scholarships: The scholarships for graduate stu­
dents are granted from the Meridan Hunt Bennett Fund as stated on page
206.

Blacker Scholarships: The Robert Roe Blacker and Nellie Canfield
Blacker Scholarship Endowment Fund, established by the late Mr. R. R.
Blacker and Mrs. Blacker, provides in part for the support of graduate men
engaged in research work. The recipients are designated as Blacker Schol­
ars.

Bridge Fellowship: The late Dr. Norman Bridge provided a fund, the
income of which is used to support a research fellowship in physics. The
recipient is designated as the Bridge Fellow.

Edith Newell Brown Scholarships: The income from the Edith Newell
Brown Fund is used to maintain scholarships for graduate students. The recip­
ients are designated as Edith Newell Brown Scholars.

Theodore S. Brown Scholarships: The income from the Theodore S.
Brown Fund is used to maintain scholarships for graduate students. The recip­
ients are designated as Theodore S. Brown Scholars.

Lucy Mason Clark Fellowship: This fellowship, in the field of plant physi­
ology, is supported by a fund contributed by Miss Lucy Mason Clark.

*Fellows receiving grants equivalent to tuition and $1000 or more per academic year
are permitted to accept employment or other appointment from the Institute during the
academic year only with special approval of the Dean of Graduate Studies.
Financial Assistance

Samuel H. and Dorothy Breed Clinedinst Foundation Scholarship: The income of this fund is designated for graduate scholarship aid.

Ray G. Coates Scholarship: Provided by the income from a bequest made by the late Mrs. Alice Raymond Scudder Coates, to maintain a scholarship for a student of physics. The graduate student recipient is designated as the Ray G. Coates Scholar.

Cole Fellowships: The income from the Cole Trust, established by the will of the late Mary V. Cole in memory of her husband, Francis J. Cole, is used to provide three scholarships annually, one in each of the following fields: electrical engineering, mechanical engineering, and physics. The recipients are designated as Cole Fellows.

Caroline W. Dobbins Scholarships: The income from the Caroline W. Dobbins Scholarship Fund, provided by the late Mrs. Caroline W. Dobbins, is used to maintain scholarships at the Institute. Graduate student recipients are designated as Caroline W. Dobbins Scholars.

Drake Scholarships: The income from the Drake Fund, provided by the late Mr. and Mrs. Alexander M. Drake, is used to maintain scholarships in such numbers and amounts as the Board of Trustees determines. Graduate students who are recipients from this fund are designated as Drake Scholars.

Richard P. Feynman Fellowships: The income from a fund provided by the H. Dudley Wright Research Foundation is to be used to provide graduate fellowships in the field of Physics, with preference to a student in Theoretical Physics. Recipients are designated as Richard P. Feynman Fellows.

Lawrence A. Hanson Foundation: The gifts made by this Foundation are to be used for student aid.

Clarence J. Hicks Memorial Fellowship in Industrial Relations: This fellowship is supported by a fund made available by Industrial Relations Counselors, Inc., and other contributors. The fellowship is granted to a graduate student who undertakes some studies in industrial relations, as approved by the Director of the Industrial Relations Center.

Henry Laws Scholarships: The income from a fund given by the late Mr. Henry Laws is used to provide scholarships for research in pure science, preferably in physics, chemistry, and mathematics. The recipients are designated as Henry Laws Scholars.

Robert L. Leonard: A fund contributed by Mrs. Robert L. Leonard, income from which is for graduate scholarships.

Joseph F. Manildi: A fund contributed as a memorial to Dr. Joseph F. Manildi. The income may be used for graduate or undergraduate scholarships.

Blanche A. Mowrer: A bequest from Blanche A. Mowrer, income from which is for the benefit of graduate students in the pursuance of post-graduate work in the study of chemistry.

David Lindley Murray Scholarships: The income from the David Lindley Murray Educational Fund is used in part to provide scholarships for graduate students. The recipients are designated as Murray Scholars.

May McManus Oberholtz Scholarship Endowment Fund: The income from this fund is to be used for scholarships.

Elbert G. Richardson Scholarship and Fellowship Fund: The income from this fund is used to maintain scholarships and fellowships for graduate students.
Frederick Roeser Scholarship: This scholarship is granted from the Frederick Roeser Loan, Scholarship, and Research Fund. The recipient is designated as the Roeser Scholar.

Eben G. Rutherford Scholarship Fund: The income derived from this fund is used for graduate scholarships.

Ralph L. Smith Scholarship: This scholarship is supported by yearly grants.

Royal W. Sorensen Fellowship: The income from a fund created in honor of Royal W. Sorensen is used to provide a fellowship or a scholarship for a student in electrical engineering.

Keith Spalding Memorial Scholarship Fund: A fund contributed in memory of Mr. Keith Spalding, the income to be used for either graduate or undergraduate scholarships.

Van Maanen Fellowship: One or more pre-doctoral or post-doctoral fellowships are provided in the department of astronomy from the Van Maanen Fund. The recipients are known as Van Maanen Fellows.

Von Karman Scholarship Fund: Given by Dr. William Bollay for scholarships for sons or daughters of Aerophysics Development Corporation employees. The recipients are designated as von Karman Scholars.

III. SPECIAL FELLOWSHIPS AND RESEARCH FUNDS

In addition to the National Science Foundation, the Department of Health, Education and Welfare, the National Aeronautics and Space Administration, the Woodrow Wilson Foundation, and the Ford Foundation, the following corporations, foundations and individuals contribute funds for the support of Graduate Fellowships which are administered by the Institute:

AtlanticRichfieldCompany
R. C. Baker Foundation
Bell Telephone Laboratories
The Boeing Company
Consolidated Electrodynamics Corporation
Del Mar Science Foundation
Douglas Aircraft Company
E. I. du Pont de Nemours Company
Eastman Kodak Company
Fairchild Camera and Instrument Corporation
Flour Foundation
General Dynamics Corporation
General Electric Foundation
General Telephone and Electronics Corporation
Gillette Paper-Mate Manufacturing Company
Fannie and John Hertz Foundation
Hughes Aircraft Company
Inland Steel-Ryerson Foundation

International Business Machines Corporation
Kennecott Copper Corporation
Paul E. Lloyd
Lockheed Leadership Fund
Arthur McCallum Fund
Radio Corporation of America
Rand Corporation
Schlumberger Foundation
Shell Companies Foundation
Sinclair Oil Corporation
Alfred P. Sloan Foundation
Standard Oil Company of California
John Stauffer
Stauffer Chemical Company
Tektronix Foundation
Title Insurance and Trust Company Foundation
TRW Systems
Union Carbide Corporation
United States Steel Foundation
Xerox Corporation, Electro-Optical Systems, Inc.
A number of governmental units, industrial organizations, educational foundations, and private individuals have contributed funds for the support of fundamental researches related to their interests and activities. These funds offer financial assistance to selected graduate students in the form of graduate research assistantships.

Daniel and Florence Guggenheim Fellowships in Jet Propulsion: These are fellowships established with the Guggenheim Jet Propulsion Center by the Daniel and Florence Guggenheim Foundation for graduate study in jet propulsion.

GALCIT Wind Tunnel Fellowships: These are fellowships established with the Guggenheim Aeronautical Laboratory for graduate study in the field of aeronautics.

AEC Special Fellowships in Nuclear Science and Engineering: These fellowships are made available and are administered by the Atomic Energy Commission to support study in the general field of nuclear energy technology. The California Institute is a participating school at which AEC Fellows may pursue graduate study. See Nuclear Energy Option in Mechanical Engineering, page 280, and note under Engineering Science, page 162.

IV. POSTDOCTORAL FELLOWSHIPS

A number of government agencies, foundations, societies, and companies support fellowships for the encouragement of further research by men who hold the doctor's degree. These grants usually permit choice of the institution at which the work will be done, and include, among others, those administered by the National Research Council, Rockefeller Foundation, John Simon Guggenheim Memorial Foundation, Commonwealth Fund, American Chemical Society, Bell Telephone Laboratories, E. I. du Pont de Nemours and Company, Merck and Company, Inc., American Cancer Society, the Atomic Energy Commission, the U. S. Public Health Service, the National Science Foundation, the National Foundation, and other government agencies, as well as various foreign governments. Applications for such fellowships should in general be directed to the agency concerned.

Institute Research Fellowships: The Institute each year appoints as Research Fellows a number of men holding the degree of Doctor of Philosophy who desire to pursue further research. Application for these appointments, as well as for other special fellowships listed below, should be made on forms provided by the Institute. These forms may be obtained from the Chairman of the Division in which the applicant wishes to work.

Gosney Fellowships: In 1929 Mr. E. S. Gosney established and endowed the Human Betterment Foundation. Following the death of Mr. Gosney in 1942, the Trustees of this Foundation transmitted the fund to the California Institute for the study of biological bases of human characteristics. The Trustees of the Institute have, for the present, set the income aside for the establishment of Gosney Fellowships. These are postdoctoral research fellowships, the conditions being similar to those of Guggenheim Fellowships. The stipend varies with the experience of the Fellow.

Harry Bateman Research Fellowship: In honor of Professor Harry Bateman, the Institute offers a research fellowship in pure mathematics to a candi-
date holding the doctorate. The recipient will devote the major part of his
time to research, but will be expected to teach one course in mathematics. The
appointment is normally made for one year, but may be renewed for a second
year.

Arthur Amos Noyes Fellowships: Dr. Arthur Amos Noyes, for many years
Professor of Chemistry and Director of the Gates and Crellin Laboratories of
Chemistry, left most of his estate to the Institute to constitute a fund to be
known as the “Noyes Chemical Research Fund.” The purpose of this fund,
as stated in his will, is to provide for the payment of salaries or grants to
competent persons who shall have the status of members of the staff of the
Institute, and shall devote their time and attention mainly to the execution
at the Institute of experimental and theoretical researches upon the problems
of pure science (as distinct from those of applied science) in the field of
chemistry.

Millikan Fellowship: Established by Dr. Robert A. and Greta B. Millikan.
Postdoctoral fellowship in the field of physical sciences, the recipients to be
known as Millikan Fellows.

Richard Chace Tolman Fellowship: A fellowship in theoretical physics
established in honor of Dr. Tolman, late Professor of Physical Chemistry
and Mathematical Physics.

V. LOANS AND DEFERRED PAYMENTS

There are two sources of loans available to graduate students: Federal loans
under the NDEA and loans from special funds of the California Institute of
Technology. The terms and conditions for these loans are the same as those
outlined for undergraduate students on pages 201 and 211, except that the
maximum amount which may be borrowed under the NDEA by a qualified
graduate student is $2500. The total of loans made to such a student from this
source for all years, including any loans made to him as an undergraduate,
may not exceed $10,000. Loans and the deferred payment plan may also be
used in combination, but the total amount from all sources may not exceed
$2500 in any one year of graduate study. Loans from Institute funds for
graduate students will be subject to interest charges from the time the loan is
made.

The Deferred Payment Plan is also available to graduate students and the
conditions for this plan are as outlined on page 202.

VI. INSTITUTE GUESTS

Members of the faculties of other educational institutions, including research
appointees already holding the doctor’s degree, who desire to carry on special
investigations, may be invited to make use of the facilities of the Institute
provided the work they wish to do can be integrated with the over-all research
program of the Institute and does not overcrowd its facilities. Arrangement
should be made in advance with the chairman of the division of the Institute
concerned. Such guests are given official appointment as Research Fellows,
Senior Research Fellows, Research Associates, Visiting Associates, or Visit-
ing Professors, and thus have faculty status during their stay at the Institute.
Section V

SCHEDULES OF THE COURSES

The school year is divided into three terms. The number of units assigned in any term to any subject represents the number of hours spent in class, laboratory, and preparation per week. In the following schedules, figures in parentheses denote hours in class (first figure), hours in laboratory (second figure), and hours of outside preparation (third figure).\(^1\)

Besides the subjects shown in the course schedules, students are required to take physical education\(^2\) in each term of the freshman and sophomore years.

</tbody>
</table>

\(^1\)The units used at the California Institute may be reduced to semester hours by multiplying the Institute units by the fraction of 2/9. Thus a twelve-unit course taken throughout the three terms of an academic year would total thirty-six Institute units or eight semester hours. If the course were taken for only one term, it would be the equivalent of 2.6 semester hours.

\(^2\)See page 197 for rule regarding excuses from physical education.
## SCHEDULES OF UNDERGRADUATE COURSES
### FIRST YEAR, ALL OPTIONS

The subjects listed below are taken by all students during their first year. Differentiation into the various options begins in the second year.

1 Honor electives (3 units) to be given second and third terms. See page 195.
**ASTRONOMY OPTION**

*(For First Year see page 252)*

Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed under his division may, at the discretion of his department, be refused permission to continue the work of that option. A fuller statement of this regulation will be found on page 193.

### SECOND YEAR

</table>

**Total units per term:**

- 1st: 48-51
- 2nd: 48-51
- 3rd: 48-51

Sophomore electives should include at least 27 units of science and engineering courses. At least 18 units of science and engineering electives shall be in subjects other than mathematics or physics. It is desirable for a student to acquire as broad as possible a background in other related fields of science or engineering.

</tr>
</tbody>
</table>

²Students who plan to do graduate work in astronomy or radio astronomy should elect some of these courses during their third and fourth years, on consultation with their advisors.
Biology Option
(For First Year see page 252)

Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed under his division may, at the discretion of his department, be refused permission to continue the work of that option. A fuller statement of this regulation will be found on page 193.

<table>

**Electives**

In addition to those listed for the third year:

- Bi 117 Psychobiology 1 (2-4-3)
- Bi 129 ab Biophysics (2-0-4)
- Bi 132 ab Biophysics of Macromolecules (3-0-6)
- Bi 133 Biophysics of Macromolecules Laboratory (0-10-4)
- Bi 214 abc Chemistry of Bioorganic Substances (1-0-2)
- Bi 218 Virology (2-3-4)
- Bi 220 abc Developmental Biology of Animals (2-0-4)
- Bi 221 Developmental Biology Laboratory (units to be arranged)
- Bi 230 Psychobiology 2 (units to be arranged)
- Bi 240 abc Plant Physiology (2-0-4)
- Bi 241 abc Advanced Biochemistry (2-0-4)
- Bi 260 Advanced Physiology (units to be arranged)
- Bi 109 Advanced Genetics Laboratory (units to be arranged)
- Bi 22 Special Problems (units to be arranged)
- Ch 14 Quantitative Analysis (2-6-2)
- Ch 144 Advanced Organic Chemistry (3-0-6)
- Ch 244 Molecular Biochemistry (3-0-3)

Any advanced course offered by other Divisions subject to approval by the student's advisor.

¹For list of Humanities electives, see page 252.
CHEMICAL ENGINEERING OPTION
(For First Year see page 252)

Any student of the chemical engineering option whose grade-point average in the required chemistry and chemical engineering subjects of any year is less than 1.9 will be admitted to the required chemistry and chemical engineering subjects of the following year only with the special permission of the Division of Chemistry and Chemical Engineering.

---

1No more than 9 units in chemical engineering and no units in chemistry courses may be elected.
2If ChE 80 units are to be used to fulfill elective requirements in the chemical engineering option, a thesis approved by the research director must be submitted in duplicate before May 10 of the year of graduation.
3For list of Humanities electives, see page 252.
4In addition to approved elective courses listed on page 258, any science and engineering course will be accepted if approved by the advisor. A student entering the chemical engineering option after the sophomore year who has not taken Ch 41 abc and Ch 46 abc must take these courses instead of an equal number of elective units. If EE 5 has not been taken previously, it is strongly recommended as a senior elective.
Undergraduate Courses

APPROVED ELECTIVE COURSES FOR FOURTH YEAR IN THE CHEMICAL ENGINEERING OPTION

Other courses may be taken as electives provided they are in science or engineering subjects and are approved by the advisor. The student must meet any prerequisites required for a course.

1Any courses in science and engineering for which the student has the required prerequisites are acceptable, but no more than 9 units in chemical engineering and no units in chemistry may be elected.

2If Ch 80 units are to be used as electives in the chemistry option, a thesis describing the research or a portion of it and approved by the research director must be submitted in duplicate before May 10 of the year of graduation. No more than 60 units of undergraduate research may be used as chemistry electives without special permission.

3May be taken in either third or fourth year. L 33 abc or L 50 abc may be substituted for L 32 abc.

4In addition to approved elective courses listed on page 260 any science and engineering course will be accepted if approved by the advisor. A student entering the chemistry option after the sophomore year who has not taken Ch 41 abc and Ch 46 abc must take these courses instead of an equal number of elective units.

5For list of humanities electives see page 252.
APPROVED ELECTIVE COURSES FOR THIRD AND FOURTH YEARS IN THE CHEMISTRY OPTION

The choice of electives must include courses which require a total of 18 units of laboratory work (for example, Ch 16, Chemical Instrumentation (0-6-2) requires 6 units of laboratory) or a total of 36 units of research (Ch 80). These elective laboratory units can be accumulated throughout the undergraduate years. No more than 60 units of undergraduate research may be used as chemistry electives without special permission. Other courses may be taken as electives provided they are in science or engineering subjects and are approved by the advisor. Students must meet any prerequisites required by a course.

| Total    |                                          | 47      |

$^1$60 units of science, mathematics or engineering electives are to be taken beyond the sophomore year. For students in the economics option, this should include 21 units in mathematics.

$^2$Chosen from:
- Ec 111 Business Cycles and Governmental Policy
- Ec 112 Modern Schools of Economic Thought
- Ec 104 Government Regulation
- Ec 123 The Russian Economy
- Ec 127 abc Problems in Economic Theory (Seminar)
- Ps 136 abc Science and Technology in Developing Areas
Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed under his division may, at the discretion of the faculty in Engineering, be refused permission to continue the work of that option. A fuller statement of this regulation will be found on page 193.

</tbody>
</table>

The electives must include Ec 4 ab and at least 99 units of Engineering Division courses (Ae, AM, CE, EE, Gr, Hy, IS, JP, MS, ME) in which a passing grade is obtained. Of these 99 units, at least 9 units must be chosen from among available engineering laboratory courses such as AM 103, AM 111, ME 126, EE 91, etc. Electives must be approved by the student's advisor. A passing grade must be obtained in courses aggregating at least 565 units for graduation in the Engineering Option.

For list of Humanities electives, see page 252.

Note: A student who plans to apply for graduate study at the Institute in some field of Engineering should, before choosing his electives, consult Sections IV and V of this catalog for specific requirements for admission to graduate study in this field.
Attention is called to the requirement that all students in the English option demonstrate competence in one foreign language.

Attention is called to the fact that any student whose grade-point average in freshman and sophomore physics, chemistry, and mathematics is less than 1.9 at the end of an academic year may, at the discretion of the Division of Geological Sciences, be refused permission to register in the Geological Sciences Option. Furthermore, any student whose grade-point average is less than 1.9 in the subjects in the Division of Geological Sciences for the academic year, may, at the discretion of the Division, be refused permission to continue in the Geological Sciences Option.

*The following courses are suggested as being especially suitable for a balanced program of study. Different courses may be elected with the advice and consent of the student's advisor, but at least 18 units of electives must be taken outside of the Division. Please note that En 7, which is required of all students in the option in the Junior year, may be elected.

Ch 14    | Quantitative Analysis (2-6-2)                     | 10  |     |     |
Bi 1     | Elementary Biology (3-3-3)                        |     | 9   |     |
Ge 2     | Geophysics (3-0-6)                                |     | 9   |     |
Ge 5     | Geobiology (3-0-6)                                |     |     | 9   |

Bi 10 Animal Biology is strongly recommended for those interested in paleontology.

Geochemistry Option

(Students in the Geochemistry option are strongly urged to elect Ch 41 abc and Ch 46 ab.)

1At least 9 units are to be chosen from the courses in History listed as "Advanced Subjects."

2A total of at least 81 units of history are to be selected from among the courses listed as "Advanced Subjects." The courses so chosen must include at least 9 units in each of three major areas of historical study: early European, modern European, and American History. The 9 units specified for the Sophomore year may count as part of the total of 81 units. Note also that a total of 60 units of science, mathematics, or engineering electives are to be taken beyond the sophomore year.
Undergraduate Courses

MATHEMATICS OPTION
(For First Year see page 252)

Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed under the division may, at the option of his department, be refused permission to continue the work of that option. A fuller statement of this regulation will be found on page 193.

SECOND YEAR

<table>
<thead>

<td>Minimum 18 18 18</td>
</tr>
</tbody>
</table>

For each term the total number of units is required to fall within range 38-48 38-48 38-48

Normally a junior will elect 9 units each term, and a senior 18 units each term, in Mathematics. Sophomores who have not taken Ma 5 must take this course as juniors, postponing the selected course in Mathematics to the senior year. They are strongly advised to take one or preferably two full-year courses in languages.

¹For list of Humanities electives, see page 252.
Attention is called to the fact that any student whose grade-point average is less than 1.9 at the end of an academic year in the subjects listed under his division may, at the discretion of his department, be refused permission to continue the work of that option. A more complete statement of this regulation will be found on page 193.

¹Courses AM 95 abc (Engineering Mathematics) and Ae 104 abc (Experimental Methods in Aeronautics) or Ae 104 a plus Ae 105 b (Research Laboratory in Fluid Mechanics) are required undergraduate subjects. If these, or their equivalents, have not been taken previously they should be taken as electives. Otherwise, more than one year of residence will be required for the M.S. degree in Aeronautics. Graduate students should take AM 113 abc (Engineering Mathematics) instead of AM 95 abc.

²Any advanced seminar as Ae 208 (Fluid Mechanics), Ae 209 (Solid Mechanics) or JP 290 (Jet Propulsion).

³Not fewer than 9 units of electives per term should be taken in the following Aeronautics subjects: Ae 201 abc (Fundamentals of Fluid Mechanics); Ae 203 (Flight Mechanics and Applied Aerodynamics); Ae 210 (Fundamentals in Solid Mechanics); Ae 211 (Applied Solid Mechanics).

¹With Faculty approval, AM 125 abc may be replaced by Ma 108 abc (Advanced Calculus), AMa 101 abc (Methods of Applied Mathematics I), or other satisfactory substitute.

²Substitution for electives listed above may be made with the approval of the student's advisor and the Faculty in Applied Mechanics.

³Students are encouraged to consider a Humanities elective as part of their free elective.

*The elective units may be divided among the 3 terms in any desired manner.
ASTRONOMY
Program for degree of Master of Science in Astronomy

Science electives at least 108 units.
Humanities electives at least 27 units.¹

The choice of astronomy and other science elective courses must be approved by the department. At least 36 units of these 135 units must be selected from Ay 108, Ay 131, Ay 132, Ay 133, Ay 136, Ay 202, Ay 210, Ay 211. Placement examinations in astronomy and physics will be required. See catalog pages 134 and 244. The courses Ay 112, Ph 106, Ph 125 may be required of those students whose previous training in some of these subjects proves to be insufficient.

¹For list of Humanities electives, see page 271.

BIOLOGY

The Biology Division does not admit students for work toward the M.S. degree. In special circumstances the M.S. degree may be awarded, provided that the student has completed at least one year of residence and 135 units of graduate work, which shall include at least 81 units of professional work at an advanced level and at least 27 units of free electives. He must have received a passing grade on each of two placement examinations. In general the degree is not conferred until the end of the second year of residence. The degree does not designate any of the disciplines of the Division, but is an M.S. in Biology.

CHEMICAL ENGINEERING

</tr>
</tbody>
</table>

A minimum of 135 units of graduate subjects, with three terms of graduate registration at the Institute, is required for master's degree. Of the 135 units, 81 must be in advanced professional subjects.

Students admitted for work toward the M.S. in chemical engineering will be required to take three placement examinations, one each in industrial and general chemistry, transport phenomena and equilibrium stage operations of chemical engineering, and engineering thermodynamics of one-component systems. (See page 230.) Any remedial work prescribed as a result of unsatisfactory performance in one or more of these placement examinations must be completed satisfactorily.

¹A student originally admitted to work toward the Ph.D. degree can substitute an equal amount of research, ChE 280, for all or part of this requirement, but must also submit a research report in thesis form and have it accepted by the chemical engineering faculty.

²A minimum of 18 units of these electives must be in advanced chemical engineering subjects; the remainder are to be chosen from other approved advanced subjects but may also include up to 30 units of freely elected graduate courses, which may be in humanities as well as in engineering and science subjects. In addition to the 81 units of advanced professional subjects, AM 113 ab must be taken if the equivalent has not been studied previously.
CHEMISTRY
Program for degree of Master of Science in Chemistry

During the week preceding General Registration for the first term of graduate study, graduate students admitted to work for the M.S. degree will be required to take written placement examinations in the fields of inorganic chemistry and organic chemistry (on Monday) and physical chemistry (on Tuesday). These examinations will cover their respective subjects to the extent that these subjects are treated in the undergraduate chemistry option offered at this Institute and in general will be designed to test whether the student possesses an understanding of general principles and a power to apply these to specific problems, rather than a detailed informational knowledge. Graduate students are expected to demonstrate a proficiency in the above subjects not less than that acquired by abler undergraduates. Students who have demonstrated this proficiency in earlier residence at this Institute may be excused from these examinations.

In the event that a student fails to show satisfactory performance in any of the placement examinations he will be required to register for a prescribed course, or courses, in order to correct the deficiency promptly. In general no graduate credit will be allowed for prescribed undergraduate courses. If the student's performance in the required course or courses is not satisfactory, he will not be allowed to continue his graduate studies except by special action of the Division of Chemistry and Chemical Engineering on receipt of his petition to be allowed to continue.

The needs of chemistry majors vary so widely in specialized fields of this subject that no specific curricula can be outlined. Before registering for the first time, a candidate for the master's degree should consult a member of the Committee on Graduate Study of the Division.

All masters' programs at the Institute require at least one year of residence and 135 units of graduate work, of which 81 units must be at an advanced professional level. For the degree in chemistry, these 81 units must include at least 40 units of chemical research and at least 30 units of advanced courses in science. The remaining 54 units are electives which may be satisfied by advanced work in any area of mathematics, science, engineering, or humanities, or by chemical research. Two copies of a satisfactory thesis describing this research, including a one-page digest or summary of the main results obtained, must be submitted to the Chairman of the Division at least ten days before the degree is to be conferred. The copies of the thesis should be prepared according to the directions formulated by the Dean of Graduate Studies and should be accompanied by a statement approving the thesis, signed by the staff member directing the research and by the Chairman of the Committee on Graduate Study of the Division.

Candidates must satisfy the department of languages that they are able to read scientific articles in at least one of the following languages: German, French, or Russian.

CIVIL ENGINEERING
Program for degree of Master of Science in Civil Engineering

Courses are grouped into five general areas. A program for the MS degree must include electives from at least three areas with a minimum of 12 units from each, and must be approved by the advisor. Students who have not had AM 95 abc or its equivalent will be required to include AM 113 as part of their elective units. Other courses not listed here may be elected if approved by the Civil Engineering Faculty.

Students in Information Science may substitute Ma 108 abc or AMa 153 abc for the above requirement in applied mathematics.

GEOLOGY

Requirements for M.S. Degree in Geology, Geochemistry, and Geophysics

Master's Degree students in Geology, Geochemistry, or Geophysics will be expected to have satisfied, either before arrival or in their initial work at the Institute, the basic requirements of the undergraduate Geology, Geochemistry, or Geophysics curriculum (p. 235, and 264-266). Particular attention is called to requirements in petrology, field geology, chemistry, physics, and mathematics; competence in these subjects will be evaluated during the Placement Examination. Twenty-seven units of such course work may be counted toward the Institute requirement of 135 graduate units. In addition, students must satisfy the Institute requirement of 81 units of advanced graduate work by taking, in consultation with the student's advisor, courses numbered over 100 in geology or other science and engineering options that are not required in the Geology, Geochemistry, and Geophysics undergraduate curriculum. Humanities work may be included in the 27 units of free electives. For most students, two years will be required to meet the Master's Degree requirements.

Only in exceptional cases will the Division permit a student to undertake work leading to an Engineer's Degree in the Geological Sciences. If such instances arise, a program of prescribed study will be worked out with each student on an individual basis.

Students with limited experience in geological field work may be required to take all or a portion of Ge 120 abc as a prerequisite to Ge 121 abc or Ge 123. By approval of the Committee on Field Geology, the field geology requirements may be satisfied by evidence of equivalent training obtained elsewhere.

MATHEMATICS AND APPLIED MATHEMATICS

As nearly all mathematics and applied mathematics students are working for the doctor's degree, and follow programs arranged by the student in consultation with members of the staff, no specific master's degree curriculum is outlined. Additional information is given on page 147.

MECHANICAL ENGINEERING

Program for degree of Mechanical Engineer

Specific requirements for the degree of Mechanical Engineer are given on page 222. The following list will suggest possible subjects from which a program of study may be organized:

Ae 201 abc Fundamentals of Fluid Mechanics
Ae 210 abc Fundamentals of Solid Mechanics
Ae 213 Fracture Mechanics
Ae 216 Structural Dynamics
AM 201 abc Neutron Transport Theory
Ch 226 abc Introduction to Quantum Mechanics
Ch 227 abc The Structure of Crystals
Ch 229 Diffraction Methods of Determining the Structure of Molecules
ChE 205 abc Neutron Transport Theory
ChE 210 abc Thermodynamics of Multi-Component Systems
Hy 200 Advanced Work in Hydraulic Engineering
Hy 201 abc Hydraulic Machinery
Hy 203 Cavitation Phenomena
Hy 210 ab Hydrodynamics of Sediment Transportation
Hy 300 Thesis
JP 203 abc Ionized Gas Theory
JP 212 ab Flame Theory and Combustion Technology
JP 240 ab Heat Transfer in Propulsion Systems
JP 250 abc Fluid Mechanics of Axial Turbomachines
MS 103 ab Physical Metallurgy Laboratory
MS 112 ab Advanced Physical Metallurgy
MS 205 Theory of Mechanical Behavior of Metals
MS 217 X-Ray Metallography II
ME 200 Advanced Work in Mechanical Engineering
ME 300 Thesis—Research
Ph 112 abc Atomic and Nuclear Physics
Ph 205 abc Principles of Quantum Mechanics
Ph 227 ab Thermodynamics, Statistical Mechanics, and Kinetic Theory

The list of subjects which could be chosen as electives for the sixth-year work is given above.

NOTES

*The elective units may be divided among the 3 terms in any suitable manner.

1 Students who have not had the equivalent of AM 95 abc are required to take AM 113 abc as a part of the free electives.

2 Electives may include graduate courses from any option, including humanities.
PHYSICS

Program for degree of Master of Science in Physics

Ph 112 abc ........................................................ 27 units
(If this course was taken as part of an undergraduate program, or an equivalent course was taken elsewhere and a satisfactory score made on the placement examination, it may be replaced by 27 units of any graduate courses.)

Physics Electives ................................................... 81 units
These must be selected from Ph 115 abc, Ph 129 abc, Ph 201 abc, Ph 203 abc, Ph 205 abc, Ph 209 abc, Ph 213 abc, Ph 214 ab, Ph 216 abc, Ph 217, Ph 221, Ph 227 abc, Ph 230 abc, Ph 231 abc, Ph 236 abc, Ph 237 abc.

Non-Physics Electives ............................................... 27 units
These must be graduate courses from any option, including Humanities, except Physics.

Note: Each program must be approved by the Departmental Representative. With his approval, students who have the proper preparation may substitute other graduate courses in science or engineering for some of those listed above.
AERONAUTICS

ADVANCED SUBJECTS

Ae 101 abc. Elements of Gasdynamics. 9 units (3-0-6); each term. Prerequisites: Elementary Thermodynamics and Fluid Dynamics. The course is intended to give an integrated overall picture of modern gasdynamics and its relation to thermodynamics and kinetic theory. Topics covered include: Thermodynamics of perfect and real gases and gas mixtures; stationary and non-stationary channel flow; shock waves; Euler equations; concepts of vorticity and its relation to entropy and enthalpy distribution; small perturbation theory for subsonic and supersonic flows; viscosity and heat conduction effects; Couette flow and boundary layer concept; elements of kinetic theory. Text: Elements of Gasdynamics, Liepmann-Roshko. Instructors: Liepmann, Roshko.

Ae 102 abc. Static and Dynamic Elasticity. 9 units (3-0-6); each term. Prerequisites: AM 97, AM 98. Fundamentals of applied elasticity with examples from aircraft, missile, and spacecraft structures. Exact solutions for two- and three-dimensional problems. Approximate methods of attack on complex problems including energy methods and analogue techniques of various types. Analysis of beams, plates and shells including higher order effects and non-linear problems. Buckling of structural elements. A concise review of wave propagation and vibration principles supplemented by engineering examples of structural components subjected to dynamic loads. Instructor: Knauss.

Ae 103 abc. Applied Aerodynamics and Flight Mechanics I. 9 units (3-0-6); each term. Prerequisite AM 95a, b or by agreement with instructor. This course gives an integrated picture of modern applied aerodynamics up to and including performance, stability and control of aerospace vehicles. Topics include: Basic field and conservation equations of continuum fluids. Momentum generating devices. Viscous phenomena, including incompressible laminar and turbulent boundary layers with pressure gradients. Stream functions and vector and scalar potentials. Lift in two and three dimensions. Applications of the complex variable and conformal mapping to airfoil, lifting line and Trefftz plane theory. Real airfoils and wings. Generalized vehicle performance. Static stability and control; small disturbance dynamic stability and control response. Instructor: Lissaman.

Ae 104 abc. Experimental Methods in Aeronautics. 9 units (3-0-6) first term; (3-3-3) second term; (2-7-0) third term. The first term is devoted to the design and use of instruments. Fundamental principles involved in making precision measurements. Parameters governing the accuracy of instruments. Instrumental and other methods of improving the accuracy of experimental data. The second term consists of experimentation in fluid mechanics. Measurements of the physical properties of fluids and fluid flows, with particular attention to low-speed aerodynamics, turbulence, and steady and non-steady gas dynamics. Examples demonstrate the use of analogies and flow visualization methods. The third term deals with experimental techniques in solid mechanics and applied elasticity. Experiments demon-
strate the basic principles established in elasticity and show both the advantages and disadvantages of the experimental method. Solution of structural analysis problems by analog techniques. The analysis and presentation of experimental data are discussed. Instructors: Klein, Coles, Sechler.

Note: Either Ae 104 b or Ae 104 c may be used to satisfy the undergraduate laboratory requirement for students in engineering.

Ae 105 bc. *Research Laboratory in Fluid Mechanics. 9 units (0-0-9); second and third terms. Prerequisite: Ae 104 a and permission of instructor. Introduction to experimental research for students who may wish to continue in this field. Closely supervised research covering problem formulation, shop practice, instrumentation and measuring technique, data interpretation, documentation, and technical writing. Instructors: Coles, B. Sturtevant.

*May be substituted for Ae 104 b, c by persons expecting to undertake thesis research in the area of fluid mechanics.

Ae 150 abc. Aeronautical Seminar. 1 unit (1-0-0); each term. Speakers from campus and outside research and manufacturing organizations discuss current problems and advances in aeronautics.

Ae 200 abc. Research in Aeronautics. Units to be arranged. Theoretical and experimental investigations in the following fields: aerodynamics, compressibility, fluid and solid mechanics, supersonic and hypersonic flow, aeroelasticity, structures, thermoelasticity, fatigue, photoelasticity. Instructors: Staff.

Ae 201 abc. Fundamentals of Fluid Mechanics. 9 units (3-0-6); each term. Prerequisites: Ae 101, AM 113, or AM 125. Foundations of the mechanics of real fluids. Basic concepts will be emphasized. Subjects covered (not necessarily in the order listed) include: physical properties of real gases; the equations of motion of viscous and inviscid fluids; the dynamical significance of vorticity; exact solutions; motion at high Reynolds number emphasizing boundary layer concepts and their mathematical treatment; inviscid compressible flow theory; shock waves; similarity laws for subsonic, transonic, supersonic and hypersonic flows. In addition topics will be selected from the following subjects: low Reynolds number approximate solutions; hypersonic aerodynamics; acoustics; flow of mixtures with chemical changes and energy transfer; stability and turbulence; rotating and stratified fluids. Instructor: Saffman.

Ae 203 abc. Applied Aerodynamics and Flight Mechanics II. 9 units (3-0-6); each term. Prerequisites: Ae 102, Ae 103, AM 113. Atmospheric flight mechanics, controlled motion of airplanes and rockets, atmospheric perturbation effects, gyroscopic coupling effects. Orbital flight mechanics, launching trajectories, space trajectories, orbital perturbations. Multi-stage rocket performance. Re-entry mechanics and aerodynamic heating. Special topics in wing theory, linearized incompressible and supersonic lifting surface theory and non-stationary wing theories. Reverse flow theorems and minimum drag theorems for incompressible and supersonic flow. Instructor: Stewart.

Ae 208 abc. Fluid Mechanics Seminar. 1 unit (1-0-0); each term. A seminar course in fluid mechanics. Weekly lectures on current developments are presented by staff members, graduate students, and visiting scientists and engineers. Instructor: Liepmann.

Ae 209 abc. Seminar in Solid Mechanics. 1 unit (1-0-0); each term. A seminar for staff and students of all divisions whose interests lie in the general field of solid me-
chanics. Reports on current research by staff and students on the campus are intermixed with seminars given by invited lecturers from companies and other research institutions. Instructors: Staff.

**Ae 210 abc. Fundamentals of Solid Mechanics.** 9 units (3-0-6); each term. Prerequisite: Ae 102 or equivalent. Theoretical foundations of the mechanics of elastic, anelastic and plastic bodies. Basic methodology is emphasized. The first part is a matrix approach to the theory of elasticity, dynamics of elastic and viscoelastic systems. The second part is continuum mechanics: it includes tensor analysis; stress and strain tensors; linear elasticity; vibrations and elastic waves; variational principles and their applications; irreversible thermodynamics, heat conduction, thermoelasticity, viscoelasticity; finite strain; plasticity; theory of stability. The third part deals with some special methods for boundary value problems: it includes theory of biharmonic functions; strain potential; stress functions; Galerkin, Papkovich, Neuber functions; integral transformations. Instructor: Sechler.

*Note:* The following group of courses, Ae 212 to 225, represents a series of one-term courses in Advanced Solid Mechanics. They will be given as student demand requires and staff facilities permit.

**Ae 212. Shell Theory.** 9 units (3-0-6); one term. General mathematical formulation of the theory of thin elastic shells. Membrane and bending stresses in shells. Elastic stability. Surveys of recent advances in the non-linear theories of stressing and buckling of shells.

**Ae 213. Fracture Mechanics.** 9 units (3-0-6); one term. Prerequisite: Ae 210 or equivalent. An advanced course stressing the interdisciplinary approach to the fracture of material, both metallic and non-metallic. The Griffith macroscopic theory of brittle fracture and its extension to ductile and viscoelastic materials. Mechanics of crack propagation including dynamic effects of running cracks. Instructors: Staff.

**Ae 215. Theory of Finite Strains.** 9 units (3-0-6); one term. Stress-strain relationships in highly deformable media. Application of variational principles. Solutions to crack and wave problems involving large deformations. Discussion of elastic stability of hollow cylinders and spheres under plane stress and plane strain. Form of the strain energy function appropriate to compressible rubbers. Finite elastic analog of Poisson's ratio.

**Ae 221. Theory of Viscoelasticity.** 9 units (3-0-6); one term. Prerequisite: Ae 210 or equivalent. Material characterization and thermodynamic foundation of the stress-strain laws. Correspondence rule for viscoelastic and associated elastic solutions and integral formulation for quasi-static boundary value problems. Treatment of time-varying boundary conditions such as moving boundaries and moving loads. Approximate methods of viscoelastic stress analysis and discussion of the state-of-the-art of failure analysis and non-linear viscoelasticity.

**Ae 223. Design Criteria for Missiles, Boosters, and Spacecraft.** 9 units (3-0-6); one term. A review of the static and dynamic design criteria for structural components relating to the missile and space program. Items affecting payload capability for a given
mission and the relationship between reliability and design criteria. The impact of new materials and analysis methods on the designer.

Ae 225 abc. Special Topics in Solid Mechanics. 9 units (3-0-6); each term. Subject matter will change from term to term depending upon staff and student interest but may include such topics as structural dynamics; aerelasticity; thermal stress; mechanics of inelastic materials; and non-linear problems. Enrollment is by permission of the instructor.

Note: The following group of courses Ae 231 to Ae 240 includes one-term advanced courses in Fluid Mechanics which will be offered from time to time as demand warrants and staff availability permits. The courses which will be offered in 1966-67 are indicated.

Ae 233. Topics in High Temperature Gasdynamics. 9 units (3-0-6); offered first term 1966-67. Prerequisites: Ae 101, Ae 201, AM 113, or AM 125, or AMa 101. Some aspects of the effects of gasdynamics of chemical reactions and departures from local thermodynamic equilibrium at high temperatures and low densities. Flow around bodies and in wakes at hypersonic speeds; importance of energy transfer by diffusion and by radiation. Ionized gases at low density. Instructor: Lees.

Ae 234. Hypersonic Aerodynamics. 9 units (3-0-6); offered second term 1966-67. Prerequisites: Ae 101, Ae 201 a, AM 125. An advanced course dealing with aerodynamic problems of flight at hypersonic speeds. Topics are selected from: Hypersonic small-disturbance theory, blunt body theory, boundary layers and shock waves in real gases, heat and mass transfer, testing facilities and experiments. Text: Hypersonic Flow Theory, Hayes and Probstein. Instructor: Kubota.

Ae 235. Magneto-Fluid Dynamics. (3-0-6); one term. Prerequisites: Ae 101, AM 125, Ph 107 or equivalent. Review of Electrodynamics: Maxwell Stresses, Field- and Momentum-Energy tensors. Thermodynamics of fluids in electromagnetic fields. Equations of motion of a conducting gas. Characteristics, shock waves. Discussion of some typical flow problems such as Couette flow, Rayleigh's problem, piston problem, etc. Limitation of the one fluid approach and discussion of possible generalizations.

Ae 236. Topics in Plasma Physics. (3-0-6); one term. Prerequisites: Permission of instructor. A lecture course on current problems in the dynamics of ionized gases offered jointly with the Astronomy department. The course will be given by resident or visiting faculty members. The subject matter will vary from year to year and may include, e.g., plasma waves, plasma stability problems, radiation from plasma sources, statistical mechanics of ionized gases, etc.

Ae 237. Shock Tube Theory and Techniques. 9 units (3-0-6); offered second term 1966-67. Prerequisites: Ae 101, AM 95 or AM 113. Review of shock waves in moving coordinate systems, in real and perfect gases. Simple expansion waves. Basic shock tube equation; various shock tube parameters. Reflected shock waves. Effects of area change. Driver types and characteristics. Non-ideal behavior in shock tubes; diaphragm opening effects, boundary layer effects. Shock tube techniques and
measurements. Illustrations of shock tube applications; shock wave structure, shock wave interactions, experiments on chemical and physical properties of gases, reaction rates, aerodynamic experiments, light gas guns, etc.

**Ae 239. Turbulent Shear Flows. 9 units (3-0-6); offered third term 1966-67.** Prerequisites: Ae 101, AM 113. Equations of mean motion and review of boundary layer concepts. Similarity arguments for turbulent shear flows and extension to energy processes. Integral methods: single and multi-parameter methods of calculation. Discussion of transition, roughness, heat and mass transfer. Applications in geophysics and astrophysics. Wakes, free shear layers, separated flows. (Subject matter will vary from year to year.) Instructor: Coles.

**Ae 240 abc. Special Topics in Fluid Mechanics. 9 units (3-0-6); each term.** Subject matter will change from term to term depending upon staff and student interest. Enrollment is by permission of the instructor.

**AERONAUTICS—JET PROPULSION**

*(For Jet Propulsion see pages 337-339)*

**AIR FORCE—AEROSPACE STUDIES**

**AS 3 abc. Growth and Development of Aerospace Power. 7 units (3-0-4); three terms.** Prerequisite: Satisfactory completion of the six-week Air Force summer field training. A survey course about the nature of war; the development of airpower in the United States; mission and organization of the Defense Department; Air Force concepts, doctrine, and employment; astronautics and space operations; and the future development of aerospace power. Instructors: Air Force Staff.

**AS 4 abc. The Professional Officer. 7 units (3-0-4); three terms.** Prerequisite: AS 3 abc. The meaning of professionalism, professional responsibilities, the military justice system; leadership theory, functions, and practices; management principles and functions; problem solving; management tools, practices, and controls. Instructors: Air Force Staff.

**ANTHROPOLOGY**

**An 1. Race, Language and Culture. 9 units (3-0-6); first term; Senior Elective.** Human and cultural evolution. Descriptive analysis of hunting and gathering societies in the Old and New Worlds. The development of racial, linguistic and cultural diversity. The agricultural revolution and the rise of the preindustrial city. Instructor: Scudder.

**An 2. Social and Cultural Anthropology. 9 units (3-0-6); second term; Senior Elective.** The social organization of contemporary societies with examples chosen primarily from Africa and village communities in Europe and the Middle East. Instructor: Scudder.

**An 3. Theories of Social Change. 9 units (3-0-6); third term; Senior Elective.** Social change with particular emphasis on the relationship of contemporary rural societies in developing areas to the intensification of agriculture, urbanization and industrialization. Induced change and revitalization movements. Instructor: Scudder.
APPLIED MATHEMATICS
ADVANCED SUBJECTS

AMa 101 abc. Methods of Applied Mathematics I. 9 units (3-0-6); three terms. Prerequisite: Ma 108 or equivalent. Review of basic complex variable analysis; analytic continuation; ordinary linear differential equations with applications to special functions, asymptotic expansions; integral transforms. Applications to boundary value problems and integral equations. Instructor: Knowles.

AMa 104. Matrix Algebra. 9 units (3-0-6); first term. Prerequisite: AM 95 abc or equivalent. Theory of matrices from the standpoint of mathematical physics and as used in the formulation of problems on high-speed analog and digital computers. Canonical forms are developed for self-adjoint and for general matrices. Text: Principles of Numerical Analysis, Householder. Instructor: Franklin.

AMa 105 ab. Introduction to Numerical Analysis. 11 units (3-2-6); second and third terms. Prerequisites: Ma 108 or AM 95 or equivalent; Ma 5, Ma 31 or AMa 104 or equivalent; and familiarity with coding procedures by the middle of the first quarter of the course. The topics considered include: Interpolation and quadrature. Numerical solution of algebraic and transcendental equations. Matrix inversion and determination of eigenvalues. Numerical solution of ordinary differential equations. Numerical solution of elliptic, parabolic, and hyperbolic partial differential equations. Instructor: Franklin.

AMa 110. Introduction to the Calculus of Variations. 9 units (3-0-6); first term. Prerequisite: Ma 108 or equivalent. The first variation and Euler’s equation for a variety of classes of variational problems from mathematical physics. Natural boundary conditions. Subsidiary conditions. The theory of extremal fields for single-variable variational problems. Conjugacy and the second variation. Hamilton-Jacobi theory. An introduction to the direct methods of Rayleigh, Ritz, and Tonelli and their application to equilibrium and eigen-value problems. Some simple aspects of control problems. Instructor: DePrima.

AMa 151 abc. Perturbation Methods. 9 units (3-0-6); three terms. Prerequisite: AMa 101 or equivalent. The course discusses uniformly valid approximations in various physical problems. Generalized boundary layer technique. Coordinate straining techniques; Poincare’s method. Problems with several time scales; averaging techniques; method of Krylov-Bogoliubov. Eigenvalue problems. Examples taken from linear and nonlinear vibrations, orbital problems, viscous flow, elasticity. Instructor: Lagerstrom.

AMa 152 abc. Linear and Nonlinear Wave Propagation. 9 units (3-0-6); three terms. Prerequisite: AMa 101 or equivalent. Mathematical formulation, hyperbolic equations, characteristics, shocks. Combined effect of nonlinearity and diffusion. Wave propagation with relaxation effects. Dispersive waves, group velocity, geometry of waves, nonlinear dispersive waves. Diffraction theory. The emphasis is on solving physical problems and the mathematical theory is developed through a wide variety of problems in gas dynamics, water waves, plasma physics, electromagnetism. Not offered in 1966-67.

AMa 153 abc. Stochastic Processes. 9 units (3-0-6); three terms. Prerequisite: Ma 108; or AM 95 and 113. An introductory course designed to proceed from an elementary and often heuristic discussion of a variety of stochastic processes in physics to a unified mathematical treatment of the subject. Topics will include: Concepts
of power spectra and correlation functions and their use in problems like shot
effect, Brownian motion, wave propagation in media with random inhomogene-
ities, turbulence, etc. Response of systems of oscillators to random inputs. Fokker-
Planck equation and its application to nonlinear oscillator problems. General

AMa 190. Reading and Independent study. Units by arrangement.

AMa 201 abc. Methods of Applied Mathematics II. 9 units (3-0-6); three terms. Prerequisite: AMa 101 or equivalent. First order partial differential equations; classification of higher order equations; well-posed problems. Fundamental solutions and Green's functions; eigenfunction expansions; solution by integral transforms. Singular integra-
equations. Instructors: Cohen, Cole.

AMa 251 abc. Application of Group Theory. 9 units (3-0-6); first and second terms. Pre-
requisite: Some knowledge of linear algebra. Applications of group theory to dif-
ferential equations and to physics, in particular quantum mechanics, will be dis-
cussed. Mathematical topics to be covered include: Basic concepts of group
theory. Infinitesimal transformations and Lie algebras. General notions of group
representations. Detailed discussion of classical groups (symmetric, orthogonal,
unitary, Lorentz, etc.) and of their representations. Not offered in 1966-67.

AMa 290. Applied Mathematics Colloquium. 2 units. Three terms.

AMa 291. Seminar in Applied Mathematics. Units by arrangement.

AMa 300. Research in Applied Mathematics. Units by arrangement.

Other courses particularly suitable in making up a program in Applied Mathe-
matics include:

Ma 109  Delta Functions and Generalized Functions
Ma 137  Introduction to Lebesgue Integrals
Ma 143  Functional Analysis and Integral Equations
Ma 144  Probability
Ma 205  Numerical Analysis
AM 130  Applications of Classical Theoretical Physics I
AM 131  Applications of Classical Theoretical Physics II
AM 135  Mathematical Theory of Elasticity I
AM 136  Mathematical Theory of Elasticity II
AM 174  Advanced Dynamics I
AM 204  Hydrodynamics of Free Surface Flows
Ae 233  Mathematical Fluid Dynamics
Ae 235  Magneto-Fluid Dynamics
Ae 236  Topics in Plasma Physics
IS 181  Linear Programming
Ph 125  Quantum Mechanics
Ph 209  Electromagnetism and Electron Theory
Ph 227  Thermodynamics, Statistical Mechanics, and Kinetic Theory
EE 161  Communication Theory
Subjects of Instruction

APPLIED MECHANICS

UNDERGRADUATE SUBJECTS

AM 95 abc. Engineering Mathematics. 12 units (4-0-8); first, second and third terms. (Graduate students needing this material should take AM 113 abc.) Prerequisites: Ma 1 abc, Ma 2 abc, or equivalent. AM 95 a may be taken simultaneously with Ma 2 c by sophomores with advanced standing in mathematics. A course in the mathematical treatment of problems in engineering and physics. Emphasis is placed on the formulation of problems as well as their mathematical solution. The topics studied include: vector analysis as applied to formulation of field theory problems; a basic introduction to analytic functions of complex variables; special functions such as the Bessel functions and Legendre functions; series of orthogonal functions; partial differential equations and boundary value problems, and an introduction to integral transforms. Text: *Differential Equations Applied in Science and Engineering*, Wayland. Instructors: Knowles, Wayland, and staff.

AM 97 abc. Analytical Mechanics of Deformable Bodies. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 1 abc and Ma 2 abc. Basic principles of stress and strain, displacements and strains in a continuum, stress-strain relations, strain energy methods, and stress failures. Equations of the Theory of Elasticity, uniqueness, and St. Venant's principle. Applications to beams, elastic instability, axially symmetrical problems, stress concentrations, torsion, plates and shells, wave propagation, and plastic and inelastic behavior, stresses and strains as tensors, numerical methods and experimental methods in stress analysis, variational methods. Instructors: Housner, Vreeland, Jennings.

AM 98 abc. Analytical Dynamics. 9 units (3-0-6); first, second, and third terms. This course for Junior or Senior undergraduates has been replaced by AM 151 abc, Dynamics and Vibrations, which may be taken by undergraduates who have had AM 95 abc or who are taking it concurrently.

ADVANCED SUBJECTS

AM 101 abc. Nuclear Reactor Theory. 9 units (3-0-6); each term. Prerequisite: AM 95 abc or equivalent. Neutron chain reactions and the criticality condition; the slowing down of neutrons in an infinite medium; one-speed diffusion of neutrons in multiplying and non-multiplying systems; combined slowing down and diffusion; bare and reflected homogeneous reactors; effects of heterogeneity; time dependent behavior of reactors; control rod theory; elements of transport theory. Instructor: Lurie.

AM 102 abc. Applied Modern Physics. 9 units (3-0-6); each term. Prerequisite: AM 95 abc or equivalent. A comprehensive introduction to modern physics for engineering students. Topics covered include: atomic physics; introductory quantum mechanics; statistical mechanics; solid state physics; interaction of charged particles, neutrons and gamma rays with matter; nuclear stability; nuclear reactions; and nuclear fission. Applications such as lasers, semiconductors, and radiation shielding will also be discussed. Instructor: Corngold.

AM 103 a. Nuclear Radiation Measurements Laboratory. 9 units (1-4-4); second term. Prerequisite: Ph 2 abc. A one-term laboratory course designed to familiarize students with basic nuclear detecting and measuring techniques. The instruments are used to determine the properties of various types of radiation and to observe the nature of their inaction with matter. Instructor: Shapiro.
AM 103 b. Nuclear Energy Laboratory. 9 units (1-4-4); third term. Prerequisites: AM 103 a, AM 101 (may be taken concurrently). Measurements associated with nuclear reactor parameters are made. Steady state neutron flux distributions in moderators and in a subcritical assembly are analysed. Dynamic techniques are also employed with the use of a pulsed neutron generator. Instructor: Shapiro.

AM 105. Advanced Strength of Materials. 6 units (2-0-4); second term. Prerequisite: AM 97 abc. Analysis of problems of stress and strain that are described by ordinary differential equations, such as beams on elastic foundation, curved bars, combined bending and axial loading of beams, combined bending and torsion of beams. Energy methods of solution. Instructor: Housner.

AM 106. Problems in Buckling. 6 units (2-0-4); third term. Prerequisite: AM 97 abc. Analysis of problems dealing with the elastic instability of columns, beams, arches and rings, and the inelastic buckling of columns. Instructor: Housner.

AM 111. Experimental Stress Analysis. 9 units (1-6-2); second term. Prerequisite: AM 97 abc or equivalent. Static and dynamic stress and strain measurements, including the use of piezoelectric materials; wire resistance strain gages; mechanical, optical, inductance, and capacitance displacement gages; photoelastic materials; brittle lacquer coatings; X-rays, and associated instrumentation and recording systems. Instructors: Staff.

AM 113 abc. Engineering Mathematics. 12 units (4-0-8); each term. For graduate students only. Prerequisites: Ma 1 abc, Ma 2 abc, or equivalent. A course for graduate students who have not had the equivalent of AM 95 abc. Emphasis is placed on the setting up of problems as well as their mathematical solution. The topics studied include: vector analysis; analytic functions of a complex variable and applications; ordinary differential equations: emphasizing power series solutions; special functions such as the Bessel and Legendre functions; partial differential equations and boundary value problems, with emphasis on applications of series of orthogonal functions; and an introduction to transform methods. Instructors: Knowles, Wayland, and staff.

AM 125 abc. Engineering Mathematical Principles. 9 units (3-0-6); each term. Prerequisites: AM 95 abc or AM 113 abc, or MA 108, or equivalent. Nonlinear first-order ordinary differential equations; ordinary linear differential equations of second order, Sturm-Liouville theorems, Green's functions, asymptotic expansions and method of steepest descent; integral transform theory; partial differential equations of first and second order; applications to vibrations, elasticity, acoustic and electromagnetic wave propagation, kinetic theory and fluid mechanics problems. Instructor: Caughey.
AM 130 abc. Introduction to Classical Theoretical Physics I. 9 units (3-0-6); first, second, and third terms. Prerequisite: AM 95 abc, or equivalent. Analytical mechanics, heat conduction, thermodynamics, kinetic theory of gases, transport theory, statistical mechanics. Instructor: Hsieh.

AM 131 abc. Introduction to Classical Theoretical Physics II. 9 units (3-0-6); first, second, and third terms. Prerequisite: AM 95 abc, or equivalent. Principles of continuum mechanics, electrodynamics, special relativity. Instructor: Plesset.

AM 136 abc. Advanced Mathematical Elasticity Theory. 9 units (3-0-6); first, second, and third terms. Prerequisite: AM 135 abc or equivalent. Special topics in the advanced linear theory and the nonlinear theory of elasticity; specific content may vary from year to year. Representative topics include: theory of Green's functions, mean value theorems and St. Venant's principle in the linear theory; linear thermoelasticity; integral transform and complex-variable methods in classical elasticity. Shell theory and problems of boundary layer type in elasticity; elastic instability. Introduction to the nonlinear theory and applications. Instructors: Knowles, Shield, Sternberg.

AM 151 abc. Dynamics and Vibrations. 9 units (3-0-6); first, second and third terms. Prerequisites: AM 95 abc, or permission of the instructor. The mechanics of particles, groups of particles and rigid bodies is studied within the framework of Hamilton's principle and Newton's laws of motion. Topics considered include: conservation principles, Lagrange's and Euler's equations, central force field problems, resonant vibration theory, response of systems to periodic and transient excitation, random vibration theory, general normal mode theory, matrix methods for vibration problems, vibration of continuous systems, and methods of nonlinear analysis. Instructors: Caughey, Hudson, Iwan.
AM 155. Dynamic Measurements Laboratory. 9 units (1-6-2); first term. Experimental studies of the behavior of dynamic systems, using the latest electric analog techniques. Free oscillations, and steady state and transient-forced oscillations of linear and nonlinear systems are considered. Instructors: Caughey, Hudson, Iwan.

AM 160. Vibrations Laboratory. 6 units (0-3-3); second term. Prerequisite: AM 151 abc, or permission of the instructor. Experimental analysis of typical problems in structural dynamics and mechanical vibrations. Measurement of strains, accelerations, frequencies, etc., in vibrating systems, and the interpretation of the results of such measurements. Consideration is given to the design, calibration, and operation of the various types of instruments used for the experimental study of dynamics problems. Instructors: Caughey, Hudson, Iwan.

AM 175 abc. Advanced Dynamics. 9 units (3-0-6). Prerequisites: AM 125 abc and AM 151 abc or equivalents. A lecture course dealing with the theory of dynamical systems. Topics considered will include linear and nonlinear vibrations of discrete and continuous systems, stability and control of dynamical systems, and stochastic processes with applications to random vibrations. Instructors, Caughey, Hudson, Iwan.

AM 200. Special Problems in Advanced Mechanics. Dynamics of solid and deformable bodies, fluids, and gases; mathematical and applied elasticity. By arrangement with members of the staff, properly qualified graduate students are directed in independent studies. Hours and units by arrangement.

AM 250 abc. Research in Applied Mechanics. Research in the field of Applied Mechanics. By arrangement with members of the staff, properly qualified graduate students are directed in research. Hours and units by arrangement.
ASTRONOMY

UNDERGRADUATE SUBJECTS

Ay 1. Introduction to Astronomy. 9 units (3-1-5); third term. This course surveys astronomy, spectroscopy and astrophysics. Reading in an elementary text is supplemented by lectures on current topics, emphasizing the applications of physics in astronomy. Instructor: Greenstein.

Ay 10. Introduction to Astrophysics. 8 units (2-2-4); second term. Prerequisites: Ph 112 concurrently, or consult instructor. An introduction to stellar atmospheres, spectroscopy, stellar interiors and evolution, gaseous nebulae and solar physics. Primarily for juniors and seniors not majoring in astronomy who have an adequate background in physics. Astronomy majors should take Ay 112 abc. Instructor: Zirin.

Ay 15. Introduction to Radio Astronomy. 9 units (3-0-6); third term. Prerequisites: consult instructor. A survey of the contributions which radio observations have made toward our understanding of celestial objects. Topics include the properties and interpretation of the radio emission from the sun, planets, interstellar gas, supernova remnants, radio galaxies and quasi-stellar radio sources. Primarily for juniors and seniors not majoring in astronomy. Seniors in astronomy should consider Ay 133 ab. Instructors: Moffet and Radio Astronomy Staff.

ADVANCED SUBJECTS

Ay 112 abc. General Astronomy. 9 units (3-3-3); first, second and third terms. Prerequisites: Ph 2 abc, Ma 2 abc. The planets and the sun. Physical properties of the stars and the spectral sequence. Binary and variable stars. Introduction to astrophysics of stellar interiors and atmospheres. Dynamics of the galaxy, extragalactic nebulae. Instructors: Schmidt, Sargent.

Ay 131 ab. Stellar Atmospheres. 9 units (3-0-6); first and second terms. Prerequisites: Ay 112 abc, Ph 112 abc, or equivalents. Atomic spectroscopy. The theory of radiative equilibrium in stellar atmospheres. The continuous spectrum of the stars; the line absorption coefficient and spectral lines. Line broadening theory. Analysis of stellar spectra. Abundances of the elements and nucleosynthesis theory. Instructors: Münch and Sargent.

Ay 132 ab. Stellar Interiors. 9 units (3-0-6); first and second terms. Prerequisites: Ay 112 abc, Ph 112 abc, or their equivalents. Introduction to the study of stellar interiors; polytropes; opacity and energy generation. Stellar models. Red giants and white dwarfs. Stellar evolution. Pulsating stars. Given in alternate years. Not given in 1966-67.

Ay 135. Topics in Modern Astronomy. 6 units (1-4-1); second term. Seminar and laboratory course for graduate students on modern observational techniques and methods for analyzing astronomical data. Instructor: Greenstein.

Ay 141 abc. Research Conference in Astronomy. 2 units; first, second, and third terms. Meets weekly to discuss work in progress with the staff of the Mount Wilson and Palomar Observatories.

Ay 142. Research in Astronomy, Radio Astronomy, and Astrophysics. Units in accordance with the work accomplished. The student should consult a member of the department and have a definite program of research outlined with him before registering. Eighteen units required for candidacy.

Ay 143. Reading and Independent Study. Units in accordance with the work accomplished. Advanced work, involving reading on special problems, or independent study, may be carried out under the supervision of a member of the staff of the Mount Wilson and Palomar or Radio Observatories. Approval of the instructor and the student's advisor must be obtained before registering.

Ay 202. The Solar Atmosphere. 9 units (3-1-5); third term. The physical state of the solar atmosphere as derived from observations. Solar activity, flares, and magnetic fields. Deviations from local thermodynamic equilibrium in atomic processes. Instructor: Zirin.

Ay 208. Modern Observational Astronomy. 6 units (1-5-0); first, second or third terms. Prerequisite: Ay 135 which may be taken concurrently. An observational course for graduate students in astronomy in which modern astronomical techniques are used in conjunction with the various telescopes and auxiliary instruments on Mount Wilson and at Palomar. Students will be permitted to register for only one term. Instructors: Oke, and staff.

Ay 215 abc. Seminar in Theoretical Astrophysics. 4 units (1-0-3). Prerequisites: Ay 131 and/or Ay 132. Seminar on recent developments for advanced students. The current theoretical literature will be discussed by the students. Instructors: Greenstein, and staff.

Ay 217. Theoretical Astrophysical Spectroscopy. 9 units (3-0-6); first term. Prerequisites: Ph 125, or equivalent. Fundamentals of atomic spectra; angular momentum and Racah coefficients. Calculation of transition probabilities and collision cross-sections. Forbidden lines. Not given in 1966-67.
Ay 234. Seminar in Radio Astronomy. 8 units (2-0-6); second term. Prerequisite: Ay 133 ab. Recent developments in radio astronomy for the advanced student. Current publications and research in progress will be discussed by students and staff. Instructor: Schmidt.

The following courses will be offered from time to time by members of the Mount Wilson Observatory and Institute staffs:

Ay 203. Magnetohydrodynamic Problems.
Ay 204. Advanced Stellar Spectroscopy.
Ay 207. Stellar Luminosities and Colors.
Ay 209. Planetary and Diffuse Nebulae.
Ay 212. Content and Evolution of Our Own and Other Galaxies.
Ay 213. Selected Topics in Observational Cosmology.
Ay 214. Theoretical Cosmology.
Ay 216. Advanced Stellar Interiors.

**Biology**

**UNDERGRADUATE SUBJECTS**

Bi 1. Elementary Biology. 9 units (3-3-3); second term. A study of the organism as a structural and functional entity, and of the relation of biological problems to human affairs. Instructors: Sinsheimer, and staff.

Bi 3. Plant Biology. 12 units (3-6-3); second term. Prerequisite: Bi 1, Bi 9, or consent of instructor. Principles of plant structure, plant diversity, and plant function. Instructor: Bonner.

Bi 9. Cell Biology. 9 units (3-3-3); third term. Studies of life at the cellular level: nature, functions, and integration of ultrastructural components; physical and chemical parameters; influences of external agents and internal regulation. Instructors: Delbrück, and staff.

Bi 10. Animal Biology. 12 units (3-6-3); first term. Principles of animal structure, function, and diversity. Instructor: Brokaw.

Bi 20. Mammalian Anatomy and Histology. 12 units (2-6-4); third term. Macroscopic and microscopic structure of a mammal, including elementary instruction in preparation of tissue for microscopic inspection. Instructors: van Harreveld, Keighley.

Bi 22. Special Problems. Units to be arranged; first, second, and third terms. Special problems in one of the fields represented in the undergraduate biology curriculum; to be arranged with instructors before registration. Instructors: Biology teaching staff.

**ADVANCED SUBJECTS**

All Subjects open to graduate students, but not to be counted toward a major for the degree of Doctor of Philosophy.

Bi 106. Introductory Developmental Biology of Animals. 12 units (2-6-4); second term. Prerequisite: Bi 10. A lecture and laboratory course dealing with the development of various invertebrate and vertebrate animals, with emphasis on their common features as well as specialized adaptations. Principles and properties of developing systems are further illustrated by experimental embryological exercises and discussions. Instructor: Tyler.
Bi 107 abc. Biochemistry. 10 units (3-0-7; 3-0-7; 0-8-2); first, second and third terms. Prerequisite: Ch 41. Lectures in the first quarter cover intracellular biochemistry, with emphasis on the energetics of metabolism, the mode of action of enzymes and coenzymes, and the chemical mechanisms of metabolic interconversions. In the second quarter, selected topics of current interest in biochemistry are discussed. These include synthesis of informational macromolecules, metabolic regulatory mechanisms, origins of biomolecules and the evolution of metabolic pathways, conversion of chemical energy into mechanical work, membrane transport biochemistry, structure and biosynthesis of antibodies, biochemistry of virus multiplication, mechanisms of hormone action, and biochemical problems in differentiation and development. In the third quarter emphasis is placed on laboratory work concerned with principles and methods in current use. Instructors: Wood, Mitchell and staff.

Bi 109. Advanced Genetics Laboratory. Units to be arranged; second term. An advanced laboratory course in the genetics of Drosophila. Instructor: Lewis.

Bi 114. Immunology. 9 units (2-4-3); first term. Prerequisite: Ch 41 abc. A course on the principles and methods of immunology and their application to various biological problems. Instructors: Sanders, Owen.

Bi 117. Psychobiology 1. 9 units (2-3-4); third term. An introduction to study of the brain and behavior. May be taken with or without laboratory. The laboratory provides a study of the vertebrate nervous system. Instructor: Sperry.

Bi 118. General Physiology. 10 units (3-3-4); first term. A lecture and laboratory course on selected topics like nervous excitation and conduction, synaptic transmission, inhibition, muscle contraction, sense organ physiology, etc. Instructors: Strumwasser, van Harreveld, Wiersma.

Bi 119. Advanced Cell Biology. 12 units (3-4-5); second term. Prerequisites: Bi 9, Bi 107. This course covers the principles of general microbiology and of the growth and differentiation of the cells of higher organisms. Regulatory circuits in nucleic acid and protein synthesis; mechanisms of control of enzyme activity; regulation of cell multiplication; surface properties of cells. Instructor: Attardi.

Bi 120. Mammalian Anatomy and Histology. 9 units; third term. This subject is the same as Bi 20 but with reduced credit for graduate students. Graduate students majoring in Biology receive no credit for this subject. Instructors: Keighley, van Harreveld.

Bi 121. Bio-Systems Analysis. 6 units (2-0-4); first, second, and third terms. Same as EE 185 abc. This course presents a systematic consideration and application of the methods of systems analysis, information theory and computer logic to problems in neurobiology. The subjects to be considered include the mechanical properties of striated muscle, the analysis of neuronal integrative mechanisms and reflex behavior in terms of logical net theory. The course will seek to describe some aspects of human cortical activity in terms of information theory and conceptual modeling. The course will be conducted as a research seminar and the detailed subject matter will change from year to year. Instructors: Fender, and staff.

Bi 122. Genetics. 10 units (3-3-4); first term. Prerequisite: Bi 1 or Bi 9. A course presenting the fundamentals of genetics in relation to general biological problems. Instructor: Lewis.
Bi 126. Genetics of Microorganisms. 10 units (2-4-4); second term. Prerequisite: Bi 122. The genetics of algae, fungi, protozoa, and bacteriophage with laboratory work to illustrate the suitability of different microorganisms to particular kinds of genetic analysis. Instructors: Edgar, Emerson, and staff.

Bi 127. Biochemical Genetics. 10 units (2-4-4); third term. Prerequisites: Bi 122 and Bi 126. A course dealing with gene action at the molecular and cellular levels. Topics covered include genetic control of metabolism and biosynthetic pathways, genetic determination of protein structure, gene-enzyme relationships, genetic control mechanisms, suppressors, and complementation. May be taken without the laboratory, for reduced credit, with permission of instructor. Instructor: Horowitz.

Bi 128. Advanced Microtechnique. 6 units (1-4-1); third term. Theory and practice of preparing biological material for microscopic examination; histochemical methods; phase contrast microscopy; methods in electron microscopy. Instructor: Tyler.

Bi 129 ab. Biophysics. 6 units (2-0-4); first and second terms. The subject matter to be covered will be repeated approximately in a three-year cycle. During the first term the subject matter will be organized according to various biological functions, such as replication, contractility, sensory processes, endogenous rhythms, etc. Each function will be discussed in its various biophysical aspects. During the second term the subject matter will be organized according to methods of research. This course together with Bi 132 constitutes an integrated program covering the physical and physico-chemical approaches to biology. Instructor: Delbrück.

Bi 132 ab. Biophysics of Macromolecules. 9 units (3-0-6); first, second terms. Prerequisite: Ch 21 or equivalent. A study of the structure and properties of biological macromolecules. Emphasis is placed on both the methods of investigation and the results. Topics covered include: polymer statistics and thermodynamics, sedimentation, light scattering, spectroscopy, X-ray diffraction, and electron microscopy. Offered 1966-67 and alternate years. Instructors: Davidson, Dickerson, Hodge, Sinsheimer, Vinograd.

Bi 133. Biophysics of Macromolecules Laboratory. 14 units (0-10-4); second and third terms. A laboratory course designed to provide an intensive training in the techniques for the characterization of biological macromolecules. Open to selected students. The same one-quarter course is offered in both the winter and spring quarters 1966-67 and alternate years. Instructor: Vinograd.

|B| Subjects primarily for graduate students.

Bi 201. General Biology Seminar. 1 unit; all terms. Meets weekly for reports on current research of general biological interest by members of the Institute staff and visiting scientists. In charge: Haagen-Smit, Sinsheimer, Wiersma.

Bi 202. Biochemistry Seminar. 1 unit; all terms. A seminar on selected topics and on recent advances in the field. In charge: Mitchell.

Bi 204. Genetics Seminar. 2 units; all terms. Reports and discussion on special topics. In charge: Edgar, Lewis.

Bi 205. Experimental Embryology Seminar. 1 unit; all terms. Reports on special topics in the field; meets twice monthly. In charge: Tyler.

Bi 206. Immunology Seminar. 1 unit; all terms. Reports and discussions. In charge: Owen, Tyler.
Bi 207. Biophysics Seminar. 1 unit; all terms. A seminar on the application of physical concepts to selected biological problems. Reports and discussions. Open also to graduate students in physics who contemplate minoring in Biology. Instructor: Sinsheimer.

Bi 214 abc. Chemistry of Bio-Organic Substances. 3 units (1-0-2); first, second, and third terms. Prerequisite: Ch 41 abc. A series of lectures on selected topics of organic chemistry that have special interest from a biological viewpoint. Instructor: Haagen-Smit.

Bi 217. Quantitative Organic Microanalysis. Units to be arranged; second term. Laboratory practice in the methods of quantitative organic microanalysis required for structure determination of organic compounds. Students must obtain permission from the instructor before registering for this subject as the enrollment is necessarily limited. Instructor: Haagen-Smit.

Bi 218. Virology. 9 units (2-3-4); second term. Prerequisite: Bi 119. Virus classification and structure; biochemical mechanisms of virus reproduction; host-virus relationships in the framework of cell regulatory mechanisms; virus-determined changes in the physiological properties of the host cell. Not offered in 1966-67. Instructors: Attardi, and staff.

Bi 220 abc. Developmental Biology of Animals. 6 units (2-0-4); first, second, and third terms. Lectures and discussion of biological and chemical problems and principles of embryonic development of animals, with reference to correlative studies on other organisms. Topics covered include: origin of the germ cells, maturation of the gonads, spermatogenesis and oogenesis, breeding habits, endocrinological influences, fertilization, cleavage, germ layer and organ formation, processes of embryonic determination and induction, specific protein biosynthesis, embryonic metabolism, cell-interactions and properties of cultured cells, metamorphosis, regeneration, etc. The course may be taken for 5 consecutive terms since the subject matter will be duplicated only in alternate years. Instructor: Tyler.

Bi 221. Developmental Biology Laboratory. Units to be arranged; all terms. A laboratory course designed to give the student first-hand experience with biological and chemical methods of study and experimentation with developing animals. Included are methods of cell isolation, transplantation, cytochemistry, protein biosynthesis, micromanipulation, metabolism, etc. Instructor: Tyler.

Bi 230. Psychobiology 2. Units to be arranged. First, second, and third terms. Prerequisite: consent of instructor. An advanced seminar course on brain mechanisms and behavior. Instructor: Sperry.

Bi 240 abc. Plant Physiology. 6 units (2-0-4); first, second, and third terms. Reading and discussion of the problems of plant physiology. Instructor: Bonner.

Bi 241 abc. Advanced Biochemistry. 6 units (2-0-4); third term. Detailed discussions of biochemical topics on an advanced level. Instructor: Dreyer.

Bi 270. Special Topics in Biology. Units to be arranged. First, second, and third terms. Students may register with permission of the responsible faculty member.
Subjects of Instruction

Bi 280-290. Biological Research. Units to be arranged. First, second, and third terms. Students may register for research in the following fields after consultation with those in charge: Animal physiology (280), biochemistry (281), bio-organic chemistry (282), embryology (283), genetics (284), immunology (285), marine zoology (286), plant physiology (287), biophysics (288), psychobiology (289), cell biology (290).

Chemical Engineering
Undergraduate Subjects

ChE 50. Applications of Chemistry. 9 units (3-0-6); second term. Selected problems in fields such as fuel cells, saline water recovery, fluidized catalytic cracking, and manufacture of rocket fuels are used as case histories in the application of physics, mathematics, chemistry, and economics to current problems in industrial chemistry. Instructor: Corcoran.

ChE 57 ab. Stage Operations. 6 units (2-0-4); second, third terms. An introduction to the treatment of equilibrium stage operations common to the chemical industry. Special emphasis is placed on the empirical and graphical methods available for treatment of process problems. Numerical procedures employing digital and analog computers are treated. Typical stage processes covered include distillation, solvent extraction, multi-effect evaporation, and crystallization. Both transient and steady state processes are treated, along with problems involving multicomponent mixtures. Instructors: Staff.

ChE 61 ab. Industrial Chemistry. 9 units (3-0-6); second, third terms. Prerequisite: Ch 21 abc. A critical study is made of selected chemical process industries in order to give the student a better understanding of the direct application of basic chemical engineering principles. Emphasis is placed on his learning to use good judgment in applying the principles of material and energy balances, thermodynamics, chemical reaction kinetics, and economics. The design of one or more chemical processes will be undertaken by the class. Instructor: Cokelet.

ChE 63. Introduction to Thermodynamics. 9 units (3-0-6); first term. Basic thermodynamic laws and expressions for one-component closed systems. The treatment includes imperfect substances and frictional processes. Text: Thermodynamics of One-Component Systems, Lacey and Sage. Instructor: Cokelet.

ChE 66 ab. Transport Phenomena. 12 units (3-0-9); first, second terms. Prerequisite: AM 95 abc. An introduction to momentum transfer, energy transfer, and mass transfer as applied to chemical engineering problems. Both microscopic and macroscopic (transient and steady state) phenomena are treated, and emphasis is on the quantitative application of the basic equations of change to situations occurring in the process industry. Special emphasis is also placed on the thermodynamic treatment of flow problems. Text: Transport Phenomena, Bird, Stewart, and Lightfoot. Instructors: Staff.

ChE 67 ab. Chemical Engineering Laboratory. 9 units (0-7-2); second, third terms. Prerequisites: ChE 63, ChE 66 a. Training and practice in the methods of chemical engineering laboratory measurements. Several short projects, illustrative of problems in transport phenomena, unit operations, and chemical kinetics, are carried out. Instructor: Shair.

ChE 80. Undergraduate Research. Units by arrangement. Research in chemical engineering and industrial chemistry offered as an elective in any term. If ChE 80
units are to be used to fulfill elective requirements in the chemical engineering option, a thesis approved by the research director must be submitted in duplicate before May 10 of the year of graduation. The thesis must contain a statement of the problem, appropriate background material, a description of the research work, a discussion of the results, conclusions, and an abstract. The thesis need describe only the significant portion of the research.

ChE 81. Special Topics in Chemical Engineering. Units by arrangement. Occasional advanced work involving reading assignments and a report on special topics. Permission of the instructor is required. No more than 12 units in ChE 81 may be used to fulfill elective requirements in the chemical engineering option.

ADVANCED SUBJECTS

ChE 101 ab. Applied Chemical Kinetics. 9 units (2-0-7); second, third terms. Homogeneous and heterogeneous kinetics are studied with applications to chemical reactions of current interest. Special emphasis is given to transition state theory, reaction models in heterogeneous catalysis, and the roles of energy and material transfer in both homogeneous and heterogeneous reactions. Flow and nonflow systems are studied. Instructor: Corcoran.

ChE 102. Applied Physical Chemistry. 9 units (2-0-7); first term. Detailed consideration is given to the application of the principles of chemical equilibria and chemical kinetics to problems in electrochemistry, plasmas, phase equilibria in solid and liquid systems, hydrocarbon reforming, and other topical areas. Instructor: Corcoran.

ChE 103 abc. Advanced Transport Phenomena. 9 units (2-0-7) first term; 12 units (3-0-9) second, third terms. Prerequisites: ChE 66 ab, AM 95 abc, or taking AM 113 ab concurrently. A study of the transfer of momentum, energy, and material in situations of practical interest. Emphasis is placed on the derivation of the applicable differential equations and solution to determine the distributions of velocity, pressure, temperature, and composition, and the fluxes of momentum, energy, and material in fluid systems. Both laminar and turbulent flow are considered. Instructors: Staff.

ChE 104 ab. Thermodynamics of Multicomponent Systems. 9 units (2-0-7); second, third terms. Prerequisites: ChE 63, AM 95 abc, or taking AM 113 ab concurrently. A discussion from the quantitative standpoint of the volumetric and phase behavior of pure substances and of binary, ternary, and multicomponent fluid systems at physical and at physicochemical equilibrium is presented. Development of the background necessary for a working knowledge of multicomponent open systems of particular interest to the engineer follows. The solution of problems relating to the application of multicomponent thermodynamics to industrial practice is an important part of this course. Texts: Volumetric and Phase Behavior of Hydrocarbons, Sage and Lacey; Thermodynamics of Multicomponent Systems, Sage. Instructor: Sage.

ChE 163. Introduction to Thermodynamics. 6 units (3-0-3) first term. This subject is the same as ChE 63, but with reduced credit for graduate students. No graduate credit is given for this subject to students in chemical engineering.

ChE 166 ab. Transport Phenomena. 8 units (3-0-5); first, second terms. Prerequisite: AM 95 abc, or taking AM 113 ab concurrently. This subject is the same as ChE 66 ab, but with reduced credit for graduate students. No graduate credit is given for this subject to students in chemical engineering.
ChE 167 abc. Introduction to Chemical Engineering Research. 15 units (0-12-3); first, second, third terms. A course for master's degree students in chemical engineering providing instruction and experience in the methods and techniques of research. The first term is devoted to short projects illustrating typical research and measurement problems in chemical engineering. During the third term each student works on an individual research project under the direction of a member of the staff. Instructor: Shair.

ChE 170. Chemical Process Control. 9 units (3-0-6); third term. Prerequisite: AM 113 ab (may be taken concurrently). A treatment of the dynamic response and control of process elements and systems in chemical engineering. Emphasis is on the analysis, design, and stability of control systems. Instructor: Gavalas.

ChE 171 ab. Chemical Engineering Applied Mathematics. 9 units (2-0-7); first, second terms. Prerequisite: AM 95 abc or AM 113 ab. A course in the mathematical treatment of physical and chemical problems arising in chemical engineering. Laplace transformation and inversion by elementary methods and by contour integration. Solution of boundary value problems by eigenfunction expansions. Elements of matrix theory. Finite differences and the numerical solution of ordinary and partial differential equations. Concepts of probability and statistical treatment of data. Instructor: Friedlander.

ChE 201. Chemical Reactor Design. 9 units (2-0-7); first term. Prerequisite: AM 103 abc. Detailed consideration is given to the design of chemical reactors with emphasis on optimization, stability, and the role of simultaneous energy, material, and momentum transport. Significant design problems are solved by use of high-speed digital computing equipment available at the Computing Center. Instructor: Corcoran.

ChE 202. Advanced Problems in Transport. 9 units (2-0-7); third term. Prerequisite: ChE 101 ab. Problems of some complexity of a quasi-research nature will be solved by group effort in the fields of material, thermal, and momentum transport. The field of interest to the student will be taken into account in establishing the problem or problems to be solved. Primary emphasis will be placed upon the synthesis of the student's background knowledge to arrive at an adequate solution to an engineering problem of some difficulty. Instructor: Sage.

ChE 264 ab. Molecular Theory of Fluids. 9 units (3-0-6); first, second terms. A study of the models and mathematical theories of the gaseous and liquid states. The rigorous kinetic theory of equilibrium and transport properties of dilute gases is presented. Models of the liquid state are discussed and their limitations noted. An introduction is given to the use of high-speed computers for the random walk estimation of transport coefficients and for Monte Carlo analysis of the many-body problem. Some emphasis is placed on the prediction of macroscopic properties from molecular parameters. Given by arrangement. Instructor: Pings.

ChE 280. Chemical Engineering Research. Offered to Ph.D. candidates in chemical engineering. The main lines of research now in progress are:

- Turbulent heat transfer.
- Turbulent mass transfer.
- Phase and thermodynamic behavior of fluids.
- Measurements of transport coefficients.
- Reaction kinetics and mechanisms.
- Combustion.
- Mathematical modeling of reactors.
Liquid state physics.
Rheology and flow of suspensions and emulsions.
Optimization and stability studies.
Mechanics of dispersions.
Plasma chemistry.

ChE 291 abc. Chemical Engineering Conference. 2 units (1-0-1); first, second, third terms.
Oral presentations on problems of current interest in chemical engineering and industrial chemistry with emphasis on the techniques of effective oral communication with groups. Instructor: Corcoran.

CHEMISTRY

UNDERGRADUATE SUBJECTS

Ch 1 abc. General and Quantitative Chemistry. 12 units (3-6-3); first, second, third terms.
Lectures, recitations, and laboratory exercises dealing with the general principles of chemistry. Fundamental laws and theories of chemistry are discussed and illustrated by factual material. In the first and second terms of the laboratory, analytical experiments involving quantitative gravimetric, volumetric, optical, electrical, and radiochemical measurements are provided; in the third term, use is made of a system of qualitative and semiquantitative analysis for selected elements representative of the periodic system. The stress in the course is on quantitative reasoning and on accurate and intelligent work in the laboratory. Texts: Quantitative Chemistry, Waser; Qualitative Elemental Analysis, Swift and Schaefer. Instructors: Waser, Smith, other staff members, and assistants.

Ch 2 abc. Advanced Placement in Chemistry. 12 units (3-6-3), first, second terms; 6 units (3-0-3), third term. Ch 2 differs from Ch 1 chiefly in having different lectures and recitation. For the first two terms the laboratory is the same, but Ch 2 students are excused from laboratory in the third term. (By special permission a suitable research project may be substituted for laboratory in the second term. This must be continued for the third term and must involve at least 6 units in each term.) Admission to the course is based on CEEB Advanced Placement and a short additional departmental examination. Competence in the following areas is assumed: (1) elementary theories of atomic structure and electronic theories of valence, (2) chemical stoichiometry, and (3) mass action law. There is more emphasis on systematic treatment of reactions and chemical reactivity than in Ch 1. Equilibrium relationships, electrochemistry, etc., are discussed directly in terms of thermodynamics and used as examples of variations in chemical reactivity as a function of chemical structure. Text: Quantitative Chemistry, Waser. Instructors: Hammond, Gray, Waser.

Ch 14. Quantitative Analysis. 10 units (2-6-2); first term. Prerequisite: Ch 1 abc or equivalent. A lecture and laboratory course. The lectures offer a systematic discussion of ionic equilibria including solubility effects, complex ion formation, oxidation-reduction and acid-base reactions in aqueous and non-aqueous solutions. The laboratory work provides opportunity to apply the principles discussed in the lectures to selected problems in inorganic chemical analysis. Instructor: Anson.

Ch 16. Chemical Instrumentation. 8 units (0-6-2); first term. Prerequisite: Ch 1 abc. Laboratory practice designed to familiarize the student with selected instruments, used both for process and control and for research. Instructor: Sturdivant.
Subjects of Instruction

Ch 21 abc. Physical Chemistry. 9 units (3-0-6); first, second, third terms. Prerequisites: Ch 1 abc; Ph 2 abc; Ma 2 abc. A lecture and recitation course. The main emphasis is on atomic and molecular theory, quantum mechanics, statistical mechanics, thermodynamics, and chemical kinetics. Instructors: Kuppermann, Dickerson.

Ch 24 abc. Elements of Physical Chemistry. 10 units (4-0-6); first, second, third terms. Prerequisites: Ch 1 abc; Ma 2 abc. The first two terms cover classical thermodynamics from the chemical point of view and its application to thermochemistry, to homogeneous and heterogeneous equilibria, to the colligative properties of solutions, and to cell potentials; chemical crystallography. The third term will consider steady-state thermodynamics and its application to electrical and material transport phenomena; chemical kinetics. Ch 24 ab is not open to undergraduates majoring in chemistry. Instructor: Hughes.

Ch 26 ab. Physical Chemistry Laboratory. 8 units (0-6-2); second, third terms. Prerequisites: Ch 1 abc; Ch 21 a. Laboratory exercises which provide both illustrations of classical principles in physical chemistry and an introduction to problems of current interest, and techniques of contemporary research. Text: Experiments in Physical Chemistry, Badger. Instructors: Chan, Davis.

Ch 41 abc. Chemistry of Covalent Compounds. 4 units (2-0-2); first, second, third terms. Prerequisite: Ch 1 abc. The chemistry of covalent compounds, emphasizing molecular structure, chemical dynamics, and synthesis. Most examples will be drawn from organic chemistry but inorganic compounds will also be treated when appropriate. Special emphasis will be accorded spectroscopic methods for study of structural and dynamic problems. Text: Basic Principles of Organic Chemistry, Roberts and Caserio. Instructor: Roberts.

Ch 46 abc. Experimental Methods of Covalent Chemistry. 6 units (1-5-0); first, second, third terms. Prerequisites: Ch 1 abc. Laboratory accompaniment to Ch 41 abc. Experiments stressing modern techniques for investigating the structures and dynamic behavior as well as synthesis, purification, and characterization of covalent compounds both organic and inorganic. Instructors: Richards and assistants.

Ch 80. Chemical Research. Offered to B.S. candidates in chemistry. If Ch 80 units are to be used as electives in the chemistry option, a thesis must be submitted in duplicate before May 10 of the year of graduation and be approved by the research director. The thesis must contain a statement of the problems, appropriate background material, a description of the research work, a discussion of the results, conclusions, and an abstract. The thesis may cover only a portion of the research. No more than 60 units of undergraduate research may be used as electives in the chemistry option without special permission.

Ch 81. Special Topics in Chemistry. Occasional advanced work involving reading assignments and a report on special topics. Permission of the instructor is required. No more than 12 units in Ch 81 may be used as electives in the chemistry option.

Ch 90. Oral Presentation. 2 units (1-0-1); first term. Training in the technique of oral presentation of chemical topics. Practice in the effective organization and delivery of reports before groups. Instructors: Corey, Booth.

ADVANCED SUBJECTS

Ch 113 ab. Advanced Inorganic Chemistry. 9 units (3-0-6); second, third terms. Prerequisite: Ch 21 abc or concurrent registration. A presentation of modern structural and dynamic aspects of inorganic chemistry. The first term includes a discussion of the
electronic structures of polyatomic molecules containing atoms of the main-group elements. The molecular orbital method is emphasized in the treatment of electronic structure. A thorough discussion of the applications of ligand-field theory to problems in transition-metal chemistry is presented. The second term consists of a detailed treatment of inorganic reaction mechanisms. The major features of ligand substitution processes of metal complexes are outlined. The mechanisms of inorganic redox reactions are also discussed. A student in the second term is asked to present a seminar on a research paper in the area of inorganic chemical dynamics. Ch 113 b may be taken without Ch 113 a. Instructor: Gray.

Ch 114. Quantitative Analysis. 4 units (2-0-2); first term. Prerequisite: Ch 1 abc or equivalent. This course is the same as Ch 14 except that no laboratory work is involved. No residence credit is given for this course to graduate students majoring in chemistry. Instructor: Anson.

Ch 117. Electroanalytical Chemistry. 4 units (2-0-2); second term. The theory and practice of selected electroanalytical techniques are presented. Topics covered include diffusion currents, polarography, amperometry, coulometry, chronopotentiometry, and other electrochemical methods. Instructor: Anson.

Ch 118 ab. Electroanalytical Chemistry Laboratory. 6 units (0-6-0); second, third terms. Laboratory experiments involving the use of electroanalytical instruments. Instructor: Anson.

Ch 122 ab. The Structure of Molecules. 6 units (2-0-4); first, second terms. A discussion of the arrangement of atoms in molecules and crystals. A non-mathematical and semi-empirical treatment is given to the various types of interatomic forces and their relationship to the chemical and physical properties of substances. Text: Nature of the Chemical Bond, Pauling. Instructors: Marsh, Waser.

Ch 124 abc. Elements of Physical Chemistry. 6 units (4-0-2); first, second, third terms. This course is the same as Ch 24 abc with reduced credit for graduate students. Instructor: Hughes.

Ch 125 abc. Introduction to Chemical Physics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ch 21 abc or the equivalent. This course provides a basic quantitative introduction to quantum mechanics (with some applications to spectroscopy) and statistical mechanics. Stress is on fundamental methods, rather than applications. Most other graduate courses in physical chemistry will assume a knowledge of the contents of this course. Instructors: Robinson, Pitzer, Davidson.

Ch 127 ab. Nuclear Chemistry. 12 units (3-3-6); first, second terms. Prerequisite: Ch 21 abc or equivalent. An introductory lecture and laboratory course designed to acquaint the student with basic nuclear processes and techniques. The topics covered in the lectures and illustrated in the laboratory work include nuclear masses and energetics, rates of production and decay of radioactive nuclei, the interaction of radiation with matter, alpha and beta decay, gamma ray emission, fission, nuclear reactions, radiochemistry, and other chemical applications of radioactivity. Instructor: Burnett.

Ch 129 abc. The Structure of Crystals. 9 units (3-0-6); first, second, third terms. The nature of crystals and X-rays and their interaction. The various diffraction techniques. The theory of space groups and the use of symmetry in the determination of the structures of crystals. The detailed study of representative structure investigations.

Ch 130, Photochemistry. 6 units (2-0-4); first term. Prerequisite: Ch 21 abc. Lectures and discussions concerning photochemical processes, with emphasis on reactions involving molecules of interest in the earth's upper atmosphere and in planetary atmospheres in general. The airglow and the ionosphere will be considered. Topics will include the absorption and emission of radiation, chemiluminescence, radiationless transitions, and the conversion of absorbed radiation into heat. Instructor: Wulf.

Ch 132 ab. Biophysics of Macromolecules. 9 units (3-0-6); first, second terms. Prerequisite: Ch 21 or the equivalent. A study of the structure and properties of biological macromolecules. Emphasis is placed on both the methods of investigation and the results. Topics covered include: polymer statistics and thermodynamics, sedimentation, light scattering, spectroscopy, X-ray diffraction, and electron microscopy. (This course is the same as Bi 132 ab.) Given in alternate years. Offered in 1966-67. Instructors: Davidson, Dickerson, Hodge, Sinsheimer, Vinograd.

Ch 133, Biophysics of Macromolecules Laboratory. 14 units (0-10-4); offered in both second and third terms. A laboratory course designed to provide an intensive training in the techniques for the characterization of biological macromolecules. (This course is the same as Bi 133.) Open to selected students. Instructor: Vinograd.

Ch 135 ab. Chemical Dynamics. 9 units (3-0-6); second, third terms. Prerequisite: Ch 21 abc or equivalent required; Ch 125 a and concurrent registration in Ch 125 b recommended. The mechanics and statistical mechanics of reactive collisions; the kinetics and mechanism of chemical reactions. Text: *Kinetics and Mechanism*, Frost and Pearson. Not offered in 1966-67. Instructors: Kuppermann, Davidson, Hammond.

Ch 144 abc. Advanced Organic Chemistry. 9 units (3-0-6); first, second, third terms. During the first two terms, an intensive study of synthetic organic chemistry that embodies the stereochemical, theoretical, and practical aspects of the synthesis of organic molecules. Examples will be drawn from naturally occurring substances as well as theoretically challenging structures. The third term will be devoted to problems in physical organic chemistry. Instructors: Ireland, Wilcox.

Ch 145. Advanced Organic Chemistry Laboratory. 7 units (1-5-1); first term. Prerequisites: Ch 41 abc, Ch 46 abc. Advanced laboratory practice, synthetic experiments, use of kinetics in mechanistic studies, and selected optional work. Not offered in 1966-67. Instructors: Hammond, Brown, and assistants.

Ch 148. Separation and Identification of Organic Compounds. 6 units (3-0-3); second term. Prerequisites: Ch 41 abc, Ch 46 abc. Lectures and recitations concerning the isolation, purification, and identification of organic compounds. Heavy emphasis devoted to the interpretation of infrared, ultraviolet, nuclear magnetic resonance, and mass spectrometric data. Instructor: Brown.

Ch 180. Chemical Research. Offered to M.S. candidates in chemistry.

Ch 190. Oral Presentation. 2 units (1-0-1); first term. Training in the technique of oral presentation of chemical topics. Any graduate student in chemistry may be required to register for the course if, during his candidacy examination, or for any other reason, he gives evidence of needing instruction in oral presentation. Instructors: Waser, Corey, Booth.
Ch 223 ab. Statistical Mechanics. 9 units (3-0-6); first, second terms. Prerequisite: Ch 125 abc or equivalent. Equilibrium statistical mechanics with applications to thermodynamics of gases, liquids, and solids, including chemical equilibria. Nonequilibrium statistical mechanics; transport phenomena. Given in alternate years. Offered in 1966-67. Instructor: Pings.

Ch 224 abc. Special Topics in Magnetic Resonance. 4 units (2-0-2); first, second, third terms. The principles of magnetic resonance will be discussed. Emphasis will be placed on nuclear interactions within molecules and their effects on magnetic resonance. Current developments in theoretical methods for \textit{ab initio} calculations of magnetic properties will also receive attention. Texts: \textit{The Principles of Nuclear Magnetism}, Abragam; \textit{Principles of Magnetic Resonance}, Slichter. Offered in 1966-67. Instructor: Chan.

Ch 225 abc. Advanced Chemical Thermodynamics. 9 units (3-0-6); first, second, third terms. Prerequisite: Ch 21 abc or the equivalent. Basic concepts and the laws of thermodynamics are reviewed. The theories of heterogeneous and chemical equilibrium are developed according to the methods of J. Willard Gibbs. A systematic treatment is presented of the thermodynamic properties of pure systems, mixtures, chemical reactions, electrochemical systems, surface phases, and systems under the influence of external fields. The theory of heterogeneous equilibrium and phase diagrams is developed analytically. The third term is largely devoted to the thermodynamics of irreversible processes. Not offered in 1966-67.

Ch 226 ab. Molecular Quantum Mechanics. 9 units (3-0-6); second, third terms. Prerequisite: Ch 125 a and concurrent registration in Ch 125 b or equivalent. The basic material is the electronic structure of atoms and molecules, including the separation of nuclear and electronic motions in molecules, the methods of obtaining wave functions, and the approximations and errors involved in both. A selection of related topics such as intermolecular forces and the effects of external fields will also be included. Instructors: McKoy, Goddard.

Ch 228 abc. Special Topics in Physical Chemistry. 9 units (3-0-6); first, second, third terms. Prerequisite: Consent of instructor. This course will be devoted to special current topics in areas of chemistry, such as molecular spectroscopy, group theory, electron scattering, molecular scattering, etc. The contents will vary from year to year and the course may be taken for credit more than once. In 1966-67, the topics will be:

\textit{First term.} Excitation Transfer in Photochemistry and Photobiology. Basic principles of singlet and triplet excitation transfer in pure and mixed aggregate systems are presented. Random walk and diffusion processes as well as coherent transfer are considered. These and other types of radiationless transitions where some or all of the excitation energy is transformed into heat or chemical energy are discussed. Examples of excitation transfer and radiationless processes are taken from the current chemical and biological literature and are discussed in terms of the basic theories. Much emphasis will be put on mechanisms of the primary light reactions of photosynthesis and vision. Text: \textit{Molecular Physics in Photosynthesis}, Clayton. Instructor: Robinson.

\textit{Second term.} Scattering Theory in Chemistry. The fundamental aspects of quantum mechanical scattering theory will be treated. Applications will then be made to problems of chemical interest, such as elastic and reactive collisions between molecules, energy transfer in molecular collisions, electronic excitation of molecules by electron impact, and ion-molecule reactions. Instructor: Kuppermann.

Subjects of Instruction

Ch 229 abc. X-Ray Diffraction Methods. 6 units (2-0-4); first, second, third terms. Prerequisite: Ch 129 abc or equivalent. An advanced discussion of the techniques of structure analysis by X-ray diffraction. Topics covered include protein crystallography, direct phase analysis methods, lattice vibrations, and refinement and assessment of accuracy of structure determinations. Given in alternate years. Offered in 1966-67. Instructors: Dickerson, Hughes, Marsh.

Ch 234. Introduction to the Spectra of Molecules. 6 units (2-0-4); first term. The theory of the structure of the spectra of both the diatomic and simpler polyatomic molecules is presented, and the transition rules and their relation to the symmetry elements of molecules are discussed. Emphasis is laid on the methods of interpreting and analyzing molecular spectra, and it is shown how from an analysis one obtains information regarding the structure and other properties of a molecule of interest to the chemist. Problems are given in the interpretation of actual data. Not offered in 1966-67.

Ch 242 ab. Chemistry of Natural Products. 4 units (2-0-2); first, second terms. Prerequisite: Ch 41 abc. The chemistry of antibiotics, alkaloids, pigments, steroids, terpenes, etc. is used as a vehicle for a discussion of the general principles of structural elucidation, total synthesis, and biogenesis of natural products. Instructors: Brown, Ireland, Richards.

Ch 244 ab. Molecular Biochemistry. 6 units (3-0-3); first, second terms. The chemistry of enzyme reactions with special emphasis on modern methods for elucidating the mechanisms of enzyme action and the influence of enzyme structure on biological function. Enzymes with a wide variety of functions will be considered; e.g., peptidases, oxidases, reductases, phosphatases, enzymes involved in the synthesis of nucleic acids, and other important bio-synthetic processes. Techniques discussed for elucidation of mechanisms will include kinetic studies, tracer techniques, studies of model systems, methods for isolation, purification, and determination of the structure of the enzyme, and the effect of structural modification on enzyme function. The molecular basis of biological control mechanisms will also be considered. Instructors: Richards, Raftery.

Ch 246 abc. Structures and Reactions of Organic Compounds. 4 units (2-0-2); first, second, third terms. Prerequisites: Ch 41 abc, Ch 21 abc. Special methods for study of organic compounds and reactions. Topics discussed vary from year to year but usually include applications of the molecular orbital approach and nuclear magnetic resonance spectroscopy to problems of structure and reactivity. Texts: Spin-Spin Splitting and Molecular Orbital Calculations, Roberts. Given in alternate years. Not offered in 1966-67. Instructor: Roberts.

Ch 247 ab. Organic Reaction Mechanisms. 6 units (2-0-4); first, second terms. Prerequisite: Ch 144 abc or equivalent. Various tools for the study of organic reaction mechanisms will be discussed with major emphasis on kinetic methods. Not offered in 1966-67. (Somewhat similar material will be introduced in Ch 114 c.) Instructor: Hammond.

Ch 253 ab. Chemistry of the Enzymes. 6 units (2-0-4); first, second terms. Consideration of the nature and mechanism of enzyme action. Not offered in 1966-67.

Chemistry of Bio-organic Substances. 3 units (1-0-2); first, second, third terms. Lectures on selected subjects of organic chemistry such as alkaloids, essential oils, and other major groups of natural products. Instructor: Haagen-Smit.

Immunochemistry. 8 units (2-3-3); second term. Prerequisite: Consent of instructor. Two formal lectures and two conferences and demonstrations of laboratory experiments each week, review of literature, and either a special research project or a review paper dealing with some aspect of immunochemistry. Emphasis is on the isolation and characterization of antigens and types of antibody molecules and the manifestations of their physical and biological interactions. Texts: Methods of Immunology, Campbell, Garvey, Cremer, and Sussdorf; Principles of Immunology, Cushing and Campbell; Fundamentals of Immunology, Boyd; Experimental Immunochemistry, Kabat and Mayer; and The Proteins, Neurath and Bailey. Given in alternate years. Not offered in 1966-67. Instructors: Campbell, Garvey, and associates.

Chemical Research. Offered to Ph.D. candidates in chemistry. The main lines of research now in progress are:

In physical chemistry, chemical physics, and inorganic chemistry—
- Electronic structures of simple molecules and molecular fragments.
- Low energy electron scattering.
- Spectroscopic studies of the chemistry of free radicals trapped at low temperatures.
- Kinetics of chemical reactions including photochemical reactions.
- Experimental and theoretical molecular kinetics.
- Reactions in crossed molecular beams.
- Molecular beam spectroscopy.
- Determination of the structure of crystals by the diffraction of X-rays.
- Application of quantum mechanics to chemical problems.
- Molecular structure by spectroscopic methods.
- Nature of the metallic bond and the structure of metals and intermetallic compounds.
- Microwaves and nuclear resonance.
- Distribution of chemical compounds between immiscible phases.
- Kinetics and mechanics of electrode reactions.
- Inorganic and analytical methods.
- Bonding in and structures of transition-metal complexes.

In organic chemistry—
- Isolation of alkaloids and determination of their structure.
- Structural elucidation and biosynthesis of natural products.
- Total synthesis of natural products.
- Chemistry and reaction mechanisms of metallocenes.
- Isotope effects in organic and biochemical reactions.
- Chemistry of small-ring carbon compounds.
- Application of isotopic tracer and nuclear magnetic resonance techniques to problems in organic chemistry.
Relation of structure to reactivity of organic compounds.
Organic chemistry of metal chelates.
Solution photochemistry.
Reactions of free radicals in solutions.

In fields of application of chemistry to biological and medical problems—
Mechanism of antigen-antibody reactions and the structure of antibodies.
Functional significance of antibodies.
Chemical and physical properties of blood.
Isolation and characterization of cellular antigens.
Mechanisms of enzyme action.
Chemical analysis of proteins and determination of the order of amino-acid residues in polypeptide chains.
Physical chemical studies of nucleic acids and viruses.
Crystal structures of amino acids, peptides, and proteins.
Plant hormones and related substances of physiological importance.
Investigation of mammalian and bacterial polysaccharides including the blood-group specific substances.
Behavior of biological macromolecules in the ultracentrifuge.

Ch 290 abc. Chemical Research Conference. First, second, third terms. These conferences consist of reports on investigations in progress in the chemical laboratories and on other researches which are of current interest. Every graduate student in chemistry is expected to attend these conferences. Seminars in special fields (immunochemistry, analytical chemistry, crystal structure, chemical physics, organic chemistry) are also held.

CIVIL ENGINEERING
UNDERGRADUATE SUBJECTS

CE 10 abc. Structural Analysis and Design. 9 units (3-0-6); first, second and third terms. Prerequisites: AM 97 abc. Analysis of lumped-parameter structural systems, including the basic concepts of relaxation. The design of structural components using such materials as steel and reinforced concrete. Instructor: McCormick.

CE 17. Civil Engineering. 9 units (3-0-6); third term. Prerequisite: Senior standing. Selected comprehensive problems of civil engineering systems involving a wide variety of interrelated factors. Instructors: Staff.

ADVANCED SUBJECTS

CE 105. Introduction to Soil Mechanics. 9 units (2-3-4); first term. Prerequisite: AM 97. A general introduction to the physical and engineering properties of soil, including origin, classification and identification methods, permeability, seepage, consolidation, settlement, slope stability, lateral pressures and bearing capacity of footings. Standard laboratory soil tests will be performed. Text: Principles of Soil Mechanics, Scott. Instructor: Scott.

CE 115 ab. Soil Mechanics. 9 units (3-0-6); first term. 9 units (2-3-4); second term. Prerequisite: CE 105, or equivalent, may be taken concurrently. A detailed study
of the engineering behavior of soil through the examination of its chemical, physical and mechanical properties. Classification and identification of soils, surface chemistry of clays, inter-particle reactions, and their effect on sediment deposition and soil structure. Permeability and steady state water flow, transient flow and consolidation processes, leading to seepage and settlement analyses. In the second term, attention is given to stress-deformation behavior of soils, elastic stability, failure theories, and problems of plastic stability. Study is devoted to the mechanics of soil masses under load, including stress distributions and failure modes of footings, walls and slopes. Laboratory tests of the shear strength of soils will be performed. Text: *Principles of Soil Mechanics*, Scott. Instructor: Scott.

**CE 120 ab. Advanced Structural Analysis. 9 units (3-0-6); first and second terms. Prerequisite: CE 10 or equivalent.** Advanced methods of structural analysis, including the solution of differential equations, energy methods, moment distribution and relaxation methods, finite difference and numerical methods, applied to special structures such as elastic and plastic frames, unstable columns and frames, suspension bridges, arches, prismatic shells. Instructor: McCormick.

**CE 121. Analysis and Design of Structural Systems. 9 units (0-9-0); third term. Prerequisite: CE 120 ab.** The analysis and design of complete structural systems. In general, students will work on a single problem for the entire term. The problem may be primarily one of analysis or one of design. Instructor: McCormick.

**CE 123. Dynamics of Structures. 9 units (3-0-6); third term. Prerequisites: AM 150 ab, CE 120.** Analysis of structures and their response to dynamic loads such as blast and earthquakes. Consideration will be given to both elastic and plastic deformations. Instructor: Housner.

**CE 124. Special Problems in Structures. 9 units (3-0-6); any term.** Selected topics in the field of structures to meet the needs of first-year graduate students. Instructors: Housner, McCormick.

**CE 130 abc. Civil Engineering Seminar. 1 unit (1-0-0); each term.** Conferences participated in by faculty and graduate students of the Civil Engineering department. The discussions cover current developments and advancements within the fields of civil engineering and related sciences, with special consideration given to the progress of research being conducted at the Institute.

**CE 141. Applied Aqueous Solution Chemistry. 9 units (3-3-3); first term. Prerequisites: Ch 1 abc or equivalent; Ch 114 or concurrent registration in Ch 114.** Application of principles from chemical thermodynamics and kinetics and analytical chemistry to the study of the behavior of the important constituents of natural waters. The chemistry of solutions, heterogeneous processes, and oxidation-reduction reactions are applied to provide quantitative explanations for the chemical characteristics of various natural waters. Among the topics treated are metal-ion solubility controls, carbonate equilibria at ordinary temperatures and pressures, pH buffer systems in natural waters, ion-exchange and adsorption processes, mathematical and graphical treatment of chemical equilibrium data, and kinetics of some simple oxidation reactions under natural water conditions. The laboratory illustrates application of various techniques of measurement, including electrometry, spectrophotometry, and ion-exchange to the analysis of natural waters. Instructor: Morgan.
CE 142 ab. Applied Chemistry of Natural Water Systems. 9 units (2-3-4); second and third terms. Prerequisite: CE 141. Detailed considerations of the application of chemical principles to the analysis of actual natural water systems and to the understanding and solution of specific chemical problems in areas such as water purification technology, water pollution control, and aquatic sciences. Among the topics dealt with are the chemical properties of streams, lakes, and ocean waters; colloidal phenomena in natural waters; chemical aspects of coagulation and flocculation; heterogeneous chemical processes of various kinds, such as adsorption from solution; corrosion and corrosion control processes; and the chemistry of water purification processes such as softening, ion-exchange, stabilization, and disinfection. Instructor: Morgan.

CE 145 ab. Environmental Health Biology. 10 units (2-4-4), second term; 9 units (3-0-6), third term. Prerequisites: Ch 41 abc or equivalent (may be taken concurrently). An exposition of basic biological principles concerning interrelations between organisms, particularly those directly affecting man and his environment. Emphasis is placed on the influences of microorganisms as illustrative of the ways populations react on each other and condition the physical and chemical environment. Unique features of the terrestrial, freshwater, and marine environments are discussed and extensive reading is required, covering a broad scope of biological literature. Instructor: North.

CE 146 abc. Analysis and Design of Environmental Systems. 9 units (3-0-6); each term. Prerequisites: ME 17 ab, ME 19 ab, AM 113 ab, CE 145 ab, and CE 155, or equivalents. (The graduate prerequisites may be taken concurrently.) A series of selected problems in the application of basic science and engineering science to water supply and treatment for municipal, industrial, and irrigation use; removal, treatment, and disposal of liquid and solid wastes; the theory of unit operations as applied to environmental systems; the design of works; and economic aspects of projects. Instructors: McKee, Gram.

CE 150. Foundation Engineering. 9 units (3-0-6); third term. Prerequisite: CE 115 ab. Methods of subsoil exploration. Study of types and methods of design and construction of foundations for structures, including spread and combined footings, mats, piles, caissons, retaining walls, cofferdams, and methods of underpinning. Instructor: Scott.

CE 152 ab. Environmental Radiation. 9 units (2-3-4); second and third terms. Prerequisites: Ch 1 abc, Ph 2 abc, Ma 2 abc, ME 17 ab, ME 19 ab. Engineering analysis of the problems associated with ionizing radiations in the human environment, especially in water, waste water, and air; evaluation of radiation sources; interactions of radiation with matter; methods of detection and measurement; use of radioactive tracers; acute and chronic effects on health; radioactive waste disposal; and engineering principles of control. Instructor: Gram.

CE 153. Seminar in Environmental Health Engineering. 3 units (2-0-1); third term. Special seminars and field trips to cover several aspects of engineering in environmental health not normally included in formal courses; e.g., engineering aspects in problems of epidemiology; sanitation of swimming pools, hospitals, and housing; engineering control of insects, rodents, and vermin; waste disposal in the marine environment; occupational hazards, and environmental control in space. Instructors: Staff and visiting lecturers.

CE 155. Hydrology. 9 units (3-0-6); first term. Prerequisites: Ma 2 abc, Ph 2 abc. An introductory study of the occurrence and movement of water on the earth's sur-
face, including such topics as precipitation, evaporation, transpiration, infiltration, ground water, runoff, and flood flows; applications to various phases of hydraulic engineering such as water supply, irrigation, water power, and flood control; the use of statistical methods in analyzing hydrologic data. Instructor: Brooks.

**CE 156. Industrial Wastes.** 9 units (3-0-6); third term. Prerequisite: CE 146 ab. A study of the industrial processes resulting in the production of liquid wastes; the characteristics of such wastes and their effects upon municipal sewage-treatment plants, receiving streams, and ground waters; and the theory and methods of treating, eliminating, or reducing the wastes. Instructor: McKee.

**CE 160. Advanced Hydrology.** 6 or more units as arranged; any term. Prerequisite: CE 155. Advanced studies of various phases of hydrology. The course content will vary depending on needs and interests of students enrolling in the course. Instructor: Brooks.

**CE 170 ab. Behavior of Disperse Systems in Fluids.** 9 units (3-0-6); first and second terms. Prerequisites: ME 19 ab, Ch 21 abc or equivalents. Studies of the mechanical and physicochemical behavior of particles in fluids with applications to gas cleaning, cloud physics, emulsion stability and water treatment. The first term is concerned primarily with stochastic problems including fluctuation theories of new phase formation, the theory of the Brownian movement, and theories of coagulation and convective diffusion. The second term deals with mechanical problems including impaction and sedimentation in flow systems, theories of filtration of particles from fluids, and experimental methods for measuring particle size distributions. Instructor: Friedlander.

**CE 200. Advanced Work in Civil Engineering.** 6 or more units as arranged; any term. Members of the staff will arrange special courses on advanced topics in civil engineering for properly qualified graduate students. The following numbers may be used to indicate a particular area of study.

**CE 201. Advanced Work in Structural Engineering.**

**CE 202. Advanced Work in Soil Mechanics.**

**CE 203. Advanced Work in Environmental Health Engineering.** One purpose of this course is to explore new approaches which bear on environmental health problems. Hence the topics covered change from year to year. In 1966-67, "Engineering Aspects of the Circulatory System" will be discussed including (a) introduction to circulatory physiology, (b) mechanics of blood flow, (c) mechanical properties of blood, (d) membrane transport, (e) oxygen transport through hemoglobin solutions, (f) convective diffusion in the circulatory system. Emphasis is on the application of engineering methods, both analytical and experimental, to the understanding of circulatory physiology. Lectures are given by members of the engineering faculty and guest speakers. Students are expected to participate in the discussions. Instructors: Friedlander, Wayland, and other members of the engineering faculty.

The same course number may be used for other advanced study in environmental health engineering.

**CE 204. Advanced Work in Water Resources.**

**Hy 200. Advanced Work in Hydrodynamics or Hydraulic Engineering.**

**CE 300. Civil Engineering Research.**
Subjects of Instruction

COMPUTERS AND MACHINE METHODS OF COMPUTATION
(See courses listed under Information Science)

ECONOMICS

UNDERGRADUATE SUBJECTS

Ec 4 ab. Economic Principles and Problems. 6 units (3-0-3); first and second terms, or second and third terms. A course in economic theory, institutions, and problems. The first half stresses analysis of money, national income, economic growth, and business fluctuations. The second half emphasizes the understanding of wages, prices, and profits in individual industrial and farm enterprises as well as international economic relations. Instructors: Sweezy, Dohan, Untereiner, Oliver, Noll.

Ec 13. Reading in Economics. Units to be determined for the individual by the department.

Ec 18. Industrial Organization. 7 units (3-0-4); third term. After outlining the historical background of industry with the economic changes involved, this subject surveys the major problems facing management, especially in factory operations. The principal topics included are organization, plant layout, costs and budgets, methods, time and motion study, production control, labor relations, and wage scales. Instructor: Gray.

Ec 25. Business Law. 7 units (3-0-4); third term. A survey of the law governing business activities and relationships. Contracts, agency, sales, insurance, negotiable instruments, employment, property rights, trusts and estates, and forms of business organization are studied. Instructor: Untereiner.

Ec 48. Introduction to Industrial Relations.* 9 units (3-0-6). Senior Elective. This course stresses the personnel and industrial relations functions and responsibilities of supervisors and executives. The history, organization, and activities of unions and the provisions of current labor legislation are included. The relationships of a supervisor or executive with his employees, his associates, and his superiors are analyzed, and the services which he may receive from the personnel department are examined. The course also discusses the use of basic tools of supervision. Instructor: Gray.

ADVANCED SUBJECTS

Ec 100 abc. Business Economics. 9 units (3-0-6); first, second, third terms. Open to graduate students. This course endeavors to bridge the gap between engineering and business, especially industry. It is intended for two groups of technically trained students: 1) those who wish, sooner or later, to take advantage of opportunities in industry beyond their strict technical fields, and 2) those who will be engaged in teaching and in scientific research, but who wish to get an understanding of industry in both its technical and philosophical aspects. The broad assumptions in the course are that technical training is an excellent approach to positions of general responsibility in business and industry, and that technically trained men going into industry can make significant contributions to the improved functioning of the economy. The principal divisions of the subject matter of the courses are: 1) industrial organization and finance, 2) factory management with emphasis on automation, 3) industrial sales, 4) personal investments, and

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.

**Advanced students in Economics should be aware that IS 181 ab, Linear Programming, 9 units (3-0-6) second and third terms, is valuable for its economic applications. Credit in this course may be counted toward the fulfillment of requirements for a Ph.D. minor in Economics.
5) business economic topics, especially the business cycle. This treatment provides a description of the industrial economy about us and of the latest management techniques. The points of most frequent difficulty are given special study. The case method of instruction is used extensively in the course. Instructor: Gilbert.

Ec 104. Business and Government.* 9 units (3-0-6); third term. Senior Elective. A study of government's growing role in the functioning of the private business system. Conditions leading to, and objectives sought by regulation of competition, quality and price. The evolution and functioning of a "mixed" economy. Emphasis on public utilities: methods and objectives of their regulation and problems of determining rate base, reasonable return and spread of rates. Instructor: Untereiner.

Ec 106 abc. Business Economics (Seminar). Units by arrangement; first, second, third terms. Open to graduate students. This seminar is intended to assist the occasional graduate student who wishes to do special work in some part of the field of business economics or industrial relations. Special permission to register for this course must be secured from the instructors. Instructors: Gilbert, Gray.

Ec 110. Industrial Relations. 9 units (3-0-6); first term. Not open to students who have taken Ec 48, Introduction to Industrial Relations. An introductory course dealing with basic problems of employer-employee relationships and covering the internal organization of an enterprise, the organization and functions of unions, and the techniques of personnel administration with emphasis on the problems of setting wage rates. Instructor: Gray.

Ec 111. Business Cycles and Governmental Policy. 9 units (3-0-6); second term. A study of the nature, causes, and possible control of economic fluctuations with special emphasis on the interrelationship of business cycles and such fiscal matters as national debt control, national budgetary control, and the maintenance of high levels of employment, production, and purchasing power. The course also integrates the international problems of war, reconstruction, trade, and investment with the analysis of business cycles and internal fiscal policies in order to provide a unified theory of national and international equilibrium. May be taken as a senior elective.

Ec 112. Modern Schools of Economic Thought. 9 units (3-0-6); third term. A study of economic doctrine in transition, with particular emphasis on the American contribution. Against a background of Marshall and Keynes, a critical examination will be made of the institutional, collective, quantitative, social, experimental, and administrative schools of economics.

Ec 113. Reading in Economics. Same as Ec 13 but for graduate credit.

Ec 120. International Economic Relations.* 9 units (3-0-6); third term; Senior Elective. An investigation of the factors influencing the flow of goods and services between markets. Particular attention is paid to the techniques of exporting and importing, foreign investments, the balance of international payments, foreign exchange rates and controls, international monetary and commodity agreements, and the international inter-relationships of politics and economics. Open to all students who have taken Ec 4 ab or the equivalent. Instructor: Oliver.

Ec 121. Price Theory.* 9 units (3-0-6); first term; Senior Elective. A theoretical analysis of the price system, with special reference to the nature and problems of the U.S. economy. The course includes a study of consumer preference, the structure and conduct of markets, factor pricing, measures of economic efficiency, and the interdependence of markets in reaching a general equilibrium. Instructor: Noll.

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.
Ec 122. Econometrics.* 9 units (3-0-6); second term; Senior Elective. The application of statistical techniques to economic data. Included in the course is a presentation of the statistical model most useful to the theory of consumer demand, to price theory, and to the prediction of levels of over-all economic activity. Instructor: Noll.

Ec 123. The Russian Economy.* 9 units (3-0-6); third term; Senior Elective. A study of the Russian Soviet economic system and a comparison of the Russian economy with the economics of Western Europe and the United States. Instructor: Sweezy.

Ec 126 ab. Money, Income, and Growth.* 9 units (3-0-6); first and second terms. Senior Elective. Open to students who have taken Ec 4 ab and to other qualified students with the consent of the instructor. This course starts with an intensive study of Keynes' "General Theory of Employment" and then goes on to post-Keynesian developments in the theory of income, consumption, investment and growth. The course also covers the theory of wages and productivity and the relation of technical progress to increases in productivity and real income. It deals with economic policy as well as economic theory, especially the application of monetary, fiscal, and other policies to problems of inflation, depression, unemployment, automation, and growth. The third term is devoted largely to a study of the Russian economy and a comparison of the Russian economy with the economies of Western Europe and the United States. Instructor: Sweezy.

Ec 127 abc. Problems in Economic Theory (Seminar). Units by arrangement; first, second, third terms. Prerequisite: Ec 126 or its equivalent. Consideration of selected topics in economic theory. Instructors: Members of the staff and guest lecturers.

IS 181 ab. Linear Programming. 9 units (3-0-6). See page 336.

Electrical Engineering

Undergraduate Subjects

EE 5. Introductory Electronics. 9 units (3-0-6); third term. Prerequisite: Ph 2 ab. This is an introductory course to provide a background in electronics for students both in engineering and in other fields. The subjects covered will be simple a.c. circuit theory, properties of vacuum tubes and transistors, simple rectifiers and switching circuits. Instructor: Langmuir.

EE 13 abc. Linear Network Theory. 9 units (3-0-6); three terms. Prerequisites: Ma 2 abc, Ph 2 abc and AM 95 or Ma 108. Introduction to the analysis of linear networks in both the time and the frequency domain. Topics presented include graphs, networks, loop and node equations, transient and steady state, power, frequency response, two-terminal-pair networks, Fourier series, Fourier and Laplace transforms, feedback, noise and distributed linear systems. Instructor: Mason.

EE 14 abc. Electronic Circuits. 9 units (3-0-6); first, second, third terms. Prerequisites: Ma 2 abc, Ph 2 abc. A course covering the general area of active devices and their circuit applications. Transistor and vacuum tube amplifiers, biasing, gain, frequency response, class A, B and C power output circuits and their limitations. Nonlinear electronics, diodes, rectifiers, mixers, switching circuits, saturation, power converters, etc. Texts: Transistor Circuit Analysis, Joyce and Clarke; Electronic Fundamentals and Applications, Ryder. Instructor: Martel.

* The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.
EE 20 abc. Physics of Electronic Devices. 9 units (3-0-6); first, second, third terms. Prerequisite: Ph 2 abc. The application of modern physical principles to materials and devices important in present technological applications. Topics include: energy bands in solids, electrical properties of semiconductors, metals and dielectrics, semiconductor devices, plasmas, gas tubes, excitation and relaxation of electronic systems and reference to luminescence and stimulated emission. Text: Solid State Physical Electronics, Van Der Ziel. Instructor: Mead.

EE 90 abc. Laboratory in Electronics. 3 units (0-3-0); each term. Prerequisite: Ph 2. An introductory laboratory normally taken in the junior year. The experiments are designed to acquaint the student with the techniques and the equipment used in electrical measurements. The characteristics of linear passive electrical circuits, the properties of electron devices and the behavior of simple linear and nonlinear active circuits are measured and compared with theoretical models. A maximum of six units may be used in satisfying the laboratory requirement of the Division of Engineering and Applied Science (see page 262). Instructor: Nicolet.

EE 91 abc. Experimental Projects in Electrical Engineering. 5 units (0-4-1); each term. Prerequisite: EE 90 abc or equivalent. A general laboratory program designed to give the student an opportunity to do original experiments in the fields of electrical engineering and applied physics. Emphasis is placed not only upon modern laboratory techniques but also upon the selection of significant projects, the formulation of the experimental approach and the interpretation of the data. Facilities are available for experiments involving electronic circuits, electronic circuit elements, cryogenics, lasers, magnetism, optics, microwaves, thermionics and electronic properties of semiconductor materials. Text: Literature References. Instructor: Humphrey.

ADVANCED SUBJECTS

EE 112 abc. Network Synthesis. 9 units (3-0-6); first, second, third terms. Prerequisite: EE 13 abc. The analysis and synthesis of lumped and distributed parameter circuits. Mathematical properties of network functions. Realization theory for driving-point and transfer functions, including the synthesis techniques of Bode, Brune, Cauer, Darlington, Foster, Guillemin and others. The approximation problem, the scattering matrix, the Deschamps chart, and selected topics of research importance. Texts: Synthesis of Passive Networks, Guillemin; Principles of Microwave Circuits, Montgomery et al. Instructor: George.

EE 126. Topics in Solid State Devices and Circuits. 6 units (2-0-4); third term. Prerequisites: EE 125 ab. Advanced treatment of a selection of topics including silicon-controlled rectifiers, field-effect transistors and their applications. A term paper will be required. Instructor: Middlebrook.

EE 131 abc. Physics of Semiconductors and Semiconductor Devices. 9 units (3-0-6); three terms. Introduction to the concepts of semiconductor devices. Includes topics
such as the solid state, electric properties of solids, Boltzmann and Fermi statistics, properties of regular arrays, mechanical and electrical filters, band theory of crystals, electrons, holes, semiconductors, theory of p-n junctions and of semiconductor devices. Not offered in 1966-67. Instructor: Nicolet.

EE 133 abc. Interaction of Radiation and Matter. 9 units (3-0-6); first, second and third terms. Prerequisite: Ph 125, its equivalent, or instructor’s permission. The interactions of coherent electromagnetic fields with a variety of atomic systems are considered. Topics discussed include: electron paramagnetic resonance of free ions and of ions in crystals, spin-lattice and spin-spin relaxation, quantization of EM fields and of lattice vibrations, photon-phonon scattering and stimulated Brillouin scattering, the theory of one and two-photon absorption, laser oscillators, nonlinear optics and multifrequency interactions in crystals, spontaneous and stimulated Raman scattering, absorption and emission of radiation in semiconductors, selected applications.

EE 135 abc. Electronic Processes in Solids. 9 units (3-0-6); first, second, third terms. Prerequisites: AM 95, EE 20. A continuation of EE 20 with emphasis on those fields of applied solid state physics relating to current research activities. Instructor: Wilts.

EE 151 abc. Electromagnetism. 9 units (3-0-6); first, second, third terms. Prerequisites: Ph 2 abc; Ma 2 abc; AM 95 abc. A course in theoretical electricity and magnetism, primarily for electrical engineering students. Topics covered include electrostatics, magnetostatics, Maxwell’s equations, waveguides, cavity resonators, and antennas. EE 151 c will include topics on propagation in the ionosphere, propagation over the earth’s surface, and modern microwave tubes. Text: Electromagnetic Fields and Waves, Langmuir. Instructor: Langmuir.

EE 155 abc. Electromagnetic Fields. 9 units (3-0-6); first, second, third terms. Prerequisite: EE 151 abc. An advanced course in classical electromagnetic theory and its application to guided waves, cavity resonators, antennas, artificial dielectrics, propagation in ionized media, propagation in anisotropic media, magnetohydrodynamics, and to other selected topics of research importance. Text: Course notes. Instructor: Papas.

EE 162 Stochastic Processes in Communication and Controls. 9 units (3-0-6); first term. Prerequisite: AM 95 abc or Ma 108. An introduction to probability theory and stochastic processes. Topics covered include continuous and discrete random variables, characteristic functions and moments. Methods of characterizing stochastic processes. Real and complex representation of random processes, processes with independent increments, stationary and ergodic processes, correlation functions and power spectra, markov processes. Instructor: Grettenberg.

EE 163 ab. Statistical Communication Theory. 9 units (3-0-6); second, third terms. Prerequisite: EE 162. Mathematical methods in Modern Communication Theory. The representation of deterministic and random signals, sampling theorems. Linear filtering of stochastic processes, the Wiener Filter, the matched filter, prediction theory. Decision theoretic models for the analysis and synthesis of optimum data processing systems. Detection of signals and estimation of signals parameters. Signal selection and criteria for system comparisons. Sequential methods for learning unknown system parameters. Instructor: Grettenberg.

EE 164 ab. Information Theory. 9 units (3-0-6); first and second terms. Prerequisite: AM 95 or Ma 108 first term, EE 162 or equivalent second term. The information rate
of a source. Coding for reliable transmission of source information over continuous and discrete channels with noise. Channel capacity and Shannon's first and second coding theorems. Group codes, convolution codes, and other error correcting codes. Information measures in decision theory. Information relative to a loss criterion. Instructor: Staff.

EE 175. Optimization in Control. 9 units (3-0-6); second term. Prerequisite: EE 174 or equivalent. The Deterministic optimal control problem: classical variational methods; Pontriagin's maximum principle; Bellman's dynamic programming; optimization via linear and nonlinear programming. Computational methods: the quasilinearization method; gradient methods. Instructor: Sridhar.

EE 176. Stochastic Problems in Control. 9 units (3-0-6); third term. Prerequisite: EE 175 and EE 162 or equivalent. Linear Filtering and Estimation; Nonlinear filtering; Stochastic optimal control; Adaptive Control Systems: Identification and decision problems. Stochastic approximation. Instructor: Sridhar.

EE 191. Advanced Work in Electrical Engineering. Special problems relating to electrical engineering will be arranged to meet the needs of students wishing to do advanced work. Primarily for undergraduates. Students should consult with their advisors before registering for this course.

EE 194. Microwave Laboratory. 6 units (1-3-2); second term. Prerequisite: EE 151 ab, or may be taken concurrently. Covering experiments on microwave generation, bridges, precise impedance measurement, nodal shift methods, and the properties of microwave circuit elements such as matched T's, directional couplers and antennas. Instructor: Gould.

EE 201. Research Seminar in Electrical Engineering. 1 unit. Meets once a week for discussion of work appearing in the literature and in industry. All advanced students in electrical engineering and members of the electrical engineering staff are expected to take part. In charge: Staff.

EE 221 abc. Topics in Physical Electronics. 4 units (1-0-3); first, second, third terms. Prerequisite: EE 124 abc. Principles of electromagnetic interaction with solids and
ionized gases and current applications. Content to vary from year to year. Typical topics are: microwave noise in electron beams, magnetic resonance and relaxation, cyclotron resonance, oscillations and waves in plasmas. Not offered in 1966-67.

EE 243 abc. Quantum Electronics Seminar. 6 units (3-0-3). Advanced treatment of topics in the field of quantum electronics. Each weekly seminar consists of one lecture of a series on the elements of radiation theory, partial coherence, dispersion, nonlinear optics, laser media, and spectroscopy, followed by a discussion of a current research paper. Text: Class notes and selected references. Instructors: George, Yariv.

EE 255 abc. Boundary-Value Problems of Electromagnetic Theory. 9 units (3-0-6); first, second, third terms. Prerequisite: EE 155 abc, or equivalent. This course presents the mathematical techniques (Fourier-Lamé method, integral equation method, variational principles) that are available for the solution of boundary-value problems arising from the study of antennas, waveguides, and wave propagation. Text: Randwertprobleme Der Mikrowellenphysik, Borgnis and Papas; also class notes. Instructor: Papas.

EE 291. Advanced Work in Electrical Engineering. Special problems relating to electrical engineering will be arranged to meet the needs of students wishing to do advanced work. Primarily for graduate students. Students should consult with their advisors before registering for this course.

ENGINEERING

E 10 ab. Technical Presentations. 2 units (1-0-1); first and second terms. A course concerned with oral presentations of technical material. Instructors: Staff.

E 11 ab. Technical Presentations. 2 units (1-0-1); first and second terms. A course concerned with oral presentations of technical material coordinated with EE 91 ab. EE 91 ab must be taken concurrently with E 11 ab. Instructors: Staff.

E 150 abc. Engineering Seminar. 1 unit (1-0-0); each term. All candidates for the M.S. degree in Applied Mechanics, Materials Science and Mechanical Engineering are required to attend any graduate seminar in any division each week of each term.

ENGINEERING GRAPHICS

Gr 1. Basic Graphics. 3 units (1-2-0); first term. This course deals with the fundamental aspects of projective geometry and graphical techniques used by the scientist and engineer as an aid in spatial visualization, communication and in creative design. Emphasis is placed on the effective use of freehand sketching in perspective, orthographic projection and other useful forms of representation. The student’s ability to visualize three-dimensional forms and spatial relationships is logically developed through a series of freehand problems followed by basic descriptive geometry solutions analyzing some of the general relationships which exist among points, lines and planes. Accuracy, neatness and clarity of presentation are encouraged throughout the course. Instructors: Welch, Auksmann.

Gr 5. Descriptive Geometry. 6 units (0-6-0); third term. Prerequisite: Gr 1. The course is primarily for geology students and is designed to supplement the study of shape description as given in Gr 1 and to present a graphical means of solving the more difficult three-dimensional problems. The student reviews geometrical relationships of straight lines and planes, then advances to curved lines, single and double
curved surfaces, warped surfaces and intersections. Methods of combining the analytical solution of the simpler problems with the graphical solution are discussed and applied. Emphasis is placed throughout the course on practical problems in mining and earth structures and on the development of an ability to visualize in three dimensions. Instructors: Staff.

**Gr 7. Advanced Graphics.** Maximum of 6 units. Elective; second and third terms. Prerequisite: Gr 1. Further study in the field of graphics as applied to engineering problem analysis and in design for production. Through a coordinated series of discussions, laboratory problems and field trips the student is introduced to work in various branches of engineering as well as to some of the broad aspects of human engineering, aesthetics and various economic factors as they affect design. Instructor: Welch.

**English**

**Undergraduate Subjects**

**En 1 a. Literature.** 6 units (3-0-3); first term. A study of literary documents illustrating Rationalism, chosen from seventeenth and eighteenth century poets, essayists and philosophers. Frequent analytical and critical papers are assigned. Instructors: J. Kent Clark and staff.

**En 1 bc. Nineteenth and Twentieth Century Literature.** 11 units (3-0-8); second and third terms. A study of the chief intellectual and literary movements from the early nineteenth century to the present. Included among the topics are the romantic reaction to eighteenth century rationalism, the nineteenth century hero, the impact of science on religion and literature, effects of reform and revolution, romantic theories of art, the movement toward "realism," the growth of relativism, the problems of engagement and identity, the anti-hero, and the modern concern with war and peace. The study will also involve a consideration of the principal literary forms: poetry, drama, narrative prose and literary criticism. Frequent analytical and critical papers are assigned.

**En 7 abc. Advanced Literature.** 8 units (3-0-5); first, second, third terms. Advanced study of major literary works in various forms. The reading of the first term is focused on tragedy and epic, the second term on Shakespeare and the third term on the novel.

**En 9. American Literature.*** 9 units (3-0-6). Senior Elective. Prerequisite: En 7. A study of major literary figures in the United States from Whitman and Mark Twain to those of the present time. The larger part of the course is concerned with contemporary writers. An emphasis is placed on national characteristics and trends as reflected in novel and short story, biography, poetry, and drama. Instructor: Langston.

**En 10. Modern Drama.*** 9 units (3-0-6). Senior Elective. Prerequisite: En 7. A study of leading European, British, and American dramatists from Ibsen to writers of the present time. Special attention is given to dramatic technique, and to the plays both as types and as critical comments upon life in the late nineteenth and twentieth centuries. Instructor: O. Mandel.

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.
En 11. Literature of the Bible.* 9 units (3-0-6). Senior Elective. Prerequisite: En 7. A study of the Old and New Testaments, and the Apocrypha, exclusively from the point of view of literary interest. The history of the English Bible is reviewed, and attention is brought to new translations. Opportunity is offered for reading modern fiction, poetry, and drama dealing with Biblical subjects.

En 12 abc. Debating. 4 units (2-0-2). A study of the principles of argumentation; systematic practice in debating; preparation for intercollegiate debates. Instructor: Booth.

En 13. Reading in English and History. Units to be determined for the individual by the department. Collateral reading in literature and related subjects, done in connection with regular courses in English or history, or independently of any course, but under the direction of members of the department.

En 14. Special Composition. 2 units (1-0-1). This subject may be prescribed for any student whose work in composition, general or technical, is unsatisfactory.

En 15 abc. Journalism. 3 units (1-0-2); first, second, third terms. A study of the elementary principles of newspaper writing and editing, with special attention to student publications at the Institute. Instructor: Hutchings.

En 18. Modern Poetry.* 9 units (3-0-6). Senior Elective. Prerequisite: En 7. A study of three or four major poets of the twentieth century, such as Yeats, T. S. Eliot and W. H. Auden. Modern attitudes toward the world and the problem of belief. Some consideration of recent theories of poetry as knowledge. Instructor: Clark.

En 20. Summer Reading. Units to be determined for the individual by the department. Maximum 8 units. Elective. Reading in literature, history, philosophy, and other fields during summer vacation, books to be selected from a recommended reading list, or in consultation with a member of the staff. Critical essays on reading will be required.

ADVANCED SUBJECTS

En 100 abc. Seminar in Literature. 9 units (2-0-7); first, second, third terms. A survey of recent critical methods, from I. A. Richards to the present time, and the application of these methods to the work of such major writers as Joyce, Yeats, Eliot and Mann. The influence of modern psychology and anthropology on creative writing and criticism. Instructor: Mayhew.

En 122 abc. Senior Seminar. 9 units (2-0-7). For majors only. Selected topics in literary history and criticism, in English and American authors, periods and types. Seminar reports and papers.

En 124 ab. Medieval Literature.* 9 units (3-0-6). Senior Elective. Prerequisite: En 7. A two-term sequence designed to give an introduction to medieval English language and literature, culminating in a detailed study of Chaucer.

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.
En 125 abc. Sixteenth and Seventeenth Centuries.* 9 units (3-0-6). Senior Elective. Prerequisite: En 7. A course designed to acquaint the student with the principal figures and genres of the period from the Reformation to the Restoration. It includes the Humanists, Elizabethan poetry, non-Shakespearian drama, seventeenth century prose writers, metaphysical and cavalier poets, Dryden, and Milton.

En 126. Eighteenth Century.* 9 units (3-0-6). Senior Elective. Prerequisite: En 7. Study of dominating figures of the eighteenth century, particularly Pope and Johnson, and of the Restoration and eighteenth century drama.

En 127. Earlier English Novel.* 9 units (3-0-6). Senior Elective. Prerequisite: En 7. The novel from Richardson and Fielding to Scott and Jane Austen.

En 130. American Renaissance.* 9 units (3-0-6). Senior Elective. Prerequisite: Study of the emergence of distinctively American literature and culmination in Emerson, Thoreau, Melville, and Hawthorne. Their influence on subsequent American writing.

FRENCH

(See under Languages)

GEOLOGICAL SCIENCES

UNDERGRADUATE SUBJECTS

Ge 1. Physical Geology. 9 units (4-2-3); first term. Prerequisites: Ch 1 abc, Ph 1 abc. An introduction to the basic principles of the earth sciences. Geology, geochemistry and geophysics in relation to materials and processes acting upon and within the earth's crust. Consideration is given to: rocks and minerals; structure and deformation of the earth's crust; earthquakes; volcanism; and the work of wind, running water, ground water, the oceans, and glaciers upon the earth's surface with the aim of stimulating the student's interest in the geological aspects of the environment in which he will spend his life. Text: Principles of Geology, Gilluly, Waters, and Woodford. Instructors: Allen, Sharp, and Teaching Fellows.

Ge 2. Geophysics. 9 units (3-0-6); second term. Prerequisites: Ge 1, Ma 2 a, Ph 2 a. A selection of topics in the field of geophysics using, as fully as possible, the prerequisite background. Included are consideration of the earth's gravity and magnetic fields, geodesy, seismology, and the deformation of solids, tides, thermal properties, radioactivity, age determinations, the continents, the oceans, and the atmosphere. Observations followed by their analysis in terms of physical principles. Instructor: Smith.

Ge 3. Mineralogy—The Crystalline State. 9 units (3-3-3); second term. Prerequisites: Ge 1, Ch 1, Ph 1. Basic atomistic relationships in the crystalline state; crystallography; crystal structure of representative minerals; solid state transformations; ionic theory of solids; physical properties in relation to crystal structure. Problems and laboratory study on: stereographic projection, morphological crystallography, crystal structure and mineral identification. Instructor: Kamb.

* The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.
Ge 5. Geobiology. 9 units (3-0-6); third term. Prerequisites: Ge 1, Ch 1, Bi 1, or consult instructor. An examination, chiefly in biological terms, of processes and environments governing the origin and differentiation of secondary materials in the crust throughout the span of earth history. Consideration is given to the environmental influence of the change from a reducing to an oxidizing atmosphere upon the evolution of life processes and to the subsequent progression of organisms and organic activity throughout the oxidizing era as recorded in the sedimentary rocks of the earth's crust. Special attention is devoted to organic progression and differentiation in time and space in terms of environment. Instructors: Lowenstam, Brown.

Ge 40. Special Problems for Undergraduates. Units to be arranged, any term. This course provides a mechanism for undergraduates, other than freshmen, to undertake honors-type work in geologic sciences. By arrangement with individual members of the staff.

Ge 41 abc. Senior Thesis. Units to be arranged. Senior majors wishing to undertake some research and prepare a suitable professional report on some topic may elect a variable number of units, not to exceed 12 in any one term, for such work under the direction of some member of the Division faculty.

ADVANCED SUBJECTS

Courses given in alternate years are so indicated. Courses in which the enrollment is less than five may, at the discretion of the instructor, not be offered.

Ge 100. Geology Club. 1 unit (1-0-0); all terms. Presentation of papers on research in geological science by the students and staff of the Division of the Geological Sciences and by guest speakers. Generally required of all senior and graduate students in the Division; optional for sophomores and juniors. Instructor: Kamb.

Ge 102. Oral Presentation. 2 units (1-0-1); first, second, or third term. Training in the technique of oral presentation. Practice in the effective organization and delivery of reports before groups. Successful completion of this course is required of all candidates for the bachelor's, master's, and doctor's degrees in the Division. However, students taking more than one degree in the Division need not take Ge 102 for the second or third one. The number of terms taken will be determined by the proficiency shown in the first term's work. Instructors: Sharp, Booth, Murray.

Ge 103. Historical Geology. 9 units (2-2-5); third term. Prerequisite: Ge 1. Distribution in time and space of stratified rocks; development of the biota since the beginning of the Cambrian; distribution of orogenies in time and space since the Precambrian; relation of major stratified rock types and orogenic areas to the Precambrian shields of the world. Instructor: Boucot.

Ge 111 ab. Invertebrate Paleontology. 10 units (2-6-2); second and third terms. Prerequisite: Ge 1. Morphology and geologic history of the common groups of the lower invertebrates, with emphasis on their evolution and adaptive modifications. Second term: consideration of the higher invertebrates groups; preparation of fossils and problems of invertebrate paleontology. Instructors: Lowenstam, Boucot.

Ge 112. Paleontology Laboratory. 6 units (0-6-0); by arrangement with instructor. Training in preparation, organization, and evaluation of fossil assemblages as a tool in stratigraphic, paleontological, and paleogeographic research. Instructor: Boucot.
Ge 114. Mineralogy II—Optical Mineralogy. 12 units (3-8-1); first term. Prerequisites: Ge 3; or Ge 1, Ch 1, Ph 1 and permission of instructor. Systematic study of the physical properties of important rock-forming minerals and mineral groups as a function of their crystal structure and chemical composition. The elements of optical crystallography and their application in microscopic mineralogy will be studied. The laboratory work will emphasize the development of basic competence in mineral identification using hand specimens and the petrographic microscope. Instructor: Silver.

Ge 115. Petrology and Petrography. Systematic study of rocks and rock-forming minerals with emphasis both upon the use of the petrographic microscope and macroscopic identification; interpretation of mineral assemblages, textures, and structures; problems of genesis. Field trips will supplement laboratory study.

Ge 115 a. Igneous Petrology and Petrography. 12 units (3-6-3); second term. Prerequisites: Ge 114, Ch 24 a or 124 a or Ch 21 a. The mineralogical and chemical composition, origin, occurrence, and classification of igneous rocks considered mainly in the light of chemical equilibrium and of experimental studies. Detailed consideration of the structure, phase relations, and identification of the feldspar, pyroxene, amphibole, olivine, and feldspathoid mineral groups. Instructor: Albee.

Ge 115 b. Sedimentary Petrology and Petrography. 10 units (3-4-3); third term. Prerequisite: Ge 115 a. The mineralogic and chemical composition, occurrence, and classification of sedimentary rocks; consideration of the chemical, physical, and biological processes involved in the origin, transport, and deposition of sediments and their subsequent diagenesis. Detailed consideration of structure, phase relations, composition, and identification of clay minerals, carbonates, and Fe-Mn oxides. Laboratory study will include identification of clay minerals by X-ray diffraction.

Ge 115 c. Metamorphic Petrology and Petrography. 10 units (3-4-3); first term. Prerequisite: Ge 115 b. The mineralogic and chemical composition, occurrence, and classification of metamorphic rocks; interpretation of mineral assemblages in light of chemical equilibrium and experimental studies. Detailed consideration of structure, phase relations, composition, and determination of the major metamorphic minerals. Introduction to use of universal stage and petrofabric diagrams. Instructor: Taylor.

Ge 120 a. Field and Structural Geology. 10 units (2-5-3); first term. Prerequisite: Ge 1. A problem and field course in the interpretation and mapping of geologic structures. Topics treated during the first part of the term include the mechanical properties of rocks, geologic scale models, and the analytical solution of structural problems. The second part of the term is devoted primarily to elementary field techniques, including field mapping in several structurally complicated areas of southern California. Instructor: Allen.

Ge 120 b. Field Geology. 10 units (0-8-2); second term. Prerequisite: Ge 120 a. Intensive field investigation of a single area of complex structural, stratigraphic, and petrologic problems. A professional report is required. Instructor: Taylor.

Ge 120 c. Geophysical Field Studies. 10 units (2-6-2); third term. An integrated geophysical field program in an area of particular geological interest, using seismic refraction, gravity, and magnetic field measurements. Students take part in all phases of the program, such as surveying of stations, operation of equipment, reduction of data and interpretation. A final report, embodying calculations and interpretation, is required. Instructors: Smith, Anderson.
**Ge 121 abc. Advanced Field Geology.** 14 units (4-8-2), first term; 10 units (0-8-2), second term; 11 units (0-5-6), third term. Prerequisites: Ge 3, Ge 120 abc. Interpretation of geologic features in the field, with emphasis on problems of the type encountered in professional geologic work. Advanced techniques of investigation are discussed. The student investigates limited but complex field problems in igneous, sedimentary, and metamorphic terranes. Individual initiative is developed, principles of research are acquired, and practice gained in field techniques, including the use of the plane table in geologic mapping. The student prepares reports interpreting the results of his investigations. Instructors: Silver (121 a); Kamb (121 b); Albee (121 c).

**Ge 123. Summer Field Geology.** 30 units. Prerequisite: Ge 120 abc. Intensive field study of a 10-15 square mile area from a centrally located, temporary camp. Emphasis is placed on stratigraphic and structural interpretation, and on detailed mapping techniques, including the use of aerial photographs. Each student prepares a geologic map, stratigraphic and structural sections, and a complete geologic report. The work is performed under close supervision of regular staff members. The area chosen generally lies in a part of the Rocky Mountains, or the Basin and Range Province. The course is designed to complement the field training in southern California afforded by the regular school year courses, Ge 20 and Ge 121. The course begins the Monday following commencement (about June 15) and lasts for six weeks. It is required at the end of the junior year of candidates for the bachelor’s degree in the geology and geochemistry options; of candidates for the Master of Science degree; and, at the discretion of the staff, of candidates for other advanced degrees in the Division of Geological Sciences. Registration is limited to students regularly enrolled in the California Institute of Technology or to those entering the following term. Text: Suggestions to Authors, Wood and Lane. Instructors: To be designated.

**Ge 130 ab. Introduction to Geochemistry.** 6 units (2-0-4); first and second terms. Prerequisites: Ch 14, Ch 21 abc or Ch 24 ab, Ma 2 abc, Ph 2 abc, Ge 1. A lecture and problem course on the application of chemical principles to earth problems, involving topics in stable and radioactive isotopic geochemistry. Instructor: Epstein.

**Ge 131. Geochronology.** 6 units (2-0-4); third term. Prerequisite: Ge 130 ab. A lecture and problem course covering topics in radioactive isotopes, and geochronology. Instructor: Patterson.

**Ge 150. The Nature and Evolution of the Earth.** 6 units (3-0-3). Discussions at an advanced level of problems of current interest in the earth sciences. The course is designed to give graduate students in the geological sciences and scientists from other fields a broad sampling of data and thought concerning current problems. The lectures are given by members of the staff of the Division of the Geological Sciences. Staff members from other divisions and visiting lecturers from the outside also participate in the instruction. Students may enroll for any or all terms of this course without regard to sequence. Instructors: The staff and visitors.

**Ge 151 a. Laboratory Techniques in the Earth Sciences.** 5 units (0-5-0); second term. Introductory training in the use of tools and techniques used in earth sciences research. Experiments of geological interest are done using the emission spectrograph, spectrophotometer, X-ray spectrometer, alpha and beta counters, mass spectrom-
eters, wet chemical techniques and other available tools and techniques. The
course carries a minimum of 5 units but additional units may be elected. In
charge: Epstein.

**Ge 166 a. Planetary Physics.** 6 units (3-0-3); *first term.* Dynamics of the solar system;
orbital parameters of planets and natural and artificial satellites; astronomically
determined parameters of the bodies of the solar system. Methods of determining
masses and moments of inertia; effect of tidal friction on orbital evolution; syn­
chronous and resonant orbits. Use of artificial satellites for determination of gravi­
tational fields of planetary bodies.  Instructor: Goldreich.

**Ge 166 b. Interiors of the Terrestrial and Jovian Planets.** 6 units (3-0-3); *third term.* A study
of the astronomical and dynamical evidence and some of the theories pertaining to
the interiors of the planets. Mars, Venus, Moon and the Jovian planets will be cov­
ered. Topics to be treated include the mass-radius relation of cold bodies, the gravi­
tational field and equilibrium configurations of the planets, internal density distrib­
tions inferred from dynamical considerations, equations of state and internal
temperatures of the Jovian planets, composite model planets of hydrogen and heli­
um, the terrestrial planets in the light of current knowledge of the earth’s interior,
thermal models for the planets, planetary magnetic fields.  Instructor: Anderson.

**Ge 171. Applied Geophysics.** 10 units (3-4-3); *first term.* The use of gravity, magnetic,
electrical, and seismic methods applied to geological field problems.  Instructor: Dix.

**Ge 176. Elementary Seismology.** 6 units (3-0-3); *third term.* Prerequisites: Ge 1, Ma 2 ab.
A survey of the geology and physics of earthquakes.  Text: *Elementary Seis­
mology,* Richter.  Instructor: Richter.

**Ge 212 ab. Thermodynamics of Geological Systems.** 10 units each term (3-0-7); *first and
second terms.*

122 a. Prerequisites: Ch 124 ab or Ch 21 abc. An advanced treatment of
chemical thermodynamics using the methods of Gibbs, with emphasis on applica­
tions to geologic problems. Topics to be covered include heat flow and heat
sources, high pressure phase transformations, silicate phase equilibria, solid solu­
tions, the effect of H2O in silicate melts, and equilibrium in a gravitational field.
Instructor: Wasserburg.

122 b. Prerequisite: 122 a. Lectures and problems on the chemical and
physical properties of aqueous solutions, with emphasis on the thermodynamic
behavior of those electrolyte solutions important in nature. Topics to be covered
include the effects of solution composition on mineral equilibria, Eh-pH diagrams,
Debye Huckel theory, extension of thermodynamic data to high temperatures and
pressures, non-ideality in mixed-gas systems, and reaction kinetics in systems in­
volving water. Results will be applied to problems of metamorphic pore fluids,
the magmatic gas phase, and hydrothermal vein deposits.  Text: *Thermody­
namics,* Lewis, Randall, Pitzer, and Brewer. Instructor: Taylor.

**Ge 213. Seminar,** to be offered at pleasure of the staff on special topics and prob­
lems of current interest in the fields listed below. 5 units. Prerequisites dependent
upon topics.

**Ge 213 a—Mineralogy Seminar.**
**Ge 213 b—Petrology Seminar.**
**Ge 213 c—Geochemistry Seminar.**
**Ge 213 d—Geochronology Seminar.**
Ge 214. Advanced Mineralogy. 10 units (3-3-4); first term. Prerequisite: Ge 115 abc. Principles of optical and X-ray crystallography. The application of modern optical, powder diffraction, and single-crystal X-ray methods to the study of the feldspars, pyroxenes, micas, and other important mineral groups. Instructor: Kamb.

Ge 215 abc. Topics in Advanced Petrology. Prerequisites: Ge 115, Ch 124, Ge 151 a. Integrated lecture, laboratory, and seminar study of sedimentary, igneous, and metamorphic processes and their products. Laboratory and field studies will be pursued in close association with the classwork. Consideration of petrologic problems in terms of basic principles and modern approaches will be emphasized.

215 a. Advanced Sedimentary Petrology. 10 units (3-4-3); first term. Instructor: Silver.

215 b. Advanced Igneous Petrology. 12 units (3-6-3); second term. Instructor: Silver.

215 c. Advanced Metamorphic Petrology. 12 units (3-6-3); third term. Instructor: Albee.

Ge 216. Nuclear Problems in Geology. 10 units (3-0-7). Permission of instructor. This course will cover a variety of topical material relating to nuclear processes which are of geologic importance. Topics to be covered include introductory discussion of theories of nucleosynthesis, naturally occurring and extinct radioactivities and their daughter products, isotopic anomalies, heat generation in the earth, cosmic ray induced nuclides, methods of absolute age dating, age determinations on meteorites and rocks, the geologic time scale, element redistribution in radioactive parent-daughter systems, and residence times and mixing processes for some model systems. Instructor: Burnett.

Ge 220 ab. Lunar and Planetary Surfaces. 9 units (4-0-5); second and third terms. Prerequisite: Consult with instructor. Observational evidence pertaining to the surface geology and geophysics of the Moon, Mars, Mercury, and the Galilean satellites is covered at an advanced level along with brief consideration of the probable surface conditions on other planets. The interpretation of visible, infrared, and microwave observations is considered in the context of: (1) the surface processes likely to have been operative in the past as well as present, and (2) the likely optical properties of silicate mineral aggregates in extraterrestrial surface environments. Instructor: Murray.

Ge 221. Astrogeology. 10 units (3-1-6); second term. Prerequisite: Ge 115 abc desirable. Consult with instructor. A review of the distribution of solid objects in the solar system and the probabilities of their collision; physics and phenomenology of shock propagation and cratering in rocks; shock metamorphism; fine-grained particles in space near the earth; distribution and characteristics of impact structures on the earth and applications to the interpretation of the stratigraphy, structure and history of the Moon. Instructor: Shoemaker.

Ge 222. The Chemistry of the Solar System. 6 units (3-0-3); first term. Prerequisite: Ge 30 ab or equivalent. A discussion of the chemical composition in relation to other properties, of the Sun, planets (including Earth), satellites, comets, interplanetary gas and dust, and asteroids. Planetary atmospheres will be discussed in some detail. Special emphasis will be placed upon meteorites and their properties, including their motion and fall, morphology, chemistry, mineralogy and petrography as well as nuclear and chemical transformations induced by cosmic rays. Instructor: Brown.
Ge 225. Selected Topics in Planetary Science (Seminar). 5 units; second term. Actual review of current research in a selected area of the chemistry, physics, or geology of the Moon, planets, or meteorites. In charge: Murray, Shoemaker, and other members of the staff.

Ge 244 ab. Paleoeocology (Seminar). 5 units; second and third terms. Critical review of classic investigations and current research in paleoecology and biogeochemistry. In charge: Lowenstam.

Ge 245. Biostratigraphy (Seminar). 5 units; first, second and third terms. A consideration of problems and principles of biostratigraphy, including regional, inter-regional, and world-wide correlations by means of fossils, and the problems arising from the consideration of animal geography. Instructor: Boucot.

Ge 247 a. Tectonics. 10 units (3-0-7); third term. Prerequisite: Ge 120 abc. Structure and geophysical features of continents, ocean basins, geosynclines, mountain ranges, and island arcs. Structural histories of selected mountain systems in relation to theories of orogenesis. Offered in alternate years (1966-67). Instructors: Allen, Kamb.

Ge 261. Advanced Seismology: Theoretical. 6 units (3-0-3); first term. Prerequisite: Ph 108 abc. Discusses essential material not covered in Ge 264 (Elastic Waves), including equations of electromagnetic seismographs and paths of seismic rays within the earth. Instructor: Richter.

Ge 264 ab. Elastic Waves. 8 units (4-0-4); first and second terms. Prerequisites: Ph 106 abc. Experimental and theoretical aspects of elastic wave propagation in a layered half space, in plates, cylinders, and spheres, with application to seismic waves and underwater acoustics.
Ge 265 ab. Advanced General Geophysics. 9 units (3-0-6); second and third terms. Prerequisites: Ph 106 abc; Ph 108 abc; Ph 129 also desirable. Topics from among the following areas will be selected: thermal regime of the earth, submarine geophysics; geomagnetism; planetary geophysics; gravity field; large-scale motions in the earth.

Ge 268 ab. Selected Topics in Theoretical Geophysics. 4 units (2-0-2), first term; 8 units (3-0-5), second term. Prerequisite: Ph 129 abc or equivalent. Discussion of seismic wave propagation, general thermodynamics and dynamics as applied to earth processes, gravitational and magnetic fields, and stress systems in the rotating earth. Course content is altered in emphasis from year to year depending mainly on student needs. Offered in 1966-67. Instructor: Dix.

Ge 282 abc. Geological Sciences Seminar. 1 unit; first, second, third terms. Prerequisite: At least two subjects in geophysics or geochemistry. Discussion of papers in geochemistry, general and applied geophysics. In charge: Epstein, Smith.

Ge 295. Master's Thesis Research. Units to be assigned. Listed as to field according to the letter system under Ge 299.

Ge 297. Advanced Study. Students may register for 8 units or less of advanced study in fields listed under Ge 299. Occasional conferences.

Ge 299. Research. Original investigation, designed to give training in methods of research, to serve as theses for higher degrees, and to yield contribution to scientific knowledge. These may be carried on in the following fields:

Geology:

(A) Economic Geology
(B) Field Geology
(C) Geomorphology
(D) Glaciology
(E) Invertebrate Paleontology
(F) Mineralogy
(G) Paleocology
(H) Petrology
(I) Sedimentation
(J) Stratigraphy
(K) Structural Geology

Geochemistry:

(L) General Geochemistry
(M) Geochronology
(N) Isotopic Geochemistry
(O) Meteorites

Geophysics:

(P) Applied Geophysics
(Q) General Geophysics
(R) Geophysical Instruments
(S) Seismology
(T) Theoretical Geophysics

Planetary Science:

(U) Planetary Observations
(V) Laboratory Studies
(W) Theoretical Studies
GERMAN
(See under Languages)

HISTORY
UNDERGRADUATE SUBJECTS

H 1 a. An Introduction to Modern Europe. 5 units (2-0-3); first term. The beginnings of modern Europe, culminating in the era of the French Revolution. A selection is made of particular topics of lasting significance for the development of Europe as we know it. Included are such subjects as the English Revolution, the Enlightenment, the Ancient Regime, the French Revolution and the career of Napoleon. Particular attention is paid to some of the important political ideas which emerged in the period. There are regular and frequent written assignments. Instructors: D. C. Elliot and staff.

H 1 bc. Nineteenth and Twentieth Century Europe. 11 units (3-0-8); second and third terms. A general study of historical development from the fall of Napoleon to the present. Included among the themes considered are the rise of nationalism and the growth of liberal democracy, the process of industrialization and the adjustment of attendant social disorders, the rise and fall of imperialism, the recurrence of war and revolution. Attention is also paid to the great statesmen and to the more important political thinkers of the period as well as to some of the more dramatic and illuminating events of this historical epoch. There are regular and frequent written assignments.

H 2 abc. History and Government of the United States. 6 units (2-0-4); first, second, third terms. The evolution of the American nation and the American character, from the seventeenth century to the present. The course will include a study of the Constitution and form of government of the United States and the State of California, and will trace the evolution of national and local political institutions and ideas. Instructors: Kevles and staff.

H 5 abc. Public Affairs. 2 units (1-0-1); first, second, third terms. This course involves a discussion of selected problems which are of continuing significance for the American people. Particular attention will be paid to the development of foreign policy and to the impact of this policy upon other parts of the world. Instructors: Elliot, Sweezy, and guests.

H 40. Reading in History. Units to be determined for the individual by the department. Elective, in any term. Reading in history and related subjects, done either in connection with the regular courses or independently of any course, but under the direction of members of the department. A brief written report will usually be required.

H 41. Summer Reading. Units to be determined for the individual by the department. Maximum, 8 units. Elective. Reading in history and related subjects during summer vacation. Topics and books to be selected in consultation with members of the department. A brief written report will usually be required.

ADVANCED SUBJECTS

H 101. Tutorial. Open to students majoring in history. Reading, preparation of a research paper, and preparation for a general examination, under the supervision of members of the staff.
Subjects of Instruction

H 105 abc. The Middle Ages.* 9 units (3-0-6). Senior Elective. Successive terms will trace government, economic change, and intellectual and social life. Topics will include: first, the medieval origins of English parliamentary government, French autocracy, and German fragmentation; second, the economic consequences of the Germanic and Moslem conquests, the growth of the medieval economy, origin of towns, and technological change; third, medieval thought, social ideals, love, and chivalry. Instructor: Benton.

H 112. Europe since 1914.* 9 units (3-0-6); Senior Elective. Since 1914 the world has felt the impact of two great wars and powerful revolutionary ideas. This course will analyze the upheavals of the twentieth century and their effect on domestic and international organization. Instructor: Fay.

H 116. Germany.* 9 units (3-0-6). Senior Elective. Principal historical developments in Germany from the Reformation to the present day. Emphasis on the evolution of social and political institutions and attitudes. Instructor: Ellersieck.

H 117. Russia.* 9 units (3-0-6). Senior Elective. An attempt to discover and interpret the major recurring characteristics of Russian history and society, with attention particularly to developments in the Soviet period. Instructor: Ellersieck.

H 118. Britain.* 9 units (3-0-6). Senior Elective. Main elements in the political life of modern Britain. Attention will be concentrated primarily on events since 1832, and emphasis will be placed on economic and social trends, on political and constitutional development, and on the lives of important statesmen. Instructor: Elliot.

H 120. The British Empire and Commonwealth.* 9 units (3-0-6). Senior Elective. The growth of the imperial idea and the institutional development of the Empire and the Commonwealth with particular reference to Africa and Asia. Instructor: Huttenback.

H 121. India and Pakistan.* 9 units (3-0-6). Senior Elective. The growth of Indian nationalism in the years before independence, and developments in India and Pakistan since partition. Special emphasis will be placed on the philosophical conflict between British and indigenous Indian attitudes and the consequent effect on contemporary India and Pakistan. Instructor: Huttenback.

H 146. The South in American History. 9 units (3-0-6). Senior Elective. Factors of regional distinctiveness: staple crops, plantations, slavery, the South as a minority, the sectional crises, rise of tenancy, the "New South," and the passing of the traditional South. Instructor: B. Jones.

H 147. The Far West and the Great Plains.* 9 units (3-0-6). Senior Elective. The exploration and development of the great regions of western America. Special attention will be paid to the influence of the natural environment, and the exploitation of it by such industries as the fur trade, mining, cattle ranching, farming and oil. Instructor: Paul.

H 151. Industrial Change and an Age of Reform in America, 1865-1917.* 9 units (3-0-6). Senior Elective. An examination of major political responses in the United States to the dislocations of an emergent industrial and urban society. Instructor: Woodbury.

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.

H 153. America since 1940.* 9 units (3-0-6). Senior Elective. The foreign and domestic politics of an emerging affluent society, with emphasis on the minority group revolution, the new conservatism, and the modification of American liberalism.

H 154. American Foreign Policy in the Twentieth Century.* 9 units (3-0-6). Senior Elective. How American foreign policy has been formed and administered in recent times: the respective roles of the State Department, Congress, and the President, of public opinion and pressure groups, of national needs and local politics. Instructor: Paul.

H 201. Reading and research for graduate students. Units to be determined for the individual by the staff.

Hydraulics
advanced subjects

Hy 100. Hydraulics Problems. Units to be based upon work done, any term. Special problems or courses arranged to meet the needs of first-year graduate students or qualified undergraduate students.

Hy 101 abc. Fluid Mechanics. 9 units; first, second, third terms. Prerequisites: ME 19 ab and Hy 111 or equivalent. General equations of fluid motion; two- and three-dimensional steady and non-steady potential motion; cavity and wake flow; surface waves, linear and nonlinear shallow-water waves, layered media, stability; acoustic fields, sound radiation and scattering, acoustic energy transport; one-dimensional steady gasdynamics, expansion fans, shock waves; two- and three-dimensional flow fields; laminar flow, Stokes and Oseen problems, laminar boundary layer; laminar instability, turbulence, turbulent shear flow; introduction to problems in heterogeneous flow, chemically reacting flow, sediment transport, flow through porous media. Instructor: Marble.

Hy 103 abc. Advanced Hydraulics and Hydraulic Structures. 9 units (3-0-6); first, second, third terms. Prerequisites: ME 19 ab and Hy 111 or equivalent. Ideal fluid flow, turbulence and diffusion, boundary layers, dimensional analysis, hydraulic models, steady flow in open channels, hydraulic jump, high-velocity flow in open channels; theory and design of hydraulic structures such as inlets, chutes, energy dissipators, canals, transitions; sedimentation, surface waves and coastal engineering, and unsteady flow in pipes and channels. Instructors: Vanoni, Raichlen.

Hy 105. Analysis and Design of Hydraulic Projects. 6 or more units as arranged; any term. The detailed analysis or design of a complex hydraulic structure or project emphasizing interrelationships of various components, with applications of fluid mechanics and/or hydrology. Students generally work on a single problem for the entire term, with frequent consultations with the instructor. Among possible problems or projects are multipurpose river storage projects, spillways, waterpower developments, pipelines, pumping stations, distribution and collection systems.

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.
flood control systems, ocean outfalls, water and sewage treatment plants, irrigation systems, navigation locks and harbors. Instructors: Vanoni, Brooks, Raichlen.

Hy 111. Fluid Mechanics Laboratory. 6-9 units as arranged with instructor; second or third term. Prerequisite: ME 19 ab. A laboratory course illustrating the basic mechanics of incompressible fluid flow, and complementing the lecture course ME 19 abc. Students will usually select 4 or 5 regular experiments, but with the permission of the instructor they may propose special investigations of brief research projects of their own in place of some of the regular experiments. Objectives also include giving students experience in making engineering reports. Although the course is primarily for seniors, it is also open to first-year graduate students who have not had an equivalent course. Instructor: Raichlen.

Hy 121. Advanced Hydraulics Laboratory. 6 or more units as arranged; any term. Prerequisite: Consent of instructor. A laboratory course primarily for first-year graduate students dealing with flow in open channels, sedimentation, waves, hydraulic structures, hydraulic machinery, or other phases of hydraulics of special interest. Students may perform one comprehensive experiment or several shorter ones, depending on their needs and interests. Instructor: Staff.

Hy 134. Flow in Porous Media. 9 units (3-0-6); third term. Prerequisite: AM 95 abc or AM 113 abc. (One term of the prerequisite courses may be taken concurrently.) A study of the hydrodynamics and physics of flow through porous media, with applications primarily in the field of ground-water flow, including seepage through earth dams and levees, flow toward wells, ground-water recharge, drainage, dispersion of contaminants, and salinity intrusion. Instructor: Brooks.

Hy 200. Advanced Work in Hydrodynamics or Hydraulic Engineering. Units to be based upon work done; any term. Special courses to meet the needs of advanced graduate students.

Hy 201 abc. Hydraulic Machinery. 6 units (2-0-4); first, second, third terms. A study of such rotating machinery as turbines, pumps, propellers, and blowers and their design to meet specific operating conditions. Instructor: Acosta.

Hy 203. Cavitation Phenomena. 6 units (2-0-4); first or third term. Prerequisite: Graduate standing. Study of the experimental and analytical aspects of cavitation and allied phenomena. Problems will be considered in the field of high speed flow and also for bodies moving in a stationary fluid. Instructor: Ellis.

Hy 210 ab. Hydrodynamics of Sediment Transportation. 9 units (3-0-6). Prerequisites: AM 95 abc and Hy 103 abc or Hy 101 abc. A study of the mechanics of the entrainment, transportation, and deposition of solid particles by flowing fluids. This will include problems of water and wind erosion. Instructor: Vanoni.

Hy 211. Advanced Hydraulics Seminar. 4 units (2-0-2); every term. A seminar course for advanced graduate students to discuss and review the recent technical literature in hydraulics and fluid mechanics. Emphasis will be on topics related to civil engineering which are not already available in courses offered by the Division of Engineering and Applied Science. The subject matter will be variable depending upon the needs and interests of the students. It may be taken any number of times with permission of the instructor. Instructor: Brooks.

Hy 212. Topics in Turbulent Diffusion and Stratified Flow. 9 units (3-0-6); first term. Prerequisites: AM 95 abc or AM 113 abc; and Hy 101 abc or Hy 103 abc. The hydrody-
Information Science 335

Dynamics of turbulent diffusion in jets and plumes in uniform and density-stratified environments; large-scale turbulent diffusion in the ocean; dispersion in shear flows, including natural streams; mixing in tidal estuaries; selective withdrawal from density-stratified reservoirs. Applications to engineering problems of pollution control in hydrologic and coastal environments. Instructor: Brooks.

Hy 213. Coastal Engineering. 9 units (3-0-6); second term. Prerequisite: Hy 103 abc or Hy 101 abc. Engineering applications of the theory of small and finite amplitude water waves; diffraction, reflection, and refraction; effect of waves on coastal structures such as breakwaters and pile supported structures; harbor resonance problems; impulsively generated waves; mooring of ships in waves; coastal sediment transport problems. Instructor: Raichlen.

Hy 300. Thesis Research.

Information Science 
Advanced Subjects

Several classes of courses are offered on the basic principles of information processing and machine computation. There are a number of non-credit coding courses given every term that are frequently prerequisites to certain credit courses and to the uses of the computers in the Booth Computing Center. The office of the Computing Center should be contacted concerning these.

Accredited Courses

100 series courses open to juniors and seniors or by special permission of instructors.

IS 103 a. Combinatorial Algorithms. 9 units (3-0-6); third term. Basic techniques for manipulation of information within computers; processing of trees and multiply-linked lists, sorting, table searching, symbol table subroutines, backtrack programming, generating permutations and combinations, scanning algebraic languages. Instructor: Knuth.

IS 110 abc. Principles of Digital Information Processing. 9 units (3-3-3). This course presents the principles and concepts of digital information processing systems with emphasis on the stored program synchronous computer. This includes switching theory and its application to the design of systems. The organization of digital processors at the machine language level is covered together with the basic concepts of formal algebraic languages, their uses and the translation between them and machine languages. The laboratory permits direct experimentation with a variety of systems ranging from basic subsystems to complete computers. Instructors: McCann, Ray.

IS 121 abc. Biosystems Analysis. 6 units (2-0-4). Same as Bi 121 abc. Prerequisite: Bi 118 or concurrently. This course presents a systematic consideration and application of the methods of systems analysis, information theory and computer logic to problems in neurobiology. The subjects to be considered include the mechanical properties of striated muscle, the analysis of neuronal integrative mechanisms and reflex behavior in terms of logical net theory. The course will seek to describe some aspects of human cortical activity in terms of information theory and conceptual modeling. The course will be conducted as a research seminar and the detailed subject matter will change from year to year. Instructors: Fender and staff.

IS 129 abc. Formal Languages and Programming Systems. 9 units (3-0-6). Introduction to concepts of computer programming and computer languages, assembly languages,
comparison of algebraic languages including FORTRAN, ALGOL, and PL/I. Formal language theory; Turing machines, introduction to automata theory; parsing, syntax directed compilation, algebraic linguistics. Programming systems, monitors, I/O supervision, real time operation, time share, content addressable memory allocation. Instructor: Caine.

IS 181 ab. Linear Programming. 9 units (3-0-6); second and third terms. Prerequisite: AMa 104 or Ma 5 abc. Engineering and economic applications of linear programming. Duality and equilibrium theorems. The simplex method. Integral linear programming. Assignment transshipment, and transportation problems. Applications to game theory. Computational methods. Instructor: Franklin.

IS 203 ab. Computer Analysis of Data. 9 units (3-0-6); second and third terms. Prerequisite: EE 160 or Ma 112. A treatment of selected statistical models and the relation of these models to the methods of graphical display for the analysis of data. Techniques of fitting data, analysis of variance, spectral theory of stationary process, graphic methods for composing multi-response data are included. The integration of these models into heuristic strategies employing a data analysis language will be stressed. Instructor: Keehn.

IS 220. Theories of Visual Nervous Systems. 9 units (3-0-6); third term. Prerequisites: IS 121 abc and IS 203 a. Correlation of nervous system physiology and systems analysis techniques in the study of sight sensory systems. Specific systems analyses include neural networks and macro-models of perception including those derived from Lie algebra. Emphasis will be placed on combined computer-human analysis of stimulus response data and correlations between data analysis and conceptual modeling. Instructor: McCann.

IS 230 abc. Advanced System Synthesis. 9 units (3-0-6); taught alternate years. Not offered 1966-67. Prerequisites: IS 103 and IS 129. This course presents a systematic consideration of the concepts and practices involved in the design of large-scale operating systems for information processing. The course starts with a treatment of the basic system design tools such as scanning, text encoding, list processing and storage allocation. Translation and communication processors are covered next. Design criterion and techniques for compilation, translation and buffering are discussed. The processing components are developed now into complete operating systems. The remainder of the course consists of a study of such concepts as shared-file processors, real-time computing and data collection, and multi-tasking processors. Text: Class notes. Instructor: Caine.

IS 250 abc. Mathematical Linguistics. 9 units (3-0-6); taught alternate years. Not offered 1966-67. Prerequisite: IS 129 abc. This course presents a systematic development of the syntactic and semantic properties of languages. This includes the natural languages as well as the formal languages of symbolic logic and information processing. The philosophical aspects of language will be stressed together with the formalization of language structures suitable for computer simulation. Instructor: Thompson.

IS 260 abc. Artificial Intelligence. 9 units (1-2-6); taught alternate years. Prerequisites: IS 129 abc or consent of instructor. Investigation of principal strategies and problems in achieving intelligent behavior on a computer; discreteness of the space of alternatives, search strategies and heuristics, hill climbing; pattern recognition and articulation of patterns; learning systems. Review of recent developments in selected areas of research; problem solving programs, computer understanding of natural and graphic languages and question answering. Simulation of cognitive
processes. The student will be expected to develop and successfully run a computer program demonstrating understanding of advanced application of computers. Instructor: Thompson.

IS 280. Research in Information Science. Units in accordance with work accomplished. Approval of student's research advisor and his department advisor must be obtained before registering.

IS 281. Seminar in Information Science. 2 units. All terms. Meets twice a week for discussion of new research in the information sciences and biological systems analysis. One meeting is devoted to topics in language theory, information system synthesis and computational mathematics. The other deals with topics related to information processing in living nervous systems. In charge: Staff.

The following courses cover related basic mathematics and applied mathematics:

AMa 194. Matrix Algebra. See Applied Mathematics Section.

AMa 105 ab. Introduction to Numerical Analysis. See Applied Mathematics Section.

Ma 116 abc. Mathematical Logic and Axiomatic Set Theory. See Mathematics Section.

Ma 121 ab. Combination Analysis. See Mathematics Section.

Ma 205 abc. Numerical Analysis. See Mathematics Section.

Ma 216 abc. Advanced Mathematical Logic. See Mathematics Section.

JET PROPULSION
ADVANCED SUBJECTS

JP 120 abc. Chemistry Problems in Propulsion. 9 units (3-0-6); each term. Open to all graduate students and to seniors by permission of instructor. Propellant chemistry; descriptive discussions of atomic and molecular structure, standard heats of formation, normal vibrations, chemistry of propellants.Combustion thermodynamics; chemical equilibrium, quantitative evaluation of rocket propellants, thermodynamic functions for atoms and molecules. Introduction to flame theory; phenomenological chemical kinetics, transport properties, introduction to laminar and diffusion flames, detonation, combustion of solid propellants, heterogeneous combustion, turbulent flames. Text: Chemistry Problems in Jet Propulsion, Rannie.

JP 121 abc. Rockets and Air-Breathing Engines. 9 units (3-0-6); each term. Prerequisite: AM 95 ab. Basic performance and comparison of rocket and air-breathing engines. Nozzle flow, under- and over-expansion, particle flow in nozzles, heat transfer and cooling of components. Cycle analysis of air-breathing engines; component performance; diffusers, combustion chambers, compressors, turbines, ducted fans; component matching and over-all performance. Properties and burning characteristics of solid propellants, solid propellant rocket motors; properties and burning characteristics of liquid propellants, propellant feed systems, liquid rocket motors, low frequency and high frequency instability; weight estimates, optimization of vehicle performance. Instructor: Zukoski.

JP 170. Jet Propulsion Laboratory. 9 units (0-9-0); third term. Laboratory experiments related to propulsion problems. Instructor: Zukoski.
338 Subjects of Information

**JP 201. Physical Mechanics. 9 units (3-0-6); any term. Prerequisite: JP 120 abc or equivalent.** Introduction to quantum mechanical and statistical mechanical methods for calculating thermodynamic properties, in particular properties of materials at high temperatures; transport theory. Not offered every year.

**JP 203 abcd. Ionized Gas Theory. 6 units (2-0-4); any term. Prerequisite: Ph 112 or Ch 226 a or JP 201 a or equivalent.** The course will consist of the following subjects with one term being devoted to each subject: (1) Particle interactions: elastic, inelastic and recombination collisions involving neutral atoms, electrons and $^+$ ions studied in sufficient detail for accurate evaluation of bulk kinetic and thermodynamic properties of ionized gases. (2) Bulk properties: Application of kinetic theory, statistical thermodynamics and collision parameters developed in (1) above to bulk properties of ionized gases such as equilibrium composition, electrical conductivity, ambipolar diffusion rate and others. (3) Surface phenomena: Particle and bulk interactions between an ionized gas and a bounding surface, surface emission processes, electrical and thermal conduction between a hot ionized gas and a cold surface. (4) Discharges: Ionization in strong electric fields, electron and ion mobilities, glow discharges, arc discharges, engineering applications. Not offered every year. Instructors: Staff.

**JP 212 ab. Flame Theory and Combustion Technology. 6 units (2-0-4); any term. Prerequisites: JP 120 abc, Ae 101 abc or Hy 101 abc or equivalent.** This course will consist of the following subjects with one term being devoted to each subject: (1) Stationary flames: review of laminar flame and diffusion flame theory; combustion of solid propellants, spray burning; combustion in boundary layers, wakes, and laminar mixing regions; principles of ignition; turbulence and turbulent flames. (2) Unsteady flames: gas dynamic flow fields with flame discontinuities, structure of non-steady flames, stability of laminar flames; unsteady combustion of particles and droplets; flame holding, flame spreading; combustion chambers. Not offered every year. Instructors: Staff.

**JP 221 abc. Rocket Trajectories and Orbital Mechanics. 6 units (2-0-4); any term. Prerequisite: AM 95 ab. (Students who have taken or are intending to take Ae 103 and Ae 203 should consult the instructor.)** This course will consist of the following subjects with one term being devoted to each subject: (1) Ballistic trajectories: impulsive launching, optimization with finite burning time, gravity turn; re-entry, non-lifting and gliding. (2) Satellite orbits: motion in an inverse square law field; perturbations due to oblateness of the earth, radiation pressure, moon, sun, and aerodynamic drag. (3) Space vehicle trajectories: transfer ellipses, minimum en-
ergy estimates, motion in the Earth-Moon system, powered flight. Not offered every year. Instructor: Rannie.

**JP 230 abcd. Power Generation and Propulsion in Space. 6 units (3-0-3). Prerequisite: JP 121 abc (some previous knowledge of Electromagnetic Theory and Modern Physics is advisable).** (The aim of this course is to provide the background for understanding the current status and problems of space propulsion systems. The emphasis will change from year to year and the various terms are independent.) This course will consist of the following subjects with one term being devoted to each subject: (1) Power generation for space systems: general power requirements for space systems, turbogenerator systems with solar or nuclear power sources, radioisotope power supply, silicon solar cell, and thermoelectric systems; heat rejection and condensation processes. (2) Plasma propulsion and power extraction: plasma properties and magnetohydrodynamic flow fundamentals; steady, wave guide, and pulsed types of plasma accelerators, limitations on performance. (3) Ion propulsion: ion sources, ion accelerators, and beam neutralization; limitations on performance. (4) Nuclear propulsion: principles of the nuclear heat transfer rocket, propellant feed systems, cooling, and materials limitations; the gaseous fission rocket. Not offered every year. Instructor: Marble.

**JP 240 b. Heat Transfer in Propulsion Systems—Conductive and Convective Heat Transfer. 9 units (3-0-6); any term. Prerequisite: Hy 101 abc or ME 118 abc or equivalent.** Exact and approximate integral solutions of unsteady heat conduction problems, applications to solid propellant rocket motors; convective heat transfer to rocket chambers and nozzles, regenerative cooling of liquid propellant motors. Not offered every year. Instructor: Rannie.

**JP 250 abc. Fluid Mechanics of Axial Turbomachines. 6 units (2-0-4). Prerequisite: Hy 101 abc or equivalent.** This course will consist of the following subjects with one term being devoted to each subject: (1) Cascade theory: potential flow through two-dimensional cascades, real fluid effects, and evaluation of performance. (2) Axisymmetrical flow: flow through an actuator disc in an annular duct, linearized perturbations of strong vorticity fields, single and multiple blade rows of finite axial length, effect of varying duct height, and compressibility effects. (3) Three-dimensional real fluid effects: secondary flow, propagating stall, blade tip clearance flow. Not offered every year. Instructors: Marble, Rannie.

**JP 270. Special Topics in Propulsion. 6 units (2-0-4).** The topics covered will vary from year to year. Instructors: Staff.

**JP 280. Research in Jet Propulsion. Units to be arranged.** Theoretical and experimental investigations of problems associated with propulsion and related fields. Instructors: Staff.

**JP 290 abc. Advanced Seminar in Jet Propulsion. 1 unit (1-0-0); each term.** Seminar on current research problems in propulsion and related fields. Instructors: Staff.
LANGUAGES

UNDERGRADUATE SUBJECTS

L 1 abc. Elementary French. 10 units (3-1-6); first, second, third terms. A course in grammar, pronunciation, and reading that will provide the student with a vocabulary and with a knowledge of grammatical structure sufficient to enable him to read at sight French scientific prose of average difficulty. Accuracy and facility will be insisted upon in the final tests of proficiency in this subject. One session in the language laboratory will be scheduled each week. Students who have had French in the secondary school should not register for this subject without consulting with the department of languages. Instructor: Greenlee.

L 5. French Literature.* 9 units (3-0-6); second term. Senior Elective. Prerequisite: L 1 ab, or the equivalent. The reading of selected classical and modern literature, accompanied by lectures on the development of French literature. Elective and offered when there is sufficient demand. Instructors: Bowerman, Stern.

L 32 abc. Introductory Scientific German. 10 units; first term (3-1-6), second term (3-1-6); third term (4-0-6). A course in grammar, pronunciation, and reading that will provide the student with the ability to read scientific literature of average difficulty. In the first two terms, the essentials of grammar are covered, supplemented by a weekly drill in the language laboratory and selections from an elementary scientific reader. The third term is devoted to the reading of scientific literature of graduated difficulty. Students who have had German in the secondary school or junior college should not register for this course without consulting the staff in languages. Instructor: Bowerman.

L 33 abc. Introductory Literary German. 10 units (3-1-6); first, second, third terms. A study of the fundamentals of grammar and pronunciation, culminating in the reading of several short literary works by modern German writers. Although primary emphasis is upon the reading goal, some stress is also placed upon the oral use of the language by both instructor and students. Classroom work is supplemented by an hour of language laboratory drill weekly. Students who have had German in the secondary school or junior college should not register for this course without consulting the staff in languages. Instructor: Wayne.

L 35. Scientific German. 10 units (0-0-10); first term. Prerequisite: L 32 abc, or equivalent. This is a continuation of L 32 abc, with special emphasis on the translation of scientific material in the student's field. Instructor: Bowerman.

L 39 abc. Reading in French or German. Units to be determined for the individual by the department. Reading in scientific or literary French or German under the direction of the department.

L 40. German Literature.* 9 units (3-0-6); third term. Senior Elective. Prerequisite: L 35, or L 32 abc with above average grades. The reading of selected classical and modern literature, accompanied by lectures on the development of German literature. Instructor: Stern.

L 50 abc. Elementary Russian. 10 units (4-0-6); first, second, third terms. A course in pronunciation, grammar, and reading that is intended to enable a beginner to read technical prose in his field of study. Students are expected to become familiar with a basic scientific vocabulary. Articles from current Russian scientific periodicals are used in the second and third terms. Instructors: Kosloff, Novins.

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.
L 51 abc. Intermediate Russian. 10 units (4-0-6); first, second, third terms. Prerequisite: L 50 abc or the equivalent. A continued study of the Russian language with increased emphasis on conversation. The reading of selected classical and modern literature. Discussions in Russian. Continuation of reading and translation of scientific material. Instructor: Kosloff.

ADVANCED SUBJECTS

L 102 abc. French for Graduate Students. 10 units (3-1-6); first, second, third terms. The first year of a two-year course, designed to give the student a superior reading knowledge of the language, and the ability to understand the contents of a lecture in his general field and to discuss the subject matter in the language, as well as some competence in general conversation. Open to a limited number of graduate students. Prerequisite: none. Instructor: Greenlee.

L 103 abc. 10 units (3-1-6); first, second, third terms. The continuation of L 102 abc. Prerequisite: L 102 abc or equivalent. Offered 1967-68. Instructor: Greenlee.

L 105. Same as L 5. For graduate students.

L 140. Same as L 40. For graduate students.

MATERIALS SCIENCE

UNDERGRADUATE SUBJECTS

MS 5 abc. Principles of Engineering Materials. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ch 1 abc, Ph 2 abc, AM 97 a. The purpose of this course is to acquaint the student with the principles underlying the properties of solid materials. The electronic structure of atoms, the types of bonds between atoms in molecules and crystals, crystal structure and its determination by X-ray diffraction, and the band theory of crystalline solids are discussed. Topics in the physical properties of solids include: Electrical and thermal conductivity; the dielectric properties of insulators; diamagnetism, paramagnetism, ferromagnetism, and antiferromagnetism; specific heat; thermoelectric effects. An introduction to statistical thermodynamics is given. Rate processes such as diffusion and phase transformations in solids are discussed briefly. Elastic and plastic deformation of crystals, the concept of dislocations, properties, and interactions of dislocations are studied and applied to discussions of mechanical properties of polycrystalline aggregates, influence of grain size, alloying and phase dispersion, and high temperature creep and fracture. Instructors: Buffington (MS 5 b), Wood (MS 5 a, c).

MS 10. Engineering Physical Metallurgy. 9 units (2-1-6); first term. Prerequisite: MS 5 ab, or ME 3. A study of the properties of ferrous and non-ferrous metals and alloys with respect to their application in engineering; the principles of the treatment of ferrous and non-ferrous alloys for a proper understanding by engineers for application of alloys in fabrication and design. Four laboratory sessions during the term correlate properties and heat treatment with the microstructures of alloys. Text: Physical Metallurgy for Engineers, Clark and Varney. Instructors: Clark, Buffington.

MS 11. Metallography Laboratory. 9 units (0-6-3); second term. Prerequisite: MS 10. The technique of metallographic laboratory practice including microscopy, preparation of specimens, etching reagents and their use, photomicrography. The study of the microstructure of ferrous and non-ferrous metals and alloys for different conditions of treatment. Text: Principles of Metallographic Laboratory Practice, Kehl. Instructors: Clark, Buffington.
MS 100. Advanced Work in Physical Metallurgy. The staff in physical metallurgy will arrange special courses or problems to meet the needs of fifth-year students or qualified undergraduate students.

MS 102. Pyrometry. 9 units (1-6-2); third term. Prerequisite: Ph 2 abc. Study of the principles of thermometry and the theory underlying instruments that are used to measure temperatures. Experiments will be conducted with a variety of such instruments to illustrate their applications and limitations. Instructors: Staff.

MS 103 ab. Physical Metallurgy Laboratory. 9 units (0-9-0); first term. 6 units (0-6-0); second term. Prerequisite: MS 11. Experimental studies concerned with the structures and properties of metals and alloys associated with heat treatment and recrystallization phenomena. Studies of hardenability characteristics of steel with respect to prediction by thermodynamic considerations. The determination of grain size of metals and alloys in relation to properties. Instructor: Clark.

MS 105. Mechanical Behavior of Metals. 9 units (3-0-6); first term. Prerequisites: AM 97 abc, MS 5 abc. A study of the mechanical behavior of metals for engineering applications. Elastic behavior of anisotropic materials and polycrystalline aggregates. Yielding, plastic flow, and strengthening mechanisms, the influence of temperature and rate of loading on plastic deformation. Fracture of metals by ductile flow, brittle cracking, fatigue, and creep. Behavior under impact loading. Instructor: Wood.

MS 112 ab. Advanced Physical Metallurgy. 9 units (3-0-6); second and third terms. Prerequisites: MS 5 ab or MS 120, MS 115 a. Ternary phase diagrams; order-disorder transformations; solid-state diffusion; theory of gas-metal reactions; advanced consideration of magnetic properties; effects of radiation on materials. Instructor: Buffington.

MS 116. X-Ray Metallography Laboratory I. 9 units (0-6-3); third term. Prerequisite: MS 115 a. Experiments on X-ray emission spectra and absorption edges. Determination of crystal structures by the Von Laue and Debye-Scherrer methods. Use of the X-ray spectrometer. Study of preferred orientation in cold worked metals. Application of X-ray diffraction methods to the study of phase diagrams. Instructor: Duwez.

MS 120. Physics of Solids. 9 units (3-0-6); first term. Prerequisite: AM 95 ab or equivalent. Introduction to wave mechanics; band theory of solids; physical properties of solids. Those who have received credit for MS 5 ab cannot receive credit for MS 120, since there exists some duplication of material. Additional study in physics of solids can be arranged under MS 100. Instructor: Buffington.
MS 135. Radioisotopes Laboratory. 9 units (0-9-0); third term. Prerequisites: AM 103 a, MS 112 a. Experiments illustrating the use of radioisotopes in the field of physical metallurgy. Typical examples are studies of solid state diffusion and the determination of chemical inhomogeneities in metals and alloys. Instructor: Buffington.

MS 150 abc. Principles of Polymer Science. 9 units (3-0-6); first, second, and third terms. Prerequisite: AM 95 ab, or equivalent. During the first term the following topics are discussed: types of polymeric substances—definition and classifications; chemical structure of monomers; methods of synthesis of polymers; principles of condensation polymerization—kinetics and molecular weight distribution; theory of gelation; principles of free radical polymerization—kinetics and molecular weight distribution, various techniques of molecular weight determination—viscosity, light scattering, osmometry; statistical thermodynamics of polymer solutions.

During the second term, the following topics are discussed: elementary theory of viscoelasticity; time-temperature equivalence; glass transition; free volume; the glassy and crystalline state; conformation of crystalline polymers; kinetics and thermodynamics of growth of crystallines; effect of stretching on crystallinity; flaws, cracks, and crazing in plastics.

During the third term, the following topics are discussed: dimensions of polymer chains; rubber elasticity; molecular theory of viscoelasticity according to Rouse, Bueche, and Zimm; diffusion and viscosity theory; molecular friction factor; theory of flow and extrusion of molten polymers; tensile strength of rubbers.

Text: Polymers—Structure and Bulk Properties, P. Meares. All needed thermodynamic relations are derived in the course. Offered in alternate years, beginning 1965-66. Instructors: Blatz and Tschoegl.

MS 200. Advanced Work in Physical Metallurgy. The staff in physical metallurgy will arrange special courses or problems to meet the needs of students beyond the fifth year.

MS 205 a. Theory of Crystal Dislocations. 9 units (3-0-6); second term. Prerequisites: AM 110 a, MS 115 a (may be taken concurrently). The concept of a dislocation, special types and general dislocations. Dislocation motion and plastic deformation. The force on a dislocation, and the stress field and energy of a dislocation. Inter-
actions of a dislocation with the crystal lattice, other dislocations, surfaces, and point defects. Text: Dislocations, Friedel. Instructor: Wood.

**MS 205 b. Dislocations and the Mechanical Properties of Crystalline Solids. 9 units (3-0-6); third term. Prerequisites: MS 205 a.** Current theories of plastic yielding, strain hardening, alloy hardening, anelasticity, twinning, fracture, creep, and fatigue are discussed. Experimental techniques used for the observation of crystalline defects are discussed including etch pitting, X-ray diffraction, electron transmission and diffraction, and field ion microscopy. Instructor: Vreeland.

**MS 217. X-Ray Metallography Laboratory II. 9 units (0-6-3); any term. Prerequisite: MS 116.** An advanced laboratory course for students carrying out research involving the use of X-ray diffraction techniques. Methods of X-ray diffraction requiring the use of single crystals, rotating crystal and Weisenberg methods. Accurate measurements of diffracted intensities. Quantitative analysis of phases in alloys. Special problems will be assigned, depending on the student's field of interest. Instructor: Duwez.

**MS 225. Industrial Physical Metallurgy. 9 units (0-6-3); any term. Prerequisites: MS 103, MS 116.** Application of the principles of physical metallurgy and the techniques of metallographic laboratory practice to the solution of problems concerning the causes of failure of commercial parts. Typical cases are used as problems to be solved by the student and presented and discussed before the class and staff in the form of reports. Instructor: Clark.

**MS 250 abc. Advanced Topics in Physical Metallurgy. 6 units (2-0-4); first, second, and third terms.** The content of this course will vary from year to year. Topics of current interest will be chosen according to the interests of students and staff. Visiting professors may present portions of this course from time to time. Instructors: Staff.

**MS 300. Thesis Research.**

---

**MATHEMATICS**

**UNDERGRADUATE SUBJECTS**

**Ma 1 abc. Freshman Mathematics. 6 units (2-0-4) for the lecture part of the course and 4 units (2-0-2) for the recitation part of the course. Prerequisites: High school algebra and trigonometry.** Topics covered: The calculus of functions of one variable and an introduction to differential equations; vector algebra, analytic geometry in two and three dimensions; infinite series.

The lecture part of the course stresses primarily the mathematical notions of the calculus and the other topics listed above. This part is required of all freshmen. In exceptional cases freshmen may be allowed to take Ma 2 abc and to receive credit for Ma 1 abc. Credit for this lecture course is obtained on a term-by-term basis.

The recitation part of the course consists of two recitations per week. It provides active practice by the students in the applications of the corresponding mathematical techniques. Credit for this recitation course is obtained by passing appropriate examinations which will be given at regular intervals and repeated as necessary. Entering freshmen with some knowledge of the topics of Ma 1 abc are given an opportunity to receive advanced partial or total credit for the recitation course. Students receiving such credit are eligible to take the optional course Ma 3 abc. Instructor in charge: Bohnenblust.
Ma 2 abc. Sophomore Mathematics. 12 units (4-0-8); first, second, third terms. A continuation of the freshman mathematics course including: linear algebra; matrices and determinants; an extension of the calculus to functions of several variables; introduction to probability; differential equations. Instructors: Krieger, Knowles, Whitham.

Ma 3 abc. Selected Topics in Mathematics. 4 units (2-0-2); three terms. Prerequisite: Approval by instructor based on advanced credit for the Laboratory part of Ma 1 abc. This course is primarily intended for freshmen with an advanced knowledge of mathematics. It is an optional course. Each term is an independent unit. Separate topics will be discussed, selected with the purpose of giving interested students a deeper understanding of basic mathematical thinking. Instructors: Apostol, DePrima, Seever.

Ma 5 abc. Introduction to Abstract Algebra. 9 units (3-0-6); three terms. Groups, rings, fields, and vector spaces are presented as axiomatic systems. The structure of these systems is studied, making use of the techniques of automorphisms, homomorphisms, linear transformations, subsystems, direct products, and representation theory. Many examples are treated in detail. Instructors, Dean, Spiegel, Estes, Baker.

Ma 91. Special Course. 9 units (3-0-6); third term. Normally, during the third term, a course will be given in one of the following topics:

(a) Some field of number theory. (Given in 1959-60.)
(b) Some field of algebra or logic. (Given in 1965-66.)
(c) Some field of analysis. (Given in 1964-65.)
(d) Game Theory. (Given in 1960-61.)

Ma 92 abc. Senior Thesis. 9 units (0-0-9); three terms. Prerequisite: Approval of advisor. Open only to seniors who are qualified to pursue independent reading and research. The work must begin in the first term and will be supervised by a member of the staff. Students will consult periodically with their supervisor, and will submit a thesis at the end of the year.

Ma 98. Reading. 3 units or more by arrangement. Occasionally a reading course under the supervision of an instructor will be offered. Topics, hours, and units by arrangement. Only qualified students will be admitted after consultation with the instructor in charge of the course.

ADVANCED SUBJECTS

[A] The following courses are open to undergraduate and graduate students. Notice that some courses are given on an alternating basis.

Ma 102. Differential Geometry. 9 units (3-0-6); first term. Selected topics in metrical differential geometry. Given in 1966-67 and alternate years. Instructor: Fuller.

Ma 103. Algebraic Geometry. 9 units (3-0-6); second term. Prerequisite: Ma 5 abc. A study of the relations between geometric objects (varieties) and the algebraic structures attached to them. Given in 1967-68 and alternate years.
346 Subjects of Instruction

Ma 104. Projective Geometry. 9 units (3-0-6); second term. Prerequisite: Ma 5 abc. Foundation of projective geometry. Theorems of Desargues and Pappus. Introduction of coordinates. Selected topics on properties of incidence and order, and various systems of coordinates. Given in 1966-67 and alternate years. Instructor: Spiegel.

Ma 108 abc. Advanced Calculus. 12 units (4-0-8); three terms. Prerequisite: Ma 2. In this course, a sequel to Ma 2, more advanced techniques and applications of calculus are treated. Point set topology is the point of departure for the theory of convergence, and applications are made to implicit functions, partial differentiations, infinite series and infinite products of real and complex numbers. Other topics treated include: uniform convergence of sequences of functions; functions defined by integrals; Fourier series and integrals; analytic functions of a complex variable. Instructors: Apostol, Simpson, Seever.

Ma 109. Delta Functions and Generalized Functions. 9 units (3-0-6); first term. Introduction to operational calculus and to delta functions. Applications to ordinary and partial differential equations. Given in 1967-68 and alternate years.

Ma 112. Elementary Statistics. 9 units (3-0-6); first and repeated in second term. Prerequisites: Ma 1, Ma 2. This course is intended for anyone interested in the application of statistics to science and engineering. The topics treated will include the preparation and systematization of experimental data, the fundamental statistical concepts; population, sample, mean and dispersion, curve fitting and least squares, significance tests and problems of statistical estimation. Instructor: Dilworth.

Ma 116 abc. Mathematical Logic and Axiomatic Set Theory. 9 units (3-0-6); three terms. Prerequisite: Ma 5 abc or equivalent. The predicate calculus and functional calculi of first order are presented and problems in the foundations of mathematics are studied. Included are Boolean algebra, theorems of Gödel, axiomatic set theory, and theory of cardinal and ordinal numbers. Given in 1967-68.

Ma 118 abc. Functions of a Complex Variable. 9 units (3-0-6); three terms. Prerequisite: Ma 108 or equivalent. Review of the basic concepts of the theory of analytic functions (Cauchy's theorem, singularities, residues, contour integration, analytic continuation). Further topics selected from: entire functions, conformal mapping, differential equations, special functions, applications of complex variable analysis. Instructor: Phillips.

Ma 120 abc. Abstract Algebra. 9 units (3-0-6); three terms. Prerequisite: Ma 5. Abstract development of the basic structure theorems of groups, commutative and non-commutative rings, lattices, and fields. Instructor: Dilworth.

Ma 121 abc. Combinatorial Analysis. 9 units (3-0-6); three terms. Prerequisite: Ma 5. Elementary and advanced theory of permutations and combinations. Theory of partitions. Theorems on choice including Ramsey's theorem, the Hall-König theorem. Existence and construction of block designs with reference to statistical design of experiment, linear programming, and finite geometrics. Instructor: Hall.

Ma 125 abc. Analysis of Algorithms. 9 units (3-0-6); three terms. Mathematical theory associated with algorithms for information processing; expected time and space requirements of algorithms, comparison of algorithms, construction of optimal algorithms, theory underlying particular algorithms. Topics include solution of recurrence relations, use of generating functions, random number generation,
Mathematics 347

properties of tree structures, algorithms for sorting and searching, optimal evaluation of polynomials, multiple precision arithmetic, backtrack algorithms, recursive subroutines and co-routines, syntax and semantics of languages, parsing algorithms. Instructor: Knuth.

Ma 137. Introduction to Lebesgue Integrals. 9 units (3-0-6); first term. Prerequisite: Ma 108 or equivalent. Sets, topology, metric spaces. Functions of bounded variation. Lebesgue integrals of functions of one or two real variables. Fourier integrals. L^2 spaces. Linear functionals on Hilbert spaces and Banach spaces. This is an introductory course designed as a preparation for graduate courses in analysis and probability theory. Instructors: Seever, Phillips.

Ma 142 ab. Introduction to Partial Differential Equations. 9 units (3-0-6); second and third terms. Prerequisite: Ma 137 or equivalent. Topics will include the following: Equations of the first order. Linear equations of the second order. Boundary value and eigenvalue problems for elliptic equations. Initial value and initial boundary value problems for parabolic and hyperbolic equations. Applications to problems of mathematical physics. Instructor: DePrima.

Ma 144 ab. Probability. 9 units (3-0-6); second and third terms. Prerequisite: Ma 137 or equivalent. Basic concepts of probability, limit theorems, random walks, Markov chains, stochastic processes with applications. Instructor: Krieger.

Ma 150 abc. Combinatorial Topology. 9 units (3-0-6); three terms. Introduction to combinatorial topology. The course covers homology and co-homology theory with applications to fixed point theorems and homotopy theory. Selected topics from the theory of fibre bundles. Given in 1966-67 and alternate years. Instructor: Fuller.

Ma 160 abc. Number Theory. 9 units (3-0-6); three terms. Prerequisite: Ma 108 abc or equivalent. The first term, Ma 160 a, is a review of the elementary theory of numbers including congruences, numerical functions, elementary theory of primes, quadratic residues. The second and third terms, Ma 160 bc, include topics selected from: zeta functions, distribution of primes, elliptic modular functions, asymptotic theory of partitions, geometry of numbers, foundation of ideal theory in algebraic number fields, theory of units, valuations and local theory, discriminants, differentials. Given in 1967-68 and alternate years.

Ma 165. Diophantine Analysis. 9 units (3-0-6); third term. Prerequisite: Ma 5. The study of rational or integral solutions of equations. Theory of rational approximations to irrational numbers, and theory of continued fractions. The theorems of Thue-Siegel and Roth will be included. Given in 1967-68 and alternate years.

Ma 190 abc. Elementary Seminar. 9 units; three terms. This seminar is restricted to first year graduate students and is combined with independent reading. The topics will vary from year to year. Instructors: Crawley, Cohen.
The following courses are open primarily to graduate students. Notice that some courses are given on an alternating basis.

**Ma 205 abc. Numerical Analysis.** 9 units (3-0-6); three terms. Prerequisite: AMa 105 or equivalent. Discussion of areas of current interest in numerical analysis and related mathematics; such as: matrix inversion and decomposition, ordinary differential equations, partial differential equations, integral equations, conformal mapping, discrete problems, linear programming and game theory, approximation theory, applications of functional analysis, theory of machines, theory of programming, estimates for characteristic value of matrices.

Each quarter will be treated as a separate unit. Where appropriate, accompanying laboratory periods will be arranged as a separate reading course. Instructor: J. Todd.

**Ma 222 abc. Group Theory.** 9 units (3-0-6); three terms. Prerequisite: Ma 120 or permission of instructor. An introduction to the basic properties of finite and infinite groups. Theorems on homomorphisms, the theory of abelian groups, permutation groups, free groups, automorphisms. The Sylow theorems. Study of solvable, supersolvable, and nilpotent groups. A large part of the second term will be devoted to the theory of group representation, and will include applications to theoretical physics. Given in 1967-68 and alternate years.

**Ma 223 ab. Matrix Theory.** 9 units (3-0-6); second and third terms. Prerequisite: Ma 120 or equivalent. Algebraic, arithmetic and analytic aspects of matrix theory. Not offered in 1966-67.

**Ma 224 abc. Lattice Theory.** 9 units (3-0-6); three terms. Prerequisite: Ma 120 or permission of instructor. Systematic development of the theory of Boolean algebras, distributive, modular, and semi-modular lattices. Includes the study of lattice congruences, decomposition theory, and the structure of free lattices. Given in 1966-67 and alternate years. Instructor: Crawley.

**Ma 226 ab. Ring Theory.** 9 units (3-0-6); second and third terms. Prerequisite: Ma 120 or equivalent. Selected topics in the structure of rings leading from classical theorems to areas of current research. Topics covered will include the role of the radical, decomposition theory, representation theory, group rings, polynomial identity rings, algebras, and commutative ideal theory. Instructor: Dean.

**Ma 237 abc. Real Variable Theory.** 9 units (3-0-6); three terms. Prerequisite: Ma 137 or equivalent. The axiom of choice and its relation to the other axioms of set theory. Measure theory; the theory of integration; and related topics such as differentiation of set functions, Banach function spaces, and ergodic theory. Topological linear spaces, introduction to Banach algebras, the Stone-Weierstrass theorem. Not offered in 1966-67.

**Ma 238 abc. Advanced Complex Variable Theory.** 9 units (3-0-6); three terms. Prerequisite: Ma 108, Ma 118 a or equivalent. In this course the knowledge of basic parts of the classical theory of analytic functions is assumed, and special topics are presented introducing topological and group-theoretical considerations, and rela-
Mechanical Engineering 349

The topics will be selected from: linear spaces of analytic functions, conformal mapping, algebraic functions, Riemann surfaces, functions of several complex variables, singular integral equations. Instructor: Macbeath.

Ma 243 abc. Introduction to Functional Analysis. 9 units (3-0-6); three terms. Prerequisite: Ma 137 or equivalent. Discussion of the theory of normed linear spaces; the closed graph theorem; the Riesz-Schauder theory; topics in Hilbert space; Banach algebras. Instructors: Luxemburg, DePrima, Bauer.

Ma 244 ab. Advanced Probability. 9 units (3-0-6); first and second terms. Prerequisites: Ma 137 and Ma 144 or equivalent. An exposition of probability theory in general sample spaces. Topics will include the following: modes of convergence of random variables, sequences of independent random variables, the central limit theorem, infinitely divisible distributions, conditional expectation, ergodic theory and the role of entropy in ergodic theory (and information theory). Not offered in 1966-67.

Ma 290. Reading. Occasionally advanced work is given by a reading course under the direction of an instructor. Hours and units by arrangement.

The following courses and seminars are intended for advanced graduate students. They are research courses and seminars, offered according to demand, and covering selected topics of current interest. The courses offered, and the topics covered will be announced at the beginning of each term.

Ma 305 abc. Seminar in Numerical Analysis. 6 units. Three terms.

Ma 320 ab. Special topics in Algebra. 9 units. Three terms. Instructor: Nagao.

Ma 324 abc. Seminar in Matrix Theory. Units to be arranged. Three terms.

Ma 325 abc. Seminar in Algebra. 6 units. Three terms.

Ma 340 abc. Special topics in Analysis. 9 units. Three terms. Instructor: Luxemburg.

Ma 345 abc. Seminar in Analysis. 6 units. Three terms.

Ma 350 ab. Special topics in Geometry. 9 units. First and second terms.

Ma 355 abc. Seminar in Geometry. 6 units. Three terms.

Ma. 365 abc. Seminar in Number Theory. 6 units. Three terms.

Ma 390. Research. Units by arrangement.

Ma 392. Research Conference. 2 units.

For courses in Applied Mathematics see separate section.

ME 1. Introduction to Design. 9 units (0-9-0); second, or third term. Prerequisite: Gr 1. This course supplements first-year graphics with more advanced applications of graphical methods to spatial delineation and design. The following subjects are introduced through a series of coordinated lecture discussions and laboratory
problems: descriptive geometry in analysis and design; useful mechanisms; displacement, velocity and acceleration in machines and systems; creative synthesis; human and economic factors as they affect design. Emphasis is placed on an imaginative yet rational approach to new problems and upon the development of the individual student’s ability to recognize fundamental principles and logically plan his development work. Instructors: Welch, Morelli, Auksmann.

ME 3. Materials and Processes. 9 units (3-0-6); second term. Prerequisites: Ph 1 ab, Ch 1 abc. A study of the materials of engineering and of the processes by which these materials are made and fabricated. The fields of usefulness and the limitations of alloys and other engineering materials are studied, and also the fields of usefulness and limitations of the various methods of fabrication and of processing machines. The student is not only made acquainted with the technique of processes but with their relative importance industrially and with the competition for survival which these materials and processes continually undergo. Text: Engineering Materials and Processes, Clark. Instructors: Buffington, Clark.

ME 5 abc. Design. 9 units (2-6-1); first, second, and third terms. Prerequisite: AM 95 ab or concurrently. The purpose of this course is to develop creative ability and engineering judgment through work in design and engineering analysis. Existing devices are analyzed to determine their characteristics and the possibilities for improving their performance or economy and to evaluate them in comparison with competitive devices. Practice in the creation or synthesis of new devices is given by problems in the design of machines to perform specified functions. The fundamental principles of scientific and engineering knowledge and appropriate mathematical techniques are employed to accomplish the analysis and designs. Text: Design and Production, Kent. Instructors: Morelli, Auksmann, Welch.

ME 17 abc. Thermodynamics. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ma 1 abc, Ph 1 abc. An introduction to the laws governing the properties of matter in equilibrium and some aspects of nonequilibrium behavior. Definition and scales of temperature. The laws of classical thermodynamics, Thermodynamic potentials, Maxwell’s relations, calculation of thermal properties and applications to various homogeneous systems. First order changes of phase and the Clausius-Clapeyron equation. Analyses of energy conversion cycles. General conditions for thermodynamic equilibrium, extremum properties of the thermodynamic potentials, and the thermodynamic inequalities. Chemical potential, mixtures of gases and vapors, solutions, basic chemical thermodynamics. Elementary statistical mechanics, ensembles, and statistical thermodynamics. Introduction to nonequilibrium thermodynamics, thermoelastic effects, and problems of heat conduction in solids. Some aspects of the kinetic theory of gases, calculation of transport properties by mean-free-path methods and simplified forms of the Boltzmann equation. Limited discussion of energy transfer in fluid form. Instructor: Liepmann.

ME 19 abc. Fluid Mechanics and Gas Dynamics. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ma 2 abc, Ph 1 abc. Basic equations of fluid mechanics, theorems of energy, linear and angular momentum, potential flow, elements of airfoil theory. Flow of real fluids, similarity parameters, flow in closed ducts. Boundary layer theory in laminar and turbulent flow. Flow and wave phenomena in open conduits. Theory and practice of some turbomachines such as fans, pumps, compressors, and turbines. Convective transfer of heat. Availability of mechanical, chemical, nuclear, and solar energy sources. Brief discussion and comparison of some types of systems for power. Instructor: Acosta.

ME 55. Adaptive Design. 9 units (3-6-0); first term. This course presents the standard calculations necessary for the application and adaptation of materials and com-
ponents to produce useful machines and structures. The properties and behavior of engineering materials to industrial environments are discussed. The purposes of standard components are explained. Some attention is given to dangerous situations and material combinations. Instructors: Morelli, Auksmann.

ADVANCED SUBJECTS

ME 100. Advanced Work in Mechanical Engineering. The staff in mechanical engineering will arrange special courses or problems to meet the needs of fifth-year students or qualified undergraduate students.

ME 101 abc. Advanced Design. 9 units (1-6-2); first, second, and third terms. Prerequisite: ME 5 abc or equivalent. Creative design and analysis of machines and engineering systems is developed at an advanced level. Laboratory problems are given in terms of the need for accomplishing specified end results in the presence of broadly defined environments. Investigations are made of environmental conditions to develop quantitative specifications for the required designs. Searches are made for the possible alternate designs and these are compared and evaluated. Preferred designs are developed in sufficient detail to determine operational characteristics, material specifications, general manufacturing requirements and costs. Instructors: Morelli, Auksmann, Welch.

ME 118 abc. Advanced Thermodynamics and Energy Transfer. 9 units (3-0-6); first, second, and third terms. Prerequisites: ME 17 abc, ME 19 ab, or equivalent. Equilibrium of chemical systems including dilute solutions, elements of non-equilibrium thermodynamics, basic concepts of statistical mechanics. Special problems in heat conduction involving non-isotropic media, moving sources, and changes of phase. Exact solutions of heat transfer problems in laminar flow for compressible and incompressible fluids. Problems in turbulent flow and the application of Reynolds analogy. Principles of mass transfer and problems involving the simultaneous transfer of heat and mass. Theory of black body radiation and radiation characteristics of solids and gases. Instructors: Sabersky, Acosta.

ME 126. Fluid Mechanics and Heat Transfer Laboratory. 9 units (0-6-3); third term. Prerequisites: ME 17 abc, ME 19 ab, or equivalent. Students with other background shall obtain instructor's permission. Introduction to some of the basic measurements and phenomena in fluid mechanics and heat transfer. The students will become acquainted with the use of hot wire equipment, thermocouples, thermistors, velocity probes, as well as with electrical and hydraulic analogues. The experiments in which these instruments will be used will include, for example, the flow over a flat plate, free and forced convention heat transfer, boiling heat transfer, solid state energy conversion phenomena, free surface and supersonic flows. Instructors: Sabersky, Zukoski.

ME 127. High Frequency Measurements in Fluids and Solids. 9 units (2-6-1); second term. Prerequisite: AM 95 ab. The course will treat the theory and application of modern instrumentation to dynamic problems in fluid mechanics and elasticity which will be selected to provide familiarity with a wide range of electronic devices, transducers, and high-speed photoelastic and schlieren photographic techniques. The theory of optical masers and experimental work with them will be included. Instructor: Ellis.

ME 200. Advanced Work in Mechanical Engineering. The staff in mechanical engineering will arrange special courses on problems to meet the needs of students beyond the fifth year.
ME 300. Thesis Research.
Many advanced courses in the field of Mechanical Engineering may be found listed in other engineering options such as:

- Applied Mechanics, page 290.
- Hydraulics, page 333.
- Jet Propulsion, page 337.
- Materials Science, page 342.

**MUSIC**

Mu 1 abc. Music History and Analysis. 5 units (2-0-3). The development of Western music studied through the analysis of historically significant compositions. Musical notation, melodic techniques, harmonic and polyphonic forms will be studied in relation to stylistic use during the principal periods of music history. An understanding of the musical score will be emphasized by means of correlated studies in analysis and record listening. Instructor: Ochse.

**PALEONTOLOGY**

*(See under Geological Sciences)*

**PHILOSOPHY AND PSYCHOLOGY**

**UNDERGRADUATE SUBJECTS**

PI 1. Introduction to Philosophy.* 9 units (3-0-6). Senior Elective. A study of a selected number of major historical philosophical systems by way of readings in the sources. Priority is given to philosophical traditions which are still existent and influential in the contemporary world. Instructor: Bures.

PI 2. Symbolic Logic and Epistemology.* 9 units (3-0-6). Senior Elective. A study of the logic of elementary propositions, the logic of general propositions, the logic of relations and the logic of classes as a basis for the philosophical analysis of knowledge. Instructor: Bures.

PI 6 a. The Psychology of Behavioral Processes.* 9 units (3-0-6). Senior Elective; first term. A study of the individual, social and cultural factors that contribute to the development of human behavior and human interaction. Both theoretical and empirical formulations will be used in the analysis of the content and process of behavior, especially as it occurs within the student's experiential field. Instructor: Weir.

PI 6 b. The Psychology of Personality Development.* 9 units (3-0-6). Senior Elective; second term. A study of psychological development from birth to maturity. Attention is

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.*
paid to stages of development, roles, emotional and motivational patterns. A posi­
tive conception of growth and creativity and factors inhibiting growth are empha­
sized in terms of a basic vocabulary. Instructor: Bures.

PI 7. Human Relations. 7 units (3-0-4); third term. An introduction to the principles
and practices of interpersonal relationships. Individual and group interactions are
analyzed using current theories of personality organization, motivation and group
dynamics. Lectures, laboratory and field trips are employed to investigate the
nature of social sensitivity, leadership, communication and group development.
Instructors: Ferguson, Weir.

PI 8 abc. Principles and Practices of Personal Growth. 7 units (1-3-3). A three-term course
of lectures, laboratory, and readings providing individual and group experiences
that foster understanding and application of the principles of psychological and
emotional growth. The process involves gaining deeper self-knowledge which in
turn leads to greater social sensitivity, creativity, and skill in human relations. The
basic course method is the self-analysis of the student’s experience within an
unstructured group. Various teaching techniques are used including class discus­
sion, assigned readings, improvisation, and non-verbal expression. The class will
form a continuing training group that will remain intact throughout the three
terms. Students taking PI 8 a are expected to take b and c in the same year. In­
structor: Weir.

PI 13. Reading in Philosophy. Units to be determined for the individual by the depart­
ment. Elective in any term. Reading in philosophy, supplementary to, but not sub­
stituted for, courses listed; supervised by members of the department.

ADVANCED SUBJECTS

PI 100 abc. Philosophy of Science.* 9 units (2-0-7). A full-year sequence. Senior Elective.
A study of the relationships between science and philosophy. The three terms re­
spectively concentrate on: language and logic; logical analysis of some basic prob­
lems in the philosophy of science such as measurement, causality, probability, in­
duction, space, time, reality; human nature, science and society. Instructor: Bures.

PI 101 abc. History of Thought. 9 units (2-0-7). A full-year sequence. A study of the
basic ideas of Western Civilization in their historical development. The making of
the modern mind as revealed in the development of philosophy and in the rela­
tions between philosophy and science, art and religion. The history of ideas in
relation to the social and political backgrounds from which they came.

PI 102 abc. Philosophy and Literature.* 9 units (2-0-7). A full-year sequence. Senior Elec­
tive. A philosophical analysis and interpretation of literature as an art and as a
vehicle of philosophical thought, exemplified in great works of world literature,
beginning with Homer and the pre-Socratic poems on nature and ending with the
literature of Existentialism and Surrealism. The course includes a study of the
main philosophical theories of the different forms of literary expression (tragedy,
comedy, poetry, the novel) and the reading of original works or translations. In­
nstructor: Stern.

PI 113. Reading in Philosophy. Same as PI 13 but for graduate credit.

IS 250 abc. Mathematical Linguistics. 9 units (3-0-6). (See page 336.)

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close
of the preceding term.
354 Subjects of Instruction

Physics

Undergraduate Subjects

Ph 1 abc. Kinematics, Particle Mechanics, and Electric Forces. 12 units (4-3-5); first, second, and third terms. Prerequisites: High school physics, algebra, and trigonometry. The first year of a two-year course in Introductory Classical and Modern Physics. The course work consists of two general lectures each week, in which the main topics of the course are presented, and two class recitations in which more specific questions are treated, largely through the solution of problems. A weekly three-hour laboratory provides working familiarity with physical principles and measurement techniques. Topics covered in the first year include kinematics, the Lorentz transformation, nonrelativistic and relativistic particle mechanics, electric and magnetic forces, planetary motion, harmonic motion, geometrical optics, interference, diffraction, and scattering of radiation, kinetic theory, thermodynamics, and black body radiation. Instructors: Barish, Leighton, Strong, Stone, Vogt, and Assistants.

Ph 2 abc. Electricity, Fields, and Atomic Structure. 12 units (4-3-5); first, second, and third terms. Prerequisites: Ph 1 abc, Ma 1 abc, or their equivalent. The second year of a two-year course in Introductory Classical and Modern Physics. The course is organized along the same lines as Ph 1 abc. Topics covered in the second year include electricity and magnetism (with emphasis upon the field concept), Maxwell's equations, electromagnetic potentials, free waves and cavity resonators; elasticity; fluid flow; atomic structure. Instructors: Bahcall, Lauritsen, Neher, Neugebauer, Peck, Sherwood, and Assistants.

Ph 77 ab. Experimental Physics Laboratory. 6 units; first and second terms. A two-term laboratory course open to senior physics majors. The purpose of the course is to familiarize the student with laboratory equipment and procedures that are used in the research laboratory. The experiments are designed to illustrate fundamental physical phenomena, such as Compton scattering, nuclear and paramagnetic resonance, the photoelectric effect, the interaction of charged particles with matter, etc. Instructors: Whaling, van Putten.

Advanced Subjects

Ph 106 abc. Topics in Classical Physics. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 2 abc, Ma 2 abc. An intermediate course in the application of the basic principles of classical physics to a wide variety of subjects. It is intended that roughly half of the year will be devoted to mechanics, and half to electromagnetism. Topics to be covered include the Lagrangian and Hamiltonian formulations of mechanics, small oscillations and normal modes, boundary value problems, multipole expansions, and various applications of electromagnetic theory. Graduate students majoring in physics or astronomy will be given only 6 units credit for this course. Instructors: Cowan, Kavanagh, Pine, Tollestrup.

Ph 112 abc. Atomic and Nuclear Physics. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 106 abc and Ph 125 abc, or equivalents. A lecture and problem course on the experimental and theoretical foundations of contemporary atomic and nuclear physics. The first term includes a study of atomic and molecular structure and spectroscopy, and a discussion of classical and quantum statistical mechanics with applications. The second term includes a discussion of the structure of crystals, the band theory of solids with application to insulators, conductors, and semiconductors, and the properties of matter at low temperatures. Topics discussed in the third term include nuclear forces and the nuclear two-body problem,
the shell and collective models of nuclear structure, nuclear reactions in the laboratory and in astrophysics, and the classification of the elementary particles. Texts: *Principles of Modern Physics*, Leighton; references from other textbooks and current periodicals. Instructor: Barnes.

**Ph 115 ab. Geometrical and Physical Optics.** 9 units (3-0-6); first and second terms. Prerequisite: Ph 2 abc. An intermediate lecture and problem course dealing with the fundamental principles and applications of geometrical optics, interference, diffraction and other topics of physical optics. Given in alternate years. Offered in 1966-67. Instructor: King.

**Ph 125 abc. Quantum Mechanics.** 9 units (4-0-5); first, second, and third terms. Prerequisites: Ph 2 abc, Ma 2 abc. It is recommended that AM 95 abc or Ma 108 abc or the equivalent be taken concurrently. A fundamental course in non-relativistic quantum mechanics aimed at understanding physical phenomena at the atomic level and introducing the mathematical techniques of calculation. The subject matter will include the Schrödinger equation, stationary states, the theory of angular momentum and spin, stationary and time-dependent perturbation theory, variational method, classical approximation, Zeeman effect, atomic structure, scattering, and quantum statistics. Graduate students majoring in physics will be given only 6 units for this course. Instructors: Boehm, Christy, Walker.

**Ph 129 abc. Methods of Mathematical Physics.** 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 106 abc or the equivalent (may be taken concurrently), and some knowledge of complex variables. Aimed at developing familiarity with the mathematical tools useful in physics, the course discusses practical methods of summing series, integrating, and solving differential equations, including numerical methods. The special functions (Bessel, Elliptic, Gamma, etc.) arising in physics are described, as well as Fourier series and transforms, partial differential equations, orthogonal functions, eigenvalues, calculus of variations, integral equations, matrices and tensors, and non-commutative algebra. The emphasis is toward applications, with special attention to approximate methods of solution. Instructor: Mathews.

**Ph 171. Reading and Independent Study.** Occasionally, advanced work involving reading, special problems, or independent study is carried out under the supervision of an instructor. Units in accordance with work accomplished. Approval of the instructor and of the student’s Departmental Advisor or Registration Representative must be obtained before registering.

**Ph 172. Experimental Research in Physics.** Units in accordance with the work accomplished. Approval of the student’s research supervisor and of his Departmental Advisor or Registration Representative must be obtained before registering.

**Ph 173. Theoretical Research in Physics.** Units in accordance with the work accomplished. Approval of the student’s research supervisor and of his Departmental Advisor or Registration Representative must be obtained before registering.

**Ph 201 abc. Analytical Mechanics.** 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 108 abc; Ph 129 ab is desirable. A problem and lecture course dealing with the various formulations of the laws of motion of systems of particles and rigid bodies, and with both exact and approximate solutions of the resulting equations. Topics considered include Lagrange’s and Hamilton’s equations, canonical transformations, the dynamics of axially symmetric rigid bodies, and vibrations about equilibrium and steady motion. Additional topics will be selected from such
356 Subjects of Instruction

Ph 203 abc. Nuclear Physics. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 112 abc and Ph 125 abc. A problem and lecture course in nuclear physics concerning the use of available experimental and theoretical methods for the study of nuclear structure. Special emphasis will be placed upon understanding both the apparatus and the theoretical interpretation of those experiments that have led to the adoption of the currently fashionable models for nuclei and for nuclear reactions. Among the topics covered will be included: the properties of nuclei and nuclear excited states, nuclear reaction mechanisms, modes of nuclear decay, and the acceleration and detection of nuclear particles. Instructor: Tombrello.

Ph 204. Low Temperature Physics. 9 units (3-0-6); second term. Prerequisite: Ph 112 abc. Introductory exposition of the subject of cryogenics. General coverage of topics includes (1) liquid helium II, (2) superconductivity, and (3) adiabatic demagnetization and nuclear alignment. Emphasis to be based on correlating behavior of matter at low temperatures with existing theoretical interpretations. Instructor: Mercereau.

Ph 205 abc. Advanced Quantum Mechanics. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 125 abc, Ph 112 abc. The course will cover advanced non-relativistic quantum mechanics and relativistic quantum mechanics with an introduction to field theory. Topics covered include angular momentum, transition probabilities, scattering theory, Dirac equation, Feynman diagrams, quantum electrodynamics, and other applications of field theory. Instructor: Feynman.

Ph 209 abc. Electromagnetism and Electron Theory. 9 units (3-0-6); first, second, and third terms. Prerequisite: Ph 106 abc. Electromagnetic fields in vacuum and in matter; classical electron theory, retarded potentials, radiation, dispersion, and absorption; theories of the electric and magnetic properties of materials; selected topics in wave propagation; special relativity. Instructor: Gould.

Ph 213 ab. Nuclear Astrophysics. 9 units (3-0-6); first and second terms. A lecture or reading course in the applications of nuclear physics to astronomy. The first term reviews the fundamental properties and structure of nuclei. The experimental evidence on nuclear cross sections is extensively analyzed in terms of current theories of nuclear reactions. The second term covers energy generation and element synthesis in stars, supernovae, and the massive condensations in quasars and extended radio sources. Nuclear evidence on the origin of the solar system is also discussed. Offered in 1966-67 as a lecture course for graduates or undergraduates. Instructor: Fowler.

Ph 214 ab. Introduction to Solid State Physics. 9 units (3-0-6); first and second terms. Prerequisite: Ph 125 abc. Recommended: Ph 112 abc concurrently. An introductory problem and lecture course in the experimental and theoretical aspects of modern solid state physics. Topics to be presented will include: Crystal structures and classification of solids; lattice dynamics; thermal and electric properties of metals, insulators and semiconductors; an introduction to the magnetic properties of solids; superconductivity, modern developments. Instructor: Gregory.

Ph 216 abc. Introduction to Plasma Physics. 9 units (3-0-6); first, second, and third terms. Prerequisite: Ph 106 abc or equivalent. An introduction to the principles of plasma physics. Topics presented will include: Orbits of charged particles in electric, magnetic, and gravitational fields; elementary processes in the production and decay of
ionized gases; continuum magnetohydrodynamics and elementary stability theory; transport processes such as conductivity and diffusion; waves, oscillations, and radiation in plasmas. Examples from physics, engineering, and astrophysics will be discussed. Not offered in 1966-67.

**Ph 217. Spectroscopy. 9 units (3-0-6); third term. Prerequisite: Ph 112 ab or the equivalent.** Atomic line spectra. Experimental techniques of excitation and observation of the spectra of atoms and ions. A discussion of observed spectra, including complex spectra, in terms of atomic structure theory. Given in alternate years. Offered in 1966-67. Instructor: King.

**Ph 218 ab. Electronic Circuits and their Application to Physical Research. 9 units (3-0-6); first and second terms. Permission of the instructor is required in order to register for this course.** A course on electronic circuits with primary emphasis on basic factors entering into the design and use of electronic instruments for physical research. Topics considered will include the theory of response of linear networks to transient signals, linear and nonlinear properties of electron tubes and practical circuit components, basic passive and active circuit combinations, cascade systems, amplifiers, feedback in linear and nonlinear systems, statistical signals, noise, and practical construction. Particular examples will be taken from commonly used research instruments. Given in alternate years. Not offered in 1966-67.

**Ph 221. Topics in Solid State Physics. 9 units (3-0-6) third term. Prerequisites: Ph 125 abc, Ph 214 abc.** A course on the magnetic properties of solids, in particular magnetically ordered states. Topics presented will include: paramagnetic solids, ferromagnetism and anti-ferromagnetism, magnetic scattering of neutrons, local magnetic fields in solids. Instructor: Mössbauer.

**Ph 230 abc. Elementary Particle Theory. 9 units (3-0-6); first, second, and third terms. Prerequisite: Ph 205 abc.** A course in advanced techniques of elementary particle theory, including field theory, renormalization, dispersion theory, groups and symmetries, and other approaches of current interest. Instructors: Zachariasen, Zweig.

**Ph 231 abc. High Energy Physics. 9 units (3-0-6); first, second, and third terms. Prerequisites: Ph 125 abc or equivalent, Ph 205 abc (may be taken concurrently).** A course covering the properties of the elementary particles and their interactions, especially at high energies. Topics discussed include the classification of the particles and their properties, strangeness theory, pion nucleon and nucleon-nucleon interactions, photoproduction of pions, high energy electron scattering, high energy electromagnetic interactions, production of strange particles, hyperfragments. Instructor: Frautschi.

**Ph 234 abc. Topics in Theoretical Physics. 9 units (3-0-6); first, second, and third terms. Prerequisite: Ph 205 or equivalent.** The content of this course will vary from year to year. Topics presented will include: General methods in quantum mechanics such as operator calculus, group theory and its application; theory of meson and electromagnetic fields; atomic and molecular structure; theory of solids; theoretical nuclear physics. Not offered in 1966-67.
**Ph 236 abc. Relativity.** 9 units (3-0-6); first, second and third terms. A systemic exposition of Einstein's special and general theories of relativity with particular emphasis on modern developments and applications. First term: the fundamentals of special relativity; relativistic kinematics; the Lorentz group; electromagnetism analyzed in the language of differential forms. Second and third terms: the fundamentals of general relativity; experimental tests; the general-relativistic theory of stellar structure and dynamics; gravitational collapse to zero volume; cosmology; gravitational radiation; failure of the concept of energy; Hamiltonian formulation of general relativity; attempts at canonical quantization of the gravitational field. Tensor analysis and differential geometry will be developed as required, but a prior familiarity with tensors will be most helpful in the second and third terms. Instructor: Thorne.

**Ph 237 abc. Theoretical Nuclear Physics.** 6 units (2-0-4); first, second, and third terms. *Prerequisite: Ph 205 or equivalent.* The course covers an introduction to the theory of nuclear structure, with emphasis on nuclear models such as the shell and unified models. Inelastic nuclear processes at low energies will also be discussed. Not offered in 1966-67.

**Ph 238 abc. Seminar on Theoretical Physics.** 4 units; first, second, and third terms. Recent developments in theoretical physics for specialists in mathematical physics. In charge: Christy, Davis, Feynman, Frautschi, Gell-Mann, Mathews, Zachariasen, Zweig.

**Ph 240 abc. Current Theoretical Problems in Particle Physics.** 6 units (2-0-4); first, second and third terms. *Prerequisite: Ph 230 abc or equivalent.* Emphasis on symmetries and broken symmetries. Discussion and argument are encouraged. Instructor: Gell-Mann.

**Ph 241. Research Conference in Physics.** 4 units; first, second, and third terms. Meets once a week for a report and discussion of the work appearing in the literature and that in progress in the laboratory. Advanced students in physics and members of the physics staff take part. In charge: Anderson, Christy.

**Ph 300. Research in Physics.** *Units in accordance with work accomplished.* Ph 300 is elected in place of Ph 172 when the student has progressed to the point where his research leads directly toward the thesis of the degree of Doctor of Philosophy. Approval of the student’s research supervisor and of his Departmental Advisor or Registration Representative must be obtained before registering.

---

**Political Science**

**Advanced Subjects**

**PS 115 abc. Seminar on National Security.** 9 units (2-0-7). *Senior Elective.* The object of this course is to afford an opportunity to study some of the problems faced by the U.S. Government in the world today. Consideration will be given to such matters as the process of policy formation within the government, the relationship of disarmament and arms control to defense policy, and the role of international organizations in the development of an orderly world society. Instructor: Hibbs.

**PS 135 abc. Political Geography of Developing Countries.** 9 units (2-0-7). *Senior Elective.* The swift transition from colonialism or an undeveloped state to the present includes the growth of one party states; the role of the military; tribal, religious, and class pressures; the internal and external role of boundaries; and new foreign policies including such regional groupings as the OAU and OAS. Emphasis on Africa with outside lecturers, including AUFS associates, on Latin America and Southeast Asia. Instructor: Munger.
PS 136 abc. Science and Technology in Developing Areas. 9 units (2-0-7); first term required for those who wish to take the second and third terms. Senior Elective. This course examines the impact of science and technology on the societies of developing areas with special attention paid to Africa. While science and technology present an extraordinary opportunity for raising living standards, its impact on human behavior and values also poses significant problems. An attempt will be made to isolate and analyze a number of these as well as to consider the best use of science in terms of meaningful economic and social development. This course can be taken as an economics elective. Instructors: Huttenback, Munger, Oliver, and Scudder.

PS 140. Seminar in Foreign Area Problems.* 9 units (3-0-6); second term. Senior Elective. The object of this course is to give students an opportunity to study in some detail problems current in certain selected foreign areas. Three or four areas will be considered each time the course is given, and the selection will normally vary from year to year. Instruction will be given mainly by area specialists of the American Universities Field Staff. Instructors: Munger, and members of AUFS.

*The fourth-year Humanities electives to be offered in any given term will be scheduled before the close of the preceding term.

DEGREES CONFERRED JUNE 10, 1966

DOCTOR OF PHILOSOPHY

Ta-liang Teng (Geophysics and Applied Mathematics). *B.S., National Taiwan University, 1959.* Thesis: Body-wave and Earthquake Source Studies.

ENGINEER’S DEGREE
AERONAUTICAL ENGINEER

MECHANICAL ENGINEER

Robert Rosen. B.S., University of Miami, 1960; M.S., Northwestern University, 1962.

Donald Richard Street. B.S., United States Military Academy, 1962.

Po Kee Wong. B.Sc., Taiwan Provincial Cheng Kung University, 1956; M.Sc., University of Utah, 1961.
Degrees Conferred 369

MASTER OF SCIENCE
AERONAUTICS

Brian Thomas Barcelo. B.S., Tulane University, 1965.
Michel Sadek El Raheb. B.Sc., Cairo University (Egypt), 1964.
Michael Meehan Griffin. B.S., Georgia Institute of Technology, 1965.
Michael John Laughlin. B.S., Purdue University, 1965.
Susann Jane Novalis. B.S., Cornell University, 1965.
Ozires Silva. B.S., Instituto Tecnológico de Aeronáutica (Brazil), 1962.
Jiunn-jenq Wu. B.S., National Taiwan University, 1964.

APPLIED MECHANICS

James Leslie Deleget. B.S., Purdue University, 1965.
Robert Francis Jeffers. B.Sc., National University of Ireland (Cork), 1964; M.S., 1965.

ASTRONOMY

BIOLOGY

CHEMISTRY

David Amstrong Brueckner. B.S., Ohio University, 1960.

CHEMICAL ENGINEERING

George Thaddius Lengyel. B.S., Lehigh University, 1965.
Axel Meisen. B.Sc., Imperial College of Science and Technology (London), 1965.
Donald Sherwood Remer. B.S.E., University of Michigan, 1965.
Degrees Conferred

CIVIL ENGINEERING

Shaukat Hayat Michael Feroz. B.E., University of Peshawar (West Pakistan), 1964.
Josephat Kanayo Okoye. B.S., Purdue University, 1965.

ELECTRICAL ENGINEERING

Mashood Olayide Adegbola. B.S.E.E., Purdue University, 1965.
David Albert Bird. B.S.E.E., Purdue University, 1964.
James Grant Blackinton. B.S., California Institute of Technology, 1965.
Chih Chieh Chao. B.S., University of Illinois, 1965.
Ko-Chuan Chi. B.A., National Taiwan University, 1960; B.S., University of Wisconsin, 1965.
Donald Allen Germann. B.S.E.E., Purdue University, 1965.
James Raymond Hannigan. B.S., United States Military Academy, 1963.
Mark Howard Kryder. B.S., Stanford University, 1965.
Tse Chin Mo. B.S., National Taiwan University, 1964.
Robert Cole Morgan. B.S., University of California (Los Angeles), 1965.
James Theodore O'Farrell. B.S., United States Naval Academy, 1960.
Reiner Ludwig Stenzel. Dipl., Technische Hochschule (Braunschweig), 1965.
Degrees Conferred 371

ENGINEERING SCIENCE

Richard Bruce Chapman. B.S., Purdue University, 1965.
Joe Ching. B.S., University of California, 1965.
Jeffrey Archibald Gorman. B.C.E., Cornell University, 1958.
Ronald Lee Kerber. B.S., Purdue University, 1965.
Justin Taro Okada. B.S., Oregon State University, 1965.
Sylvie Françoise Potigny. Ing., Ecole Supérieure de Physique et de Chimie Industrielles (Paris), 1965.

GEOLOGY

George Richmond Clark II. A.B., Cornell University, 1961.
Steven David Hall. B.S., California Institute of Technology, 1965.
Hartmut A. W. Spetzler. B.S., Trinity University, 1961; M.S., 1962.
David Bruce Wenner. B.S., University of Cincinnati, 1963.

MATERIALS SCIENCE

MATHEMATICS

Leslie Creighton Higbie. B.S., St. Lawrence University, 1963.

MECHANICAL ENGINEERING

372 Degrees Conferred

Larry Cooper. B.S., University of Missouri School of Mines and Metallurgy, 1965.
Donald Richard Street. B.S., United States Military Academy, 1962.

PHYSICS

Lloyd Craig Davis. B.S., Iowa State University, 1963.
BACHELOR OF SCIENCE

Students whose names appear in boldface type are being graduated with honor in accordance with a vote of the Faculty.

Carl Lawrence Anderson, Santa Rosa, California. Engineering.
Lawrence Sven Anderson, Lincoln, Massachusetts. Astronomy.
Michael Paul Anthony, Vista, California. Physics.
Michael George Aschbacher, Sepulveda, California. Mathematics.
Jared Asher Austin, Reseda, California. Chemistry.
Rodney Kent Bergman, Bakersfield, California. Engineering.
Robert Lee Bernstein, New Milford, New Jersey. Physics.
James Weldon Brooks, Jr., Oxnard, California. Physics.
Fred Davis Brunswig, San Francisco, California. Geology.
Jonathan Ferris Callender, Pasadena, California. Geology.
Clement Grasham Chase, Tucson, Arizona. Geology.
Stephen David Clamage, Los Angeles, California. Engineering.
David Harry Close, Peru, Illinois. Economics.
Philip Lynn Coleman, Spring Valley, California. Physics.
Jack Clifton Comly, Jr., Los Angeles, California. Physics.
Ronald Lee Constable, La Canada, California. Engineering.
Michael John Creutz, Rancho Santa Fe, California. Physics.
Michael Alan Cunningham, Las Vegas, Nevada. Physics.
Benjamin Dembart, Alhambra, California. Mathematics.
Ronald Scott Douglass, San Diego, California. Engineering.
Donald N. Dumont, Madera, California. Biology.
Michael Alan Erle, Pasadena, Texas. Chemical Engineering.
Ralph Raymond Gajewski, Castro Valley, California. Engineering.
Stuart Wilber Galley, El Cajon, California. Physics.
James Stanley Gibson, Piedmont, California. Chemistry.
Jesse Grodnik, Middle Village, New York. Physics.
James Allison Hall, Garden Grove, California. Chemical Engineering.
Alan William Harris, Newberg, Oregon. Geology.
Melville Yance Hirschi, St. George, Utah. Physics.
Arthur Stewart Hopkins, Los Angeles, California. Engineering.
Michael Dan Hunsaker, San Diego, California. Engineering.
Dario Iacuelli, Naples, Italy. Geology.
Guy Delacy Jackson IV, Atlanta, Georgia. Chemistry.
Andrew Janis Kampe, Riga, Latvia. Engineering.
Kenneth Robert Kimball, La Canada, California, Engineering.
David Joseph Lischinsky, Los Angeles, California. Biology.
Alston Clemens Lundgren, Hobart, Indiana. Chemical Engineering.
Ernest Seu-Keung Ma, Hong Kong. Physics.
Julius Michael John Madey, Clark, New Jersey. Engineering.
Dan McCammon, Hawthorne, California. Physics.
David Burnett McCarroll, Oakland, California. Astronomy.
Lynn Ayres Melton, Denton, Texas. Chemistry.
William Patrick Miller, Jr., Portland, Oregon. Engineering.
Gordon Earl Myers, Rocky River, Ohio. Engineering.
Lawrence Herbert Nagel, Lynwood, California. Chemical Engineering.
Lawrence Ronald Newkirk, Aurora, Colorado. Engineering.
Richard Carl Nielsen, Lakeport, California. Engineering.
Wallace Lee Oliver, Jr., Kirkwood, Missouri. Chemistry.

Edward Harris Perry, Memphis, Tennessee. Engineering.

David Browne Posner, Owings Mill, Maryland. Chemistry.

Vern Sheridan Poythress, Fresno, California. Mathematics.

Jeffrey L. Pressing, La Mesa, California. Chemistry.

Donald Wade Radeliffe, Paterson, New Jersey. Engineering.

J. Herman Rickerman, Jr., New Milford, New Jersey. Astronomy.

John David Rouse, Madison, Wisconsin. Geology.

Charles Anthony Sawicki, Cincinnati, Ohio. Physics.

Carl John Scandella, Sacramento, California. Chemistry.

Robert Alan Schaar, Pacific Palisades, California. Engineering.

Jean Christopher Shelton, San Diego, California. Physics.

David Lee Sherlock, Ridgecrest, California. Engineering.

Lynwood David Shields, Abilene, Texas. Mathematics.

Frederic Waters Shultz, Rockville, Maryland. Mathematics.

Richard Anthony Siquig, San Jose, California. Physics.

Terryl L. Smith, Covina, California. Engineering.

Sean Carl Solomon, La Canada, California. Geology.

Richard Peter Stanley, Savannah, Georgia. Mathematics.

Marvin C. Stearns, Tigard, Oregon. Engineering.

Joseph John Stupak, Jr., La Puente, California. Engineering.

Norman Minoru Uyeda, Watsonville, California. Physics.

John Peyton Walter, Riverside, California. Physics.

Robert Kenneth Weatherwax, Jr., Whittier, California. Engineering.

Harold A. Williams, Jr., Orange, New Jersey. Mathematics.

Ronald James Williams, Lomita, California. Mathematics.
Degrees Conferred

Thomas Clifford Williams, Prattville, Alabama. Geology.
Larry Dawson Wittie, Tyler, Texas. Mathematics.
Peter William Wyatt, Sacramento, California. Engineering.
HONORS AND AWARDS

Honor Standing

The undergraduate students listed below have been awarded honor standing for the current year, on the basis of excellence of their academic records for the year 1965-66.

No honor standing has been granted for the class of 1969. Under present Institute policy, grades in all freshman courses are only “P,” indicating passed, or “F,” indicating failed.

### Class of 1967

</table>
AMERICAN INSTITUTE OF AERONAUTICS AND ASTRONAUTICS AWARD
Awarded to the student member of the AIAA attaining the best scholastic record in engineering or the physical sciences.

DENNY RU-SUE KO

DON BAXTER, INC. PRIZES
Awarded to the undergraduate students who during the year have carried out the best original researches in chemistry.

First prize: JARED ASHER AUSTIN
Second prize: LYNN AYRES MELTON

E. T. BELL MATHEMATICS PRIZE
Awarded annually to one or more juniors or seniors for outstanding original research in mathematics.

NOT GIVEN THIS YEAR

CONGER PEACE PRIZES
Established in 1912 by the late Everett D. Conger, D.D., for the promotion of interest in the movement toward universal peace, and for the furtherance of public speaking.

First prize: RONALD PHILLIP DRUCKER
Second prize: DANIEL STEFAN METLAY

EASTMAN KODAK SCIENTIFIC AWARDS IN CHEMISTRY
Awarded to doctoral students on the basis of outstanding contributions and progress either in graduate studies and research or in teaching.

STEVEN DOUGLAS COLSON

GEORGE W. GREEN MEMORIAL AWARD
Awarded to the undergraduate student who, in the opinion of the Division Chairmen, has shown outstanding ability and achievement in the field of creative scholarship.

JARED ASHER AUSTIN

HONEYWELL AWARD
Established by Honeywell, Inc. for presentation to a senior student for outstanding individual performance in undergraduate engineering and science.

JOSEPH PAUL TYMCZYSZYN

FREDERIC W. HINRICH, JR., MEMORIAL AWARD
Awarded to the senior who, in the opinion of the Undergraduate Deans, has throughout his years at the Institute made the greatest contributions to the welfare of the student body and whose qualities of leadership, character and responsibility have been outstanding.

JERRY MICHAEL YUDELSON
DAVID JOSEPH MACPHERSON PRIZE
Awarded annually to the graduating senior in engineering who best exemplifies excellence in scholarship.

JOHN CHARLES TRIJONIS, JR.

MARY A. EARLE MCKINNEY PRIZES
First prize: VERN SHERIDAN POYTHRESS
Second prize: MICHAEL JAMES BEESON
Third prize: JOHN ROBERT EYLER

DON SHEPARD AWARDS
Awarded annually to one or more outstanding residents of the Student Houses in order to pursue cultural opportunities which they might otherwise not be able to enjoy.

TERRILL WILLARD HENDRICKSON
GEORGE FREDERICK SHARMAN

THE MORGAN WARD AWARD
Awarded for the best problems and solutions in mathematics submitted by a freshman or sophomore.

JAMES ANTHONY MAIORANA

- **Historical Sketch**: 119-125
Late Registration Fee 189
Leave of Absence 194
Libraries 40, 131
Living Accommodations 169, 245
Loan Funds 201-203, 211

Machine Methods of Calculation 335
Marine Biology Laboratory 132, 137
Master of Science, Degree of
Conferred, June 1966 369-372
Courses leading to
Registration 220
Regulations and Requirements 219-221

Materials Science
Advanced Subjects 342-344
Schedule of Courses 278
Special Req., Ph.D. Degree 233-234
Study and Research 163
Undergraduate Subjects 341

Mathematics
Advanced Subjects 345-349
Laboratories, Description of 147
Schedule of Courses 268, 279
Special Req., Ph.D. Degree 242-243
Staff of Instruction and Research 33
Study and Research 147-149
Undergraduate Subjects 344-345

Mechanical Engineering
Advanced Subjects 351-352
Laboratories, Description of 164
Schedule of Courses 279-281
Special Req., Engineer's Degree 221
Special Req., Ph.D. Degree 233
Staff of Instruction and Research 23
Study and Research 163
Undergraduate Subjects 349-351

Medical Examination 183, 197
Medical Service 197-199
Metallurgy (see Materials Science)
Mount Wilson Observatory 38, 134
Mudd Laboratory of Geological
Sciences 129, 144
Music History and Analysis 352
Musical Activities 40, 174
National Defense Student Loans 202, 211
New Student Camp 184
Notification of Admission 181
Nuclear Engineering 162, 280
